ATLAS GEOGRAPHUS:
OR, A COMPLEAT
System of Geography,
ANCIENT and MODERN.

CONTAINING

What is of most Use in *Bleau, Varenins, Cellarius, Cluverius, Baudrand, Brietius, Sanfon, &c.*

WITH THE

Discoveries and Improvements of the best Modern
AUTHORS to this Time. Illustrated with
about 100 New MAPS, done from the
latest Observations, by *Herman Moll*, Geogra-
pher; and many other CUTS, by the best
Artists.

EUROPE is Two Volumes, with Sixty eight
MAPS, *Sanfon's TABLES, &c.*

VOL. I.

In the *SAVOR*:

Printed by *John Nutt*; and Sold by *Benjamin Barker* and *Charles King*
in *Westminster-Hall*; *Benjamin Tooke* at the *Middle-Temple Gate*; *William*
Taylor at the *Ship* in *Pater-Noster-Row*; *Henry Clements* at the *Half-Moon*
in *St. Paul's Church-yard*; *Richard Parker* and *Ralph Smith* under the
Piazza of the *Royal-Exchange*; and *John Morphew* near *Stationers-*
Hall. MDCCXI.

ADVERTISEMENT.

EUROPE being finish'd, except *Great Britain* and *Ireland*, which is now preparing for the Press; and as Informations and Accounts of Places come in, they are inserted in their County, &c. It is entituled, *Britannia & Hibernia Antiqua & Nova*; in which will be a new and accurate Map of each County, with the Wapentacks, Laths, Hundreds, &c. and all the Roads exactly mark'd. In the Whole will be about 100 Maps, and many Cuts. We have receiv'd Accounts from above 100 Persons, each giving an Account of some or more considerable Places, and many more are doing; as, a Gentleman will give a particular Account of *Eaton* College, how endow'd, what Livings in their Gift, &c. another that of *Winchester*, with *William of Wickham's* Life, his Foundations, Charities, &c. and so of most other Places in *Great Britain* and *Ireland*. In less than Six Months we shall begin to print, and shall do the Counties in Alphabetical Order; as *Bedfordshire*, *Berkshire*, *Buckinghamshire*, *Cambridgeshire*, *Cheshire*, *Cornwal*, &c. Gentlemen are desired to send in what Accounts they think proper for this Design to *John Nutt*, Printer, in the *Savoy*, paying Postage.

T H E

PREFACE.

THE Usefulness of Geography is so well known, and the Study of it so general among all Persons of Education, that 'tis needless to enlarge upon that Head, to insist upon the Use of it to Statesmen, Scholars of all Sorts, Merchants and Tradesmen, or to say that 'tis both profitable and pleasant to Persons of all Ranks, who by reading a Work of this Nature may know all that is curious in the World, without the Fatigue or other Inconveniencies of Travelling.

The Turks have a Proverb, That those who never saw the World, think 'tis made like their Father's House; and they have a particular Reason for it, since one of their late great Courtiers, when he heard the Siege of Vienna was rais'd by the King of Poland, fell into a great Rage against the French King for suffering that Prince, as he suppos'd, to march thro' his Dominions, in order to do it. M. Martineau du Pleffis, in the Preface to his Three Volumes of Geography, takes Notice of several gross Errors of Authors for Want of a competent Knowledge in this Science, and especially of the Ancients, French as well as others; some of whom talked of burning the Pont-Euxin, because Pont in that Language signifies a Bridge. Some thought the Morea to be the Country of the Moors; and others, when they heard of Venice, Genoa, and Lucca, took them to be rich Italian Ladies. That same Author relates a very pleasant Mistake of an Ambassador of our own Country through Ignorance of Geography. He happened to be at the Court of Rome when M. Bethancourt, a Frenchman, discover'd the Canaries, which were the Fortunate Islands of the Ancients, Pope Clement VI. having made a Grant of them under that Name in 1343, to the Count de Clermont, Son to Alphonfus de la Cerda, a Prince of the Blood Royal of France and Spain. The Ambassador thinking there were no other Fortunate Islands but those of Great Britain, left Rome in Disgust, and made Hast to England, to acquaint his Master that the Pope had given away his Crown.

The Want of a sufficient Knowledge in this Science, has led even some late Authors into such gross Mistakes, as to talk of Vessels sailing from the Caspian into the

a

Euxin

Euxin Sea, without considering that they have no Communication with one another, and that the Mountains of Elbours lie betwixt them.

—We have Reason to be thankful that we live in an Age of more Knowledge, towards which the many learned Books of Geography have not a little contributed.

And we have Ground to hope, that the following Work will advance that useful Science further among us than any Thing which has yet appeared in English; not that we would disparage the Endeavours of such of our Countrymen as have gone before us, which have all of them been useful in their Way and Time.

But we may presume to say without Vanity, That as we have taken a larger Field than any of our Predecessors, we have likewise had better Opportunities to improve it; for the greatest Part of the modern Discoveries have been printed since any Work of this Nature was done in English. Because Geography of it self is looked upon by all but the Curious to be a dry and unpleasant Study, we have taken Care to mix it with ancient and modern History in their proper Places; and besides the General History at the Beginning of each Country, we have taken Notice of the remarkable Actions that have happened in or near any of the Places we describe, as well as of every Thing that is curious in Art or Nature, in order to make this Work pleasant as well as instructive to the Reader; so that it contains a View of Universal History of all Sorts, as well as of Geography.

Some of our Subscribers have indeed complain'd of our being too prolix; but if they consider the great Number of Authors we had to peruse, and that our Plan was to take in Ancient History and Geography as well as Modern, with Natural History, and an Account of the Religion and Government of every Country, we hope they will excuse us, and particularly as to the ancient Geography of Germany, the Netherlands, France, Spain, Portugal, Swisserland, Italy, and Greece, because those Countries having been the Scene of great Actions, the ancient Historians and Geographers who treat of 'em cannot be understood without such Helps as are here afforded.

The Learned know how much Baudrand is valued upon that Account, tho' he has little else but a bare Description of the Places he treats of; what Pains Valesius, Papyrius Masson, and others, have taken upon the ancient Geography of France; what Esteem Cluverius has justly acquir'd for his *Germania Italia*, and *Sicilia Antiqua*. Wormius is deservedly praised for his *Antiquities of Denmark*, &c. and Brietius did very much oblige the learned World by his *Parallela Geographiæ Veteris & Novæ*. Buno, and the other Annotators on Cluverius's *Introduction*, have had their deserv'd Applause; and Cellarius's *Notitia Orbis Antiqui* comes short of none of them. The *Atlas Historique* furnishes us with many Curiosities in Relation to Genealogy, History and Geography, that had not been taken Notice of in other Works of this Nature; which, together with *Bleau's Atlas in Eleven great Folio Volumes*, and the Four of 'em that were done into English with Improvements, besides the Geographies of Varenus, Luyts, La Forrest, Du Plessis, &c. and the celebrated Travels of Monconys, Dr. Brown, Mr. Ray, Mr. Laffels, Mr. Misson, Mr. Willoughby, Dr. Northleigh, Mr. Wheeler, and Mr. Spon, with the Histories of the French Royal Academy, our own Philosophical Transactions, and others whom we can't now stay to name, have all of them been carefully consulted, in order to make this Work complete.

The P R E F A C E.

iii

Particular Care has likewise been taken to make our Descriptions agree with our Maps, a Thing too much neglected by those who went before us, which made their Descriptions the less intelligible; and where our own Maps were wanting in any Place because of the Smallness of the Scale, we always consulted those of Sanſon and Bleau to supply that Defect, as to the Distance and Bearing of Places; and have taken Notice of any considerable Difference betwixt their Maps and Moll's, which being from the latest Discoveries, and engraven on Purpose for this Work, are much more exact than theirs. We must own, that we were very much obliged to the learned Dr. Nicholſon, now Lord Bishop of Carlisle's Volume of the great English Atlas for our Account of Germany, that learned Person having very much improved the Account which Bleau and others had given of it before him: And besides what Books the Proprietors could purchase at Home and Abroad to carry on the Design, which already amount to 150 l. we have been obliged to publick Libraries in this City as well as to private Ones, and particularly to those Two learned and communicative Gentlemen, Dr. Hans Sloane, and Dr. Tancred Robinson, whose Libraries are as well furnished for this Sort of Learning, as any perhaps in Europe. We could do no less in Justice, than to take this Way of returning our Thanks to those Two worthy Gentlemen, and to let the Publick know, how much they are obliged to them for many curious Things in this Work, which we could not be furnished with elsewhere.

By this it appears, that our Materials are much better than ever were used for any Work of this Nature done in England, and that we have likewise been supplied with the best that could be had for Money Abroad. The Authors we made Use of are too many to enumerate here; but when the whole is compleated, a Catalogue of them will be printed, and such as belong to the Proprietors sold by publick Auction, for which End they are carefully preserved, and lock'd up as they are done with; and those which are lent by private Gentlemen duly return'd.

Modesty will not allow us to commend our own Performance; but this we can truly say, That we have not been wanting in Pains; and by the good Reception it has met with from the Publick, and above 100 Letters we can produce, which commend it to be the largest and most compleat System of this Nature in all Parts yet extant, we have no Reason to doubt of the like Encouragement for the remaining Parts of the World.

'Tis Seven Years since this Work was first undertaken; and that Mr. Moll begun to engrave the Maps, which he has now compleated, for the Four Parts of the World.

The Introduction which relates to the Scientifical Part, was done by the Direction of the learned Dr. Gregory, late Astronomy Professor at Oxon, who likewise gave his Advice as to the Choice of Books and Materials; and for the History and Geography he recommended Two ingenious Gentlemen, who, with some others of University and liberal Education, have been employed in it; and if Health permit, will go through with the Whole.

We are not so vain as to think our Performance without Faults; for to pretend to that, especially in a Work of this Nature, were to suppose our selves to be more than Men, but we have been as careful to avoid Errors as we could. We invited Gentle-

The P R E F A C E.

men from Time to Time to send us an Account of what Mistakes they found, but very few of 'em have thought fit to oblige us in that Matter. We were indeed challenged by a Gentleman for saying, the Muscovites deny Transubstantiation; and giving this as one of the Reasons, That they had their Religion from the Greeks, who never believed any such Thing. Our Authority for saying so of the Muscovites, was the Earl of Carlisle's Embassy; but we own there are Writers who say otherwise. Yet that the Ancient Greek Church believed no such Thing, is evident from the Account we have given of their Religion in its proper Place.

The same Gentleman complains that we say, Pag. 948. the English Seminary at Doway is under the Conduct of Jesuits, but mistakes us; we said it was so at its first Institution by Philip II. and thought we had Reason, since William Allen, afterwards Cardinal, who founded that Seminary, wrote a Book entituled, *Apologetica pro Sacerdotibus Societatis Jesu*, as appears by the *Athenæ Oxonienses*. The English Priests, &c. who fled thither in Queen Elizabeth's Time, were afterwards obliged by D. Lewis de Requiesens, Governour of the Spanish Netherlands, to retire from thence and went to Rheims; but what Alteration has been made in the House at Doway since, we know not. As to what that Gentleman says further, that we are too partial against the Roman Catholicks when Matters of Controversie come in our Way: We shall only reply, that we act as Historians, and not Criticks, and quote our Authors of both Communions. However, we shall always be thankful to him or any other Gentlemen that inform us of what they think Mistakes, and shall impartially consider them.

Another Gentleman was so kind as to inform us of a Mistake and an Omission in our Accounts of the Dukes of Holstein, Pag. 549. They were occasioned by mislaying an Insertion in the Copy, and to be corrected thus: Col. 1. Pag. 549. towards the Close, after Christian Albert, read, Who was born in 1641, expelled his Dominions by the King of Denmark, his Brother-in-Law who demolished his Strong Towns, &c. Then after the Words on both Sides in the last Line, add, Christian Albert died in 1694, and was succeeded by his Son Frederic, who married Hedwige Sophia, Daughter to King Charles XI. of Sweden, was killed at the Battle of Clissen in Poland, in 1702. and succeeded by his Son Charles Frederic, born at Stockholm the 10th of April, 1700.

The same Gentleman took Notice that we had omitted, 1. The County of Werin-gen in Lower Saxony, Pag. 543. and its chief Town Elbingerode. The Reason was, that 'tis now an obsolete Distinction, not mention'd in Sanfon's Maps, or the Matricula of the Empire; the Town inconsiderable, and that this Division is included in the Counties of Blankenburg and Reinsteine. 2. That we had omitted the Town and County of Pappenheim. To this the same Answer may serve, that Count being more noted for his Post as Hereditary Marshal of the Empire, than for his Territory, which is very small, and lies betwixt those of Oettingen and Newburg in Franconia. The Family has also some Lands about Donawert and Memmingen. The Town of Pappenheim lies about 12 Miles S. E. from Donawert, but does not merit a Description.

The P R E F A C E.

IV V

We were obliged for gaining Time and Room to forbear giving the Long. and Lat. of every Place, but satisfied our selves with giving those of the Capital or most remarkable Towns, from which we give the Distance and Bearing of others; so that they will be as readily found by the Scale and Compass, as if the Long. and Lat. had been set down.

The Account of Great Britain and Ireland is reserved for a Volume by it self, for the Reasons which have been published in several of the preceding Months. We shall begin it as soon as our Materials are all come to Hand, of which we receive more or less from Gentlemen in the Country every Post. In the mean Time we go on with Asia, for which the 12 following Maps are done by Mr. Moll, viz.
1. Asia in General. 2. Turkey in Asia, or Asia Minor. 3. Arabia. 4. Persia. 5. The West Part of India, or the Empire of the Great Mogul. 6. The East Part of India, or that beyond the Ganges. 7. Independant Tartary. 8. China. 9. The Principal Islands of the East-Indies. 10. The Isle of Japan. 11. North Guinea. 12. North Britain, the Ladrones, &c. The Maps of the Ancient Geography of Asia, &c. are, 1. Asia Antiqua & Nova, Cluver. 2. Scythia & Tartaria, Cluver. 3. India Orientalis & Insularum Antiqua & Nova, Cluver. 4. Persia, Armenia, Assyria, Mesopotamia & Babylonia, Cluver. 5. Chersonesi hodie Natolia, Cluver. 6. Terra Sancta, Cluver. 7. Syria, Cluver.

Besides these, we take in Sanfon's Tables with many Cuts, and shall bring the Whole into one Volume of 12 or 14 Months.

Africa will be contained in such another; and America, with Great Britain and Ireland, will be Two Volumes more.

To each Volume there will be an Alphabetical Table like this, and a general Index of Omissions and Errata to the Whole; with Tables for reducing Foreign Weights, Coins, and Measures, to those of Great Britain.

*We shall take Care when the Work is finished to collect the Errata of the Whole; in the mean Time the Reader is desired to read, *Introduct.* pag. 21. l. 38. for 16. 61. to observe that pag. 235 and 236 are Twice number'd; and therefore if he seek for any Place referred to in those Numbers, he must look to both. And in the Table, add *Kingdom* to *Astracan*.*

It would have swelled the Index too much to insert the Name of every particular Prince, but the Reader may easily find them in the History of the Counties to which they belong.

The

*The NAMES of so many of the
SUBSCRIBERS as have sent
them in to the Undertakers.*

Note: Those that are omitted, (for we are informed several were sent that never came to our Hand) shall be inserted when Asia comes out, if they please to send them.

ATLAS GEOGRAPHUS.
OR, A COMPLEAT
System of Geography,
ANCIENT and MODERN.

Containing what is of most Use in *Bleau, Varenius, Cellarius, Cluverius, Brietius, Sanfon, &c.*

With the Discoveries and Improvements of the best
Modern Authors to this Time.

CHAP. I.

An INTRODUCTION to Ancient and Modern
GEOGRAPHY in General.

SECT. I.

The Antiquity of GEOGRAPHY.

THIS Science appears to be as ancient as the Use of Letters. The Invention of it is ascrib'd to the *Egyptians*; at least they are supposed to be among the first who made use of it, and not only wrote on this Subject, but convey'd it to Posterity by Figures and Charts. *Hommer*, as he was the first noted Author among the *Greeks*, was also their first Geographer, and carefully described their Towns and Country, and that Part of *Asia*, which lies on the *Hellepont*: He was followed by others of his Country-

men, who gave learned Descriptions of the World, as appears by *Strabo*, *Pliny*, *Stephen of Byzantium*, and others: But their Works, together with most of their Names, are lost. The Industry of the Ancients in this Matter is evident from their Tables or Charts, and Spheres. *A-maximander* the *Milesian*, Scholar to *Thales*, one of the Seven Sages, is reckoned the first who attempted to draw the Earth on a Map. *Laertius* says, he likewise drew the Sea, and prepared a Terrestrial Globe, which *Eratosthenes* corrected. *Aristagoras*, the *Milesian* Tyrant,

The General Introduction to GEOGRAPHY.

is said to have shewn the *Spartans* a Brass Table, in which the Circumference of the whole Earth was engraved. *Socrates* shew'd *Alcibiades* at *Athens* a Chart, containing a Description of the Earth. *Theophrastus* had several of them, which he ordered by his Will to be hung up in his Gallery.

That the *Romans* understood and practised this Science, is evident from *Varro*, who says, They had Tables or Maps in the Temple of *Tellus*; and *Suetonius* mentions a Map of the Earth in Parchment by *Metius Pomposianus*, in *Domitian's* Reign: Nor had they only Maps of Kingdoms, and of the whole World, in those Days; but likewise Globes, the Way of Projecting which on a Plain was taught by *Ptolemy*. From *Rome* this Science was derived to the Provinces, as appears by *Emmenius Rhetor*, who mentions such Maps to be hung up in the Galleries of the School of *Antonin*, in his Oration to the President of *Gaul*, exhorting him to restore the Schools, in the Reigns of *Constantius* and *Dioclesian*. The Curious may see more on this Subject in *Gellarius's Notitia Orbis Antiqui*, Cap. 1. and in *Varenius*, published by Mr. *Newton*, (now Sir *Isaac*) Lib. 1. p. 5. which is the Edition we make use of.

SECT. II.

The Definition of GEOGRAPHY.

THE Literal Signification of the Greek Word, implies no more than a bare Description of the Earth; and so *Cluverius* defines it to be a Description of the whole Earth, as far as 'tis known to us. In *Varenius* 'tis defin'd to be a mix'd Mathematical Science, which teaches the Qualities of the Earth and of the Parts of it, depending on Quantity; viz. Figure, Place, Magnitude, Motion, the Heavenly Appearances, and other such Qualities. But *Baudrand*, and other modern Geographers, understand by the Word Geography the Description of the Terraqueous

Globe, as it contains both Land and Water; and 'tis now become customary to intermix with Geographical Descriptions something of the Political and Natural History of Countries, which is more instructing and diverting to the Reader than meer Geography.

SECT. III.

The Division of GEOGRAPHY.

IT differs from Cosmography as a Part from the Whole, and from Chorography as the Whole from the Part; for Cosmography implies a Description of the whole World, as composed of Heaven and Earth. Chorography is the Description of particular Countries, as *Great Britain*, *France*, &c. Topography is the Description of a particular Place or District; and some add *Topobesia* as a special Description of the Situation of a particular Place. *Varenius* divides it into General and Special: By General Geography, he understands a Description of the Earth, and its Qualities in general, without Relation to any particular Country; and special Geography he divides into Chorography and Topography. To General Geography he assigns Three Parts, viz. Absolute, Respective, and Comparative. The Absolute Part considers the Body of the Earth, and its Parts, with their proper Qualities, as Figure, Magnitude, Motion, Lands, Seas, Rivers, &c. The respective Part relates to those Qualities and Accidents which happen to the Earth from Celestial Causes. The Comparative Part contains an Explication of those Properties which flow from a Comparison of divers Places of the Earth with one another.

SECT. IV.

The Object and Properties of GEOGRAPHY.

THE Object is chiefly the Surface of the Earth, and its Parts. *Varenius* divides the Things which are principally

The General Introduction to GEOGRAPHY.

3

to be considered in every Country into *Celestial, Terrestrial, and Humane*. The Celestial are those Properties which depend on the apparent Motion of the Sun and Stars, *viz.* 1. The Elevation of the Pole, the Distance of the Place from the Equator and the Pole. 2. the Obliquity of the Diurnal Motion of the Stars over the Horizon of the Place. 3. The Quantity of the longest and shortest Day. 4. The Climate and Zone. 5. Heat, Cold, and the Seasons of the Year; also Rain, Snow, Winds, and other Meteors. 6. The Rising, Appearance, and Continuance of the Stars over the Horizon. 7. The Stars passing through the Vertical Point of the Place. 8. The Swiftiness of the Motion, by which, according to *Copernicus*, each Place is wheeled about every Hour. The 9th Property, added by some Astrologers, of a peculiar Planet that rules and governs every Country, he rejects as frivolous.

The Terrestrial Properties are reckoned 10.

1. The Limits. 2. Figure. 3. Magnitude. 4. Mountains. 5. Waters, *viz.* Rivers, Fountains, and Bays. 6. Woods and Defarts. 7. Fruitfulness and Barrenness, and the Sorts of Fruit. 8. Minerals. 9. Animals. 10. The Longitude of the Place.

The Humane Qualities he divides into 10.

1. The Stature, Shape, Complexion, Length of Life, Origine and Diet, of the Inhabitants. 2. Their Commerce, Trades, and Commodities. 3. Their Virtues, Vices, Learning, Genius, and Schools. 4. Their Customs at Child-bearing, Marriages, and Funerals. 5. Their Language. 6. Their Civil Government. 7. Their Religion and Ecclesiastical Polity. 8. Their Towns and Places of most Note. 9. Their most remarkable Histories. 10. Their Famous Men, Artists, and Inventions.

SECT. V.

The Principles of GEOGRAPHY.

Geographers make use of Three Sorts of Principles, to confirm the Truth of their Propositions. 1. Of Geometrical, Arithmetical, and Trigonometrical Propositions. 2. Of Astronomical Precepts and Theorems. 3. Of Experience; for the greatest Part of particular Geography depends on the Experience of Men who have described the several Countries.

SECT. VI.

Some Things of Geometry and Trigonometry, necessary to be known by those who study GEOGRAPHY.

1. **GEOMETRY** has Three Species of Magnitude, by which all Things are measured; *viz.* *Lines, Surfaces, and Solid Bodies*, as *AB, CDEF, and GHIKLMN*.

A 2

2. Lines

2. Lines are divided into straight and crooked, as the Lines *AB* and *D*; and the crooked Line is Uniform or Circular, as the Line *E*; or different, i. e. of a Dissimilar Form, as Oval Lines, *F*. Conchoides and Spiral Lines, as *G*.

3. A Circle is a Space or Plain Surface and Figure included in a crooked Line; in which Space there is a certain Point, from which the straight Lines being drawn to that crooked Line, which includes the Space, are all equal; and that crooked Line, including the Space, is called the Circular Line, or Circumference of the Circle; and the Point in the Middle is called the Centre of the Circle.

4. The Diameter of the Circle is a straight Line drawn through the Center to the Circumference on both Sides, as the Line *AB*. The Semi-diameter is that which is drawn from the Center *D* to the Circumference *ABC*.

5. The Arch is a Part of the Circumference of a Circle, as the Arch *CB*.

The Quadrant is the Fourth Part of the whole Circumference, as *CDA*. The Complement of any Arch, is an Arch by which it differs from a Quadrant, or falls short of it. The Excess is that by which it exceeds a Quadrant.

PROBLEMS.

6. A Straight Line being given, and a Point in it, or out of it, to draw a Perpendicular Line from that Point, let the Line given be *AB*, the Point *C*: Take any open Space of the Compasses, put one Foot in *C*, and with the other cut the Line in *D* and *F*, then on *F* describe the Arch *CH*. Likewise on the Center *D* describe another Arch, cutting the former at *C* and *H*, and let *CH* be drawn; and this will be the perpendicular Line.

7. To divide a Circle and Circumference into Four Parts, draw a Diameter *AB*, and from the Center *C* raise a perpendicular Line upon it, *DCE*. This will also be a Diameter, and the Circumference and Circle will be divided into Four equal Parts or Quadrants.

Note,

Note, That Mathematicians cut a Circumference into 360 Parts, which they call Degrees. These Degrees they divide into 60 First Minutes, and the First Minutes they divide into 60 Seconds.

8. To divide the Circumference of a Circle into Degrees; first take the Quadrant of a Circle; then by your Compasses take the Semi-Diameter AB of the Circle, and by this Space of the Compasses take away the Arch CB from the Circumference. This Arch will contain 60 Degrees, and there remains in the Quadrant 30 Degrees; which being divided into Two Parts, you have 15 Degrees; and these being mechanically divided into Three Parts, you have 5 Degrees; and these being again divided into Five Parts, are the Degrees themselves. But these Things are best performed by Mathematical Instruments.

9. To find out the Area or Contents of a Right-angled Quadrangle, two Sides of the Quadrangle being given; multiply the one Side into the other, and the Product is the Contents. *Note*, That Lines are measured by Lines, Surfaces by Measures which are Surfaces, and those also square. Bodies and Solids are measured by Measures which are Bodies, and indeed solid Cubes. Thus we measure the Sides of an House by Foot-Lines, but the Floor with Square-Feet; and the Capa-

city or Solidity of the House with Cubick-Feet.

10. The Half-Diameter or Diameter of a Circle being given, to find out in the same Measure the Circumference of the Circle; and on the contrary, the Circumference of the Circle being given, to find the Diameter near enough to any Geographical Purpose, depends on the Proportion of the Diameter to the Circumference, which according to Archimedes's Demonstration, is much as 7 to 22, or more exactly, as 1000000000 to 3,1415926535. So let there be given a Diameter of 12 Foot: Let it be done by the Golden Rule, as 7 to 22; so let 12 be to the Circumference of that Circle; or as 1000000000 to 3,1415926535; so 12 to the same Circumference. Contrariwise, if the Circumference be given, and the Diameter sought for, let it be worked as 22 to 7, or as 3,1415926535 to 1000000000; so a Circumference given to the Diameter sought for.

11. The Circumference of a Circle being given in Feet or Miles, and a Diameter: Or a Circumference alone, or a Diameter alone being given, to find out the Area of the Circle in Square Feet or Miles: In the first Case, multiply the given Circumference into the 4th Part of the Diameter, or half the Circumference into half the Diameter, and the Product is the Area or Space demanded. In the Second Case, 'tis better to find out first the Half-Diameter, or Half-Circumference, by the foregoing Problem, tho' it may be done without it.

12. The Half Diameter, or Diameter, of any Globe, $ABCD$, being given, to find its Surface in Square Measure, and its Solidity in Cubical Measure. First, let the Circumference of the Circle be found out by the Diameter given, then multiply the Diameter into the Circumference, and the Surface of the Globe will be the Product in Square Measure. Further, multiply this Surface by the 6th Part of the Diameter, and the Product is the Solidity of the Globe in Cubick Measure.

13. A Triangle is called Rectangular; one Side of which stands perpendicularly upon the other Side, or with it makes a Right Angle of 90 Degrees. These Two Sides AB and AC are called Catheti; and the Third, CB , Hypotenuse. The Measure of the Angles is the Arch described, the Center being taken in the Top of that Angle; viz. Of how many Degrees that Arch intercepted between the Legs of the Angle is, of so many Degrees that An-

gle is said to be. So a Right Angle is said to be 90 Degrees, because the Arch so describ'd is always the Quadrant or 4th Part of the Circumference of the Circle.

The Sine of any Arch is call'd a straight Line, which is drawn perpendicular from the Extreme of the Arch upon the Diameter, drawn through the other Extreme of the Arch.

The Tangent of an Arch is the straight Line touching the Arch at one Extremity, and terminated by another straight Line drawn from the Center through the other Extremity of the Arch: And this Line so drawn is called the Secant of the Arch.

But the Sine of an Angle is said to be the Sine of that Arch which measures that Angle: So the Tangent of the Angle, and its Secant.

'Tis further to be observed, That, by the Industry of Mathematicians, there are Tables made, in which the Semi-Diameter of 100000 (or of more Cyphers) being taken, the Sines, Tangents, and Secants, of all the Arches of the Circumference are found out. For Instance, 2 Degrees, 10 Degrees, 20 Degrees 32 Minutes, &c. These Tables are called the Mathematical Canon, and are of infinite Use in all Mathematical and Natural Sciences. Therefore 'twas proper to inform the Students of Geography of those few Things; but they are of principal Use in the measuring Spherical and Plain Triangles: Since the measuring of Spherical Triangles is attended with some Difficulty, and is only necessary for those who would dive deep into this Art, we shall only treat of Rectangular Plain Triangles, whose Dimension is easy to be apprehended by any Body.

SECT. VII.

Two Theorems of frequent Use in GEOGRAPHY.

14. Three Angles of any Triangle whatever are equal to Two Right Angles, or 180 Degrees.

The General Introduction to GEOGRAPHY.

7

Degrees; and therefore Two Acutes in a Rectangular Triangle make 90 Degrees. Further, If a straight Line touch a Circular Line, and from the Point of Contact or Meeting, a straight Line be drawn to the Center of the Circle, it makes a Right Angle with the Tangent-Line.

The Problems of most Use are those which follow:

16. I. The Hypotenusa, together with the Cathetus of a Rectangular-Triangle, being given, to find out the Angle contained, or the other Acute Angle: For the finding out of this, let it be done by the Golden Rule: As the given Hypotenusa is to the given Cathetus; so the whole Sine 100000 (which Number is the Semi-Diameter taken in the Table of Sines) is to the Sine of the other Angle. This Sine, sought for in the Canon, will shew the Arch or Quantity of the Angle which joins to the Hypotenusa. But the Angle contained is the Complement of the Angle found out, to 90 Degrees: Therefore if you subtract the Angle found out from 90 Degrees, the Remainder is the Angle sought for.

II. A Cathetus and the Acute adjacent Angle being given, to find out the Hypotenusa; Do it by the Golden Rule: As the Sine of the Complement of the Angle given, is to the whole Sine 100000, or 10000000 in the greater Canon; so is the given Cathetus to the Hypotenusa demanded.

17. III. Two Cathetus's being given, to find the Angle adjacent to either of them; Work thus: As one Cathetus is to another; so is the whole Sine 100000 to the Tangent of the Angle, which is adjacent to the first assumed Cathetus.

18. IV. A Hypotenusa, and one Acute Angle being given, to find out either Cathetus; Work thus: As the whole Sine 100000 is to the Sine of the Angle, which is opposite to the Cathetus demanded, so is the given Hypotenusa to that Cathetus.

SECT. VIII.

Of the different Measures made use of in GEOGRAPHY.

THE Famous Measure is, The Length of a Foot; but differs according to the Custom of Nations. Mathematicians now make use of Snellius's Rheinlandish Foot, which he says is equal to the ancient Roman Foot.

The Rod or Perch for measuring Land contains 10 Rheinlandish Feet; but Surveyors make their Perch of 12 such Feet, or of 16 Foot and a half English.

The Perch and Mile arise from the Multiplication of Feet. A Foot is divided into Hand-breadths, Inches, and Grains: A Hand-breadth is 4 Digits or Inches, a Foot 12, and a Grain the 4th Part of an Inch; but 'tis better to divide a Foot into 10 Inches, and an Inch into 10 Grains. These Measures are sufficient for Modern Geography.

The Measures of the Ancients were those of the Egyptians, Greeks, Romans, Persians, &c. and the Measures of these of later Times are those of the Turks, Poles, Germans, Muscovites, Indians, Spaniards, French, English, &c.

The Greek Stadium or Furlong is reckoned 600 Greek Feet, which make 625 Roman or Rheinlandish Feet.

The German Mile (of which Geographers allow 15 to a Degree) contains 14000. $\frac{1}{2}$ Feet, and is reckoned 4000 Paces, or 32 Furlongs, and bears Proportion to the Rheinlandish Mile, as 19 to 15. The Italian or Roman Mile is 1000 Paces, or 8 Furlongs.

A Geometrical Pace is 5 Foot.

A Fathom is 6 Foot, and by some reckoned to have been the Greek Pace.

A Cubit is reckoned one Foot and a half.

Parasange, or the Persian Mile, is reckoned 30 Furlongs, or 300 Persian Paces.

Schoenus, the *Egyptian Measure*, is, according to *Herodotus*, 360 Furlongs; but, according to *Pliny*, 40; which is supposed to arise from different Customs of Places; or else is a Mistake in the Books.

The *French League* is to the *Rheinlandish Mile*, as 19 to 25. The *Spanish Leagues* is to the same Mile as 17½ to 19; but because there is a Difference of Leagues both in *France* and *Spain*, these Things are uncertain.

The *English Mile* is to the *Rheinlandish*, as 19 to 55 or 60. But the *English* have Two Sorts of Miles, Computed and Measured: Of the first Sort 50, and of the last Sort 55 or 60 make a Degree.

Morden, in his Introduction to Geography, says, 'Tis a common Opinion, that 5 of our *English Feet* make a Geometrical Pace, 1000 such Paces make an *Italian Mile*, and 60 of those Miles, in any great Circle upon the Spherical Surface of the Earth or Sea, make a Degree: So that a Degree of the Heavens contains, upon the Surface of the Earth, according to this Account, 60 *Italian Miles*, 20 *French or Dutch Leagues*, 15 *German Miles*, 17½ *Spanish Leagues*, and 56½ *English Miles*.

But, according to several Experiments made, the Quantity of a Degree is variously accounted for thus: By *Albazzard*, an *Arabian*, 333333 *Arabian Feet* in one Degree, which reduced to our *English Measure*, is 367283 Feet, or 70 Miles and 1128 Parts of a Foot. By *Ptolomy*, 360000 *Rheinland Feet*, which reduced to our *English Feet* is 371900, or 70 Miles 1154. By *Willebrordus Snellius*, Anno 1613, 342000 *Rheinland Feet*; in *English* 353306 Feet, or 67 Miles. *Nor-*

wood, by his Experiment betwixt *York* and *London*, finds one Degree upon the Earth to contain 367200 Feet, which makes 69½ Miles. *Picart*, a *Frenchman*, makes it about 73 *Italian Miles*, and is the nearest Measure yet found by these Experiments to answer to a Degree of the Heavens.

The *Danish* or *Swedish Miles* are to the *Rheinlandish*, as 19 to 10; but in some Places the *Danes* and *Swedes* use the *German Mile*.

The *Russian Miles*, called *Korss*, are to the *Rheinlandish Mile* as 19 to 80.

The *Turkish Miles* are the same with the *Italian*.

The old *Arabian League* was reckoned the 25th Part of a Degree; but they used another Measure, 55 of which made a Degree.

Indian Miles are 100 to a Degree; for the *Indians* commonly measure their Distances by Journeys of Hours or Days.

Those of *Camboja* and *Guzarata* have a Measure called *Cosa*, 30 of which are a Degree.

The *Chinese* use Three Measures for Journeys; (1.) *Li*, the Space as far as a Man crying aloud in a Plain may be heard in a calm Day, supposed to be 300 Geometrical Paces; (2.) *Pu*, which contains 10 *Lis*; (3.) *Uchan*, which contains 10 *Pus*, and by them is reckoned one Day's Journey.

The *Square Rheinlandish Mile* consists of Square Feet: The *Cubick Rheinlandish Mile* of Cubick Feet. The Amount of the *Square Rheinlandish Mile* arises from multiplying the same Mile into it self, and that of the *Cubick Mile* by multiplying the *Square Mile* by a Simple Mile. The like is to be said of *Square* and *Cubick Feet*.

Cluve-

The General Introduction to GEOGRAPHY.

9

Cluverius gives us the following SCHEME of the Measures used by several Nations.

DEGREES.	1	2	3	4
Russian Miles.	20 40 60 80	120 160	200 240	280 320
Italian Miles.	10 20 30 40 50 60	90 120	150 180	210 240
English Miles.	27½ 55	82½ 120	165	220
Scottish Miles.	10 20 30 40 50	100	150	200
French Leagues.	5 10 15 20 25	50	75	100
Leagues of an Hour.	5 10 15 20	30 40	50 60	70 80
Spanish Leagues.	17½	35	52½	70
German Miles.	5 10 15	30	45	60
Swedish and Danish Miles.	2 4 6 8 10	20	30	40

For the Benefit of those that read the ancient Geographers in Greek or Latin, we thought fit to subjoin a more particular Account of their Geographical Measures from *Brietius*, Part I. Lib. 3. Cap. 6.

The ancient Measures of the Greeks are comprehended in these Technical Verses.

Quatuor ex digitis constabat Græca Paleste

Ille ter in Spiteme : justo quater in Pede : Senos

Fert Orgia Pedes : Pelethro centesimus est Pes :

Arvus dimidium est : Stadiumque coeret Achivum

Sexcentes : Stadia Assyriis ignota Phærique

Triginta antiquis Parafanga, & Schoenus habebant.

Paleste is translated by the Latins *Palmarum parvus*, and was of Two Sorts, the lesser consisting of 4 Fingers, and the greater, which *Pliny* confounds with *Spiteme*.

Spiteme contains 12 Fingers, or Inches ; is translated by the Latins *Dodrans*, and sometimes *Pedalis*, and at other times *Semipedalis*, a Foot, or half a Foot

Pes, Πούς, according to *Herodotus*, Lib. 2. contains 4 *Palestes*, which is 16 *Digiti*, and therefore something larger than the Roman Foot.

Orgia, ὀργία, translated by the Latins *Ulna*, from the Arms extended, contain'd 6 Foot, or 4 Cubits ; and this was of Two Sorts, one called the *Just Orgia*, of 6 Foot ; and the other, call'd the *Great Orgia*, contain'd 10, according to *Theophrastus*.

Plethrum, or *Pelethrum*, by the Latins call'd *Jugerum*, contain'd 100 Foot.

Arvus, ἀρεως, 50 Foot ; but by some extended to 100 Cubits.

Stadium, στάδιον, or the proper Greek *Stadium*, measured by *Hercules* with his Feet in the *Olympick* Field, was 600

Foot ; when doubled, it was called *Diaulos* ; and the *Diaulos* doubled, was call'd *Dolichos*.

Parafanga, a Persian and Egyptian Measure, according to *Herodotus*, consisted of 30 *Stadia* ; but this Measure was various, according to *Pliny*, Lib. 6. Cap. 26.

Schoenus : Of this Measure there are Three different Opinions ; the First, according to *Ptolomy*, *Pliny*, *Artemidorus*, and *Sirabo*, was of 30 *Stadia* : The Second, according to *Pliny*, who seems to have forgot himself, Cap. 14. Lib. 12. is 40 *Stadia* ; and this he says was taken from *Eratosthenes* ; though in the same Place he says it was contracted to 32 *Stadia*, which is a Mistake, for it ought to be 30. The Third Opinion is that of *Herodotus*, who, Lib. 2. says it was 60 *Stadia* ; and with this *Hermogenes* is said to agree. *Sirabo* seems to reconcile all those Opinions, Lib. 17. when he observes from *Artemidorus*, That this Measure was various ; that from *Pelusium* to *Memphis* it contain'd 30 *Stadia* ; that from *Memphis* to *Thebais* it was 120 ; and from *Thebais* to *Syene* it was 60. He adds, That he has found it elsewhere to be 40.

The Measures used by the ancient Roman Geographers, are contained in the following Technical Verses.

Quatuor ex granis Digitus componitur unus :

Est quater in Palmo digitus : quater in Pede Palmus.

Quinque Pedes Passum faciunt : Passus quoque centum

Viginti quinque Stadium dant : at Milliare.

Octo dabunt Stadia : duplicatum dat tibi Leucam.

Digitus, the least of the Country Measures, according to *Frontinus*, contained 4 Grains of Barley laid Longwise.

Uncia

Uncia was more than a Digit, and the 12th Part of a Foot. This he says was us'd in *Apulia*: But in the rest of *Italy*, they divided a Foot into 16 Digits; so that the *Uncia* answer'd to the *French* Inch.

Palmus contain'd 4 Digits, and therefore was call'd *Quadrans*.

Pes, or a Foot, of 16 Digits, or 12 *Uncia*, *Brevius* says he finds to answer to the ancient *Roman* Foot, and is 5 *Paris* Lines less than the *Paris* Foot.

PACE,	Single,	{ Of the 1st Difference,	contain'd 2 Foot.
		{ Of the 2d Difference,	2 Foot and half.
		{ Of the 3d Difference,	3 Foot, or the <i>French</i> Pace.
	Double,	{ Of the 1st Difference,	4 Foot.
		{ Of the 2d Difference,	5 Foot, or the Geometrical Pace.
		{ Of the 3d Difference,	6 Foot.

Pertica, a Perch, by *Isidorus*, *Lib.* 15. *Orig.* Cap. 15. is reckon'd 2 Paces, or 10 Foot, and seems to answer to the Measure call'd a *Reed* in Scripture.

Stadium was 125 Geometrical Paces, or 625 Foot, according to *Pliny*, *Columnella*, and *Julius Frontinus*. *Bergerius* gives the Reason why 25 *Roman* Feet were added to the 600 *Grecian*, because the *Roman* was less than the *Greek* Foot.

Milliare, or *Milliarium*, a Mile, was so call'd, because it contain'd 1000 Geometrical Paces: But there are Three Opinions as to the Number of *Stadia* in a Mile; the First is that of *Polybius*, in

Cubitus, a Cubit, contain'd a Foot and half, that is, from the End of the Middle-Finger to the Elbow.

Passus, or a Pace, is the Step of a Man as he walks, and by the Ancients was divided into the lesser and the Greater; the Lesser contain'd a Foot and a half, and was call'd *Gressus*; the Greater was twice as large, and was call'd the Geometrical Pace, or Pace simply; but afterwards the Pace was thus divided:

Strabo 7 *Geogr.* who says, 8 *Stadia* make only 960 Paces, each *Stadium*, according to the *Greek* Measure, containing 600 Foot. The Second is that of *Plutarch*, in *Camillus*, who says, 7 *Stadia* and an half are equal to a *Roman* Mile. *Suidas*, *Phocinus*, and all the *Greek* Authors, are of this Opinion. The Third is that of the *Roman* Writers, and of the *Roman* Empire it self, when the Mile-Stones were fix'd, from whence Miles were call'd *Stones*, and these Miles contain'd 8 *Stadia*; and into this Computation *Polybius* had slip'd many times unawares.

The Measures for Voyages and Journeys.

The Sea-Journey of the Ancients.	{	<i>Herodotus</i> reckons	{ 70000 <i>Orgia</i> by Day, 60000 by Night; that is, 700 <i>Stadia</i> , or 84 <i>Roman</i> Miles, by Day; and 600 <i>Stadia</i> , or 72 <i>Roman</i> Miles, by Night.
		<i>Polybius</i> ,	{ In <i>Strabo</i> , denies that in one Day they can sail 2000 <i>Stadia</i> , or 240 Miles.
		<i>Aristides</i>	{ Thought, that with a fair Wind they might sail 1200 <i>Stadia</i> , that is, 144 Miles.
		<i>Marinus</i> ,	{ In <i>Ptolomy</i> , thought they might sail 1000 <i>Stadia</i> , that is, 120 Miles, in one Day.
		<i>Strabo</i>	{ Thought, that in a Day and a Night they might sail 1000 <i>Stadia</i> .
		<i>Scylax</i>	{ Compares the Voyage of a Day and a Night to a Journey of 3 Days, which he does not compute at above 108 Miles.

The Sea-Journey of the Moderns.

The *Arabians* reckon'd 10000 Paces in a Day, perhaps 145 Miles. Mariners reckon'd a *German* Mile for every one of our Hours; but when the Wind was very brisk, they reckon'd 60 *German* Leagues in a Day.

In the *Mediterranean* they sail 16 Miles an Hour; but no Ship can hold that Course long there without Danger.

Journeys on Foot.

Strabo in his first Book seems to hint, That one Day's Journey is 333 *Stadia*, or 20 Leagues, or at least 250 *Stadia*, i. e. 15 Leagues; but in his 7th Book, he makes one Day's Journey 310 *Stadia*, i. e. 37 Miles.

Herodotus, Lib. 4. reckons it 200 *Stadia*, i. e. 12 French Leagues. *Polybius* and *Livius*, Lib. 5. reckon it 150 *Stadia*, that is to say, a Journey through *Cilicia*, which is something above 9 French Leagues. *Xenophon*, in the same 5th Book, concerning the Way through *Armenia*, which is 120 *Stadia*, i. e. 7 French Leagues and an half, is of the same Opinion.

Procopius, Lib. *Rerum Goth.* reckons 100 Miles, from *Ravenna* to the *Tuscan* Sea, to be 8 Days Journey to an expedite Man, though it seems to require no great Expedition to travel 12 Miles and a half per Day.

Military Journeys.

The *Romans* commonly reckoned this to be 20 Miles; but *Claudius Drusus Nero* reckoned it 33.

Alexander, to suppress the Rebellion of the *Arcei*, travelled 600 *Stadia* in two Days, that is, each Day 72 Miles: But now, because of Baggage and Artillery, an Army can scarce march 10 Miles in a Day.

Those who have Occasion to read ancient Authors, or those of the middle Age, and since, for the better understanding them, may observe, That the ancient *German Rasta* contained Three Miles.

The *Arabians* make use of Three Sorts of Measures: The First contains 12000 Cubits; their Cubit 24 Inches; their Inch 6 Grains of Barley laid Broadwise, and 25 of this First Measure make a Degree. The Second Measure contains 6000 Feet, or 4000 of our Cubits, and 56 of this Second Measure make a Degree. The Third Measure used by those who inhabit *Arabia*, is by them called *Fom*, and contains 3 *Parasanga*, or 9 Miles.

The *Jews*, who are scattered in the East, measure the Distance of Places by *Sta-*

tions, *Parasanga*, Miles, and Cubits. Their *Station*, or one Day's Journey, contains 9 French Leagues and an half, or 150 *Stadia*. Their *Farsanga*, or *Parasanga*, contain 4 Miles; their Mile 2000 Cubits; the common Cubit 5 Hand-breadths; the greatest 10 Hand-breadths, or 40 Inches; their Inch is either that which is common to all Nations, or the great Inch, by which all Things are measured in the Law, and answers to the Thumb of a Man's Hand.

All the *Asiatick* Moors reckon by *Parasanga*, each of which contains 3 *Italian* Miles.

The *Tartars*, and those of *Canada*, measure their Journey by Days, which contain 15 French Leagues, or 13 where the Ways are bad.

'Tis to be observ'd, That the Leagues of an Hour, which are frequently set down in Maps, are not always alike; and the common Rule of measuring them is according to the Strength or Weakness of the People. Thus the *French*, says *Brietius*, reckon one of their Leagues to an Hour, and the *English* reckon two. Hence it comes to pass, that the Leagues of several Countries are unequal; but Astronomers always reckon 20 Leagues of an Hour to a Degree; and so 'tis always to be understood in Geographical Maps, where the Scale of Miles is mark'd with the Leagues of an Hour.

SECT. IX.

Of the Figure of the EARTH.

THE Ancients had different and very odd Opinions concerning the Figure or Form of the Earth. *Cleomedes* says, some of the Ancients thought it to be plain; others thought it hollow, because Water stays upon it; but both those Opinions were soon found to be absurd. Some were still more absurd, and thought it to be quadrangular; but *Cleomedes* tells us, in his *Kuzianis Oewcia*, That all his Countrymen, the Mathematicians, and *Socrates's* Followers, held it to be of the Figure of a Globe. *Aparchemerus* tells us, there were those who held it to be of an oblong Form, and that it was one half longer than broad: Others alledg'd it to be twice as long as broad; and others gave the Length a greater Proportion. *Crates* resembled it to a Semi-Circle; *Hipparchus* to a Table; *Posidonius* to a Sling, whose Breadth or Middle lay South and North, and its narrower Ends East and West. The Curious may see more of this in *Cellarius's Notitia Orbis Antiqui*, Cap. 2. *Varenius* tells us, The Vulgar commonly thought it to be a broad circular Plain. *Lactan-*

tius and others of the Fathers were of the same Opinion, and thought the Earth extended downward with infinite Roots, because of certain Places of Scripture which they misunderstood. Some thought the ancient Heathen Philosopher *Heracitus* to be of the same Opinion; and others say, he alledg'd it was shap'd like a Boat. *Anaximander* is said to have ascrib'd it to the Form of a Rolling-pin; but this is deny'd, because he understood Astronomy. *Leucippus* thought it of the Shape of a Drum.

Cosma the Egyptian, who flourished about the Sixth Century, in his *Christian Topography*, thought the Earth to be twice as long as broad, and to be in Form like an oblong Square; and that the Heaven was rais'd in Form of an Arch over it: He conceived it to be represented by the Table in *Moses's* Tabernacle, which was two Cubits in Length, and one in Breadth: He was so very zealous for his Opinion, that he would scarcely allow those who were for *Ptolemy's* System the Name of Christians. He had a particular Fancy of a certain Mountain of a prodigious Height, in Form of a Cone, round which he suppos'd the Sun and Moon to take their Course; and by this he endeavoured to account, for the Seasons of the Year, the Length and Shortness of Days and Nights, and the Eclipses, &c. He founded his System on the Authority of *Patricius*, a Chaldean Doctor, whom he reckon'd to be a Divine Man. Those who have a Mind to see more of his Sytem, may find it in his *Topography* inserted in the Second Volume of Father *Montfaucon's* New Collection of the Greek Fathers and Writers, lately printed at Paris in Folio; where that Author tells us, That *Ptolemy's* System was not admitted into the Schools till very late; And that about the End of the 14th Century, 'twas the common Opinion of Divines, That the Earth was flat; and that even *Tostatus*, a few Years before the Discovery of

America.

America, rejected the Opinion of the Spherical Figure of the Earth as a rash Doctrine, and inconsistent with the Christian Faith.

SECT. X.

Arguments to prove that the WORLD is round.

V*arentius*, in his Third Chapter concerning the Figure of the Earth, rejects the Sophistical Arguments brought by several Authors for the Roundness of the Earth, and prefers *Archimedes's* Demonstration of those of *Aristotle*; tho' he owns that they also have their Difficulties: Therefore he proves the Earth to be round, because all the *Appearances*, as well *Celestial* as *Terrestrial*, are most commodiously explained by the Round or Spherical Form, as is evident from the Consideration of all other Figures. The Celestial Appearances he reckons to be the different Elevations of the Pole, the different Altitudes of the Sun, in one and the same Day in different Countries, the Proportion and Shadows, the Difference and Increase of the longest Days towards the Pole, the appearing of more or fewer Stars about the Poles, the different Times of the Rising and Setting of the Stars, &c. The *Terrestrial* he reckons to be the Directions of Navigation, the Appearing and Disappearing of Towers and Mountains, the Distances of Places, the Winds, &c. He adds, That our artificial Terrestrial Globe represents all Things so as they are to be really found in the Earth, which certainly could not be if the Earth were not round. Besides, whatever other Form we chuse, 'twill be attended with innumerable Absurdities; for 'tis manifest from the Appearances, that 'tis not plain: Nor can it be hollow, because the Sun and Stars must then appear to those who inhabit the West, before they appear

to those in the East; as we see the Sun illuminates the Vallies before it appears to those on the opposite Side of the Mountains.

Some of these Arguments are more particularly illustrated thus:

The Earth is prov'd to be of a Spherical Form, because the Sun and Stars rise and set a great deal sooner to those who live East from us, than to those who live West from us; and on the contrary, to those who live West from us, they rise and set later than to us, according to the Proportion of Time which the Distance of their Meridians have from ours. Thus if two Places be taken from ours, *viz.* the Distance of the Meridian of one towards the East 225, and the Distance of the other 450, then we shall find that in the latter the Sun rises two Hours sooner than with us, and in the former only one Hour. The Argument is still more clear, if it be propos'd according to the Sun's Arrival of coming to the Meridians of different Places; for whatever the Distance is betwixt their Meridian and ours, or Proportion between the Arches of the Equator intercepted between their Meridian and ours, the different Time of the Sun's Arrival will be found to be the same, which is plain from the Eclipses; for these Things are demonstrated by the artificial Globe, if we ascribe a Spherical Form to the Earth; whereas no other Form can do it.

The Globular Form of the Earth may be also prov'd by the Latitude of Places only, if any Difficulty be found to arise from their Longitude; for all Sections of the Earth, which are made according to its Latitude in different Places, are the Circumferences of Circles, and pass thro' the same Point of Heaven, *viz.* the Pole of Conversion, which lies near to the Polar Star. From these two Reasons it may be solidly infer'd, that the Figure of the Earth is Spherical; for this is a Geometrical Proposition which Geometricians

Hoc Schema demonstrat terram esse globosam

p. 14

This Scheme demonstrates y^e Earth to be of a Globular form.

Si terra esset trigona, umbra quoque triangulari figura in eclipsi Lunari appareret.

If the Earth were of a Triangular form, y^e Shadow woud appear so in the Eclipse of the Moon.

Si terra esset tetragona umbra quoque tetragonæ haberet formam.

If the Earth were four Square, the Shadow would also be four Square.

Si terra hexagonæ esset figura, ejus quoque umbra in defectu Lunari hexagona appareret. quæ tamen rotunda.

If the Earth were six-square, y^e Shadow would be six-square in the Eclipse of y^e Moon, which however appears to be round.

metricians ought to demonstrate. If any solid Body be cut with what Number of Planes you please, passing through some one Point, and that all those Sections do make Circles in the Surface of the Body, that Body is Spherical.

Another Argument of yet greater Force is brought from the Shadow, which the Earth, from the Side opposite to the Sun, casts upon the Moon; by which means she is eclips'd: For this Shadow being round and circular, it proves the Form of the Earth to be so.

Other Arguments are brought for the Spherical Form of the Earth, from the following Considerations:

1. From sailing round it. Our *Europeans* parted from *Europe* 8 times, steering directly to the West and South as far as the Straights of *Magellan*, and afterwards to the West and North, and return from the East into *Europe*; and all these *Phenomena* happen'd to them that rise from the Properties of a Globe, which could never have happen'd, had not the Earth been of a Spherical Form: For since upon this Supposition these Voyages were undertaken, the Sailors could never have succeeded in 'em, had the Earth been of another Form.

2. When either by Land or Sea we go from high Towers and Mountains, the lower Parts of them disappear first, and then they go out of View more and more, till the whole of them disappear. In the same Manner when we travel towards a Tower or Mountain, the Tops of them first appear to our View, and then the lower Parts, according as we draw nearer, until we see the lowermost Parts of them; and the appearing or disappearing of those Mountains or Towers is in Proportion to the Spherical Tumor of the Earth: Nor can this *Phenomenon* be explain'd by any other Way or Figure. The like is to be said as to Ships, which go from or come towards the Shore: When they sail from us, the Hulk first

disappears, then their Sails, and at last their highest Masts, the natural Convexity of the Water appearing betwixt them and our Sight; but when a Ship comes towards the Shore, the Masts appear first, then the Sails, and at last the Hulk. To this may be added, That to those who live more or less Northward, the Pole is more or less elevated; for the Inhabitants of *Island* and *Lapland*, &c. who live about 1000 Miles more Northward than we, do see the Pole-Star 15 Degrees higher than we can. And those who sail hence for those Countries, do find that this Variation comes to about a Degree and a half at the End of every 100 Miles, which could not be, except the Body on which they mov'd were Spherical. The Curious may see more of this in Dr. Gregory's Learned and Elaborate Work, Entituled, *Astronomia Geometrica & Physica*; where he lays down a Method to determine the Figure of the Earth exactly.

SECT. XI.

Of the Dimensions and Magnitude of the EARTH.

THIS Noble Property of the Earth hath exercis'd the Wits of the greatest Men in all Ages. *Anaximander*, who liv'd about 550 Years before Christ, is said to be the first who described the Circumference of the Earth and Sea; and his Dimensions were follow'd by succeeding Mathematicians, till the Time of *Eratosthenes*; and therefore is thought to be the same which *Aristotle* takes Notice of in the Close of his Second Book concerning the Heavens; viz. That the Circumference of the Earth was 400000 Stadia. *Eratosthenes*, who lived about 200 Years before Christ, and was an expert Mathematician, assign'd 250000, or, as some say, 252000 Stadia, to the Circumference of the Earth, which according

ding to *Pliny*, makes 315000 Roman Miles. *Hipparchus*, who lived 100 Years after *Eratosthenes*, added 25000 Stadia to *Eratosthenes*'s Number. *Posidonius*, a learned Philosopher, and particularly well vers'd in Astronomy, who lived in the Time of *Cicero* and *Pompey* a little before our Saviour, said the Circumference of the Earth was 240000 Stadia, as *Cleomedes* relates; but 180000 according to *Strabo*, which seems to be truest. However, *Eratosthenes*'s Dimension was follow'd by most till the Time of *Ptolomy*, who lived 144 Years after Christ, and asserted the Circumference to be 180000 Stadia. *Maimon*, King of the *Arabians*, order'd some learned Mathematicians to meet in the Fields of *Mesopotamia*, and enquire into the Circumference of the Earth, which they determined to be 20060 or 20340 Miles. From that Time till our Days this Problem lay neglected; the *Arabians* follow'd their own Mathematicians, and the *Latins* follow'd *Ptolomy*. But about 60 Years ago, *Snellius*, Professor of Mathematicks at *Leyden*, a very learned Man, finding these Computations defective, demonstrated one Degree in the Earth to consist of 28500 Perches of 12 *Rheinlandish* Feet each, which make 19 *Dutch* Miles; and by Consequence the whole Circumference of the Earth to be 8640 Miles, each Mile

containing 18000 *Rheinlandish* Feet. The Curious may find the several Ways of making up those Computations in Sir *Isaac Newton*'s Edition of *Varenus*, *Lib. 1. Cap. 4.* with his own Opinion and Animadversions upon them. The Surface of the Earth, Mr. *Keil*, in his Examination of Dr. *Burnet*'s Theory, makes to be 170981012 *Italian* Miles. The Circumference of the Earth, according to the *French* Measure, is 123249600 *Paris* Foot, or 24649 $\frac{7}{8}$ *English* Miles. The mean Semi-Diameter of the Earth is 19615800 *Paris* Foot, or 3933 Miles, of 5000 Foot to a Mile; but the Earth is higher at the Equator than at the Poles by 85200 Foot, or 17 Miles; so that the Radius of the Earth may be taken in a round Number as 200000000 Feet. The solid Content of the Globe of the whole Earth is 30000.000000.000000.000000 Cubick Feet.

Since in Geography we not only consider the greater Circles of the Earth, as the Equator, &c. but also the Parallels of the Equator; therefore we must also determine how many Miles or Perches answer to one Degree in each Parallel. I took, says *Varenus*, the Computation of the Perches from *Snellius*; but I computed the Miles my self; viz. 1900 Perches for a *German* Mile, 1500 for a *Dutch* Mile, and 475 for an *Italian* Mile.

A TABLE of the Quantity of One Degree in every Parallel

SECT.

SECT. XII.

Of the Motion of the EARTH.

THE *Copernicans* say, That the Pythagorical Motion or Circumrotation of the Earth is the Cause of most of the Celestial Appearances; otherwise every Place would have a perpetual Constancy of those *Phænomena*. But no Property of the Earth has been more warmly disputed than this; and it was formerly condemned by the Church of *Rome*.

Every Body knows that the Sun, Moon and Stars, seem, in 24 Hours time, to be moved from East to West, and to return to the same Places of the Heaven; therefore of Necessity either they or we must be moved. 'Tis the common Opinion of those who follow *Ptolomy*, that the Heavens with the Stars are moved, and that the Earth stands still; yet the *Pythagoreans* maintained the contrary long ago, for which *Aristarchus* of *Samos* was accused of prophaning Religion, before the *Areopagites*, who acquitted him: Yet this Opinion lay buried in Oblivion till that eminent Astronomer *Copernicus* revived it about two or three Ages ago, wherein he was followed by many excellent Astronomers. Their Reasons in brief are these:

1. Because of the Number of Stars which seem to perform their Circuit round the Earth in 24 Hours, that it seems to be more reasonable to explain it by the Motion of the Earth, which is but one, tho' still keeping its own Place; as when we sit in a Ship, and sail near a Harbour of Ships, which seem to move towards us, tho' it be we that move towards them. And since Nature does not use to effect that by many Things which may be done by a few, we have Reason to think she observes the same Rule in this Case.

2. Because such a swift Motion of the

Stars seems to be incredible, and to surpass all Imagination; for since they are almost at an infinite Distance from the Earth, and run through such a vast Orb, they must run in a Minute's Time at least 100000 Miles: If this Motion be ascribed to the Earth, it continues still in its Place; nor is there any Thing to be apprehended from its Swiftmess, because it's carried round its own Axis.

3. This Argument appears yet more strong, if we compare the Vastness of the Celestial Bodies with that of the Earth; for since the Sun is at least 200 times bigger than the Earth, and the fix'd Stars above 1000 times bigger, it seems much more probable that the Earth turns round its Axis with a natural Motion, than that such huge Bodies are moved from Place to Place with that incredible Swiftmess.

4. Because all the greatest Astronomers find themselves obliged, with *Tycho Brache*, to deny those solid Orbs which the Ancients made use of to maintain their Hypothesis of the Motion of the Stars, their Circumrotation about the Earth seems much more incredible: For if they should allow those solid Orbs, they must grant a mutual Penetration of those Orbs, since certain Planets are frequently found in the Sphere of another.

5. No Reason can be given why the Stars should be moved round the Earth; whereas there are some to be assign'd why the Earth and the rest of the Planets may be moved round the Sun.

6. Because neither the Pole nor the Axis is real, about which the Stars are said to move; whereas there is a Pole and an Axis in the Earth.

7. Because all the Celestial Appearances, the Rising and Setting of the Stars, and the Lengthening of Days, may be easily explain'd, if we allow the Earth to move, especially since the Convenience and Necessity of this Hypothesis is easily perceived in those admirable Properties of the Planets; to explain which

Ptolomy's Followers have been forced to invent many Excentrick Circles and Epicycles, without any Reason; but the *Copernicans* do so easily deduce those Appearances from the Earth's second Motion round the Sun, as to make them intelligible to the Unlearned; viz. 1. Why the Planets seem sometimes to go retrograde, and *Saturn* oftner and for a longer Continuance than *Jupiter*, and *Jupiter* than *Mars*; and why sometimes they seem to be carried with a more rapid Motion, and sometimes to be Stationary? 2. Why *Venus* and *Mercury* can never be seen during the whole Night? 3. Why *Venus* is never at more than 60 Degrees Distance from the Sun, and *Mercury* no more than 30; and therefore are never seen opposite to the Sun.

These Arguments, tho' not demonstrative, yet make the Motion of the Earth more probable than the Motion of the Sun.

The Arguments brought against this System are;

1. That the Weight of the Earth makes it unfit for Motion.

2. That the Parts of the Earth are naturally carried in a straight Motion towards the Center; therefore a Circular Motion is contrary to its Nature.

3. If the Earth were moved, a Stone let fall from the Top of a Tower could not fall at the Foot of it.

4. A Bullet shot towards the West at any Mark, or a Bird flying Westward to any Place, they could not hit it, if the Mark or Place were moved with the Earth towards the East; or at least they would reach it sooner than if the Bullet were shot towards the East.

5. Neither Towers nor other Buildings could stand, but must be overturn'd by such a Motion; and all Men would be troubled with a *Vertigo*.

6. Because we see plainly, say they, that the Stars change their Place; but we do not perceive that the Earth does so.

7. Because the Earth is in the Center of the World, and the Center is not moved.

8. Because the Scriptures assert the Stability of the Earth.

To these Arguments, the *Copernicans* answer thus:

To the First, by denying the whole Earth to be heavy; for Gravity or Weight is the Tendency of the Parts to the Whole of the same Nature, and such a Gravity is discovered in the Parts of the Sun and Moon; yet neither of them is said to be heavy.

To the Second they answer, That this straight Motion is of the Parts of the Earth, and not of the Whole; and that the Circular Motion of the one does not hinder the Rectilineal Motion of the other; which is plain from the Parts of the Sun and Moon.

To the Third they give Three Answers: 1. That such heavy Things are not primarily carried to the Center, but to the Earth it self, and therefore by the Shortest Line to its Surface. The Shortest is that which answers to the Tower; as Iron tends not to the Center of the Load-stone, but to the Load-stone it self. 2. The whole Air adheres to the Earth, and is moved with it; therefore such heavy Things thrown down, do, together with the Earth, acquire its Circular Motion, and are moved, as 'twere, in a Vessel. 3. *Gassendus* has demonstrated, by frequent Experiments, That if any Thing be thrown from a moving Body, the Thing thrown is moved with the same Motion as the moving Body: For Instance; a Stone thrown from the Top of a Mast of a Ship under Sail, falls down at the Foot of the Mast; and a Bullet being shot up perpendicularly from the Foot of a Mast, falls down again perpendicularly: So that this Objection has nothing in it.

To the Fourth Objection they give the same Answer as to the Third.

To the Fifth, they say, There is no Room for it, because the Motion of the Earth is equal, and it dashes against no other Body; and Buildings being heavy Bodies, of the like Nature with the Earth, are moved with it, as in a Ship; for if a Ship be moved slowly or swiftly, if the Motion be equal in calm Water without Waves, we find that erected Bodies are not overturn'd by the Motion; nor will a Cup full of Liquor on board any Ship spill one Drop.

To the Sixth, they answer, That the Change of Place in the Stars is not perceiv'd, but only the Change of their Situation, with respect to our selves; and this Change of Situation may both be observ'd, and have a Being, whether we move with the Earth, or whether the Stars move, and we continue fix'd, or whether both we and the Stars do so.

To the 7th, they answer, That both the Major and Minor of the Argument are false, or at least doubtful.

To the Eighth, they answer, 1. That the Scripture speaks in natural Things according to Appearance, and the Capacity of the Vulgar: For Instance, The Moon as well as the Sun is call'd a great Light, because 'twas created to give Light to the Night; tho' the Moon cannot be call'd great, if compared to the Stars; nor has it any Light of its own, or does illuminate the Earth every Night. So the Scripture says, The Sun goes from the one End of the Earth to the other, and returns again; whereas in Truth there is no such End. So in the Book of *Job* a plain and square Figure is ascribed to the Earth, with Pillars to support it; yet every body knows, that this must not be understood in the literal Sense. Other Places of the like Nature might be brought; but these are enough; for the Scriptures are design'd not to teach us Philosophy, but Piety. 2. *Ptolomy's* Followers use to bring some Places of Scripture to prove the Earth to be unmoveable, which are not to be understood with respect to its Motion, but

to its Duration and Constancy; and such is that Place of *Job* just now mention'd. Thus we have briefly explain'd the Motion of the Earth according to the *Copernican* Hypothesis; but must refer the further Explication of it to Astronomy; and this Motion being suppos'd, all those Things are to be applied to the Earth, which use to be consider'd in a Globe turn'd round; viz. The Axis, round which 'tis turn'd, is one of its Diameters: The Poles, or the Extremities of the Axis, are two Points which are not moved. In the Third Place we are to consider the greatest Circle or Circumference, according to which its Circumrotation is made, and its Parallels. Then as to the Quantity or Swiftness of its Motion. The First Motion, by which the Earth is turn'd round its Axis, cannot be perceiv'd in the whole Earth, but is different according to the Difference of Places; viz. the nearer any Place is to the Equator, with so much the greater Swiftness 'tis mov'd; and the nearer the Pole, with so much less Swiftness: For because in 24 Hours every Place of the World is turn'd round by the Space of the whole Circumference, to wit, 360 Degrees, the Space mov'd in 1 Hour is found thus; if we divide 360 by 24, the Quotient will be 15 Degrees, the Number by which a Place lying in or out of the Equator is turn'd round in one Hour: And if the Place lie in the Equator, they make 225 *German* Miles; from whence, in 4 Minutes, it is turn'd round one Degree, that is, 15 *German*, or 16 *English* Miles; and in one Minute, $3\frac{1}{4}$ *German*, or 15 *English* Miles.

But Places lying out of the Equator, towards either of the Poles, are in an Hour's Time turn'd round so many Degrees, but such as are, much less; for the Proportion is the same betwixt the Swiftness of the Motion, and the Distance of two Places, as it is betwixt the Sines of the Arches by which those Places are distant from the Pole: For Instance, The Distance of *Amsterdam* from the Equator,

of the Elevation of the Pole is 52 Deg. 23 Min. therefore its Distance from the Pole is 37 Deg. 27 Min. whose Sine is 61037. Let us take another Place in the Equator, whose Distance from the Pole is 90 Deg. its Sine is 100000. But a Place under the Equator is in 4 Minutes turn'd round 15 German Miles, and in an Hour 225. Therefore by the Golden Rule;

As 100000 to 61037, so 15 to 9 Miles.
Or thus: So is 225 to 137 Miles.

Therefore *Amsterdam* is turn'd round every Hour 137 German Miles, and 9 Miles in every 4 Minutes of Time.

But the Discovery of this is much easier by the Table at the End of the preceding Section; for 360 Degrees being divided by 24 Hours, we find that any Place is turn'd round 15 Deg. of its own Circle every Hour, and 1 Degree in 4 Minutes: Therefore if we enter the Table with the Elevation of the Pole, or Distance from the Equator, we shall find the Number of Miles set down at the Degrees of the Elevation given, that the Place propos'd is turn'd round in 4 Minutes. For Instance, at *Stockholm*, the Elevation of the Pole is about 60 Deg. and in the Table at 60 Degrees, I find 7 German Miles answer one Degree: Therefore I say that *Stockholm* is turn'd round so many Miles in 4 Minutes.

So great is the *First Motion* consider'd in the Place of the Earth: But the *Second Motion* is that of the whole Earth from Place to Place; and all Parts or Places are mov'd with equal Swiftneſs, and by equal Circumferences. The Quantity of this depends on the Distance of the Earth from the Sun, and is perform'd in a whole Year; and therefore every Day the Earth is turn'd round about one Degree; and in one Hour, two Minutes and an half of a Degree.

The *Third Motion* of the Earth we leave to Astronomers.

SECT. XIII.

Of the Situation of the EARTH, with respect to the Planets and fix'd Stars.

Ptolomy, and those that follow him, place the Earth in the Center of the World, in the middle of the Stars and Planets; but the ancient *Pythagoreans* and *Copernicans* place the Sun in the Center, and the Earth as a Planet betwixt *Mars* and *Venus*, and alledge it to be carry'd round the Sun in one Year; which will be better understood by the following Diagrams. In this however they agree, that the Center of the First Motion is in the Earth, by which the Stars seem to be carry'd round in 24 Hours: For both *Astronomy* and *Geography* require this Hypothesis; so that whether you follow *Ptolomy* or *Copernicus*, it detracts nothing from the Certainty of General *Astronomy* or *Geography*. The Difference being only this, That *Ptolomy* ascribes this Motion to the Stars, and *Copernicus* to the Earth.

According to *Ptolomy* the Situation of the Earth, with respect to the Planets and fix'd Stars, is thus: The Earth, the Moon, *Mercury*, *Venus*, the Sun, *Mars*, *Jupiter*, *Saturn*, the fix'd Stars.

According to *Copernicus*, the Sun is plac'd in the middle of the World, as the Heart; next to him, the Orb of *Mercury*, then *Venus*, the Earth, *Mars*, *Jupiter*, *Saturn*, the fix'd Stars.

If the Distance betwixt the Earth and Planets be demanded, it must be observ'd, that it is not always the same, but changes every Day: Therefore Astronomers reckon three Degrees of Distance, viz. the Least, the Mean, and the Greatest. The Mean Distance of the Earth, from the other Planets, according to most Astronomers, is thus:

From

The Systeme of Copernicus who holds y^e Sun is unmoveable in y^e Center of y^e World. y^e Mercury makes his Revolution round y^e Sun in 7 Months. Venus makes here afterward in 7 & 1/2 The Earth in a year. the Moon goes round y^e Earth in about 27 days. and afterwards Mars Jupiter Saturn & y^e Firmament &c.

The Sytème of Des Cartes who holds that y^e Sun in y^e Center of y^e World, that all y^e Matter of y^e Heav'n is on y^e same side with y^e Sun that is from y^e West by y^e South finds a Medium betwixt Copernicus and Tichobrunius Motion to y^e Earth as Copernicus does. but contrary to the contrary.

The Systeme of Ticho Brahe who holds y^e Earth to be y^e Immoveable Center of y^e World. y^e Motion of y^e two Luminaries and of the primus Mobile. as he makes y^e Sun to be Center of y^e Motion of Mercury Venus Jupiter & of Saturn &c.

Des Cartes places y^e Sun among y^e fixd stars. & y^e Earth. He says that tho' y^e Sun & fixd stars seem to be situated in y^e sphere, these different bodies are nevertheless situated in space. Another is that y^e S be the Sun F. f. will be y^e fixd stars. & w^{ch} an Infinite Number of others above beneath and beyond the p^{re} dispersed thro' all y^e dimensions of space. &c.

The Figure of the World

According to the System of Ptolomee who holds that the
 Earth is unmoveable in North the Centre of y^e World.

From the Moon, 60 of its Semi-Diameters.

From Mercury, 110.

From Venus, 700.

From the Sun, 1150.

From Mars, about 5000.

From Jupiter, about 11000.

From Saturn, 18000.

But the Distance of *Mars*, *Jupiter*, *Saturn*, and the fix'd Stars, is very uncertain, because of the Want of the Parallaxis. In the *Copernican* Hypothesis, the Distance is varied, not only from the Motion of the Planets, but from the Motion of the Earth. The Reasons for both Opinions are much the same with those in the preceding Section about the Motion of the Earth; for if you ascribe the Second, which is called the proper Motion to the Sun, the Earth, and not the Sun, will be in the middle; If otherwise, the Sun will be in the middle. The *Copernicans* offer the following Arguments for their System:

1. The Sun is not only the Fountain of Light, which, as a clear shining Torch, illuminates the Earth, the Moon, *Venus*, and the rest of the Planets; but is the Focus of Heat, and Vital Spirits by which the Universe is nourished and sustained: Therefore 'tis probable 'tis in the middle.

2. 'Tis more likely that the Earth turns round the Sun, that, with the rest of the Planets, she may receive Light and Heat from him, than that the Sun goes round the Earth, since he receives nothing from it.

3. The Sun being placed in the middle, furnishes us with a Reason how the Earth and the rest of the Planets are carried round him; viz. Because the Sun is a most vast Body, and endowed with great Force, and therefore puts the rest in Motion. This Argument will appear still more strong, if we consider *Kepler's* Hypothesis concerning the Motion of the Planets.

4. The Sun is turned round his Axis, as is proved by *Galileus* and *Sveinerus*, concerning the Spots of the Sun.

5. If we place the Earth betwixt *Mars* and *Venus*, and the Sun in the Center, the Motions of each of the Planets commodiously answer their Distance from the Center; which cannot be done by *Ptolomy's* System, as is evident from the Consideration of the Motion of the Sun, *Venus* and *Mercury*.

6. Those Celestial Appearances made use of in the former Section, to prove the Motion of the Earth, do likewise conclude for this Situation of it; viz. the retrograde Course of the Planets, and their Station, and the wonderful Appearances and Motions of *Venus*, *Mercury*, &c. For this Second Motion of the Earth presupposes the Situation of it. And this Argument, in my Opinion, is one of the chief; for from the First Motion of the Earth, nothing can be infer'd concerning its Situation; for the Earth might be in the Center of the World, if it wanted the Second Motion, as *Origanus* has also laid down.

7. Thus also the Variation of the Distances of Planets from the Earth is commodiously explained.

The *Aristotelians*, and those who follow *Ptolomy*, offer the following Arguments to prove the Earth to be in the Center: 1. Heavy Things are carried to the Center of the World; but the Earth is the heaviest Body; therefore it is in the Center. 2. Heavy Things would descend from the Earth towards the Center of the World, except the Center were in the Earth. 3. The Center is the ignoblest Place; but the Earth is the most ignoble Place of the Universe; therefore 'tis the Center. 4. If the Earth were without the Center of the World, and of the Motions of the Stars, then the Stars and Constellations would at some Seasons and Days of the Year appear greater than at others. 5. Neither would one half of the Heaven be always conspicuous; so that when *Taurus* rises, *Scorpius* should set, &c. 6. Nor would there be Equinoxes. 7. Nor when the Moon

Moon rises in an Eclipse, would the Sun set, &c. 8. Nor would an equal Number of Miles in the Earth answer to every Degree of the Heaven.

To these Arguments, the *Copernicans* answer thus: The First and Second are easily refuted, because the Motion of heavy Things is not to the Center of the World, but to Bodies of the same Nature; as is proved by the Parts of the Moon, Sun, and Loadstone. The Third is false, both in the Major and Minor; for the Center is a noble Place, and the Earth not ignoble. The rest of the Arguments are easily confuted by the Diagrams; at least if this be pre-supposed, that tho' the Distance of the Earth from the Sun or Center be very great, yet if compared to the Distance of the fix'd Stars from the Sun, 'tis so small, that it bears no Proportion: And this by some is reckon'd the great *Postulatum* in the *Copernican* Astronomy.

To this Place belongs the Explication of the Theorem, that the Distance of the fix'd Stars, and superior Planets, *Mars*, *Jupiter*, and *Saturn*, is so great from the Earth, that the Semi-Diameter of the Earth bears no Proportion to it; but that the Distance of the Moon, *Venus*, and *Mercury*, is not so great. As to the Sun, 'tis still in doubt; but certainly if there be any Proportion of the Semi-Diameter of the Earth to the Distance of the Earth from the Sun, it must be very small.

The Theorem is thus proved: 1. The fix'd Stars and superior Planets appear to us to rise in the same Moment, as by Computation they would appear to rise if we were placed in the Center of the Earth. Therefore the Distance of the Place where we are from the Center of the Earth, i. e. the Semi-Diameter, bears no Proportion to the Distance of the fix'd Stars. 2. If we take the Meridian, or any other Altitude, of a fix'd Star, or of one of the superior Planets, with an Instrument, we find it to be the same as

if we had observed it in the Center of the Earth: Therefore the Semi-Diameter of the Earth is nothing at all, if compared to that Distance. 3. If there were any Proportion, then the Distance of Two Stars would be found less about the Horizon than about the Meridian; because in this Situation, they are nearer to the Earth almost by one Semi-Diameter. The same holds as to the Sun; for his Diameter is not found to be greater in the Meridian, than when he is in the Horizon; but the Diameter of the Moon in the Meridian is observed to be something greater than when it is in the Horizon; and therefore in the Meridian 'tis nearer us almost by one Semi-Diameter of the Earth.

SECT. XIV.

Of the Substance and Constitution of the EARTH.

Proposition I. To explain of what Simple and Simil^r Parts the Earth is compos'd.

Philosophers are divided in this Matter: The *Peripateticks* reckon Fire, Air, Water and Earth, to be the Four Elements of all the Sublunary World. Many of the Ancients, as *Democritus* and *Leucippus*, held, that the World consisted of little solid Particles, differing only in Figure and Magnitude: They have been followed in this by many of the Moderns; and *Cartes* lately endeavoured to explain all natural *Phenomena* by such an Hypothesis.

Chymists lay down three Principles, viz. Salt, Sulphur, and Mercury; to which some add, *Caput Mortuum*.

But *Varenius* is of Opinion, That there are five First Simple Bodies, viz. Water, Oil of Sulphur, Salt, Earth, and a certain Spirit which some call Acid, and perhaps is the Mercury of the Chymists: For all Bodies and Parts of the Earth are resolv'd into those Elementary Substances;

stances; yet he owns, that they differ not so much in Essence, as in Figure and Magnitude. Of these Bodies, he holds the Earth to consist; and which being differently mix'd, produce such a Variety of Bodies, that being compared with one another, appear different or similar.

Prop. II. *The Earth is divided into dry and Liquid, or into Earth and Water; to which some join the Atmosphere.*

Water in this Sense is taken for all that's Liquid, and the Earth for every Thing that's Dry, and consists of Earthy Parts; as, 1. Sand, Loam, Clay and Mineral Earths, Chalk, Cinnaber, Ochre, *Terra-Lemnia*, brought from the Isle of *Lemnos*, called likewise *Terra-Sigillata*, Earth of *Samos*, *Armenia*, and many other different Species of Earth. 2. Stones, of which there is great Variety. 3. Metals, as Gold, Silver, Copper, Tin, Lead, Mercury or Quick-silver, or Metalick Oars; such as of Gold, Silver, &c. 4. Sulphur, Salts, Nitre, Allom, Bitumen, Vitriol, Antimony. 5. Herbs and Animals.

To the Water are referr'd, 1. Seas, and the Ocean. 2. Rivers and fresh Water. 3. Lakes and Marshes. 4. Mineral Waters, as Baths, &c.

The Atmosphere is that thin and subtil Body which encompasses the Earth towards the Heavens, and comprehends the Air, Clouds, Rains, &c. Philosophers differ in their Opinion as to the Height of the Atmosphere: *Kepler* makes it 8 Miles; and *Ricciolus* makes it probable, that 'tis at least 50 Miles high. The late Honourable Mr. *Boyle* makes the common Height of the Atmosphere, when the Mercury in the Baroscope is at 30 Inches, to be 7 Miles; upon a Supposition, that all our Air is of the same Density and Weight, from the Surface of the Earth to the Top of the Atmosphere: But since this cannot be supposed, he suggests it must be much more; and in his Book against *Linus*, he supposes it to be probable it may be some Hundreds,

say Thousands, of Miles high, in case the Atmosphere be not a bounded Portion of the Air, but reaches as high as the Air.

Prop. III. *How Earth and Water cohere, and constitute the Earth.*

1. The dry Part of the Earth has not always a regular Surface, but many Cavities and raised Parts. In the Cavities, which are round the whole Earth, is contained the Sea or Ocean: Therefore Part of the Surface of the Earth is covered with Water, and Part rises above it. The Cavities are not all equally hollow, but here and there have Rocks and raised Parts, and in some Places very deep Gulphs: So the dry Land is some Parts higher, and some Parts more depressed than others. Hence it comes to pass, that the Water which encompasses the Earth is hinder'd from overflowing it.

2. Besides that continued Cavity in the Surface of the Earth, there are also in the inner Part or solid Body of it many Hiatus's, Recesses, Windings, Conveyances, Gulphs, Conduits, and vast Receptacles; in some of which there is Sea, which is join'd to the Channel of the common Sea by some secret Conveyance: In some of them there is fresh Water, Rivers and Streams; in some of them Spirit, or a sulphurous smoaking Substance. This was also *Seneca's* Opinion, and 'tis proved by the following Arguments: 1. Because of the Rivers found in many Places, when the Earth is dug to any considerable Depth, as happens frequently in Mines. 2. Because in some Places the Sea is of an unfathomable Depth. 3. Because of Streams that are found in Caves of the Earth; particularly there is a Mountain in the West Part of *Hispaniola* of a considerable Height, with many Caves, into which Streams fall with such a Noise, that 'tis heard for 5 Miles. 4. Several Whirlpools are found in the Sea, particularly in that called *Pentland-Frith*, betwixt the

D

Orkney

Orkney Isles, and Caithness in the North of Scotland. 5. Because several Rivers hide themselves under Ground, such as the *Niger* and *Tygris*, &c. 6. Salt Fountains are found in many Places, which, doubtless, for the most Part come from the Sea. 7. Earthquakes prove the Existence of Subterranean Cavities. 8. In many Places the Earth shakes, as at *St. Omers* in the *Netherlands*, and *Peel* in *Brabant*.

From hence 'tis plain, That the Opinion of some ancient Philosophers was false, who alledged, That the Earth swims upon the Water. Some of them were likewise of Opinion, That the Earth was of old mix'd with the Water, so that it was of a middling Nature, betwixt Dry and Liquid, and of a Spherical Form: But at last the Watery Particles gathered together by Degrees into one Body, by that natural Property of joining together which is discerned in Water, that the Terrestrial Parts became thus condens'd; and that the Waters, as they retired, made Channels in the Earth. Some Modern Christian Philosophers defend this Opinion, and thus they understand that Text, *Let the Waters be gathered together into one Place, and let the dry Land appear*, Genesis i. 9. But most of the Primitive Fathers thought otherwise, for they were of Opinion, That the Water at first was separated from the Terrestrial Parts, and covered the whole Earth; but upon this Saying of *Jeboah*, the Waters retired miraculously, and the Earth was discovered, and that hitherto they are hindered by the singular Providence of God from overflowing the Earth again: And thus they look upon this Constitution of the Earth and Sea to be a Miracle. But *Varenius* shews, That there is no need of having Recourse to that, because the Inundation of the Sea is hindered by the Height and Consistency of the Land, which if at any Time removed, as by Earthquakes, &c. the Sea immediately overflows such Parts: And as to the Opinion of the ancient Philosophers, there can no Reason

be given why the Terrestrial Parts might not as well have sunk down, and have been wholly covered with Water, as that the Water should remove, and leave the Earth dry.

Prop. IV. 'Tis uncertain how those Parts of the Earth which lie towards the Centre are constituted.

Some think there is Water about the Centre of the Earth; but 'tis more likely, that the Earth possesses that Place. Mr. Gilbert, an *Englishman*, was of Opinion, That the innermost Body of the Earth is a very hard Loadstone, and that those Parts which we dig, and upon which Herbs and Trees grow, is like the Bark or Crust of the Earth, wherein there happens continual Generation and Corruption. *Cartes* differs not much from this: He thinks there are Three Regions of a different Substance in the Body of the Earth; the innermost, about its Centre, like the Substance of the Sun and fix'd Stars: The Second, which is thick and opaque, consists of very minute Particles; and the Third, upon which we live, consists of Particles that have not so close a Coherence: But there is nothing certain about these Things. That there is Fire in many Subterranean Places, and Smoke which proceeds from Sulphur, is manifest from the Baths: And *Thurnheusrus* affirms, That he found by Experience, that the nearer Mines are dug to the Centre of the Earth, the less Water is found in them.

Prop. V. The Consistency and Coherence of the Earth proceeds from Salt.

The Artificial Dissolution of the Parts of the Earth shews, that in all of them there is a certain Species of Salt to be found, and the harder the Body is, so much the more Salt, (a few oily Parts excepted) as in Metals, Rocks, &c. And that the Consistency or Concretion of all Things proceeds from Salt, is manifest from the very hard Stones that are made

made of Salt by Art. If you separate Salt from the Earth, it will no more stick together, but becomes meer Dust, and cannot be reduced to Hardness without a Mixture of Salt.

Prop. VI. *The Sorts of Earth are differently mix'd among one another in the Bowels of it.*

Thus in Mines there are found Particles of Gold, Silver, and Lead, not separate from other Particles, but sometimes mutually mix'd with one another, and sometimes with the Earth; and in some small Particles, that Artists cannot discover at first Sight but by other Ways of Trial, what it is that is contained in any Mineral Earth. When at *Amsterdam* a Well was dug 232 Foot deep, the Veins of Earth appeared as follows: 7 Foot of Garden Mold; 9 of Turf, or Peat; 9 of soft Clay; 8 of Sand; 4 of Earth; 10 of Clay; 4 of Earth; 10 of Paving Sand; 2 of Clay; 4 of White Loam; 5 of dry Earth; 1 of muddy Earth; 14 of Sand; 3 of sandy Clay; 5 of Sand mix'd with Clay; 4 of Sea-Sand mix'd with Shells; and then Clay of 102 Foot deep; and at last 31 Foot of Loam, where the Digging ceased.

Prop. VII. *The Cavities of the Earth, and its internal and external Disposition, and Situation of Parts, are not always the same, but differ at different Times:*

For not only the Sea makes several Changes in Parts of the Earth, by stopping up some Cavities, and enlarging others, but Spirits and Sulphureous Substances lurking here and there in the Earth, when they begin to kindle, and to be resolved into Vapours, they impetuously move and thrust forward the Parts of the Earth, as is plain from Earthquakes; and 'tis very probable there are such Motions in the innermost Parts of the Earth, of most of which we perceive nothing.

SECT. XV.

Of the Division of the EARTH by the Ocean.

THE Terraqueous Globe is divided into Earth covered by the Water, into Earth standing out of the Water, and Water it self. The Surface of the Earth standing out of the Sea, is divided into these Four Parts by the Interflux of the Water.

I. Into great Continents, or greatest Islands; of which we reckon Four:

1. The Old World,	} <i>Europe, Asia, Africa.</i>	} The Boundaries of this Continent, are,	On the North, the Northern, Frozen, and Tartarian Sea.
whose Parts are,			On the East, the <i>Pacifick</i> and <i>Indian</i> Sea.
			On the South, the South Sea.
			On the West, the <i>Atlantick</i> .

2. The New World,	} <i>Northern, and Southern,</i>	} Its Boundaries are,	On the North, <i>Davis's</i> Straights.
or <i>America</i> , whose Parts are,			On the East, the <i>Atlantick</i> Sea.
			On the South, the <i>Magellanick</i> Straights.
			On the West, the <i>Pacifick</i> Sea.

3. The Land of the North Pole, or *Greenland*, is every where encompassed by the Sea and Straights.

4. The South Land, or Land of *Magellan*, not yet discovered.

II. The Second Division is *Peninsula's*, or *Cherfonesi*, which are Parts of these Continents, and join'd to them by narrow Necks of Land: They are divided into Round, Oblong, and into such as have an Affinity with *Peninsula's*.

The round ones, } *Africa*,
whose Latitude } *Peloponnesus*, or the *Morea*; the *Cherfonesus* of *Grecia*,
and Longitude } *Cherfonesus Taurica*, or *Tartaria Preeopenfis*.
are almost equal: } *Cambaiia*.

The oblong are many in Number. }
1. The *Golden Cherfonesus*, or *Malacca*, adjoining to *India*.
2. *Cimbrica*, or *Futland*, adjoining to *Holstein*.
3. *Corea*, adjoining to *Tartary*.
4. 5. *North and South America*.
6, 7, 8. *California*, *Jucatan*, the *Cherfonesus* of *Thracia*.
9, 10. *New France*, *Ionia*, *Cnidensis*, *Myndensis*.

Those which have an Affinity to *Peninsula's*. } *Italy*, *Greece*, *Achaia*, *Spain*, *Asia Minor*, *Arabia*, *Norway*,
with *Sweden* and *Lapland*; *Beach*, a Country of *Magellan*;
New Guinea, *Indostan*, *Cochinchina*, [*New England*, *Monomota*,
tapa, and *Cambaiia*.

III. The Third Division is *Islands*, of which there are,

Nine great ones; } *Great Britain*, *Japan*, *Iland*, *Canada*, *Sumatra*,
Madagascar, *Borneo*, *Nova Zembla*, *California*.

Thirteen middling ones; } *Sicily*, *Ireland*, *Hispaniola*, *Cuba*, *Java Major*.
Celebes, *Crete*, *Luconia*, *Sardinia*, *Friseland*, *Terra Nova* near
New France, *Mindanao*, and *Ceilan*.

Nine little ones; } *Gilolo*, *Amboina*, *Timor*, lie among the *Indian Islands*.
Corfica, *Majorca*, *Cyprus*, *Negropont*, lie in the *Mediterranean*.
Danish Zealand, and *Jamaica* which lies in the Bay of *Mexico*.

Very small ones; } 1. Those of most Note which lie alone, as *Rhodes*, *Malta*,
Lemnos, *St. Helens's*, *St. Thomas's*, *Madera*, &c.
2. Those which lie together in great Numbers very near one
another, viz. the *Canary Islands*, the *Caribbee Islands*, the
Hesperides, those in the Bay of *Mexico*, the *Maldiva Islands*,
those about *Madagascar*, the *Molucca's*, and *Illes of Banda*,
the *Philippin Islands*, those of *Japan*, the *Illes of Theeves*,
those of the *Aegean Sea*, those about *Great Britain*, and the
Islands of Solomon.

IV. The Fourth Division is *Isthmi*, or narrow Necks, of Land, which are those betwixt *Egypt* and *Arabia*, or betwixt *Africa* and *Asia*; the *Corinibian Isthmus*, betwixt *Peloponnesus* and *Achaia*; the *Isthmus of Panama*, or *Darien*, in *America*, the longest of them all; that betwixt *Futland* and *Holstein*; that betwixt *Malacca* and *India*, &c.

SECT. XVI.

Of MOUNTAINS in General.

TIS needless to insist on the Description of Mountains, and how they differ from little Hills, since that is known to every Body. The natural Use of them is very well described by *Kircher Lib. 2. Mund. Subter. viz.* That they are the same to the Earth as Bones are to the Body, and fasten the Globe so as it cannot be dissolved: For since the Earth is compos'd of Soil of different Sorts, and produces innumerable Species of different Things, as Minerals, and Mineral Fluors, these Things could not consist together, except they were kept in by the firm Structure of the Mountains. 2. Since the Sea flows perpetually round the Land, and is in continual Motion by the Winds and Tides, the Earth could not last without the Mountains, which keep the Sea within Bounds like so many Barriers; and, as *Job* expresses it, sets Bars and Doors to it. 3. Mountains are absolutely necessary to further and regulate the Course of Fountains and Rivers, since their Water would stagnate or overflow the Country, if the Surface of the Ground were altogether level: Therefore, says he, the Mountains are like Dugs in the Bosom of the Earth, and serve as the Repositories of Nature to supply the Earth perpetually with Liquor, and to fructify the neighbouring Vallies. 4. Mountains are necessary for breaking high Winds, and for producing Variety of Herbs, which could not subsist without them. 5. Mountains are the Repositories of Minerals, in whose Cavities the Subterranean Fire matures them, as in a Furnace, for humane Use. We need say nothing of the pleasant Prospects they afford, and of the useful Shade they give, at some Times of the Day and Year, to the neighbouring

Valleys, to prevent their being parch'd up; and of the Heat of the Sun, which at other Times they reflect upon them, to prevent their being absolutely drowned with Moisture: And, in the last Place, they make the Air serene and healthful. 'Tis evident, That most Countries rise from the Shore towards the Inland Places, it being necessary that it should be so for the Course of the Rivers and Brooks: So that the Proportion of Height betwixt the Midland and Maritime Places may be known by the Declivity of the Rivers. For the Way of measuring the Height of Mountains, we refer to *Varenius, Lib. 1. cap. 9.*

'Tis evident, by the Reasons that Author gives us, That the Height of Mountains bear so small a Proportion to the Semi-Diameter of the Earth, that they hinder its Roundness no more than a Grain of Sand does that of an Artificial Globe: For since we find by Experience, that there is no Mountain which exceeds an *English* Mile and an half in Height, and that the Semi-Diameter of the Earth is 860 *German* Miles, the Proportion betwixt the highest Mountain and that can be no more than 1 and an half to 860.

Philosophers differs as to the Origin of Mountains. Some think they were created at first: But 'tis evident, that several of them have fallen down by the Decay of the Rocks which supported them, from whatever Cause that Decay proceeded; and since there are natural Causes for their Corruption, there may be the like for the Generation, at least of some of them: For that several Mountains have been generated by Progress of Time, is infer'd from the Shells that are found in the Tops of many of them, particularly in *Gelderland*: And their Way of Formation, seems to be by Heaps of Sand and Dust being blown together by strong Winds, and brought to a Consistency by Rain: But this must only be understood of the lesser Sort, since

since 'tis more reasonable to conclude, that the greater Sort were concreted with the Earth.

The same Author considers the Reason why there is frequently Rain, Clouds and Snow, on the Tops of Mountains, when the Air is clear in the neighbouring Valleys. He rejects their Opinion, who think that Mountains attract the Air and the Clouds, because they give no Reason for it. He gives his own Opinion thus: He thinks that the Vapours and Exhalations being condens'd into Drops in the middle Region of the Air, they begin to fall downward, and because the Tops of the Mountains are nearer them than the Valleys, those Drops which fall on the Mountains leave their Place in the Air, which is immediately filled by those that are next, being either pushed forward by what Philosophers call *Fuga Vacui*, or because the Nature of Water is such, that it flows to that Place where the Flux first begins.

In his 10th Chapter he treats of the Difference of Mountains, which are either in single or long Tracts, and particularly of burning Mountains, which we refer to the Description of those Countries they belong to, and shall only take Notice here, That he assigns the Cause of those *Vulcano's*, or burning Mountains, to be the Sulphureous and Bituminous Substance contained in them.

Every one knows, that Mountains which run into the Sea, or rise very high on the Shore, are called *Promontories*, or *Capes*.

To Mountains are opposed Gulphs, Caves, Abysses, and deep Valleys: The most remarkable of which, we shall treat of in their respective Countries; and the like as to Mines, Woods, and Deserts.

In his 12th Chapter he treats of the Division of the Ocean by the Earth, and proves, That the Ocean encompasses the Earth, and the Parts of it, by a conti-

nued Tract, and that its Surface is nowhere totally interrupted by Lands interposed, but only its larger Continuity, and coming together freely, a little hinder'd. This is evident from the Experience of those that sail round the Earth. As to the Seas of different Denominations, and the Division of the Ocean into particular Seas, Bays and Friths, we refer them to the particular Countries from whence they take their Name, and shall only take Notice here, That the Ocean is divided into 4 great Seas, sometimes also called Oceans, viz. the *Atlantic Ocean*, which lies betwixt the West Shore of the Old World, and the Eastern Shore of the New, and is commonly, though improperly, called the *Northern Sea*, and therefore is more rightly divided into Two Parts, one lying from the Equator Northward, where it joins with the North Sea, and the other Southward, where it joins with the South Sea. 2. The *Pacific Ocean*, commonly called the *South Sea*, which lies betwixt the Western Shore of *America* and *Asia*, as far as the *Indian* and *Philippine Islands* and *China*. 3. The *Hyperborean*, or Northern Ocean, which lies about the North Pole. 4. The Southern Ocean, that lies about the *Terra Australis*, of which the *Indian Ocean* is a Part.

In his 13th Chapter he treats of some Properties of the Ocean, and its Parts, wherein he proves, That the Surface of the Ocean, and of all Liquids, is round, or a Part of the Spherical Surface, whose Center is the same with that of the Earth. He makes use of the same Arguments that were formerly brought, to prove the Roundness of the Earth, and likewise of *Archimedes's* Demonstration, which supposes Three Things: 1. That the Earth has some Center in its Middle, and therefore is Spherical. 2. That 'tis the Nature of all Fluids, that their Parts lying equal, and continued among themselves, at an equal Distance from the Center of the Earth, that which is less press'd

is expelled by that which is more pressed, as is plain from Experience. 3. That every Part of a Fluid is press'd by the Fluid above it perpendicularly, with respect to the Center of the Earth, if this Fluid descend, or be press'd by another Body. For his Geometrical Demonstration of this, we refer to the Book it self.

He likewise proves, That the Ocean is no higher than the Shores of the Land; and therefore that the Land and the Sea are every where almost of the same Height, excepting high Mountains. This is proved *a Priori* by the preceding Proposition; and he proves it also *a Posteriori* by the following Arguments:

1. We find by Experience, that Water, unless it be stop'd, runs from higher to lower Places; Therefore if the Places about the Shores were lower than the middle of the Ocean, Part of the middle of the Sea would flow to the Shores.

2. If the Ocean far from the Shore were much higher than the Sea at the Shore, that Height would be perceiv'd at a greater Distance than a Spherical Surface admits of: Nay, it must be seen at the same Distance from which the intercepted Parts of the Ocean are seen betwixt that Height and the Shore. But we find by Experience, that 'tis not seen at a greater Distance, but that the more remote Part is gradually seen after the nearer Part, when we come to the Shore from Inland Places; and the nearer that any Part is to the Shore, so much the sooner 'tis seen at the greater Distance from the Shore.

3. When Mariners sail in the middle of the Ocean or deep Sea, tho' they make use of Mathematical Instruments, they find it no higher there than in the Parts next the Shore; which could not be, if the Sea were elevated like a Tower or high Mountain: For as by Instruments we discern the Height of Towers or Mountains above the lower Parts of the Earth, we must of Necessity by the same Instruments perceive the middle of the

Ocean to be higher than the neighbouring Parts, if it were really so.

4. In the middle of the Ocean Islands are found here and there, and that also in great Numbers in some Parts near the Continents: Therefore the middle of the Ocean is not higher than the Earth, because 'tis not higher than the Shores of those Islands.

5. No Wave of the Ocean continues long in the Form of a Heap or Hill, but is immediately dispersed, so as to make an Equality with the neighbouring Parts. Therefore there can be no such Height in the middle of the Ocean above the adjacent Parts of it.

6. If the Water were higher in the middle of the Ocean, no Reason can be given why it should not flow into the Channels of the Rivers, if their Waters were lower; for we find by Experience, that Water, wherever it is, flows into the lower Parts; and hence Inundations are occasioned. It makes nothing against this, that in some few Places the Shores are higher than the neighbouring Inland Parts, since in most Parts 'tis otherwise; and 'tis evident in the main, from the Course of Rivers, that the Midland Places are higher than the Shores. He does not however deny, that there are Countries somewhat lower than the Water of the Ocean; but they are either defended by the Height of the Shores, or by Ramparts made on Purpose, which for most part are not cast up, because the Ocean is higher than that Part of the Shore in its natural and calm State; but to save the Country from being overflowed, when the Sea is swollen by tempestuous Weather.

From all this he concludes, That the Waters of the Ocean are no higher than the Earth; and that there is no need of having Recourse to the miraculous Providence, which prevents the whole Earth from being overflow'd.

In the next Place, he gives us the Reason why the Sea, view'd from the Shore, seems to rise higher and higher the more remote

remote it is ; and concludes, that this proceeds from a *deceptio visus*, or rather from a Mistake of our Conception, which led many into that Error, that the middle of the Ocean is higher by many Furlongs than the Shore ; and wonders they were not convinced of this Fallacy by daily Experience : For if we look at an *Area* extended to a considerable Length, any Body would think that the remote Parts arise gradually higher than those which are next us, though they be all of an equal Height. He says, 'tis the same with the Waters of the Ocean ; and that if we make use of a proper Mathematical Instrument on the Shore, we shall find no Part of the remote Ocean to be higher than the Shore, but rather a small Depression ; so that the Water sinks beneath the Horizon of the Shores.

He explains this Fallacy of our Sight by the Opticks, and demonstrates it by a Figure ; for which we refer to the Book it self.

In the Fourth Proposition of this Chapter, he explains the Causes and Rise of the Bays and Friths of the Ocean, which he thinks ought more properly to be called the Bays of the Earth, and Arms or Branches of the Sea ; and that those are more properly call'd Bays of the Sea, where *Peninsula's* run into it from the Land.

The Cause of those Bays he ascribes to the Separation of some Part of the Earth from others ; and that those separated Parts are lower than the Surface of the Sea : And hence it comes to pass, that the Water overflows those depressed and separated Parts, until it meet with a higher Land, which fixes its Boundary ; and the Cause of Friths is the same.

He assigns the Cause of the Separation of the Parts of the Earth to the impetuous Motion of the Sea, by Winds or otherwise ; which happening almost every Day, in Progress of Time some Parts of the Shore are so shook by the Waves, that they give Way to the Sea ; and the

more depressed the Shore is, the more easily Bays are form'd, especially if the Matter of the Shore be such as may be wasted by the Water : Yet we must not conclude, that all Bays and Friths have been so form'd ; for 'tis probable, that some of them are as old as the Creation. We have no Account in History of any new Bay or Frith's being formed ; tho' the ancient *Greeks* tell us some such Fables concerning the Streights of *Cadix* or *Hercules* ; viz. That *Calpe*, a Mountain on the *Spanish* Shore, and *Abyle*, another on the *African* Shore, were formerly one, but separated by *Hercules*, from whence they were called his Pillars ; and the Streights were also call'd by his Name.

The Opinion of the Ancients, concerning that Streight betwixt *Sicily* and *Italy*, is much more probable, because 'tis but small.

In the Fifth Proposition of this Chapter, he handles that Question, Whether the Sea be every where of an equal Height ? That it is so, is proved by the First Proposition, (provided there be no Impediment or Stop) wherein he shews the Surface of the Ocean to be Spherical, and that it has the same Center with the Earth. But since 'tis doubted whether there are not some Causes which may make some Parts of the Ocean higher than others, he thinks it a Matter of Moment that deserves Consideration, especially to those who have occasion to dig through Isthmus's for a Communication of Trade, &c.

Many are of Opinion with *Aristotle*, That the Ocean and Earth are higher towards the North, but lower towards the Equator. The Reason is, that the Ocean seems to flow from the Northern Regions as from its Fountain ; but from this he can infer no certain Conclusion, because 'tis still a Question, whether the Northern Countries, especially the Northern Channels, be higher or lower than those next to the Equator ? Nor is it sufficiently proved from this Motion of the Sea, because

because 'tis not general, nor perceiv'd in all Northern Countries; but tho' this Motion be allow'd, it will not follow that the Ocean is higher there, because to avoid this Excess of Height, the Ocean flows from those Places to the Equator.

This Opinion, That the Northern Regions are higher than the rest, seems to have taken its Rise from this; That when we travel to the Northward, we conceive the Pole to be elevated above the Horizon, and the Place where we are; and therefore, that the Pole of the Earth and the neighbouring Countries are higher than others.

Some think, that the *Indian Ocean*, betwixt *Africa* and *India*, is higher than the *Atlantick*, and endeavour to prove it from the *Arabian* and *Mediterranean Seas*: Where, at the same time, we are to consider, whether Bays be higher or lower than the Ocean, especially in the extream Parts of those Bays, and particularly those which are join'd to the Ocean by narrow Streights.

'Tis not unlike, that the *Atlantick* and *Indian Oceans* are higher than the *Mediterranean*, especially the extream Parts of it, towards *Asia Minor*, and *Egypt*: For the *Atlantick Ocean* flows into the *Mediterranean* by the Streights of *Cadix*; and 'tis likely that the Ocean is somewhat higher than *Frishts*, because the Water has not a Free Influx into them. At the Streights, indeed, the Difference can be but small; but as we advance further into that long and broad Tract betwixt *Europe* and *Africa*, this Bay seems to be lower depress'd than the Ocean, especially when it is stop'd by Rocks, Islands, and Promontories, which repel the Water, and lessen the Influx. And if it be true what credible Writers say of *Darius*, *Sesostres*, and other Kings of *Egypt*, we are not to doubt of this Inequality of Height; for those Kings attempted to dig a Canal betwixt the *Red Sea* and the *Nile*, that Ships might sail this Way from the *Indian* and *Red Seas* by *Egypt*, and from

thence by the Mouth of the *Nile* into the *Mediterranean*, which would have been of vast Advantage to *Egypt*, and to many Countries on the *Mediterranean Sea*: but they desisted, upon Information by Persons of Skill, that the *Red Sea* was much higher than the Land of *Inner Egypt*: Therefore if the *Red Sea* be higher than *Egypt*, it must be higher than the *Nile*, and by Consequence than the *Mediterranean*: For 'tis plain, that the *Nile* is not lower than the *Mediterranean*, because it flows into it. Therefore the *Indian* and *Red Seas* are higher than the *Mediterranean*, at least than the extream Parts of it about *Egypt*, *Syria*, *Thracia*, and the *Aegean Sea*. Besides, not only the ancient *Egyptian Kings*, but their latter Sultans, and the Emperors of the *Turks*, are said to have attempted the same Thing, and to have forborn it for the same Reasons.

But what we have said concerning the *Red Sea's* being higher than the *Mediterranean*, is questioned by some, since they are both Bays of the Ocean, the *Mediterranean* of the *Atlantick*, and the *Red Sea* of the *Indian Ocean*. *Varenius* thinks the Cause to be, that tho' both of them are Bays from the Ocean, and are therefore probably somewhat lower than the Ocean; yet it is not so sensible in the *Red Sea*, because 'tis of a much less Length than the *Mediterranean*; and therefore a great deal nearer to the Ocean than the extream Parts of the latter.

Therefore if a Canal were dug from the *Red Sea*, the *Indian Ocean* would send in abundance of Water into the *Mediterranean*; but he questions whether it would send so much as to overflow the Countries which lie upon the *Mediterranean*; for it might perhaps be, that if the *Indian Ocean* sent in more through that Canal, the *Atlantick* would send in less through the Streights; because the Height of the *Atlantick* would be lessen'd if the Motion were from the *Indian Ocean* into the *Mediterranean*.

E

There

Therefore he thinks, those Princes gave over the Attempt rather from Political Reasons : And,

1. Because of the Trouble and Charge ; for the *Isthmus* is at least 40 German Miles broad where 'tis narrowest ; the Ground is full of Rocks ; and Ramparts must have been cast up in many Places by skilful Engineers, which those Governments had not.

2. Because the Christians, particularly the *Venetians* and other *Italians*, the *French* and *Spaniards*, would have reap'd more Advantage by it than *Egypt*, and other of the *Turkish* Dominions ; for the Christian Merchants would have sail'd that Way to and from *Persia* and the *Indies*, and brought home those Goods in Ships, which the *Turks* had rather should be brought through their Dominions on Camels which by the Toll they pay in several Places, bring much Money into their Treasury. *Masse*, in his History of the *Indies*, confirms this Conjecture, when he tells us how ill *Campson*, the Sultan of *Egypt*, took the Navigation and Trade of the *Portuguese* to the *Indies*.

3. He supposes the Sultans and *Turks* were afraid that the Christians, whom they knew to be strong in Shipping, would make themselves Masters of that Canal, and the adjacent Countries, together with *Medina* and *Mahomet's* Sepulchre ; since it would have been easy for them to have transported Armies by their Fleets for that End.

Alphonfus Albuquerque, the *Portuguese* Governor of the *Indies*, is said to have form'd another Design, viz. to turn the Course of the *Nile* from *Egypt*, and by that Means to have render'd it barren and useless to the *Turks*, by digging a new Channel for it from *Abassia* into the *Red Sea* ; but he dy'd without doing any Thing in it.

This may be confirm'd by another Instance : The *German Ocean*, which is Part of the *Atlantick*, running in between *Erijsland* and *Holland*, makes a Bay ;

which tho' comparatively small in respect of others, yet is called a Sea, and comes up to *Amsterdam*, the famous *Emporium* of *Holland*. Not far from thence is the Lake of *Haerlem*, which is also call'd a Sea ; 'tis as high as the Bay just now mentioned, and sends out a Branch to the City of *Leyden*, where 'tis divided into several Canals. Therefore since neither this Lake nor that Bay overflow the adjacent Countries, except in case of Tempests, against which Ramparts and Dikes are provided, 'tis plain that they are not higher than the Land of *Holland*. But that the *German Ocean* is higher, the Citizens of *Leyden* found by Experience, when they attempted to dig a Canal from that City to the said Ocean, near *Carnick*, which is but 2 Miles distant, in order to let in the Sea by that Canal, that they might have sent Ships from thence into the said Ocean ; but when they dug a great Way, it was discovered by Observation, that the *German Ocean* was higher than the Land betwixt it and *Leyden* ; and therefore they gave it over.

'Tis otherwise with those Bays which flow in, not by an oblong and narrow Channel, but by one that is large and broad betwixt Lands ; such as those of *Bengall*, *Mexico*, &c. for 'tis not to be doubted that they are of the same Height with the Ocean, from which they are not separated by any Streights. I know 'tis said, the *Spaniards* doubted whether the *Pacifick Sea* was higher than the Bay of *Mexico*, when they thought of digging a Canal through the *Isthmus* of *America* or *Darien*, for the Convenience of a free Navigation to *Peru*, *China*, and the *Indian Islands* ; but the true Reasons of their forbearing it were found to be Political, because they were afraid lest the *English*, *Dutch*, and other Nations, should make themselves Masters of this Canal, fortify it at both Ends, and invade *Peru*, &c. For 'tis certain, in this Case, the *Dutch* had been under no Necessity to undertake long and dangerous Voyages by the Streights of *Magellan* and.

and *Le Maire* to attack *Pern*, and weaken the Strength of the *Spaniards* in those Parts.

The continual Flux and Reflux, and other Motions of the Sea, occasion a different Height of the Ocean, in the same Part, at different Times and Hours of the Day; but these are external Causes; but we speak of the natural Constitution of the Water. Besides, they do not so much vary the Height in the Ocean it self, as they do near the Shores.

In his Sixth Proposition he asserts, That the Depth of the Ocean may be founded in most Parts by a Line; and that there are few Places where the Bottom has not been found.

The Depth of the Sea is various, according as the Channel is more or less depressed, $\frac{1}{2}$ of a *German Mile*, $\frac{1}{3}$, $\frac{1}{4}$, $\frac{1}{5}$, &c. and in some Places it is found to be about a whole *German Mile*, where Lines are not long enough to sound it; tho' probably it is not much deeper. We don't deny however, but that in some deep Channels there are a certain sort of Whirlpools and Subterranean Passages.

The Depth is much less in Bays than in the Ocean, because the Channel is more shallow on Account of the Nearness of the dry Land; and for the same Reason, the Ocean is shallower towards the Shore than in Places more remote, because of the hollow Figure of the Channel.

Mariners sound the Depth with a Plummet of a Pyramidical Form, weighing about 12 lb. If the Line be of 3 lb. or more, such as is sufficient for 200 Perches, the others require a Plummet of more Weight. Yet there may be a Mistake in this Observation, if the Line be hinder'd to descend perpendicularly by the Waves or Vortices of the Water.

From the Depth hitherto observ'd in most Places, 'tis manifest, that it is very near equal to the Height of Mountains and Inland Places, viz. As much as they are elevated above the Horizon of the Shores, so much are the Channels depressed

below it; but the Depth is sometimes alter'd by the Flux and Reflux, by the Increase and Decrease of the Moon, by Winds, and by the settling of Sand and Slime in the Channels.

His Seventh Proposition is, That the Ocean has no Fountains, but is contain'd within the Cavities or Channels of the Earth.

Varenius has a long Dissertation upon this Subject, with the Arguments *pro* and *con*, but determines nothing. He takes Notice, that some of the Ancients thought the Ocean flow'd from 4 Conduits under the North Pole, and represented it so in Maps; but he accounts for the Motion of the Sea from North to South, that is often observ'd in the Northern Parts by the following Reasons:

1. The Frequency of the Northern Winds.

2. The great and perpetual Quantity of Snow and Rain in those Places, which increases the Water, and makes it flow towards the South. Upon the whole, he says, he will not controvert the Opinion of those who assert, That the Fountains of all the Rivers which disburden themselves into the Ocean, are the Fountains which supply it; nor that the Water returns again to those Fountains and Rivers by Subterranean Passages, and the Vapours rais'd from the Sea, which occasion Rain. The Curious, who would see more of it, we refer to the Book it self.

In his Eighth Proposition, he asserts, That the salt Taste of the Sea-Water proceeds from the Particles of Salt mix'd with it: But whence those Particles come, or how they are augmented and preserv'd, is doubtful.

The First Part of the Proposition is plain from Experience, and known to the Vulgar, that Salt is made by the boiling of Sea-Water, and by the Heat of the Sun and Fire. In *Germany*, and many other Places, 'tis separated from the Water by Fire: In *France*, where

the Sun is hotter, the Sea-Water is let into Pits made on purpose, where, in some Months time, the Water being dry'd up by the Heat of the Sun, there is Salt found at bottom. In the Shores of many Countries, there is found Plenty of Black Salt; for the Sea flowing frequently upon the Coast, and leaving some Particles or Moisture behind it, the Water, or more subtil Part, exhales from it, and leaves Salt behind it, the Blackness of which is cured by boiling; tho' in most Shores 'tis carried off again, and dissolv'd by the Sea, which is the Reason that 'tis not found on all Shores. Hence 'tis plain, that the immediate Cause of the Saltiness of the Sea-Water is the Salt Particles contain'd in it. Therefore *Aristotle* and his Followers were in the Wrong to ascribe this Saltiness to the Heat of the Sun, or adust Particles.

The chief Controversy is about the other Member of the Proposition, from whence these Salt Particles come. *Aristotle* says, That dry Exhalations of a Saline Nature, rais'd from the Earth, mix'd with moist Vapours, and meeting with Rain, fall together with it into the Sea, and there produce Salt Particles, which occasions this Saltiness of the Water.

Other Peripateticks alledge, That the Saltiness of the Sea is occasion'd by the scorching Heat of the Sun, because the Surface of the Water is found to be most Salt.

But both these Opinions are attended with Absurdities. *Aristotle's* Opinion is confuted thus: 1. That the Sea-Water was never yet found without a Salt Taste; so that it cannot proceed from Salt Rains. 2. That the Sea would be less Salt when Rain is not frequent; which is contrary to Experience.

The Arguments of the other Peripateticks are answer'd thus: 1. That 'tis not true that the nearer the bottom, the Waters are the less salt; and there are but very few Places where fresh Springs are found in the bottom of the Sea. 2. Experience shews, that fresh Water, tho'

long expos'd to the Heat of the Fire or Sun, does not thereby become salt. *Scaliger's* Objection against this, That the fresh Water, because of its small Quantity, does not grow thick, but dissolve, is likewise answer'd by Experience; for tho' you take a great Quantity of Water, and set it over a gentle Fire to prevent its Dissolution, yet the Water does not grow salt. 3. Lakes and Marshes, tho' scorcht by the Sun, do not grow salt. *Scaliger's* Objection against this, That it proceeds from a Succession of Rain-Water, is likewise easily answer'd; for those Pools and Lakes which proceed from Rain and Snow, are dry'd up during a long Intermission of Rain or Snow, without growing salt.

From hence *Varenius* infers, That these Salt Particles were created with the Ocean; and that we are no more to dispute this, than the Origine of the Ocean it self, or the Origine of the Earth and Generation of the World. 2. If this seem less probable, he adds, that these Salt Particles may be deriv'd from the Earth, and dissolv'd in the Sea; for he tells us, 'tis certain there are many Salt Mountains or Rocks in the Bosom of the Ocean. The whole Isle of *Ormuz* is a white hard Salt Rock, of which they build the Walls of their Houses; and there is no fresh Water found in that Island. He adds, That none can be ignorant that many Salt Mines are found on the Land; but there is no need of being particular in this, for the greatest Part of the Earth is nothing but Salt: And as the Chymical Philosophers have prov'd, that every Thing owes its Consistency to Salt, Experience makes good their Assertion; for if we take a Piece of hard Earth, and burn it to Ashes, we shall find much Salt in them. To the Objection, That those Salt Parts of the Earth could not perpetually supply the Sea with Salt Particles, but they would in Time be consumed by the Ocean; he answers, That the Salt of the Sea-Water is not consum'd in such Abundance,

dance, as to need much Supply ; and if any be dissolv'd, it still remains in the Bottom, and supplies the Saltness of the Sea.

In his Tenth Proposition, he asserts, That the Water of the Ocean is so much the less salt, the nearer 'tis to the Poles ; and becomes more salt, the nearer it lies to the Equator or Torrid Zone. But tho' this may be understood of most Parts of the Ocean, yet he owns, that it admits of some Exceptions. He assigns Six Causes why the Ocean is more salt in some Places than others.

1. Under and near the Torrid Zone, where the Sun is hotter, the fresh Vapours are more separated by the Heat ; and hence it comes to pass, that the Water is more salt there than in the Northern Places, where there is not so much fresh Water separated, because of the weak Heat of the Sun.

2. The Second Cause is the Heat or Coldness of the Water ; for the same Numerical Water, or Salt Meat, &c. is more Salt to the Taste when hot, than when cold ; for the Heat or Particles of Fire make the Salt more acute and sensible to the Taste ; and this is the Reason why the Waters near the Equator seem more salt to the Taste, than those which are near the Poles, even though they should contain the same Quantity of Salt.

3. It proceeds from the greater or lesser Quantity of Salt in the different Parts of the Channel of the Ocean ; for as we find that there are not Pits of Salt in all Places of the Earth, and that those Pits do not all contain a like Quantity, we must judge the same of the Channel of the Sea ; and by Consequence, where there is most Salt in the Channel or Shore, there the Water is more salt. Thus the Isle of *Ormuz* being all Salt, the neighbouring Ocean is very salt : But whether there be more Salt in the Channels and Shores in the Torrid Zone than in the North, is doubtful ; tho' some are of Opinion, that there is more

Salt in those Places, because the greater Heat of the Sun separates the Water from the Earthy and Salt Parts : But this is not to be depended on, because we have no Observations to confirm it.

4. It proceeds from the unequal Frequency of Rain and Snow. In the Northern Places, Rain and Snow is frequent. In the Torrid Zone, they are less frequent some Parts of the Year, and at other Times they are almost continual ; and in the rainy Months the Water of the Ocean is less salt ; as is plain from the Coasts of *Malabar*, where the Ocean is fresh, in rainy Months, because of the great Quantity of Water that flows into the Sea from the Mountain *Gatis*.

5. It proceeds from the unequal Faculty of the Water to dissolve the Salt, and unite it to it self ; and since hot Water dissolves the Salt better, therefore the Ocean is more salt under the Torrid Zone.

6. It proceeds from the more or less Quantity of fresh Water that flows into the Ocean from Rivers : Thus Mariners affirm, That on the Coast of *Brasile*, where the Silver River falls into the Sea, the Ocean loses its Saltness, and affords fresh Water 15 Miles from the Shore. 'Tis the same on the *African* Coast, where the River *Zaire* discharges it self into the Ocean : And to these we may add, the fresh Water Fountains that spring up in some Parts of the Bottom of the Sea.

From hence, says *Varenius*, 'tis easy to give an Account why Salt is not so easily separated by boiling from the *German* and Northern Ocean, as from the *Spanish* Sea, and that about the *Canary* Isles and *Cape Verd*, (from whence the *Dutch* fetch great Store of Salt) because this Ocean is nearer the Torrid Zone : Yet he does not deny the Channels themselves to be more or less salt in their Constitution ; for the Sea-Water at *Guinea*, in the *Ethiopian* Sea, produces Salt at one Boiling as white as Snow ; such as neither the *Spanish* Ocean, nor any other

other in *Europe*, produces at one Boiling.

In his Eleventh Proposition, he considers why Rain in the middle of the Ocean is sweet, tho' it proceeds from the Vapours rais'd out of the Sea; and yet Sea-Water is continually salt, tho' boil'd or distill'd: And here he tells us, That Chymists have hitherto laboured in vain to extract fresh Water from that of the Ocean; for tho' both when they boil and distil it, they find Salt left in the bottom of the Vessel; yet Water separated either Way, is still found to be salt, and not fit for Men to drink. The Chymists, he says, tho' it seems strange to others, have found the Reason of it; *viz.* That there are two Kinds of Salts in Bodies, which tho' they agree in Taste, yet differ in other Qualities. The one they call Fix'd Salt, the other Volatile. The Fix'd Salt, by reason of its Weight, is not rais'd by Distillation, but remains in the bottom of the Vessel; whereas the Volatile Salt is full of Spirit, and in Reality is nothing else but a most subtil Spirit rais'd by a gentle Fire; and therefore in Distillation ascends with the Water, and is more firmly united to it by the Subtilty of the Atoms. Nor is this Volatile Salt found only with Fix'd Salt in Sea-Water, but almost in all Bodies, as Chymists find by Experience in greater and lesser Quantities. Thus sharp-tasted Herbs are found to have a greater Quantity of Salt than those which are oily.

He assigns Four Reasons why Rain-Water is as fresh by Sea as by Land, tho' it be extracted from the Exhalations of the Sea by the Heat of the Sun, or Subterranean Fires: 1. From the Slowness of the Operation, by which the more subtil Part is only rais'd from the Ocean; which, tho' it contains a Salt Volatile Spirit, yet has it in less Quantity than it would have were the Exhalation occasion'd by a stronger Heat. 2. 'Tis probable, that before these Vapours arrive at that Region of the Air where they are

condens'd into Rain, the Salt Spirit is separated by Degrees from the watery Parts. 3. The Mixture of other watery Particles which exist in the Air. 4. The cooling and condensing of the Vapours; for these Exhalations, rais'd from the Ocean by Degrees, are more and more cool'd, and being join'd with other Vapours in their Way, they are condens'd into a more thick Cloud; and in this Condensation of the Salt Spirit with the fiery Particles, they fly into the higher Part of the Air.

He gives us Two Reasons why the same is not perform'd in Distillation, where the exalted Vapours are also condens'd. 1. Because of the Smallness of the Passage, the Salt Spirit is too straitly conjoin'd to the watery Parts. 2. Because the Vapours restrain'd in the Vessel allow not a free Passage to the Volatile Spirits.

In his Twelfth Proposition, he lays down, That the Sea-Water is more heavy than fresh Water; and that the Water of one Sea is heavier than another. The Cause of this, he says, is manifest from what has been said already, because the Sea-Water contains a fix'd Salt, which is a heavier Body than fresh Water; and that the Sea is not equally salt in all Places: Yet he alledges, it does not follow, the more salt the Water is, the more heavy it is, because Salt does not augment the Weight, but lessens it, and yet makes the Water very salt.

In his Thirteenth Proposition, he assigns the Reason why salt Water does not so easily freeze as fresh Water; *viz.* Because in the Salt there is a certain Spirit which resists Congelation, and being separated from the Salt, cannot be frozen by the hardest Frost, as Chymists very well know.

In his Fourteenth Proposition, he gives us the Reason why the Ocean is not made bigger, tho' it receives so many Rivers. 1. Because the Water returns from the Sea through Subterranean Passages. 2. Because much of the Rain which

is rais'd from the Vapours of the Sea falls on the Land.

In his Fifteenth and Sixteenth Propositions he gives an Account why the Sea differs in Colour, which he assigns to the different Colours of the Sand at Bottom. Thus the *Red Sea* appears always of that Colour, because the Red Sand is kept in continual Motion by the violent Flux and Reflux of the Water there; which being taken up in a Vessel, the Red Sand sinks to the bottom. In other Places, 'tis occasioned by multitudes of small Red Worms, which Mariners call Sea-Fleas. About Cape *Verd* in *Africa*, the Sea appears Green, from a Green Herb which lies in the Surface of it, and is troublesome to Sailors. We pass by the several Things which are found in the Sea, and the different Sorts of Animals which are bred in it, till we come to the particular Countries most noted for those Animals.

In his Eighteenth Proposition he gives us the Reason why the Ocean, or rather all Water, casts Terrestrial Bodies ashore, especially in the full Moon. He ascribes this to the Motion of the Water, which if it be swift, and towards one Quarter, it carries Terrestrial Bodies with it until they come to the Shore, where the strong Motion of the Water ceasing, those Bodies are laid down; and because all Waves tend to some Coast, therefore all Terrestrial Bodies are carried to the Shore; and this happens at the Full Moon, because then the Motion of the Sea is greatest.

SECT. XVII.

Varenius, in the Fourteenth Chapter of his First Book, treats of the Motions of the Sea in general, and particularly of its Flux and Reflux.

IN the First Proposition of this Chapter, he asserts, That Water has only one natural Motion, viz. from a higher

to a lower Place; and if the neighbouring Body or Place be either equal with, or higher than the Surface of the Water, then the Water rests, except it be put in Motion by a violent Cause. This being plain from Experience, there is no need to insist upon the Proof of it.

In his Fifth Proposition, he divides the Motion of the Sea into General, Proper, and Contingent Motions. The General Motion is that which is found at all Times in all Parts of the Ocean. The proper Motions are those by which some Parts of the Ocean are only moved, and those Motions are either perpetual or anniversary; the latter being found only at certain Months and Days of the Year. The Contingent Motions are such as begin and end without any certain Order, and these are infinite; the Cause of which is the Wind, which drives the Sea before it to an opposite Point; and from this, the Sea is never free in one Part or other.

In his Seventh Proposition, he divides the General Motion of the Sea into two Sorts: The one is continual from East to West; and the other consists of two contrary Motions, call'd Flux and Reflux.

That the Ocean moves continually from East to West, is proved chiefly from the Motion of that Sea which lies in the Torrid Zone, betwixt the two Tropicks. This Motion is plainly perceived by those who sail from *India* to *Madagascar* and *Africa*; and likewise in the *Pacifick* Ocean, betwixt *New-Spain* and *China*, and the *Molucca's*; and likewise in the Ocean betwixt *Africa* and *Brasile*. For the particular Instances of this, we refer to the Account of the several Countries, and of the Seas adjoining to them.

In his Eighth Proposition, he shews us, That the Winds frequently alter this Motion of the Sea, especially the West Winds: For because those Winds blow for most Part from South and North, or from their collateral Points; hence it comes to pass, that the Sea, which by

its General Motion tends to the West, is carried towards the collateral Points of the West; and likewise because the General Wind blows very rarely from the East it self, but for most Part from the collateral Points of the East, it changes the General Motion of the Sea. The Northern Winds change this Motion more frequently in the Northern Sea, where the General Motion of the Ocean is sensible but in a few Parts.

In his Ninth Proposition, he tells us, That the Cause of this General Motion of the Sea from East to West is uncertain. Here he informs us, that the *Aristotelians* think it proceeds from the first Motion of the Heavens, which is not only common to all the Stars, but also in Part to the Air and Ocean, by which all Things are carried from East to West; tho' this was unknown to *Aristotle* himself, and all our *European* Philosophers, until the *Portuguese* sail'd through the Ocean under the Torrid Zone. Some of the *Copernicans*, tho' they ascribe this Motion to the Moon, yet they think the Motion of the Earth contributes much towards it; for they suppose the Water cannot follow the Circumrotation of the Earth, and that it stops towards the West, while the Earth is carried Eastward; and that so the Sea is not mov'd from one Part of the Earth to another, but that the Earth leaves Parts of the Water; one after another, behind it. Others, who are neither satisfied with *Aristotle* nor *Copernicus's* Opinion, have Recourse to the Moon, as that which governs all Moistures; and therefore they will have it, that she carries the Sea about from East to West: But if you ask them how, they tell you, 'tis by an occult Quality, Influence, Sympathy, her Nearness to the Earth, and such like; which is as much as to say, they knew not how. 'Tis indeed very probable, that the Moon is the Cause of those Motions, because at the New and Full Moon the Motion is much more violent than in the Quarter Moons, when 'tis commonly very small.

The acute *Mr. des Cartes* explains, in a Mechanical Manner, how the Moon occasions this Motion both in the Water and Air: For he supposes, according to his general Hypothesis, that infinite Numbers of Atoms are carried round the Earth, by which the Space, which he calls the Vortex of the Earth, is filled up, without any *Vacuum*, as far as the Moon; viz. Let the Earth be FEHG, the Water 2143, the Air 6587, the Vortex of the Earth BADC, the Moon B:

If therefore in the Vortex BADC, there were no Moon, says he, the Particles of that Vortex would, without any Let, be turn'd round the Center T: But because the Moon is in it, therefore the Space by which the Celestial Matter flows, betwixt B and T, is made more strait; and hence it follows, that the Celestial Matter flows more swiftly there, (betwixt B and T) and therefore presses more both the Surface of the Air in 6, and the Surface of the Water in 2, than if the Moon were not in the Diameter of the Vortex BD: And since the Bodies of the Earth and Air are fluid, and easily give Way to that Pressure, they could not be so high above the Parts of the Earth F and H, as if the Moon were without the Diameter BD; and on the contrary they must be higher towards E and G. But while the Earth is carried from E by Way of F towards G, or from West to East, the Tumor of the Water 412, and like-

likewise of the Air 856, which now lie upon the Part of the Earth E, do move by Degrees towards more Western Parts; so that in 6 Hours Time they come to the Part of the Earth H, and in 12 Hours to the Part of the Earth G. Hence it comes to pass, that the Water and Air are carried from the East Parts of the Earth to the West by a continual Flux. Thus, says *Cartesius*, the Force of the Demonstration lies in this; because the Earth E F G H is carried round with the Water 1234, together with the Celestial Matter of the Vortex betwixt B A D C and 6587; but the Moon being in B, makes the Space B 6 more straight; therefore the Celestial Matter, with a certain Pressure passing through the straighter B 6, the Air and Water, while F passes through below B, must be pressed forward towards H G E, and while E passes through under B, must be pressed forward towards H G F, and so on. Nor can the Part of the Celestial Matter which reaches the Moon in B D refuse back, tho' repell'd, because all is full of Bodies: And tho' it press the Air and Water from 62 F, not only towards the West E 15, but also towards the East 73 G. Yet because the Parts situated from 62 F towards the East 73 G, do more and more recede from those Streights, but the Parts situated towards E 15 do more and more approach 'em; therefore this Force is principally received by them.

But there are several Things wanting in this Explication of that ingenious Person.

1. It would follow from hence, That the Sea should fall as the Moon approaches it, and rise in those Parts which are a Quarter or 6 Hours distant from it; that is to say, the Tumor is in E 15; but in F 26, where the Moon is Vertical, there's the less Height: But this is contrary to Experience; for in F 26, the Sea swells; but in E 15, there's the least Swelling. How this Absurdity may be avoided, shall be observ'd in the following Proposition.

2

2. 'Tis not sufficiently shew'd (*Cartes* himself has plainly omitted this) why when the Celestial Matter presses the Air in the straight Space B 6, and the Water 2, that it is not equally moved towards G 37; since, with the Earth it self, both the Air and the Water, as well as the Celestial Matter, are carried towards G 37; and therefore the Water and Air are rather carried towards the East than towards the West. I doubt, says *Varenius*, whether this Objection can be sufficiently remov'd, merely by the Subduction of the Parts from 6 B, towards G 3.

3. When the Moon approached any Sea, the Wind would be found more vehement in that Part towards the West from the East, than at another Time: But it is not so.

4. It is more manifest, that the Sun occasions that Motion in the Air, or rather General Wind, from the East towards the West, because we perceive it in the Morning, before and at the Rising of the Sun, in most Places; for then it is a Quarter distant from the Vortex of the Place. These Things deserve to be consider'd in Mr. *des Cartes's* Explication, to say nothing of the Hypothesis it self.

Varenius doubts whether this Motion of the Ocean can be ascrib'd to a general East-Wind; for since that Wind is perpetual under the Torrid Zone, it would seem that it might also occasion that perpetual Motion of the Sea. 'Tis certain, that this Motion is encreas'd with the Highness of the Wind; but that's no sufficient Proof that the Motion it self depends on the Wind. The Connexion which this Motion has with the Moon seems to oppose this, because when the Moon approaches the Sea, it makes it swell. 2. Because in the Full and New Moon that Motion is more vehement than in the Quarter Moons. This is excellently explained by Mr. *des Cartes's* Demonstration; viz. because in the New and Full Moon, the Moon is nearer the Earth; and thus the Passage B 6 is made

F

more

more strait for the Celestial Matter to pass through, and therefore there is the greater Pressure. And tho', when the Moon is Full, the Swelling of the Sea may be ascrib'd to her greater Light, yet when the Moon is New, this Reason ceases; and so 'tis plain, that the Light of the Moon is not the Cause of this Motion, but it must rather come from *Cartes's* Pressure; as we shall have Occasion to shew in what follows.

In his Tenth Proposition, he lays down, That the Second General Motion of the Sea is its Flux and Reflux, by which in 12 Hours and an half 'tis perceiv'd to flow and ebb; viz. it flows when the Moon comes to the highest or lowest Meridian, and it ebbs when the Moon retires from the Meridian towards the West or East.

Here he proposes to be enquir'd, in the first Place, Whether the Ocean by this Motion be carried towards one certain Point, i. e. from East to West, and from West to East?

For the Shores of Bays, and the Channels of Rivers, in which the Flux and Reflux is more discernable than in the Main Sea, lie towards different Points; some from West to East, as the *Mediterranean* Sea; some from South to North, as the *Arabian* Gulph: And in each of those Bays and Shores, the Waters flow according as they lie; and by Consequence, in those different Bays and Shores, the Motion of the Ocean is towards different Points: Therefore 'tis to be enquir'd in the first Place, Whether this Motion of the Ocean observes no certain Point, or is in some Places carried to different Points, or whether it observes two Points, i. e. the Western Point in the Flux, and the Eastern Point in the Reflux, or whether 'tis carried to the Western Point both in the Flux and Reflux? He answers, That the whole Ocean by the Flux is carried from East to West, and the like in the Reflux; but in the latter by a less Quantity of Water: And therefore he concludes,

That the Flux and Reflux of the Sea is not to be reckon'd distinct from that General Motion by which it is continually carried from East to West, but only as a Modification of that General Motion, and is more properly called a Rising and Falling, than Flux and Reflux; but 'tis call'd Flux and Reflux, because it seems to approach to, and retire from the Shore, not from the Quality of the Motion it self, but because of the Situation of the Shores, tho' the Ebb be not occasion'd by that Situation, but by the Nature of the Motion it self. Nor can the Motion of the Sea be consider'd from its flowing to the Shore; for whatever the Motion of the Sea be, and to what Point soever it tends, the Flux is always towards the Shore, because of the fluid Nature of the Water.

He says, That the Flux and Reflux of the Sea is prov'd to be always from East to West, by the following Arguments: 1. In the Ocean remote from the Shore, under the Torrid Zone, there is no other Motion perceiv'd but that from East to West. 2. In such Friths as are directly extended from East to West, and by which the Parts of the Ocean are join'd, as the Streights of *Magellan*, *Manila*, and *Java*, &c. the Sea rises and falls 12 Hours; but in the Fall it does not flow back out of the Friths from West to East, but flows out by the other Mouth of the Frith into the West; which is a manifest Proof, that this Rising and Falling of the Sea is not a peculiar Motion, but a Modification of the General Motion; and that the Sea does not flow back towards the East. But we are to observe as before, That when we say the Sea flows from East to West, we understand not only the Cardinal, but also the Collateral Points.

In the Eleventh Proposition, he explains the Cause of the Flux and Reflux of the Sea, or rather of its Rising and Falling: And here he tells us, That no Phenomenon in Nature has more exercised the Pens and Thoughts of the

Learned,

Learned, tho' for most Part to little Purpose. Some were so weak as to fancy the Sea and Earth to be an Animal, and that the Flux and Reflux of the Sea was occasioned by its Respiration. Others fancied there was a great Vortex in the Sea near *Norway*, which swallowed up the Water for 6 Hours, and threw it out again as many. *Scaliger* and others ascrib'd it to the Shores, particularly to those of *America*, which repell'd the Sea when it was carried towards them by its General Motion; but most when they perceived the Connexion of the Rising and Falling of the Sea with the Motion of the Moon, concluded it to depend intirely on that.

Mr. *des Cartes* deduces this Motion from his general Hypothesis thus: Look back into the Diagram of the Ninth Proposition, in which let A B C D be that Vortex, which has the Earth for its Center, and which, with it and the Moon, is carried round the Sun in the greater Vortex. M the Center of this Vortex, E F G H the Earth, 1234 the Surface of the Sea; by which, for the better Perpicuity, we suppose the Earth to be every where covered, and 5678 to be the Surface of the Air which encompasses the Sea: Therefore if there were no Moon in that Vortex, the Point T, which is the Center of the Earth, would be in the Point M, which is the Center of the Vortex; but the Moon being towards B, this Center of the Earth T ought to be betwixt M and D; because when the Celestial Matter of this Vortex is moved any thing quicker than the Moon and Earth, which it carries with it, except the Point T be somewhat more distant from B than from D, the Prefence of the Moon would hinder it to flow so freely betwixt B and T, as betwixt T and D: And since the Place of the Earth in that Vortex is not determined, except from the Equality of the Force of the Celestial Matter which flows about it; therefore 'tis evident, that it ought somewhat to approach towards D: And the same Way when the Moon is in C, the Cen-

ter of the Earth ought to be betwixt M and A; and so the Earth always departs a little from the Moon. Moreover, because by the Moon's being towards B, not only that Space by which the Celestial Matter flows betwixt B and T, but also that by which it flows betwixt T and D, is made straiter. Hence it follows, that that Celestial Matter flows more swiftly there; and therefore does the more press both the Surface of the Air in 6 and 8, and likewise the Surface of the Water in 2 and 4, than if the Moon were not in the Diameter of the Vortex B D: And since the Bodies of the Air and Water are fluid, and easily submit to that Pressure, they ought to be less high over the Parts of the Earth F and H, than if the Moon were without this Diameter B D, and on the contrary must be higher towards G and E; so that the Surface of the Water 1, 3, and of the Air 5, 7, would be protuberant there. But because the Part of the Earth which is now in F opposite to the Point B, where the Sea is lowest, will after 6 Hours be in G, opposite to the Point C, where the Sea is highest, and in 6 Hours more in H, opposite to the Point D, and so on: Or rather, because the Moon does in the mean time move something forward from B to C, and in the Space of a Month runs through the Circle A B C D. The Part of the Earth which is now in E, opposite to the Body of the Moon, will be in 6 Hours and about 12 Minutes beyond the Point G, in that Diameter of the Vortex A B C D, which cuts the Diameter of the Vortex, in which the Moon will then be at Right-Angles, then the Water will be most high there, and after 6 Hours and 12 Minutes, it will be beyond the Point H, in the Place where the Water will be lowest, &c. From whence 'tis clearly understood, that the Water of the Sea must in every 12 Hours and 24 Minutes flow and ebb in one and the same Place.

This is *Cartes's* Demonstration, in which 'tis particularly ingenious, because it very aptly shows not only how the Afflux of the Sea is made towards a Place when the Moon is moved towards the Vortex or Meridian of it, but also when the Moon is mov'd below the Horizon to the Midnight Meridian.

We told in the Clofe of the Ninth Proposition what was wanting in this Demonstration: And 'tis chiefly to be wonder'd at, that *Cartes* did not observe, that, according to his Demonstration, the Height of the Water must be least, and the Swelling intirely cease, when the Moon came to the Meridian; as when the Moon is in B, the Water is lowest in 2 and 4, and on the contrary the Water swells at the Departure of the Moon or Earth; so that when F is in G, that is, 6 Hours from the Moon, it will be at the highest: Which is manifestly contrary to Experience; for when the Moon approaches the Meridian, the Water increases, and when she goes from it, it decreases; yet *Cartes* asserts the contrary, both in his Words and Diagram. But I think, says *Varenius*, that the Absurdity may be removed from the Demonstration thus: Let us suppose that the Vortex of the Earth ABCD is without the Moon, and that the Water 1234 is equally distant from the Center T, without any Tumor, but carried about with the Earth and Celestial Matter betwixt ABCD and 5678. Let the Body of the Moon approach in this Vortex; for Instance, in B, and thus the Space TB is made straiter, and the Celestial Matter, as it endeavours to get through that Passage, will press the Water in 2 towards I.

Therefore whilst the Water is pressed from 2 towards I, 'tis to be enquired where the greatest Swelling of the Water will be, whether in the Place E, which is a Quarter distant from the Place F, (to which the Moon is Vertical) or in the Place near unto, or which is next to F towards E? If we assert

the First, to wit, the Tumor, must be in E, Experience gainsays it; but that the Second is truly so, is confirm'd by Experience, and proved by Reason, viz. while the Moon is over the Place E, the Water will be expell'd from 2 towards I; but the greatest Swelling will be in the Place next to 2, not in I; but the least Increase will be in I. This is manifest from Experience, because in the Western Places, the Swelling of the Sea is latest perceived. Reason it self, and the Nature of the Motion of the Water, require this: For if the Water be poured out into 2, that it may flow towards E, the greatest Plenty will be in the Place E, a little less in the neighbouring Place, and still a little less in the Place next to that, and the least in E: Therefore when the Water is thus pressed from 2 towards E, the greatest Quantity of it will be in the Place next to 2, and the Tumor will be so much the less, the more remote the Tumor is from 2: For because the Earth is carried round, that E might come to F, then the greatest Tumor will be in E, and the Water will be thrust towards H.

Therefore *Cartes's* Diagram and Demonstration is so to be chang'd, that the Tumor may be in the neighbouring Place to 2; that is, to the Place to which the Moon is Vertical.

In his 12th Proposition, he informs us, That in the Full and New Moon, the General Motion of the Sea from West to East is most vehement, and the Swelling of the Sea is in most Parts perceiv'd to be greater; but in the Quarter-Moons, the Motion and Swelling are both least.

Experience proves this Proposition; for Mariners testify, That the Sea swells at New and Full Moon, but is calmer in the Quarter-Moons. This is also demonstrated easily, according to the Hypotheses of the foregoing Propositions: For the Moon, when Full and New, is nearer to the Earth than at any other Time, and further off in the Quarters, as Astronomers demonstrate: For when the Moon

Moon is nearer to the Earth, that is, when the Space B T is less, the Celestial Matter being stop'd, presses the Water with more Force from 2 to 1, (because 'tis nearer;) but in the Quarters 'tis contrary.

Yet the Motion is observ'd to be more violent at the Full than at the New Moon, at least in some Places; for which, says *Varenius*, he can see no Cause, except it be ascrib'd to the Light of the Moon. Nor can it be otherwise explain'd, why at Full Moon both Trees and Animals are more impregnated with the Moisture of the Ocean than in the New Moon, tho' the Sea does equally swell them. Yet he says, 'tis wonderful what *Twiss*, a *Netherlander*, says in his Description of *India*, of the Kingdom of *Guzareth*; in which he lived many Years, viz. That Cockles, Crabs, and other Shell-Fish, have less Moisture and Flesh in the Full Moon, but most in the New Moon; which is contrary to what is perceiv'd in all other Countries. Nor is it less wonderful, that at the Shores next to the Mouth of the River *Indus*, in that same Kingdom, the Sea increases and swells at the New Moon; and that not far from thence, in *Calecut*, the Sea increases at the Full Moon.

In the Time of the Equinoxes, the Floods are greater and stronger than at other Times; but during the Solstices, they are less. *Cartesius* thinks, this Phenomenon is only to be accounted for from his Hypothesis; but his Account of it is very obscure, and far from a Demonstration: 'Tis probable, the Sun and General Winds contribute much towards the Swelling of the Sea during the Equinoxes, the Sun being directly over the Sea under the Torrid Zone; so that either through Influence of the Sun or Wind, the Sea cannot fail to swell more then, than at other Times: Or we may say, That the Swelling of the Sea, great Rains, Winds, and Inundations, at that Time, are to be derived all from the same Cause.

In some Bays, Shores, and Parts of the Ocean, there's a great Increase and Decrease of Water in the Ebbs and Floods: In some, it is very small; and in others, there's no sensible Flood or Ebb.

Those Places have the greatest Flood and Ebb, 1. That are in the Torrid Zone, within the Tropicks. 2. Those lying directly East and West, or towards the Collateral Points. 3. Bays that are very long, and not broad. 4. Places that have few Islands or Promontories.

The most remarkable Flood and Ebb hitherto known is in the Bay of *Cambaia*, in one of the Mouths of the River *Indus*; for it ebbs speedily, and the Water retires a vast Way: Whence 'tis reasonably thought to be the Place where *Alexander the Great* arrived with his Fleet, in order to transport his Army; but finding the Water to retire all of a sudden, and his Fleet to be left on dry Land, he judg'd it was the Mind of Heaven that here he should put a Stop to his Progress: And this is also reported by the Inhabitants of *Cambaia*. For the higher the Channel is, the more it is uncover'd at the Tide of Ebb; but 'tis probable there may also be some other Cause.

At the Town of *Damma* in *India*, near *Surrat*, the Height of the Water is varied to Two Fathom and an half, and the Sea retires half a German Mile from the Shore.

In the Bay of *Cambaia*, the Water rises sometimes 5, and at other Times 7 Fathom high; which Strangers not knowing, do many Times lose their Ships; which, upon the retiring of the Sea, are dash'd against the Rocks.

There is a vast Irregularity of the Tides in the Bays and Shores of the Straights of *Magellan*; sometimes the Tide of Ebb and Flood lasts 3 Hours, and sometimes 12, which is ascrib'd to the violent Irruptions of the Sea into that Frith, and to the frequent tempestuous Winds.

About

About *Malacca*, and the Streights of *Sunda*, there are very great Floods and Ebbs.

Some of the Ancients (as *Scaliger* informs us) said, there was so great an Ebb in the *Arabian Gulp*, or *Red Sea*, that *Moses* and the Children of *Israel* passed it without a Miracle; but this is false, because the Sea never ebbs there so much as to leave the Channel dry.

Thomas Button, an *Englishman*, when he winter'd at *Nelson's Bay* in *Hudson's Streights*, at 57 Degrees of Northern Latitude, observ'd, that every 12 Hours the Water rose 15 Foot and more; and next Summer he found it much the same in the 60th Degree: But in *Hudson's Bay*, and in that of *Sirame*, the Water did not rise above Two Foot.

Along the Coasts of *China*, and in the Islands of *Japan*, the Tides are very discernable.

They have great Tides at *Panama*, a Town in *America*, upon the *Pacifick Ocean*, the Water rises very high, and immediately falls: At Full Moon, the Floods are so great, that the Water enters the Houses of the Town. Along all the Coasts of the South Sea, they have very great Floods and Ebbs; and at low Water, the Sea retires Two *German Miles*, that it cannot be seen by those who stand on the Shore.

In the Gulph of *Bengal*, upon the Coasts of *Siam*, the Water rises 10 Foot.

In the *Mediterranean*, the Floods are not perceived, because the Situation is contrary to the Point towards which the Sea is carried; therefore the Water is so little augmented by the Flood, that it is not perceptible, except in the Gulph of *Venice*, which, because of its great Length, and small Breadth, shews the Flux and Reflux of the Sea, which is not perceiv'd in the rest of the *Mediterranean*, because of its great Breadth. Hence it comes to pass, that this Flux and Reflux of the Sea was unknown to the *Greeks*, and likewise to the *Romans* in the Time of *Scipio Africanus*: So that both of

them, when they perceived it in other Places, look'd upon it as a Miracle; as is evident from *Alexander the Great's Expedition*, and *Scipio's Siege of Carthage*: But in *Cicero's Time*, it was well enough known to the *Romans*. Some small Fluxes were observ'd at *Marseilles*; and in some Coasts of *Barbary*, it is said to be remarkable enough.

But in the *Baltick Sea*, and likewise in the whole *North Sea*, beyond *Great Britain*, *Norway*, and *Greenland*, and in the Northern Shore of the *Pacifick Sea*, no Flood or Ebb has hitherto been observed. The Cause of this is not yet very well known, except we ascribe it to their being far remote from the Course of the Moon, that they are extended from the West to the East and North, and that the Tides are hindered by Multitudes of Islands and Promontories. These Three together must be assigned as the Causes which hinder the Tides in those Seas. Thus the Objection, as to the Tide in *Hudson's Bay*, will be removed, because it lies from East to West; and when the Sea is carried to the latter, it is no wonder that the Flood is more perceptible there than in the Sea of *Norway*, the *Baltick*, and other Northern Places.

In his 16th Proposition, he shews, That in those Places to which the Moon is Vertical, the Flood and Ebb is greatest, except other Things hinder it, as we mention'd in the 14th Proposition: From whence it comes, that the more remote those Parts of the Sea are from that Place, so much the less is the Flood and Ebb.

In his Eighteenth Proposition, he shews us, That the greatest Flux of the Sea in any Place, and the Time of it, ought to be when the Moon is in the highest or lowest Meridian of that Place; but in many Parts it is found in another Situation of the Moon.

For then the Moon is nearest to any Place when she is in the Meridian of it, because the *Hypotenuse* of a Right-Angled Triangle is longer than the *Cathetus*: From whence it is infer'd by the 16th

Pro-

Proposition, That when the Moon is in the Meridian, then the Flood ought to be highest, and an Ebb immediately follows; but when the Moon is in the low Meridian, then the narrow Part of the Vortex of the Earth opposite to it is in the high Meridian, and effects the same Thing as if the Body of the Moon were there.

But here we meet with a great Difficulty; for there are many Shores of the Earth, where we find that the Flood is not highest when the Moon comes to the Meridian, (as the Philosophers of former Ages taught) but sooner or later, viz. as the Moon comes to a certain Vertical Circle, or to a Point that is not Cardinal. Nor is this Point constantly observ'd; but for most part at New and Full Moon the Flood is highest, and the Ebb begins before the Moon comes to this Quarter or Vertical Circle. Thus at *London*, the Water is at highest when the Moon comes to the Point betwixt the South and West, or betwixt the North and East; that is, to the South-West, or North-East Point. For *Varenius's* other Instances to prove this Proposition, we refer to the Book it self.

It is very difficult to explain the Cause of this remarkable Difference in all Places, tho' it be incumbent on a natural Philosopher or Geographer to do it. It is probable, that the various Windings of the Shores, their Situation with respect to the Sea, the Obstructions occasion'd by Islands, the Meeting of different Tides, the Distance of Places from the Course of the Moon, the various Winds, especially the Constant and General Winds, and the Declivity of the Shores, contribute much to the remarkable Difference above-mentioned. For Instance; At the Port of *London*, the Tide flows till the Moon comes to the South-West; viz. she declines from the Ecliptick towards the South; for then the Water begins to ebb, but not when the Moon comes to the Meridian; therefore we must say, That while the

Moon moves from the Meridian of *London* towards *Brasile*, (or from *Brasile* towards *London*) therefore the Sea does not ebb from *London*, but still flows, because the Shores of *America*, towards which the Ocean is mov'd by the Moon, repels that Water towards *England*. But why, whilst the Moon declines from the Ecliptick to the North, is the Flood greatest, and the Beginning of the Ebb observ'd, before the Moon comes to the Meridian, viz. in the North-East Quarter?

I answer, That it is because the Moon is much nearer *England* when she declines from the Ecliptick towards the South, and therefore hastens the Flood; but the Cause why 'tis not continued till the Moon comes to the Meridian, may be, because the Moon moves the Sea more towards the Sea of *Mexico* and *Hudson's Bay*, where a great Flood and Ebb is observ'd. But *Varenius* owns, that these Reasons do not satisfy him; and therefore he leaves it to further Observation and Enquiry.

In his 19th Proposition, he lays down, That in most Places, the Sea flows Six Hours and Twelve Minutes, and ebbs as much.

In some few Places it flows longer, and ebbs in a shorter Time; and on the contrary, in some few Places it flows a shorter Time, and ebbs longer, but so as the Flood and Ebb together make 12 Hours, with 24 $\frac{1}{2}$ Minutes; so that it flows and ebbs twice in 24 Hours and 48 $\frac{1}{2}$ Minutes; that is almost 25 Hours; so that each Day High-Water happens almost a whole Hour later, because the Moon returns every Day to the same Point of the Compass so much later.

Varenius thinks it difficult to assign the Causes of this Difference: Some are of Opinion, That the impetuous Current of some Rivers is one Cause why the Time of Flux and Reflux is so unequal. For Instance; the *Garonne* flows 7 Hours, and ebbs in 5; for the Violence

lence of the Stream bears against the Tide, and stops its Motion when it flows.

In the 21st Proposition, the Hour being given when it is High Water or Lowest Ebb in the Day of the New or Full Moon, where the Flood and Ebb is ordinary, viz. 6 Hours 12 Minutes, he shows how to find the Hour and Minute of High or Low Water any Day of the Moon.

It was said before, That the Time of High and Low Water is every Day later by $48\frac{1}{2}$ Minutes; or, to speak more accurately, $48\frac{1}{2}$ Minutes, than it was the former Day.

If therefore the Time of High Water at any Place on the Day of the Full Moon be at 12 of the Clock, the High Water will be the following Days of the Moon's Age, according to the following Table.

<i>Moon's Age.</i>	<i>Hours.</i>	<i>Minutes.</i>
1	12	48
2	1	37
3	2	27
4	3	16
5	4	5
6	4	55
7	5	44
8	6	34
9	7	23
10	8	12
11	9	1
12	9	51
13	10	40
14	11	29
$14\frac{1}{2}$	12 at Midnight.	
15	12 of the Day.	

This Calculation supposes an equal Motion of the Moon from the Sun, which however is unequal; so that the Moon in her *Perigeum* moves much more swiftly from the Sun, than when she is in her *Apogaeum*; and then the Flood is longer than 6 Hours and 12 Minutes: But when the Moon is in her *Apogaeum*, the Flood is sooner; for some of the Lunar Months exceed 30 Days, and others are less than 29, and the Medium is reckon'd 29 Days, 12 Hours, and 44 Minutes.

But this Matter of the Tides is more clearly and accurately described by the Learned and Ingenious Captain *Edmund Halley*, in his true Theory of the Tides,

extracted from Sir *Isaac Newton's* admirable Book, Entituled, *Philosophia Naturalis Principia Mathematica*: Being a Discourse presented with that Book to the late King *James*, thus:

He explains this, and most of the great and surprizing Appearances of Nature, by the sole Principle of *Gravity*, whereby in the Earth all Bodies have a Tendency towards its Center; and having demonstratively prov'd the Law of the Decrease of Gravity, he enquires into the necessary Consequences of this Supposition, whereby he finds the genuine Cause, and discovers the hitherto unknown Laws of the Ebbing and Flowing of the Sea.

He

He shews the Theory of the Motion of the Primary Planets to be nothing else but the Contemplation of the Curve Lines; which Bodies cast with a given Velocity in a given Direction, and at the same Time drawn towards the Sun by its gravitating Power, would describe; or, which is all one, that the Orbs of the Planets are such Curve Lines as a Shot from a Gun describes in the Air, being cast according to the Direction of the Piece, but bent in a crooked Line by the supervening Tendency towards the Earth's Center; and the Planets being suppos'd to be projected with a given Force, and attracted towards the Sun after the afore said Manner, are prov'd to describe such Figures as answer punctually to all that the Industry of this and the last Age has observed in the Planetary Motions: So that it appears, that there's no Need of solid Orbs and Intelligences, as the Ancients imagin'd; nor yet of Vortices or Whirl-pools of the Celestial Matter, as *Des Cartes* supposes: But the whole Affair is mechanically perform'd upon the sole Supposition of a Gravitation towards the Sun.

He proves, That all the Inequalities of the Motion of the Moon rises from the same Principles; only here the Effect of Two Centers operating on, or attracting a projected Body, comes to be consider'd; for the Moon, tho' principally attracted by the Earth, and moving round it, does, together with the Earth, move round the Sun once a Year, and is, according as she is nearer or farther from the Sun, drawn by him more or less than the Center of the Earth, about which she moves; whence arise several Irregularities in her Motion.

All the surprizing *Phenomena* of the Flux and Reflux of the Sea, are in like Manner shewn to proceed from the same Principle.

If the Earth were alone, that is to say, not affected by the Actions of the Sun and Moon, 'tis not to be doubted but the Ocean, being equally press'd by the

Force of Gravity towards the Center, would continue in a perfect Stagnation, always at the same Height, without either ebbing or flowing: But it being here demonstrated, That the Sun and Moon have a like Principle of Gravitation towards their Centers, and that the Earth is within the Activity of their Attractions, it will plainly follow, that the Equality of the Pressure of Gravity towards the Center will thereby be disturb'd: And tho' the Smallness of these Forces, in respect of the Gravitation towards the Earth's Center, renders them altogether imperceptible by any Experiments we can devise, yet the Ocean being fluid, and yielding to the least Force by its Rising, shews where 'tis less press'd, and where it is most press'd by its sinking.

Now if we suppose the Force of the Moon's Attraction to decrease, as the Square of the Distance from its Center increases, (as in the Earth and other Celestial Bodies) we shall find, that where the Moon is perpendicularly either above or below the Horizon, either in Zenith or Nadir, there the Force of Gravity is most of all diminish'd; and consequently, that there the Ocean must necessarily swell by the coming in of the Water from those Parts where the Pressure is greatest, *viz.* in those Places where the Moon is near the Horizon: But that this might be better understood, I though it needful to add the following Figure;

where m is the Moon, E the Earth, C its Center, and Z the Place where the Moon is in the Zenith, n where in the Nadir. Now by the Hypothesis it is evident, that the Water in Z being nearer, is more drawn by the Moon, than the Center of the Earth C, and
G that

that again more than the Water in *n*: Wherefore the Water in *Z* hath a Tendency towards the Moon, contrary to that of Gravity; being equal to the Excess of the Gravitation in *Z*, above that in *C*: And in the other Case, the Water in *n*, tending less towards the Moon than the Center *C*, will be less pressed, by as much as is the Difference of the Gravitations, towards the Moon in *C* and *n*. This rightly understood, it follows plainly, That the Sea, which otherwise would be Spherical, upon the Pressure of the Moon, must form it self into a Spheroidal or Oval Figure, whose longest Diameter is where the Moon is Vertical, and shortest where she is in the Horizon; and that the Moon shifting her Position as she turns round the Earth once a Day, this Oval of Water shifts with her, occasioning thereby the Two Floods and Ebbs observable in each 25 Hours.

And this may suffice as to the General Cause of the Tides. It remains now to shew how naturally this Motion accounts for all the Particulars that have been observ'd about them; so that there can be no Room left to doubt, but that this is the true Cause thereof.

The Spring-Tides upon the New and Full Moons, and Neap-Tides on the Quarters, are occasion'd by the attractive Force of the Sun in the New and Full, conspiring with the Attraction of the Moon, and producing a Tide by their united Forces: Whereas in the Quarters, the Sun raises the Water where the Moon depresses it, and the contrary; so as the Tides are made only by the Difference of their Attractions. That the Force of the Sun is no greater in this Case, proceeds from the very small Proportion the Semi-Diameter of the Earth bears to the vast Distance of the Sun.

'Tis also observ'd, That *ceteris paribus*, the Equinoctial Spring-Tides in *March*

and *September*, or near them, are the highest, and the Neap-Tides the lowest; which proceeds from the greater Agitations of the Waters, when the fluid Spheroid revolves about a great Circle of the Earth, than when it turns about in a lesser Circle; it being plain, that if the Moon were constituted in the Pole, and there stood, that the Spheroid would have a fix'd Position, and that it would be always High Water under the Poles, and Low Water every where under the Equinoctial: And therefore the nearer the Moon approaches the Poles, the less is the Agitation of the Ocean, which is of all the greatest when the Moon is in the Equinoctial, or farthest distant from the Poles: Whence the Sun and Moon being either conjoin'd or opposite in the Equinoctial, produce the greatest Spring-Tides: and the subsequent Neap-Tides, being produc'd by the Tropical Moon in the Quarters, are always the least Tides: Whereas in *June* and *December*, the Spring-Tides are made by the Tropical Sun and Moon, and therefore less vigorous; and the Neap-Tides by the Equinoctial Moon, which therefore are the stronger. Hence it happens, that the Difference between the Spring and Neap-Tides in these Months, is much less considerable than in *March* and *September*. And the Reason why the very highest Spring-Tides are found to be rather before the Vernal, and after the Autumnal Equinox, viz. in *February* and *October*, than precisely upon them, is, because the Sun is nearer the Earth in the Winter Months, and so comes to have a greater Effect in producing the Tides.

Hitherto we have considered such Affections of the Tides as are universal, without Relation to particular Cases. What follows, from the different Latitudes of Places, will be easily understood by the following Figure.

Let

Let $A p E P$, be the Earth covered over with very deep Waters, C its Center, P, p its Poles, $A E$ the Equinoctial, $F f$ the Parallel of Latitude of a Place, $D d$ another Parallel, at equal Distance on the other Side of the Equinoctial, H, h the Two Points where the Moon is Vertical, and let $K K$ be the great Circle where in the Moon appears Horizontal. It is evident, That a Spheroid describ'd upon $H h$ and $K K$, shall nearly represent the Figure of the Sea, and $C f, C D, C F, C d$, shall be the Heights of the Sea in the Places f, D, F, d ; in all which it is High Water: And seeing that in 12 Hours Time, by the Diurnal Rotation of the Earth, the Point F is transferr'd to f , and d to D , the Height of the Sea $C F$ will be that of the High Water when the Moon is present, and $C f$ that of the other High Water when the Moon is under the Earth; which, in the Case of this Figure, is less than the former C, F ; and in the opposite Parallel $D d$, the contrary happens. The Rising of the Water being always alternately greater and less in each Place, when it is produced by the Moon declining sensibly from the Equinoctial, that being the greatest of the Two High Waters in each Diurnal Revolution of the Moon, wherein she approaches nearest either to the Zenith or Nadir of the Place: Whence it is, that the Moon in the Northern Signs, in this Part of the World,

makes the greatest Tides when above the Earth, and in Southern Signs when under the Earth; the Effect being always the greatest where the Moon is furthest from the Horizon, either above or below it. And this alternate Increase and Decrease of the Tides has been observed to hold true on the Coast of *England*; at *Bristol* by Captain *Sturmy*, and at *Plimouth* by Mr. *Colepreffe*.

But the Motions hitherto mention'd, are somewhat alter'd by the Libration of the Water, whereby, tho' the Action of the Luminaries should cease, the Flux and Reflux of the Sea would continue for some Time. This Conservation of the impress'd Motion diminishes the Differences that otherwise would be between two consequent Tides, and is the Reason why the highest Spring-Tides are not precisely on the New and Full Moons, nor the Neaps on the Quarters; but generally they are the third Tides after them, and sometimes later.

All these Things would regularly come to pass, if the whole Earth were cover'd with Sea very deep; but by reason of the Shoalness of some Places, and the Narrowness of the Streights, by which the Tides are in many Cases propagated, there arises a great Diversity in the Effect, and not to be accounted for without an exact Knowledge of all the Circumstances of the Places, as of the Position of the Land, and the Breadth and Depth of the Channels by which the Tide flows; for a very slow and imperceptible Motion of the whole Body of the Water, where it is (for Example) 2 Miles deep, will suffice to raise its Surface 10 or 12 Foot in a Tide's Time: Whereas if the same Quantity of Water were to be convey'd upon a Channel of 40 Fathoms deep, it would require a very great Stream to effect it in such large Inlets as are the Channel of *England* and the *German Ocean*: Whence the Tide is found to set strongest in those Places where the Sea grows narrowest; the same Quantity of Water being to pass

pass thro' a smaller Passage. This is most evident in the Streights between *Portland* and *Cape de Hague* in *Normandy*, where the Tide runs like a Sluce; and would be yet more between *Dover* and *Calais*, if the Tide coming about the Island from the North did not check it; and this Force being once impressed upon the Water, continues to carry it above the Level of the ordinary Height in the Ocean, particularly where the Water meets a direct Obstacle, as it is at *St. Maloes*; and where it enters into a long Channel, which running far into the Land, grows very straight at its Extremity, as it is in the *Severn* Sea, at *Chepflow* and *Bristol*.

This Shoalness of the Sea, and the intercurrent Continents, are the Reason that, in the open Ocean, the Time of High Water is not at the Moon's Apulse to the Meridian, but always some Hours after; as it is observed upon all the West Coast of *Europe* and *Africa*, from *Ireland* to the *Cape of Good Hope*: In all which, a S.W. Moon makes high Water; and the same is reported to be on the West Side of *America*. But it would be endless to account all the particular Solutions which are easy Corollaries of this Hypothesis; as, why the Lakes, such as the *Caspian* Sea, and *Mediterranean* Seas; such as the *Black* Sea, the *Streights*, and the *Baltick*, have no sensible Tides: For Lakes having no Communication with the Ocean, can neither encrease nor diminish their Water, whereby to rise and fall; and Seas that communicate by such narrow Inlets, and are of so immense an Extent, cannot in a few Hours time receive or empty Water enough to raise or sink their Surface any thing sensibly.

Lastly, To demonstrate the Excellency of this Doctrine, the Example of the Tides in the Port of *Tunking* in *China*, which are so extraordinary and differing from all others we have yet heard of, may suffice. In this Port there is but one Flood and Ebb in 24 Hours, and

twice in each Month; viz. when the Moon is near the Equinoctial, there is no Tide at all, but the Water is stagnant; but with the Moon's Declination, there begins a Tide, which is greatest when she is in the Tropical Signs; only with this Difference, that when the Moon is to the Northward of the Equinoctial, it flows when she is above the Earth, and ebbs when she is under, so as to make High Water at Moon's Setting, and Low Water at Moon's Rising: But on the contrary, the Moon's being to the Southward, makes High Water at Rising, and Low Water at Setting; it ebbs all the Time she is above the Horizon, as may be seen more at large in the *Philosophical Transaction*, Numb. 162.

The Cause of this odd Appearance is proposed by Sir *Isaac Newton* to be from the Concurrence of Two Tides; the one propagated in 6 Hours out of the great *South* Sea, along the Coast of *China*; the other out of the *Indian* Sea, from between the Islands, in 12 Hours, along the Coast of *Malacca* and *Cambodia*. The one of these Tides, being produc'd in North Latitude, is, as has been said, greater when the Moon, being to the North of the Equator, is above the Earth, and less when she is under the Earth. The other of them, which is propagated from the *Indian* Sea, being rais'd in South Latitude, is greater when the Moon, declining to the South, is above the Earth, and less when she is under the Earth: So that of these Tides alternately greater and lesser, there comes always successively Two of the greater, and Two of the lesser, together every Day, and the High Water falls always between the Times of the Arrival of the Two greater Floods; and the Low Water between the Arrival of the Two lesser Floods. And the Moon coming to the Equinoctial, and the alternate Floods becoming equal, the Tide ceases, and the Water stagnates: But when she has pass'd to the other Side of the Equator, those Floods which in the former Order

were

were the least, now becoming the greatest: That that before was the Time of High Water, now becomes the Low-Water on the Converse. So that the whole Appearance of these strange Tides, is without any forcing naturally deduc'd from these Principles, and is a great Argument of the Certainty of the whole Theory.

For other special Motions of the Sea, we shall take Notice of them in the Description of the particular Counties where they are observ'd.

SECT. XVIII.

Of LAKES.

Varenus gives it as his Opinion, That such Lakes as are not nourished by Rivers, and yet are never dried up, are fed by Rain, Snow, and Springs, which yield as much Water as the Sun exhales from them; and for Salt Lakes, such as that of *Harlem*, &c. he supposes they have a Communication with the Sea: For those Lakes and Pools that are dried up in the Summer, there can be no Doubt but they proceed from Rain and Snow, or small Fountains, which are consum'd by Drought, till again supplied by Rain, &c. For the particular Lakes which are remarkable, we shall treat of them in their respective Countries. For such as send out Rivers, tho' they receive none, it's natural to suppose that they proceed from large, or at least many Fountains; which filling up the low Ground in the Neighbourhood, form a Lake; and that overflowing its Banks at the lowest Place, becomes a River. Such of them as send out large Rivers, are thought to be supplied by large Streams, thro' Subterranean Passages. Those which receive Rivers, and send out none, must have what's more than sufficient to fill them, convey'd likewise from them by Conduits under Ground. The few that there are of this Sort, shall

be taken Notice of in their proper Places. Such as send out greater Rivers than they receive, must be supplied by Fountains, or Streams under Ground.

SECT. XIX.

Of RIVERS.

OF such as proceed from known Fountains, and are encreas'd by many Brooks, Streams, and other Rivers, there is no need to say any thing, the Cause of their Rise and Encrease being visible. The like may be said as to those small Rivers which run by Day, and are dried up by Night, because they proceed from Snow melted by the Heat of the Sun: And from the same Cause it is, that some great Rivers encrease by Day, and decrease by Night, and are greater in the Spring and Summer than in Winter.

SECT. XX.

Of the Origine of FOUNTAINS.

THE Learned differ very much upon this Subject. Some think they proceed from Rain and melted Snow, because great Rivers decrease, and small ones are dried up by a long Drought; and because in Places where it seldom rains, there are few Fountains and Rivers, as in *Inner Africa*: But this proceeds from a Mistake, and Want of due Consideration, because Rivers are found where there's seldom any Rain, and never any Snow. Nor does Rain moisten the Earth above 10 Foot deep; whereas many Fountains spring much lower. They mistake the Question, who say, That Water being an Element, we are no more to enquire into its Origine, than into that of other Elements; for the Question is, how the Water comes to the Places from whence the Fountains spring.

Aristotle

Aristotle and his Followers think, That Water is generated from Air in the Bowels of the Earth, *De Meteor. Lib. 1. Cap. 11.* as Rain is from Air above the Earth; and that the Air is condens'd in both by Cold. 2. They appeal to Experience, because in the Earth small Drops running together, drop down into Cavities; and that the Beginning of Rivers is from Springs of Water that run together in one Part. Thus they, who make Aqueducts, perceive it to sweat, as it were, from the Bowels of the Earth, and to fall down into the Conduits. 3. Because many Fountains, and those too of the greatest Rivers, are in Mountainous Places, and few of them in Plain Ground; which they think is a manifest Proof, that Water is generated from the Air and Vapours, which move to the higher Places; and that the Mountains, like Sponges, suck up the Moisture from the low Grounds. To which may be added, That when the Air is cloudy and condens'd, Mineral Fountains are found to be less Acid; which is a Proof, that they are encreas'd by the Air.

Cardan and others think, That Fountains proceed from little Rivulets, generated by Watery Vapours, both within and without the Earth; and that Fountains alone can scarce make Rivers without Rain or melted Snow, because, 1. Mountains are found to be moist in the Morning. 2. Rivers encrease in the Morning, and so much the more as the Fountains are nearer; but it is not probable, that perpetual Fountains can be thus supplied.

Some of the Ancients thought, That Rain being gather'd together in the Cavities of the Earth, did at last break out as from a Channel, and that no Water is generated; but the Water being thus gather'd together into those Repositories during the Winter, serves to supply Fountains and Rivers; And hence they think it proceeds, that Rivers are greater in Winter than Summer, and

that some Fountains and Rivers are constant, and others not: But *Aristotle* rejects this Opinion, because he says, there flows a greater Quantity of Water from one River in a Year, than the Bulk of the whole Earth.

Some Modern, as well as ancient Philosophers, think the Earth receives again from the Sea whatever Water the Rivers pour into it; and that being convey'd by Subterranean Passages through Sand, Clay, &c. as through a Strainer, it loses its salt Taste. This Opinion *Varenius* approves, tho' he will not exclude Rain, melted Snow, and Vapours, from having their Share in it; and his Reasons are, 1. Above 1000 Rivers disburthen themselves into the Sea, and the greater ones in such Plenty, as would in one Year's Time cover the whole Earth, as the *Volga* into the *Caspian* Sea, and others. Were it otherwise, no Reason can be given why the Sea should not encrease infinitely, and why Fountains should not cease to flow. 'Tis in vain to say, That as many Vapours are raised from the Sea, as there comes Water into it from the Rivers; for those Vapours only make Rain, and are nothing in Quantity compar'd to the Water of the Rivers. 2. Because Fountains near the Sea are salt or brackish, and the nearer, the saltier, as in the Shores of *Africa*, *India*, &c. 3. Because 'tis manifest, from the Salt-Pits of *Lunenburg* and *Hall* in *Germany*, &c. that the Sea conveys its Water into the Earth by Subterranean Conduits. 4. Because, when we dig deep, we find Plenty of Water in Mines, &c. which we cannot suppose to proceed from the Air.

The principal Objections made against this Opinion are, 1. That most Fountains rise in Mountainous Places, which are higher than the Surface of the Sea; therefore Water cannot flow from the Sea to those Places, because 'tis the Nature of Water to flow towards lower Places, and not to those which are higher; as is plain from the Course of

of Rivers and Water-works made by Engineers. 2. If the Bottom of the Sea be clayie, slimy, or sandy, so that the Water may sink through it, 'tis more reasonable to think, that it should moisten the Earth under it, than flow upwards to the Place of Fountains, especially since that is many times full of Stones and Rocks, as appears by the Mountains of the Island of *St. Helena*. 3. No Reason can be given, why Water coming thus from the Sea, should not burst out Mid-way betwixt the Sea and the Fountain. In the deepest Mines, there is little or no Water found, as *Thurnbenferus* testifies. 5. The Water of Fountains would be salt, if it came from the Sea. To which *Varenius* answers, 1. Those who maintain the Ocean to be higher than the Earth, deny the Assumption; and, according to them, 'tis easy for the Water of the Sea to flow to the Tops of the highest Mountains. This they maintain from an Experiment made by *Olearius*, in his *Persian* Journey, who, going to the Top of a Mountain that lies on the *Caspian* Sea, found, by a Mathematical Instrument, that the extreme Surface of that Sea seem'd to be higher than the Top of the Mountain where he stood: But *Varenius* does not allow this, because 'tis contrary to the frequent Observations of other Mathematicians, as has been mentioned already; and therefore thinks *Olearius* was deceiv'd by the Refraction or Waves, and that the Mountain he stood on was not so high as others upon the *Caspian* Sea.

Others perceiving the Weakness of this Solution, argue thus; That the natural Place of the Water is about the Earth, and therefore ought to cover the whole Earth, because 'tis higher than it. But because 'tis hinder'd from coming to this its natural Place by Mountains, and the Height of the Earth, which rises towards the Inland Places; therefore that Part of the Ocean which ought to be where the Mountains and high Grounds

lie, not being in its natural Place, presses the Water that lies under it, which indeed is in its natural Place; but is pressed by the other incumbent Water towards the Bottom, and finding no Passage, moves towards the Sides and Roots of the Mountain, where, being gather'd together as in a Cistern, 'tis thrust by the Water of the Ocean, which presses it, towards the Top of the Mountain, just as in a Vessel, which has a Pipe in the Side of it, that reaches from the Bottom: If we put Liquor into it, and throw a Stone into the Vessel, the Liquor will flow out at the Mouth of the Pipe or Spout. This is a Subtilty of *Scaliger's*; but *Varenius* rejects it, because Experience shews the contrary: And besides, if the Water were thus pressed towards the Tops of the Mountains, the Water of all Fountains must be salt. Moreover, what he assumes is false, *viz.* That the Water is not in its natural Place, as is plain from Experience; because Water does not press upon the Part which lies under it, except it be higher than the neighbouring Water, and therefore rests where the Surface of the Ocean is Spherical; and if any Motion were occasion'd by the Pressure, it would rather thrust the Water to the Shore, where there is more Room, and not through the small Caverns of the Earth. 'Tis certain, that Water flows into the Earth by great Cavities from the Bottom of the Sea; but they do not make a Sweet-Water Fountain, because the Saltness of the Water still continues.

Varenius thinks the Solution not difficult, if we consider how Water comes to the Fountain, not by any Channel or Conduit from the Bottom of the Sea, or Foot of the Mountains, (for so 'twould retain its Saltness) but by a continual Progression or creeping of the Water through the Earthy Matter to the Places near the Fountain, till at last it falls into some Cavity, and by a continual Succession of Water forms a Fountain. This, he says, is found to be true, by digging the

the Earth to any considerable Depth, where we find little Drops of Water; which being pressed by others, make little Streams or Veins; and if many of them come together, form a Fountain, as is very well known to those who dig Wells or Conduits.

If it be objected, That many Fountains are discover'd in the Middle of Rocks, through which 'tis not probable the Watery Particles could creep in this Manner; *Varenius* answers, That in those Mountains where Springs are found, the Rocks do not lie very deep, or only cover the Surface; whereas the Earth within is either more soft, or the Rock is of that Nature, as it may be pierced by the Water; and when it comes to those Places which are more hard, there it stops, and forms a Fountain, which sends forth a Stream, if it finds a Passage through the Rocks. He adds, That the Mountains and Rocks of the Island of *St. Helena*, and others, are not so rocky and hard in the Inside, because most of those Mountains have sent forth Smoak at some Time or other; and 'tis likewise plain from the Alhes of Earth or Sulphur found in those Places. To this he subjoins, That the Fountain, as has been already mention'd, is not always in that Place where it seems to be, but comes by some Subterraneous Passage from a higher Place to that from whence it flows out: And hence it comes, that many Wells break out with great Force.

He answers the Second Objection thus; That the Water does not so much descend into the Earth under the Sea, because 'tis found by Experience, that the Earth in the Bottom of the Sea is more hard, and full of Metal; but where 'tis not so hard, there the Water penetrates: And this he thinks to be the Reason why, in some Places at the Bottom of the Sea, there are found sometimes Rivers, and at other Times Lakes, of fresh or salt Water. But because there are few such Cavities in the Bottom of the Sea, it cannot but continually imbibe the Water,

and then it proceeds towards higher Places. This he thinks to be much promoted by the different Height of the Sea, sometimes here, and sometimes there, occasion'd by Waves and Tempests; for the Water being thus made higher, presses that which lies under it so much the more, and promotes its Passage through the Earth to Fountains; but this he thinks cannot effect much.

To the Third Objection, he answers, That the Moisture is carried to the Fountains, and does not break out at any other Place betwixt them and the Sea, because of the Nature and Situation of the Places.

He thinks the Solution of the Fourth Objection to be somewhat more difficult, because it would seem, that the Saltness could not be remov'd meerly by the Water's being strain'd thro' the Earth: For tho' that might strain away the Fix'd Salt, it could not remove the Volatile Salt; which we find by Experience cannot be remov'd by Distillation, how frequent soever repeated: But he thinks it a sufficient Answer, 1. That 'tis so in Fact, tho' we do not know the Manner how 'tis done; and therefore 'tis not to be denied, because we find the Separation made by Nature in those fresh Rains which fall into the Middle of the Ocean, tho' they were generated by Vapours rais'd from the Sea. 2. Those Particles of Sea-Water which enter the Earth, are, before they reach the Fountain, mix'd here and there with other fresh Moistures, proceeding from Rain and Vapours; and so the small Saltness which they retain becomes imperceptible. 3. 'Tis not true, that the Saltness is wholly imperceptible in all Fountains, because, as has been already mentioned, some of them are sensibly salt, and so much the more as they lie nearer the Sea. Therefore there is a Necessity of a long and very slow Straining and Evaporation, to separate the Water from the Volatile Salt, since 'tis known, that by Art we can make the Sea-Water less salt; and 'tis pro-

probable, that this is also the Reason why Rain that falls into the middle of the Ocean is sometimes found to be more salt than at other times, because the Vapours rais'd from the Sea had not Time enough to evaporate the volatile Salt.

From all this *Varenius* concludes, That the Water of Fountains comes partly from the Sea, partly from Subterraneous Waters, and partly from Rain, Snow, and Dew, which moisten the Earth; and that the Water of Rivers proceeds partly from Fountains, and partly from Snow and Rain.

Such Rivers as hide themselves under Ground, and flow out again in another Place, we shall account for in the respective Countries where they are found.

In his 18th Proposition, he gives an Account of many Rivers which carry down with them Particles of several Metals, and of oily or fat Bodies; and some of them have Gold Dust mix'd with their Sands, because they flow through Places in which there are Gold Mines: But we refer the Particulars to the Description of their respective Countries.

Rivers that carry down Particles of Silver with their Sand, are not taken Notice of by Writers, because of the Difficulty to distinguish the Sand from the Silver, and partly because it would not be worth while to separate the one from the other. From the same Cause, those Rivers which carry down Particles of Iron, Copper and Tin, have been omitted by Authors, except a very few; and where Men perceive their wonderful Effects, they are amazed, and Philosophers straitways have Recourse to occult Quality. We shall only take Notice at present of a River in *Upper Germany*, which changes Iron into Copper, as is commonly thought; so that if you put a Horse-shoe of Iron into it, you find it immediately transform'd into Copper, as the Vulgar think; whereas the Particles of Copper and Vitriol in the River, with the Help of the Water, corrode the Iron, and succeed in its Place; which our modern Na-

tural Philosophers and Chymists have found out by another Experiment.

Water thus impregnated with different Particles has different Effects. Some Waters give all Things boil'd in it a black Colour: Some will never boil Pease soft, &c. because such Water is full of Particles of Iron or Vitriol, and has no Mixture of oily Substances. This Variety proceeds from the Difference of the Soil the Rivers run through.

In his 19th Proposition, he shews, That Waters differ in Colour, Weight, and other Qualities, from the same Reason: The Instances we refer to the particular Countries, and shall only observe here, That the Water of the *Ganges* is so light and wholesom, that the Great Mogul carries some of it always with him wherever he is.

In the 20th Proposition, he discourses of some Rivers which overflow their Banks at stated Seasons; among which the *Nile* is most remarkable. The particular Instances we refer likewise to the respective Countries.

In the 21st Proposition, he gives us an Account how Fountains break out, thus: 1. If there be a Cavity in any Place, the Water drops into it till it be full, and then forces its Passage. 2. The Spirits mix'd with the Water remove the Earth, and the Water being rarified in the Earth, makes further Room to it self; and Subterraneous Fires contribute also towards this. 3. Rains do sometimes make Way for Fountains, by opening the Pores of the Earth. 4. Fountains are sometimes open'd by Earthquakes. 5. A Passage is frequently open'd by the Industry of Men. 6. They are sometimes discover'd by Animals, who open the Ground by digging with their Snouts. Thus the salt Fountains of *Lunenburg* were discover'd by a Hog, which having dug up the Ground, the Water issued, and making a Puddle, the Hog, as is usual with those Creatures, laid down and wallowed in it, and when its Back was dry'd by the Heat of the Sun, the

People perceived Salt upon it; upon which they went to the Place, and, by digging, discover'd several other such Fountains. In Memory of this, they kill'd the Hog, and having dry'd his Quarters, hung them up in the Town-House, where they are still kept, as a Memorial of this Discovery; but by Length of Time are reduc'd to meer Skins.

In his 22d Proposition, he gives us an Account, from *Vitruius's* Architecture, *Lib. 8. Cap. 1.* how to discover where Water or Fountains may be found; which in brief is thus: Lie down, says he, upon your Face on the Ground, before the Sun rise, and fixing your Chin upon the Earth, look about, and where you perceive Vapours gathering together, and rising in the Air, 'tis a certain Sign of Water in the Place. Small Rushes, Willows, Elder-Tree, Withies, Reeds, Ivy, are also Signs of Water. But where there are none of those Signs, he advises to dig a Hole 3 Foot broad, and 5 deep, and about Sun-set to place in it a Balon of any Metal, anointed with Oil in the Inside, and its Mouth turn'd downward: Cover the Hole with Reeds, or Leaves of Trees, throw Earth over them; open the Hole next Day, and if you find in the Vessel Drops of Water resembling Sweat, 'tis a Sign of Water. A Vessel of Chalk, not bak'd, put in the Hole, and found to be moist or dissolv'd next Day, is also a Sign of Water. A Fleece of Wool, if put into the Hole, and found to be so moist next Day, as you may press Water out of it, is a Sign of a plentiful Fountain. If a Lamp full of Oil, and lighted, be put into the Hole, and cover'd, and found next Day not to be quite suck'd up, it is likewise a Sign of a Fountain. If when a Fire is made upon any Place, the Earth, when it's heated by the Fire, sends out a Cloudy Vapour, 'tis a Sign of a Fountain.

In this Proposition, and likewise in the 23d, he lays down Rules for judging if Water be wholesom; the chief of

which are as follow: 1. If the Soil be chalky, the Water is thin, in no great Plenty, and ill tasted: The like if the Soil be a loose Sand. 2. Water found in low Places is generally slimy, and ill tasted. 3. If the Soil be black, the Water has a very good Taste. 4. If the Soil be full of Pebbles, the Water is not very plentiful, nor certain, but very sweet. 5. If it be gravelly, and mix'd with Slates and Sand, the Water is more plentiful, and very good. 6. Where there are red Rocks, the Water is generally plentiful and good. 7. That which flows from the Roots of Mountains, and flinty Rocks, is cold and wholesom: But Fountains in Plains or Champion Places are generally brackish, hot, and ill tasted, except they proceed from the Roots of Mountains, and break out in the neighbouring Fields, shaded with Trees; in which Case they are generally sweeter than those which immediately proceed from the Roots of Mountains. 8. If the People who dwell near Fountains be of strong Bodies, good Limbs, and a clear Complexion, 'tis a Sign that the Water is very good. 9. If the Water be put into a Vessel of *Corinthian*, or other good Brass, and leave no Stain behind it, 'tis a Sign that 'tis very good. 10. If the Water be heated in a Kettle, and poured out when settled, and leave no Sand or Slime behind it, 'tis very good. 11. Water which speedily boils Pease or Beans, is certainly good. 12. When Fountains are clear, and the Streams which flow from them have no Moss or Rushes in them, 'tis a Sign that the Water is pure and wholesom.

On this Occasion, he takes Notice of dangerous Vapours that proceed from the Earth, and sometimes kill those who dig Wells and Mines. The Earth, he says, as other Things, is compos'd of Four Principles; the First is the Terrene Part; the Second is the Moist Part, which produces Fountains. It has likewise Heat, from whence proceed Sulphur, Allum, Bitumen, and great Spirits of the

the Air, which, when they pierce thro' the porous Part of the Earth that lies betwixt the Veins, kill the Diggers, and stop their Breath by these Vapours, if they do not make a speedy Escape. The Way to avoid this Danger, he says, is to let down a burning Lamp, and if it continue burning, the Workmen may descend without Danger; but if the Lamp be put out, they must dig other Holes on the Right and Left of the Well, which will let out those Vapours.

In his 17th Chapter, he treats of Mineral Waters, Baths, and those properly call'd Medicinal Waters; and because their Effects are much admir'd, he undertakes to treat of them, and of their Causes, with more Clearness and Exactness than former Geographers.

In his first Proposition, he lays down, That there is no Water so pure but is mix'd with Particles, such as are found in Earthy Bodies; yet those Particles are not Earth, but Spirits, Oils, &c. He calls that Mineral Water, which has so many Particles of a different Nature from the Water as endow it with some remarkable Quality perceptible to our Sense.

The Truth of the Proposition is manifest from Experience, and proved by the Difference of Tastes and Distillation. The Cause of the Difference is the various and perpetual Agitation of the Particles; but the Mixture is not alike in all Waters: Therefore he calls those only Mineral Waters, which have some remarkable Quality beyond common Water.

In his Second Proposition, he divides Mineral Waters into Three Sorts; the First he calls *Corporeal*, for Want of a better Word; the Second he calls *Spiritous*; and the Third *Corporeal* and *Spiritous*. He calls those Mineral Waters *Corporeal*, which contain solid and fix'd Parts of Minerals, that may be separated from the Water, and discerned by the Eye. These he divides into Two Sorts; the First contains those Particles of Mi-

nerals, so large, that they may be easily seen in the Water, and, properly speaking, are not mix'd with it, nor do any way impregnate the same; Such are those in whose Sand Gold and other Minerals are found. To this last, Bituminous Fountains must be reduced.

Therefore those are more properly call'd *Corporeal* Mineral Waters, which contain indeed solid Mineral Particles, but so small, and so much mix'd with the Water, that they are not straitway to be discover'd by the Eye, but by Art; or when, after a long time, they settle to the bottom, and grow together, as in Salt and Sulphureous Fountains, and Chymical Waters, in which Metal is dissolv'd.

These he calls *Spiritous* Waters, which contain only a Volatile Spirit, such as is found in Minerals; but no fix'd Particles that are to be seen.

Those he calls both *Corporeal* and *Spiritous* which contain Solid and Volatile, or Spiritous Particles of Minerals.

In his Third Proposition, he explains how Mineral Waters are generated.

1. If Water be carried with a rapid Stream by Subterraneous Passages, in which Metallick Earths and Minerals are not very thick, the Water may easily carry with it Grains of those Minerals.
2. If Water come through Minerals that are imperfect, and not very thick, as Vitriol, Sulphur, Salts, &c. which are easily united to Moisture, it must necessarily be mix'd with the Atoms of those Minerals. There are some indeed who call this in Question, because the Mineral Particles being hard and solid, are not easily united to Water: But *Vareninus* thinks, that it may easily be done, not indeed by meer Water, but by that which is mix'd with Vitriol and a Spiritous Salt, and is like the *Aqua-Fortis* of the Chymists. For as *Aqua-Fortis* dissolves Metals into Atoms, and unites them to it self, so that they do not fall to the bottom, except they be separated

by Art: In the same Manner, Water, which flows through Mineral Earth, may dissolve Mineral Particles into Atoms, and unite it to it self. 3. In the Bowels of the Earth, before Metals be generated, Vapours and Fumes are condens'd upon the Corners of the Rocks to which they adhere; so that if Water flow through those Places where such Vapours are, they are impregnated by them, and become Spiritous Mineral Waters. But imperfect Minerals make Mineral Waters of the same Nature with themselves, in another Manner thus: Those Minerals being heated by a Subterranean, or their own proper Heat, send forth Spirits and Vapours, as Sulphur, Vitriol, Salt, Coals, &c. And such Fumes and Exhalations are constantly found where such Minerals are; by which Means, Water which flows through those Places is impregnated with those Spirits.

Varenus rejects the Opinion of those who think, that such Spiritous Waters may be generated by Waters merely flowing through that Metallick Earth, or standing long upon it in Mines, &c. because he says, 'tis contrary to Experience, by which we find, that Water receives no Quality by Minerals, how long soever they may be steep'd in it; and therefore he says, that Water is impregnated, 1. By the Seeds of Metals. 2. That Water being already impregnated by other subtiler Spirits, as of Vitriol, Salt, &c. by their Assistance the Spirits are extracted from hard Metals; yet he is not positive in this, because the Question will still recur, how those Waters are impregnated with the Spirits of Salt or Vitriol, &c.

In his Fourth Proposition, he gives an Account of the innumerable Species of Mineral Waters, which 'tis needless to insist on, since 'tis obvious to every body, that the Difference arises from their being impregnated with one or more of the Minerals, which we shall have occasion to treat of in the Description of those Minerals. Here such Mineral Waters are found.

He reduces them into 11 Classes. 1. Acids. 2. Bitter. 3. Hot. 4. Very Cold. 5. Oily and Fat. 6. Poisonous, or Deadly. 7. Those which are Coloured. 8. Those which boil up. 9. Such as make Things which are less hard more hard, or that change or die Things thrown into them. 10. Salt. 11. To these may be added such as are endowed with some other wonderful Qualities. To these Classes may be reduc'd all the Waters which are describ'd by Authors. We shall briefly shew their Generation and Difference, and give some Instances.

In his Sixth Proposition, he accounts for the Causes, Difference, and Species, of Acid Waters.

They proceed from a Mixture of the Spirit of Vitriol, Salt, Allum, &c. His Reasons are; 1. Wherever such Waters are found, Mines of Vitriol, Salt, and Allum are found. 2. Because the Spirit of Vitriol, Salt, and some Sort of Sulphur, is Acid. 3. Because no Acid Body can be separated from those Waters, but only Spirits very like those of Vitriol, &c.

There are reckoned in *Germany* alone about 1000 Springs of Acid Waters: They abound most where there are Mines.

The Difference of those Waters is very great: Some are nothing short of Vinegar in Sharpness, and are used instead of it. Of this Sort, there is a Fountain in *Sicily*. Some have much the Taste of Wine: Near *Lions* in *France* there is such a Fountain, called *Fontaine forte*, which sometimes supplies the Want of Wine; so that if a Fourth Part of it be mix'd with Three Parts of Wine, the Strength of the Wine is nothing abated: It ferments when Meal is mix'd with it. Meat cannot be boil'd in it, for it evaporates, because of its great Subtlety. 'Tis so very healthful, that the People there seldom make use of Physicians.

Some are Astringent, and contract the *Pallat*, which is a Sign that they are mix'd.

mix'd with Particles of Iron, Vitriol, or Allum. If they be expos'd to Heat, or not covered close, they lose that Acidity, which shews, that it proceeds from a subtil Spirit.

He thinks, the Reason why they are seldom found in Countries far North, is the Want of Subterranean Fires, and the Thickness of the Earth; and this he takes also to be the Reason why there are no Gold Mines in those Countries.

In his Seventh Proposition, he gives us the Causes of Hot Baths.

In *Japan*, there is a Fountain so prodigiously hot, that no Water can be made so hot by the most violent Fire: The Natives call it Hell. The Hot Fountains of *Baden* in *Switzerland*, and those at *Buda*, are remarkable: In the latter, they boil Eggs to any Degree of Hardness they please.

The Cause of the Hotness of those Fountains, according to *Varenius*, is a Mixture of Sulphur. 2. The Fumes, Vapours, and Exhalations of Sulphur, Coal, Amber, &c.

In his Eighth Proposition, he says, That Oily and Bituminous Fountains proceed from Sulphureous and Bituminous Matter, melted in the Bowels of the Earth by Heat and Spirits, and their Difference proceeds from the different Matters they flow through, as Amber-greece, Amber, Petroleum, Pitch, Naphtha, Bitumen, &c.

In his Ninth Proposition, he says, That Bitter Waters proceed from a Sort of impure Sulphur, Bitumen, Nitre, Vitriol, and Copper.

His Tenth Proposition is about very cold Springs. Near *Vienne* in *Dauphiny*, there is a Spring so extraordinary cold, that no Man can endure to put his Hands in it, and it makes the Faces of those who drink it swell. This proceeds from a Mixture of Nitre, Allum, Mercury, or Iron. Sometimes it proceeds from the Deepness of the Spring, and the Want of the Heat of the Sun and Subterranean Fires. Some Fountains are hot

and cold by Turns. The Cause of this, he says, is, That the Pores of the Earth being open in the Summer, the hot Spirits evaporate; but being shut in the Winter, they make the Water warm: And thus some Fountains are hotter by Night than by Day.

In his Eleventh Proposition, he treats of those Waters which change the Nature of Things thrown into them.

In the Province of *Ulster*, in the North of *Ireland*, there's a Lake which, in Seven Year's time, turns Timber thrown into it into Stone. Some again don't change the Timber into Stone, but the stony and salt Particles in the Water cleave to the Wood, and cover it with a Crust of Stone. Others don't change the Timber, but make it as hard as Stone. *Varenius* thinks, the Change of Timber into Stone is effected thus: The Mineral Waters entering the Pores, dissolve, or at least alter, the Form of the long Fibres by which the Parts of the Timber cohere; and at the same Time condense the Timber more, and communicate to it their Mineral Particles. For such as change Iron into Copper, his Opinion is, That they communicate Particles and Spirit of Copper and Vitriol to the Iron.

In his 12th Proposition, he explains the Cause of poisonous Waters, and says, they flow through Soil mix'd with Arsenick, Mercury, and Antimony.

The Thirteenth Proposition treats of the different Colours of Waters, which proceed from the different Colours of the Soil.

The Fifteenth Proposition is about Fountains that boil up, and send forth a great Quantity of Spirit. *Varenius* says, this is occasioned by Sulphureous and Nitrous Spirits; that such of them as are hot, are impregnated with Sulphur; and those that are cold, with Nitre. In *Westphalia*, there is a Fountain of this Sort, which, because of the Noise it makes as it bubbles up, is call'd *Bolderborn*.

Mr. *Edmund Halley*, in his Estimate of the Quantity of Vapours rais'd out of the Sea, together with an Account of the Circulation of those Vapours, and of the Cause of Springs, presented to the Royal Society, says, This Matter has not been any where well examined, tho' it seems to be one of the most necessary Ingredients of a Real and Philosophical Meteorology: Therefore he made the following Experiment:

He took a Pan of Water about 4 Inches deep, and 7 Inches $\frac{1}{2}$ Diameter, in which he placed a Thermometer, and by means of a Pan of Coals brought the Water to the same Degree of Heat with our Air in the hottest Summer, the Thermometer nicely shewing it; then he fix'd the Pan of Water, with the Thermometer in it, to one End of the Beam of a Pair of Scales, and exactly counterpois'd it with Weights in the other Scale; and by the Application or Removal of the Pan of Coals, 'twas easy to maintain the Water in the same Degree of Heat precisely. He found the Weight of the Water sensibly to decrease; and at the End of two Hours he observ'd, that there wanted half an Ounce Troy all but 7 Grains, or 233 Grains of Water, which in that Time had gone off in Vapours, tho' one could hardly perceive it smok, and the Water was not sensibly warm. This was little less than 6 Ounces in 24 Hours, from a Circle of 8 Inches Diameter. He quotes the Experiment to have been made in the *Oxford Society*, by Dr. *Edward Bernard*, That the Cube Foot *English* of Water weighs 76 Pound Troy: This, divided by 1728, the Number of Inches in a Foot, will give 253 $\frac{1}{2}$ Grains, or $\frac{1}{3}$ Ounce 13 $\frac{1}{2}$ Grains, for the Weight of a Cube Inch of Water: Wherefore the Weight of 233 Grains is $\frac{233}{253\frac{1}{2}}$ or 35 Parts of 38 of a Cube Inch of Water. Now the Area of the Circle, whose Diameter is 7 $\frac{1}{2}$ Inches, is 49 Square Inches; by which, dividing the Quantity of Water evaporated, viz. $\frac{1}{2}$ of an Inch the Quote $\frac{1}{2} \div \frac{35}{38}$, or $\frac{3}{2}$

shews, that the Thickness of the Water evaporated was the 53d Part of an Inch; but he supposes it only the 60th Part, for the Facility of Calculation. If therefore Water, as warm as the Air in Summer, exhales the Thickness of a 60th Part of an Inch in Two Hours, from its whole Surface in 12 Hours it will exhale $\frac{1}{4}$ of an Inch; which is abundantly sufficient to serve for all the Rains, Springs, and Dews, and to account for the *Caspian Sea's* being always at a stand, neither wasting nor overflowing; as likewise for the Current said to set always in at the Streights of *Gibraltar*, tho' those *Mediterranean Seas* receive so many and so considerable Rivers.

In estimating the Quantity of Water arising by Vapours out of the Sea, he considers it only for the Time the Sun is up, because the Dews return in the Night as much, if not more, Vapours than are then emitted; and in Summer, the Days being longer than 12 Hours, this Excess is ballanc'd by the weaker Action of the Sun, especially when rising, before the Water be warm'd: So that he allows $\frac{1}{4}$ of an Inch of the Surface of the Sea to be rais'd *per Diem* in Vapours, as a probable Conjecture. Upon this Supposition, every 10 Square Inches of the Surface of the Water yields in Vapour *per Diem* a Cube Inch of Water, and each Square Foot half a Wine Pint; every Space of 4 Foot Square a Gallon; a Mile Square 6914 Tuns; a Square Degree, suppose of 69 *English* Miles, will evaporate 33 Millions of Tuns. It is fit to observe, That when Mr. *Halley* made the said Experiment, the Water he made use of was salted to the same Degree with common Sea-Water, by the Solution of about a 40th Part of Salt.

Having thus shew'd, by Experiment, the Quantity of Water rais'd in Vapour from the Surface of the Sea in a Day's Time, he was order'd by the *Royal Society* to enquire how Nature returns those Vapours again to the Sea, which he says is

so justly perform'd, that in many Hundreds of Years we are sufficiently assur'd, that the Sea has not sensibly decreas'd by the Loss in Vapour, nor yet abounded by the immense Quantity of fresh it receives continually from the Rivers. Upon this he gave the Society what to him seem'd the most satisfactory Account of this grand Phenomenon, in Substance thus: He attempted in another Place to explain the Manner of the Rising of Vapour by Warmth; by shewing, That if an Atom of Water were expanded into a Shell or Bubble, so as to be 10 times as big in Diameter, as when it was Water, such an Atom would become specifically lighter than Air, and rise so long as that *Flatus* or warm Spirit, that first separated it from the Mass of Water, shall continue to distend it to the same Degree; and that Warmth declining, and the Air growing cooler, and withal specifically lighter, the Vapours consequently stop at a certain Region of the Air, or else descend, which may happen on several Accounts: Yet he does not assert, that this is the only Principle of the Rise of Vapours, or that there is not a certain Sort of Matter whose *Conatus* is contrary to that of Gravity; as is evident in Vegetation, wherein the Tendency of the Sprouts is directly upwards, or against the Perpendicular. But whatever is the true Cause, 'tis certain in Fact, That Warmth doth separate the Particles of Water, and emit them with a greater Velocity, as the Heat is more and more intense, as is evident in the Steam of a boiling Cauldron, wherein likewise the Velocity of the Ascent of the Vapours does visibly decrease, till they disappear and are dispersed, and assimilated with the ambient Air.

Now the Ocean being divided with wide and spacious Tracts of Land, and high Ridges of Mountains, which surpass the usual Height to which the aqueous Vapours of themselves ascend, and on the Tops of which the Air is so cold and rarified, as to retain but a small

Part of those Vapours brought thither by Winds. Those Vapours therefore that are rais'd copiously in the Sea, and by the Wind are carried over the low Land to those Ridges of Mountains, are there compelled by the Stream of the Air to mount up with it to the Tops of the Mountains, where the Water presently precipitates, gleeting down by the Crannies of the Stone; and Part of the Vapour entering the Caverns of the Hills, the Water gathers into the Basons of Stone it finds, which being once fill'd, the Overplus runs over at the lowest Place, and breaking out by the Sides of the Hills, forms Springs. He says, This Theory of Springs is not a bare Hypothesis, but founded on Experience; for when he was at St. *Helena*, on the Tops of the Hills, at Night, making his Celestial Observations, his Glasses were covered with Drops, so that he was oblig'd to wipe them each half quarter of an Hour; and his Paper was so wet with Dew, that it would not bear Ink.

Thus one Part of the Vapours is return'd by Rivers into the Sea, and the greatest Part by the Cool of the Night falls into it by Dew or Rain before it reaches the Land; and this is the Reason why Rivers do not return so much into the *Mediterranean* as is extracted into Vapour. A Third Part falls on the low Lands, and is the *Pabulum* of Plants, where yet it does not rest, but is again exhal'd in Vapour by the Heat of the Sun, and is either carried by the Winds to the Sea in Rain or Dew, or else to the Mountains, where 'tis form'd into Springs: And thus, after several Vicissitudes, each Particle of the Water is return'd to the Sea from whence it came. Add to this, That the Rain-Waters, after the Earth is fully sated with Moisture, does, by the Vallies, find its Way into Rivers, and so is compendiously sent back to the Sea. After this Manner, he says, Circulation is perform'd; and he doubts not but this Hypothesis is more reasonable than that which derives

all

all Springs from Rain, tho' many of them be perpetual, and without Diminution, even when no Rain falls for a long Time. He thinks it also more reasonable than that Hypothesis which derives them from the Sea through certain imaginary Passages within the Earth, where they lose their Saltness: This, besides many others, labouring under this principal Absurdity, That the greatest Rivers have their most copious Fountains farthest from the Sea, whither so great Quantities of fresh Water cannot reasonably be deriv'd any other Way than in Vapour. This, if we may allow final Causes, seems to be the Design of the Hills, That their Ridges being plac'd through the midst of the Continents, might serve, as it were, for Alembicks, to distil fresh Water for the Use of Man and Beast, and their Heights to give a Descent to those Streams to run gently like so many Veins of the Macrocosm, to be the more beneficial to the Creation.

Varenius, in his 18th Chapter, gives an Account how the Earth and Water may change their respective Places.

In the Third Proposition, he advances a Conjecture about the Quantity of Water and Earth the Globe may contain; but several Things hinder a demonstrative and satisfactory Account of this Matter, as, the Uncertainty of the Deepness of the Sea in different Places, our Ignorance of what Water may be contain'd in the Abyss, and what Proportion the Water may bear to the Earth: But upon Supposition that the Water covers the one half of the Surface of the Earth, and that the Sea may, by a Medium, be computed at a quarter or half a Mile deep, the Calculation may be thus; Subtract from the Semi-Diameter of the Earth a quarter or half a Mile, and the Solidity of the Sphere may be found, whose Semi-Diameter is equal to the Remainder: Let this Solidity be subtracted from the Solidity of the Earth, the one Half of the Remainder will be

the Quantity of Water: The same Half being subtracted from the Solidity of the whole Earth, there will remain the Quantity of the Earth; to which, upon the Account of the Height of Mountains, must be added a Fourth or Fifth Part of the Quantity of the Water, or of the former Half: But this Calculation is very uncertain, tho' it may be near the Truth.

The Fourth and Fifth Propositions are concerning the deserting of their former Channels, by Seas, Rivers, and Lakes. Many Lakes have been drain'd by the Industry of Men; of which, 'tis needless to give Instances. Rivers change a Part of their Channel, 1. When they carry down with them Quantities of Earth and Mud, which settling to the bottom of the Channel, makes it as high as its Banks. 2. When they take another Course, by Inundations, Winds, or Earthquakes. 3. The Mouths of Rivers are sometimes stop'd by violent Tempests, which choak them up with Sand.

In the Seventh Proposition, he acquaints us, That Friths are dried up sometimes, and turn Isthmus's, or Parts of the Continent. Thus 'tis probable, That the Isthmus of *Suez*, which divides the *Red Sea* from the *Mediterranean*, was formerly Sea. So the *Zuider-Zee* in *Holland* is shallower than formerly; which seems to presage, That some time or other it will be quite dried up.

In the Ninth Proposition, *Varenius* gives the Reasons why the Sea sometimes retires from the Shore. 1. If the Shore be of a rocky hard Substance, that the Sea can wash nothing away from it, but brings Slime and Sand, &c. towards it, the Shore cannot fail to become higher than the Sea. 2. If the opposite Shore be of a soft porous Soil, then what the Sea washes away from that, it will restore to another, and overflowing the Shore so wasted, leaves the opposite Shore dry. 3. When great Rivers bring down vast Quantities of Mud, Earth, &c. it subsides, and makes the Shores higher.

higher. 4. If great Storms and Winds blow from the Sea to the Shore, and if the Shore be hard and rocky, or of firm Earth, it must be enlarged by Slime and Sand from the Sea. 5. If the Flood be swift, and the Ebb slow, then the Slime and Sand settles on the Shore, and adds to the Land.

Thus *Homer* and *Aristotle* were of Opinion, That *Egypt* formerly was almost all cover'd with Sea, but at last was made higher than the Sea, by the Mud and Slime that the *Nile* left Annually behind it. Ancient Histories tell us, That a great Part of *Holland*, *Guelderland*, and *Zealand*, were formerly under Water. The Shells of Sea-Fish, found in the Hills above *Nimeguen*, seem to be a Proof of this.

In the 19th Proposition, he enquires into the Reasons why there are more Islands near the Continent than in the middle of the Ocean. In the *Pacifick* Ocean there is scarce an Island to be seen. In the Ocean betwixt *Africa* and *Brazile*, there's few, except the Islands of *St. Helena* and *Ascension*. The *Azores* are the only Islands betwixt *Europe* and *America*.

The Cause of this, he says, is, because the Ocean, by its Irruptions, separates Parts from the Continents, which become Islands; but the Ocean not being high enough to cover those separated Parts, therefore great Numbers of them are about Continents: Others again are form'd of the Slime and Mud brought down by Rivers, or of that which the Sea washes from the neighbouring Continent, but settles down again, and by the Addition of Slime, &c. rises higher than the Surface of the Water: Some Islands have likewise been rais'd in the Sea by Earthquakes, and Mines of Sulphur, which have taken Fire, as one lately in the *Archipelago*.

SECT. XXI.

Of the ATMOSPHERE and WINDS.

Arenius, in his 19th Chapter, gives an Account of the Atmosphere and Winds: He describes the Atmosphere thus; That 'tis a Space round the whole Earth, which contains the Exhalations that are rais'd from it; but 'tis uncertain whether it contains any other Body besides. 'Tis also taken for the Exhalations themselves, and, by no mean Philosophers, is confounded with the Air; beyond which they immediately place what they call the Etherial Substance. That Vapours are continually exhaled both from Earth and Water, is too evident to be denied; and these Exhalations are occasioned, 1. By the Heat of the Sun, Moon and Stars. 2. By the Heat of the Earth, mix'd with its Parts, or by Subterranean Fires: For we perceive, that Fire put to any Body, causes it to send out Exhalations; and Experience shews us, that by Night, when the Moon shines, Vapours are rais'd from Water. But other Philosophers suppose, that, besides those Exhalations in the Space about the Earth, there is some peculiar and simple Body, which they call Air; altho' they freely grant, that Exhalations may be changed into Air; and on the other hand, that Air may be changed into Clouds, and thicker Vapours. Exhalations are more or fewer, according to the different Elevation of the Sun above the Horizon, or its Depression under it, according to the different Age and Elevation of the Moon, according to the Rising, Setting, and Constitution, of the Stars above the Horizon, and according to the Nature of the Soil; for moist Places send forth more than dry, and the

Exha-

Exhalations are of different Kinds, viz. Watery, Salt, Sulphureous, Earthy, Spiritous, &c. according to the Bodies they are rais'd from. From those Sulphureous Particles, fiery Meteors, Lightening, *Ignis fatui*, and Thunder, proceed. And the Difference of Air is occasion'd by those different Vapours.

He affirms in the Sixth Proposition, That Exhalations don't ascend of their own Nature, but by a violent Motion from another Cause; or that Air is not light, but heavy, absolutely speaking; and proves it thus: Every Thing is to be call'd heavy, which moves towards the Center of the Earth, except it be hinder'd: But Air does so; for if a Hole be dug in the Earth, Air descends into the Hole; and the Reason of its being carried upwards, is, 1. Because 'tis rarified by the Heat, which makes it seek for a larger Space. 2. Because it is thrust upwards by other Vapours. Hence 'tis, That in cold Places, such as *Nova Zembla*, and with us in the Night-Time, Clouds don't ascend; but when the Sun approaches, they are rarified, so as one Part pushes another forward.

In his Seventh Proposition, he proves, That the uppermost Parts of the Atmosphere are more subtle than the lower Parts; yet it may so happen, that the middle Parts are more gross than the lowermost Parts which are next the Earth, because the lighter Parts tend naturally to the higher Place; but those in the Middle may easily come together again, and so be more gross, the hot Particles which were carried up with them having left them, and the Beams of the Sun reflected from the Earth having no Power in the middle Region, because of their Distance. Hence it is, that the middle Air is more clear after Rain, because the grosser Parts are separated.

In his Eighth Proposition, he proves, That the Atmosphere or Air, when warm, takes up a greater Space than before; and the colder it is, the more 'tis contracted,

and requires the less Space. This is plain from the Thermometer; for the colder the Air is, the less Space it takes up in the Glais; and the warmer it is, the more. The Cause is this, the warm Particles of the Beams of the Sun, or of any other Fire, are the most subtle Particles of the World, and in continual Motion. Therefore while they are mix'd with the Atmosphere, they separate those Particles with great Force, and make more Pores; but when those fiery Particles are gone, the Particles of the Air, being left to themselves, do again unite.

In his Tenth Proposition, he asserts, That a clear Air may be so rarified by a violent Fire, as to take up 70 times more Space than it did before, and may be so condens'd in an Air-Pump, as only to take up the 60th Part of what it did before; but the Heat of the Sun never occasions a Rarefaction, nor the Coolness of the Air a Condensation, to that Degree. This is prov'd by the *Aelopila*, which being made hot by the Fire, will contain 13 Ounces of Water; but when cold, contains half a Dram over: Therefore the Air, while warm, took up so much more Space in the *Aelopila* when hot, than when it was cold; which answers to the Quantity above-mention'd.

In the Eleventh Proposition, he gives the Reasons why in the Frigid Zone, when they have no Sun, the Air is sometimes clear, but for most Part thick and cloudy. The latter, he says, proceeds from the small Subterranean Heat of the Earth, and of the Moon and Stars, which continue, while the Sun is absent, many Days and Nights above the Horizon; and that the Air is sometimes clear, is either because the thick Vapours fall down to the Earth, or are carried elsewhere by the Winds.

In his Twelfth Proposition, he gives the Reason why, many times in the coldest Days of Winter, the Air is clear, and not condens'd by the Cold. A Middling Cold,

Cold, he says, does not make the Air clear, but cloudy; because the small Heat still left in the Air raises the Vapours; but does not dispel them; but a violent Cold makes the Air clear. 1. By making the gross Matters yet more gross; by which means they settle and fall to the Earth. 2. By shutting up the Pores of the Earth, so that the Vapours cannot rise.

In the Eighteenth Proposition, he gives an Account of the Three Regions of the Air. The First is that in which we live, and reaches to the Middle Region. The Middle is that wherein Snow, Rain, and Hail, are generated. The Third is that which begins at the highest Part of the Middle Region, and reaches to the highest Part of the Surface of the Air; above which the *Aristotelians* place what they call the Sublunary Fire.

The Middle Region is reckon'd colder than the First and Third. 'Tis colder than the First, because the Earth reflects the Beams of the Sun, and so doubles the Heat, besides what it receives from the Particles of the Subterranean Fire. 'Tis colder than the Third, because that contains the more subtle fiery and sulphureous Parts of the Exhalations, which are carried thither from the Place of the watery Particles. The Middle Region is colder, because it is neither reach'd by the Beams of the Sun reflected from the Earth, nor by the fiery Particles, &c. of the Upper Region.

In his 41st Proposition, he gives us the Observation made by one *David Frelichius* upon the Mountain *Carpathus* in *Hungary*, which is the highest in that Country, and gives Name to all that Tract of Mountains which divide *Hungary* from *Poland*, *Moravia*, *Silesia*, and that Part of *Austria* which lies beyond the *Danube*. He thinks this Observation very proper to help us to make a Judgment concerning the Height of the Air, and the Constitution of its Regions.

In *June* 1615, he went up with Two

Companions to view these high Mountains, and when, with great Fatigue, he came to the Top of the first Rock, which, from the low Ground, he thought was as high as he needed to go, he perceived another Rock much higher, which he also climb'd up, through vast loose Rocks; of which, if any fell down, it carries Hundreds of others with it, of a much larger Size, with such a terrible Noise, as if the whole Mountain were tumbling down. When he came to the Top of that, he still found another higher, till at last he came to the Top of the highest. When from the lower Hills he look'd down to the Vallies, which were full of large Trees, he could perceive nothing but what either resembled dark Night, or the blue Sky in a clear Day, the visible Species were so much extenuated by the vast Declivity. Whilst he climb'd up the higher Mountain, he found himself encompass'd with thick Clouds. When he got through them in some Hours time, and drew near the highest Summit, he sat down and view'd the Place, where he was encompass'd with Clouds, and there he saw thick white Clouds moving; over which, for some Miles, he had a pleasant Prospect, and perceiv'd some Clouds higher, some lower, and some that mov'd at an equal Distance from the Earth; from whence he inferr'd these Three Things: 1. That he was enter'd the Middle Region of the Air. 2. That the Distance of the Clouds from the Earth was not equal, but some higher, and others lower, according to the Nature of the Vapour. 3. That the Distance of the Clouds nearer the Earth was much less than some Natural Philosophers say, and, instead of 72 *German* Miles, is only half a *German* Mile. When he came to the highest Summit, he found the Air so calm and subtle, that it did not so much as move a Hair; whereas in the lower Mountains there was a very high Wind. From this he conjectur'd, That this Summit was a

Ger-

German Mile from the Root of the lowest Hill, and that it reach'd above the Region of the Air where the Winds come. He fir'd a Pistol on the Top of it, which at first made no greater Report or Noise than if he had broke a little Stick; but in a small Time the Sound increased, and fill'd the lower Parts of the Mountain, the Vallies, and the Woods. As he came down through Snow, which had lain some Years in the Distances and Clefts of the Mountains, he fir'd another Pistol, which made a greater Noise than the largest Gun. This put him in Fear that the Mountain would fall with him. The Noise continued half a Quarter of an Hour, and went through all the Caverns of the Mountains, which multiplied it; there being no such Cavities in the Top of the Mountain, the Sound at first was very small; but meeting with Resistance in the Caves and Distances between the Rocks, it became louder. He adds, That in those high Mountains, there is Snow and Hail in the middle of Summer, as often as it Rains in the neighbouring Vallies: And he perceiv'd, by the Colour and Hardness of the Snow in several Parts, that it had lain there for some Years.

Varenius, in his 20th Chapter, treats of Winds in general, and of the Quarters of the World, or 32 Points of the Compass; of which he gives us the following Table, with their Distances from each Pole, viz. of the first 16 from the *Antarctic*, and of the rest from the *Arctic*.

	Degr.	Min.
East	90	0
East by South	78	45
East-South-East	67	30
South-East and by East	56	15
South-East	45	0
South-East by South	33	45
South-South-East	22	30
South and by East	11	15

North-East	45	0
North-East by East	56	15
East-North-East	67	30
East and by North	78	45

Brietius, lib. 2. p. 32. gives us the following Account of the Winds, according to the Ancients. *Aristotle de Meteor.* lib. 1. Cap. 13. says, some Philosophers allowed only one Wind, because Wind was only the Motion of the Air. *Theriacles*, in *Strabo*, makes only Two, opposite to one another, according to the Poles, *Boreas*, *Notus*. The Greek and Latin Poets allow Four, which they place thus; *Auster* or *Notus*, opposite to *Aquilo* or *Boreas*; *Eurus*, opposite to *Favonius* or *Zephyrus*. The latter, in Time of a Tempest, they call *Africus*.

Andronicus Cyrrhestes, in *Strabo*, drew Eight, upon an Eight-corner'd Tower in *Athens*, pointed out by a Triton, with a moveable Rod.

Pliny, *Seneca*, and *Aristotle*, make 12, which *Seneca* collected from the Points of the Tropicks, of the Polar Circles, and of the Meridian intersecting the said Circles; and *Vernvius* made 24.

of the Winds and their
Ancients and Moderns.

SECT. XXII.

The Causes of WINDS in General.

V *Arenius*, Cap. 20. Prop. 10. gives an Account of the Causes of Wind, thus: The First and General Cause is the Sun, who by its Heat rarifies the Air, which obliges it to seek a greater Space, and one Part of the Air to thrust forward another. Thus, when the Sun moves from East to West, the principal Impulse of the Air is towards the West. A Proof of this is, That in most Places by Land, under the Torrid Zone, and every where by Sea, the Wind blows continually from the East; that is to say, the Sun thrusts the Air from East to West, but does not exceed the Torrid Zone. The rarified Air is indeed thrust forward toward all Quarters, *viz.* N. S. E. W. and the intermediate Points; but 'tis not admitted in all Points, the greatest Impulse or Protrusion being to the West, because the Sun moves that Way. It is almost continually so in the Torrid Zone; but in ours it blows generally before the Rising of the Sun, and after it, when most other Winds cease. Some Points are sometimes more disposed to receive this Impulse of the Air than others; and thus, when the Impulse is most towards the North, it is called a South Wind, &c. Here it is to be observed, That when this Impulse is towards any of the Points without the Four Cardinal Ones, then in different Countries the Wind seems different; for tho' that Point be one with respect to the Place to which the Sun is vertical, yet in respect to the other Places it is different; and this is the Reason why the same Wind is call'd by different Names in different Countries: But this is either assisted or hinder'd by other Causes; if it be assisted, then the Wind becomes violent; but if hinder'd, it becomes less violent from that Quarter, and frequently another Wind blows then, which is rather assisted by the General Cause. The Second Cause of Winds, he says, is frequent Exhalations rais'd plentifully from the Sea and Earth with great Force; but they scarcely occasion a Wind till they begin to be rarified. The Third Cause is the Rarefaction of

greater and lesser Clouds, either by the Sun and other Stars, or by the Fiery and Sulphureous Particles contained in themselves. The Fourth is the Dissolution of Ice and Snow, especially in Mountainous Places; for they are not altogether dissolv'd into Water. The Fifth is the Rising and various Situation of the Moon, and of the rest of the Stars. The Sixth is the Condensation and Rarefaction of the Air and Vapours by any Heat or Cold. The Seventh is the Descent of Clouds, by which the Air is pressed. These Things are better understood by the Consideration of the Instrument call'd *Æolopila*, in which Water being inclos'd, and the Instrument put to the Fire, it sends forth Wind with a great Force, until all the Water be exhal'd. He thinks, the Part of the small Orifice of the *Æolopila* is perform'd, 1. By the thicker neighbouring Air. 2. If that Air be pressed or hindered to give Way by other Vapours or Clouds. 3. If the Air be more condensed towards one Quarter, and so make Way for Blasts or Gusts of Wind.

In Prop. 11. he accounts for the Winds blowing so as to form a perpendicular Line above the Horizon. He says the Cause is, because the Air goes round the Earth in a Spherical Form, and the Protrusion is for most part made through the greatest Circle of the Sphere; but this will be better apprehended, if we consider the First Cause of the Wind: For the Sun thrusts the Air towards all those Quarters of the Places to which it is vertical; but the Impulse is not receiv'd in all those Places, as has been said already. Then if we consider the greatest Circles drawn from that Place, and among those such as receive the Protrusion and Impulse of the Air, all those Places of the Earth, situated in this Circle or Semi-Circle, will have the Wind perpendicular; because every great Circle of the Earth passing thro' any Place of it, is perpendicular to the Horizon of that Place. 'Tis the same when a Gust of Wind breaks out from a Cloud; but the Places situated without those Circles are not sensible of the Wind, tho' the Air be mov'd above their Horizon, because it is not perpendicular to that Horizon, but oblique: Yet he owns, 'tis not generally true that the Wind moves perpendicularly to the Horizon, because we many

times perceive the Wind to blow Cross-wise in the Air; and thus Smoak from a Chimney is sometimes carried to different Points by the Wind at the same time.

In Prop. 12. he gives the Reason why, during a Wind, the Blasts sometimes cease, and of a sudden renew their Force; and thinks, it's occasion'd by the ceasing of the Cause; and that Time is required for collecting the Vapours to break thro' the Air with such Force: Therefore the Wind is more continued at Sea, because the Exhalations there are so.

The Cause why Westerly Winds are less frequent than the Easterly, is accounted for in the 10th Proposition.

The Cause why North and East Winds are more strong than the South and West Winds, he accounts for thus: The Northern Air is more thick, because of the Cold; and the Southern Wind in our Zone is thinner, because the Air is rarified by the Heat of the Sun, &c. But it must be observ'd, That the South Winds are as dry, cold and impetuous in the Temperate Zone, opposite to ours, as the North Winds are to us; but the East Wind is stronger for another Reason, because it rises for most part from the Rarefaction of the Air by the Sun, which being continually carried from East to West, blows the more strong; tho' there may be other Causes which either further or hinder it.

In Prop. 16. he gives the Cause why the South and West Winds are warmer than those of the East and North: But he says, this is only to be understood of the Places in our Zone; for in the other Temperate Zone, situated from the Equator towards the South, it is contrary, because in those Places the North Winds are more warm, and the South Winds more cold. This, he says, must be so, from the Nature of the Thing; for the South Winds are more warm to us, and the North Winds colder, because our South Winds come from the Places which are nearer to the Torrid Zone, or the Course of the Sun; but it is otherwise as to the Northern Winds. In Places situated from the Equator towards the Antarctic, 'tis just the contrary, because the North Wind blows upon them from the Torrid Zone, and the South Wind from Places which are nearer the Antarctic Pole.

But we must answer otherwise as to the Eastern and Western Winds, because the Diversity of the Places of ours and the opposite Zone has no room here. In the first Place, 'twas said in the former Proposition, That the Western Winds are less frequent, and they are more warm, because they blow for most part by Night, after the Sun sets; and the Air which comes from that Quarter is warmer than ours, because we are further from the Setting Sun. Here's another Cause (which holds also in the Difference betwixt the North and South Winds) why the Western Winds are less strong: for 'tis known that any Air or Wind is found to be the more or less cold, according as it blows more or less strong; tho' it be in reality neither colder nor hotter, as we may perceive by our own Breath, which we can blow both hot and cold as we please.

In Prop. 17. he gives us the Signs of approaching Wind. When Mariners see a pale or blackish little Cloud, they look upon it as a Sign of Wind from that Quarter; for Clouds of that Colour are a Sign that they are forthwith to be dissolv'd into Blasts, or the Clouds themselves settling downwards because of their Weight; and being separated from other Clouds, they press the Air which is under them, and so occasion it to blow. Other Signs are; 1. If the Sun when it rises appear with Spots, and lurk under a pale or black Cloud, it foretells either Wind or Rain. 2. If the Rising Sun appear Concave, so that it shines in the middle, and casts out Rays, it foretells a moist and windy Tempest: The like if the Setting-Sun look pale. 3. But if it look red, the Air will be calm and clear next Day. 4. If the Sun look pale, and set in a black Cloud, it presages a North Wind. 5. If the Moon be of a Gold Colour, it's a certain Sign of Wind, according to the Verse:

Pallida Luna pluit, rubicunda stat, alba serenat. i. e.

A Pale Moon Rain foretells, the Red brings Wind;

But when there's White, the Air is clear we find.

6. A Circle round the Moon. 7. If the Horns of the Moon be sharp. 8. If the Nor-

Northern Horn of the Moon be longer than the other, it presages a North Wind; but if the Southern Horn be more erected, a South Wind. 9. The Rising of the Moon and more noted Stars, as *Arcturus*, *Orion*, and of those little Stars called *Hedi*, with the Sun. 10. If the little Stars in *Cancer*, which are call'd *Astiles*, be cover'd with a small Cloud, especially if the Northernmost of the two be covered, it presages a South Wind; but if the other, a North Wind. 11. When Rain ceases, Wind begins to blow for most Part. 12. When a Sound or Noise, like bubbling up of Water, is heard in the Sea. 13. The Ancients took Marks of approaching Winds from Animals, as the Crow, the Dolphin Fish, &c. 14. From Fiery Meteors and Lightening.

In Prop. 18. he gives the Reasons why Winds are more frequent in Spring and Autumn, and blow harder than in a hot Summer or cold Winter.

This happens in the Spring, partly from the Dissolution of Snow, especially in Mountainous Places, partly because the Pores of the Earth are then open, and send forth more Exhalations, and partly because the Air and Vapours are then more rarified than in Winter. Add, That in the Month before the Spring begins, and in the Spring it self, there happens for the most Part to be much Rain, because the moist Constellations are in those Places of the Zodiac; into which, when the Sun enters, we reckon the Spring begins. The same Frequency of Rain and Exhalations is the Occasion of Wind in Autumn, because the middling Heat of the Sun does indeed raise the Vapours, but thick, and not enough rarified: But in a hot Summer, Winds and Rains are less frequent, because the Sun attenuates the Exhalations too much, and does not suffer them to come together in such Plenty as is required to the Generation of Wind. In a hard Winter, the Winds are more seldom, because the Pores of the Earth being shut, there are few Vapours rais'd; and such as are, do either condense into Snow, or are hinder'd by the Frost from rarifying so much as to occasion Wind.

In Prop. 19. he gives an Account how high in the Air Winds blow, or in what Region of the Air they begin. Some think that Winds don't go above the Lower Re-

gion of the Air, because none is perceiv'd in the Tops of high Mountains, such as *Olympus*, &c. But *Varenius* doubts of this, because Smoak issuing from the Top of Mount *Aetna*, is carried about by the Wind.

In Prop. 20. he gives an Account how far one and the same Wind may extend, and tell us, there's a great Diversity in this Matter: For Winds which blow from East to West, under the Torrid Zone, seem to go round the whole Earth; and those which blow from South and North, Mariners find to continue many Days, and to blow thro' a great Space of the Globe. The same seems to hold of Collateral Winds, but with this Diversity, that the same Wind is different in different Places, as was mention'd in the 10th Proposition.

SECT. XXIII.

Varenius, Cap. 21. treats of Winds in Particular, and of Tempests.

THE Second Proposition treats of General and Particular Winds.

A General or Trade Wind is so called, because it blows from the same Point in many Places at the same time over large Tracts of the Earth, and for most part of the Year; but is most discernable at Sea. A Particular Wind is just the contrary.

The General Wind at Sea is interrupted sometimes by an opposite Land-Wind from Places near the Sea; so that this Wind is most constant in the middle of the Sea: Such Winds are found only in the Seas under the Torrid Zone, or in Seas within the Tropics, and sometimes 7 Degrees without the Tropics. All these General Winds are from the East, and its Collateral Points, viz. East, North-East, and South-East. They are most constant in the *Pacific Ocean*; so that Ships bound from *Aquapulco* in *New-Spain* to the *Philippine Islands*, which lie from East to West, frequently perform this great Voyage of 1650 Leagues in 60 Days, without shifting their Sails, the Wind being all that Time at East or North-East; so that the Seamen say, they may sleep securely all that Voyage, 'till they come in sight of the *Philippine Islands*, where this Wind is interrupted by others. The same General Wind

is observ'd betwixt the Cape of *Good Hope* and *Brafle*, betwixt whom lies the Island of *St. Helena*. They fail from this Island to the Cape of *Good Hope* (which is 350 Leagues) very often in the Space of 12 or 16 Days; but if they fail beyond this Island the 8th Part of a League, they cannot tack about to make it again, the Wind blows so hard from the East.

The Causes of these Winds are accounted for thus: Some are of Opinion, That the Motion of the Sun from East to West carries the Air along with it, and with more Force in the Torrid Zone than in other Places. Those who are of Opinion, That the Earth moves round the Sun, say, The Air, when carried about with the Earth, moves slower than the Earth. Hence it is, That when we are carried with the Earth from West to East, the Air moving with less Swiftnefs, seems to be against us, and to move from East to West. *Cartes* advances a new Solution of this Phenomenon, Part 4. Prop. 49. of his Principles, where he ascribes this to the Moon, as well as the Motion of the Sea from East to West.

In the 3d Prop. *Varenius* discourses of Fix'd and Periodical Winds, and of such as are unconstant; some are Anniversary; some return every six Months, some once per Month, and some every Day. The most remarkable are the *Mouffons*, (as the *Dutch* call them) or Trade-Winds, for their Usefulness in Trade. In the *Indian Ocean*, they have this Wind constantly for some Months, and when they cease, a contrary Wind begins, and lasts as long; and sometimes there is a Cessation of both for some Days: During which, sometimes there are Calms and variable Winds, and frequent Storms. In that Part of the *Atlantick* which lies in the Torrid Zone, and sometimes in the Temperate Zone, the North Wind blows during *October*, *November*, and *January*, which is therefore a fit Time for a Voyage from *Europe* to *India*. *Varenius* thinks, the Dissolution of Snow, the Plenty of thick Vapours, and the continual Pressure of heavy Clouds, during those Months, may occasion the said Winds, especially since they blow for most part from the North and South Quarters; but refers the Matter to further and more accurate Observations of the Seasons of the Year, and the Mountains in those Places.

In the 4th Proposition, we have an Account of those Winds the *Greeks* call'd *Etesie*, or Anniversary: They were of Two Sorts; the Summer Winds, which blow from the North, begin about the 6th or 15th of *July*, and lasts 40 Days or longer: They blow only in the Day-time; nor do they begin early in a Morning. This Wind is observ'd not only in *Greece*, but in *Thrace*, *Macedonia*, in the *Archipelago*, *Egypt*, and *Africa*. *Varenius* thinks they proceed from the melted Snow and Rain in the neighbouring Mountains; and the Reason why they don't blow in the Night-time, is, because the Snow does not melt then, or at least not so much, because of the Absence of the Sun. The South Winds begin after Winter, and are very low. The *Greeks* call'd the former *Etesie*, by way of Eminence, because they are the strongest; and the latter they call *Chelidonius*, or *Ornithias*, because they foretel the coming of the Birds call'd *Chelidona*, or Swallows. He thinks those Winds proceed from the melting of the Snow in the Mountains of the Moon in *Monomotopa*, it being Summer there when it is Winter in *Europe*. These Winds begin in *Congo* and *Guzarate* in *September*, and continue till *March*. He is doubtful how to give Reasons why these Winds are not equally observable in *Italy*, *Germany*, *France*, &c. as in *Greece*, &c.

In the 6th Proposition, he gives an Account of some Winds that are peculiar to some Places, viz. On the Coasts of *Peru*, *Chili*, and the adjacent Sea, the South Wind, or South-West Wind, is perpetual. It begins at 46 Degrees of Latitude, and reaches beyond *Panama*, in the Isthmus of *America*. Hence it is, That Ships from *Lima* to *Panama*, in a very few Days compass their Voyage; but from *Panama* to *Lima*, much more Time is required. This Wind blows only near the Coasts of *Peru*. Upon the Coasts of the *Terra Megallanica*, or *del Fuego*, about the Frith of *Le Maire*, the West Winds are very frequent. On the Coasts of *Malabar* in *India*, the North and North-East Winds blow all the Year. Our Author believes, his former Hypothesis of the melting of Snow in the Mountains, will answer this, and all other Difficulties of that Sort.

In the 7th Proposition, he speaks of Winds that blow at certain Times of the Day and Night;

Night; as on the Coasts of *Malabar*, from September to April, the Wind begins to blow at East from Midnight till Noon from the Land; but from Noon till Midnight, there blows from Sea a Westerly Wind.

On the Coasts of *New Spain*, they have Land-Winds all Night, and Winds from the Sea all Day. In the Kingdom of *Congo*, they have Winds from the Land all Night, but cool refreshing Breezes from the Sea all Day; which is a great Comfort to the Inhabitants of those sultry Countries.

In the 8th Proposition, he observes, the nearer we come to the Equator from the North Pole, the North Winds are the less violent; and when we pass the Equator, in Part of the *Terra Australis*, we find the South Winds strong, which are cold and dry in those Places, especially in *Chili* and *Peru*. He thinks the Cause of both to be the same, because they come from the Polar Places.

In the 10th Proposition, he discourses of Winds remarkable for their fatal Effects, as Whirl-Winds, Hurricanes, &c.

The Winds which Mariners call *Travado's*, break out suddenly from a Cloud; and while they last, carry all before them: They are very frequent betwixt the Cape of *Good Hope* and *Brasile*, and on the other Side of *Africa* as far as the Country of *Natal* and *Guinea* under the Equator. Mariners, as soon as they observe the black Clouds gather together, they know it is their immediate Concern to provide against the Storm; upon which they furl their Sails. Before the Mariners knew the Signs and *Travado's*, many Ships were lost. The *Portuguese* were first acquainted with these Winds, being the first *Europeans* who sail'd over the *Ethiopic* Ocean. Upon the Discovery of the Way to the *Indies* by the Cape of *Good Hope*, by *Vasco de Gama*, the King of *Portugal* set out 13 stout Ships of great Burden in the Year 1500, which was the first Fleet from *Europe* that arrived at *Brasile*. They continu'd there during April; and sail'd in May for the Cape of *Good Hope*; Tho' they saw the Signs of the approaching Storm, they did not understand them. Before the Storm, they were becalm'd, and spread all their Sails, to gather what Wind they could; but all of a sudden a furious North Wind blew, and sunk 4 of their Ships immediately. The whole Fleet had been irrecovera-

bly lost, if they had not straightway furl'd their Sails. In the Ocean betwixt *America* and *Africa*, under the Equator, these Winds are very frequent, especially in April, May, and June. They are also observ'd upon the Coasts of *Guinea*. In the *Arabian* Gulph, in *Arabia* it self, and *Ethiopia*, those Winds are frequent; so that in one Year's Time 6000 Travellers, with their Camels, have been buried under vast Mountains of Sand. 'Tis probable the Mummies are nothing else, but such Corps which are immediately dried by the scorching Sand.

Varenius thinks these Winds may be produc'd, 1. By the sudden falling down of Clouds, because of their Weight. 2. By the sudden breaking out of Spirits, Fire, or Sulphureous Matter; as Spouts proceed from watery Clouds, which fall down with great Force perpendicularly when they become too weighty to be supported by the neighbouring Air.

Hurricanes are very frequent in the Eastern Ocean. In the Seas of *Japan* and *China* they begin at West, and go over all the Points of the Compass in 24 Hours. This makes Voyages from the *East-Indies* to *Japan* extremely dangerous; so that they reckon it a prosperous Voyage if one Ship in three returns safe. These Winds have prodigious Effects, pull up Trees by the Roots, overturn Houses, and throw huge Ships quite out of the Water a great way into the Land. *Varenius* thinks, the Cause of these Whirl-Winds and Hurricanes to be a Wind which breaks out with great Violence from some Quarter, and meeting with a Stop, is whirl'd round into it self, as we see Water in a Whirl-pool; or that they proceed from opposite Winds, which blow fiercely at one and the same Time.

Prop. 13. He thinks the Wind may proceed from the Earth and Water: For since there are Cavities in both, with Spirits and Sulphureous Substances, he sees no Reason why we may not think, that strong Blasts of Wind are generated there; that is to say, if it be hinder'd from coming out by Degrees as it generates, or if so much be generated at once as is sufficient to form a Wind. Thus when Wind is stop'd in the Bowels of the Earth, it occasions Earthquakes; and the same is the Occasion of *Smook's* rising frequently out of the Sea in

leve-

several Places of the World: But he owns, he never read of any Winds breaking out of the Sea.

Prop. 14. Upon the Question, Whether Wind rises from the Flux of the Sea and Rivers? he says, 'tis plain from Experience, That when the Sea flows and ebbs, if the Air be free from other stronger Winds, there's generally a Wind from the Sea with a Tide of Flood: Therefore he thinks 'tis probable that the Air, because of its Contiguity, is carried towards the same Quarter with the Water; or, he thinks, the Air may be thrust from its Place by the flowing Water; for the Air is mov'd with a very small Impression.

Prop. 15. He gives the Reason why *Ignes-Fatui*, *Castor*, *Pollux*, and *Helenæ*, are perceiv'd during Tempests. The Portuguese call 'em *Corpo Santo*; the Spaniards *St. Elmo*. Many of them are sometimes seen moving about the Masts of Ships, with a wandering and uncertain Motion, like other *Ignes-Fatui*; tho' at other times they rest upon the Masts and Sails, and give a faint Light, like a Candle that burns dark. If 5 of them be seen together, the Portuguese call them *Our Lady's Crown*, and take them as a certain Token that the Tempest will immediately cease. The Cause of these Fires he thinks to be a Sulphureous Bituminous Matter, thrust downward by the great Motion of the Air, and being gather'd together, is set on fire by the Agitation and coming together of the Particles.

Prop. 16. He thinks the Cause of the frequent and long Calms in the Sea near Guinea, and under the Equator in the *Atlantic*, especially in April, May and June, to be, that there's no Snow upon the Mountains in those Parts, which, by its Dissolution, may generate Winds.

S E C T. XXIV.

HERE 'tis fit to add what Mr. Edmund Halley says, in his *Historical Account of the Trade-Winds and Monsoons observable in the Seas between and near the Tropics; with an Attempt to assign the Physical Cause of the said Winds.*

He says, This is a Part of Natural History, no less desirable and useful, than hard to obtain: That *Varenius's* Account of it is

not accurate, but full of Mistakes, which he will endeavour to rectify, from the Accounts of experienc'd Sailors, and his own Observations whilst he lived between the Tropics.

The Substance of what he had collected, is briefly as follows:

The Universal Ocean may most properly be divided into 3 Parts, viz. 1. The *Atlantic* and *Ethiopic* Sea. 2. The *Indian* Ocean. 3. The great South Sea, or *Pacific* Ocean. And tho' these Seas do all communicate by the South, yet, as to our present Purpose of the Trade-Winds, they are sufficiently separated by the Interposition of great Tracts of Land; the first lying between *Africa* and *America*; the second between *Africa* and the *Indian* Islands, and *Hollandia Nova*; and the last between the *Philippine* Isles, *China*, *Japan*, and *Hollandia Nova*, on the West, and the Coast of *America* on the East. Now following this Natural Division of the Seas, so will we divide our History into 3 Parts in the same Order.

I. In the *Atlantic* and *Ethiopic* Seas, between the Tropics, there is a general Easterly Wind all the Year long, without any considerable Variation, excepting that it is subject to be deflected there from some few Points of the Compass towards the North or South, according to the Position of the Place. The Observations which have been made of these Deflections are the following:

1. That near the Coast of *Africa*, as soon as you have pass'd the *Canary* Isles, you are sure to meet a fresh Gale of N. E. Wind, about the Latitude of 28 Degrees North, which seldom comes to the Eastward of the E. N. E. or passes the N. N. E. This Wind accompanies those bound to the Southward to the Latitude of 10 North, and about 100 Leagues from the *Guinea* Coast, where, 'till the 4th Degree of North Latitude, they fall into the Calms and Tornado's: Of which, more hereafter.

2. That those bound to the *Caribbe* Isles, find, as they approach the *American* Side, that the aforesaid N. E. Wind becomes still more and more Easterly, so as sometimes to be E. sometimes E. by S. but yet most commonly to the Northward of the East a Point of two, seldom more. 'Tis likewise observ'd, That the Strength of these Winds does

or y^e Shifting Trade Winds through y^e WORLD, Variations &c.
According to the Newest and most Exact Observations, By H. Moll Geographer.

does gradually decrease as you fail to the Westward.

3. That the Limits of the Trade and variable Winds in this Ocean are farther extended on the *American* Side than the *African*; for whereas you meet not with this certain Wind 'till after you have pass'd the Latitude of 28 Deg. on this Side, on the *American* Side it commonly holds to 30, 31, or 32 Degrees of Latitude: And this is verified likewise to the Southward of the Equinoctial; for near the Cape of *Good-Hope*, the Limits of the Trade-Winds are 3 or 4 Degrees nearer the Line than on the Coast of *Brasile*.

4. That from the Latitude of 4 Degrees North, to the aforesaid Limits on the South of the Equator, the Winds are generally and perpetually between the S. and E. and most commonly between the S.E. and E. observing always this Rule, That on the *African* Side they are more Southerly, on the *Brasilian* more Easterly, so as to become almost due East; the little Deflection they have being still to the Southward. In this Part of the Ocean it has been my Fortune to pass a full Year, in an Employment that oblig'd me to regard more than ordinary the Weather, and I found the Winds constantly about the S. E. the most usual Point S. E. by E. When it was Easterly, it generally blew hard, and was gloomy, dark, and sometimes rainy Weather: If it came to the Southward, it was generally serene, and a small Gale next to a Calm; but this not very common: But I never saw it to the Westward of the South, or Northward of the East.

5. That the Season of the Year has some small Effect on these Trade-Winds; for that when the Sun is considerable to the Northward of the Equator, the S. E. Winds, especially in the Streight of this Ocean, (if I may so call it) between *Brasile* and the Coast of *Guinea*, do vary a Point or two to the Southward, and the N. E. become more Easterly: And on the contrary, when the Sun is towards the Tropic of *Capricorn*, the South Easterly Winds become more Easterly, and the North-Easterly Winds on this Side the Line were more to the Northward.

6. That as there is no General Rule that admits not of some Exception, so there is in this Ocean a Tract of Sea wherein the

Southerly and S. W. Winds are perpetual, viz. all along the Coast of *Guinea*, for above 500 Leagues together, from *Sierra Leona* to the Isle of *St. Thomas*; for the S. E. Trade-Wind having pass'd the Line, and approaching the Coast of *Guinea* within 80 or 100 Leagues, inclines towards the Shore, and becomes S. S. E. and by degrees, as you come nearer, it veres about to S. S. W. and in with the Land S. W. and sometimes W. S. W. which Variation is better expressed in the Map hereto annexed, (*Vide Map.*) than it can well be in Words. These are the Winds which are observ'd on this Coast when it blows true; but there are frequent Calms, violent sudden Gusts called *Tornadoes* from all Points of the Compass, and sometimes unwholesome foggy Easterly Winds, called *Hermillas* by the Natives, which too often infect the Navigation of these Parts.

7. That to the Northward of the Line, between 4 and 10 Degrees of Latitude, and between the Meridians of *Cape Verde* and of the Eastermost Islands that bear that Name, there is a Tract of Sea wherein it were improper to say there is any Trade-Wind, or yet a variable; for it seems condemned to perpetual Calms, attended with terrible Thunder and Lightening, and Rains so frequent, that our Navigators from thence call this Part of the Sea the Rains: The little Winds that are, be only some sudden uncertain Gusts, of very little Continuance, and less Extent; so that sometimes each Hour you shall have a different Gale, which dies away into a Calm before another succeed; and in a Fleet of Ships in sight of one another, each shall have the Wind from a several Point of the Compass. With these weak Breezes, Ships are oblig'd to make the best of their Way to the Southward thro' the aforesaid 6 Degrees, wherein 'tis reported some have been detained whole Months for want of Wind.

From the three last Observables is shewn the Reason of two notable Occurrences in the *East-India* and *Guinea* Navigations: The one is, why notwithstanding the narrowest Part of the Sea between *Guinea* and *Brasile* be about 500 Leagues over, yet Ships bound to the Southward sometimes, especially in the Months of *July* and *August*, find a great Difficulty to pass it. This happens because

of

of the S. E. Winds, at that time of the Year commonly extending some Degrees beyond the ordinary Limit of 4 Degrees North Latitude; and withal, they come so much Southerly, as to be sometimes South, sometimes a Point or two to the West. There remains then only to ply to Windward; and if on the one Side they stand away W. S. W. they gain the Wind still more and more Easterly; but there is Danger of not weathering the *Brazilian Shore*, or at least the Shoals upon that Coast. But if upon the other Tack they go away E. S. E. they fall into the Neighbourhood of the Coast of *Guinea*, from which there is no departing, without running Easterly as far as the Isle of *St. Thomas*, which is the constant Practice of all the *Guinea Ships*, and which may seem very strange without the Consideration of the 6th Remark, which shews the Reason of it: For being in with the Coast, the Wind blows generally at S. W. and W. S. W. with which Winds they cannot go to the Northward for the Land; and on the other Tack they can lie no nearer the Wind than S. S. E. or S. With these Courses they run off the Shore; but in so doing they always find the Winds more and more contrary: So that when near the Shore they could lie South, at a greater Distance they can make their Way no better than S. E. and afterwards E. S. E. with which Courses they fetch commonly the Isle of *St. Thomas* and *Cape Lopez*, where finding the Winds to the Eastward of the South, they keep them favourable, by running away to the Westward in the South Latitude of 3 or 4 Degrees, where the S. E. Winds are perpetual.

For the Sake of these General Winds, all those that use the *West-Indian Trade*, even those bound to *Virginia*, count it their best Course to get as soon as they can to the Southward, that so they may be certain of a fair and fresh Gale to run before it to the Westward: And for the same Reason, those homeward-bound from *America* endeavour to gain the Latitude of 30 Degrees as soon as possible, where they first find the Winds begin to be variable; tho' the most ordinary Winds in the Northern Part of the *Atlantic Ocean* come from between the S. and W.

As to those furious Storms call'd Hurricanes, which are, as it were, peculiar to the *Caribbe Isles*, and which so dreadfully afflict

them in the Month of *August*, or not much before or after, they do not so properly belong to this Place, both by reason of their small Continuance and Extent, as likewise because they are not Anniversary; some Years having more than one, and sometimes, for several Years together, there being none at all. But their Violence is so unconceivable, and their other *Phænomena* so surprising, that they merit well to be consider'd apart.

What is here said, is to be understood of the Sea-Winds at some Distance from the Land; for upon and near the Shores, the Land and Sea-Breezes are almost every where sensible; and the great Variety which happens in their Periods, Force and Direction, from the Situation of the Mountains, Valleys and Woods, and from the various Texture of the Soil, more or less capable of retaining and reflecting Heat, and of exhaling or condensing Vapours, is such, that it were an endless Task to endeavour to account for them.

II. In the *Indian Ocean* the Winds are partly General, as in the *Ethiopic Ocean* partly Periodical; that is, half the Year they blow one Way, and the other half near upon the opposite Points; and these Points, and Times of shifting, are different in different Parts of this Ocean: The Limits of each Trade of Sea, subject to the same Change or Monsoon, are certainly very hard to determine; but the Diligence I have us'd to be rightly inform'd, and the Care I have taken therein, has, in a great Measure, surmounted that Difficulty; and I am persuaded, that the following Particulars may be rely'd upon.

1. That between the Latitudes of 10 Degrees and 30 Degrees South, between *Madagascar* and *Hollandia Nova*, the General Trade-Wind about the S. E. by E. is found to blow all the Year long, to all Intents and Purposes, after the same Manner as in the same Latitudes in the *Ethiopic Ocean*; as it is describ'd in the 4th Remark foregoing.

2. That the aforesaid S. E. Winds extend to within two Degrees of the Equator, during the Months of *June*, *July*, *August*, &c. to *November*; at which Time, between the South Latitudes of 3 and 10 Degrees, being near the Meridian of the North-End of *Madagascar*, and between 2 and 12 South Latitude,

rude, being near *Sumatra* and *Java*, the contrary Winds from the N. W. or between the N. and W. set in and blew for half a Year, viz. from the Beginning of *December* till *May*: And this Monsoon is observed as far as the *Molucca* Isles of which more anon.

3. That to the Northward of 3 Degrees South Latitude, over the whole *Arabian* or *Indian* Sea, and Gulph of *Bengall*, from *Sumatra* to the Coast of *Africa*, there is another Monsoon, blowing from *October* to *April* upon the N. E. Points; but in the other half Year, from *April* to *October*, upon the opposite Points of S. W. and W. S. W. and that with rather more Force than the other, accompanied with dark rainy Weather; whereas the N. E. blows clear. 'Tis likewise to be noted, That the Winds are not so constant, either in Strength or Point, in the Gulph of *Bengall*, as they are in the *Indian* Sea, where a certain and steady Gale scarce ever fails. 'Tis also remarkable, That the S. W. Winds in these Seas are generally more Southerly on the *African* Side, more Westerly on the *Indian*.

4. That as an Appendix to the last describ'd Monsoon, there is a Tract of Sea to the Southward of the Equator, subject to the same Changes of the Wind, viz. near the *African* Coast, between it and the Island *Madagascar* or *St. Lawrence*, and from thence Northward as far as the Line; wherein, from *April* to *October*, there is found a constant fresh S. S. W. Wind, which, as you go more Northerly, becomes still more and more Westerly, so as to fall in with the W. S. W. Winds, mention'd before in those Months of the Year to be certain to the Northward of the Equator. What Winds blow in these Seas for the other half Year, from *October* to *April*, I have not yet been able to obtain to my full Satisfaction; for that our Navigators always return from *India* without *Madagascar*, and so are little acquainted in this Matter: The Account that has been given me is only this, That the Winds are much Easterly, hereabouts, and as often to the North of the true East, as to the Southward thereof.

5. That to the Eastward of *Sumatra* and *Malacca*, to the Northward of the Line, and along the Coast of *Cambodia* and *China*, the Monsoons blow North and South; that is to say, the N. E. Winds are much Norther-

ly, and the S. W. much Southerly. This Constitution reaches to the Eastward of the *Philippine* Isles, and as far Northerly as *Japan*; the Northern Monsoon setting in, in these Seas, in *October* and *November*, and the Southern in *May*, blowing all the Summer Months. Here it is to be noted, That the Points of the Compass, from whence the Wind comes in these Parts of the World, are not so fix'd as in those lately describ'd; for the Southerly will frequently pass a Point or two to the Eastward of the South, and the Northerly as much to the Westward of the North; which seems occasion'd by the great Quantity of Land which is interspers'd in these Seas.

6. That in the same Meridian, but to the Southward of the Equator, being that Tract lying between *Sumatra* and *Java* to the West, and *New Guinea* to the East, the same Northerly Monsoons are observ'd, but with this Difference, That the Inclination of the Northerly is towards the N. W. and of the Southerly towards the S. E. but the *Plaga Venti* are not more constant here than in the former, viz. variable 5 or 6 Points: Besides, the Times of the Change of these Winds are not the same as in the *Chinese* Seas, but about a Month or 6 Weeks later.

7. That these contrary Winds do not shift all at once; but in some Places the Time of the Change is attended with Calms, in others with variable Winds: And it is particularly remarkable, That the End of the Westerly Monsoon on the Coast of *Coremandel*, and the two last Months of the Southerly Monsoon in the Seas of *China*, are very subject to be tempestuous. The Violence of these Storms is such, that they seem to be of the Nature of the *West-India* Hurricanes, and render the Navigation of these Parts very unsafe about that Time of the Year. These Tempests are by our Seamen usually term'd, *The Breaking up of the Monsoons*.

By reason of the shifting of these Winds, all those that sail in these Seas, are oblig'd to observe the Seasons proper for their Voyages; and so doing, they fail not of a fair Wind, and speedy Passage: But if so be they chance to out-stay their Time till the contrary Monsoon set in, as it frequently happens, they are forc'd to give over the

Hopes of accomplishing their intended Voyages, and either return to the Port from whence they came, or else put into some other Harbour; there to spend the Time till the Wind shall become favourable.

III. The 3d Ocean, call'd *Mare Pacificum*, whose Extent is equal to that of the other Two, (it being from the West Coast of *America* to the *Philippine* Islands not less than 150 Degrees of Longitude) is that which is least known to our own or the neighbour Nations: That Navigation that there is on it, is by the *Spaniards*, who go Yearly from the Coast of *New Spain* to the *Manilla's*, but that but by one beaten Track; so that I cannot be so particular here, as in the other Two. What the *Spanish* Authors say of the Winds, they find in their Courses; and what is confirm'd by the old Accounts of *Drake* and *Candish*, and since by *Schooten*, who sail'd the whole Breadth of this Sea in the Southern Latitude of 15 or 16 Degrees, is, That there is a great Conformity between the Winds of this Sea, and those of the *Atlantic* and *Ethiopic*; that is to say, That to the Northward of the Equator, the predominant Wind is between the E. and N. E. and to the Southward thereof there is a constant steady Gale between the E. and S. E. and that on both Sides the Line with so much Constancy, that they scarce ever need to attend the Sails; and Strength, that 'tis rare to fail of crossing this vast Ocean in 30 Weeks time, which is about 130 Miles *per Diem*. Besides, 'tis said, That Storms and Tempests are never known in these Parts; so that here is the very best of Sailing, no Want of a fresh fair Wind, and yet no Danger of having too much: Wherefore some have thought it might be as short a Voyage to *Japan* and *China*, to go by the Straights of *Magellan*, as by the Cape of *Good Hope*.

The Limits of these General Winds are also much the same, as in the *Atlantic* Sea, viz. about the 30th Degree of Latitude on both Sides; for the *Spaniards* homeward-bound from the *Manilla's*, always take the Advantage of the Southerly Monsoon, blowing there in the Summer Months, and run up to the Northward of that Latitude, as high as *Japan*, before they meet with variable Winds, to shape their Course to the Eastward. And *Schooten* and others, that

have gone about by the *Magellan* Straights, have found the Limits of S. E. Winds much about the same Latitude to the Southward. Besides, a farther Analogy between the Winds of this Ocean, and the *Ethiopic*, appears in that upon the Coast of *Peru*, they are always much Southerly, like as they are found near the Shores of *Angola*.

Thus far Matter of Fact, wherein if the Information I have receiv'd be not in all Parts accurate, it has not been for want of Enquiry from those I conceiv'd best able to instruct me; and I shall take it for a very great Kindness if any Master of a Ship, or other Person, well inform'd of the Nature of the Winds in any of the aforementioned Parts of the World, shall please to communicate their Observations thereupon; so that what I have here collected, may be either confirm'd or amended, or, by the Addition of some material Circumstances, enlarged. 'Tis not the Work of one, nor of few, but of a multitude of Observers, to bring together the Experiments requisite to compose a perfect and complete History of these Winds: However, I am not much doubtful that I have err'd in, or omitted, any of the principal Observables, whatever lesser Particles may have escap'd my Knowledge.

To help the Conception of the Reader in a Matter of so much Difficulty, I believ'd it necessary to adjoin a Scheme, shewing at one View all the various Tracts and Courses of these Winds; whereby 'tis possible the Thing may be better understood, than by any verbal Description whatsoever.

The Limits of these several Tracts are design'd every where by prick'd Lines, as well in the *Atlantic* and *Ethiopic*, where they are the Boundaries of the Trade and variable Winds, as in the *Indian* Ocean, where they also shew the Extent of the several Monsoons. I could think of no better Way to design the Course of the Winds on the Map, than by drawing Rows of Strokes in the same Line that a Ship would move, going always before it; the sharp End of each little Stroke pointing out that Part of the Horizon, from whence the Wind continually comes: And where there are Monsoons, the Rows of the Strokes run alternately backward and forward; by which

Mean

Means they are thicker there than elsewhere. As to the great South Sea, considering its vast Extent, and the little Variety there is in its Winds; and the great Analogy between them and those of the *Atlantic* and *Ethiopic* Oceans; besides that the greatest Part thereof is wholly unknown to us; I thought it unnecessary to lengthen the Map therewith.

In the foregoing History are contain'd several Problems, that merit well the Consideration of our acutest Naturalists, both by reason of the Constancy of the Effect, and of the immense Extent thereof; near half the Surface of the Globe being concern'd. The chief of these Problems are, 1. Why these Winds are perpetually from the E. in the *Atlantic* and *Ethiopic*, as likewise in the *Pacific* Ocean, between the Latitudes of 30 N. and 30 S? 2. Why the said Winds extend no farther with Constancy than to the Latitudes of 30 Degrees? 3. Why there should be a constant South-Westerly Wind upon and near the Coast of *Guinea*? 4. Why in the North Part of the *Indian* Ocean the Winds, which for one half Year do agree with those of the other two Oceans, should change in the other half Year, and blow from the opposite Points, whilst the Southern Part of that Ocean follows the General Rule, and has perpetual Winds about S.E? 5. Why in these General Trade-Winds it should be always true; That to the Northward of the Equator, it is inclin'd to the Northward of the East; and in South Latitudes, to the Southward thereof? 6. Why in these Seas of *China*, there should be so great an Inclination from the E. to the N. more than elsewhere? With many more, which it would be much easier to propose, than answer.

But lest I should seem to propose to others, Difficulties which I have not thought worth my own Time and Pains, take here the Result of an earnest Endeavour after the true Reason of the aforesaid *Phenomena*; wherein if I am not able to account for all Particulars, yet 'tis hoped, the Thoughts I have spent thereon will not be judged wholly lost by the Curious in Natural Enquiries.

Wind is most properly defin'd to be the Stream or Current of the Air; and where such a Current is perpetual and fix'd in its Course, 'tis necessary that it proceed from

a permanent unintermitting Cause. Wherefore some have been inclin'd to propose the Diurnal Rotation of the Earth upon its Axis, by which, as the Globe turns Eastward, the loose and fluid Particles of the Air, being so exceeding light as they be, are left behind; so that in respect of the Earth's Surface, they move Westward, and become a constant Easterly Wind. This Opinion seems confirmed; for that these Winds are found only near the Equinoctial, in those Parallels of Latitude where the Diurnal Motion is swiftest; and I should readily assent to it, if the constant Calms in the *Atlantic* Sea near the Equator, the Westerly Winds near the Coast of *Guinea*, and the Periodical Westerly Monsoons under the Equator in the *Indian* Seas, did not declare the Insufficiency of that Hypothesis. Besides, the Air being kept to the Earth by the Principle of Gravity, would acquire the same Degree of Velocity that the Earth's Surface moves with, as well in respect of the Diurnal Rotation, as of the Annual about the Sun, which is about three times swifter.

It remains therefore to substitute some other Cause, capable of producing a like constant Effect, not liable to the same Objections, but agreeable to the known Properties of the Elements of Air and Water, and the Laws of the Motion of fluid Bodies. Such an one is, I conceive, the Action of the Sun-Beams upon the Air and Water, as he passes every Day over the Oceans, consider'd together with the Nature of the Soil, and Situation of the adjoining Continents. I say therefore, 1. That, according to the Laws of Statics, the Air, which is less rarified, or expanded by the Heat, and consequently more ponderous, must have a Motion towards those Parts thereof which are more rarified, and less ponderous, to bring it to an *Equilibrium*: And, 2. That the Presence of the Sun continually shifting to the Westward, that Part towards which the Air tends, by reason of the Rarification made by his greatest Meridian Heat, is with him carried Westward; and consequently the Tendency of the whole Body of the lower Air is that Way.

Thus a General Easterly Wind is form'd, which being impress'd upon all the Air of a vast Ocean, the Parts impel one the other,

and so keep moving till the next Return of the Sun, whereby so much of the Motion as was lost, is again restor'd; and thus the Easterly Wind is made perpetual.

From the same Principle it follows, That this Easterly Wind should, on the North Side of the Equator, be to the Northward of the East, and in South Latitudes to the Southward thereof; for near the Line, the Air is much more rarified than at a greater Distance from it, because of the Sun twice in the Year vertical, and at no Time distant above 23 Deg. and a half; at which Distance the Heat, being as the Sine of the Angle of Incidence, is but little short of that of the perpendicular Ray. Whereas under the Tropics, tho' the Sun stays long vertical, yet he is as long 47 Deg. off; which is a kind of Winter, wherein the Air so cools, as that the Summer-Heat cannot warm it to the same Degree with that under the Equator. Wherefore the Air to the Northward and Southward being less rarified than that in the middle, it follows, that from both Sides it ought to tend towards the Equator: This Motion, compounded with the former Easterly Wind, answers all the *Phænomena* of the General Trade-Winds; which if the whole Surface of the Globe were Sea, would undoubtedly blow all round the World, as they are found to do in the *Atlantic* and *Ethiopic* Oceans.

But seeing that so great Continents do interpose and break the Continuity of the Oceans, Regard must be had to the Nature of the Soil, and the Position of the high Mountains, which I suppose are the two principal Causes of the several Variations of the Winds, from the former General Rule: For if a Country lying near the Sun prove to be flat, sandy, low Land, such as the Desarts of *Lybia* are usually reported to be, the Heat, occasion'd by the Reflection of the Sun's Beams, and the Retention thereof in the Sand, is incredible to those that have not felt it; whereby the Air being exceedingly rarified, it is necessary that the cooler and more dense Air should run thitherwards to restore the *Equilibrium*. This I take to be the Cause why, near the Coast of *Guinea*, the Wind always sets in upon the Land, blowing Westerly instead of Easterly; there being sufficient Reason to believe, that the inland Parts of *Africa* are pro-

digiously hot, since the Northern Borders thereof were so intemperate, as to give the Ancients Cause to conclude, That all beyond the Tropic was made inhabitable by Excess of Heat: From the same Cause it happens, that there are so constant Calms in that Part of the Ocean call'd the *Raines*, (describ'd in the 7th Remark on the *Atlantic* Sea:) For this Tract being plac'd in the middle, between the Westerly Winds blowing on the Coast of *Guinea*, and the Easterly Trade-Winds blowing to the Westward thereof, the Tendency of the Air here is indifferent to either, and so stands in *Equilibrium* between both; and the Weight of the incumbent Atmosphere being diminish'd by the continual contrary Winds blowing from hence, is the Reason that the Air here holds not the copious Vapour it receives, but lets it fall into frequent Rains.

But as the cool and dense Air, by reason of its greater Gravity presses upon the hot and rarified, 'tis demonstrative, that this latter must ascend in a continued Stream as fast as it rarifies; and that being ascended, it must disperse itself to preserve the *Equilibrium*; that is, by a contrary Current, the upper Air must move from those Parts where the greatest Heat is: So by a kind of Circulation, the N.E. Trade-Wind below will be attended with a South-Westerly above, and the South-Easterly with a N.W. Wind above: That this is more than a bare Conjecture, the almost instantaneous Change of the Wind to the opposite Point, which is frequently found in passing the Limits of the Trade-Winds, seems to assure us. But that which above all confirms this Hypothesis, is the *Phænomenon* of the Monsoons, by this Means most easily sol'd, and without it hardly explicable.

Supposing therefore such a Circulation as above, 'tis to be consider'd, That to the Northward of the *Indian* Ocean, there is every where Land within the usual Limit of the Latitude of 30, viz. *Arabia*, *Persia*, *India*, &c. which for the same Reason as the *Mediterranean* Parts of *Africa* are subject to unsufferable Heats when the Sun is to the North, passing nearly vertical; but yet are temperate enough when the Sun is remov'd towards the other Tropic, because of a Ridge of Mountains at some Distance within the Land, said to be frequently in

Winter

Winter cover'd with Snow; over which the Air, as it passes, must needs be much chilled. Hence it comes to pass, That the Air coming according to the general Rule, out of the N. E. in the *Indian Seas*, is sometimes hotter, sometimes colder, then that which by this Circulation is return'd out of the S. W. And by Consequence, sometimes the under Current of the Wind is from the N. E. sometimes from the S. W.

That this has no other Cause, is clear from the Times wherein these Winds set in, viz. in *April*, when the Sun begins to warm those Countries to the North, the S. W. Monsoon begins, and blows during the Heats till *October*; when the Sun being retired, and all Things growing cooler Northward, and the Heat encreasing to the South, the N. E. Winds enter, and blow all the Winter, till *April* again. And it is undoubtedly from the same Principle, That to the Southward of the Equator, in Part of the *Indian Ocean*, the N. W. Winds succeed the S. E. when the Sun draws near the Tropic of *Capricorn*: But I must confess, That in this latter occurs a Difficulty, not well to be accounted for, which is, why this Change of the Monsoon should be any more in this Ocean than in the same Latitude in the *Ethiopic*, where there is nothing more certain than a S. E. Wind all the Year.

'Tis likewise very hard to conceive, why the Limits of the Trade-Wind shou'd be fix'd about the 30th Degree of Latitude all round the Globe, and that they should so seldom transgress or fall short of those Bounds: As also, That in the *Indian Sea*, only the Northern Part should be subject to the changeable Monsoons, and in the Southern there be a constant S. E.

These are Particulars that merit to be consider'd more at large, and furnish a sufficient Subject for a just Volume, which will be a very commendable Task for such, who, being us'd to Philosophical Contemplations, shall have Leisure to apply their serious Thoughts about it.

SECT. XXV.

An Account of Meteors, from Monsieur Bion's Use of the Globes; approv'd by Monsieur de la Hire, the French King's Professor of Mathematicks, and one of the Royal Academy of Sciences.

Of DEW.

DEW is occasion'd thus: The Cold which is upon the Surface of the Earth during the Winter, covers it on all Parts, and concentrates the Heat in low and Subterraneous Places; and in the Spring, the Cold being abated, and the Pores of the Earth open, it has a Sort of Sweat or Perspiration: From whence it is, That many Vapours must then of Necessity flie up into the Air; and the Nights of that Season being still cold, condense those Vapours and Exhalations that are rais'd by Day, and change them to a very small and insensible Rain, of a short Continuance, that falls early in the Morning, and is found in Drops of Water like Pearl upon the Tops of Herbs and Flowers. But the Exhalations which are easily rais'd with those Vapours, are more subtle, and less corrosive: Whence it is, That they make a very healthful Water upon the Tops of tender and blooming Flowers, which is indeed so very healthful; that it is gather'd to be made use of on many Occasions.

Of MISTS, or FOGS.

The Mists in Winter are form'd of Vapours rais'd in that Season, and condens'd by the Cold in the lower Region of the Air: Whence it comes, That tho' fewer Vapours are then rais'd than in other Seasons, we have yet more frequent Mists.

Mists in Summer are partly form'd of Vapours, and partly of Exhalations, rais'd in the Day-time by the Heat of the Season; and because the Mist, by reason of the Grossness

Grossness and Weight of the Exhalations, cannot easily mount to the higher Region, where the Air is more subtil; and so the Coldness of the Night condenses those Exhalations and Vapours, which in the Morning appear to be Mists. But the Air which has been cool'd in the Night, and but little warm'd by the Morning-Sun, has then only a small Heat; which if it have Force enough to raise the Fog, then we have either bad Weather, or many Clouds: But if the Morning-Sun cannot draw it up, the Mist falls down again upon the Earth by its natural Gravity, and is a Sign of fair Weather.

Of MILDEW.

This is a kind of Fog that happens in the middle of Summer, when, by the Heat of the Season, many corrosive Exhalations are rais'd with the Vapours; which falling upon the growing Corn, blasts and scorches it, especially if heated by the Sun, which makes them still more corroding. Therefore skilful Countrymen kindle great Fires of Straw on that Side of their Corn from whence the Winds blow, to protect it from the Mildew.

Of FROST and ICE.

Frost comes from a violent North Wind, that brings a colder Air with it than what we had, which, by the Violence of that Wind, only glances upon the Surface of the Earth: It stops the Motion of the small Particles of the Earth and Water, and by this Means hardens and condenses them. Ice comes from the same Cause, but with this Difference, That the Air which the Wind brings from the North is very cold; and it being the same in the Place where it comes, those two concurring Winds freeze the Water.

Of CLOUDS.

They are form'd when Vapours being drawn up into the Air from all Parts, their Motion is lessen'd, and their Parts come

nearer together, and reaching the middle Region of the Air, they become more united, and form those Clouds which we see move in the Air when driven by Winds.

Of RAIN.

Rain comes from Clouds driven from one Point of the Air to another more cold, or from Vapours elevated from the lower to the middle Region of the Air, which is more cold: These Clouds being condens'd by this Cold, turn to Water, which, by its Gravity, falls to the Earth in small Parcels call'd Drops, form'd by the Agitation of the Air. Hence it is, That Rain for most part follows a South, but seldom a North Wind; tho', from particular Causes, it may happen, that the Air is more warm sometimes in a more Northern, than in a more Southerly Place. In *France*, they have seldom Rain when the Wind is in the East, but frequently when in the West; because the Sea is on that Quarter, from whence a great Quantity of Vapours arise, which form Clouds, and are brought into *France* by that Wind.

Rain is also form'd from Clouds elevated to the middle Region of the Air, which is more cold than ordinary at some times. Hence it is, that those Vapours are hastily condens'd as they rise, and before the other Vapours can arrive there. Thus they form little Clouds heap'd one upon another, that makes the Sky look as if it were curld'd. This shews, that Vapours are rising from the Earth; that the middle Region is more cold than ordinary, and presages Rain. When that Part of the Horizon where the Sun rises or sets is of a pale or yellowish Colour, it shews, that there are many Vapours in the Air, and foretels bad Weather: But when the same Parts of the Horizon are of a bright Red, there are few Vapours in the Air, and those very subtil; the Rays of the Sun coming then to us Horizontally, they meet the better with those few subtil Vapours and Exhalations, which denotes a Continuation of good Weather, especially if the Wind in the South or West Points has not begun to blow.

Of S N O W.

Snow comes from this, That in the Winter, the Regions of the Air are altogether cold, and the Clouds meeting that great Cold every where, pass very soon from that Degree of Condensation which is requisite to change them to Rain, to that which is necessary to change them to Ice; so that in Winter, as soon as the Clouds begin to change into Rain, the small Particles of Water immediately freeze, and turn to Snow, which touching upon one another, make Flakes; and having small Intervals, like so many Pores, are therefore very light.

All these Flakes continuing for most part together, have still Intervals betwixt one another, and together form a Cloud, which, tho' it appear thick, yet, because of those small Intervals, is easily carried about: Therefore those Flakes take some Time before they fall to the Ground.

The Snow is not chang'd into a sensible Body of Ice during that Time, because when it is once form'd, the small Intervals, which are only fill'd with a subtiler Air, hinder it to be chang'd into any other Form.

It falls when the Wind divides its Flakes into other smaller ones, which then fall to the Ground, not so much by their Gravity, which is very little, but because they are driven towards the Ground by the Air of the middle Region, which is repelled itself by the Wind which blows beneath the Cloud.

And as the small Particles of the Ice that compose these Flakes are hard, solid, transparent, and all of different Figures and Positions, they reflect the Light from every Part, so appear white, just like white Sand, which is only a Heap of little transparent Bodies, as we perceive by the Microscope; but with this Difference, That Snow being form'd of Vapours, and having no Mixture of Earthy Parts; therefore it is of a very bright White.

If it happen that the Coldness of the Air that form'd the Snow be abated, then some of the Flakes melt, and dividing those that are not melted, insinuate some Water into

the Intervals, which freezing, they become heavier; then both the Snow which is melted, and that which is not, fall: And thus it both snows and rains at the same time.

Of H A I L.

Hail is form'd under the Clouds, thus: The Air of the middle Region is very cold in Summer, and in the temperate Seasons; and when the Air is under a great and thick Cloud, which deprives it of the Rays of the Sun, by this means it grows cold to a great degree. Hence it is, That if that Cloud fall down in Rain, it necessarily happens, that the Drops of Water, as they pass thro' the cold Air under that Cloud, must freeze, and fall down in little Particles of Ice, much of the Figure and Greatness with the Drops of Rain.

Of T H U N D E R.

Thunder is form'd of Exhalations, which are rais'd in great Abundance by the Heat of Summer. These Exhalations cannot be rais'd, especially in that Season, but their Particles must receive Agitation, and begin to grow warm; so that being in the middle Region, among the Vapours which are there chang'd into Clouds, these Exhalations being mix'd with them, disperse the Vapours hither and thither, and gathering together in the Center of the Clouds, they continually grow more and more hot, to that degree, that they swell those Clouds; and if other Clouds beat against them, they burst out with great Force: And this is always followed by a great Noise, and with Lightning, which appears to us before the Noise; because Light being more subtiler than the Air, which occasions our Hearing, reaches our Eyes sooner than that does our Ears.

The Continuation and Repetition of the Noise of Thunder is from a sort of Echo in the Clouds. Sometimes we see Lightning without Thunder, because that Cloud has no Vapours; tho' enough to condense the Circumference, so as to make it uneasy to burst: Not but that at the same time it makes

makes a Noise, but so small, that we cannot hear it at so great a Distance.

Lightning without Thunder happens ordinarily in a Time of great Heat, because then there are more Exhalations than Vapours rais'd: And hence we observe, That when there is Lightning without Thunder, there is no Rain, because there is not Vapours enough to make Rain.

But when Lightning is accompanied with great Thunder, 'tis a Sign there are a great many Vapours condens'd round the Circumference of the Cloud, and almost form'd into Rain already; because the Heat concentrating in the Center of the Cloud, leaves a greater Cold to the Vapours in the Circumference. Thus we find every time the Thunder shakes and bursts the Cloud, the Rain encreases the more: For these Reasons, the Water being almost form'd, falling by the shaking of the Cloud, must needs fall in very great Drops; which passing thro' the middle Region of the Air, are many times, by the great Cold there, immediately turn'd to very big Hail, which frequently makes terrible Devastations.

The more thick and condens'd the Circumference of the Cloud is by the Vapours, the Exhalations burst out with the greater Force; the Lightning is carried further, and sometimes touches the Surface of the Earth; and then it is called a Thunder-bolt, and burns and overturns Buildings, sets all in a Flame where it comes, and kills Men and Beasts.

Lightning has frequently surprizing and prodigious Effects, as melting the Blade of a Sword in the Scabbard, and Money in one's Pocket, without hurting the Scabbard or Pocket. This happens when the Particles that compose the Lightning are so subtil, and small, as to make no Impression upon Bodies that have large Pores, to give a Passage to them; so that they spend their Force upon those Bodies that resist them. On the contrary, sometimes it burns Men's Clothes and Hair, without hurting their Flesh: The Reason of which is, That the Particles and Exhalations which compose that Lightning, are more gross, fat and oily.

SECT. XXVI.

The Definition of the *GLOBE*, and its Parts.

THE Terrestrial Globe is a Spherical Body, made by Art, upon whose Surface the Parts of the Earth, and their Situation with respect one to another, are represented as they really are, according to the Proportion the Surface of the Terrestrial Globe bears to that of the Earth.

A Map, Chart, or Geographical Table, is a plain Figure, in which the Parts of the Earth are placed, according to their real Situation, viz. their Situation as to North, South, East and West, and their Distance from other Places. The Advantage of Maps is this, That they lay the Globe of the Earth before us at once. In all Maps, the Places on the Right Hand lie East, and those on the Left lie West, the Top of the Map is the North, and the Bottom the South. But the Terrestrial Globe most naturally shews the different Situations of Places, the Motion of the Sun, the Difference of Climates, the Inequality of Days, and many other Parts of pleasant and useful Learning, which cannot be understood without it. The Difference betwixt a Map and a Globe, is much the same with that betwixt a Picture and a Figure in *Basso-Relievo*.

Maps are either General or Particular; the General Map shews us the whole Surface of the Earth; and a Particular Map is that of a particular Kingdom or Country.

The Poles of the Earth are two fix'd Points, Diametrically opposite to one another, directly under the Poles of the World. The Pole of the Earth, under the Constellation of *Ursa Major*, is call'd the North or Artic Pole: It is represented in the Heavens by the Polar Star, in the Extremity of the Tail of *Ursa Minor*, and is distant from the true North Pole about $2\frac{1}{2}$ Degrees. This Star may easily be known; for it makes almost a Right Line with the two last

Wheels

Wheels of *Charles's Waine*, in the Constellation of *Ursa Major*.

The South or Antarctic Pole is known by 4 Stars in the Southern Hemisphere. The Mariners, who lately discover'd them, call them the *Croisade*, because they are in Form like a Cross. These two Poles are 180 Degrees distant from one another. The People who live under the Poles have but one Day of 6 Months length, and one Night of the same: This is easie to be conceiv'd; for when the Sun takes his Course to the North of the Equator during those 6 Months, it is above the Horizon of those who live under the N. Pole; and for the same Reason, the Stars that are near the Pole never set. The Doctrine of the Poles is easily understood by the Terrestrial Globe; for when it is turn'd round, we see the two Poles fix'd. If we conceive a Line to be drawn through the Center of the Earth from one Pole to another, this is call'd the Axis, because the Heavens and the Stars move round that Line, as a Wheel does round its Axle-Tree. This Motion may be easily explain'd by the familiar Experiment of piercing a round Orange through the middle with a long Needle: The Needle represents the Axle-Tree of the World; its two Extremities represent the two Poles; and if you move the Orange round the Needle, it resembles the Motion of the Earth.

The Globe is surrounded with many imaginary Circles, which are divided into Greater and Lesser: The Greater have the same Center with the Globe, and divide it into two equal Parts, as the Equator, the Zodiac, the Horizon, the Meridian, and the two Coluri: The Lesser Circles have a different Center from that of the Globe, and divide it into two unequal Parts; they are the 2 Tropics, and the 2 Polar Circles. They are also divided into 5 Parallel and 3 Oblique Circles: The Parallels are the Equator, the two Tropics, and the two Polar Circles, so called, because all the Parts of these Circles are equally distant from one another, and because they have the same Poles with the World. The 3 Oblique Circles, so called, because their Poles are not the same with those of the World, are the Zodiac, the Meridian, and the Oblique Horizon.

Of these Circles, some are call'd Right

Circles, because they make Right Angles with the Equator; viz. the two Coluri, the Meridian, and the Horizon when Right.

The Equator is the greatest Circle of the 5 Parallels, and is equally distant from both Poles: Seamen call it the *Line*. This Circle divides the World into two equal Parts, of which the one is called the Northern, and the other the Southern Part: The Extent of the Northern is from the Equator to the North Pole, and that of the Southern from the Equator to the South Pole: It is call'd the Equinoctial, and the Equator, because it shews when the Equinoxes are to come, viz. when the Sun comes to that Part of the Ecliptic where the Ecliptic and Equator intersect each other.

There are two Equinoxes, one in Spring and the other in Autumn; the first is about the 20th of *March*, when the Sun enters the first Degree of *Aries*; and the second is when the Sun enters the first Degree of *Libra*, which is about the 23th of *September*. All the People of the World, except those under the Poles, have at the same time of the Year their Day and Night of an equal Length; for at that Time the Sun moves in a middle Course, betwixt the two Poles. Those who live under the Equator, have equal Days and Nights all the Year, because their Horizon divides all the Diurnal Circles of the Sun into two equal Parts. The Equator is the Measure and Rule of the Diurnal Motions of the Stars; for every Star, by its Diurnal Motion, describes a Circle parallel to the Equator. When they ascend 15 Degrees of the Equator above the Horizon, we reckon it an Hour; for by this Account, the Sun runs through all the 360 Degrees in 24 Hours. The Equator has mark'd upon it the Degrees of Longitude from W. to E. Places under the Equator have no Latitude.

The Parallel Circles are of great Use to shew the Latitude of Places, and for this Reason are called the Circles of Latitude.

The Tropics are the two greatest Circles parallel to the Equator, which touch the Ecliptic in the Signs of *Cancer* and *Capricorn*: They are distant from the Equator 23 Deg. and a half. The Sun, on the 21th of *June* and 21th of *December*, describes these Circles. The Tropic of *Cancer* is nearest us. When

the Sun comes to the first Degree of *Cancer*, then we have the longest Day, and shortest Night: It is also call'd the High-Solstice; for then the Sun is in his greatest Height with regard to us. Some call it the Tropic of Summer, or the Northern Tropic. The other is call'd the Tropic of *Capricorn*, because when the Sun enters the beginning of that Sign, he returns, and goes no further Southward from the Equator. Some call it, in regard to us, the Low-Solstice; for the Sun being then at the greatest Distance from our Zenith, we have the shortest Days.

The Tropics are the Boundaries of the Course of the Sun, and have their Name from a Greek Word, which signifies to return; for whenever the Sun touches those Points, he returns towards the Equator, and goes no further either Northward or Southward. The Tropics do likewise show the Place in the Ecliptic where the Solstices are celebrated; and in the Horizon, they show the greatest Eastern and Western Amplitude of the Sun: In the Meridian, they discover the least and greatest Distance of the Sun from the Zenith of those who live in an Oblique Sphere. They also show the Breadth of the Torrid Zone, which is 47 Deg. Betwixt them and the Equator lies the Torrid, and betwixt the Polar Circle and Tropics lie the Temperate Zones. The Northern Parts of *Africa*, some Places of *Asia*, and *North America*, are under the Tropic of *Cancer*. The Southern Places of *Africa*, *Terra Magellanica*, and *South America*, are under the Tropic of *Capricorn*.

The Polar Circles are the two least of the Parallel Circles, and nearest the Poles, being distant from them 23 $\frac{1}{2}$ Degrees, and 66 $\frac{1}{2}$ Degrees from the Equator, and are call'd the Artic and Antartic Polar Circles, from those two Poles: They terminate the Frigid and Temperate Zone. They who live under those Circles, or (which is the same thing,) are 66 $\frac{1}{2}$ Degrees distant from the Equator, have their longest Day 24 Hours, and their longest Night the same. If the North Pole be elevated 66 $\frac{1}{2}$ Degrees, by this Position we may see, That the Artic Polar Circle passes through the Zenith, and the Antartic through the Nadir, the Tropic of *Cancer* will be entirely above the Horizon, and

the Tropic of *Capricorn* quite below it; so that the Sun, when in the Tropic of *Cancer*, will be 24 Hours above the Horizon.

The Meridian is a great Circle, passing through the Poles of the World, and takes its Name from the Latin Word *Meridies*, Mid-day, or Noon: For whenever the Sun touches the Meridian of any Place, then it is Noon to the Inhabitants. We change Meridians when we go from E. to W. or from W. to E. but if we go straight N. or S. we are still under the same Meridian, though we change our Zenith and Nadir. Globes have a great Brazen Meridian fix'd to them, having the same Poles with those of the World: It divides the Globe into two equal Parts, viz. the Eastern and Western: It shews the Latitude of Places, or their Distance from the Equator.

To know the Latitude of any Place, or the Altitude of the Pole in that Place, turn the Globe about, till the Place whose Latitude you want touch the right Side of the Meridian. Observe the Figure upon the Meridian which the Place given touches, and you have its Degrees of Latitude. One half of the Meridian is above the Horizon, and the other half below, which shews the same thing in that Hemisphere.

Geographers have invented a First Meridian, to be the Boundary and Measure of all other Meridians. Authors are not agreed which is the first, so that every one may follow their own Judgment in this Matter; but they generally plac'd the First Meridian in the most Westerly Place of our Continent. *Ptolomy*, and others of the Ancients, plac'd the First Meridian in the *Canary Islands*; but *Ptolomy* was mistaken when he thought all those Islands to be of one Longitude. The French King, *Lewis XIII.* by an Edict of the 25th of *April*, 1634. order'd his Subjects to place the First Meridian in the Island of *Fer*, the most Westerly of all the *Canaries*, by the Advice of the ablest Mathematicians of *Europ.*, who came to *Paris* at the Invitation of Cardinal *Richlieu*. The *Hollanders* make it the Pic of *Teneriff*, which is two Degrees more to the E. Others make the First Meridian to pass thro' the Islands of *Gorée* and *Flores*, part of the *Azores*. The Reason they give, is, That they observe the Needle of the Compass has no Decl-

Declination in that Place. Astronomers ordinarily make the Places of their Observations the First Meridian; as *Ptolemy* made *Alexandria*; *Tycho Brahe* a small Island belonging to *Denmark*, call'd *Uraniburg*; but most People make the Cape of *Teneriff* their First Meridian. Mr. *Moll* makes it at *Ferro* Island, the same that the *French* call *Fer*.

In general Maps, all the different Meridians meet in one Point in the Poles of the World. The nearer those Meridians are to the Poles, the less Distance they have from one another; so that one Degree of Longitude near the Equator contains many more Miles than one Degree of Longitude near the Poles. Tho' Meridians might be drawn through every Point of the Equator, yet for Orders sake the Makers of Maps have contracted them to 36, 18 Degrees distant from each other, of which they give 18 to the Upper, and as many to the lower Hemisphere.

The Meridian touches the Horizon in two Points, *viz.* the N. and S. and the Equator intersects the Horizon at E. and W. which are the 4 Cardinal Points.

The Meridian is of Use to show the Elevation of the Pole above the Horizon, which is an Arch of the Meridian from the Horizon to the Pole; and as many Degrees as the Pole is above the Horizon, so many it is said to have of Altitude.

The Meridian and the Horizon divide the Heavens into 4 Parts, *viz.* the E. and W. of the higher Hemisphere, and the E. and W. of the lower.

This Circle is also of Use to show the greatest Height or Ascension of the Sun and Stars, and the Beginning of the natural Day. Astronomers begin the Day when the Sun is in the Meridian; but most Nations of *Europe*, with *Copernicus*, begin the Day at Midnight: The *Jews* begin theirs at the Setting of the Sun; and the *Greeks* begin theirs at the Rising of it. This Circle divides also the Day into the Morning before the Sun comes to the Meridian, and the Afternoon after it has pass'd the same.

The Meridian shows also the Latitude of Places, which is nothing but an Arch of the Meridian from the Zenith of the Place where we are, to the Equator.

The Meridians are reckon'd from W. to E. and show the Longitude of Places, which

is their Distance Eastward and Westward from one another. The more Eastward any Place is, the sooner the Sun and Stars come to the Meridian. If one Place be 15 Degrees more to the E. than another, it will be Noon there an Hour sooner than at the Place more Westerly: And if one Place be 90 Degrees more E. than another, it will be Noon there 6 Hours sooner. Thus if two Ships sail round the Earth, one of them steering E. and the other W. and if they meet at the 180th Degree of Latitude, the Ship that sail'd E. reckons one Day more than the Ship that sail'd W. The Reason is plain; for the Eastward-bound Ship sails towards the Day, and has the Sun-rising and setting every Day sooner; whereas the other has them every Day later, and by Consequence loses Time.

The Zodiac is so call'd, because the 12 Parts it is divided into have their Names from living Creatures; for the ancient Astronomers thought the Stars which compose the Constellations of *Aries*, *Taurus*, &c. had something of the Resemblance of those Creatures.

The Zodiac is the only Circle in the Sphere which has Breadth assign'd it, and is reckon'd 16 Degrees broad, *viz.* 8 on each Side the Ecliptic: It is in Form more like a Girdle than a Circle. The Ecliptic divides the Equator obliquely; so that these 2 Points of it which are most distant from the Equator are 23 $\frac{1}{2}$ Deg. distant from it. The Equator intersects the Zodiac in the Points of *Aries* and *Libra*; and by this the Zodiac is divided into two Parts, the one N. and the other S. This Circle is plac'd obliquely betwixt the two Poles, and touches the Tropics in two opposite Points. The Breadth of the Zodiac is of use to terminate the Course of the Planets: But upon the Globes and Maps, the Zodiac is represented by a Line in the middle of it, call'd the Ecliptic; because the Eclipses of the Sun and Moon are upon the Plain of it.

The Sun makes his Annual Course upon the Ecliptic without ever leaving it, and every Day runs over almost one Degree of this Circle; but not one intire Degree, otherwise he would run thro' all the 360 Degrees of the Ecliptic in so many Days: Whereas he requires 365 Days and 5 $\frac{1}{4}$ Hours to complete his Course. The Circle

ele the Sun makes every Day upon the Globe is not a perfect one; for he changes every Day the Place of his Rising and Setting in the Horizon, as he does his Place in the Meridian.

The Northern Part of the Zodiac has 6 Signs, and the Southern Part the like. The Names and Figures of these Signs, upon the Horizon of the Globe, are these:

The 6 Northern Signs, and their Characters, are these:

<i>Aries.</i>	♈
<i>Taurus.</i>	♉
<i>Gemini.</i>	♊
<i>Cancer.</i>	♋
<i>Leo.</i>	♌
<i>Virgo.</i>	♍

The 6 Southern Signs, and their Characters:

<i>Libra.</i>	♎
<i>Scorpius.</i>	♏
<i>Sagittarius.</i>	♐
<i>Capricorn.</i>	♑
<i>Aquarius.</i>	♒
<i>Pisces.</i>	♓

Each of these 12 Signs has 30 Degrees.

The Sun runs through one of these Signs every Month: The Constellations which formerly answer'd to these Signs do not so now; for they are 28 Degrees more Eastward than anciently. Thus the Constellation of *Aries*, which formerly answer'd to the first Sign of the Zodiac, is now 28 Degrees more towards the E. in the Place where *Taurus* was formerly.

When the Sun is in the Northern Signs, we have the longest Days, and the shortest when he is in the Southern.

When the Sun is in *Aries*, *Taurus*, and *Gemini*, we of the Northern Hemisphere have Spring; when in *Cancer*, *Leo*, and *Virgo*, we have Summer: When in *Libra*, *Scorpius*, and *Sagittarius*, we have Autumn; when the Sun is in *Capricorn*, *Aquarius*, and *Pisces*, we have Winter: But in the Southern Hemisphere our Winter-Signs are those of their Summer; and *vice versa*, our Autumn is their Spring.

The Obliquity of the Ecliptick is the

Cause of the Variety of Seasons, and of the Inequality of Days and Nights.

The Horizon is so call'd from a Greek Word, signifying to limit or bound, because it bounds our Sight, when we view the Heavens round from any Part of the Earth or Sea. This Circle in the artificial Globe is of Wood, supports the Globe, and has usually 3 Circles on its Surface: The innermost represents the Figures of the Signs of the Zodiac, with their Names and Degrees: That in the middle has the Months of the Year, and the Days of every Month, according to both *Julian* and *Gregorian* Accounts; and the outermost has the Quarters of the World, and the Names of the principal Winds.

The Horizon is either Rational or Sensible: The Rational, so call'd because we conceive it only by our Understanding, is a great Circle, which we apprehend to pass through the Center of the Earth, and by Consequence divides the World into two equal Parts or Hemispheres; the one above, and the other below: The sensible Horizon is a small Circle parallel to the Rational Horizon, that touches the Surface of the Earth in a Point, which is that where our Feet stands. This is the Reason that it does not divide the Heaven into two equal Parts, as the Rational Horizon does: But the Difference of those two Horizons is insensible, being only occasion'd by the Semi-diameter of the Earth, which is only a Point, compar'd to the immense Extent of the Firmament, since we see the half of the Heaven above the Surface of the Earth, the same as if we were at its Center.

The Rational Horizon, with respect to the Equator, may be divided into Right, Oblique, and Parallel.

Both the Sensible and Rational Horizon have the same Poles, which are call'd Zenith and Nadir, the Names given them by the *Arabians*, under whose *Kaliphs* Astronomy and other Sciences flourish'd. The Zenith is the Point of the Heavens which is over our Head; the Nadir is that below our Feet, and is at the same time the Zenith of our Antipodes: The Meridian and Horizon are both changeable Circles; for every different Place hath a different Horizon and Zenith.

The Right Horizon passes through the Poles of the World, and has its Zenith in the Equator, which it divides at Right Angles, and into equal Parts. The Oblique Horizon has its Zenith betwixt one of the two Poles and the Equator; so that one Pole is nearer its Zenith than the other: It cuts the Equator obliquely. The Parallel Horizon has one of the Poles for its Zenith, and the Equator for its Horizontal Circle.

The 3 different Horizons make 3 different Positions of the Sphere, *viz.* the Right, Oblique, and Parallel Position, which are useful to explain the different Appearances of the Sun, as to its Rising and Setting, Length of Days, Heat, &c. The Right Sphere has a Right Horizon, because the Equator, Tropics, and Polar Circles, cut the Horizon at Right Angles. This Position belongs to those who live under the Equator: They have always their Days and Night equal, and the Sun is twice a Year perpendicularly over their Heads, *viz.* the 11th of *March*, and the 12th of *September*. All the Stars rise and set to them, and are the same Number of Hours above as below the Horizon.

The Oblique Sphere has an Oblique Horizon; and all the Circles, as the Equator, Tropics, and the Polar Circle, cut this Horizon at Oblique Angles. It agrees to those who live betwixt the Equator and the Poles: They have equal Days and Nights only during the Equinoxes. In the Summer, their Days are shorter than their Nights, because the Horizon doth not divide the Tropics into equal Parts. In this Position, some Parts of the Heavens are never seen, and some Parts are always visible.

The Parallel Sphere has the Horizon parallel to the Equator, and all the Circles and Revolutions are parallel to the Horizon. This Position agrees to those who live under the Poles, (if there be any such) and they have only one Day and one Night in the Year of 6 Months each; because the Sun never rises with them, but at one of the Equinoxes, and sets not till the other. The Axis of the World in this Sphere is perpendicular, one of the Poles the Zenith, and the other the Nadir of the Place. When the Sun enters *Aries*, he rises to those un-

der the North Pole, and sets when he enters *Libra*. The Moon is 15 Days above their Horizon, and so many below it; *Saturn* 15 Years, and *Jupiter* 6.

From what has been said, it appears that the Horizon has many Uses; 1. It divides the World into two Hemispheres, *viz.* those of the Day and Night. 2. It shews us the Elevation of the Pole; for so many Degrees as the Pole is above the Horizon, so many Degrees it is said to be elevated. 3. It shews us the Place and Time of the Rising and Setting of the Sun, Moon, and Stars; for when they come to the East Part of the Horizon, they are said to rise; and when they go below the Western Part, they are said to set. It determines the ending of the Morning *Crepusculum*, or Dawning of the Day, which is before the Rising of the Sun; and of the Evening *Crepusculum*, or Twilight, when the Sun is about 18 Degrees below the Horizon. This Circle is the Seat of the 4 Cardinal Points, North, South, East, and West, which are 90 Degrees distant from each other. The South is the Point the Sun is in when it is Noon: The true East is that Point of the Horizon where the Sun rises in the time of the Equinoxes: The true West is the Point where the Sun sets at the same time. These Points make 4 Collateral Points, *viz.* the Place where the Sun rises in the Summer-Solstice, which is N. E. and where it rises in the Winter-Solstice, which is S. E. The Place in the Horizon where the Sun sets in Summer, which is N. W. and the Place where it sets in Winter, which is S. W. The Sun's rising in the N. E. and setting in the N. W. shews us that Part of the Tropic of *Cancer* that is above our Horizon; and his rising in the S. E. and setting in the S. W. shews his Motion in the Tropic of *Capricorn*.

The ZONES.

The 4 small Circles, *viz.* the two Tropics, and the Polar Circles, divide the Globe of the Earth into 5 Parts, call'd Zones by the Ancients, from a Greek Word which signifies a Girdle. The Space betwixt the Tropics is call'd the Torrid Zone, and is divided by the Equator into two equal Parts. The Ancients, because little of the World was discover'd in their Time, thought the

Zone

Zone was not habitable, because of the violent Heat of the Sun; but 'tis now found to be otherwise. 'Tis true, the Heat of the Sun there is violent; but the Length of their Nights, frequent Rains, Winds and Dews, make it supportable. The Sun raises a great Quantity of Vapours, which occasion those frequent Rains, Dews, and Winds; so that after the setting, and before the rising of the Sun, they have constantly fresh Breezes, which make their Nights cool. The Dews do likewise contribute towards it; which, with the Rains, refresh the Inhabitants, and make the Soil produce abundance of Provisions. They have two Summers, *viz.* when the Sun enters the Equinoctial Signs. Their Winters are, when the Sun is in the Tropics, because then he is at the greatest Distance from their Zenith. The Air under the Tropics is more violently hot than that in the Torrid Zone, because the Sun is longer above their Horizon. They who have their Zenith betwixt the Equator and the Tropics, are in an Oblique Sphere: Therefore all the Places of the Heavens do not rise and set to them; and having one of the Poles above their Horizon, their Days and Nights are unequal, except in the Time of the Equinoxes. They who have their Zenith in the Tropics, have but one Summer, because the Sun is but once vertical to them, *viz.* when he is in the Tropic they live under, and when the Sun is in the opposite Tropic, it is 47 Degr. from their Zenith; so their shortest Day is $10\frac{1}{2}$ Hours, and their longest Day $13\frac{1}{2}$ Hours: But to those who live betwixt the Tropics, the Sun is twice a Year in their Zenith.

The two Zones betwixt the Tropics and Polar Circles are call'd the Temperate Zones, because they are not liable to such excessive Heat and Cold as the other Zones: One of these is betwixt the Tropic of *Cancer*, and the Artic Polar Circle; and the other Temperate Zone is betwixt the Tropic of *Capricorn*, and the Antartic Polar Circle. They have their Zenith betwixt the Tropics and the Polar Circles: Their Sphere is extremely oblique, and so are all the Revolutions of the Heavens. A great Part of the Heaven is never seen in their Hemisphere: They have their Days and Nights more unequal than in the Torrid Zone; the

Sun is never in their Zenith; and they have four Seasons in the Year. The Air is more temperate than in the Torrid Zone, because the Beams of the Sun fall more obliquely upon them; whereas in the Torrid Zone they are more perpendicular.

The People who live under the Polar Circle, or, which is the same, are 66 Degr. and a half distant from the Equator, their Pole is of the same Altitude above the Horizon: They have a more oblique Sphere than any of the other preceding Zones: They have one Tropic entirely above the Horizon, and the other Tropic altogether below it. Therefore they have one Day in the Year, *viz.* when the Sun is in the Tropic next to them, of 24 Hours; and one Night of the same, when the Sun is in the opposite Tropic. They have 4 Seasons in one Year. Having a very oblique Sphere, the opposite Places of the Heavens are never seen by them: The greatest Ascension of the Sun at Noon, when it is in the Tropics, is only 47 Degrees; and so is 43 Degrees from their Zenith. From the 4th of *April* to the 9th of *September*, they have Twilight all the Night over, because the Sun, during that Time, is never 18 Degrees perpendicularly below their Horizon.

They who have their Zenith betwixt the Polar Circles and the Poles, are in the Frigid Zone: Their Sphere is more oblique than any of the former; so that their Days and Nights are more unequal. In the Summer they have many Days without any Night at all; and likewise many Nights without any Day. Since they want little of having a Parallel Sphere, they never see the opposite Part of the Heavens. Their Air is warmer in Summer than under the Polar Circles, because the Sun is longer above their Horizon.

They who have for their Zenith the Poles of the World, are in the middle of the Frigid Zones: Their Sphere is parallel. And hence it is, that all the Revolutions of the Heavens are parallel to the Horizon. They have 6 Months of Day, and as much Night: The Sun, when in the Tropic nearest them, is in its greatest Height only $23\frac{1}{2}$ above the Horizon, which is the same Height the Sun makes with us an Hour and an half after his rising. They constantly see the same

same Half of the Heavens; and the same Fix'd Stars, which never set with them.

The CLIMATES.

The Zones being only of use to distinguish the Places of the World with regard to their different Degrees of Heat and Cold, ancient Geographers invented Climates, to determine the Difference of the Length of Days. The Climates are reckon'd from the Equator to the Poles. Under the Equator, their Day is always 12 Hours in Length: Under the Polar Circle, the longest Day is 24 Hours. Geographers have made 24 Climates betwixt the Equator and each of the Polar Circles, because there are 24 half Hours of Difference betwixt the Length of the Day under the Equator, and the longest Day under the Polar Circles: So that any Place having its longest Day half an Hour longer or shorter than that of another Place, is of a different Climate. The first Climate begins at the Equator: The second begins where the longest Day is 12 hours and an half; and the third where the longest Day is 13 Hours: And so on.

The first Climate begins at the Equator, and ends at 8 Degrees 34 Minutes of Northern Latitude: The longest Day is 12 $\frac{1}{2}$ Hours. It comprehends the *Molucca*, *Maldive*, and *Sumatra* Isles, in the *East-Indies*.

The 2d Climate begins at 8 Deg. 34 Min. of Northern Latitude, and reaches to 16 Deg. 43 Min. Their longest Day is 13 Hours. It comprehends *Abissinia*, *Aden*, *Siam*, *Coromandel*, and the *Isle of Ceilan*.

The 3d Climate reaches from 16 Deg. 43 Min. to 24 Deg. 11 Min. Their longest Day is 13 $\frac{1}{2}$ Hours. It contains *Mecca*, *Arabia Felix*, *Bengal*, *Mexico*, and *Tunquin*.

The 4th Climate is betwixt 24 Deg. 11 Min. and 30 Deg. 47 Min. Their longest Day is 14 Hours. It passes over *Ormus* in *Persia*, *Agra* belonging to the Great Mogul, *Fechu* in *China*, *Alexandria* in *Egypt*, and the *Canary* Islands.

The 5th Climate is extended from 30 Deg. 47 Min. to 36 Deg. 30 Min. Their longest Day is 14 $\frac{1}{2}$ Hours. It comprehends *Babylon*, *Tunis* in *Barbary*, *Nicossia* in the *Isle of Cyprus*, *Nankin* in *China*, *Rhodes*, *Ispahan* in *Persia*, and *Pekin*.

The 6th Climate begins at 36 Deg. 30 Min. and ends at 41 Deg. 22 Min. The longest Day is 15 Hours. To this Climate belong *Lisbon* in *Portugal*, *Palermo* in *Sicily*, *Madrid* in *Spain*, and *Mechet* in *Persia*.

The 7th Climate is from 41 Deg. 22 Min. to 45 Deg. 29 Min. Their longest Day is 15 $\frac{1}{2}$ Hours. It comprehends *Marseilles*, *Rome*, *Constantinople*, and *Tanchut*.

The 8th Climate is from 45 Deg. 29 Min. to 49 Deg. 1 Min. The longest Day is 16 Hours. *Paris*, *Vienna*, the *Crim Tartars*, and the *Eastern Tartars*, are in this Climate.

The 9th Climate is from 49 Deg. 1 Min. to 51 Deg. 58 Min. Their longest Day is 16 $\frac{1}{2}$ Hours. *London*, *Prague* in *Bohemia*, *Cracow* in *Poland*, *Rouen*, *Amiens*, *Frankfort*, belong to this Climate.

The 10th Climate is from 51 Deg. 58 Min. to 54 Deg. 29 Min. Their longest Day is 17 Hours. This Climate contains *York*, *Dublin*, *Amsterdam*, *Warsaw*, and *New-France*.

The 11th Climate is from 54 Deg. 29 Min. to 56 Deg. 37 Min. Their longest Day is 17 $\frac{1}{2}$ Hours. It contains *Edinburgh*, *Vilna* in *Lithuania*, *Smolensko* on the *Boristhenes* in the West of *Muscovy*, and the *Tartars* of *Mordwa*.

The 12th Climate begins at 56 Deg. 37 Min. and reaches to 58 Deg. 26 Min. Their longest Day is 18 Hours. *Aberdeen*, *Copenhagen*, and *Riga*, are in this Climate.

The 13th Climate is from 58 Deg. 26 Min. to 59 Deg. 59 Min. Their longest Day is 18 $\frac{1}{2}$ Hours. *Stockholm*, and *Revel* in *Livonia*, are in this Climate.

The 14th Climate is from 59 Deg. 59 Min. to 61 Deg. 18 Min. The longest Day is 19 Hours. This Climate passes thro' the *Orkney* Islands of *Scotland*, *Aronis* in *Norway*, and *Muscovy*.

The 15th Climate is from 61 Deg. 18 Min. to 62 Deg. 25 Min. Their longest Day is 19 $\frac{1}{2}$ Hours. *Bergen* in *Norway*, *Norremburg* in *Finland*, and *Oustoug* in *Muscovy*, are in this Climate.

The 16th Climate begins at 62 Deg. 25 Min. and ends at 63 Deg. 23 Min. Their longest Day is 20 Hours. *Perma Welick*, a Town of *Muscovy*, belongs to this Climate.

The 17th Climate is from 63 Deg. 23 Min. to 64 Deg. 16 Min. The longest Day is 20 $\frac{1}{2}$ Hours. This Climate passes thro' the Country of *Finland*, belonging to the *Swedes*.

The

The 18th Climate is from 64 Deg. 16 Min. to 64 Deg. 55 Min. Their longest Day is 21 hours. *Drontheim* in *Norway* belongs to this Climate.

The 19th Climate is from 64 Deg. 55 Min. to 65 Deg. 25 Min. Their longest Day is 21 $\frac{1}{2}$ Hours. *Tobel* in *Siberia* belongs to it.

The 20th Climate is from 65 Deg. 25 Min. to 65 Deg. 47 Min. The longest Day is 22 Hours. The North of *Finland* belongs to it.

The 21st Climate is from 65 Deg. 47 Min. to 66 Deg. 6 Min. The longest Day is 22 $\frac{1}{2}$ Hours. *Torna* in *Botnia*, a considerable Harbour belonging to the *Swedes*, is in this Climate.

The 22d Climate is from 66 Deg. 6 Min. to 66 Deg. 20 Min. The longest Day is 23 Hours. *Caiembourg* in *Muscovy* belongs to this Climate.

The 23d Climate is from 66 Deg. 20 Min. to 66 Deg. 28 Min. The longest Day is 23 $\frac{1}{2}$ Hours. *Skallott* in *Iceland* is in this Climate.

The 24th Climate is from 66 Deg. 28 Min. to 66 Deg. 31 Min. Their longest Day is 24 Hours. This Climate passes thro' *Hola*, a small Town of *Iceland*.

To know what Climate any Place is in, see how many Hours the longest Day of that Place is more than 12, the Number of half Hours contain'd in the Difference, is the Number of Climates that Place is distant from the Equator.

There are also 24 Climates in the Southern Hemisphere: The Ancients did not reckon so many Climates, because they thought the Places beyond their own Number of Climates were quite desolate; little of the World being then known. They had only 7 Climates; their first Climate pass'd thro' *Meroë*, an Island and City in the Nile in *Africa*; the 2d Climate went by *Siene*, a City of *Egypt*; the 3d Climate by *Alexandria*, a City of *Egypt*; the 4th Climate by the Island *Rhodes*; the 5th Climate by *Rome*; the 6th Climate by the *Euxine* Sea; and the 7th by the Mouth of the *Borysthenes*. *Strabo* adds two more: He tells us, the 8th Climate went thro' the *Palmus-Mestis*; but does not tell us where the 9th ended.

Near the Equator, the Climates are very much larger than towards the Polar Circles;

the first Climate is 8 Deg. 34 Min. broad; the 24th Climate is but 3 Min. in breadth.

To explain this Inequality, it must be observ'd, That in a Right Sphere, which is under the Equator, the Half of the Tropic of *Cancer*, which is below the Horizon, is divided into 48 equal Parts; each of these Parts consist of 3 Deg. and 45 Min. which make one Quarter of an Hour: The Tropic of *Cancer* has one of these Parts, which is nearest the Horizon on the East Side, and another nearest the Horizon on the West Side. These two Parts together make up one half Hour, which is the Distance of one Climate from another. This being laid down, it is easie to conceive, That the Inequality of the Extent of the Climates proceeds from the more or less oblique Interfection of the Tropic by the Horizon, according to the Different Elevation of the Pole. The Ancients made no Account of the Climates on the S. Side of the Equator, because they had no Knowledge of those Places. There are 48 Climates in all; viz. 24 betwixt the Polar Circle and the Equator in the Northern Hemisphere, and as many betwixt the Equator and the Polar Circle in the Southern Hemisphere, which are called Climates of Hours.

The 12 Climates betwixt the Polar Circles and the Poles are call'd Climates of Months; because the longest Day in the second Climate is one full Month longer than the longest Day of the first Climate.

The first Climate begins at 66 Deg. 31 Min. Northern Latitude, and ends at 69 Deg. 48 Min. The longest Day is 1 Month, or 31 Days, without Night. This passes thro' *Lapland*, belonging to *Muscovy*.

The 2d Climate begins at 69 Deg. 48 Min. and ends at 73 Deg. 37 Min. They have Day without Night for 2 Months, or 62 Days. This Climate passes thro' *Greenland*, a Country so cold, that the Sea is almost constantly frozen there.

The 3d Climate begins at 73 Deg. 37 Min. and ends at 78 Deg. 30 Min. They have a Day of 3 Months, or 93 Days. This Climate belongs to the South Part of *Newa Zembla*.

The 4th Climate begins at 78 Deg. 30 Min. and ends at 84 Deg. 5 Min. They have a Day of 4 Months continuance, without

without any Night. This Climate passes through the North Part of *Nova Zembla*.

The 5th Climate begins at 84 Deg. 5 Min. and ends at 90. They have a Day of 5 Months, or 155 Days.

The 6th Climate is at 90 Deg. The Day there is of 6 whole Months, i. e. 186 Days, or 4464 Hours.

SECT. XXVII.

Of the Longitude and Latitude of Places.

THE Earth being a Globe, in a strict Sense, it can neither have Longitude nor Latitude; yet Geographers, for very good Reasons, have introduc'd the Doctrine of Longitude and Latitude: The Usefulness of knowing the Longitude and Latitude of a Place, is great; for when we know that, we know the Situation of it by Sea or Land.

The ancient Geographers knew more of the World from West to East, than they did from South to North; therefore they had more Degrees of Longitude than Latitude. In *Ptolemy's* Time, there were only 80 Degrees of Latitude, taking in all then known on both Sides the Equator; whereas they had 180 Degrees of Longitude.

The Latitude of a Place is its Distance from the Equator; or, properly speaking, an Arch of the Meridian from the Zenith of a Place to the Equator; or, which is the same, it is the Elevation of the Pole above the Horizon of any Place. They who are under the Equator, have no Latitude; for none of the Poles are elevated above their Horizon: But when we go from the Equator towards any of the Poles, one of the Poles ascends above the Horizon, and the other descends. The Latitudes of Places are reckon'd from the Equator to the Poles; tho' in every Point of the Meridian, and in every Point of the Equator, different Degrees of Latitudes and Longitudes may be reckon'd: Yet Geographers, to avoid Confusion, have reckon'd 90 Degrees from the Equator to the North-Pole; and from the North-Pole to the Equator, in the same Hemisphere, 90 Degrees, which make 180.

And the same Way they reckon 180 Degrees for the Southern Hemisphere, which make up 360, the Number of Degrees every Circle contains. But the Degrees of Longitude are reckon'd from the first Meridian, from West to East, quite round the Globe; and the Reckoning ends at the first Meridian where it began, at 360 Degrees. The Degrees of Longitude are reckon'd upon the Equator; tho' they might also be reckon'd on the parallel Circles of Latitude.

The Longitude of a Place is an Arch of the Equator betwixt one Place and another, or the Distance of one Place from another, from W. to E. The Places more Eastward have Noon sooner than the Places more to the West, because they have different Longitudes. A Place 15 Degrees more to the East than another, will have Noon one Hour sooner than another Place. From what has been said before, this Question, which to many appears very unaccountable, may easily be answer'd; viz. If Twins born at the same Hour, and both dying at the same Minute, one of these Children can, at his Death, be two Days older than the other: For if the one be carried round the World in a Ship from W. to E. and the other from E. to W. the Child which went the Eastern Voyage will be two Days older than the other, for the Reasons before given.

One Degree of Longitude under the Equator is reckon'd about 60 *Italian Miles*; but the further you go from the Equator, either Northward or Southward, a Degree of Longitude contains fewer Miles: For Instance, under the Equator, one Degree of Longitude contains 25 *French Leagues*; but at *Paris*, one Degree of Longitude contains only 16 *French Leagues*. Under the Poles, they have no Longitude, because all the Meridians or Circles of Longitude meet there in a Point. We refer to the Table, Page 17. to shew the Number of Miles a Degree of Longitude contains, with regard to the different Latitude of Places.

The Knowledge of the Longitude of Places is very necessary, and of great Use in Navigation and Geography: The Longitude is not so certainly known as the Latitude. For this Reason, the greatest Part of the People of *Europe* concern'd in Trade, as the *English, French and Dutch*, have offer'd a Reward of 50000 Florins to those who could

find out the Way to adjust the Longitude of Places by Sea with equal Exactness to what we have of the Latitude of Places. Many who have attempted this, gave out they had succeeded, and laid down a great many Rules, which, upon Trial, did not answer Expectation. This may be owing in part to the great Difficulty in taking Observations at Sea; for Instruments of a necessary Length cannot be us'd there with that Steadiness requisite to compass the Design. The Longitude of Places at Land may be found out to a sufficient Degree of Exactness, by observing the Eclipse of the Moon, and the Eclipse of the first Satellites of *Jupiter*. The French Missionaries to *Siam*, &c. from their Observations of the Eclipses of the Satellites of *Jupiter*, are positive that *China*, *Siam*, and *Japan*, and those Eastern Countries, are plac'd in all our Globes and Maps many Degrees more Eastward than they ought to be.

To find out the Longitude of any Place, is not to find, as some imagine, the East and West of it, for that may be known by the Compass; for if your Face be towards the North, the East will be on your Right Hand, and the W. on your Left: But it is to know the Distance any Place of the Land or Sea is from another from West to East, or the Distance of any Place from the first Meridian.

The most sure Way to know the Longitude of any Place, is from the Appearances of the Stars: Ephemerides are a great Help in this Matter; for when we know the Hour and Minute of the Eclipse in a certain Place, and by Observations find that the Eclipses of the Moon, Satellites of *Jupiter*, &c. are sooner or later than in the Place given, we infer, that the one Place is more Eastward or Westward than the other.

Observations from the Motions of *Saturn* are altogether unserviceable on this Head, because he does not move above 5 Seconds in an Hour; for which Cause we can make no comparative Judgment betwixt the Time of his Appearance in one Place and another.

Observations from the Motion of the Sun are not to be depended upon; because the Sun, by its diurnal Motion, moves only one Degree in the Ecliptic in 24 Hours. This Motion is too slow to answer the Observations above-mention'd, which ought to be

so accurate, that in a Minute we may observe a sensible Motion in that Star from which we make our Observations; otherwise we may mistake the $\frac{1}{4}$ of a Degree of Longitude. So Observations must be taken, 1. From the Beginning, Middle, and End, of the Eclipse. 2. From the Moon's Place in the Zodiac. 3. From the Moon's Distance from a Fix'd Star. 4. From the Moon's Entrance into the Ecliptic. 5. From the Eclipses of the Satellites of *Jupiter*, which are observ'd by the Help of a Telescope.

To know the Longitude of any Place by the Eclipses of the Satellites of *Jupiter*, Two Things must be observ'd; 1. The Manner of observing the said Eclipse. 2. The precise and exact Time of the Observation of those Eclipses. The Satellites of *Jupiter* are small Planets, which are turn'd round *Jupiter*, according to these Periods:

	Days.	Hours.	Min.
The first Satelles of <i>Jupiter</i> makes its Revolution in	1	18	29
The 2d, in	3	13	19
The 3d, in	7	4	0
The 4th, in	16	18	5

Jupiter being an opac gross Body, like the Earth or the Moon, must necessarily occasion an Eclipse of his Satellites sometimes, as the Earth occasions an Eclipse of the Moon.

When the Satellites of *Jupiter* are in his Shadow, they suffer an Eclipse of a longer or shorter Continuance, according to the slower or swifter Motion of each of the Satellites. Their Eclipse commences when they enter the Shadow of *Jupiter*, and ends when they go out of it. The Entry of these Satellites into the Shadow is call'd Immersion, and their going out of it Emerision. The fittest Time for observing the Immersion is, when *Jupiter* rises after the Sun; and their Emerision is best observ'd, when *Jupiter* sets before the Sun.

That these Observations may be more easie, M. *Cassini's* Tables are necessary, which tho' calculated for the Meridian of *Paris*, yet may answer any other Meridian, by knowing the Difference betwixt the Meridian of *Paris*, and that of the other Place given.

But

But to prevent being surpriz'd and unpar'd for these Observations, it is most advisable to be ready an Hour before the Time given by the Tables. As the first of the Satellites is the swiftest of 'em all, it is by much the more fit for Observation of the Longitude of Places; for being 16 times swifter than the Moon, its Motion is so many times the more sensible. Telescopes from 18 to 21 Foot in Length are us'd for this purpose. By reason of the great Rapidity of the Motion of the first of the Satellites of *Jupiter*, it is easie to observe the first Moment of its Immersion or Emerfion. Pendulum Clocks exactly rectified, having the Minutes and Seconds, must be us'd in this Matter. Such Clocks are of great use in all Astronomical Observations: The Length of the Pendulum ought to be $36\frac{1}{2}$ Inches. The Way of regulating Pendulum Clocks, is known to those who are acquainted with Astronomical Observations.

All these Precautions being taken, it is very easie to know the Longitude of a Place; Let there be two Observers in two different Places, they must both observe the Hour and Minute of the Immersion and Emerfion of the first of the Satellites of *Jupiter*. The Difference of the Time of the two Observations shews the different Longitude of Places; for if the Immersions and Emerfions are at the very same Minute, then these two Places are of the same Longitude, or under the same Meridian: But if two Persons, the one at *Paris*, the other at *Lisbon*, with Pendulum Clocks well rectified, observe at the same time the Immersion or Emerfion of the first Satelles of *Jupiter*; if the Immersion or Emerfion be at *Paris* at 10 at Night, and at *Lisbon* at 9, we may conclude, That *Paris* is more Eastward than *Lisbon* by one Hour, which answers to 15 Degrees: So that if the Longitude of *Paris* be 23, the Longitude of *Lisbon* must be 8 Degrees.

To find the Longitude of Places by the Eclipses of the Moon, we must observe, by the Assistance of a Telescope, the Beginning, the Continuance and End, of the Eclipse, and the Elevation of the Pole. The Hour and Minute being known by the Altitude of any Fix'd Star, or if a Star be in the Meridian of the Place, we may easily know the Hour and Minute: But now Pen-

dulum Clocks rectified are us'd in such Matters. Then compare the Time of the Beginning of the Eclipse in one Place, with that of another, for whose Meridian Ephemerides are calculated; for if the Eclipse begin in one Place $\frac{1}{4}$ of an Hour sooner than in the other, that Place must be 3 Deg. 45 Min. more Eastward than the other; But if the Eclipse of the Moon begin one Hour sooner in one Place, that where the Eclipse is sooner by an Hour is 15 Deg. more Eastward than the other. This has been the ordinary Way to find the Longitude of Places; which tho' useful by Land, yet it will not answer the Seamens Purpose, because the Eclipses of the Moon seldom happen. Astronomers make use of another Way to find out the Longitude of Places: When the Moon is in the Meridian of a Place, whose Longitude we want, then find what Hour this happens at, by the Altitude of any Fix'd Star then in the Meridian of the Place; the Hour being found, we may know what Part of the Ecliptic is in the Meridian of the Place we are in: So by knowing the Place of the Zodiac the Moon is in at that Time by Ephemerides, we know at what Time the Moon comes to that Place of the Zodiac for which the Ephemerides were calculated. By this means we have two different Times of the Moon's coming to a Place in the Zodiac; and by the former Principles, the Longitude of the Place where we are may be found out. Some are of Opinion, That if Watches and Clocks were made with that Equality and Justness of Motion as is requisite, we might easily know the Longitude of Places. When Ships are to go off from any Port, let the Watch or Clock be exactly 12 when the Sun is in the Meridian of the Place the Ship parts from; keep the Clock or Watch a going: When you want the Longitude of any Place, observe exactly when the Sun is in the Meridian of that Place; compare the Difference of Hours and Minutes betwixt the Times of the Sun's being in the Meridian of the Place you left, and in the Meridian of the Place you are then in: By the former Principles, you will easily know the Difference of Longitude.

The Distance of Places in Particular Maps, is easily known by a Scale of Miles which such Maps always have; Take the Distance

of two Places by your Compass, then bring the Distance taken to the Scale of Miles or Leagues; if the Distance be greater than the Scale, then by another Pair of Compasses you may take the Excess, and bring it to the Scale, and adding it to the Number of Miles or Leagues the Scale contains, you have the Distance of one Place from another. But upon Planispheres, if the Distance of two Places be only in Latitude, then allowing 60 *Italian* Miles for one Degree, the Number of Miles the two Places are distant may be known. If two Places differ in Longitude, knowing their Latitude, and observing by the Table of the Diminution of Longitude, how many Miles one Degree of Longitude contains in such a Latitude; by this means you have the Distance of these two Places. But when Places differ both in Longitude and Latitude, the ordinary Method is to take their Distance by your Compasses: Bring this Distance to the Side or Circumference; if the Map be a Planisphere, then reckon how many Degrees that Distance makes, and for every Degree allow 60 *Italian* or *English* Miles.

S E C T. XXVIII.

Of the *Afcii*, *Heteroscii*, *Periscii*, *Amphiscii*, *Periæci*, *Antiaeci*, and *Antipodes*.

THE Inhabitants of the Earth are thus distinguish'd, with regard to the Points their Shadows go to, when the Sun is in the Meridian: This Difference proceeds from the Obliquity of the Ecliptic, and from the Spherical Figure of the Earth.

The *Afcii* are those who live betwixt the Equator and the Tropics, who some Days in the Year, when the Sun is in the Meridian, have no Shadow at all. Those under the Equator, the two Days of the Equinoxes, have no Shadow at Noon, the Beams of the Sun falling then perpendicular. Those under the Tropic of *Cancer*, when the Sun is in the first Degree of that Sign, have no Shadow at Noon: The Tropic of *Capricorn* the like. At other Times, under the Tropic of *Cancer*, their Shadow at Noon points to the North; but under that of

Capricorn towards the South; and then they are call'd *Heteroscii*. The same in both the Temperate Zones.

The *Periscii* are those whose Shadow, in 24 Hours, is carried round all the Points of the Compass. The Inhabitants of the Frigid Zones, the Sun being some time of the Year all the 24 Hours above their Horizon, are so call'd.

The *Amphiscii* have their Shadow at Noon, sometime towards the North, and sometime towards the South. The Inhabitants of the Torrid Zone are therefore call'd by this Name.

The People of the Earth, with respect to their Situation, are *Periæci*, *Antiaeci*, and *Antipodes*.

The *Periæci* are those who dwell in the same parallel Circle of Latitude, but in opposite Points of the same, *viz.* in opposite Meridians. Hence it is, That when the one, *viz.* those who are 180 Degrees of Longitude further East have Noon, the other have Midnight, their Days are of equal Length, their Seasons are the same, because the same Pole is equally elevated in both Places: But in Places that belong to the Frigid Zone, this Difference of Day and Night is not observed, because the Sun is 24 Hours or more above their Horizon.

The *Antiaeci* are those who live under the same Meridian, but in opposite Parallel Circles of Latitude, and they are equally distant from the Equator; so if one live in a Northern Latitude, the other live in a Southern, and have the same Elevation of different Poles, they have Noon and Midnight at the same time; but 'tis not so as to the Rising and Setting of the Sun. The Seasons of the Year are also opposite; for when it is Winter in the one Place, it is Summer in the other; and when the one has the longest Days, the other has the shortest.

The *Antipodes* are the People who are Diametrically opposite to one another, at the Distance of one half of the Circumference of the Earth: They have contrary Parallels and Meridians. If the one Place have so much Southern Latitude, their *Antipodes* have the same Northern Latitude; their Meridians are 180 Degrees distant. Hence it is, That when the one have Night, the other have Day; when the one have Summer, the other have Winter. Our *Antipodes*
can

can see no more of our Stars than we can of theirs; and the Stars that never set to us, never rise to them.

The Ancients could not believe the Doctrine of the *Antipodes*; so that whoever maintain'd that Opinion in the first Times of Christianity, were accounted Hereticks. *Virgilius*, Bishop of *Salzburg*, in 745. upon the Complaint of *Boniface*, Archbishop of *Mentz*, to the Duke of *Bohemia*, and afterwards to Pope *Zachary*, was by him con-

demn'd of Heresie on that Account; as *Aventinus* says. *Annal. Boicis*, Lib. 3.

The Venerable *Bede* reckon'd the Opinion of the *Antipodes* a meer Fable. *Lactantius* and *Augustine* were of the same Mind; and 'tis no Wonder, since they thought the Earth was shap'd like a Table.

Those who live under the Equinoctial, have no People who are their *Antiaci*. *Perraci* and *Antipodes* under the Equator are the same.

S E C T. XXIX.

Of the Use of the Terrestrial
G L O B E.

HAVING explain'd the Circles of the Sphere, we come now more particularly to the Use of the Terrestrial Globe: Some few Things belonging to it, which could not fall in so naturally before, are first to be explain'd.

The Horary Circle is a small Circle of Brass, and so affix'd to the Brazen Meridian, that the Pole (or End of the Axis) is its Center. The 24 Hours of the Natural Day are at equal Distances from one another; the 12th Hour for Noon being in the upper Part of the Circle towards the Zenith, and the other 12th Hour for Midnight in the lower Part towards the Horizon: So that from 12 to 12 on the East-Side, are the Hours from Midnight to Noon; and from 12 in the upper Part to 12 in the lower on the West Side of that Horary Circle, are the Hours from Noon to Midnight. The Index to this Circle is fix'd upon the End of the Axis, and turns round with the Globe. The Use of this Circle will appear afterwards.

The Quadrant of Altitude, or the Vertical Circle, is a narrow thin Plate of pliable Brass, exactly answerable to a fourth Part of the Equinoctial. Upon this Quadrant are inscrib'd 90 Degrees, each of them being according to the same Scale with those upon the Equator. Of its Use, we shall speak afterwards.

The Semi-Circle of Position is a narrow solid Plate of Brass, exactly answerable to one half of the Equator. Upon this Semi-Circle are inscrib'd 180 Degrees, exactly the same with those upon the Equator. We may term it a double Quadrant of Altitude: Its greatest Use is in Astronomy.

The Mariners Compass, Horizontally fix'd upon the Pedestal of the Globe, is frequently needful for the Solution of several Problems, and for placing the Poles North and South.

Prob. I. To rectifie the Globe.

The Globe being upon a true Plain, elevate the Pole above the Horizon, according

to the Latitude of the Place given; fix the Quadrant of Altitude in the Zenith, the Mariners Compass upon the Pedestal, the Brazen Meridian standing due North and South.

Prob. II. To find the Longitude and Latitude of a Place.

Turn about the Globe, till the Place whose Longitude and Latitude you want touch the East-Side of the Brazen Meridian: Observe what Degree of the Equator touches the said Meridian, and that Degree is the Longitude of the Place. See what Degree of the Meridian touches the Place, and the Degree found is the Latitude of the Place. When the Longitude and Latitude of a Place is known, to find the Place upon the Globe, turn the Globe, till the Meridian touch the Equator in the Degrees of Longitude of the given Place; find upon the Meridian the Degrees of Latitude of the Place, and the Place you want is exactly under the Latitude found. For Instance; To find *Paris* on the Globe, its Longitude is $23\frac{1}{2}$ Deg. and Latitude 48 Deg. 51 Min. I turn the Globe round till the Meridian touch the Equator in $23\frac{1}{2}$ Deg. then I trace up the Meridian till I come to 48 Deg. 51 Min. and the Place of the Globe exactly under that Deg. of the Meridian is *Paris*.

Prob. III. To find the Distance of two Places, as of Amsterdam and Constantinople.

Set one Foot of the Compass in the Point of the Globe that shows *Amsterdam*, open your Compass till the other Foot touch *Constantinople*, bring the Compass thus open'd to the Equator, and count the Deg. it contains, you will find 21 Deg. Or, instead of Compasses, it may be known by the Quadrant of Altitude, thus: Bring to the Meridian one of the Places, as *Amsterdam*, put the Quadrant of Altitude upon that Place, extend it to *Constantinople*, and you will find 21 Deg. of Distance. When Places differ only in Latitude or Longitude, the Way to know their Distance has been shown before.

Prob. IV. The Latitude of a Place being given, to know all the Places on the Earth that have the same Latitude.

Find the Latitude in the Brazen Meridian, then turn the Globe round, and all Places

Places touching that Deg. of Latitude in the Meridian, are of the same Latitude.

Prob. V. *The Longitude of a Place being known, to find all Places upon the Globe that have the same Longitude.*

Bring the Longitude of the Place upon the Equator to the Brazen Meridian; then all Places that touch the Meridian quite round the Earth are of the same Longitude.

Prob. VI. *To find the Sun's Place in the Zodiac on the 18th of August, N. S.*

Seek for the Day of *August* in the Wooden Horizon: In the Circle of Months, observe the Difference betwixt the *Julian* and *Gregorian* Calendar, and you find over against it, in the Circle of the Signs, the 25th Degree of *Leo*; find that Degree of *Leo* in the Ecliptic of the Globe, and that is the Place of the Sun the 18th of *August*: But in Leap-Year, for the 19th of *February*, you must seek the first of *March*.

Prob. VII. *To know on what Day of the Year the Sun is at Noon perpendicular above any Place given in the Torrid Zone.*

Let the Place be *Goa*, which is in the 16th Deg. of Northern Latitude; mark upon the Brazen Meridian that Latitude; turn the Globe quite round, and observe what Signs of the Zodiac pass under that Latitude of the Meridian, and you will find two that touch that Deg. of the Meridian, viz. the 13th Deg. of *Taurus*, and the 18th of *Leo*: Look on the Wooden Horizon, and you will find the Days that answer those Degrees, viz. the 3d of *May*, and the 11th of *August*, N. S.

Prob. VIII. *The Month and Day, and Time of the Day, being known, to find those Places on the Globe, in whose Meridian the Sun is at that Time.*

The Pole being elevated according to the Latitude of the given Place, bring the said Place to the Brazen Meridian, set the Index of the Horary Circle at the Hour of the Day of the given Place, turn the Globe till the Index point at the upper Figure of 12; which done, fix the Globe in that Situation, and observe what Places are exactly under the upper Semi-Circle of the Brazen Meridian, and those Places have the Sun in their Meridian at that Time.

Prob. IX. *To know the Length of the Day and Night in any Place of the Earth at any Time.*

Elevate the Pole according to the Latitude of the Place whose Length of Day you seek for; find the Sun's Place in the Ecliptic at that Time; which being brought to the East-Side of the Horizon, set the Index of the Horary Circle at the upper Figure of 12; and turning the Globe about till the said Place of the Ecliptic, where the Sun is at that Time, touch the Western Horizon, reckon the Number of Hours the Index of the Horary Circle has pass'd from the Figure of 12, and that is the Length of the Day.

Prob. X. *To find on the Globe the Antæci, Periæci, and Antipodes.*

Bring the Place whose *Antæci* you want to the Brazen Meridian, by which you will know its Northern Latitude; see what Place touches the same Deg. of Southern Latitude; and that Place is the *Antæci*: Bring the Place given to the Brazen Meridian, in the same Parallel Circle of Latitude, and that Place that touches the opposite Part of the Meridian, in the same Hemisphere, is the *Periæci* of the Place: Or add 180 Deg. to the Longitude of the Place given; turn about the Globe till that Deg. of Longitude upon the Equator touch the Meridian, and under that Latitude, upon the Meridian of the Place given, the *Periæci* are to be found; Or having brought the Place given to the Brazen Meridian, observe the Place of the Meridian it touches; set the Index of the Horary Circle at 12, and turn the Globe till the Index comes to the opposite 12, the Place that touches the same Deg. of Latitude in the Meridian is the *Periæci*.

Prob. XI. *To find the Antipodes of any Place; for Instance, the Antipodes of London.*

Turn the Globe round, either towards the East or West, till *London* touch the Horizon; count upon the Horizon the Deg. that that Place of the Horizon which *London* touches is distant from the Brazen Meridian; if *London* touch the Horizon in the East-Side of the Meridian, reckon the same Number of Deg. from the West-Side of the Meridian, and where the Reckoning ends, that Place is the Antipodes of *London*. Or having found out the Latitude of the Place, by bringing

bringing the Place to the Brazen Meridian, set the Index of the Horary Circle at the upper 12, turn round the Globe till the Index touch the lower 12; then whatever Deg. of North Latitude the Place given has, seek in the Brazen Meridian for the same Deg. of South Latitude; which being found, is the Antipodes of the given Place.

Prob. XII. To find the Sun's Declination.

The Sun's Declination is its Distance from the Equator, either Northward or Southward; first seek, according to the former Directions, the Place of the Sun in the Ecliptic for that Day; the Sign and Deg. of it being found for that Day, bring that Sign and Deg. to the Brazen Meridian, then see what Deg. of Latitude it touches; which being found, is the Sun's Declination from the Equator. Take the Sun's Declination from the Latitude of the Place, the Remainder will be the Distance of the Sun from the Zenith of the Place given at Noon: But if the Sun is not on the Side of the Equator we are on, then add the Sun's Declination to the Latitude of the Place, and this makes the Distance betwixt the Sun and the Zenith of the Place.

Prob. XIII. To find the Time of the Sun's Rising and Setting in Places that are betwixt the Equator and the Polar Circles.

Elevate the Globe according to the Latitude of the Place: For Instance; *Amsterdam*, the 30th of *July*, N. S. Seek the Sun's Place in the Wooden Horizon, according to the former Directions, and you will find it to be then the 7th Deg. of *Leo*: Bring that Place of the Zodiac to the Brazen Meridian, set the Index of the Horary Circle at the upper 12, turn the Globe from W. to E. till the Place of the Ecliptic, where the Sun is for that Day, touch the Eastern Horizon; see what Hour the Index of the Horary Circle points at, which is 4 Hours 17 Min. in the Morning; and this in the Place sought for is the Hour of the Sun's Rising. Turn the Globe Westward, till the same Point of the Ecliptic touch the Western Horizon; observe what Hour the Index of the Horary Circle points at, which is 7 Hours 43 Min. in the Evening; and that is the Hour of the Sun's Setting.

Prob. XIV. To find the longest Day of any Place betwixt the Equator and the Polar Circles.

Elevate the Pole according to the Latitude of the Place, viz. *Paris*; if it be of Northern Latitude, the longest Day is when the Sun enters the first Deg. of *Cancer*, which bring to the Brazen Meridian; set the Index to the upper 12, turn the Globe round Eastward, till the first Deg. of *Cancer* touch the Eastern Part of the Horizon; see what Hour the Index points at, which is 4 Hours for the Rising of the Sun; turn the Globe Westward, till the same Degree of *Cancer* touch the Western Horizon, the Index will point at 8, which is the Hour of the Sun-setting for the longest Day at *Paris*: So the longest Day there is 16 Hours, which is 8 half Hours longer than their Day under the Equator; by which we know, that *Paris* is in the 8th Climate. Observe the same Way of Operation for Places that have Southern Latitude, whose longest Day is when the Sun is in the first Deg. of *Capricorn*.

Prob. XV. To find in what Climate any Place, lying betwixt the Polar Circles and the Poles, is.

Elevate the Pole according to the Latitude of the Places, viz. 69 Deg. 30 Min. Northern Latitude; turn the Globe Eastward, till the Ecliptic touch the Northern Point of the Horizon; observe the Deg. of the Ecliptic that touches the Horizon, and you will find it to be the first Deg. of *Gemini*; count how many Deg. there are from that to the first Deg. of *Cancer*, and you will find it 30 Deg. which doubled, makes 60, the Number of Days without any Night for their longest Day; and you find that Place to be the End of the second Climate of Months.

Prob. XVI. To know what Hour it is in one Place, when it is Noon in another.

Let the Example be, to know what Hour it is at *Constantinople*, when it is Noon at *Paris*: Bring *Paris* to the Brazen Meridian, set the Index at the upper 12, move the Globe from E. to W. (because *Constantinople* is E. from *Paris*) till *Constantinople* touch the Brazen Meridian; observe what Hour the Index touches, which is 2 in the Afternoon, and that is the Time of the Day when it

The General Introduction to GEOGRAPHY. 101

is 12 at *Paris*, because *Constantinople* is 30 Deg. more Eastward than *Paris*, and so has Noon two Hours sooner.

Prob. XVII. *To know what Hour it is in all Places of the Earth, when you know what Hour it is in a particular Place.*

When it is 10 in the Morning at *Paris*, to know what Hour it is at that Time all the World over; Bring *Paris* to the Brazen Meridian, set the Index at 10 of the Morning, turn the Globe round; the Index will mark what Hour it is in all Places that come under the Brazen Meridian. If you turn the Globe towards the West, you will find, for Example, that when it is 10 of the Morning at *Paris*, it is Noon at *Constantinople*; $2\frac{1}{2}$ in the Afternoon at *Ispahan*, the Capital City of *Persia*; $4\frac{1}{2}$ after Noon at *Siam*; and 7 at Night at *Meaco*, the Capital of *Japan*. If you turn the Globe towards the East, you will see, that when it is 10 in the Morning at *Paris*, it is only $9\frac{1}{4}$ at *Lisbon*; $5\frac{1}{4}$ of the Morning at *Quebec*; $4\frac{1}{4}$ of the Morning at *Cartagena* in *America*; and $2\frac{1}{2}$ at *Compostella* in *Mexico*.

Prob. XVIII. *To find the Beginning and Ending of the Twilight in any Place, and at any Time of the Year.*

The Twilight is before the Sun's rising, and after its setting. When the Sun is 18 Deg. perpendicularly below the Horizon in the Morning, the Twilight begins; and when the Sun is 18 Deg. perpendicularly below the Horizon after its setting, the Twilight ends. In a direct Sphere near the Equator, the Twilights are of shorter continuance, because the Sun then goes below the Horizon in a perpendicular Line. But in an oblique Sphere, the Twilight is longer; and longest of all in a parallel Sphere. For Instance:

To know when the Twilight begins and ends at Amsterdam the 5th of October.

Elevate the Pole according to the Latitude of the Place; seek the Place of the Sun for that Day, according to the Directions above, which is the 12th Degree of *Libra*; bring this to the Meridian, and set the Index to 12 at Noon; turn the Globe towards the East, till the 12th of *Aries*,

which is diametrically opposite to the Place the Sun is then in, be elevated 18 Deg. above the Western Point of the Horizon; which done, you will see, 1. That the Place of the Sun is 18 Deg. below the Eastern Horizon. 2. That the Index points at 4 Hours 26 Min. after Midnight for the Beginning of the Morning Twilight. Turn about the Globe, till the 12th of *Aries* be elevated 18 Deg. above the Eastern Horizon; which Elevation is known by the Quadrant of Altitude: Then the Index shows 7 of the Clock and 37 Min. after Noon for the End of the Evening Twilight.

Prob. XIX. *To find those Places that have Twilight all the Night at a certain Day.*

Seek, by the Directions above, the Declination of the Sun for that Day; elevate the Pole so many Deg. above the Horizon, as the Declination of the Sun is Deg. from the Equator; which being done, all the Circles of Latitude that are not 18 Deg. below the Horizon, have Twilight all the Night over.

Prob. XX. *To find the Hour of the Day by the Globe at any Time when the Sun shines.*

Divide your Equinoctial Line into 24 equal Parts, and in small Figures set down the Hours of the natural Day after the following Manner: At the Intersections of the Ecliptic and Equator, place the Figure 6, and bring those Places to the Brazen Meridian, one being in the upper, and the other in the lower Hemisphere; which done, place the 12 Figures in the Western Hemisphere in this Order following; 6, 7, 8, 9, 10, 11, 12, 1, 2, 3, 4, 5, 6; then beginning at the same Figure of 6, and proceeding Eastwards, set down the other 12 Figures thus; 6, 5, 4, 3, 2, 1, 12, 11, 10, 9, 8, 7, 6. The Equator being thus divided and mark'd, elevate the Globe according to the Latitude of the Place where you are, and bring the Intersection of the Vernal Equinox to the upper Part of the Brazen Meridian; and placing the Globe duly South and North, observe exactly that half of the Globe upon which the Sun doth actually shine; for the last Part of the enlighten'd Hemisphere doth always show the Hour of the Day upon the Equinoctial Line.

O

Prob. XXI.

Prob. XXI. *The Latitude of the Place, and Height of the Sun, being known, to find thereby the Hour of the Day.*

The Pole being elevated according to the Latitude of the Place, and the Height of the Sun being found by an exact Quadrant, mark his Place in the Ecliptic for the given Day, and bring the same to the Brazen Meridian; after this, fix the Quadrant of Altitude at the Zenith, and mark in the said Quadrant the particular Degree of the Sun's Altitude; set the Index of the Horary Circle at Noon; move the Globe, together with the Quadrant of Altitude, till the Sun's Place mark'd in the Ecliptic, and his Deg. of Altitude mark'd upon the Quadrant of Altitude, do come both in one: Which done, observe what Hour the Index pointeth at, and that is the Hour wanted.

Prob. XXII. *The Latitude of the Place being given, as also the true Bearing of the Sun in the said Place at any Time, to find thereby the Hour of the Day.*

The Pole being elevated according to the Latitude of the Place, and the Sun's Place in the Ecliptic for that Day being found and mark'd, fix the Quadrant of Altitude to the Zenith, and by the Mariners Compass observe the true Bearing of the Sun; and then bring the Quadrant of Altitude to the observ'd Point of the Compass upon the Wooden Horizon, and move the Globe till the Sun's Place in the Ecliptic coincide with the said Quadrant: Which done, and the Globe continuing in that Position, the Index of the Horary Circle will point at the Hour of the Day at the Time desir'd.

Prob. XXIII. *The Latitude of a Place, and the Sun's Place in the Ecliptic, being given, to find thereby the Hour of the Day.*

Elevate the Pole according to the given Latitude, and place the Globe directly South and North by the Mariners Compass; then fix a small Needle perpendicularly in the Sun's Place in the Ecliptic, and bringing the same to the Brazen Meridian, set the Index at Noon; turn the Globe till the Needle cast no Shadow; and then what Hour the Index points, is the Hour of the Day.

When any Place is 90 Deg. above the Horizon, the Wooden Horizon is the Horizon of that Place.

Prob. XXIV. *To find the Meridian Line by the Globe in any Place, and at any Time of the Day.*

The Latitude of the Place being known, and the Pole elevated answerably, observe the Height of the Sun above the Horizon at that Time, and draw upon a true Horizontal Plain a straight Line in, or parallel to, the Shadow of a Stile perpendicularly erected upon that Plain; in which describe a Circle at any opening of the Compasses, and finding the Sun's Place in the Ecliptic, mark his observ'd Height in the Quadrant of Altitude; then move the Globe, together with the said Quadrant, till that Mark in the Quadrant, and the Sun's Place in the Ecliptic, come both in one; which done, count upon the Wooden Horizon the Number of Degrees between the Quadrant of Altitude and the Brazen Meridian, and set off the same Number of Degrees upon the aforesaid Circle drawn upon the Plain, by making a visible Point in the Circumference, where the Reckoning ends, (beginning still at the Side towards the Sun, and proceeding E. or W. according to the Time of the Day;) then draw a Line from that Point in the Circumference through the Center of the said Circle, and the same will prove the true Meridian Line of that Place, at what Time soever the Observation is made.

Prob. XXV. *The Month and Day being given, to find by the Globe those Places of the North Frigid Zone, where the Sun begins to shine constantly without setting; as also those Places of the South Frigid Zone, from which the Sun begins at that Time totally to absent himself.*

Find the Sun's Place in the Ecliptic, bring it to the Brazen Meridian, and reckon the same Number of Degrees on the Meridian from the North Pole to the Equator, as the Sun's Place in the Ecliptic is Degrees from the Equator: Observe, that in all Places, when the Globe is turn'd round, that touch that Degree of the Meridian, the Day in those Places begins to be continual.

Prob. XXVI.

The General Introduction to GEOGRAPHY. 103

Prob. XXVI. *A Place being given in the North Frigid Zone, to find by the Globe what Number of Days the Sun doth constantly shine upon the said Place, and what Days it is absent; also the first and last Days of its Appearance.*

Bring the given Place to the Brazen Meridian, and observing its Latitude, elevate the Pole accordingly; then turn the Globe about, till the first Deg. of *Cancer* come under the Meridian, and count the same Number of Deg. upon the Meridian from each Side of the Equator, as the Place is distant from the Pole; and making a Mark where the Reckoning ends, turn the Globe round, and carefully observe what two Degrees of the Ecliptic pass exactly under the two Points mark'd in the Meridian; for the Northern Arch of the Circle, (*viz.* that comprehended between the two mark'd Degrees) being reduc'd to Time, will give the Number of Days that the Sun doth constantly shine above the Horizon of the given Place; and the opposite Arch of the said Circle will give the Number of Days that he is absent. The Pole continuing in the same Elevation, bring the beginning of *Cancer* to the Brazen Meridian, and observe the two Points of the Ecliptic, which in the mean time coincide with the Horizon; then search upon the Wooden Horizon for those Days that the Sun doth enter into the aforesaid Degrees of the Ecliptic, and these are the Days of his first or last Appearance in the given Place.

Prob. XXVII. *The Hour of the Day being given, according to our Way of Reckoning in England, to find thereby the Babylonick Hour at any time.*

The *Babylonians* of old, and the People of *Nuremberg* now, commence their Hours from the Appearance of the Sun in the Eastern Horizon. For the finding this Hour at any Time, and at any Place, elevate the Pole according to the Latitude of the Place; note the Sun's Place in the Ecliptic at that time, bring the same to the Brazen Meridian, and set the Index of the Horary Circle at Noon: After this, turn the Globe either Eastward or Westward, according to the Time of the Day, till the Index point the given Hour; then fix the Globe in that Position, and bring back the Index to Noon, and move the

Globe from West to East, till the Sun's Place mark'd in the Ecliptic coincide with the Eastern Horizon: Which done, reckon upon the Horary Circle the Number of Hours between the upper Figure of 12, and the Index; for that is the Number of Hours from Sun-rising for that Day in the given Place, or the true *Babylonick Hour* desired.

Prob. XXVIII. *The Babylonick Hour being given, to find the Hour of the Day at any time, according to our Way of Reckoning in England.*

Elevate the Pole according to the given Latitude, and marking the Sun's Place in the Ecliptic, bring the same to the Brazen Meridian, and set the Index of the Horary Circle at Noon; then turn the Globe Westward, till the Index point at the given Hour from Sun-rising; and fixing the Globe in that Situation, bring the Index back again to Noon, and turn the Globe backwards, till the Sun's Place mark'd in the Ecliptic return to the same Semi-Circle of the Brazen Meridian from whence it came: Which done, observe what Hour the Index of the Horary Circle points at, and the same is the Hour desired.

Prob. XXIX. *The Hour of the Day being given, according to our Way of Reckoning in England, to find thereby the Italic Hour at any time.*

The *Italic Hour* is the Number of Hours from Sun-setting at all times of the Year, to Sun-setting the next following Day: For the finding such Hours, elevate the Pole according to the Latitude of the Place; and noting the Sun's Place in the Ecliptic upon the given Day, bring the same to the Brazen Meridian and set the Index of the Horary Circle at Noon; then turn the Globe either East or West, according to the Time of the Day, till the Index point at the given Hour; and fixing the Globe in that Situation, bring the Index back to Noon: Which done, turn the Globe Eastward, till the Mark of the Sun's Place in the Ecliptic coincide with the Western Horizon, and observe how many Hours there are between the upper Figure of 12 and the Index (reckoning them Eastward as the Globe mov'd) for these are the Hours from Sun-set, or the *Italic Hour* desired.

Prob. XXX. *The Italick Hour being given, to find thereby the Hour of the Day at any time, according to our Reckoning in England.*

Elevate the Pole according to the Latitude of the Place; note the Sun's Place in the Ecliptic, bring the same to the Western Horizon, set the Index at Noon, turn the Globe Westward, till the Index point at the *Italick Hour* given; then fixing the Globe in that Position, bring the Index back to Noon, and turn the Globe backward, till the Mark of the Sun's Place return to the Semi-Circle of the Brazen Meridian, from whence it came: Which done, observe how many Hours there are between Noon and the Index, (reckoning them from W. to E.) for those are the Hours desir'd, according to our Way of Reckoning in England.

Prob. XXXI. *The Hour of the Day being given, according to our Way of Reckoning in England, to find thereby the Judaical Hour at any time.*

The Jews divided their artificial Day into 12 Hours, which must be unequal according to the Length of the Days in the particular Places: For finding which, elevate the Pole according to the Latitude of the Place, mark the Sun's Place in the Ecliptic at that Time, bring it to the Eastern Horizon, and set the Index at Noon; then turn the Globe about, till that Place mark'd in the Ecliptic come to the Western Horizon, and observe the Number of Hours betwixt Noon and the Index, these being the Hours of which the given Day doth consist; which Number you are to note down, and to find what Hour from Sun-rising corresponds with the given Hour, or from Sun-setting, if the given Hour be after Sun-set: Which done, work by the following Proportion: As the Number of Hours whereof the Day given consisteth, (*viz.* those noted down) is to 12; so is the Number of Hours from Sun-rising, (if it be an Hour of the Day) or from Sun-setting, (if an Hour of the Night) to a 4th Proportional; which is the Number desir'd, *viz.* the *Judaical Hour* at the Time given.

Prob. XXXII. *The Judaical Hour being given, to find thereby the Hour of the Day at any time, according to our Way of Reckoning in England.*

Elevate the Pole according to the Latitude of the Place, find the Sun's Place in the Ecliptic at the Time, bring the same to the Eastern Horizon, and set the Index at Noon; then turn the Globe Westward, till the Sun's Place coincide with the Western Horizon; then the Index points at the Number of equal Hours whereof the Day consisteth; which Number you are to note down, and bring the Sun's Place to the Brazen Meridian, and setting the Index again at Noon, turn the Globe till the Sun's Place coincide with the Eastern Horizon, and the Index will point at the Hour when the Sun riseth in the given Place: Which done, work by the following Proportion: As 12 is to the given Number of *Judaical Hours*; so is the Length of the Day in equal Hours (formerly found out) to a 4th Proportional; which is the Number desir'd, *viz.* the Hour of the Day according to our Way of Reckoning in England: Only note, That if the 4th Proportional be less than 12, you are to add the same to the Hour of Sun-rising, and the Product will give the Number of Hours before Noon for that Day; but if it be more than 12, then subtract it from 12, and the Remainder will give the Hour of the Day for Afternoon.

Prob. XXXIII. *The Day and Hour of either a Solar or Lunar Eclipse being known, to find by the Globe all those Places in which the same will be visible.*

Mark the Sun's Place in the Ecliptic for the given Day, as also the opposite Point thereunto, which is the Place of the Moon at that Time; then find that Place of the Globe to which the Sun is vertical at the given Hour, and bring the same to the Vertical Point or Pole of the Wooden Horizon, and fixing the Globe in that Situation, observe what Places are in the upper Hemisphere; for in most of them the Sun is visible during his Eclipse. As for the Lunar Eclipse, you are to find the Antipodes of that Place, which hath the Sun vertical at the given Hour, and bringing the same to the Pole of the Wooden Horizon, observe, as formerly, what Places are in the upper Hemisphere of the Globe, for in such will the Moon be visible during her Eclipse, except those that are very near unto, or actually in the Horizon.

Prob. XXXIV.

Prob. XXXIV. *To know all the Places that have Day, or the Sun shining upon them, at the same Time.*

The Globe being rectified, *i. e.* the North Pole standing due North, and elevated according to the Latitude of the Place, bring the Place you are in to the Brazen Meridian, expose the Globe to the Sun; all Places on the Globe that are illuminated, have Day at that Time; and those that are not, have Night at that Time: Then bring the Index of the Horary Circle to Noon; bring that Point of the Equator, where the Sun's shining ends, to the Brazen Meridian; the Index shews how many Hours the Sun is distant from the Meridian.

Prob. XXXV. *A Place being given, to find the Situation of another, according to the Angle of Position.*

Let the given Place be *Paris*, to know what Point the Cape of *Good Hope* is in regard to it; elevate the Globe according to the Latitude of *Paris*, which is 49 Deg. bring *Paris* to the Brazen Meridian, fix the Quadrant of Altitude in the Zenith, *i. e.* upon *Paris*, and make the Quadrant touch the Cape of *Good Hope*; then you will find that the Arch of the Horizon, betwixt the Zenith of the Cape of *Good Hope* and that of *Paris*, or the Brazen Meridian, is 18 Deg. for the Angle of Position; so that we find that the said Cape is in a Point a little less Easterly than South-South-East.

It being troublesome to quote Authors for every Particular, we think it proper to acquaint the Reader, That in the Description and Use of the Globes, we have made use of *Bleau, Varenius, Ozanam, Brietius, Brion, Martineau de Pleffis*, besides *English* Authors who have wrote on that Subject.

CHAP. II.

Of the Origine of Mankind, and Peopling the World.

THAT Mankind had their Original at the Time so particularly accounted for in the sacred History, can be doubted by none who believe the Divine Authority of the Scriptures. But abstracting from that unquestionable Authority, we may prove the Truth of it, as Men, by the following Arguments: 1. That in all Ages, and among all Nations, there has been a constant Tradition, That Mankind had its Original from some first Parents, not begot in the common Way, but immediately created by God. 2. That by Observation, we find the Increase of People daily exceeds their Decree: From whence 'tis, That Nations usually double their People in 360 Years, or sooner. 3. If we enquire into the Original Invention of Arts and Sciences, we shall find by History, That they all had their Rise within the Compass of 5 or 6000 Years. 4. By consulting the Histories of the most ancient Times, it will appear, That

we have no Authentic Account of any Originals of Kingdoms, Wars, Institutions of Laws or Governments, higher than that Time; but that the Plantations of all the known Parts of the World, nay even of the Original and Apotheoses of the Heav'n Deities, do all fall within that Period. By Consequence 'tis evident, That *Moses's* History, abstracting from its Divine Authority, is not only the most ancient, but the most valuable Piece now extant: For 'tis plain, That to him alone we are indebted for our Knowledge of the Time and Manner of the beginning of the World; of our first Parents; of the Frailty and Degradation of humane Nature; of the Inventors of Arts; of the Original of Nations; of the first Founders of Empires and Kingdoms; and of the Institutions of Laws and Government. These Things in all other ancient Histories are so blended with Fables and ridiculous Stories, that we may easily perceive the Authors knew nothing of the Matter,

Matter, but what they stole from him, or had convey'd to them by uncertain Tradition.

Moses's Account of the Situation of *Paradise*, the Original Seat and Dwelling-Place of our first Parents, is very particular. He tells us, That it was in *Eden* Eastwards; i. e. Eastwards from *Judea*, or from the Defart of the *Amorites*, where he wrote his Account. Some are of Opinion, That the Name *Eden* is deriv'd from the Pleasantness of the Place. We read of the Country of *Eden* in several Places of Scripture, as in 2 *Kings* 19. 12. *Isa.* 37. 12. *Ezek.* 27. 23. and this lay Eastwards of *Judea*. That it was Part of the Kingdom of *Assyria*, seems plain from 2 *Kings* 19. 12. and that Kingdom contain'd anciently not only the Country then call'd *Assur*, but also *Mesopotamia*, *Babylonia*, &c. And Dr. *Patrick*, Bishop of *Ely*, in his Commentary on *Genesis*, alledges, That *Paradise* was situated in Part of the latter; tho' most Authors think it was in *Mesopotamia*.

Moses says, a River went from *Eden*, and from thence was parted into two Heads. This River, according to the best Accounts, was a Conjunction of *Euphrates* and *Tigris*, which meet in *Apamia*, according to *Ptolemy*; which the Learned *Bochart* says, is the Place now by the *Arabians* call'd *Alcatjar*, about 45 Miles from *Bagdat*; and then they run together for a great Way. 'Tis probable, this united Stream ran through the Country of *Eden*, and that the Garden lay on the East-Side of it, and its Southern Boundary at the parting again of the two Rivers.

This River, *Moses* says, became into 4 Heads, which Sir *Walter Raleigh* understands to be Streams; and these 4 Streams were *Tigris* and *Euphrates* before they join'd, and *Pishon* and *Gihon* afterwards. *Pishon* was probably the Western River *Pasitigris*, the same with *Oreantis*, according to *Salmasius*, Sir *Walter Raleigh*, and *Bochart*. Mr. *Carver* observes from *Zenophon*, That this River was call'd simply *Physus*; and *Bochart* says, There was a Place call'd *Pasumum* lying near *Euphrates*: In all which Names, there are some Footsteps of the Name *Phison*, or *Pison*. *Moses* informs us in the 2d of *Genesis*, That this River encompass'd the whole Land of *Havilah*: And in the 10th of *Genesis*, he mentions two *Havilah's*, one descended from *Joktan*, v. 29. but this cannot be the *Havi-*

lah here mention'd, because his Posterity were planted Eastward: But the other *Havilah*, mention'd v. 7. is said to be descended from *Cush*, and gave Rise to a more Western People, seated on that Part of *Arabia-Felix* which borders on this Stream; for we read, *Gen.* 25. 18. That the *Ismaelites*, who were certainly Inhabitants of *Arabia-Deserta*, are bounded by *Shur* towards *Egypt*, and by *Havilah* in the Way to *Assyria*: And after this, we read, 1 *Sam.* 15. 7. That *Saul* found *Havilah* in the same Situation. The next Stream *Moses* calls *G-hon*, of which Name there are scarce any Footsteps left; but by the Country 'tis said to encompass, must be the Eastern Division of the River after its parting at *Eden*. This Country he calls *Ethiopia*, or *Cush*, by which we are not to understand that *Ethiopia* in *Africa*, but *Ethiopia* in *Asia*: For the Ancients mention two *Ethiopia's*, as *Bochart* informs us; and *Steph. Morinus*, in his Treatise of *Paradise*, proves it to be the Country of *Susiana*, which the *Greeks* call *Kissia*; and the *Persians* at this Time call it *Chuzestan*, or the Country of *Chus*.

The Name of the 3d River *Moses* says is *Hiddekel*, which, *Dan.* 10. 4. is call'd the great River, and therefore must be *Tigris*. *Rauwolf*, in his Travels, P. 11. Ch. 9. says, That in his Time, the River *Tigris* was by the People of *Caruch*, on the Confines of *Media*, call'd *Hiddekel*. *Plin. Lib.* 6. Cap. 27. says, That *Tigris* is so call'd from its Swift-ness; but where it runs slower, 'tis call'd *Diglitis*; and the *Arabians* call it *Deglat*, and *Degela*: All which are evident Corruptions of the Name *Hiddekel*, which the Targum of *Onkelos* and *Jonathan* render *Diglat*.

The 4th River, *Euphrates*, is only mention'd by *Moses*, because it was well known at the Time when he wrote. The Seat therefore of *Paradise* was thus: The Rivers *Euphrates* and *Tygris*, i. e. *Hiddekel*, joins somewhere in ancient *Babylonia*, or, as some call it, *Mesopotamia*, in one great Stream; on the East-Side of whose Banks lay the Garden of *Eden*; at the South End of which the River parted again into two Streams, then call'd *Pishon*, and *Gihon*, but in Process of Time *Euphrates* and *Tygris*, as before their Conjunction; and this Name we find given them both in Greek and Roman Authors. Mr. *Whiston*, in his new Theory of the Earth, Pag. 104. supposes the ancient *Paradise* to be

be at the Confluence of the *Tigris* and *Euphrates*, either before they fall into the *Persian* Gulph, where they now unite, and separate again, or rather where they anciently divided themselves below the Island *Ormus*, where the *Persian* Gulph under the Tropic of *Cancer* falls into the *Persian* Sea: So that the exact Place of *Paradise*, according to him, is now under Water. For his Reasons, we refer to the Book it self.

There is little more of Geography taken notice of before the Deluge, but *Cain's* going out of the Presence of the Lord into the Land of *Nod*, on the East of *Eden*; his dwelling there, and building a City, which he call'd *Enoch*, after his Son's Name. *Nod*, which is as much as to say, the Land of Vagabonds, probably took its Name from his wandering up and down in it. *Junius* thinks, the first *Nomades* liv'd in this Country, and perhaps took their rambling Way of Living from this first Vagabond *Cain*; and he supposes it lay near *Susiana* or *Chuzestan*.

There is nothing certain of the History of those before the Deluge, but what's to be found in the 6 first Chapters of *Genesis*. This Period of Time is said to have consisted of 1656 Years, which is prov'd from the History of *Genesis*, by taking the Years which *Adam* and his Descendants liv'd before they had those Children, which make up the List of the Patriarchs till *Noah*, *Gen. 5, 6, and 7. viz.*

	Years.
<i>Adam</i> had <i>Seth</i> at the Age of	130
<i>Seth</i> was Father at	105
<i>Enos</i> at	99

<i>Noah's</i> Age at the Time of the Flood	600
In all - - -	1656

Moses tells us, That after the Flood, the Ark rested on the Mountains of *Ararat*, which the Learned agree is that long Ridge of Mountains now call'd *Taurus*, as it was

in the Time of *Pliny*, and runs through *Armenia*, *Assyria*, *Mesopotamia*, *Media*, *Susiana* &c. from *Cilian* to *Parapomissus*. The Ark is thought to have rested on the highest and more Easterly Part of this Tract of Hills, call'd by *Epiphanius* and *Bechart* the *Gordiean* Mountains; and observ'd by *Theodoret*, on *Isay* 16. and 13. to have been always reckon'd the highest in the World. *Portius Cato* says, That about 250 Years before *Ninus*, the Earth was drown'd by a Deluge, and that Mankind was restor'd again in *Scythia* Saga, which, according to *Sir Walter Raleigh*, is under the Mountain *Parapomissus*. *Dr. Heylin* mentions a Tradition of the Inhabitants of that Country, That near the Foot of Mount *Caucasus*, there was a large Vineyard, in *Margiana* of *Noah's* planting. *Mr. Whiston*, in his New Theory of the Earth, thinks it plain from the Text and the Nature of the Thing, That the Ark rested on the highest Hill of *Asia*; for the Water was 15 Cubits above the Tops of all the other Mountains, when the Ark rested on Mount *Ararat*: Therefore *Parapomissus*, the ancient *Caucasus*, must be the Place. *Bechart* says, these Mountains were not above 200 or 300 Miles from *Eden*, and probably about half as far from the Place where *Noah* built the Ark. The Course of the Rains, and the Rise of the Water coming from the South, might gently drive the Ark so far Northerly, as to set it down on the Top of those vast Hills. That it was the most Easterly Part of those Mountains on which the Ark rested, seems plain from the Account which *Moses* gives us of the first Removal after the Deluge, which was from the East to the Plains of *Shinar*. *Gen. 11. 2.*

The Waters being asswag'd, and the Earth become dry, we are not to doubt that *Noah's* Family seated themselves in the Neighbouring Country, where they judg'd it most for their Conveniency, and spread as their Posterity increas'd, till they came to replenish the whole Earth, as *Moses* informs us, *Gen. 9. 19.* 'Tis more than probable, that from *Ararat* they mov'd first towards the South, Peopling by degrees *Assyria*, *Babylon*, *Syria*, *Egypt*, and *Ethiopia*: So that the *Egyptians* were in the Wrong to pretend to be the most ancient People of the World. *Bechart* takes notice of the Difficulty Interpreters meet with to reconcile this with the Scripture Account,

Account, in *Gen. 11. 2.* where those who came from the Mountains of *Ararat* into the Valley of *Shinar* are said to journey from the East, because those Mountains do not lie to the East, but to the North of *Babylon*; and on this Occasion he gives us the Opinion of those who think *Noah's* Family first came down into the Plains of *Affyria* and *Susiana*, and afterwards mov'd Westward to *Babylon*. He acquaints us also with the Solution of this Difficulty, by *James Cappel*, his Kinsman, in his Notes on *Genesis*, which were not then publish'd; viz. 'That the Posterity of *Noah* went from the Mountains of *Armenia* into that Country afterwards called *Keden*, from *Kedma*, *Ishmael's* youngest Son, *Gen. 25. 15.* *Ishmael's* second Son was *Kedar*; and that those two Brothers liv'd near one another, is infer'd from *Jer. 29. 48.* *Arise ye, go up to Kedar, and spoil the Men of the East.* So that when *Moses* says, *Gen. 11. 2.* They journey'd from *Kedem*, or the East, and found a Valley in the Land of *Shinar*, he thinks this Place is to be understood in this Manner." *Bochart* adds his own Conjectures thus: 'That he thinks the Scripture speaks here according to the Custom of the *Affyrians*, who call'd that Part of their Empire beyond the *Tigris* the East, and that on this Side of it the West: And therefore, according to this Division, the Mountains of *Ararat* are rightly said to be in the East. The first Thing they undertook after their Arrival here, was to build a Tower, whose Top might reach to Heaven. The Town is by *Moses* call'd *Babel*, *Gen. 11. 9.* which all agree to be *Babylon*. *Bochart, Lib. 1. Cap. 8.* takes Notice of the Mistake of those who confound *Babylon* with *Susa*, the Metropolis of *Susiana*; and of such as will have it to be *Nineveh*, from the Authority of an Anonymous Writer in *Suidas*, who says, That *Semiramis* first encompass'd *Nineveh* with Walls, and then chang'd its Name into *Babylon*. He likewise confutes those who will have *Bagdad* to be *Babylon*, an Error which many Learned Men fell into; but the Mistake is evident from the different Situation of the Places, *Babylon* being on the *Euphrates*, and *Bagdad* on the *Tigris*. And *Texeira*, an Eye-Witness, says, That the Ruins of *Babylon* were to be seen in his Time, and

were 40 Miles distant from *Bagdad*. For the Way how they came to fall into this Mistake, we refer to the Book it self; and likewise for his exact Description of the Situation of the ancient *Babylon*, and of the Division of the *Euphrates* into many different Streams in that Country. In his 9th Chapter he proves, That the Tower was built in the City, and made Part of it; and Chap. 10. he proves, That it was built in the 10th Year after the Deluge, because it's said, *Gen. 10. 25.* That to *Heber* two Sons were born, one of whom was call'd *Phaleg*, because in his Time the Earth was divided; which is the same as if he had said, This happen'd when *Phaleg* was born, because his Father gave him this Name at his Birth: And that *Phaleg* was born in the 10th Year after the Deluge, appears from *Gen. 11. 10.* to the 16th Verse." This first Century is what the Poets call the *Golden Age*, because the Earth not being then divided, they enjoy'd all Things in common; and *Noah*, who was the Saturn of the Heathens, govern'd Men not as a King does his Subjects, but as a Father does his Children; not so much by Fear, as by Love, and the Respect which is due to a Parent.

Bochart is not of their Opinion, who think that the Tower was immediately destroy'd by strong Winds, or Fire from Heaven; but believes it stood long after the Dispersion; that it was the same which was consecrated to *Belus*, and is describ'd at large by *Herodotus, Lib. 1.* Nor does he think that *Noah*, or any of his Religious Posterity, was concern'd in this impious Undertaking, but that it was such of his Posterity as had cast off the Fear of God; because, *Gen. 11. 5.* they are call'd the Children of Men, in the same manner as *Gen. 6. 2.* The Sons of God are oppos'd to the Daughters of Men, as Believers to Unbelievers: And hence it came to pass, That all those who were Partakers of the Covenant, i. e. *Abraham's* Forefathers, as high as *Noah*, were exempted from the Punishment inflict'd upon the rest; for when the Language of others was confounded, they retain'd their own Language in its Purity, viz. the Hebrew, so call'd from *Heber*, and was transmitted to his Posterity. In like manner, when the rest were dispers'd, they continu'd in their ancient Habitations.

At least 'tis plain, that *Ur* of the *Caldees* where *Abraham's* Ancestors liv'd, *Gen.* 11. 28. was not far from *Corduena*, where *Noah's* Ark rested. This is plain from *Ammianus*, *lib.* 5. where he says, the *Romans* pass'd the *Tigris* about 100 Miles from *Corduena*, and after 6 Days Journey came to a *Persian* Castle call'd *Ur*; from whence they march'd first to *Thisafpata*, and then to *Nisibis*: Therefore *Ur* must lie about *Nisibis*, and nearer at least to the *Tigris* and *Corduena* by two Stations. He is also of Opinion, That *Nimrod* was not among the Builders of this Tower, otherwise he must have been obliged to remove with the rest. Therefore he thinks that the Plain of *Shinar* lay desolate for some Years, the Memory of such a Dispersion having frighted Men from repossessing it, till obdurate *Nimrod* ventur'd to go thither with a great Number of *Cushites* to continue and perfect the Work, and to make that very Place, from whence Mankind was dispersed, the Metropolis of his Kingdom: To which he was perhaps induc'd by the extraordinary Fruitfulness and Pleasantness of the Country.

As to the Confusion of Tongues, *Bochart* is of Opinion, That 'tis not to be taken as if every one concern'd in this Attempt spoke a distinct Language, and that none of them could understand another; for by that means all Societies must have perish'd, if the Husband could not have understood the Wife, nor the Children the Parents, and *vice versa*. But he thinks every Family had a distinct Language. He is also of Opinion, That there is nothing certain to be determin'd as to the Number of Languages then spoke, tho' they are commonly said to be 70, or 72, but without any good Foundation, as the Curious may see by his Book, to which we refer. 'Tis enough that the Confusion was such as made them give over the Work; for when they could not understand one another, and when one ask'd for Brick, another brought Mortar, it must needs occasion Contention, and make them think they were mock'd, which must be attended by an Alienation of Mind, and mutual Aver-sion; from whence a Dispersion must naturally ensue.

He confutes the Opinion of *Epiphanius*, who thinks they divided the World among them by *Lot* in the Town of *Rhinocolura*,

and judges rather that they were drove asunder into the remotest Parts of the World by the secret Impulse of the same Spirit which confounded their Tongues. Nor is it likely, after they were Barbarians to one another in Language, that they could agree to meet together in one Place to divide the World among them by *Lot*: But there is nothing more certain, than that they could not meet at *Rhinocolura*; for *Diodorus* tells us, *Lib.* 1. *Cap.* 38. That that Town was not built till many Ages after, by *Artisanes*, King of *Ethiopia* and *Egypt*.

In his 16th Chapter, he describes the Boundaries of the Dispersion thus: On the North, *Thracia*, where *Thiras* fix'd; and *Caucasus*, where *Magog* settled: On the South, *Lybia*, where *Phut* planted himself; *Ethiopia*, whither *Ludim* went; and *Arabia* the *Spicey*, where *Jectan* and his Children chose their Seats. On the West, *Gaul*, where *Rhodanim* posted himself; and *Spain*, the Habitation of *Thar-sis*. On the East, *Media*, the Country which *Madai* took for the Place of his Abode; *Persis* and *Elymais*, where *Elam* pitch'd his Tents; and *Carmania*, the Country where *Sabthea* dwelt. He differs from those who, following *Josephus*, alledge those Colonies went as far as *India*. He adds, That since many of *Cham's* Posterity went into *Africa*, and many of *Japhet's* Posterity into *Europe*, it was peculiar to the Posterity of *Sem*, that they did not go out of *Asia*. Yet he does not think that this was done by joint Consent, or any fix'd Purpose, but that each of them possessed themselves of such Countries as first fell in their Way. This does not agree very well with his fixing *Rhodanim* in *France*, and *Thar-sis* in *Spain*, at the first Dispersion; for they must have travelled thro' many Countries before they came thither: Therefore 'tis more probable, that the first Colonies which went from *Babylon* settled themselves much nearer it than either *France* or *Spain*, especially considering how little they understood of Navigation.

'Tis plain from the Writings of the ancient Heathens, both Poets and Historians, That they knew of the Deluge, and of the Dispersion after it; tho' they mix their Accounts of it with Fables, and give *Noah* and his Sons other Names. *Bochart* proves this undeniably, *Lib.* 1. *Cap.* 1. by the following

P Argu-

Arguments: 1. *Noah* was the common Parent of Mankind after the Deluge; and so *Saturn* is call'd in *Orpheus's* Hymns the Father of all Men, and his Wife *Rea* their Mother. 2. *Noah* is called in *Scripture* a just Man, and a Preacher of Righteousness. *Diodorus* and *Aurelius Victor*, and *Justin*, &c. say much the same of *Saturn*. 3. *Noah* was a Husbandman, and planted a Vineyard; and the Poets ascribe the Teaching of Agriculture to *Saturn*, and making his Wife *Rea* and *Tellus*, i. e. the Earth, the same Thing. 4. *Noah* was overtaken with Drink, and the Heathens make *Saturn* to preside over Drunkenness; from whence came their Debauches call'd *Saturnalia*. 5. *Noah* curs'd his Son *Cham*, for looking upon his Nakedness when drunk. The Poets say, *Saturn* made a Law to punish those who look'd upon the Gods

naked. 6. *Noah* and his Family escap'd the Deluge. The Poets make *Saturn* and his Wife *Rea* the Children of the Sea, which they call *Oceanus* and *Thetis*; and the old *Romans* made a Ship the Symbol of *Saturn*; and the *Assyrians*, as *Alexander Polyhistor* informs us, said that *Saturn* foretold the Deluge, and order'd an Ark to be built for preserving so many Men, and other living Creatures. 7. *Noah* foretold the Destruction of Mankind by the Deluge, and accordingly none were sav'd but himself and his Family. The Heathens say, *Saturn* destroy'd all his Children but three, viz. *Jupiter*, *Neptune*, and *Pluto*, which answers to *Noah's* three Sons, *Shem*, *Cham*, and *Japhet*. We refer the Curious, who would see more of this, to the Book it self.

C H A P. III.

Of the WORLD in General.

HAVING accounted for the Peopling of the World after the Deluge, and how much of it appears then to have been known according to the Scriptures, we come next to consider how much of it was taken notice of by the ancient Heathen Writers.

Their Knowledge of it appears to have been very indistinct, and their Sentiments about it very different. *Agathemerus* and others thought there was not above a 4th Part of it habitable; as we find in his Geography, lib. 1. cap. 6. Most of them agreed, That the Temperate Zones were only habitable; and of this Opinion was *Strabo*, lib. 1. p. 44. They were not ignorant, that the World was inhabited as far South as the Tropic of Cancer; but how far it was habitable Northward, they were altogether uncertain, because neither the *Greeks* nor *Romans* had gone far that Way. *Salust*, in his *Jugurthin War*, cap. 19 says, That be-

yond *Numidia*, the *Gatuli* dwelt, some in Cottages, and others wander'd up and down. Next to them are the *Ethiopian*, and beyond *Ethiopia* are the Places which are scorched with the Heat of the Sun. Thus it appears he thought *Ethiopia* to be on this Side the Torrid Zone; but *Ptolomy*, lib. 4. cap. 6. and 9. places the *Ethiopian* for most part in the Torrid Zone, and not only as far as the Equator, but some of them beyond it; tho' by why Authority, we are not certain.

They were yet more in the Dark as to the Northern Parts, which is plain from this, That *Strabo*, *Dionysius Periegeta*, *Pomponius Mela*, *Pliny*, and *Solinus*, took the *Caspian Sea* to be a Bay of the *Scythian Ocean*; tho' they might have been better inform'd by *Herodotus*, lib. 1. cap. 203. where he says, That it has no Communication with any other Sea. Nor do they write with any greater Certainty as to the Places beyond the *Black Sea*, or beyond *Germany* in *Scandinavia*: And what they write concerning the further

NORTH

ding to the New Observations. by H. MOLL Geographer.

Pag. 110.

POLE.

Parts of *Sythia*, is equally doubtful and fabulous. *Agathemerus* and *Ptolemy* indeed seem'd to have had better Information, and perhaps from some of the Inhabitants; but that they knew all *Sythia*, we cannot be persuaded, because the Eastern Part of it, or *Great Tartary*, is not fully known to us Europeans at this very Day. So far as *Alexander* carried his Arms to the East, was pretty well known: But what the ancients wrote of Places beyond the Limits of that Expedition, is altogether fabulous and uncertain; which is the Occasion of their differing so frequently from one another, as we find in *Strabo*, *Lib. 2.* and *15.* They are plain and clear enough as to the Western Boundary of the World in *Mauritania*, *Spain*, *Gaul*, the *British Isles*, the *Atlantic*, *Aquitain*, and *British Ocean*; but they were at no Certainty as to the Places which lay further South or North of those Boundaries.

And tho' the Form of this Part of the World known to them had much more Length than Breadth, yet the Latin Writers call it always *Orbis Terrarum*: Nor are we to wonder at it, since they frequently call lesser Divisions by the Name of *Orbis*, as *Europæus Orbis*, *Africanus Orbis*, *Orbis Persicus*, and *Orbis Iberus*, &c. 'Tis known, That the Romans call'd their Empire *Orbis Romanus*; and so 'tis call'd in the 3d of *Luke*, and not undeservedly, since it comprehended the greater and more noble Part of the then known World. And thus *Augustin* elegantly calls the Church of Christ, dispers'd through the World, *Orbis Christianus*.

The Navigation of the Ancients is as imperfect and full of Errors, as their Geography: Nor could it be otherwise, since they knew not the Use of the Compass, and never durst venture far from Shore. 'Tis not certain when Men began first to sail in the *Atlantic*, which lies betwixt *Europe*, *Africa*, and *America*. The Scriptures mention the sailing to *Ophir* by the Kings, *Solomon*, *Hiram* and *Jehoshaphat*; and *Job* speaks of the Gold of *Ophir*. *St. Jerom* and *Strabo* mention Voyages from *Egypt* into *India*. *Pliny* says, The Trade of *Egypt* was thereby much augmented; and describes the Way of travelling to the *Indies*, *Lib. 6. Cap. 23.* *Reiskius*, in his Notes on *Cluverius*, *Lib. 1. Cap. 13.* thinks that the Voyage to *Ophir* in *Solomon's* Time was only made by Coasting; and that it is not to be

doubted, if we place *Ophir* in the *Golden Chersonesus*, or *Taproban*: Nor could the Voyage from *Egypt* to *India*, mention'd by *St. Jerom* and *Strabo*, be perform'd otherwise, if there were any such Thing. *Bochart. Lib. 2. Cap. 27.* takes Notice of two *Ophirs*, one in *Arabia*, the other in *India*. He takes the former to be that mention'd by *Job*, because in his Time, which was much about that of the Patriarch *Jacob*, *India* was not known to the People of *Judea*, or at least they had no Commerce with it. He is likewise of Opinion, That the 3000 Talents of the Gold of *Ophir*, given by *David* towards the building of the Temple, came from *Arabia*, where there was great Plenty of excellent Gold, as is plain from *Strabo*, *Diodorus*, and others. He owns however, that *Ophir* to which *Solomon* and *Hiram* sent Ships, was That in the *Indies*, because there were three Years spent in the Voyage; whereas *Arabia* was near him, and the Journey must have been perform'd by Land: Nor was there any Ivory there, because no Elephants. He is not positive in what Part of *India* this *Ophir* was; but, after having given the different Opinions of the Learned about it, he thinks it most probable to be *Taproban*, which he elsewhere proves to be *Ceylon*, where 'tis very well known there is Plenty of Gold, Ivory, Jewels, abundance of Peacocks, and Apes, which are mention'd to be brought from *Ophir* by *Solomon's* Ships.

The *Phanicians* are reckon'd by the Ancients to be the first who understood Navigation; and of them, the *Tyrians* are said to be the first who taught the Art of Sailing, according to that of *Tibullus*.

Prima Ratem Ventis credere docta Tyrus.

Sidon however is with good Reason thought to have produc'd the first Navigators; for in *Joshua's* Time, *Cap. 11.* 'tis call'd the *Great Sidon*; and this is reckon'd to be the 2500th Year after the Creation. 'Tis also mention'd to be famous for Trade in *Isaiah* and *Ezekiel*, and was so considerable, that *Artaxerxes Ochus*, King of *Persia*, about the Year of the World 3590, could not take it with a mighty Land Army, 300 Gallies, and 500 Ships of Burden, till they were betray'd by *Tennis*, the chief Man of their Republick, and Mentor their General, as we are inform'd by *Diodorus Siculus*. *Tyrus* came

next to it in Reputation, and is supposed to have been built by the first Inhabitants, to secure themselves from the *Israelites*, under the Conduct of *Josua*, there having been first a Town of that Name on the Continent; but the People thought they would be more secure by removing it to the neighbouring Island: 'Tis call'd by the Name of the *Strong City*, *Josua* 19. and by *Isaiab*, *Cap.* 23. a *Crown of Glory*, whose Merchants were Princes, and her Traffickers the Honourable of the Earth. The Power of that City must needs have been very great, since they gave *Alexander* a Repulse, and held out 7 Months Siege before he could take it. Both those Cities flourish'd again afterwards by their Navigation, till they fell under Arbitrary Government. *Bochart*, in his *Canaan*, *Lib.* 1. *Cap.* 2. gives an Account of a Multitude of Colonies planted by the *Phanicians* in *Europe*, and of their Navigation as far as the *Cassiterides*, now call'd the *Scilly Islands*; or, as some suppose, the County of *Cornwall*, where he and other Authors say, they traded for *Tin*.

Pliny, *Lib.* 11. *Cap.* 69. says, That in his Time, the *Romans* sail'd round *Spain* and *France*; and that in *Augustus's* Time, they sail'd as far North as the Promontory of the *Cimbri*, now called *Scagen*, in *North-Jutland*, about 9 Miles West from *Norway*: And *Velleius*, in his 2d Book, says, That in *Tiberius's* Time, they sail'd as far North as the *Scythian* Country, now *Tartary*; but this latter is very improbable, and may as justly be exploded as the Voyage of *Hanno* the *Carthaginian*, and that of *Eudoxus*, who is said to have sail'd from the *Red Sea* round *Africa*, to have doubled the Cape of *Good Hope*, and afterwards arriv'd at *Cadiz*. Nor can we give any Credit to the Story, That the King of the *Suevi* sent some *Indians* (who were drove ashore on the Coast of *Germany* by Storm) to *Quintus Metellus Celer*, the *Roman* Consul; tho' all these Things be asserted by *Cornelius Nepos*, since the *English* and *Dutch*, tho' incomparably beyond the *Romans*, or any of the Ancients, in Navigation, have never yet been able to find out a Passage to the *Indies* by the North-East; so that 'tis next to impossible the *Indians* could in those Days find a Passage that Way from their own Country to the North of *Germany* on the *Baltick*, which was the *Sea* of the ancient *Suevi*.

But that the Mistakes of the ancient Geographers may the better appear, we shall give the following Account of their most remarkable Errors from *Brisetius*.

The first and most gross Mistake was of those who plac'd the New World, the Habitation of the *Antichionies*, or *Antipodes*, below *Africa*: So *Pomponius Mela*, *Macrobius*, *Manilius*, and most of the Ancients. They made *Tappoban* the Beginning of this New World, and fancied the *Nile* had its Fountains there; which passing thro' the Ocean by secret Conduits, broke out again in *Africa*. And they run into the like Mistake, who let the Ocean in between the two Tropics, and fill'd it with Monsters, which hinder'd any further Navigation that Way; of which Opinion were many of the Ancients. Their 2d Mistake was, That they separated the *Arabian* Gulph from the Ocean, and made it a Lake full of Trees and wild Shrubs; as *Damastes* does in *Strabo*. Their 3d Error was, That they denied the *Mediterranean* Sea to have any Communication with the Ocean towards *Spain*; and alledge, That what is now called the Mouth of the *Streights*, was a Canal dug by Human Industry. Most of them were of the like Opinion as to the *Black Sea*, as we find in *Strabo*, *Lib.* 1. But those Fictions, together with the Fables, That *Italy* and *Sicily*, and *France* and *England*, were formerly one Continent, are easily refuted by the Course of the Rivers which fall into those Friths on both Sides; of which, *Cluverius* discourses at large in his Description of *Sicily*. Their 4th and most absurd Error is, That they join the *Mediterranean* Sea with the *Persian* Gulph: So *Diotimus*, in *Strabo*, *Lib.* 1. who pretended, That when he went Ambassador from *Athens*, he sail'd up the *Cydnus*, a River in *Cilicia*, and by that means falling into *Coasphe*, a River of *Persis*, sail'd down the said River to *Susa*. Their 5th Error is, That they join'd the North Sea with the *Caspian* Sea, by a narrow Canal or River; which Mistake they were led into by one *Patrocles*, an Admiral of the *Macedonian* Fleet; for before his Time, *Aristotle* and *Herodotus* divided the *Caspian* from the other Seas: But after that fabulous Author said, he sail'd from the *Caspian* Sea into the Northern Ocean, all the Geographers, till *Ptolomy's* Time, fell into that Error. Their 6th Mistake

Mistake was, That they made *Scandia* and *Fennigia* two Islands, both divided from *Europe*, the former more to the West, and the latter more to the East, according to *Pliny*. Their 7th Error is, That they brought the River *Tanais* from the remotest Places of the North, as *Strabo*, *Pliny*, and almost all of them do. An 8th Mistake was, That some of the Poets made the *Ganges* fall into the *Mare Eoum*; whereas it certainly falls into the Southern or *Indian* Sea.

Time discover'd these and many more Errors, as Colonies remov'd into unknown Countries; for it was not so easy for a Multitude to agree in a Lie, as single Travelers, who by those Fables think to acquire Glory to themselves. *Strabo* is in the right, when he says, Those Discoveries were perfected by the Conquests of Princes; that the East was made known by *Alexander the Great*, the West by the *Romans*, the North by *Mithridates Eupator*, and the South by the Kings of *Alexandria*.

The Ancients, who fell into those Mistakes, drew the Map of the World in an Oval Form; the Length of which lay from E. to W. the *Mare Eoum* being the Eastern, the *Atlantic* the Western, the *Mare Cronium* the Northern, and the Mountains of the Moon the Southern Boundary; and betwixt *Africa* and the *Antichtones*, they brought the Ocean into the Torrid Zone, for the Boundary betwixt themselves and the Southern People, or Antipodes, as we find by *Macrobius*, *Lib. 1. in Somnio Scipionis*. This is the oldest Map of the World now extant. The Curious may find it in *Brietius, de prima Orbis Notitia, Part. 1. Lib. 5. Cap. 2.*

We come next to the Mistakes of *Ptolomy*, who corrected many of those before him, and yet fell into other very great ones, which they had avoided.

All the ancient Maps being lost, there remain'd only one of *Agathidemon* of *Alexandria*, compos'd from *Ptolomy's* Observations, which is necessary to be taken notice of by those who would compare the Ancient and Modern Geography.

Ptolomy's first Error, and which appears by this Map, is, That he represents *Africa* as a Country that was not to be said about, tho' some of his Predecessors had justly represented it otherwise. Besides, whereas he

ought to have drawn it decreasing, in Form of a Wedge, he enlarges it on the South Side; and towards the Equator, he strangely alters the Form of it, and omits some of the greatest Rivers; tho' he ought to have been better inform'd of those Parts, which were so near his own Country. The 2d Error is, That whereas he ought to have extended *Albion* or *Scotland* towards the North, he brings it East towards *Germany*; and assigns the same Elevation of the Pole to *Ireland*, as he does to *Scotland*. The 3d Error is, That instead of placing the *Chersonesus Cimbrica*, now *Jutland*, Westward, he makes its Situation lie East, and too much contracts the *Sinus Venedicus*, now the Gulph of *Dantzick*. His 4th Mistake is, That he represents *Scandia*, now *Sweden* and *Norway* a very large Peninsula, as a small Island; to which he joins three lesser ones on the East, quite contrary to the true Situation of the Country. A 5th Mistake is, That he thinks the Northern Parts of *Europe* and *Asia* terminate in the *Terra Incognita*, or unknown Countries; tho' many of the Ancients own'd there was a Sea on the Northern Parts of both, as in Truth there is. His 6th Mistake is, in placing *China* South from *India*, and bringing it beyond the Equator, does, by a very gross Mistake, thereby join *Africa* and *Asia*; whereas *China* lies North from *India*. This occasion'd some People, out of Respect to the Name of this great Author, to strike this Mistake out of his Geography, *Lib. 7. Cap. 3.* His 7th Mistake is, That he extends *Taproban* too much, whether we take it to be *Ceylan* or *Sumatra*; and the lesser Islands he places about it, neither agree in Situation nor Number with the late Discoveries made by the *Portuguese* and *Dutch*. His 8th Mistake is, in representing the Southern Tracts and Coasts of the *Indies* quite otherwise than they are. He divides *India* on this Side the *Ganges* into two Promontories, tho' there be but one large one, call'd *Cape Commorin*; and that this Place was then well known to the *Romans*, who had traded thither ever since *Claudius's* Time.

'Tis fit to observe further, That his Map of the World has 180 Degrees of Longitude, about 60 of North, and somewhat more than 10 of South Latitude.

Others

Others of the Ancients divided the World in Six different Manners.

The First we find in *Strabo*, where *Eratosthenes* confutes those who divided the whole World into Greeks and Barbarians; and therefore advis'd *Alexander* to use the Greeks as his Friends, and the Barbarians as his Enemies. But whether the Greeks accounted the Romans Barbarians, is not clear; yet *Plutarch*, in the Life of *T. Flaminius*, seems to be for the Negative.

The 2d Division is that of *Ephorus*, in *Strabo*, who divides the World into four People, viz. the Indians, Ethiopians, Celts, and Scythians. *Scymnus*, who formerly went under the Name of *Marcianus Heracleota*, was of the same Opinion; but *Cluverius* was in the wrong to join *Dionysius Halicarnassensis* with him: And some are of Opinion, That this Division was only to be understood of the Barbarians, and not unjustly, since *Homer* makes no mention of it.

The 3d was of those who divided it only into two, calling the Northern Part Europe, and the Southern Asia. This we find in *Varro*, *Lib. 1. De Re Rustica*, where he commends *Eratosthenes* as the Author of it. *Isocrates*, in his Panegyrick, hints this to have been the Opinion of the Persians; and the same is mention'd by *Silius Italicus*, *Lucan*, *Augustin*, *Orosius*, &c. But these again are divided in their Opinion; some of them join'd Africa to Asia, as we find in *Pliny*, *Lib. 3. Cap. 1.* And *Silius*, *Lib. 3.* expresses it thus:

*Æstivo Libye torretur subdita Canero,
Aut Ingens Asia latus, aut Pars tertia rerum.*

Others again join'd Africa to Europe, as we find in *Salust. De Bello Jugurthino*, which *Lucan*, *Phars. 9.* expresses thus:

*Tertia Pars rerum Libye, si credere fames
Cuncta velis, at si ventos calumque sequaris
Pars erit Europa.*

A 4th Division was into Asia, Europe, Africa and Egypt, which is mention'd by *Ortelius* and *Cluverius*; but they do not give their Authors. It may also be inferr'd from *Pliny*, *Lib. 5. Cap. 9* who divides Egypt from Asia by the Eastern Mouth of the Nile, called then *Ostium Pelusiacum*, and now *Carabes*; and from Africa, by the *Ostium Canopicum*,

the Western Mouth of the Nile, now call'd *Bochir*: And the Reason why they call so small a Country a 4th Part of the World, seems to be, that there were then more Towns in it than in all the rest, as *Eusebius* testifies. *Pliny* says, it had 2000 Towns in the Reign of *Anasis*; and *Diodorus Siculus* says, there were 3000 remaining when he wrote.

The 5th Division was likewise into four Parts; but they made *Græcia* one instead of Egypt. This we find by *Herodotus* in *Melpomene*, where he divides *Crete*, which is a Part of Greece, from Europe; and *Aristotle* more plainly in his *Republick*, *Lib. 7.* divides the Greeks from the Europeans and Asiatics.

The 6th and most common Division, which was generally receiv'd by all, is into Europe, Asia, and Africa. Europe they represented lying West and North; and sometimes they divided it from Asia by the River *Tanais*; and at other Times, enlarging its Boundaries, they parted them by the River *Carambyce*, now call'd *Oby*, and by *Constantinople*.

To Asia, was ascrib'd the Eastern Part of the World, extending far North and South, and equal almost to both Africa and Europe in Breadth.

Africa was divided from Europe by the *Mediterranean*; from Asia, by the *Arabian Isthmus*, according to the Learned; but by the River Nile according to the Vulgar.

Whether America was known to the Ancients under the Name of *Atlas's Island*, or an Island in the Atlantic, shall be consider'd when we come to treat of America.

Of the Roman World, or Empire.

POets and Flatterers gave out, That the Romans possess'd the whole World; That they seiz'd what Part of it they thought fit, and rather despis'd the rest than despair'd of reducing it. History tells us, That they set the following Boundaries to their Empire, viz. the Rhine, the Tigris, or, as others say, the *Euphrates*, and the Mountain *Atlas*. We shall give the following succinct Account of it from *Bristius*, and the *Notitia Imperii*.

This Empire increas'd to so great a Bulk thus: The Romans having struggled 600 Years

The General Introduction to GEOGRAPHY. 115

Years with their Neighbours, first reduc'd Sicily into a Province, when call'd into that Country as Auxiliaries; *Sardinia* and *Corsica* follow'd the Example of *Sicily*. *Gallia Narbonensis* opened *Julius Caesar's* Way into the other Parts of *Gaul*, call'd *Aquitanica*, *Celtica*, and *Belgica*. He likewise attempt'd *Britain*, most of which was conquer'd by succeeding Emperors, and separated from the *Scots* and *Picts*, whom they call'd *Barbari*. *Agrippa* conquer'd *Spain* in the Reign of *Augustus*, and divided it into *Boetica*, *Lusitania*, and *Tarraconensis*. *Juba* being conquer'd, they became Masters of both the *Mauritania's*. *Antiochus* left to them most Part of *Asia Propria*. *Nicomedes* yielded *Bitbynia*. *Mithridates* on his Death-Bed left 'em *Pontus*. *Augustus* took all or most of *Galatia*, *Cappadocia*, and *Armenia Minor*, from *Antony's* Favourers. The Barbarity of the Inhabitants gave them *Thracia*. The Coverousness of *Perseus* brought them *Macedonia*. The Ralhness of the *Aetoli* possess'd them of *Epirus*,

Hellas, and *Peloponnesus*. The Credulity of *Gentius* made them Masters of *Illyricum*. Their Victory over *Jugurtha* subjected *Nu-midia*. The demolishing of *Carthage* added *Africa Propria*. They obtain'd *Cyrennaicum* by the Liberality of *Ptolemy Apion*. They possess'd themselves of *Egypt* after *Cleopatra's* Death. And *Pompey* made a very easy Conquest of all *Syria* and *Armenia*, with *Colchis*, *Iberia*, and *Albania*.

When they came to have Emperors, and that the Empire subsisted chiefly by the Army, the Administration was committed to the *Præfetti Prætorio*, who were a sort of Lieutenant-Generals. At first there was no certain Number of them, nor was the Time of their Government fix'd; but *Constantine* made four of them, whose Office was to be perpetual. When the Empire was divided betwixt *Honorius* and *Arcadius*, each of them had two of those *Præfetti* under them. Their Jurisdictions were as follow.

The Western Empire.

1. The Præfettus Prætorio of Italy had under his Jurisdiction,

The Vicarius, or Lieute- nant of Rome.	Consul.	<i>Latium & Campania</i> , <i>Roma</i> , now <i>Rome</i> .
	Consul.	<i>Tuscia & Umbria</i> , <i>Sena</i> , now <i>Sienna</i> in <i>Tuscany</i> .
The Diocese of Italy.	Præses.	<i>Picenum Suburbicarium</i> , <i>Ancona</i> .
	Præses.	<i>Valeria</i> , <i>Reate</i> , now <i>Rieti</i> .
The Vicarius of Italy.	Corrector.	<i>Sammium</i> , <i>Corfinium</i> , the Ruins of <i>Corfinium</i> near <i>Pentinia</i> .
	Corrector.	<i>Apulia & Calabria</i> , <i>Brundisium</i> , now <i>Brindes</i> .
The Diocese of Illyricum.	Consul.	<i>Lucania & Brutium</i> , <i>Consentia</i> , now <i>Consenza</i> .
	Præses.	<i>Sicilia</i> , <i>Syracuse</i> , now <i>Syracuse</i> .
The Vicarius.	Præses.	<i>Sardinia</i> , <i>Caralis</i> , now <i>Cagliari</i> .
	Præses.	<i>Corsica</i> , <i>Aleria</i> , where there are now the Ruins of <i>Aleria</i> .
The Diocese of Illyricum.	Consul.	<i>Venetia & Istria</i> , <i>Aquileia</i> .
	Consul.	<i>Emilia</i> , <i>Bononia</i> , now <i>Bologna</i> .
The Vicarius.	Consul.	<i>Flaminia & Picenum Annonarium</i> , where <i>Raven-na</i> lies; and <i>Senagallica</i> , now <i>Senigaglia</i> .
	Consul.	<i>Liguria</i> , <i>Genoa</i> .
The Diocese of Illyricum.	Præses.	<i>Alpes Cottia</i> , <i>Augusta Taurinorum</i> , now <i>Turin</i> .
	Præses.	<i>Ratis prima</i> , <i>Curia</i> , now <i>Coire</i> .
The Vicarius.	Præses.	<i>Ratis secunda</i> , <i>Augusta Vindelicorum</i> , now <i>Augsburg</i> .
	Præses.	<i>Noricum Ripense</i> , <i>Arelape</i> , now <i>Paklarn</i> on the <i>Erlap</i> .
The Diocese of Illyricum.	Præses.	<i>Noricum Mediterraneum</i> , <i>Juvana</i> , now <i>Salzburg</i> .
	Præses.	<i>Pannonia prima</i> , <i>Sabaria</i> , now <i>Saricuar</i> .
The Vicarius.	Consul.	<i>Pannonia secunda</i> , <i>Sirmium</i> , now <i>Sirmich</i> .

The

The Dioceſe of Illyricum.	Illyrici.	Dux Limit.	Valeria, Aquincum, now Buda.
		Corrector.	Savia, Siſcia, now Siſeg.
		Præſes.	Dalmatia Salona, now Spalatto.
		Præſes.	Liburnia, Jadera, now Zara.
The Dioceſe of Africa.	The Lieute- nant of A- frica.	Proconſul Africa.	Africa, Carthago, now the Ruins of Carthage, near Tunis.
		Conſul.	Nemidia, Cirta, now Conſtantine.
		Conſul.	Byzacium, Adrametum, now Souſe.
		Præſes.	Tripoliſana, Tripoliſ, now Tripoli in Barbary.
		Præſes.	Mauritania, Sitifenſis, now Sitifi, or Eſteſe.
		Præſes.	Mauritania Caſarienſis, Julia Caſarea, now Algier.

2. The *Præſectus Prætorio* of Gaul.

The Dioceſe of Gaul.	The Lieute- nant of Gaul.	Conſul.	Lugdunenſis prima, Lugdunum, now Lions.
		Præſes.	Lugdunenſis ſecunda, Rotomagus, now Rouen.
		Præſes.	Lugdunenſis tertia, Caſarodunum, now Tours.
		Præſes.	Lugdunenſis quarta, Agendicum, now Sens.
		Præſes.	Maxima Sequanorum, Viſontio, now Beſançon.
		Conſul.	Belgica prima, Auguſta Trevirorum, now Treves.
		Conſul.	Belgica ſecunda, Durocortorum, now Rheims.
		Conſul.	Germania prima, Moguntia, now Mentz.
		Conſul.	Germania ſecunda, Colonia Agrip. now Cologne.
		Præſes.	Aquitania prima, Avaticum, now Bourges.
		Præſes.	Aquitania ſecunda, Burdegala, now Bourdeaux.
		Præſes.	Novem Populania, Auguſta Auscricorum, now Auch.
		Conſul.	Viennenſis prima, Vienna, Vienna in Dauphine.
The Dioceſe of Spain.	The Lieute- nant of Spain.	Præſes.	Viennenſis ſecunda, Narbo, now Narbonne.
		Præſes.	Viennenſis tertia, Aquæ Sextia, now Aix.
		Præſes.	Alpes Maritima, Ebrodunum, now Ambrun.
		Præſes.	Alpes Grata, Tarantaſia, now Mouſtier in the Ta- rentaiſe.
		Præſes.	

The Dioceſe of Spain.	The Lieute- nant of Spain.	Conſul.	Bætica Hiſpalis, now Seville.
		Conſul.	Luſitania, Emerita, now Merida.
		Præſes.	Mauritania Tingitana, Tingis, now Tangier.
		Conſul.	Gallæcia, Bracara, now Bragues.
		Præſes.	Tarragonenſis, Caſarauguſta, now Sarageſſa.
The Dioceſe of Britain.	The Lieute- nant of Bri- tain.	Præſes.	Carthaginenſis, Carthago Nova, now Carthagina.
		Præſes.	Baleares, Palma, & Majorca.
		Præſes.	

The Dioceſe of Britain.	The Lieute- nant of Bri- tain.	Præſes.	Britannia prima, Londinium, London.
		Præſes.	Britannia ſecunda, Iſcaſilurum, Caerleon, now ruin'd.
		Præſes.	Flavea Caſarienſis, Verulamium, now St. Albans.
		Conſul.	Maxima Caſarienſis, Eboracum, now York.
		Conſul.	Valentia, Alata Caſtra, now Edinburgh.

The Eastern Empire.

3. The *Præſectus Prætorio* of the Eaſt.

The Dioceſe of Aſia.	The Procon- ſul of Aſia.	Aſia Epheſus.	
		Conſul.	Helleſpontus, Cyzicus, now Cyzico.
		Præſes.	Infula, Rhodus, now Rhodes.

The Diocese of Asia.	The Lieutenant of Asia.	Præfes.	Phrygia Salutaris Pergamus, now Pergamo.
		Præfes.	Phrygia Pacatiano Synnada.
		Consul.	Lydia Sardis.
		Præfes.	Caria Laodicea, now Laodichi or Leufke.
		Præfes.	Lycia Myra, now Strumita.
		Consul.	Pamphylia Perge, now Perges.
The Diocese of Pontus.	The Lieutenant of Pontus.	Præfes.	Pisidia Antiochia Pisidia, Antioch in Pisidia.
		Præfes.	Lycaonia Iconium, now Cogne.
		Consul.	Bithynia Nicomedia, now Comedia.
		Præfes.	Honorias Heraclea Ponti, now Pendarachia.
		Corrector.	Paphlagonia Pompeopolis, now Tarachipoli : Gangra, now Castmoni.
		Consul.	Galatia Ancyra, now Angori.
The Diocese of the East.	Comes Orientis.	Præfes.	Galatia Salutaris Pessinus, now Pessene.
		Præfes.	Helenopontus Amasia, now Amasee.
		Præfes.	Pontus Polemoniacus Neocæsaree, now Tocat.
		Præfes.	Cappadocia prima Mazaca Cæsarea, now Sarnusad.
		Præfes.	Cappadocia secunda Tyana, now Tyazna.
		Præfes.	Armenia prima Sebastia, now Syvas.
The Diocese of Egypt.	Comes Egypti.	Præfes.	Armenia secunda Melotene, now Malatie.
		Consul.	Cilicia prima Cæsarea ad Anazarbum, now Anazarbe, or Aixar.
		Præfes.	Cilicia secunda Tharsus, now Tarsa, or Trefe.
		Præf. Perf.	Isauria Seleucia, now Selechhia.
		Consul.	Syria Antiocha, the Great Antiochia.
		Præfes.	Comagena, or Euphratensis Samosata, now Samasat.
The Diocese of Thracia.	The Lieutenant of Thracia.	Præfes.	Syria Salutaris Palmyra, now Faid.
		Consul.	Phenice Sidon, now Siden, or Said.
		Præfes.	Phenice Libani Damascus, now Damas.
		Consul.	Palaestina prima Cæsarea, now Azor.
		Præfes.	Palaestina secunda Scabaste, anciently Samaria, now Napolitza.
		Præfes.	Palaestina Salutaris Hierosolyma, Jerusalem.
The Diocese of the East.	Comes Orientis.	Præfes.	Osrhoene Edeffa, now Rhoads.
		Præfes.	Mesopotamia Nisibis, now Nisibi.
		Præf. Perf.	Arabia Petraea, now Arach.
		Præfes.	Cyprus Salamis, near Famagusta.
		Præfes.	Egyptus Alexandria.
		Corrector.	Augustamnica Pelusium, now Damietta.
The Diocese of Egypt.	Comes Egypti.	Præfes.	Arcadica Memphis, now Grand Cairo.
		Præfes.	Thebais, Theba, Thebes.
		Præfes.	Libya Superior, Cyrene, now Corene.
		Præfes.	Libya Inferior, Paratonium, now Abreton.
		Consul.	Europa Constantinopolis, by the Turks call'd Stambul.
		Consul.	Thracia Philippopolis, now Philippopoli and Polibe.
The Diocese of Thracia.	The Lieutenant of Thracia.	Præfes.	Hemimons Hadrianopolis, Adrianople.
		Præfes.	Rhodope Maximianopolis, now Maminopoli.
		Præfes.	Mysia secunda Martianopolis, now Provaz.
		Præfes.	Scythia Tomi, now Constantia, or Tmeswa r.
		Præfes.	
		Præfes.	

4. The *Præfectus Prætorio Illyrici*.

The Dioceſe of Dacia.	The Lieute- nant of Da- cia.	Præſes.	<i>Moeſia prima Viminacium</i> , now <i>Uinczidernum</i> .
		Præſes.	<i>Dacia Ripenſis Oſeſe</i> , now <i>Iſcar</i> .
The Dioceſe of Macedonia.	The Lieute- nant of Ma- cedonia.	Conſul.	<i>Dacia Mediterranea Neſſus</i> , now <i>Nyſſa</i> .
		Præſes.	<i>Dardania Scupi</i> , now <i>Uſchup</i> , or <i>Uſcopie</i> .
		Præſes.	<i>Prævalitana & Pars</i> } <i>Juſtiniana prima Ochrida</i>
			<i>Macedonia Salutaris</i> , } <i>Scodra</i> , now <i>Scutari</i> .
The Dioceſe of Macedonia.	The Lieute- nant of Ma- cedonia.	The Proconſul of Achaia.	<i>Achaia</i> .
			<i>Patrae</i> , now <i>Patras</i> .
			<i>Athene</i> , now <i>Sitines</i> .
		Conſul.	<i>Macedonia Parva Theſſalonica</i> , now <i>Salonichi</i> .
		Præſes.	<i>Theſſalia Lariffa</i> , now <i>Larizo</i> .
The Dioceſe of Macedonia.	The Lieute- nant of Ma- cedonia.	Conſul.	<i>Creta Gnoſſus</i> , now <i>Cynſa</i> .
		Præſes.	<i>Old Epirus</i> , or the <i>Inferior Nicopolis</i> , now <i>Præ- viza</i> .
			<i>New or the Upper Epirus</i> , } <i>Dyrracehium</i> ,
		Præſes.	and Part of <i>Macedonia</i> } now <i>Duras</i> .
			<i>Salutaris</i> .

This was the Division of the Roman World or Empire. By the Map that was made of it, according to the *Notitia Imperii*, it was extended from the 14th to the 75th Degree of Longitude; viz. from *Atlas Major* in *Africa*, to *Arabia Felix*; from *Spain* in *Europe*, to the *Tigris* in *Asia*, it was extended from the 14th Degree of Longitude to the 75th: From *Atlas Major* in *Africa*, to the *Thule* in *Europe*, which they place where the *Schetland* Iſles, now belonging to *Scotland*,

lie, it reach'd from the 25th to the 61st Degree of North Latitude; and on the Eaſt, from *Arabia Felix*, to the Head of the River *Euphrates*, it reach'd from the 25th to the 45th Degree of the ſame Latitude.

The Modern Division of the World is well enough known to be into *Europe*, *Asia*, *Africa*, and *America*; and, according to the receiv'd Cuſtom among Geographers, we ſhall begin with the firſt.

C H A P. IV.

Of EUROPE in General.

Ortelius, Maginus, Merula, and others, think it was formerly called *Japetia*, becauſe moſt of it fell to *Japhet's* Lot. *Theocritus* ſays, it was call'd *Tyria*, from the *Tyrian* Damſel, who, the Poets ſay, was raviſh'd by *Jupiter*. *Diodorus Siculus* ſays, it was call'd *Galatia*, and that moſt of its Inhabitants had the Name of *Galatians*. *Ptolemy*, Lib. 2. Op. *Quadri-partit.* ſays it was call'd *Celtica*, becauſe the *Celts* were

ſpread through the moſt part of it, which is confirm'd by *Ortelius* and *Cluverius*. As to its preſent Name *Europe*, ſome derive it from *Europa*, the *Tyrian* Damſel above-mention'd: Others from *Europus*, a King mention'd by *Troges*, who perhaps was the King of the *Scythians*, ſpoken of by *Pausanias* and *Eusebius*. Others derive it from the Beauty of the Country.

The Extent of ancient *Europe* was reckon'd by old Authors thus: *Strabo* accounts it about

4. The *Præfectus Prætorio Illyrici*.

The Dioceſe of Dacia.	The Lieute- nant of Da- cia.	Præſes.	<i>Moeſia prima Viminacium</i> , now <i>Unverzahn</i> .
		Præſes.	<i>Dacia Ripenſis Oeſus</i> , now <i>Iſcar</i> .

		Præſes.	<i>New or the Upper Epirus</i> , } <i>Dyrracehium</i> , and Part of <i>Macedonia</i> } now <i>Duras</i> .
			<i>Salutaris</i> .

This was the Division of the Roman World or Empire. By the Map that was made of it, according to the *Notitia Imperii*, it was extended from the 14th to the 75th Degree of Longitude; viz. from *Atlas Major* in *Africa*, to *Arabia Felix*; from *Spain* in *Europe*, to the *Tigris* in *Asia*, it was extended from the 14th Degree of Longitude to the 75th: From *Atlas Major* in *Africa*, to the *Thule* in *Europe*, which they place where the *Schetland* Isles, now belonging to *Scotland*,

lie, it reach'd from the 25th to the 61st Degree of North Latitude; and on the East, from *Arabia Felix*, to the Head of the River *Euphrates*, it reach'd from the 25th to the 45th Degree of the same Latitude.

The Modern Division of the World is well enough known to be into *Europe*, *Asia*, *Africa*, and *America*; and, according to the receiv'd Custom among Geographers, we shall begin with the first.

CHAP. IV.

Of EUROPE in General.

Ortelius, Maginus, Merula, and others, think it was formerly called *Japetia*, because most of it fell to *Japhet's* Lot. *Theocritus* says, it was call'd *Tyria*, from the *Tyrian* Damsel, who, the Poets say, was ravish'd by *Jupiter*. *Diodorus Siculus* says, it was call'd *Galatia*, and that most of its Inhabitants had the Name of *Galatians*. *Ptolemy*, Lib. 2. Op. *Quadripartit.* says it was call'd *Celtica*, because the *Celtae* were

spread through the most part of it, which is confirm'd by *Ortelius* and *Cluverius*. As to its present Name *Europe*, some derive it from *Europa*, the *Tyrian* Damsel above-mention'd: Others from *Europus*, a King mention'd by *Troges*, who perhaps was the King of the *Scythians*, spoken of by *Pausanias* and *Eusebius*. Others derive it from the Beauty of the Country.

The Extent of ancient *Europe* was reckon'd by old Authors thus: *Strabo* accounts it about

about 30000 Stadia in Length, which is about 3750 English Miles. *Pliny* reckons it 8414000 Paces; i. e. 8414 Miles; and *Ptolemy* 24000 Stadia, or 3000 Miles.

Strabo reckons the Breadth of it 14100 Stadia, about 1712 Miles. *Pliny* makes it 618000 Paces, or 6018 Miles; and *Ptolemy* 14900 Stadia, or 1750 Miles.

As to the Qualities of *Europe*, the Ancients reckon'd 4 very remarkable. 1. That it was the whollomest of all the Divisions of the World. So *Varo de re Rustica*, Lib. 1. reckons it whollomer than *Asia*, because it lies more to the North; and *Strabo*, Lib. 2. says, 'tis every where habitable. 2. That it abounded with all Necessaries for Life: So *Herodotus*, *Varo*, and *Strabo*. The latter adds, That it communicates its Product to the other Parts of the World, and needs nothing from them but what her Inhabitants may very well want. 3. That her People excel the rest in Learning, Valour and Politicks, as appears by *Mamilius*, *Strabo* and *Aristotle*, who asserts it of the *Greeks*; and every one knows, the *Romans* deserv'd the Character as well. The 4th Quality they ascribe to *Europe*, was, That in it only Amber was found. They ought to have added a 5th, That it gave Rise to two of the greatest of those call'd Universal Monarchies, viz. the *Grecian* and *Roman*; and a 6th, That for many Ages, it has been the chief Seat of the Christian Religion.

For the Boundaries of Ancient *Europe*, they reckon'd them thus: *Pliny*, *Mela*, and *Stephanus*, own'd, That on the North, it was bounded by the Northern Ocean, tho' *Herodotus* and *Ptolemy* doubted it. On the West, it had the Western Sea, besides part of the North Sea, elsewhere call'd the *British*. On the South, it was bounded by the *Mediterranean*, as at present. On the East, it was divided from *Asia* as at present, by part of the *Mediterranean*, call'd the *Mare Egeum*, the *Hellepont*, *Propontis*, the *Thracian Bosphorus*, and the *Euxine Sea*. But as to the other Boundaries towards the North, the Ancients were divided into Five different Opinions. 1. *Herodotus*, *Dionysius*, and others mention'd by *Eustathius*, thought *Europe* to be bounded on the East by the Conjunction of the Northern and *Caspian Sea*; and others divided *Europe* from *Asia* by an Isthmus between the *Caspian* and the *Euxine*.

2. Some made the River *Phasis*, call'd otherwise *Hypanis*, the Boundary of *Europe* on that Side: So *Herodotus*, *Procopius*, and others.

3. *Seneca*, Lib. 4. *Nat. Quaest.* makes the River *Danube* the Eastern Boundary of *Europe*; but this perhaps is to be understood of the River *Tanaïs*, which is sometimes called the *Danube*, as *Acron* observes in his Notes on *Horace*, which *Ortelius* seems to approve: And this is also favour'd by *Isidorus*, *Orig. Lib.* 17. *Cap.* 9. where speaking of *Rhubarb*, he says, that it grows in the Country of the Barbarians beyond the *Danube*; since 'tis known, that that Plant is now found on the *Volga*, which lies near the *Tanaïs*.

4. Some added to the *Euxine Sea* the *Bosphorus Cymmerius*, the *Palus Meotis*, and all the River *Tanaïs*, with a Line drawn from its Fountains Northward; and of this Opinion were most of the Ancients. 5. Some take in only part of the *Tanaïs*, and add to it a Line as far as the River *Rha*, now the *Volga*; and from hence they draw another Line to the River *Carambyce*, by most now reckon'd the *Oby*; and they take in all this River as far as the Mouth of it, above the Island *Elixona*, which most think to be *Nova Zembla*. *Ortelius*, and *Cluverius* in his *Germania Antiqua*, endeavour'd to fix this Opinion on *Pliny*, because he makes the Promontory *Listarmis* and *Carambyce* the Boundary of *Celtica*, which is the same with *Europe*: And this River is now call'd *Oby*; and, according to *Stephanus*, above *Carambyce* lies the Island *Elixona*, equal in Extent with *Scilly*: And here there is none, except *Nova Zembla*, which lies almost at the Mouth of the *Oby*. They argue likewise, That *Pliny* places the End of the *Rhiphaean Mountains* on the River *Carambyce*; and these Mountains are now called by the *Russians*, *Kameny Poyas*, which end at the Mouth of the *Oby*. To this they add from *Pliny*, That those who come from *Asia* into *Europe*, must pass the *Ryphean Mountains*, which cannot be, except *Europe* be extended to the River *Oby*.

Brietius having diligently consider'd the Matter, gives his Opinion thus: That *Carambyce* is the River *Dwina*; near the Mouth of which lies *Archangel*, where the Line drawn from the Fountains of the *Tanaïs* towards the North by the Ancients commonly ends. His Reason is, because the An-

cients did always call *Tanais* the Boundary of *Europe*, which would have been very improper, had the least Part of that River only separated *Europe* from *Asia*: And he thinks *Pliny*, *Lib. 4. Cap. ult.* to be of his Opinion, since he reckons the Length of *Europe* from *Cales* to the *Tanais*; for 'twould have been a very gross Error in him to have extended *Europe* as far as the *Oby*, and then to have cut off the Country betwixt the *Tanais* and the *Oby*: Besides, what Occasion had there been for the Division of *Sarmatia*, made use of by most, into *European* and *Asian*, if *Sarmatia* had been all in *Europe*?

To the Objection which *Cluverius* makes from the *Riphaean* Mountains, he answers, That the Ancients speak of their Situation with very great Uncertainty, as he himself confesses; and that *Pliny*, *Lib. 4. Cap. 12.* brings the *Tanais* from those Mountains, which cannot agree with the Stone Girdle, or *Kameny Poyas*: And *Mela*, *Lib. 3. Cap. 5.* places the *Hyperborei* on the *Asian* Shore, tho' he extends them above the *Riphaean* Mountains. How then can the *Hyperborei* be in *Asia*? As to the *Elixona* of *Stephanus*, some think it not improbably to be that Island which we first meet with as we go out of the *Sinus Granducius*, now the *White Sea*; for 'tis large enough to have given the Ancients, who were ignorant of that Country, Ground to compare it with *Sicily*; but certainly no Man of Sense will think *Stephanus's* *Elixona* to be the *Nova Zembla* of the Moderns: And for the Promontory *Lytarmis*, no body will place that out of *Europe*, since *Ortelius* thinks that call'd *Kibarnes*, near the Island *Wardhuys*, to be the same. Others do more probably take it to be *Cape Orleganas*, in the Mouth of the *White Sea*.

The Languages of Ancient *Europe* were reckon'd Four, of which the rest were only Dialects. 1. The *Sarmatian* Tongue, or, as some call it, *Riphaean*, from whence they derive the *Slavonic*. 2. The *Celtic*, from whence came the *German* or *Teutonic*, the *Gaulic* and *British*, which some say are one, and the *Ilyric*. 3. The *Latin* Tongue, the Ancient call'd *Osca*, and the New call'd *Romana*. 4. The *Greek*, with its 5 Dialects, viz. 1. The *Common*, made up of them all. 2. The *Attic*, from whence came the *Baotic*, *Calcedic*, *Pamphylian*, and *Cyprian*. 3. The *Ionic*, from whence, mix'd with the *Doric*,

came the *Thessalian*, and from it the *Macedonian*. 4. The *Eolic*, from whence *Dion. Halicarnassensis* thinks the *Latin* took its Rise. 5. The *Doric*, from whence the *Peloponnesian*, subdivided into the *Common*, *Argive*, *Laconic* or *Spartan*, the *Libye*, us'd by those of *Cyrene* and *Pentapolis*. The *Rhodian*, *Cretian*, and *Sicilian*, subdivided into the *Common*, and those call'd *Rhagina* and *Tarentina*.

The Ancients divided *Europe* into West, North, and South: In the West, they plac'd the *British* Isles, *Spain* and *Gaul*; in the North, *Germany* and *Sarmatia*; in the South, *Dacia*, *Ilyricum*, *Greece*, and *Italy*.

According to the ancient Map of *Europe*, exhibited by *Britania*, it lay betwixt 35 and 70 Degrees of North Latitude; but the Longitude was very uncertain.

The Description of EUROPE, according to Modern Authors.

AS to its ancient Name, it has still retain'd it, none of the greatest Princes that ever rul'd in it having attempted a Change. Tho' this holds among our selves, yet those of *Asia* and *Africa* call us by several Names. The *Asiatics* call us in-general *Franks*, because the *French* made the greatest Appearance of any of the Christian Princes who attempted the Recovery of the *Holy Land*. At present, the *Turks*, who follow the *Latin* Way of Speaking in that respect, call us *Romei*; and those who follow the *Greek* Way of Speaking, call us *Franki*. The *Ethiopians* call us *Alfrangues*; and some of the *Turks* call us *Cauri*; i. e. Infidels, because we do not believe in their *Mahomet*: And others call us *Dzinzis*, which signifies a Pagan, as *Brietius* informs us.

The Boundaries and Extent of Modern EUROPE.

TOWARDS the North, it is bounded by the Northern or Frozen, call'd by the Ancients the *Hyperborean* Ocean: On the West, by the *Atlantic*: On the South, by the *Mediterranean*: On the East, 1. By the *Archipelago*, anciently call'd the *Aegean* Sea, from a *Greek* Word signifying Goats, because the Islands scatter'd up and down in

it resembled a Flock of Goats. 2. By the *Hellepont*, where were *Cassos* and *Abydos*, on the opposite Shores, now call'd the Streights of *Gallipoli*, or of the *Dardanelles*. 3. By the *Propontis*, now the Sea of *Marmora*, or the *White Sea*. 4. By the *Bosphorus Thoracicus*, now the Streights of *Constantinople*. 5. By the *Pontus Euxinus*, now the *Black Sea*. 6. By the *Bosphorus Cimmerius*, now the Streights of *Caffa*. 7. By *Palus Maotis*, or the Sea of *Zabaque*. 8. By the *Tanais*, or River *Donn*. 9. By a Line drawn from the most Easterly Turnings of that River to the *Obi*. 10. By a Line from the *Obi* to the Northern Ocean.

The Length of *Europe* is variously calculated by Geographers. *Cluverius* says, That from the Cape of *St. Vincent* to the Mouth of the River *Obi*, it is 900 German Leagues, or 3600 Italian Miles. *Morden* says, there is but 50 Degrees of Longitude from the Cape of *St. Vincent* to the Mouth of the River *Obi*; but *Sanfon* makes the Distance 55 Degrees, and *Mr. Moll* 68.

Cluverius reckons the Breadth of *Europe* from the Cape of *Matrapan*, a Promontory in the *Morea*, or ancient *Peloponessus*, to the North Cape in *Normy*, to be 550 German Leagues, or 2200 Italian Miles. *Morden* says, from the most Southerly to the most Northerly Parts of *Europe*, there are only 35 Degrees of Latitude: *Sanfon* makes them 38; the Great Atlas makes them 44; and *Mr. Moll* makes them 42.

Europe, in respect of Government, is divided into Empires, Kingdom, Republicks, and Principalities. Of the first, there are Three, viz. The Empires of *Germany*, *Muscovy*, and *Turky*. The Kingdoms are Nine: 1. *Spain*. 2. *France*. 3. *Portugal*. 4. *Britain* and *Ireland*. 5. *Hungary*. 6. *Bohemia*. 7. *Poland*. 8. *Swedeland*. 9. *Denmark* and *Norway*. The Commonwealths are, *Venice*, *Genoa*, *Lucca*, the *Swiss Cantons*, the *United Netherlands*. Some add *Ragusa*, *St. Marino*. The Principalities are, the *Patrimony of the Church*, the Great Dukedom of *Tuscany*, the Dukedoms of *Savoy*, *Modena*, *Parma*, *Mantua*, *Mirandola*, *Transilvania*, *Moldavia*, *Walachia*, *Malta*, *Lorrain*, *Curland*, and *Lesser Tartary*. Some add the Nine Electorates, viz. *Mentz*, *Treves*, *Cologne*, *Bohemia*, *Bavaria*, *Saxony*, *Brandenburgh*, *Palatinate of the Rhine*, *Hanover*.

The principal Languages spoke now in

Europe are, the *Latin*, *Greek*, *Teutonic*, and *Sclavonic*. The *Teutonic* is of Three Sorts; *High Dutch* in *Germany*, *Saxon* in *England*, *Danish* in *Denmark*, *Sweden*, and *Norway*: The *Latin* is corrupted into *French*, *Italian*, and *Spanish*: The *Modern Greek* is much different from the *School Greek*: The *Sclavonic* Language is used in *Sclavonia*, *Bohemia*, *Poland*, *Muscovy*, and *Turky* in *Europe*: The *Tartarian* Language is a Dialect of the *Sclavonic*. There are several Languages of less Note which are used in *Europe*: The *Albanian* or *Epirotic* in *Epirus* and *Macedonia*: The *Cossack* and *Tartarian* in Part of *Poland* and *Tartary*: The *Hungarian* or *Bulgarian* in *Servia*, *Bosnia* in *Bulgaria*, and *Hungary*, &c. The *Finnick* in *Finmark* and *Lapland*: *Irish* in the Highlands of *Scotland*, and amongst the ancient *Irish* in *Ireland*: The *British* is spoken in *Cornwall*, *Wales*, and *Britany* in *France*: The *Biscayan* is spoken only in *Biscay*, near the *Cantabrian* Ocean or Bay of *Biscay*; and *Arabic* in Part of *Spain*.

The Religions in *Europe* are the *Christian*, which is divided into *Papists* and *Protestants*; the *Jewish*, the *Mohometan*, and *Pagan*. There are some of the last in *Lapland*.

Of the Quality of EUROPE, according to the Moderns.

THE Ancients have been much too short in the Account they give of the distinguishing Qualities of this most famous Part of the World, we think it proper to enlarge a little upon it.

Bochart says justly, That though it be the least of the Principal Divisions of the World, it is by far the best cultivated, and most populous; has for many Ages been the Seat of Civility or good Breeding, as well as of polite Learning; and was the Mother of the *Greeks* and *Romans*, who extended their Empire to the remotest Parts of *Asia* and *Africa*. To which we may add, That she has likewise brought the far greatest Part of what is known in *America* under her Subjection, and introduced Civility and the Christian Religion among the Inhabitants of that Part of the World. Which, taken all together, is by *Bochart* and other Interpreters understood to be the Accomplishment of that Prophecy, *Gen. 9. 27.*

That

That God shall enlarge Japheth, and he shall dwell in the Tents of Shem, and Canaan shall be his Servant. Bochart agrees with those who think the Meaning of this to be, That in the Division of the Earth, Japheth shall have the largest Share; which he says every one must own to have been abundantly fulfilled, when they consider, That, besides Europe, which fell to Japheth's Lot, his Posterity likewise inhabited *Asia Minor, Medea, Part of Armenia, with Iberia and Albania,* and those vast Countries towards the North, formerly inhabited by *Scythians*, and now by the *Tartars*. To say nothing of the new World, or *America*, into which 'tis very probable the *Scythians* sent a Colony by the Straights of *Anian*.

Dr. Heylin is of the same Opinion in his General Description of Europe, as to the Enlargement of Japheth's Borders, and the dividing the Isles of the Gentiles among his Sons, which he takes to include all the Continent of Europe, and the Isles adjacent: And he further observes, That the great Countries of *Anatolia, Greece, Spain, and Italy*, all which did fall to the Posterity of Japheth, are but so many Peninsula's, environ'd round almost with one Sea or other. Nor was, says he, the Name and Memory of Japheth so much forgot by the Children who descended of him; but that the *Greeks*, who were the first Colony they sent into Europe, retain'd it a long time in their *Japetus*, whom they make to be the Son of *Calum* and *Terra*, and the Father of *Prometheus*, whom *Ovid* therefore calls *Satus Japeto*, in his First Book of his *Metamorphosis*.

The Doctor adds, That the Second Part of the Prophecy, *That he should dwell in the Tents of Shem*, though it was long before it came to the Accomplishment, yet it was fulfilled at last, and that both in the literal and mystical Sense: 1. In the literal Sense, when the Posterity of Japheth, both *Greeks* and *Romans*, made themselves Masters of *Judea*, and of the Land of *Canaan*, and the Eastern Parts promised to him, and possessed by the Seed of *Shem*. Next in the mystical, when God was pleased to break down the Partition-Wall, and to incorporate the Gentiles of the House of Japheth into the Body of the Church, which for a long time was restrain'd to the Line of *Shem*.

We may add to the other Qualities of Europe, especially of its Northern Parts, what *Jornandes*, an ancient *Gotthick* Writer, says of it deservedly, viz. *Est Officinas Gentium & velut Faginas Nationum; i. e.* That they are the Nurseries and Seminaries of Nations and People, because of their being so extraordinary prolific.

Ortelius also takes Notice, That *Pliny* called Europe, *Altricem Vixoris omnium Gentium Populi, Terrarumque pulcherrimam*; the Nurse of that People (the *Romans*) which have conquer'd all the rest, and the most beautiful of all Lands that are known. And tho' it is certainly the least of all the Four great Parts into which the World stands now divided; yet, as *Ortelius* goes on, it is of great Fertility, naturally temperate, (being seated in the Northern Temperate Zone) and therefore enjoying the Blessings of a temperate Air, and its Soil producing Fruits of all Sorts, Wine and Trees equal to the best, which make it extremely pleasant to the Eye. It is also adorn'd with Cities, Towns and Villages, and a numerous Progeny of Men beyond any of the rest. Its Inhabitants are not only more numerous in Proportion, but much more civil and ingenious; so that tho' it is less than any of the other Three in Extent, yet it is, and ever was, thought much more excellent than any of the other; and, besides its present Grandeur, it is venerable on the Account of the *Macedonian* and *Roman* Empires. Thus far that great Man.

There are many other Authors who have given Europe the Preference of the other Divisions of the World, particularly *Boissardus*, in his *Epigrams, Lib. 2. Epig. ult.* who writes concerning the Four Parts of the World, thus:

*Artium Genetrix, Scientiarumque
Europa, ut fuit, estque, eritque semper.
Rerum Stamine fulgido celebris
Et dente Indo, Asia est, ordoribusque
Auro fertilis atque Margaritis
Est, & Murice dives Afra Tellus.
Balsamum Americi legunt, Piperque
Thus & Zinziber, & fragrans Anomum.*

Brietius tells us, the *Saracens* own Four remarkable Qualities in Europe: 1. That 'tis very fruitful; 2. That it breeds Warlike Inhab-

habitants; 3. That they are very Religious; 4. That they are fit to govern the rest of the World.

As to its *Fruitfulness*, he observes, That there is scarcely any Country of *Europe*, which is not commendable for some Product or other; yet he might have excepted, as to the general Qualification of Fertility, some of those Countries which lie near the North Pole, as well as he does Part of *Spain*. 'Tis true however, with respect to those which he calls the most cultivated Nations, viz. *Greece*, *Italy*, *France*, and Part of *Spain*. What he says of *England's* Fruitfulness in Corn and Cattle, every one knows to be true; but he might have extended it to the whole Island in general, and ought not to have omitted its Naval Strength, our Materials for building of Ships, our Fishery, Mines, and Fruit-Trees; and *Ireland* ought at least to be allowed its Share of those Qualifications.

What he says of the Fruitfulness of *Germany*, is true, as to many Parts of it; but he has omitted their Forests, Vines, and Minerals. That 'tis a Nursery of Soldiers, and has maintained many great Armies at one and the same time, is not to be denied.

To what he says of *Poland*, That in time of a Famine it furnished Provisions to a great Part of *France*; he might have added, That it has been justly esteemed the Granary of *Europe*, though it has suffered much in that Respect by the present War, which obstructs their Cultivation.

He takes Notice of the Fruitfulness of *Hungary*, though subject to frequent Devastations by the *Turks* and *Germans*.

He observes of *Europe* in general, That for the Advantage of mutual Commerce, and publick Society, *Spain* furnishes Iron, dry Fruits, and fine Wool; *England*, Hides, Wool, Tin, and Lead; *France*, among other Things, furnishes Corn, Salt, and very fine Oil; *Germany*, Horses, Arms, Iron, and Silver; the *Netherlands*, Manufactures; *Italy* and *Greece*, Silks; the Northern Kingdoms, Hides, Tallow, Copper, and Timber for Shipping; *Poland* and *Russia*, rich Furs and Skins, Honey, and Wax. He concludes this Head of *Europe's* Fertility thus; That it produces all Things necessary for Life, except Drugs; the Reason of which he alledges to be, That it is not so obnoxious to Diseases as other Parts of

the World, except such as are introduced by Intemperance and Luxury. What he says as to its Want of Drugs, may be justly disputed, since in general it produces many excellent Simples, which are of Use in Physick.

For his other Defects in the general Description, they shall be supplied in the particular Accounts of the several Countries.

As to the Second Head, That the *Europeans* are a Warlike People, he says 'tis plain from this one Instance, That though they be all good Soldiers, and have each had their Share in Military Glory; yet hitherto none of the Warlike Nations, of which 'tis composed, have been able to obtain the Sovereignty of the whole: And when the *Turks* and *Saracens* have joined their Forces against them, yet they were not able to stand before them in *Europe*, *Asia*, or *Africa*.

He likewise takes Notice of the particular Military Virtues of its several Nations thus: The Inhabitants of *Great Britain* despise Dangers; the *French* are quick and fierce; the *Spaniards* are extraordinary patient; the *Germans* are stedfast; the *Netherlands* are sagacious; the *Hungarians* vigilant; the *Poles*, *Russians* and *Swedes*, tenacious; and all of them are ready to conquer or die: Only the *Grecians* and *Italians*, formerly the Glory of War, do now understand better to obey than to fight, some of them excepted: Yet both of them, he says, seem to be born for Empire, would they resume their ancient Courage. He adds, That 'tis certain, since the *Ottomans* fixed the Seat of their Government in *Europe*, and chose their Janizaries from among the *Europeans*, they have had much braver Armies than before, and make very little Account of their *Asian* Troops.

In his Account of the Religion of the *Europeans*, he governs himself by the Principles of the Church of *Rome*, and is very liberal of his Censures upon *Luther* and *Calvin*, and those who are called their Followers.

The Protestant Religion has its chief Seat in the Empire, *Switzerland*, the Vallies of *Piedmont*, the *United Netherlands*, *Great Britain* and *Ireland*, *Denmark*, *Norway*, and *Sweden*. It had formerly a very large Footing in *France*, *Bohemia*, *Hungary*, and *Poland*; but has lost much of it (at least as to the external Profession in those Parts) by the violent Persecution of Popish Princes.

The

The principal Seat of Popery, is *Italy*, *France*, *Spain*, *Portugal*, and in those Parts of the Empire which are the Hereditary Dominions of the House of *Austria*, the Electorate of *Bavaria*, the Dominions of the Three Ecclesiastical Electors, and the *Spanish Netherlands*.

As to that which is called the *Greek Church*, the principal Seat of their Religion is *Greece* it self, with some of the neighbouring Islands, and such Parts of the *Moscovite* Dominions as are in *Europe*. 'Tis observed by some, That the prevailing Languages in those Parts, which are the principal Seat of Popery, are derived from the Latin: The Languages of those who have chiefly embraced the Reformation, are derived from the *Téutonic*; and where the *Greek Church* prevails, the *Sclavonic Language* is most in Use. There are some Exceptions however to those Generals, which shall be taken Notice of in the particular Countries.

Though it must be own'd, That there is more true Religion in *Europe* than in all the rest of the World; yet 'tis justly observed by some, That the Lustre of Christianity is very much eclips'd by the unnatural Divisions among Protestants, about Things of lesser Moment, by the gross Idolatry and Superstition among the Papists, and by the scandalous Lives of too many of both: And had it not been for those Things, *Europe* might truly have been accounted the Temple of Religion, the Court of Policy and Government, and the Paradise of Human Felicity.

The *Mahometan* Religion is only profess'd in some of those Parts of *Europe* which are subject to the *Turks*.

The *Jewish* Religion is in a vagabond State like themselves, the visible Effects of the Curse of God upon them for their blaspheming and crucifying our Saviour; which being foretold so many Ages ago, as appears by the History of the Gospels, is, together with the Apostacy of the *Roman Church*, foretold likewise so expressly in other Parts of the New Testament, an undeniable Proof of the Truth and Divine Authority of the Christian Religion.

As to the Fourth Head, which is *Policy*, *Brietius* instances, 1. In the *Spaniards*, who, he says, in the Memory of our Fathers, did

with admirable Prudence govern a large Empire, diffus'd through the World, and made up of disjointed Parts, and carried War every where, while they themselves were at Peace. His 2d Instance is that of the Commonwealth of *Venice*, than which he says there can be nothing better constituted; and that their Senators resemble so many wise and prudent Kings. His 3d Instance is of the *Dutch*, who being, according to him, nothing at first but a Mob of rebellious Fishermen, have spread their Commerce and Victories through the World, to the great Damage of the *Spaniards*; which is a plain Argument, that the latter had declined very much in the Politicks and Prudence that he ascribes to them, when they provok'd the *Dutch* to revolt by their Bigottry and Tyranny. His 4th Instance is of the *Greeks* and *Italians*, who, by their too great Prudence, (which he ought rather to have call'd Effeminacy and slavish Principles) are kept from knocking off their Shackles. His 5th Instance is of the *French*, who, in his own Time gave a sufficient Proof of what they were capable to do in Government under the Administration of the Great Cardinal. The Book being published in 1648, 'tis suppos'd he meant Cardinal *Mazarin*. 'Tis evident however, That he might have very well allow'd Cardinal *Richlieu* a Share; tho' the Administration of *Henry IV.* commonly call'd the *Great*, seems to be a more proper Instance than either of them. But 'tis probable, a few Years will demonstrate to the World, That the *French* have been guilty of as great a Failure in Politicks, in grasping at the universal Monarchy, and persecuting their Protestant Subjects, as the *Spaniards* were before them: And had not our Author been carried away with Partiality towards his own Country, he might have added the Instance of the Great *Gustavus Adolphus*, who gave signal Proofs of his Ability both for Government and War: And we may add, for the Honour of our own Country, without Flattery, (since 'tis known to all the World) That *Great Britain* has oftner than once held the Ballance of *Europe* in her Hand, and is always capable of doing so, under a good Government, as is evident (to go no higher) from the Instances of *Henry VIII.* Queen *Elizabeth*, the late King *William*, and Her present Majesty Queen *Anne*.

CHAP. V. OF GREENLAND.

HAVING given a Description of Europe in General, we come now to the particular Countries; and, according to the Method of *Bleau's Atlas*, shall begin with those which lie next the North-Pole, and first with *Greenland*.

GREENLAND.

TIS supposed this Country was so called by the *English* Discoverers, because the Water of the neighbouring Sea appear'd to them as green as Grass. The *Dutch* call it *Spitzbergen*, because of its sharp pointed Rocks and Mountains. What Part of it is yet discovered, lies from 76 to 82 Deg. N. Lat. and from Long. 30 to 50. How much further North it runs, or whether it be an Island or Continent, is not known. Our Mariners take it to be an Island; but the *Dutch* think it goes much further North, because they found the Ice not floating as at Sea, but firm and stable, as it uses to be near the Shore. The South Part of it looks towards the Promontories of *Finland* and *Lapland*, *North-Cape*, *North-Kin*, &c. On the West lies the large Country of *Groneland*; and on the East *Nova-Zembla*.

The *Dutch* ascribe the first Discovery to three of their Pilots, and have given Names to the Bays, Creeks and Promontories, according to their own Fancy. They oblige their Masters of Ships to make Charts of the Places they discover; and had we done the like, several of our Discoveries had been ascertain'd, which are now disputed. *Purchas* observes, That the *Dutch* have given Names to Places long before discovered by the *English*, as if they themselves had been the first Discoverers.

The *Dutch* say, That *Jacob Heemskirk*, Ba-

rents, and *Cornelius Ryp*, searching for a N. E. Passage, discover'd *Greenland* in 1596; tho' Sir *Hugh Willoughby* was the first Discoverer of it in 1553, as is probable by the short Notes found upon his Table after his Death, which tell us, That Aug. 14, they were 160 Leagues N. and E. from *Seynam*: They continued sailing till the 14th of September, when they landed on a Country, high, rocky, and uninhabited; from whence, by Cold and Ice, they were forced to return more S. till they came to *Arxina River* in *Lapland*, where next Spring they were all found frozen to Death in their Ship. Captain *Stephen Barroughs*, afterwards Comptroller of the Navy to Queen *Elizabeth*, in 1556, searching a N. E. Passage to the *Indies*, arrived in 112 Deg. of Long. and 76 of Lat. and sailed to 80 Deg. 11 Min. of N. Lat. where he says the Country was desolate, the Ice of a blue Colour, and great store of Fowls, which can be no other Place but *Spitzbergen*.

The best Account of this Country, is the Voyage of *Frederick Martens*, an *Hamburgher*, who sailed from the *Elb* April 5, 1671. and arrived at *Charles-Isle*, 70 Miles long, and 10 Miles broad, separate from *Greenland* by a narrow Streight, called *Foreland's-Erd*.

The external Appearance, or Face of the Country, is in general Rocks and Mountains, rising above one another, from the Shore to the Inland Parts, to a prodigious Height: And those next the Shore, tho' so high, that the tallest Ships with her Masts is no more, when compar'd with them, than a little Cottage to a Steeple, are as much inferior to those which rise higher in the Country behind them. The Rocks being red, the Foot of those Mountains look like Fire, especially before a Storm. The Tops of them are cover'd with Fogs and Snow; and the latter is marbled as if it were

R

Branches

Branches of Trees, and gives as glorious a Light by Reflection on the Sky, as if the Sun shin'd on them. Below, at the Foot of those Mountains, there are others of Ice of a great Height, which increase continually by the Rain and Snow that falls and freezes upon them: And during the Summer, when the Snow melts elsewhere, it continues in the Clefts, which makes those Mountains appear at a Distance like dry Trees, with Branches and Twigs; and when new Snow falls upon them, at first it resembles Leaves. There are 7 of those Icy Mountains in a Line, that lie betwixt the high Rocks, are reckon'd the highest Mountains in the Country, and appear of a glorious blue Colour, with abundance of Cracks and Holes in them. Some of the Rocks are one continued Stone from Top to Bottom, look like a decay'd Wall, and smell very sweet, as the green Fields do with us after Rain in the Spring. The Stones for most part are vein'd like Marble, with white, red, and yellow. They sweat at the Alteration of Weather, which gives the Snow upon them a red Colour; and the Rain does the like when it runs down from the Rocks. At the Foot of the Mountains, where there are no Hills of Ice, there lie great loose Rocks, as they had fallen by Chance upon one another, which form Caves and Holes, so that 'tis very ticklish walking upon them. They are mix'd with Stones of a grey Colour, with black Veins, and glister like Silver Ore. They seem to be much of the Nature of our Pebbles, with which we pave the Streets. Those Mountains look as if there were Earth on the Tops of them, because of their great Height; but are found to be Rock at Top as well as Bottom. Stones flung down from them, or Peices that fall off, make a Noise like Thunder. Those Mountains are full of Cracks, where the Birds build their Nests. They are very difficult and dangerous to climb or walk up, and those who do so, mark the Way they go with Chalk, that they may find it again when they return. They are so high, that when the Day is not clear, one half of them seem to be above the Clouds; and some of them look as if they would tumble down every moment. The Sharpness of the Rocks, loose Pieces of Ice, and Want of Paths, do soon

fatigue and heat those that travel on them, be it ever so cold, and quickly wear out their Shoes.

Great Peices break off many times from the Ice Hills, fall into the Sea, are far more firm and compact than the other Ice, and are form'd by the Water of the Sea into several Shapes: Some of them resemble Churches with arch'd Windows, and Doors and Pillars within of a curious Blue: Others resemble round and square Tables with blue Pillars underneath, and Icicles on the Sides, that look like fring'd Table-Cloths; smooth and white on the Top with the Snow, and sometimes Peices of Ice of various Shapes lying upon them. The Country at a distance looks like a Cloud, and is scarce to be distinguished from the Air.

The Soil, so far as yet discover'd, is in most Places nothing but Rock, Heaps of big Stones and Slates standing Edge-wise. What Mould there is, comes from Moss, wash'd down from the Hills, and the Dung of Birds: It bears Heath, Moss, Grass, and some Plants. The Herbs produc'd here are fit for the Distempers of the Climate. In *June* and *July* they grow up to bear Seed: The most remarkable are, small House-Leek, 4 Sorts of Crow's-Foot, Sorrel, Scurvy-Grass in great Quantities, but so mild, that they eat it for Sallads; Snake-Weed, an Herb like Mouse-Ear, another like Perewinkle, Cabbage-Lettice, which tastes like Cresses; Ranunculus's of several Sorts, Semperivives, Herbs like Aloes, Wall-Pepper, Prick-Madam, and others unknown to our Climate.

The Sun appears about the middle of *February*, and leaves them the first of *October*; but they have a Twilight when the Sun comes near their Horizon. From the beginning of *May* to the first of *August*, the Sun never sets; yet they reckon Night and Day all that time thus; when the Sun is West, they call it Night; and when it comes about to the East, they call it the beginning of another Day. *Martens* observes, That the Light of the Sun is then like that of a clear Moon, and Men may look on it without dazzling their Eyes. It rises no more than 33 Deg. above their Horizon, and so is not warm enough totally to melt the Snow and Ice, nor to raise the Vapours so high as to make the Air

tempe-

temperate; so that they hang for most part in thick dark Mists, and to that degree sometimes, as a Man cannot see from one End of a Ship to another. The Cold is so violent here, that it immediately freezes dead Corps; and some say, they have found them entire after having been buried 30 Years.

No Springs of fresh Water are yet discovered in the Country; so that what fresh Water they have comes from melted Snow and Ice, that runs down from the Mountains.

The AIR.

THE Air here is so cold, that the Frost is almost continual, and strongest in *April* and *May*, when Men can hardly keep Heat within them: Their Teeth chatter, and their Appetite is greater than in other Countries. During those two Months, the Weather is very unconstant. When the Wind blows hard from North and East, it's scarce possible for Men to live. West and South Winds, if any thing constant, bring much Snow, sometimes Rain, and moderate the Cold. In *June*, *July*, and *August*, the Air is for most part pretty calm. The Winds are strangely chang'd by the Clouds, so that when it is South-West in one Place, at a few Miles Distance it blows quite another Way. The Air over those Places called Ice-fields appears white, and by this Mariners know where the fix'd Ice lies. In the two last Months of the Summer, especially in *July*, the Sun shines so warm, says *Martens*, as to melt the Tar of the Ships betwixt the Seams, where the Wind cannot come at it. There is hardly any Difference of Cold betwixt Night and Day. The Meteors generated in the Air fall down like small Needles of Snow into the Sea, and cover it as if it were sprinkled with Dust, or a tender Ice, which tastes fresh. This is easily perceiv'd in a clear Sun-shine, when one looks towards a shady Place, and they sparkle like Diamonds; but the Particles are so small as not to stick to or wet ones Clothes. When the Sun shines warm towards Noon, they melt in the Air, fall like Dew, and sometimes occasion a Reflexion like a Rainbow. They have another which they call a Sea-Bow, that ap-

pears in the Atmosphere of the Water, blown up by the Wind. In the Clouds near the Sun, they have *Parelia*, or Mock-Suns, which the Seamen call Weather-Galls. They move about with the Sun Day and Night, and are much bigger in the Morning, Evening, and Night, than in the Day-time. When the Cold increases, the Sea and other Waters send forth a Vapour, which is turn'd into Rain or Snow in the Air, and smells like Fog. When great Vapours rise constantly during the shining of the Sun, 'tis a Sign the Cold is remitting. When the Air is over-burthen'd with them, they last a great while with a constant Wind. From those small Vapours, the Snow is first generated, and falls down in various Shapes like Needles, Crosses, Roses, and Stars, according as the Cold is more or less strong; but if not dispers'd by Wind, it falls down in Clusters.

Their HARBOURS.

1. *South-Haven*, where they commonly repair their Ships: It is large and commodious, so that sometimes 40 Ships at a time have Anchor'd conveniently in it. Here they take in fresh Water, which runs plentifully from the melted Snow and Ice on the Mountains; for the Rivers, as far as has yet been discovered, are brackish. It has high Mountains on both Sides, especially on the Left, there is one call'd the *Bee-Hive*, and another the *Devil's-Huck*, which is commonly covered with a thick Mist, that darkens the Haven when driven into it by the Wind. Within this Harbour lies the Island of *Deadmen*, so called, because it is the Burying-Place for such as die there: They dig no Graves, but heap Stones upon the Coffin. Here are several others called *Fowl-Islands*, because of the vast multitude of Fowls that breed there.

2. *Maurice's-Bay*, where some People have winter'd. Near this are the only Houses in the Country, being a few Cottages and Warehouses built by the *Dutch* for making their Oil, where they have a great Gun to defend them. This Place they call *Smearbourg*, and the *Harlingish Cookery*. All other Nations burn their Houses when they leave the Place.

3. The Northern Bay, in which there is an Island by the Dutch called *Vogel-Song*, because of the great Noise which the Fowls make there. This, with *South-Haven*, and one called *Safe-Harbour*, are the most known of any Harbours of the Country.

4. *Monyers-Bay*, which lies furthest North on the West Part of *Greenland*.

5. *Rosfield*, so called, because it abounds with Deer.

6. *Muscle-Haven*, which lies at the Mouth of the *Weygatt*: North of which, *Martens* says, he sail'd to 81 Deg. and saw 7 Islands further North, but could not approach them because of the Ice. The lowest Part of the Country lies about this Harbour.

7. *Alderman Freeman's Inlet*, by the Dutch called *Walter Thymen's Fort*: It is the large Mouth of a River, which is not yet discover'd.

The Voyages mention also the *English*, *Hamburg*, *Danish*, and *Magdalen* Havens, with one called the *Bay of Love*; but not so distinctly as to enable us to judge whether they be different from those already mention'd with Dutch Names. They take Notice likewise of the Haven of *Weygatt*; as to which, they do not know whether it goes through the Country, but say it is not the Streights of *Weygatt*; of which so many Things are writ: They call it by this Name, because of the Winds which frequently blow there: And about this Place, they tell us the Country is low, and adorn'd with small Hills.

The whole Country is encompassed with Ice, which makes the Approach difficult.

Their BEASTS.

1. **W**Hite Bears, which are quite otherwise shap'd than those commonly seen with us: They have long Heads like Dogs, and bark like a hoarse Dog: They are slenderer, and much swifter than other Bears. Their Hair is long and soft, like Wool; their Noses, Mouths and Talons, are black. Their Skins make comfortable Clothes for those that travel in the Winter, and are dress'd at *Spitzbergen*, by treading them in hot Saw-Dust, which sucks up the Fat, and dries them. The Fat of their Feet melted out is used for Pains in the Limbs, and given to Women in Child-bed

to hasten Delivery. It likewise occasions plentiful Sweat. It is spongy, and feels very soft, and is best when tried up there, for if it be long kept, it grows foul and stinking. Their other Fat is like Sewer; when tried up, it becomes thin like Train-Oil, and the Skippers many times sell it as such; yet it is nothing so good, and is chiefly used for Lamps, because it does not stink so much as the other. *Martens* says, if it were tried up with *Orris-Root*, it would keep better, and smell well. Their Flesh is whitish and fat, like that of a Sheep. The Seamen say, That it makes the Hair of those who eat it grey. The Milk of the Females is very white and fat, and they are so fond of their Young, that they will rather be kill'd than leave them. Their Teeth burn'd and powder'd, and taken inwardly, disperses congeal'd Blood. They feed upon the Carcasses of Whales, and likewise upon Birds and Eggs. They eat Men alive when they can master them; so that when Sailors travel any where in the Country, they carry Guns and Lances for their Defence. Their Heads are very strong, and when struck with some Cudgels as would knock down a Bullock, they don't matter it. They roll away the Stones of Burying-Places, tear up the Coffins, and eat the dead Men. They dive under Water when pursued, or in Search of their Prey at Sea.

Some of them are 6 Foot high, and 14 Foot long. An Hundred Pound Weight of Fat has been taken out of one of them. When any of them are killed, and not carried off, others run away with them in their Mouths, and eat them. When they are attacked, they run to help one another, and the old ones will rather suffer themselves to be kill'd, than leave their Young. The largest are those called Water-Bears, which live upon what they catch at Sea, and have sometimes been seen 12 Miles from Shore. The Story, That they lick their Young into Shape, is false; for the Cubs are found in the Bellies of their Dams perfectly form'd.

2. Deer of a greyish yellow Colour, with Cloven Feet, and Horns like a Hart or Elk: They have three or four Branches on each Side about two Inches broad, and a Foot long, They have long Ears, and short

Tails.

Tails. When they see Men, they run away; and if you stand still, they do so, which is the Time to fire at them. They feed on Grass and Moss, and grow very fat in three Months time, which enables them to hold out during the Winter; yet many of them are then starved; and in the Spring they are generally lean. They are very good Meat when roasted.

3. Foxes, which don't much differ in Shape from ours; some of them have their Heads black, and their Bodies white; and they make a Noise at a Distance as if a Man laugh'd: They feed generally upon Birds and Eggs, but for most part have short Commons.

4. Sea-Dogs, called Rubbs or Seals: They are reckon'd among Beasts, because they live by Land as well as by Water. On their Feet they have 5 Claws, like Fingers join'd together, with a thick Skin like that on a Goose's Foot. The most known is the Seal, called Sall-Dogs and Rubbe by the Germans. Their Heads are like that of a Dog with cropp'd Ears, but not all of one Shape. They have Beards about their Mouths, and Hair on their Noses and Eye-Lids, but seldom above 4 on the latter. Their Eyes are large, hollow, and clear; their Skins cover'd with short Hair, and of several Colours; some of them spotted like Tygers: They have sharp Teeth, with which they will break a Stick as thick as ones Arm. Their Tails are short; they bark like a hoarse Dog, and their young ones mew like Cats. They are very numerous in some Places of this Country, and lie in Multitudes on the Ice-Fields. Where they abound most, there are but few Whales, because there is no Food for them. The Seals live on small Fish and Sea-Worms. They will stand upon their Defence, pursue and bite Men. The biggest are from 5 to 8 Foot long, and some of them yield half a Barrel of Fat, which lies about three Inches thick betwixt the Skin and Flesh, and makes the best Train Oil. Their Flesh is black, and they abound with Blood. They have large Livers, Lungs and Hearts, which the Sailors eat sometimes, after they draw out the Rankness with Water; but it is loathsome Food. They are hard to be killed, and are generally knock'd down with long Poles upon the Ice-Fields: The Sailors first raise them with a Shour, upon which

they stretch out their Necks like Dogs, and bark, which gives them the better Opportunity to fell them. When they run away, they squirt out a yellow Dung, and stink abominably.

Their BIRDS.

They saw no Land-Fowls here, but one of the bigness of a Lark, with a square Bill, which feeds upon Worms; and another they call Snow-Fowl, of the Size and Colour of a Sparrow, with a white Belly: Being almost starv'd, they flee to the Ships in great Numbers, and are so tame, that the Mariners take them as they please; but as soon as they are fed, they flee away. There is great Variety of Water-Fowl, and in such Numbers, that when they flee they darken the Sun; and at rising make such a Noise, that one cannot hear another speak: The most remarkable are, 1. One by the Dutch called *Raadsheer*, white as Snow, except his Bill, Feet and Eyes. 2. A *Diver*, almost as big as a Duck, with a thin crooked sharp Bill two Inches long, black Feathers, and red Legs and Feet. They swim very fast: They have little Horns above their Eyes, and a cross one underneath them; continue a long time under Water, and are tolerable Meat. 3. The *Lumb*, much like the other, but his Belly is white, and he croaks like a Frog: They build in the Mountains, and carry their young ones in their Beaks to the Sea, to teach them to swim and dive, and will be killed rather than abandon them. They are not good Food. 4. A *Mew*, with a crooked Bill, and a Bunch under it, a white Belly, grey Wings and Back, black Pinions, Legs and Feet, and a red Ring about his Eyes: The Seamen take them with Hooks baited with Whales Flesh. 5. The *Dung-hunter*, that pursues the *Mew* for his Dung, which, as soon as he drops, the other eats it, and leaves him. 6. The *Allen*, which pursues and beats the other Birds, till they vomit their Prey, which he eats. 7. *Mallamucks*, which feed on dead Whales, and are so greedy of their Prey, and loth to leave it, that they suffer the Seamen to fell them with Sticks in great Numbers. They eat till they vomit, and tumble about in it. 8. *Mountain-Ducks*, which

which are very good Meat, but their Fat is thrown away, because it tastes like Train-Oil, and makes Men sick. The Birds of Prey are not so good to eat as others, till they be hung up by the Legs, that the Train-Oil may run out, and the Air blow through them. All these Birds come at certain Times, and abide here as long as the Sun shines, and then return to their former Places altogether in great Flocks.

Of their FISH, and the WHALE.

THE Whale-Fishing being the chief Occasion of People's going to *Greenland*, we shall give a brief Account of them from *Martens*. He says, they differ from other Whales in their Fins and Mouths, which are without Teeth; but instead of them, have long black horny Flakes, all jogg'd like Hair, and somewhat broad: They differ from the Fin-Fish in their Fins; the Fin-Fish has a great Fin on his Back, where the Whale has none; but he has two behind his Eyes, cover'd with a thick black Skin, delicately marbled with white Strokes, or Representations of Trees, Houses, &c. With these he steers himself, as a Boat is row'd with Oars. He says, in the Tail of one of them, there was marbled very delicately and exactly the Number 1222. Their Tails don't stand up as the Tails of most other Fish, but lie Horizontally, as those of the Fin-Fish and Dolphin, and are from 3 to 4 Fathoms broad. The Head is the 3d Part of the Fish, and some of them more. Their Lips are plain, somewhat bended like an S, and end underneath the Eyes before the two Fins: They are smooth, and quite black, round like the Quarter of a Circle; and when they draw them together, they lock in one another. Within, in the uppermost Lip, is the Whale-bone, of a brown, black, and yellow Colour, with Streaks of several Colours. The Whale-bone of one of the young ones is blue. Just before, in the under Lip, there is a Cavity or Hole, which fits the upper Lip exactly as a Sheath does a Knife, and through this Hole he draws the Water he spouts out. The Whale-bone hangs down on both Sides within his Mouth, all hairy, like a Horse's Hair. The Whale-bone of some of them

is bended like a Scymiter, and in others like a Half-Moon: In one Side, all on a Row, there are 250 Pieces of Whale-bone, and as many on the other, besides the small Whale-bone which is not regarded, because they cannot well come at it to cut it out. The middlemost is the greatest and longest, and is sometimes two or three Mens length: It lies in a flat Row, one Peice by another, is broad at Top, where it sticks to the upper Lip, and towards the Root cover'd with white Sinews; which, when boil'd, smells pleasantly. There grows small Whale-bone at the Root of the greater, and they make of it Boxes, Handles for Knives, Walking-Sticks, &c. *Martens* is of Opinion, That Packthreads and Clothes might be made of their Hair, as the *Spaniards* do of the *Sempervivae Aloes*, which they drefs like Hemp. It is a peculiar Trade to cut out the Whale-bones, and requires abundance of Iron Tools. The Tongue lies among the Whale-bones, is close fix'd to the under Chap, is very large and white, with black Spots at the Edges; it has a soft spongy Fat, and cannot be easily cut, so that it is generally flung away, tho' it would yield 6 or 7 Barrels of Train-Oil: It is pleasant Food to the Sword-Fish, the Whale's mortal Enemy. Upon his Head there is a Bump. Before his Eyes and Fins, at the Top of this Bump, on each Side, there is a Spout-hole bended like an S, out of which he blows the Water so fiercely, that it roars like a great Wind. When he is wounded, his blowing resembles the roaring of the Sea in a great Storm. His Head is somewhat flat, and slopes downward like the Ridge of a House to the under Lip, which is broader than any Part of the Whale's Body, and broadest in the middle behind the Bump; and between that and the Fins are his Eyes, not much bigger than those of a Bullock, with Eye-lids and Hair like Men's. The Chrystal of the Eye is not much bigger than a Pea, clear and transparent, and in some white, and in others yellowish. The Eyes lie low, almost at the End of the upper Lip. He does not hear when he spouts the Water, and is easiest struck at that time. His Belly and Back are quite red; but under the Belly they are commonly white, and some of them coal-black. They look very beautiful when the Sun shines on them, and the small

small clear Waves over them glister like Silver; Some of them are white all over, and some of them are half white; but they lose much of their beautiful Colour when they grow dry. The outward Skin is thin, like Parchment, and is easily pull'd off when the Fish grows hot, which they frequently do by hard swimming, and then stink alive. The Yard of the Whale is a strong Sinew, and from 6 to 8 Foot long. Where the Yard is fix'd, the Skin is doubled, so that it lies like a Knife in a Sheath. The *Puenda* of the Female is shap'd like that of Four-Leg'd Beasts: They have Breasts, with Nipples at the Sides of it, like those of a Cow. When they couple, they stand upright, with their Heads out of the Water. How long they carry their Young, is uncertain. They are never observ'd to have more than two young ones at a time. Their Sperm, when fresh, smells like Wheaten Flower boil'd in Water, and may be drawn out in Threads, like hot Sealing-Wax, or Glew. When cold, it turns to a Musk Colour, and smells strong. *Martens* says, he has try'd several Ways to keep it sweet and fresh, but could never make it like that *Sperma-Ceti* which the Apothecaries sell in their Shops. He says, they may take whole Pails-full of it out of the Water, for it swims upon the Sea like Fat; as does that of the Sea-Horses and Seals. The Seamen make twisted Whips of the Sinews of the Yard. The Bones of the Whales are hard, like those of great Four-footed Beasts; but porous like a Sponge, and fill'd with Marrow; and when that is consumed, the Holes are as big as those of a Honey-Comb. They have two great and strong Bones, which hold up the under Lip: They lie against one another in Form of a Half-Moon: Some of them are 20 Foot long of a Side. The Flesh of the Whales is coarse and hard, like that of a Bull, mix'd with many Sinews: It is very dry and lean when boil'd, because their Fat lies wholly betwixt the Flesh and the Skin. When the Sailors have a Mind to eat of it, they cut great Pieces off before the Tail, which is tenderest, and boil it: Some of it looks green and blue, like powder'd Beef: The Fat is mix'd with Sinews, which holds the Oil as a Sponge does Water. The other strong

Sinews are chiefly about the Tail, with which he turns and winds himself as a Rudder does a Ship. He swims as swiftly as a Bird flies, and makes a Track in the Sea like a great Ship under Sail. The middling sort of Whales here are about 50 or 60 Foot long, and commonly yield 70, 80, or 90, Kardels of Fat. *Martens* mentions one Whale that yielded 130. Besides the uppermost thin Skin, there is another of about an Inch thick, and of the same Colour with the other; but both are so brittle when dry, that they are of no Value; and the Softness of the Skins is reckon'd to be the Cause why the Whale, tho' the strongest and biggest of all Creatures in the Water, cannot make much use of his Strength. He says nothing of the inward Parts, but only that the Guts are of a Flesh Colour, and the Dung within them yellow. Their Food is Sea-Snails, Herrings, and other small Fish. They are not very courageous, considering their Strength; for when they see a Man, or a Long-Boat, they dive and run away: But when he is in Danger, he values a Man no more than a Straw, and frequently beats the Long-Boats to pieces; but great Ships are too hard for him, and when he strikes against them with his Tail, he receives more Hurt than he does. Sometimes he runs away with Thousands of Fathoms of Rope-Line, a great deal swifter than a Ship can sail, or a Bird fly. In the Spring they keep Westward from *Spitzbergen*, near *Old Greenland*, and the Island of *John Mayen*, and then run Eastward to *Spitzbergen*. After them come the Fin-Fish, and then the Whales do probably retire to warmer Seas. They have Ailments as well as other Beasts, and are mightily tormented by Lice, and sometimes leap out of the Water as if they were in an Agony. Before a Tempest, they beat the Water about with their Tails like Dust. They are observ'd to have the greatest Strength when they strike Side-ways. If they escape, their Wounds are soon heal'd, because of their Fat; but the Wound always leaves a white Scar behind it.

The young ones, when brought forth, are as big as an Hogthead, and they suck their Dams, whose Milk is very white and sweet, but tastes Fishy.

Of the Taking of the WHALE

When the Fishermen hear a Whale blow or spout, they call into the Ship, *Fall, Fall*; then every one gets into their Long-Boats, which for most Part contain 6 or 7 Men: They row till they come near; then the Harponier takes his Harpoon, or sharp Iron, which resembles an Arrow fix'd to a Stick, and strikes him. They take Care to have Rope enough, otherwise, when the Whale dives straight down, as he frequently does, he would sink the Boat: And to prevent the Rope's setting the Boat on Fire when it is drawn quick, they take Care to water it sufficiently; for he draws many Hundred Fathom of Rope under Water with incredible Force. The Line fasten'd to the Harpoon is 6 or 7 Fathom long, and call'd the Forerunner: It is made of the finest and softest Hemp, and not pitch'd, that it may the more easily follow the Harpoon. Join'd to this, there's a whole Heap of Lines, divided into 3, 4, or 5 Parts, of 80, 90, and 100 Fathoms each, made of strong Hemp well tarr'd. If the Whale run under Water, they tie more and more to it, and if there be not enough in one Long-Boat, they make use of that which is in the next; and they take special Care that they don't entangle and overset the Boat. The Steersman observes which Way the Rope goes, and steers the Boat accordingly, that it may run exactly out before; for the Whale runs away with the Long-Boat as fast as the Wind, and would overturn it, if the Line be not kept straight. If the Harpioneer can, he darts the Harpoon just behind the Spout-Hole, or in the thick Fat of the Whale's Back, which makes him spout more Blood, and dye sooner than when wounded in the Belly, or through the Guts, except they be wounded in the Privy-Parts, which puts them to extream Pain; and even when they are almost dead, if they be wounded there, it causes their whole Body to tremble. About the Head, the Harpoon does them but little Hurt, of which the Whale seems to be sensible: And therefore when struck at, rather exposes his Head than any other Part, because the Harpoon gets out easier there, and so he escapes. When the Whale is struck,

the other Long-Boats row before, and take notice which Way the Line stands, and sometimes pull at it. If they find it stiff, 'tis a Sign the Whale still pulls with Strength; but if it hang loose, and the Long-Boat lie equally high before and behind in the Water, they pull it in, but lay it in Order, that the Whale may have it easily again if he recover Strength. If he run on a Level, they take Care not to give him too much, lest he should entangle himself about a Rock, and pull out the Harpoon, which he does sometimes. 'Tis observ'd, That the fat ones don't sink immediately when dead, but the lean do, and come up again after some Days. When dead, they immediately begin to stink, and their Flesh ferments like Beer or Ale, and the Steam enflames Men's Eyes if they be weak. When he runs under Ice, where he cannot be follow'd, they cut off their Line, if they cannot pull out the Harpoon; for they always retire to the Ice if they be near, and frequently endanger the Boats. When they are wounded, they spout so loud, that one may hear them as far as a Cannon; but when he grows feeble, the Noise decreases, and sounds like the bubbling of an empty Bottle in the Water, which is a Sign of his being just a dying. Some of them spout Blood to the last, cover the Men and Sloops, and tinge the Sea with it. They likewise fling up a fattish Substance, which looks like Sperm, and is greedily devoured by the Birds call'd *Mallmucks*, and others, who eat them while alive. Sometimes they are surrounded with Boats, and killed with Lances; but this is a dangerous Way for the Men and Boats. The Females, when with Young, are the most dangerous, and make the longest Defence.

2. The Fin-Fish is as long as a Whale, but scarce so bulky by two thirds: He is known by the Fins on his Back near his Tail. The Knob on his Head has a long Hole, thro' which he blows up the Water higher, and with more Force, than the Whale. His Back is not so much bended as that of the Whale. His Lips are brown, and twisted like a Rope, and the Whale-bone hangs to the upper Lip. He is not black like the Whale, but colour'd like a Tench. He is not so fat as the Whale, yet is more dangerous to take, because he moves quicker,

and

and is soonest kill'd by Lances. 'Tis dangerous to strike him with a Harpoon, especially near the Ice; for by his quick Motion, he sometimes pulls the Boat and Men under it. When those Fish appear, there are no more Whales to be seen.

The Ships that go a Whale-fishing carry 30 or 40 Men, and sometimes more, and have generally 5 or 6 Sloops apiece. The largest Ships hold from 800 to 1000 Cardels or Barrels of Fat, and the lesser from 400 to 700. In each Ship there are 60 Lances, 6 Sea-Horse Lances, 40 Harpoons, and 10 long ones to strike Whales under Water, 6 small Sea-Horse Harpoons, and 30 Lines of 80 or 90 Fathom each. The Scurvy is the common Distemper in this Voyage, besides Fevers and Imposthumes; and the Surgeons provide accordingly.

3. The *Sea-Horse*, by some call'd the *Morse*, *Melrusk*, and *Horse-Whale*, is shap'd much like the Seal, but as big as an Ox. Their Legs and Claws are like the Seals, but their Nails short. Their Head is thicker, rounder and stronger: Their Skin an Inch thick, chiefly about the Neck, cover'd with short Hair. They have two great long Teeth in their upper Jaw, about a Foot and two Foot long, and sometimes longer: They hang below their under Lips. They are more esteem'd than Ivory, as being whiter, firmer and heavier, and fit for Handles of Knives, Boxes, &c. The *Furlanders* make Buttons of them, and use them against Poyson and malignant Diseases, wherein they excel that called the *Unicorn's Horn*. Their Mouth is broad before, like a Bullock's, with Bristles above and below, hollow within, and as big as a Straw: The Seamen make Cramp-rings of them. He has two Semi-circular Nostrils, from which he blows the Water like the Whale, but with less Noise. Their Eyes are at a good distance from their Nose, and red like Blood. Their Eye-lids are like those of Four-footed Beasts. Their Eyes are like the Seals: Their Tongues as large as a Neat's-Tongue, and when new boil'd, eatable; but if kept two or three Days, tastes like Train-Oil. Their Necks are thick, so that they seldom turn their Head about. Their Flesh is like that of a Hog, and their Heart and Liver eatable. Of their Yards, which are hard Bone, Handles of Knives

are made. They feed upon Herbs and Fish. They lie in great Numbers upon the Ice, and roar most terribly. They sleep and snore either upon the Water or Ice, and dive like the Seals. They are stout, undaunted Creatures, and stand by one another as long as they have Life; and tho' wounded, make to the Boats, endeavour to get in, pursue them a great way, and sometimes strike Holes in them with their Teeth, or jump in and overset them. They defend their Young as long as they have Breath. They are chiefly taken for their Teeth, of which there are many that are hollow, and worth nothing. When they lie upon the Ice in Numbers, one of them keeps Watch, and when Boats come near, he strikes the next Morse with his Tooth, and so the Signal goes round; upon which they rise up, stand on their fore Foot, look and roar terribly, and make to the Water. The Skin about their Neck is thicker than that of an Elk, and if dressed, would be as good as the best Buff, and very light. They frequently sleep on the Shore, and if they can, get up to high Places. They scarcely value Shot, or Blows, but are easiest kill'd with Javelins. Sometimes Sailors make a good Voyage with their Oil and Teeth, when the Whale-Fishing does not answer.

4. The *Dragon-Fish* has two Fins on his Back, the foremost of which has long Strings, about two Inches high above the Back. He has no Gills, but blowing Holes in his Neck, and on each Side of them two short Fins, and underneath a broad one. Beneath his Belly he has a long narrow Fin, that reaches to his Tail. His Head is oblong, composed of many Bones. He has a raised Part before his Nose. His Tail is about an Inch broad. His Body is long, thin and round; and his Skin is greyish, and shines like Silver.

5. The *Butskopf*, or *Place's-Head*: His Head is blunt, with a Beak of an equal bigness all along, and of a brown Colour marbled. His Fins are like the Dolphin's: His Tail like a Whale's. He has a Spout-Hole above in his Neck, out of which he spouts Water. They are from 16 to 20 Foot long. His Back brown, and his Belly white. They run near the Ships, and keep Company with them a long time.

All these Fishes swim against the Wind, as do the Whales, Fin-Fish, and Dolphins, Mr. *Martens* is of Opinion, That when they tumble, it is not by Way of Play or Diversion, but that they run away before the Storm, and are sensible of it by some Pain in their Bodies a while before it comes, because they generally continue to tumble till the East Wind, which torments them, ceases. They saw another Fish here resembling the Butskopf, but larger, and with a Fin three times as high, by which they may easily be taken as they tumble.

6. *White-Fish*, as large as a *Butskopf*, shap'd like a Whale, without Fins on his Back, but two on his Belly, and a Tail like a Whale's. He has a Spout-Hole on his Head, is of a yellowish Colour, and one of them yields a Barrel of Fat, which is soft, and not much valued. When there's Plenty of them, 'tis a Sign of a good Whale-Fishing, for their Food is the same.

7. The *Unicorn*, has no Fin on his Back, but a Spout-Hole in his Neck. When they swim swiftly, they say they hold up their Horns, or rather Teeth, out of the Water, and go in great Shoals. They are shap'd like a Seal. Their undermost Fins and Tail are like the Whale's; some of them are white, others a dappled grey. Their Bellies are white, and they are from 16 to 20 Foot long.

8. The *Saw-Fish*, or *Sword-Fish*, has a long broad Bone fix'd to his Nose, with sharp Teeth like a Saw on each Side of it. He has two Fins on his Back; that next the Tail is hollow, like a Sickle. He has four underneath his Belly, viz. two on each Side. His Tail is like a Piece of Board pointed behind and underneath, but not divided. His Shape, from Top to Tail, is like a Man's Arm. His Eyes stand high out of his Head. His Nostrils are oblong. His Mouth is directly under his Eyes; and the Fishes are from 2 to 20 Foot long. They are mortal Enemies to the Whale and Fin-Fish, about which they gather in great Numbers, and when they kill them, eat only their Tongue. Sometimes they will sing'y attack a Whale; and in calm Weather the Whale-Fishers lie by till they kill the Whale; and upon the Approach of the Boats, the Sword-Fish being frightened, retreats.

9. The *Hay*. Of this Fish there are several Sorts: They have two Fins on their Backs, and 6 underneath their Belly. Their Tail is of a peculiar Shape, one Part like half of that of the Sword-Fish, and the other shap'd like a Lilly. He has a long Nose. His Mouth is shap'd like the Sword-Fish, is full of sharp Teeth, of which there are three Rows above and below. His Eyes are oblong, and very clear. He has 5 Gills on each Side. His Skin is hard and thick, and rough if struck upwards. They are of a grey Colour, and from one to three Fathom long. They bite great Pieces from the Whale, as if they had been dug out with Shovels, and they devour all the Fat of the Whales under Water; whence Seamen take them up sometimes half devour'd. The Hays have large Livers, which yield Oil. The Flesh of their Backs being cut off, and hung up some Days in the Air, the Seamen think good Meat, and boil or roast it when scarce of other Provisions. The least are best. They devour and eat Men if they catch them swimming in the Sea. They are caught by a great Hook baited with Flesh, and fasten'd to a strong Iron Chain.

The other Fish here are the *Craw-Fish*, without a Tail, otherwise call'd the *Sea-Spider*. They are shap'd like Lobsters, and eatable. They have also *Garnels* or *Prauns*; and a Fish call'd the *Louse of the Whale*, with Scales as hard as Prauns. Their Head is like that of a Louse, with 4 Horns. The two short ones, which stand out before, have Knobs like the Sticks of Kettle-Drums. They have 6 Plates on their Backs: Their foremost Legs are crooked, like a Half-Moon, with sharp Points, by which they fasten in the Skin of the Whale, and bite pieces out of them. Whales are most annoy'd with them in warm Weather. They have also those call'd the *Star-Fish*, of two Sorts, some larger, and some lesser, of a reddish Colour, with 15 Rows of Knobs, which together make the Form of a Star of 5 outward bended Points.

They have also Fishes here call'd *Rotz-Fish*, *Sea-Qualms*, or *Slime-Fishes*, of several Sorts: They seem to be nothing else but Slime, and are transparent. Some of them resemble flat Snails, and instead of Fins, have Stalks like Feathers. Some call them

Sea-Nettles, because they occasion a burning Pain like a Nettle. They cleanse the Sea mightily, for all sort of Filth sticks to them, as a Bur does to Cloth. The first of them is call'd a *Sea-Mayfly*, are transparent, and dissolve, if held in one's Hand. They have two Fins under their Neck, resembling those of Whales. They are shap'd like white Rowls, broad and thick in the middle. The Head is broad and round, split in the middle, and has small Horns of the breadth of a Straw. They have 6 little red Knobs on their Heads, suppos'd to be Eyes. Their Mouth is split, and from thence to the Belly are its Guts, which are easily seen, because he is transparent. The Colour of the Fish is like the White of an Egg: It moves in the Water like a Sea-Nettle, and the Birds feed on them. The 2d is call'd the *Snail-Slime-Fish*: He is transparent, flat and round about, like a Snail; and upon the Land are found Shells of such flat Snails; on each Side are Stalks, with which he moves in the Sea. They are of a brown Colour, and are as numerous in those Seas, as Atoms of Dust in the Sun. 'Tis suppos'd, the Whales feed on them, as well as the Birds. The 3d is the *Hat-Slime-Fish*; his upper Part resembles a Toad-stool. They go up and down perpendicularly in the Water, and have a blue Knob in the middle. The 4th is call'd the *Rose-Slime-Fish*, being round as a Circle, and indented on the Edges. There is another call'd the *Slime-Fish like a Cap*; and a 6th call'd the *Slime-Fish like a Fountain*, resembling a Fountain with 8 Streams or Spouts. Their Body is as white as Milk; but their Streams sometimes change into all the Colours of the Rainbow.

Of the SEA.

THE Colour of the Sea changes here according to that of the Sky: If the Air be clear, the Sea is as blue as Saphir; if cloudy, it is green as an Emerald; if foggy with Sun-shine, 'tis yellow: if it be dark, it looks like Indigo. In stormy and cloudy Weather, 'tis of the Colour of black Lead. The Stream among the Ice is observ'd to run Southward, and at the *Musile-Harven* it runs Northward. There is

nothing certain as to its ebbing and flowing; but when the Winds are high, the Water is observ'd to be higher about the Land than at other Times. The Water in a Calm is very clear, so that one may see 12 or 14 Fathom deep. The Waves begin to rise first from a small Breeze of Wind; and as the Wind increaseth, they grow higher and bigger, till they grow as high as Mountains, and break with Foam, which in a hard Wind blows like Dust, and the Waves fall over one another with great Noise. At Night, when it dashes much, it shines like Fire.

Of the ICE.

THE West-Ice begins to break in *April* and *May*. The Ice here is not so smooth as to slide on, nor transparent, but looks like Loaf-Sugar. Where 'tis fix'd on the Sea, it reflects a Snow-white Brightness on the Sky. The Sea dashes against those Ice-fields, which occasions several fine Figures, like Mountains, Tables, Chapels, and all sorts of Beasts. They are much deeper under the Water than high above it, and as hard as Stone. The small Ice-fields are dangerous for Ships, and many times break them to pieces; but they fasten themselves to the greater ones with large Ice-hooks fix'd to strong Cables. Their best Defence against the smaller Pieces of Ice are dead Whales, or their Tails and Fins hung round their Ships; and sometimes they keep them off with long Poles and Hooks. The Ice rises sometimes 16 Fathoms above the Water, and often freezes to the bottom, and at other times about 35 Fathoms under Water; and that below is more salt, and easier melted than that above. It makes a terrible Noise when it freezes or breaks, is sometimes of a delicate blue Colour, and the deeper the bluer.

The Trade from *England* to those Parts, begun a little before *Stephen Burroughs* had been there in search of a N. E. Passage to the *Indies*: For we find, That in 1553, King *Philip* and Queen *Mary* gave Commission to certain Merchants to trade to *Russia*, and made them a Corporation, which not only begun a profitable Trade to those Northern Countries, but employ'd several Ships

to find out a N. E. Passage to the *Indies*, particularly *Arthur Pett* and *Charles Jackman* about 1580, who 'tis probable were also upon *Greenland*. None but the *English* frequented those Seas till 1578, that a *Dutch* Ship came to *Cola*, and a Year or two after another to *St. Nicholas*, by the Advice of an *Englishman*, who oppos'd the Company. In 1594, the *Dutch* employ'd *Barents*, and others to find out a Passage to the *Indies*; and in 1596, they sent 3 Pilots upon the same Design, who first came to *Bear Island*, and then to *Greenland*. In 1603, *Stephen Bennet* went as far as *Cherry Island*, from whence he brought *Lead-Oar*. In 1608, *Henry Hudson* was sent to discover the North Pole, went to 82 Deg. where he saw several Islands beyond that, and gave Names to several Places of *Greenland* formerly discover'd.

The Company being inform'd of the great Number of *Morses* and *Whales* in those Parts, they sent two Ships thither, which kill'd many *Morses*. In 1610, they sent out the Ship *Amity*, *Jonas Pool* Commander, a *Whale-fishing*, who fell upon the Land formerly discover'd, tho' not regarded, and call'd it *Greenland*, either because of the green Moss, or because the Sea about it look'd green. He call'd it also, *King James's New Land*; but that Name was soon forgot. He seiz'd the Country for the Use of his Masters, and for that end set up a red Cross, with Writing upon it. He made some Oil there, and brought home one of those call'd *Unicorn's Horns*. In 1611, the Company sent two Ships more thither, where they killed several *Whales*, and 500 *Morses*. In 1612, they sent two more, which killed 17 *Whales*, with some *Morses*, and made 180 Tun of Oil. That same Year, a *Dutch* and a *Spanish* Ship were conducted thither by two *English* Pilots, who were threaten'd by the *English* Ships; but notwithstanding made a good Voyage. In 1613, the Company sent 7 Ships, with a Patent to prohibit all Strangers to fish there, except the *Muscovia* Company. They found 15 *Dutch*, *French* and *Flemish* Ships there, with some *English* Interlopers: To some of them the General gave Liberty, with others he compounded for half their Fish, and others he drove away, after taking the *English* Sailors from them. This Year they discover'd

Hope Island, and others to the West, but returned home not very well laden. In 1614, the Company sent 13 great Ships, and two *Pinnaces* well arm'd, and the *Dutch* sent 18, 4 of which were Men of War; so that being stronger than we, they stay'd and fish'd, as we also did; but both return'd poorly laden. Our Men discover'd the Country then to 80 Degrees. They took possession of several Parts of the Coast for the King, and set up a Cross with his Arms upon it in Lead; and the *Dutch* did the like afterwards in the same Places for the Prince of *Orange*. In 1615, the Company sent two great Ships and two great *Pinnaces*; but the *Dutch* having 14 Ships there, ours had not their full Loading. That Year the King of *Denmark* sent 3 Men of War there, with an *English* Pilot, to demand Custom for fishing on his Island, as he call'd it; but it was deny'd him, and the Right of the *English* asserted. In 1616, the Company sent 8 great Ships, and 2 *Pinnaces*, which being appointed to several Harbours, they return'd full laden. The *Dutch* sent 4 Ships, which made but a bad Voyage. In 1617, the Company sent 14 Ships and 2 *Pinnaces*. They met 11 Sail of *Dutch* in *Hornsound*, from whom they took their Fish, and their *English* Sailors, and then forc'd them away. This Year the Company's Ships made 1900 Tun of Oil. In 1618, the *English* forc'd the *Dutch* again from *Hornsound*, and took from them some of their Goods, with Ordnance and Ammunition, which were afterwards restor'd.

A new Company of *English*, *Scotts* and *Zealanders*, procur'd a Grant to fish in those Parts: Upon which the former Adventurers join'd with the *East-India* Company, and sent out 13 Ships and 2 *Pinnaces*; but they were worsted by 23 *Zealanders*, which made it an unfortunate Voyage. In 1619, the Company sent 9 Ships; but the *Dutch* being there before them, they made a losing Voyage; and one of their great Ships lying at Anchor under a Mountain, a great Piece of Ice fell down from it, kill'd and wound several of their Men, and shatter'd their Ship so much, that she was with Difficulty repair'd. The *Dutch* at the same time being fully laden, did so much undersell them, that they gave over trading thither as a Company.

But Mr. *Ralph Freeman*, and others of the Company, continu'd it, and in 1620 sent 7 Ships, who return'd but with half Loading. In 1621, they sent 8 Ships, which, notwithstanding the Harm done them by the *Dutch*, brought home 1100 Tun of Oil. In 1622, they sent out 9 Ships, one of which was lost in the Ice, and the rest brought home 1300 Tun of Oil.

We find nothing more worth relating till 1630, when the Company sent a Ship commanded by *William Goodler*, who quickly made up his Lading; and sending 8 of his Men on Shore to kill Deer, they lost their Way in a Fog; and the Ships going off because of the Ice, they were forc'd to Winter there, and took up their Habitation in the Couper's Tent, within which they built another with 4 Cabbins, which they furnish'd with the Skins of Bears, Deer and Foxes, and Pieces of old Sails. Having lost their Sloop, with the Deer they had formerly kill'd, in the Ice, they went out a hunting for more, and kill'd 2 Morfes, which they roasted, and eat at leisure.

Finding that their Provisions were not enough for half the Winter, they made it up with Fritters of Whales, and reserv'd their Deer for Sicknefs and Holy-days, which they preserv'd by roasting, and stowing it in the empty Casks they found there. The Want of Light was a great Hindrance to their getting Provisions; for from the 14th of *October* to the 3d of *February*, they saw not the Sun; but in clear Weather, they had Moon-light; and the Bears coming to-

wards their Tent, at several times they killed 8 of them: They found their Flesh wholesome; but when they eat their Liver, it made their Skins peel off. When the Sun began to appear, the Fowls and Foxes came abroad, for which they set Traps. They catch'd abundance of Fowl, and about 50 Foxes, which being roasted, were good and pleasant Meat, and reliev'd them much against the Scurvy. The first of *May*, the Weather being somewhat warm, they went abroad for Provisions, and found great Quantities of Willocks Eggs, which were very refreshing. That same Day two *English* Ships arriv'd in the *Sound*, which took them on board, and brought them safe to *England*. The Cold was so severe during the Winter, that it rais'd Blisters on their Flesh, as if they had been burnt. If they touch'd Iron, it stuck to their Fingers; and while they sat by a great Fire, which they made of broken Sloops, &c. tho' their Stockings were burnt, their Feet were numb'd with Cold, and their Backs frozen, so that they were forc'd to heat Stones at the Fire to apply to their Feet, and other Parts of their Bodies, to keep them from freezing.

'Tis proper here to observe, That the *Dutch*, in order to deprive Sir *Hugh Wilmoughby* of the Honour of first discovering *Greenland*, call an imaginary Island by his Name, alledging that was the Place he discover'd: They place it near *Nova-Zembla*. But tho' *Hudson* sail'd in quest of it, he could never find it.

CHAP. VI.

NOVA-ZEMBLA.

Nova-Zembla is separated from *Samøia* by the Streights of *Weygates*. On the N. E. is the *Still Sea*, into which the River *Oby* runs. The Lat. is from 68 to 78 Deg. and the Long. from 70 to 98. *Morden* says, in all the Maps he ever saw, it is plac'd

110 or 150 Deg. too far E. and thinks this Mistake was the chief Cause of Captain *Wood's* failing in his Search of a N. E. Passage to *China*. It was first discovered by the *English* in 1556, and has oft been visited both by them and the *Dutch*, to find out a N. E. Passage; but this Design has always been

been defeated, by the Flakes of Ice. The Misfortune of that worthy Pilot *William Barents* has also been discouraging to others: He adventur'd so far, that his Ship was first hemm'd in, then frozen and broken in the Ice, so that he was forc'd to Winter upon the Land, where he lost his Life.

Those that Winter'd in *Nova-Zembla* in 1596, in 76 Deg. on Nov. 2. N. S. saw the Sun not fully above the Earth: It rose S. S. E. and set S. S. W. After November 4, they saw it no more; but the Moon, from the first Quarter to the last, is to be seen Night and Day. January 24, they saw the Edge of the Sun above the Horizon; and the 27th, they saw his whole Body: He was in 5 Deg. 25 Min. of *Aquarius*. They farther observ'd, by an Ephemerides they carried with them, that at *Venice* there would be a Conjunction of the Moon and *Jupiter* that very Day at One a Clock in the Morning, which they in *Nova-Zembla* saw at Six in *Taurus*: So that the Difference of Longitude of those two Places is 5 Hours, or 75 Deg. *Venice* being in Long. 37 Deg. 25 Min. *Nova-Zembla* must be 112 Deg. 25 Min. But these Observations are contrary to the Opinion of all Astronomers. There is publish'd lately in *Holland* a new Chart of *Nova-Zembla*, which places the N. of it in the same Parallel with Part of *Greenland*. A late *French* Traveller, who was Chirurgion in a *Danish* Ship, affirms, That *Nova-Zembla* is join'd to *Samoieda* on the South by the *Pater-Noster* Mountains, and

on the North to *Greenland*: But this is contrary to the Observations of both *English* and *Dutch* Mariners. *Nova-Zembla* signifies in the *Russian* Language a *New Land*. Some *Danish* Seamen, sent out by their King's Order in 1653, say, they passed the *Weygate* Streights, and found some Inhabitants of *Nova-Zembla* in their Canoes. They add, That they are very nimble Footmen; That their Clothes were made of the Skins of great Birds, like Penguins and Pelicans, with the Feathers on them. Their Boots were of the Hides of Morfes, or great Seals: That they had Quivers at their Backs full of Arrows, with a Hatchet of Fish-Bones: That their Temper is untractable and indocil; and they abhor our Beer, Spirits and Meat. The *Dutch*, who Winter'd there, mention no other Beasts than Bears, Foxes, and such others as live upon Prey. They add, That there is neither Leaves nor Grass for other Beasts to feed upon. But Mr. *Hudson*, who was there in the Summer, saw some green Places, and Deer feeding in them. 'Tis probable, upon the Approach of Winter, the Deer retire to *Samoieda*, or other neighbouring Places. Our Merchants who have liv'd in *Russia* say, That in *Nova-Zembla* there is a great Lake, where a great Number of Geese and Swans breed, which moult about St. *Peter's* Day; and then the *Russes* go thither to gather the Feathers, and kill the Fowls, which they dry and bring home for Winter Provision.

CHAP. VII.

Of Attempts to discover a North-East Passage to China, &c. by Nova-Zembla.

WE shall pass by the Attempts of others, and only take Notice of those mention'd by Captain *John Wood*, beginning with that made by himself in the Ship *Speedwell*, by the Order of King *Charles II.* of Great Britain. The Captain

was induc'd to this by several Relations sent from *Holland* and elsewhere, which made him believe that such a Passage had been found, and in a great measure discover'd by others. Therefore he set out with the *Speedwell*, and another Ship call'd the *Prosperous Pink*, fitted for the Voyage at the Charge

Charge of the Duke of York and others, the 28th of May, 1676. On the 29th of June after, the *Prosperous* struck on a Ledge of Rocks, and sunk, and the Men escap'd with Difficulty on Shore in *Nova-Zembla* with part of their Provisions; but were brought off by Captain *Flaws*, after having stay'd on Shore some Time. Captain *Wood* gives the following Account of the Voyage, and of the Reasons of their Miscarriage. He says, it was their following the Opinion of *William Barents*, which was to steer directly N. E. from the North Cape, and to fall in betwixt *Greenland* and *Nova-Zembla*, which he attempted accordingly. He continued coasting the Ice sometimes with great Hopes of a clear Sea, and then again was dishearten'd by more Ice; but at last lost all Hopes, when he saw *Nova-Zembla*, and the Ice join'd to it; by which he found that *Barents* was mistaken, and that all the *English* and *Dutch* Relations, which encourag'd him to the Undertaking, were meer Forgeries; for he could get no further than 76 Deg. and found the Sea frozen without Intermission, which would have taken some Centuries of Years to thaw it. He concludes *Nova-Zembla* and *Greenland* to be the same Continent; for had there been a Passage, there would have been some Current, which he could not find, but only a small Tide, which rises about 8 Foot. He thinks 'tis not certainly known whether *Nova-Zembla* be an Island, or join'd to the Continent of *Tartary*; but says, 'tis no great matter, since 'tis the most miserable Country upon Earth, most of it always cover'd with Snow; and what is not so, is not to be walk'd on, being like Boggs, with a Moss on the Surface, that bears a small blue and yellow Flower, which is all the Product of the Earth here. Upon digging two Foot deep, they came to a firm Body of Ice, the like of which he thinks was never heard before; and shews their Mistake, who think Men might preserve themselves there during the Winter, by digging Caves in the Earth. The Snow lies there contrary to what it does in other Climates, where it melts soonest near the Sea; but here it washes under the Snow a prodigious way, and the Snow hangs over in a manner fearful to behold. The Mountains are cover'd all the Way up with Snow,

which he thinks has lain there ever since the Creation. On the Top of the Mountains they found it bare, and had indifferent good walking upon Slates; but they durst not go far, lest they should have lost their Way in the Fogs. The Beasts of the Country, he says, are large white Bears and Deer, with some Foxes, a little Creature resembling a Cony, but not so big as a Rat; and they saw no Fowls, but little Birds about the Size of a Lark. Every quarter of a Mile, there runs down from the Hills into the Sea a small River of very good Water, melted from Snow; and where those Rivulets fall into the Sea, they found black Marble with white Veins. The Westernmost Point of *Nova-Zembla*, where he lost his Ship, he call'd *Point-Speed-ill*. It lies in 74 Deg. 30 Min. N. Lat. and in Long. E. from *London* 63 Deg. The Tide rises 8 Foot, and sets directly upon the Shore, which, he says, is a certain Sign that there is no Passage to the Northward. The Sea about the Ice and Land is the saltest that ever he tasted, and the heaviest and clearest Water in the World; for he could see the Bottom with Shells upon it at 80 Fathom Water, which is 480 Foot deep.

The Captain takes Notice of the like Attempts made formerly by others, as follows:

The First that ever attempted the said Voyage was Sir *Hugh Willoughby*, in the Year 1553, with 3 Sail of Ships, and he sail'd to the North-Cape of *Finmarke*, and then into the Lat. of 72, where he says he saw Land; but to this Day it cannot be found again; And I am of Opinion, says the Captain, That it was some Fog-Bank that he saw; for in my Return home, I run over the same Place where our Chart-makers lay down that Land: But certain it was, that by foul Weather he was forc'd into a Harbour in *Lapland* call'd *Arxena*, whence, by the continuance of bad Weather, he could never return out, but was there frozen to Death with all his Ship's Company: So that by this Voyage, there was no Light given to find a Passage that Way.

The Second that attempted it was one Capt. *Stephen Burroughs*, afterward Comptroller of the Navy to Queen *Elizabeth*. In the Year 1556, he set forward, and passed the North-Cape; and sailing farther Easterly,

disco-

discover'd the *Weygates*; that is, the Streight that runneth between the South Part of *Nova-Zembla*, and the *Samoieds* Country, where he entred; and believing that *Sinu*, or by the Eastward of the Streights, to be a free and open Sea, he return'd with Hopes of Passage that Way to *China* and *Japan*.

The Third that attempted it was Captain *Arthur Pett*, and Captain *Charles Jackman*, in the Year 1580. being sent out by Queen *Elizabeth* to follow the Track of *Burroughs*: So setting forwards, they came to the *Weygates*, pass'd the Streights, and came into the Sea to the Eastward, where they met with such a vast Quantity of Ice and bad Weather, that they with great Hazard, Peril, and Labour, were forc'd to return; but by foul Weather lost one the other, and *Pett* was never heard of since: So the Passage through the *Weygates* was in *England* laid by, as thought not possible that Way; and then the *Hollanders* undertook it.

The Fourth that attempted it was *William Barents*, a well experienc'd Navigator and Artist, sent out of *Holland* by Prince *Morrice* in the Year 1606. He sail'd into the *Weygates*; but being entred, he found the same Incumbrance with Ice that *Pett* and *Jackman* had done before: So tasting of the Water, and finding it fresh, which neither *Burrough*, *Pett*, nor *Jackman*, had observ'd, he return'd without any Hope or Probability of a Passage that Way: But this not discouraging him, he resolv'd a second Adventure to the Northward of *Nova-Zembla*, to see what might be perform'd that Way.

So in the Year 1607, he set forward, and arriv'd on the Coast of *Nova-Zembla* in the Lat. of 73, where he met with Ice; and so coasted the Shore till he came to the Lat. of 76, where he could get no farther, and by the Ice was there driven on Shore, and his Ship broke in pieces by it, and he confin'd to Winter there, where they all endur'd the greatest Extremity of Cold that ever Mortals did. The Winter being past, they with Difficulty, in two Boats, got to *Cola* in *Lapland*; but before their Arrival there, *William Barents* dy'd, to the great Grief of all his Company.

The next that attempted it, was that famous Discoverer of our Nation, Mr. *Henry*

Hudson, in the Year 1610; but he being dishearten'd by the Voyage of *Barents*, attemp'ted but little.

So the Thoughts of a Passage by the N. E. was wholly laid aside, till Captain *Wood* undertook it again; of whose ill Success, we have heard already.

Cherry Island.

THIS Island lies in 74 Deg. 30 Min. N. Lat. and in Long. 40. It was first call'd, and discover'd to be of any Profit, in 1603. A Ship then set out at the Charge of Sir *Francis Cherry* touch'd upon it, and call'd it by his Name.

May 1. 1604. *Stephen Bennet* sail'd from *London*, and July 8. came in Sight of this Island; and going ashore, one of his Men with a Gun kill'd as many Fowls as almost laden the Boat: They found likewise many Foxes. In another Bay, they saw an incredible Number of Morfes swimming in the Sea, and 1000 lying on the Ground like Hogs. They kill'd 15, and found as many of their Teeth as fill'd a Hoghead.

In 1605, the same Persons slew there abundance of Morfes with Lances, which they found did greater Execution than Guns. They made 11 Tun of Oil of their Blubber. In 1606, they return'd, and in 6 Hours slew 800 Morfes, and 2 great Bears: Of which they made 22 Tun of Oil, and 3 Hogheads of Teeth. In 1608, they slew 900 Morfes in 7 Hours, which made 31 Tun of Oil. They brought one Male Morfe to *England*, which liv'd 10 Weeks, and was taught many Things. In 1610, two Ships arriv'd there, and found three Lead-Mines. They set up an Ensign, as a Token of their taking Possession of the Island for the *Russia* Company. Three other Ships kill'd 800 Morfes there that same Year.

It is worth Observation, That both the Whale and Morfe-fishing was known and practis'd 800 Years ago, as appears by the Relation which *Offher* the *Norwegian* made to *Alfred* King of *England*, when he acquainted him, that the Morfes were hunted for their Teeth, which were then mightily esteem'd.

Mayen's Island.

John Mayen's Island has its Name, as the *Dutch* pretend, from the first Discoverer, their Countryman. Some take it to be what the *English* call *Hope* Island. It is of no great Consequence now, since the Whales have left it; but formerly it was frequented in the Summer-time on the Account of Whale-fishing, and was well known to most of the Northern Adventurers of *Europe*. On the West-Side 'tis not so much inclos'd with Ice as on the North, and therefore Mariners steer their Course to the West-Side; but if by Mistake they come to the East-Side, they are forc'd to sail North about the Island, which is very dangerous,

by reason of the Ice and high Winds. The Sea flows here from S. to N. and ebbs from N. to S. At the North-End lies *Bears* Mountain, which takes up the whole Space betwixt the two Shores: 'Tis very steep, and so high, that 'tis seen 30 Miles off at Sea. It derives its Name from the many Bears seen upon it. There are several Bays in this Island, to which the *Dutch* have given Names; one of them is call'd the *English* Bay. The Sea is 60 Fathom deep about a Musket-shot from the Shore; but a little further, the Sounding-Line cannot reach the Bottom. It lies from S. W. to N. E. and the further it shoots in Length, the narrower it grows. The Northernmost Point of it lies in 71 Deg. 23 Min. N. Lat.

CHAPTER VIII.

GRONELAND.

CAll'd also *Groinland*, *Groenland*, and anciently *Engroenland*, lies (as the Islanders say) like a Half-Moon, about the North of their Country, at the Distance of 4 Days sailing; yet it seems not to lie so much East, but rather on the North of *America*. The Lat. of it, from Cape Farewell to the most Southerly Point, is 60 Deg. 30 Min. It is unknown how many Deg. it lies North. The East and West are encompass'd by two great Oceans; but at what Deg. of Longitude, is not yet discover'd: Only Mr. *Fotherby* found it near the Coast of *Groneland* in 71 Deg. and the South of *Groenland* to be above 200 Leagues. Common Maps place the most Eastern Parts in 15 Deg. of Longitude.

It is said to have been first discover'd by a *Norwegian* nam'd *Eric Rotsep*, who having committed a Murder in *Iceland*, resolv'd to fly to some strange Country. He landed here, and, because of its Greenness, call'd it *Greenland*. He sent his Son to *Olaus Trug-*

ger, King of *Norway*, to get his Pardon, which was obtain'd. Upon this, many Gentlemen adventured to plant there, settled Christianity, and built two Towns, called *Garde* and *Albe*. The King sent thither a Vice-Roy, who had his Seat at *Albe*, which was also made a Bishop's See, and had a Cathedral. They write also of a Monastery dedicated to St. *Thomas*, which they pretend was built of Pumice-Stone, and that it had a Spring so hot, as to boil their Meat, and being convey'd into the Rooms by Pipes, warm'd them as well as Stoves; but this seems fabulous. This small Colony fail'd about 1349, whether by a Disease they call'd the *Black Plague*, or the Barbarity of the Natives, is not certain. In 1406, the Bishop of *Drontheim* sent one *Andreas* to bring an Account of the State of Christianity there; but he never return'd.

The late Voyages to those Coasts were to find out a N. W. Passage to *China*, after the N. E. Passage had been long sought in vain.

Martin Frobisher was the first who set out for that Design in 1576, and he came to a great Inlet in 62 Deg. call'd by him *Frobisher's Streights*. He sail'd 60 Leagues into it, and had main Land on either Side. He found an Oar, which he thought to be Gold, but it prov'd only Black Lead. They found a Silver Mine; but it lay so deep in the Rocks, that they could not dig it. They melted also Gold, but in very small Quantities, out of Stones they found in *Smith's Isle*. They found a dead Fish 12 Foot long, not unlike a Porpus, with a Horn growing out of his Snout like that call'd the *Unicorn's Horn*, which is still kept at *Windsor*. In 1578, he took Possession of the Land in the Name of *Queen Elizabeth*, and call'd it *Metacognita*.

In 1585, 1586, and 1587, *Mr. John Davis* was employ'd in this Design: He enter'd a Streight on the West-Side of *Greenland*, call'd after him, *Davis's Streights*; then into a wide Sea, 72 Deg. 12 Min. Westward, where there was 40 Leagues betwixt Coast and Coast. *Mr. Hudson*, in 1610, went to the S. W. of *Davis's Streights*, 100 Leagues further than any had done, which he call'd *Hudson's Streights*. And in 1615, and 1616, *Mr. Baffin* discover'd that there was no Passage in the North of *Davis's Streights*. He found Rocks of white Stone, finer and purer than *Alabaster*, and Plenty of *Angelica*, which the Natives us'd to eat.

In 1605, the King of *Denmark* set out 3 Ships, *John Cuningham*, a *Scotts-man*, was Admiral: They went a great way up *Davis's Streights*. In a Place they call'd *Cuningham-Ford*, they found Stones, out of 100 Weight of which they extracted 26 Ounces of fine Silver. They brought with them 3 of the Natives of *Greenland* to *Denmark*.

In 1619, *John Munch*, with 2 Ships, was sent thither by the King of *Denmark*. They arriv'd at *Cape Farewell* in 65 Deg. 30 Min. They could not handle their Tackle for Icicles. He call'd that Part of *Hudson's Bay* towards *Greenland*, *Mare Christianum*; and the South Part of the Bay he call'd, *Mare Novum*. As to the 8 *Greenlanders* transported at several times to *Denmark*, the King commanded them to be treated with all possible Humanity. They lov'd Flesh and Fish raw better than all other Meats. They abhorr'd Wine and Brandy. Train-Oil was their

favourite Drink; but no Offices of Kindness or Care could take off their Melancholy and Chagrin, for the Want of their belov'd Country. Two of 'em were dextrous at rowing. They often had a Design to make their Escape home, and were excellent in diving for Pearl Muscles; but the Governor's Covetousness and Cruelty, in making them dive in Winter, kill'd one of them. The other never enjoy'd himself after: He was resolute to go home, and told those who dissuaded him, That he would go Northward so far, and then the Stars would direct him to his own Country.

The Country is almost all high Land, cover'd with Snow. It has little or no Wood, except some few Bushes, and not many Plants or Herbs. They live upon Fish, and have but few Beasts. The Country is subject to Earthquakes, but healthful. The Natives neither plant nor sow, tho' the Soil seems to be fertile and pleasant betwixt the Mountains. The North Parts are undiscover'd, because of the Ice; and the Southern Part consists of many Islands, which occasion Variety of strong Currents.

Their Beasts are Foxes, Bears, Black Rain-Deer, and Dogs; the bigger Sort of which draw their Sleds; the lesser kind they feed for Meat. All those who have been there talk of a North Light, as they call it, because it appears in that Point. They say it resembles a great Pillar of Fire, darts out Streams every way, moves from Place to Place, leaves behind it a Mist or Cloud, appears usually about the Time of the New Moon, enlightens the whole Country, and continues till it be hid by the Beams of the Sun.

Their Fish are Whales, Dog-Fish, and Sea-Unicorns; the Horns, growing in their Snouts, are kept as Rarities in Princes Cabinets. The Natives use them to head their Darts and Arrows, and when sharpen'd and ground on Stones, are as piercing as ours. This Creature fights the Whale with his Snout.

They have Fowls here in great Number, particularly *Solan Geese*, such as are in the Island of the *Bast* near *Edinburgh*. The Natives use their Skins for Clothes, with the Feathers inwards in Winter, and outwards in Summer. Two or Three of our Men kill'd 1500 of those Geese with their Guns.

in one Day. Their Skins are thicker, and their Flesh worse tasted, than those elsewhere.

The *Norwegians* found several Nations there, govern'd by different Kings, who all join'd in War against them. Our late Discoverers found a Country in 66 Deg. 50 Min. the Natives call themselves, as they thought, *Secanunga*, and said they had a great King call'd *Cachio*, who was carried on Men's Shoulders.

Their RELIGION.

They seem to worship the Sun; for when our Men invited them to Conversation, they held up their Hands toward it, crying, *Totan*, and would not come near till they did the like. Yet some, who have been further in the Country, say, they found such Images as we make of the Devil, with Altars, and the Bones of many Beasts by them. The Natives are given to Inchantment and Sorcery, and when they worship the Devil, lie flat on their Bellies, and mutter their Prayers into the Ground, under which they conceive the Devil to have his Abode. In some Diseases they tie a Stick to a great Stone, and pray to it, and if they can lift it up easily, they think their Prayers are heard.

Their STATURE and TEMPER.

They are generally low, have black Hair, flat Noses, broad Faces, Lips turn'd up, of a ripe Olive Colour, and some of them quite black. The Women stain their Faces with blue, and sometimes with black Streaks, which they let into the Skin, by pricking it with a sharp Bone, so as it can never be taken out again. They very much resemble the *Samoeids* and *Laplanders*. They are active, strong, courageous, and desperate, so that many of them chuse rather to throw themselves Head-long from the Rocks, than be taken by our Men. They are thievish, revengeful, and treacherous, and not to be gain'd by any Civilities; so that frequently after they have been kindly entertain'd, they would shoot at, sling Stones, and kill our Men if they could. They de-

light exceedingly in Musick, and keep Time to it with Voice, Hands and Feet. They are so very affectionate one to another, that meeting a *Danish* Seaman, who looked somewhat like them in his Features, they gave him all possible Demonstration of Kindness.

Their HABITATIONS.

IN the Summer, when they fish, they have Tents, which they remove from Place to Place in their Boats: They consist of 4 Poles, which they cover with Skins. In the Winter, they retire to the Vallies, and their Houses are round Caves at the Foot of an Hill, near together, and Passages from one to another within. Their Doors open to the S. and, with the Entries, stand without the Caves, and are made artificially with Ribs of Whales, cover'd with Seal-Skin. The Place where they lie is rais'd higher than the rest, and cover'd with Moss.

Their Way of TRADING.

They make two Heaps, one of such Things as they want, and the other of what they would part with, and they balance the Account, by adding or taking away from the respective Heaps.

Their CLOTHES.

They wear either the Skins of Birds, as has been mention'd already, or those of Seals, Dog-Fish, &c. with the Fur outward, the better to deceive the Seals when they fish for them. They sew their Clothes with the Sinews of Beasts, and with Needles made of Fish-Bones.

Their BOATS.

They make them of Whale-Bone, stitch'd with Sinews of Beasts, and cover'd with Seal-Skins. They are shap'd like a Weaver's Shuttle, so that they can row 'em either way. In the middle are the Ribs, to keep the Sides asunder, and to make a Hole

in the Covering where the Rower sits. They have a Deck of the same Materials. In the middle, there's a Hole as big as a Man's Waste. When he goes to Sea, he sets himself in that Hole, stretching his Feet forward into the Hollow of the Boat, and stops the Hole so close with his Frock, that no Water can enter, tho' it were at the bottom of the Sea. His Frock is streight ty'd at the Wrists and to his Neck, and his Capouch is also sew'd close to it; so that if his Boat be overturn'd in the Sea, he rises again without any Wet, either upon his Skin, or in his Boat. They have but one Oar, 6 Foot long, with a Paddle 6 Inches broad at either End. This serves both to ballance his Boat, and to move it, which he does with such incredible Swiftneſs, that

one of our Boats with 10 Oars is not able to keep Company with them. The *Danish* Relation says, they row'd so swift, that they dazzled the Eyes of the Spectators; and tho' they cross'd frequently, they never interfered or hit one another. They fish ordinarily with long barb'd Darts, with Bladders ty'd to them, that when they have struck the Fish, he may spend himself by struggling to get under Water, which yet he cannot do, and so is easily taken. Their Fishing-Boats are from 10 to 20 Foot long, and their larger Boats are 30 or 40, with 10 or more Seats for Rowers. *Bembo*, in his *Venetian* History, says, That one of these Boats, with 7 Persons in it, was by Storm cast upon the Coasts of *Britany*.

CHAP. IX. FREESLAND.

Some say, this Island lies 60 Deg. more Westward than any other Part of *Europe*. Mariners are not agreed about its Extent: Some say, it is not much less than *England*. There are Maps which place it from Lat. 60 to 63, 30 Min. and in Long. from 340 to 347.

It was first discover'd by *Nicolao* and *Antonio Zani*, two *Venetian* Gentlemen, that were shipwreck'd here.

They say, the Inhabitants are very good Christians, and civil, govern'd by a great Lord call'd *Lichamay*. The People our

Men saw resembled the *Groenlanders* in every thing, and were perswaded it join'd to *Greenland*; in which they were confirmed, by the many Islands of Ice they saw there, which coming from the North, shews that there is Land that way. There is some pale Coral here, and little Stones, clear as Chrystal, in a Place they call *West-England*. There is good fishing every where upon the Coast, which is so full of Ice, that 'tis almost inaccessible. The Land is rugged and high, and the Mountains cover'd with Snow.

CHAP. X.

Of ISELAND, or rather ICELAND.

THis Country, according to some Maps, lies from $64\frac{1}{2}$ Deg. to 68 N. Lat. and from Long. 345 to 4. Moll from 355 to 8. *Burns* on *Cluverius* says, it is 144 German Leagues long, and 65 broad. It lies 420 Miles W. from the Coast of Norway, and 360 N. from Scotland.

It was first discover'd by *Nadocum*, a Privateer of Norway, in 860, who, because of the great Quantity of Snow there, call'd it *Snowland*. Some Years after, *Flaccus*, another Norway Privateer, gave it the Name of *Iceland*, from the great Quantity of Ice he found there.

It was first inhabited by the *Norwegians* in 874, who were led thither by *Ingulphus*, one of their Lords.

Their Government was an Aristocracy till the Year 1262, that the Kings of Norway subdued them.

They continued in Idolatry till the beginning of the 11th Century, that *Olaus Trugger* the Pious planted Christianity among them, which occasion'd 20 Years Civil War with the Natives. *Christian III.* about 1550, introduc'd the Reformation. *Christian IV.* caus'd the Scriptures to be translated for the Use of the Islanders into their own Language.

Of the AIR, SOIL, and PRODUCT.

THE Air is very cold, and the Country Mountainous; but in the Southern Parts of the Island, where it is more level, the Meadows are so rich, that Beasts put into them must be fed by Measure, otherwise they would burst themselves. The Natives love the Flesh of Bears, Wolves and Foxes, which they catch upon the Ice, better than Beef. The Oxen of this Island have no Horns. There are scarcely any

Trees, save low Birch, and Juniper Bushes. Horses and Cows are their only Cattle, which feed on dry'd Fish when they want Hay. They have excellent little Dogs, not unlike those of *Malta*. They have also Falcons and White Bears. There is a smoking Fountain, whose Exhalations turn every thing into Stone, without altering the exterior Form. There is also another Fountain, whose Water kills all that drink of it. It has 3 very high Mountains, cover'd with Snow at Top, which at Times vomit Fire: The most noted is *Hesla*, in which there are rich Mines of Brimstone. It often throws out Flames and Stones at a prodigious distance, so that those who adventure too near, are frequently swallow'd up in Gulphs of Brimstone, which are so cover'd with Althes, that one cannot perceive them. The Natives call this Place the *Mouth of Hell*: And the frequent Apparition of Ghosts there, (if we may believe *Olaus Magnus*) confirms them in that Opinion. *Grotius* thinks, that *Mexico* was Peopled from this Place. In 982, *Ericus Rufus* Peopled *Greenland* from hence.

The Inhabitants were formerly accounted nothing inferior in Wit and Understanding to any of the Northern Countries, and were said to be skill'd in the Greek. They have writ the History of their Country in their own Language. They are very strong, but of low Stature, the tallest not above 5 Foot high. *Olaus* says, They have Spirits that serve the Natives in their ordinary Affairs. The People are long liv'd, some of them living to 150 Years.

Their TRADE.

THeir principal Traffick consists in Butter, Tallow, Sulphur, dry'd Fish, and small Cod, of which Stock-Fish is made. They

They have Whales, but not of such Value as those about *Greenland*. An Ancient Poem, writ about 1449, call'd, *The English Policy*, says, That we then drove a considerable Trade by fishing there.

The Inhabitants dwell in Caves, and, for want of Wood, build their Tents of Fish-Bones, which they also grind, and make Bread of.

Of the Division of ISELAND.

THIS Isle is divided into 4 Parts, nam'd according to the 4 Quarters of the World they lie towards. The Inhabitants call them thus: The North Quarter, *Norlendinga-Fiordung*; the Southerly, *Sudlendinga-Fiordung*; the Westerly, *Westlendinga-Fiordung*; the Easterly, *Ostlendinga-Fiordung*. Those 4 Parts are subdivided into 12 Bailiwicks, which contain about 330 Parishes, and have their particular Governor, subordinate to the Governor-General of the Isle, under the King of Denmark.

1. North-Quarter.

Is the greatest and best Peopled of the whole Isle. *Holar*, or *Hola*, seated upon the

Gulph Skaga, is the chief Town here, and a Bishop's See. 'Tis a small Town without Walls, and has a good and well frequented Harbour.

2. The East-Quarter.

The chief Town is *Kurbar*, which is but small.

3. The South-Quarter.

The chief Town of this Quarter, and of the whole Isle, is *Shalhor*, which lies in 66 Deg. 25 Min. The longest Day is 23 ½ Hours. 'Tis situated among Mountains, and has no manner of Fortifications. It is a Bishop's See, and the chief Court of Justice for the whole Isle is kept here. It is 160 English Miles from *Hecla*. *Haner* and *Keplawick* are two commodious and well frequented Harbours. *Befede*, or *Comingsgard*, is a small Fortress, where the Governor keeps his Court.

4. The West-Quarter.

Gilr, a small Hamlet, is the Chief of this Division.

CHAP. XI.

Of the THULE of the ANCIENTS.

THIS Country having by many Authors been taken for the *Thule* of the Ancients, we think proper to say something in this Place as to the Opinions both of the Ancients and Moderns about it. Some derive the Name from the *Arabian* Word *Tule*, which signifies Far off. This is supported by some Authorities; for the *Carthaginians* seem to have called *Ireland* by that Name, because it was the farthest of their Discoveries: But the Opinion of *Bochart*, as to the Name *Thule*, seems to bid fairest for

the Truth: He thinks *Thule* is a *Phœnician* Word, (the *Phœnicians* being the first Discoverers of the Place) which signifies an Island of Darkness, because of the Length of their Nights. Both Greek and Latin Authors were of Opinion, That Northern Places were condemn'd to perpetual Darkness, as *Pliny* and *Solinus*, &c. *Tibullus* speaking of the Frigid Zone, says,

Illic & densâ Tellus absconditur Umbrâ.

In thickest Darkness, there the Earth's involv'd.

Strabo tells us, That in Homer, the North and Darknels are the same thing. The *A-rabians* also call the Northern Sea the Dark Sea. The Poet *Statius*, speaking of *Thule*, has the same Notion of its Darknels, in his 3d Book, *Hesperia vada caligantia Thules*; i. e. the dark Friths of Western *Thule*; and in his 4th Book to *Marcellus*, *Nigra Littora Thules*; i. e. the Coasts of dark *Thule*.

Authors are not agreed where the *Thule* of the Ancients was; some are for having *Island* to be it. *Pythias Massiliensis* seems to favour this Opinion, for he places *Thule* under the Polar Circle; but the Character that *Polybius* and *Strabo* give him, lessens his Credit, for they call him a trifling lying Author. It is not probable, that the *Romans* durst lose the Sight of the Land, and venture into those dangerous and frozen Seas; far less could they be acquainted with the Inhabitants of *Island*, and defeat them in Battles, as we find by their Authors they did those of *Thule*. Others maintain, That *Ireland* was the *Thule* of the *Romans*; but tho' the *Phenicians* have been in *Ireland*, it is certain the *Romans* never were there. The *Glacialis Ierne*, i. e. the Frozen *Ierne*, of *Claudian*, in Verse 33, of the 4th Consul. of *Honor*. cannot be *Ireland*, because it deserves not the Epithet of *Glacialis*, or *Icy*; for their own Writers say, That Frost and Snow don't continue long there: But *Claudian* in this Place gives an Account how *Theodosius* pass'd the Friths of *Forth* and *Clyde* in *Scotland*, which are his *Hyperborea Unda*, the *Hyperborean Seas*; and *Theodosius* upon that Account is call'd *Vastator Borea*, *D. bel-latorque Britanni Littoris*; i. e. the Conqueror of the North, and the Subduer of the *British* Coasts. That he enter'd *Strathern*, which to this Day bears the Name of *Ierne*, the *Roman* Medals, Camps, and Military Ways, still to be seen there, put it beyond Controversy; whereas *Ireland* has no Monuments to prove that ever the *Romans* were in that Country.

Others, with greater Probability, think that *Schetland*, or some of the *Orkney* Islands, was the *Thule* of the Ancients. *Marinus* was of this Opinion, and also *Ptolemy*, who says *Thule* was a little *Island* in 62 Deg. of North Latitude, not above a Day's Voyage from *Britain*, where the longest Day is 20 Hours, which agrees to *Schetland*. *Agathemerus*

agrees with this. *Stephanus Byzantin* allows only 20 Hours to the longest Day in *Thule*. The Learned *Cambden* is positive in this Matter, and observes, That Mariners call *Schetland*, *Thylenfol*, which is deriv'd from *Thyle*, or *Thule*.

This Opinion seems to be supported with very good Reasons. *Tacitus*, in the Life of *Julius Agricola*, says, when the *Roman* Navy sail'd about *Britain*, *Despecta est & Thule quam hactenus Nil & Hiems abscebat*; i. e. Then *Thule* was discover'd, which hitherto was unknown, because of its Snow and constant Winter. This puts it out of doubt that it could not be *Island*, which was impossible to be seen by the *Roman* Fleet when sailing about *Britain*. Further, *Silius Italicus* gives the same Description of the Way of Fighting by the Natives of *Thule*, that *J. Caesar*, *Mela*, *Martial*, and *Tacitus*, give of the Old *Britains*. In his 17th Book he says,

*Cervulus haud aliter cum dimicat incola Thules,
Agmina falsifero circumvenit acta corvino.*

*The Thule-Men, whose Face has a Blue Dy,
With Chariots hook'd surround their Foes that fly.*

Seneca calls also one of the Tribes of the *Scots*, *Ceruleos Scoto Brigantes*; the *Blue Scots Brigantes*: And *Claudian*, in the above-mention'd Place, strengthens this Opinion, by joining the *Orcaes* and *Thule* together; for he says,

*Maduerunt Saxone fuso
Orcaes? Incaluit Picorum Sanguine Thule.*

*The Orkney Isles were drench'd with Saxon
Gore,
And Pictish Blood did thaw cold Thule's
Shore.*

The Circumstances of the Story make it plain, that *Thule* can only be in some of the Northern Places of *Scotland*. Besides, *Claudian* in many Places makes the *Orcaes* lie over against *Thule*. We refer the curious Reader to Dr. *Wallace's* Description of the *Islands* of *Orkney*, where there are strong Arguments to prove, that the *Thule* of the *Romans* was the Eastern Coast of *Sutherland*, and the adjacent Country in the North of *Scotland*.

C H A P. XI.

Of M U S C O V Y.

The Ancient and Modern EXTENT.

Muscovy is a great Part of the Old *Sarmatia Europea*, the ancient Boundaries of which were upon the West, 1. The River *Vistula*. 2. The Gulph of *Finland*. 3. A Line from that Gulph to the *White Sea*. The Northern Limits were the *Sarmatian* or Frozen Sea. Upon the East, it had the same Boundaries with *Europe*, viz. the *Palus Meotis*, the Isthmus of *Taurita Chersenesus*, now called *Crim-Tartary*. On the South, it had the *Euxine Sea*, the *Ister* or *Danube*, the River *Hierafus*, now *Prut*, and that Part of the *Carpathian Mountains* betwixt the River *Patissus*, now *Tey*, and the *Danube*.

The Length of the *European Sarmatia*, from the Conflux of the Rivers *Ister* and *Patissus*, to the Mouth of the *Obi*, is 540 *German Leagues*. Its Breadth, from the *Wolga* to the *White Sea*, 360.

It comprehended Part of the Modern *Moldavia*, lying betwixt the Rivers *Nieper*, *Danube*, and the *Prut*; a Part of *Hungary* betwixt the *Danube* and the *Tey*; and that Part of *Poland* beyond the *Vistula*. It comprehended *Prussia*, *Livonia*, *Lithuania*, and *Muscovy*.

The ancient *Greeks* knew little or nothing of the old *Sarmatians*; but because they resembled the old *Parthians* in Manners, they thought they were of the same Origin: The Inhabitants of *Sarmatia Europea* were the *Isirici*, so call'd from the River *Ister*; the *Boristhenite*, from the *Boristhenes*; the *Neuri*, living near that River; the *Alani*, who dwell above the Sea of *Sabach*, near the *Tenais*, or *Don*; the *Roxalani*, who lay to the West of them; the *Geloni*, who inhabited Part of *Mazovia* and *Podolia*; the *Aethyrsi*, who liv'd about the *Palus Meotis*;

and the *Hyperborae*, a Name us'd for all Northern Places, Seas and People, that the Ancients were not acquainted with.

The Modern *Muscovy*, otherwise call'd *Russia Alba*, from the white Caps worn by the Natives, is bounded on the N. by the Frozen Sea, by *Great Tartary* on the E. by *Poland*, *Turky*, *Georgia*, and the *Caspian Sea*, on the S. *Sweden* and *Livonia* on the W.

The Latitude is from *Astracan* in 46 Deg. to 73, which reckoning 60 Miles to a Degree, makes 1620 *English Miles*. The Longitude is from the outmost Boundaries of the Dutchy of *Pleskow*, in 47 Deg. to *Wielka*, a Bishoprick, in 89, which makes 1980 *English Miles*. Others reckon the Extent of *Muscovy* from the the N. W. to the S. E. viz. from the outmost Parts of *Muscovite-Lapland*, to the most Easterly winding of the *Don*, 589 *Leagues*; and from the S. W. to the N. E. viz. from the Shore of the *Boristhenes* or the *Nieper* in *Ukrania*, to the Mouth of the River *Obi*, 460 *Leagues*. The *Czar's* Dominions reach to *Argunskoi* in *Asia*, upon the Borders of *China*, Lat. 50. Long. 125. according to the Account of *Tsibrant Ides*, Ambassador to *China* from his *Czarish Majesty*. Some place *Astracan* in Long. 90; but Mr. *Moll*, whose Maps we follow, places it in 73, and *Morden* in 78.

Of the ORIGINE of the Muscovites.

Some, from the Similitude of the Name, fancy that *Mesoch*, or *Mesec*, the Son of *Japhet*, Peopled this Country. We find also in *Strabo* frequent Mention of the *Meschi*, tho' he is not positive where their Country was. *Mela* places them near the *Caspian Sea*; *Pliny* near *Iberia*, which is now call'd

Georgia:

The Dominions of MOSCOVY or RUSSIA.

By H. Moll Geographer

NB. The faint double line shews
the Tract of M^r I. Strands Travels
by Land & Water from
Moscow to Peking in
China.

Georgia: *Lucan*, and after him *Sidonius*, say, they dwelt near the *Sarmata*: So that the *Moschi* were some of those many Nations that dwelt in the Southerly Parts of the *Russian Empire*. But their old Histories say, they were most anciently call'd *Russes*. *Pliny* and *Protolomy*, as well as some Modern Latin Authors, call them *Roxalani*, and think they are the Posterity of the ancient *Roxalani*, who dwelt about the *Taurica Chersonesus*. Others say, this Country was call'd *Rossia*, which signifies Dispersion, or Scattering, because they liv'd dispers'd, without any certain Government, in continual Quarrels and Dissentions one with another, till *Genareta Daniel*, or *Ivan* his Son, surnam'd *Caleta*, gather'd and join'd them together in one Government and Body; and for their better Union, he built almost in the middle of the Country the City *Moscow*, upon a River of that Name, and made it the Metropolis of the Empire; from whence they began to be call'd *Muscovites*. *Bochart* thinks, in *Phaleg. Lib. 3. Cap. 13.* they are from מושכ, i. e. *Rhos* and *Mesech*. *Ezech. Cap. 38. v. 2.* who were the same with the *Rossi* and *Moschi*, People that dwelt near the River *Araxes*. He quotes the *Nubian Geographer* and *Tzetzes* for this, who call the *Sythians* of *Taurica Rhos*. *Strabo* and *Pomponius Mela* call them the *Asiatick Moschi*. The *Sclavonian Histories* say, they have the Name of *Russes* from one *Russus*, the Brother of *Lechus*; but the *Muscovites* themselves boast that they are descended from the ancient *Greeks*.

in one Year they have exported 100000 Pood. Hides of *Black-Cattle*, of which they have sold in a Year 100000, besides 30000 Hides of *Losh* (*Lozzi*) and *Buff*; with multitudes of *Goat-Skins*, and others: *Train-Oil*, made of *Seals*; *Caviar*, made ordinarily at *Astracan* of the *Roes* of *Sturgeon* and *Belluga*, a Fish 15 Foot long, much like a *Sturgeon*, but without Scales. They salt and press the *Roes*, and put them up in Casks. In one Fish, they find sometimes 150 or 200 lb. Weight of Spawn. The *Caviar* of *Sturgeon* is small, black, and waxy: That of *Belluga* is darkish, grey, and the Grain as large as Pepper. This Spawn they cleanse from its Strings, salt it, and afterwards into small Part, by laying it on shelving Boards; then they put it into Casks, and press it till it grow hard. *Isinglass*, or *Ichthyocolla*, made of the Sounds of Fish. This Trade is reserv'd to the Emperor himself. Salt, of which they have great Plenty: *Tar*: *Morses-Teeth*, transported into *Turky* and *Persia*: *Slude*, which is a soft Rock in *Corellia*, that they cut out in Lumps, and afterwards into small Pieces, we call it *Muscovy-Glass*; it can neither be broken nor burnt: 'Tis the *Lapis Specularis*, and is us'd for Lanthorns, Windows, &c. *Salt-Petre*, and *Masts*, better than those of *Norway*. The Commodities of this Country are transported by the Way of *Archangel* to all Parts of *Europe*; and by *Astracan* and the *Caspian Sea* to *Persia*, and other Places in *Asia*.

Their AIR, and SOIL.

They differ according to the Situation of the Places; some are in the 8th Climate, and some beyond the Polar-Circle. It is generally marshy, full of Forrests, Pools, and Lakes, which hinders its being populous. Towards the North, the little Corn they sow never comes to Perfection; for they have 9 or 10 Months Frost and Snow. Towards the South, they have Plenty of Corn, with which they furnish *Lapland*, and the North of *Sweden*. The *Dutch* also transport Corn from this Place. The Heat is intolerable in Summer, being reflected from the Sandy Ground. This likewise makes their Corn to ripen very soon. They sow in the end of May, and reap in July.

The PRODUCT.

THE Commodities of this Country are *Sturgeon*, *Pot-Ashes*, *Hemp*, such Plenty of *Honey* in the Woods, that hollow Trees are filled with it; *Salt-Fish*, *Soap*, *Russia-Leather*, *Elkes-Hides*, *Fine Furs*, as *Ermins*, *Martens*, *Sables*, *Black Foxes-Skins*, *Beavers*, *White Bears*, *Squirrels*, *Wolverins*, and *White Foxes-Skins*; as also that of a *Water-Rat*, which smells like *Musk*. *Siberia* is the most famous Province of *Muscovy* for Furs: The *Czar* has the Monopoly, and makes Presents of them. *Wax*, of which they have Ship'd in one Year 50000 Pood Weight, each Pood containing 40 lb Weight. *Tallow*, of which

July. In Winter, the Frost is so violent, that the Rain freezes as it falls, and the Earth chaps, by reason of Cold, sometimes above 20 Fathom long, and a Foot broad: Travellers are found dead in their Sleds, and sometimes are frozen to Death, standing like Statues. Their Houses are lin'd with Furs, and they are obliged to make use of Stoves. When they travel on the Road, they rub their Noses and Ears with Snow, as a Remedy against their freezing. The Turk's Ignorance of this, occasion'd that of 70000 Men who invaded *Muscovy*, 40000 were destroy'd by the Cold. In Winter, they lay the Bodies of their dead Friends on Heaps in the Belfries of their Churches: But when they design to bury them immediately, they put a great Fire of Wood for a long time upon the Place where they are to dig their Graves. Because of the great Cold, they never putrify nor stink; but their usual Time of burying after Winter is in the beginning of *April*, when the Earth is fit for digging. It is surprizing to Strangers to see Fields all covered with Grass and Plants, that a few Days before were cover'd with Snow and Frost. In Winter, they travel conveniently on Sledges, wrapt up in Furs. In Summer, they have prodigious Quantities of Gnats and other Insects, which are very troublesome. The Heat in Summer is extraordinary, for nothing less can melt their Ice and Snow. Sometimes their Corn is burnt up by the Heat. The Country is in general overgrown with Wood. Parts of the great *Hircanian* Forrest, which anciently over-run all the North, are more visible here than in other Places. This proceeds either from the Idleness of the People, or because the Country is not populous enough to cut it down. The tallest Trees of the World grow here. Their Forrests consist most of Firs and Birch, which love a light sandy Soil. They have Apples, Pears, Plumbs, Cherries; yet they are never quite ripe, nor can they be preserved as in other Places. Fruits and Herbs of sudden Growth are very good here, as all sorts of Berries, Gourds, Melons, which are exceeding large, and eat well; some of them weigh 40 lb. *Olearius*, and other Authors, speak of a certain Melon and Gourd found near *Afracan*, *Samara* and *Casim*, called by the Natives *Borometz*, or a Lamb,

that grows upon a Stalk. Others call it *Zoophyton*, which signifies the Animal Plant. It withers, or, as some say, eats up all the Grass within its reach; after which the Stalk withers, and the Fruit ripens. The outward Rind of this Melon is cover'd with a kind of Hair, which they use instead of Fur.

They shew'd us, say the *Holstein* Ambassadors, some of those Skins, which were cover'd with a soft frizzling Wool, not unlike that of a Lamb newly taken out of a Sheep's Belly, and swore that they came from that Fruit. *Julius Scaliger* says, the Wolf is the only Beast that will feed upon this Lamb, and therefore 'tis us'd as a Bait to catch him. The *Muscovites* affirm the same.

In the Time of the Great Duke *Michael Federowitz*, who began his Reign in 1613, and was a great lover of Gardening, Flowers and Sweet-Herbs, were first transported into *Muscovy*, and planted there; and it is but few Years ago since the first *Provence* Roses were brought hither by *Peter Marcellus*, the *Danish* Commissary. Some of the *German*s and *Dutch* have lately shew'd them the Way of managing the *Asparagus* Beds; so that they grow now to the Thickness of 2 Inches. The *Muscovites* were averse to all Salad-Herbs till of late.

Their TRADE of IMPORT.

THE Commodities imported to them, are *Silk*, *Suffi*, *Cloth of Gold*, *Cloth of Silver*, *English Cloth*, *Tapestry*, *Pearls* and *Precious Stones*, *Spices*, *Wine*, *Brandy*, and *Hot Liquors*. In 1634, the Emperor discharg'd, by an Edict, the Use or Importation of any Tobacco, on Pain of being whip'd, or having their Nostrils bor'd; but the present Czar has allowed the *English* and *Dutch* to import it into his Dominions. Their Trade is always by Barter. They are not allow'd to buy Foreign Goods with Money, and must not export Coin. Before the Discovery of the Passage by Sea to *Archangel*, their Trade was carried on by Way of *Narva* and *Revel*; which tho' nearer, yet Merchants chuse to go to *Archangel*, to avoid the great Imposts by the *Swedes* and *Danes*.

The ESTABLISHMENT of the English Russia Company.

THE first Discoverers of the Way by the North Cape were the *English*. In the last Year of *Edward VI.* viz. 1553, *The Company of Merchants Adventurers for the Discovery of unknown Places* set forth 3 Ships, under the Command of *Sir Hugh Willoughby* and *Richard Chancellor*. *Sir Hugh* and the other Ship put into a River on the Desert-Coasts of *Lapland*, where they were soon frozen in, and their Bodies were found dead next Summer by *Russian* Fishermen. *Mr. Chancellor* pursued his Voyage, and first discover'd the Bay of *St. Nicholas*. The Fishermen there were frighted at the Greatness of his Ship, and endeavour'd to fly from him; but he overtook them, and was inform'd the Country was call'd *Russia*, and the Duke's Name was *Juan Vasilwick*. He was honourably conducted to Court, and splendidly entertain'd by the Duke; and having obtain'd a Privilege written in *Russe*, with the Great Duke's Seal, they return'd in 1554. In 1555, the same Emperor granted the first Privileges to the *English* Merchants, viz. That they should not be liable to the Payment of any Toll or Subsidy for ever; That they should not need to ask any Licence or safe Conduct; That they might sell their Goods to whom they pleas'd, of whatever Country; That all *Englishmen* there should be under the Company's Government; That no *Englishmen* should be imprison'd for Debt, upon finding Bail; That he would assist the Governor and Chief Factor, if any rebell'd, and refus'd to obey their Commands; And that they should have Dispatch and speedy Justice when cited to *Russian* Courts. The same Year *Philip* and *Mary* granted a Charter to the *Russian* Company, by which they were empower'd to make Conquest of undiscover'd Places; and all others not of that Company were discharg'd, and prohibited Trading to *Muscovy*. In 1556, the Company sent two Ships: At their Return, they brought with them an Ambassador from the Czar. The *Edirard*, on the 10th of *November*, arriv'd in the Bay of *Pitslego*, in the North of *Scotland*, where she was

split upon Rocks in the Night: *Mr. Chancellor*, with 7 *Russes*, and divers Mariners, were drown'd, the Ambassador hardly escaping. Many of the Presents design'd for the King and Queen were lost, viz. 6 Timbers of rich Sables; 1 Timber is 80 Skins; 20 entire Sables, with Teeth, Ears, and Claws; 4 living Sables, with Chains and Collars; 30 large and beautiful Luforns; 6 large and great Skins, such as are only worn by the Emperor; a large and fair white Jer-Faulcon, for the Wild-Swan, Crane, Goose, and other great Fowls; with a Drum of Silver, us'd as a Lure to call the Hawk. These Privileges from the Czar were sometimes renewed and augmented, with the Exclusion of all other Nations from that Trade: Sometimes they were retrench'd and lessen'd, according to the Interest of the Czar. Upon the Murder of King *Charles I.* the then Czar revok'd all the former Privileges granted to our Merchants, the *Dutch* having aggravated that Matter to our Loss, and their own Advantage.

Of the MANNERS of the Muscovites, from the Travels of the Holstein Ambassadors, and the Earl of Carlisle, &c.

MOST of them are very barbarous: They despise all Arts and Sciences. They look upon a Mathematician as a Sorcerer. A *Dutch* Surgeon, for having a Skeleton in his Room there, was accus'd of Magic, and in great Danger of Death; and, after all could be done by his Friends, he was banish'd the Country, the Skeleton dragg'd thro' the Streets, and afterwards burnt. *Dr. Flecher* says, some of them have very good Parts. A Merchant there is not thought to understand his Business, if he be not Crafty, and well skill'd in Cheating. A *Dutch* Merchant, noted for this Quality, was the more valued for it by the *Russians*; so that many of them desir'd to be his Partners, that they might be perfected in the Way of Cheating. They are much given to Lies and Calumny; insolent both to Foreigners and one another. They are very quarrellsome, and liberal of their

their brutish Reproaches. Their Resentments never go the Length of Blood, but end in a Kick or two. Their *Boiars*, or Noblemen, decide their Differences upon Horseback with Whips. 'Tis but of late they made use of Physicians, Garlick and Strong-Waters were then their only Remedies for all Diseases; and they are not asham'd to belch the Exhalations of their Garlick and Onions into the Faces of People of whatever Quality. Their Ignorance of Sciences, and of the World, makes their Conversation run generally upon nothing but Brutality and Vices not to be nam'd, which they commit when Drunk. Men and Women are not asham'd to come to the Streets stark naked from Brothel-Houses. Drunkenness is so modest a Vice here, that none are free from it, Men or Women. The Wives, after their Husbands are fallen asleep on the Floor with Drink, sit upon them, and continue drinking till they themselves tumble also down. They bow their Heads to the Ground to their Superiors, after they have been soundly cudgell'd, which is a Demonstration of the Lowness of their Spirits. The greatest *Boiar*, when he writes to the Czar, expresses his Name in the Diminutive, as, *Petrushe twoy Golop, I Petrillo your Slave*, instead of *I Peter*. They are perswaded Physicians can cure all Diseases if they please, and punish them severely if their Patients die. The *Boiars* keep great Numbers of Slaves both in City and Country, which commit great Disorders, and frequently murder People in the High-Ways. Because they us'd to approach their Images with their Breaths stinking of Tobacco, the Patriarch obtain'd from the Czar a Prohibition of it. All Strangers admire, that from sweating in a hot Stove, they frequently go out naked, and wallow in Snow, and return to it again without any Harm.

Reading and Writing is the heighest Degree of Learning among them: They count by Forties and Nineties; so that their Arithmetick can be none of the best. Their Priests go no further in Learning than to be able to read a Chapter in the Bible. They have their Characters from the *Greeks*, but have much alter'd and augmented them, for they have 39 Letters. They reckon their Years from the Creation of the World,

and maintain that Christ was born in the Year 5508, after the Creation. Our present Year 1708 is their 7216. Their Year commences the first of *September*. They begin their Day at Sun-rising, and end it at Sun-setting. They write upon long Scrolls of Paper glu'd together, sometimes 25 or 30 Ells. Endeavours have been us'd to reform them from this scandalous Ignorance. *Ivan Brissovitz Cirka* got divers Histories and Books of Learning translated into the *Russian* Language, and after that a *Greek* and *Latin* School was erected in *Moscow*. The present Czar gives Leave to his Nobility to acquire the Liberal Sciences, particularly the Mathematicks, to acquaint themselves with Foreign Countries, and has set them an Example in his own Person, with a Design to understand Sea-Affairs and Shipping. The *Muscovites* are jealous. Some say, they use *Italian* Locks, to ensure the Chastity of their Wives. They are cruel and bloody minded, insolent in Prosperity, and cowardly in Adversity; yet have such an Opinion of their own Abilities and Merits, that you can scarce ever pay them enough of Respect.

The *Muscovites* in general are of a very healthful Constitution, and long liv'd: Their Bodies are robust, and strong built, but not tall.

They are frugal in their House-keeping: They live in wretched Wooden Houses; but their Merchants and Lords have of late built Houses of Stone. Their Household-Stuff consists in 2 or 3 Pots, and as many Wooden or Earthen Dishes. Some of the better sort have Pewter. They hang their Rooms with Mats, and sleep on Benches. The whole Family is squeez'd together into the same Room. In the Country, the Pigs and Poultry are lodg'd in the same Place with the Family. Their Food is Turnips, Colworts, and Cucumbers. Their Salt Fish, tho' it smell strong, because not well salted, is to them a great Rarity. Their Beef is good, but their Mutton indifferent. The greater Part of the Year is spent in Fasts, and then they eat Fish and Pulse, but no Flesh: Therefore they dress Fish better than Flesh. Their ordinary Drink is a sort of small Mead call'd *Quax*. They brew strong Beer in *March*, and make a Bed of Ice and Snow mix'd together, upon which they

they lay Barrels. Over them they lay another Bed of Ice, and then another Row of Barrels. They cover all with Straw and Planks, for their Cellars are not cover'd. They prefer Metheglin to *French* and *Rhenish* Wines. They put one lb. of Honey to every three lb. of Water, and add the Juice of Raspberries, Cherries, and Strawberries. They make it ferment with a Toast dip'd in the Dregs of Beer: Some put into in a Bag with Cloves, Cinnamon, and Grains of Pepper.

All *Muscovites*, of what Quality soever, must have their Afternoons Sleep. They are all fond of hot Baths, and discover'd the Imposture of the false *Demetrius*, by his Aversion to those Customs.

There are some Authors, and particularly *Dr. Fletcher*, who soften this Character, and say, That among the Nobility, there are very many of excellent Parts, Courage and Discretion; and among the People, some who are not Strangers to those Qualities; but they own, that many of those Things they are charg'd with proceed from their Want of Education, and the Oppression of their Superiors.

Their RELIGION.

BEFORE Christianity was known in *Muscovy*, the *Russians* were involv'd in the thickest Darkness of Paganism; for, besides such Gods as *Jupiter*, *Saturn*, and *Mars*, known to the ancient Pagans, they ador'd their peculiar Idols of monstrous and terrible Shapes, under the Names of *Pioruni*, *Stribi*, *Corfi*, *Mecosti*, all set on Pedestals. The first resembles a Dog with two big Breasts, his Tongue hanging out, and his Ears long. The 2d is like a Satyr, with two Feet like a Horse: It has 4 Horns, and a Tail. The 3d is also like a Satyr sitting, and has two Feet like a Horse, the Body like a Man's, with an open Mouth, flaming Eyes, and 4 Horns; in one Hand holding something like a Scepter, and the other Hand is like the Claws of a Fowl. The 4th is a big Head, with a wide Mouth, glaring Eyes, and Ears resembling Wings.

P. Wladimir, who married *Anna*, the Sister of *Basilius Porphyrogeneta*, about the Year 989, introduc'd the Christian Religion into this unpolish'd Nation; but they themselves

boast that their Nation was converted by *St. Andrew*; upon which Account the present Czar hath erected an Order of Knighthood, called, the *Order of St. Andrew's Cross*. When they embrac'd Christianity, it was much allay'd with a mixture of Superstitions and Follies, which are since improv'd by the modern *Muscovites*. They are of the *Greek Church*, because converted by the *Grecians*. Their Monks are all of the Order of *St. Basil*. Their Sermons are from *St. Chrysostom*, translated into their own Language. The Patriarch of the *Greek Church* resided formerly at *Constantinople*; but being forc'd from thence by the *Turk*, he remov'd to the Isle of *Scio*, whither the Emperors of *Russia* and their Clergy were wont to send Gifts every Year, in Acknowledgment of their Spiritual Subjection. In 1588, one *Hieronymo* came to *Moscow*, pretending to be Patriarch of *Constantinople*, and that he was banish'd by the *Turks*. Some say, he was depos'd by his own Clergy. He came by the Way of *Italy*; and the Pope, by his Practices and Intrigues, engag'd him in a Design to reconcile the Church of *Russia* with that of *Rome*; but this not succeeding, he propos'd the Translation of the See of the Patriarch from *Scio* to *Moscow*, and to resign his Patriarchate. This was very well receiv'd by the Czar. The Reasons *Hieronymo* alledg'd for removing this See, were these: 1. Because *Scio* was under the *Turk*. 2. Because the *Russian Church* was the only natural Daughter of the *Greek Church*; and agreeing with her in Doctrine and Ceremonies, 'twould be a great Honour to the Emperor and the Country of *Russia*. The Resignation in Writing, and the Patriarchal Staff, were delivered to the Metropolitan of *Moscow* with great Solemnity, before the Clergy of *Russia*, on the 25th of *January*, 1588. who by this became Patriarch, and was immediately inaugurated. *Hieronymo* got a deal of Money by the Bargain; upon which Account the *Russians* think it valid. The Patriarch of *Constantinople* never quarrels at it; and to bribe him to Silence, a Present of 500 Crowns is sent him every Year: Besides, the *Greeks* send frequently consecrated Toys and Relicks to *Moscow*, for which they get considerable Gifts.

The Invocation of Saints is a principal Part of their Devotion; every Family has the

the Picture of some Saint in their Houses, and a Wax Candle before it lighted in the Time of Worship. The Pictures are flat, and wretchedly done. They use none in *Basso-Relievo*. The Picture of St. *Nicholas*, and of the Virgin *Mary*, is over their Church-Porches, and City-Gates, through which no *Muscovite* passes without bowing to them. They bow likewise to all Crosses, and frequently make the Sign of the Cross. When they purchase an Image, they will not say they bought it, but exchange'd it for Silver. When they are old, they bury them under Ground, or throw them into Rivers. They go thrice to Church on *Sundays* and Holidays, and attend Divine Service standing. Their Churches have no Seats. The Women stand in the Porch, because they reckon them all impure. They know not what Preaching is. Their Service consists only in reading Psalms or Chapters in the Bible, some of *Chrysostom's* Homilies, and *Athanasius's* Creed. They sing certain Hymns. When they say the *Gospeld*, i. e. *Lord God have Mercy on me*, they beat their Foreheads to the Ground. They have 15 Festivals: and besides their stated Fast-Days, as *Wednesdays*, *Fridays*, and the *Eves* before Holidays, they have four severe *Lents*, in which the Use of Butter, Milk, and Eggs, is forbidden, except the first Week of their great *Lent*, in which they commit all manner of Debaucheries; and to make Amends for this, all the rest of that *Lent* they live upon Pulse, Herbs, Garlick, and Onions. During their *Lents*, the Husband is not to converse with his Wife, on Pain of Excommunication for a whole Year. Their Penance consists, 1. In abstaining from hot Liquors. 2. From the Pleasures of Matrimony. 3. To say the *Gospeld* with the usual Reverence: (The Emperor *Ivan Basilowick* had his Forehead swell'd by knocking it on the Floor upon this Occasion.) 4. To stand in the Porch during Divine Service. 5thly, and chiefly, To wash with Holy Water, consecrated on the *Epiphany*; the telling of which is Part of the Clergy's Perquisites. That they don't believe Transubstantiation, is evident, 1. Because on all Occasions they speak of the Absurdity of that Doctrine. 2. They never adore the Host. 3. The *Greeks*, from whom they had their Religion, never believ'd any such thing. As Followers of

that Church, they deny the Holy Ghost to proceed from both Father and Son. They deny Purgatory, but pray for the Dead. They communicate in both Kinds, with Leaven'd Bread, and with Wine mix'd with Water. They mix the Bread and Wine together, and make use of Spoons when they communicate. Some sleep after it, to prevent any Occasion of sinning. Children of Seven Years of Age are admitted to the Sacrament in both Kinds, because, according to them, they begin then to sin. Before that Age, they communicate only in one Kind. They forbid Extreme Unction, and punish fourth Marriages with Death. They admit none to Orders but those who are married. They divorce their Wives upon slight Occasions, and never fail to do it if a Woman be barren, and then send her to a Monastery, which they call sending her to her Prayers. They hate the *Roman-Catholics*, *Jews* and *Turks*: Therefore the *Ottoman* Ambassadors are not admitted to kiss the Czar's Hands. Whoever embraces the *Russian* Religion, must be re-baptized. The Czar gives great Gifts to Proselytes. *Lutherans* and *Calvinists* are tolerated, and have Churches in his Dominions.

If any Stranger enter their Churches, they think them polluted, and afterwards purify them with strange Ceremonies. It is a known Story at *Moscow*, That a Monk belonging to an *English* Ambassador entred a Church, and tore an Image of St. *Nicholas*. The *Muscovites* were perswaded that it was an old Heretick, and, by a particular Order from the Patriarch, it was carried in Shew through the Streets, and afterwards put to Death.

They look upon Baptism as absolutely necessary to Salvation: They baptize in the Church, and have two Godfathers, who are obliged to be so to all Children as long as they live. They consecrate the Water first, then the Father and Godfathers renounce the Devil and all his Works; and at naming the Devil, they spit upon the Ground. The Priest exorcises the Child at the Church-Door, because they believe all Children are possessed with the Devil: Therefore they are not allowed to enter the Church till the Devil is thrown out. The Priest hangs a Cross of Gold, Silver, or Lead, about the Child's Neck, which it must wear till Death; and

and such as want this, cannot have Christian Burial. The Priest assigns a Saint to the Child, whom he must ever after reverence as his Patron. They dip the Child three times in the Water, put some Salt in his Mouth, make the Sign of the Cross on his Forehead, Hands, Breasts and Back, with consecrated Oil, and put a clean Shirt on him, saying, *Thou art as clean and as clear of Original Sin as this Shirt.* They plunge Profelites over Head and Ears in Water.

Their MARRIAGES.

THE young People are not allow'd to see one another; but the Relations of the Bridegroom see the Bride naked, and give an Account of their Remarks to the Bridegroom. Young Women are not allow'd to come abroad. The Nuptial Bed is made upon 40 Sheaves of Rye, laid in good Order, and encompass'd with several Barrels of Wheat, Barley, and Oats. The Bridegroom near Night goes from his own House to the Bride; the Priest leads the Van on Horseback; a Piece of Taffeta is held betwixt the Bride and Bridegroom, that they may not see one another; then the Bride is painted, has her Hair ty'd up in two Knots; and, if a Person of Note, has a Coronet of Leaf-Gold, or of Silver-gilt, lin'd with Silk, put upon her Head, having on both Sides near the Ears 5 or 6 Rows of Pearls, hanging down in Strings to her Breast: The upper Garment sometimes costs 1000 Crowns, and is richly embroider'd. Then the Bridegroom is painted: After that they go to Church, and there a Canopy of Taffeta is put over them. When they have made the usual Offerings, the Priest gives them his Blessing, by holding Images over their Heads, and taking the Man by the Right, and the Woman by the Left Hand, asks them three times, If they be willing to be married? When both answer, Yes, the whole Company join Hands; then the 128th Psalm is sung, the Priest singing one Verse, and the Company the next; and they dance all the time. Then he puts a Garland of Rue upon their Heads, and about their Shoulders, if they have been married before, and says, *Multiply and Increase;* and dismisses them, saying these Words, *Whom God hath joined*

together, let no Man separate. One of the Company gives a Glass of Wine to the Priest, and he drinks to the married Couple. The Bridegroom throws down the Glass on the Ground, and they both tread upon it, and say, *May they thus fall under our Feet, and be trod to pieces, who shall endeavour to sow Division between us.* Then the Women throw some Flax and Hemp-seed at the young Couple, wishing them much Prosperity: Others pull the Bride by the Robe; but she embraces the Bridegroom, and will not part from him. She is conducted home in a Sledge, with an old Woman in Company, who entertains her with smuggy Conversation. As soon as the Marriage-Feast is done, they go to Bed. The Guests in the mean time use many Charms, which they think advantagious to the Consummation. An old Servant of the House, that attends at the Door, asks the Bridegroom if the Business is done. As soon as the Bridegroom answers, Yes, the Trumpets and Timbrels sound till they have conducted them to the Stoves; then the Bride sends the Bridegroom a Shirt richly embroider'd. The two next Days they spend in Merry-making. If the Husbands happen to be drunk, the Wives never fail to improve that Time to vicious and leud Purposes. The Wedding-Day may be said to be the last Day of Pleasure to the Women, for after that they must not stir abroad, except on extraordinary Occasions. They know nothing of House-keeping, but are employ'd in embroidering, or making Purfes, or such Toys. Their Diversion within Doors is in swinging. Their Wives are hardly used, and sometimes beat. The Husbands excuse themselves, alledging, that they are addicted to strong Liquors, have lewd Tongues, and are not chaste. They have no other Notion of Adultery, but marrying another Man's Wife. Tho' they be much given to Lust, they will not lie with a Woman till she take off the Cross from her Neck, and the Images in the Room be cover'd, lest they should inform against them.

Of their CHURCHES.

THose of their Churches that are built of Stone, are round, and vaulted, that they may resemble the Heavens. They have

have no Seats nor Organs, nor any other Instruments of Musick. Their Patriarch, in 1636, forbade the Use of Musical Instruments in private Houses, and order'd 5 Waggon full of them to be burnt. Each Church has a Tower, with a triple Cross at Top. If a Dog chance to get into the Church, they not only sweep it, but purify it with Incense. Nor are any allow'd to make Water in the Church-Yards. Their Bells are not hung in the Steeples, but in certain Engines built for that purpose near the Church, and are commonly small, of 150 or 200 Pound. They toll them at the beginning of the Service, and the Elevation of the Chalice, which is done but once, because they put the Bread into it immediately after the Consecration. Every Church has an Image over the Door. The Corners of the Streets, and the very Gates of the Cities, are beset with Images, which the *Muscovites* reverence as they pass along, as well as the Crosses on their Churches, and never forget at such Times to say their *Gospels*.

Of their BURIALS.

WHEN a Man dies, the Kindred and Friends are sent for by the Widow, who ask the Deceased, Why he would die? Whether he wanted any thing? Whether his Wife was not young and handsome enough? Whether she had been inconstant? Then they wash the Body, and put on it a clean Shirt and Shroud, with a new Pair of thin Shoes on his Feet. They lay him with his Arms across in his Coffin. The Priest is to pray for his Soul, and to purify the Corps with Holy Water and Incense. The Burial is perform'd thus: The Priest goes first with the Image of the Saint, Patron of the Deceased; then 4 Virgins that are nearest of Kin to the Deceased, who make mournful Lamentations; next comes the Body, carried by 6 Men upon their Shoulders; but if a Monk, he is carried by those of his own Profession: The Corps is surrounded by Priests, who burn Incense, to keep off evil Spirits. When they come to the Grave, the Coffin is uncover'd: The Widow still asks the Former Questions; and the Priest, with an Image in his Hand, re-

peats often these Words, *Lord, look upon this Soul in Righteousness*. The Friends take their Leave, by kissing the Corps or Coffin; then the Priest puts a Piece of Paper betwixt his Fingers, which is his Pass to the other World, certifying St. Peter, That upon seeing this, he may open the Gates of Heaven to him. The Certificate is sign'd by the Metropolitan or Patriarch, and Confessor: It shews, That the Bearer has behav'd himself like a good Christian of the *Greek* Religion, and that he was absolv'd of his Sins; then the Coffin is put in the Grave; after which, the Friends drown their Sorrow in good Liquor. Prayers are made for the Deceased 40 Days, at which Time the *Muscovites* believe their Sins are expiated.

Of their CLERGY.

THE Patriarch is oblig'd to reside constantly at *Moscow*: He is next in Dignity to the Czar, who leads his Horse by the Head at the Procession on *Palm-sunday*. He determines all Ecclesiastical Affairs, wears a long black Robe, and always has a Cross carried before him. They have 4 Metropolitans, and 7 Bishops, who dare not reside in their Dioceses, because the Czar is jealous lest they should excite the People to Rebellion. Next to them are the Priests, call'd by them Popes, or *Papa's*. No other Qualification is requisite for this Office, but some small Skill in Reading, Writing and Singing. As a Badge of their Office, a *Calot*, or Cap, is put upon their Heads at their Consecration, and they are obliged to wear it while they are Priests. When Laymen design to beat a Clergyman, they first secure his Calot, beat him to purpose, and then put it on again. The Priests bless the People as they pass along the Streets with the Sign of the Cross. This Country swarms with Monks.

The Bishops live upon Tithes; but the Priests have no other Maintenance except what private Persons think fit to bestow upon them; yet by what they get at Baptisms, Marriages, Burials, by Prayers for the Dead, or upon People's undertaking any Journey, and by blessing of Houses, they obtain a competent Livelihood.

*The Czar's TITLES, from Ysbrant
Ides's Dedication of his Travels
to his Czarish Majesty.*

THE most Serene and most Potent Sovereign Czar, and Great Prince *Peter Alexowitz*, by the Grace of God, Emperor of the Whole, Great, Little, and White Russia, Monarch of *Moscow, Kiow, Wolodimer*, and *Novogorod*, Czar of *Casan*, Czar of *Astracan*, Czar of *Siberia*, *Daour*, *Samoiedia*, Lord of *Pleskow*, Great Duke of *Smolensko*, *Twere*, *Jugoria*, *Permia*, *Wiatska*, *Bulgaria*, &c. Lord and Great Prince of *Novogorod*, of the *Nederigen* Countries, *Czernikow*, *Rezan*, *Polosko*, *Rostkow*, *Jawoslau*, *Biela-Ozera*, *Udoria*, *Obdoria*, *Condoria*, and of the whole North Sea, Commander and Lord of the *Ivershian* Countries, the *Kartalinshian*, *Grusinschian* Czars, the *Kabardinschian* Dominions, the *Czerkassian* and *Gorsjschian* Princes, and many other Countries and Territories East, West, and North, the Inheritance of his Ancestors.

Those who treat with his Ambassadors, have the greatest Trouble in the World to give him his Titles, because of his extraordinary Pretensions. In 1654, to give some Colour to his making War upon *Poland*, and to assist the *Cossacks*, the Czar pretended that some of the *Polish* Lords had not given him his due Titles, and that they had printed Books in *Poland* in Derogation of his Honour. One of his Predecessors was so cruel, that he caus'd the Hat of a *French* Ambassador to be nail'd to his Head, because he refus'd to be uncover'd in his Presence.

*Of the Czar, and his Method of
Government.*

THE *Muscovites* have a great Reverence and Regard to the Czar, and look upon his Will as the Will of Heaven. They call him *God Almighty's Chamberlain*, so that it is a Proverb among them, *God only knows it, and the Great Duke*. Persons of the chief Rank in the Empire approach him with the same Reverence they do God. If he gives them the least Mark of his Displeasure, they are ready to expiate their Faults with the

Loss of their Lives. He is Arbitrary in all Parts of his Government, and absolute Lord of the Lives and Estates of his Subjects.

His REVENUES.

1. **T**HE Crown-Lands are 136 Towns with their Territories, of which some pay Money, and others Corn and Provisions: This being more than is spent in his Household, the Surplus is sold at 230000 Rubles per Ann. a Ruble being a Mark Sterling; and commonly pays his Servants. 2. An Imposition upon every Measure of Grain that grows in the Kingdom, and a Tax on every Town and Precinct, which is commonly 400000 Rubles per Ann. 3. The Customs, which rise or fall according to Trade; those of *Archangel* amount sometimes to 600000 Rubles per Annum, and the Customs of other Towns to about 340000. These are levied by the Court of the Great Income, which also levies the Tax on Bath-Stoves and Publick-Houses. There are 3 in *Novogorod*, which pay 4000 Rubles per Annum; and it is said, there are 1000 such in the Empire, which pay the like in Proportion. They collect also 10 per Cent. upon those that are cast in Law-Suits, and an Impost for every Name contain'd in Writs that pass out of the Courts, amounting commonly to 3000 Rubles per Ann. 4. The Half of Felons Goods, the other Half going to the Judge and Informer. 5. Rents of Lands, allow'd for maintaining Soldiers. These Branches of the Revenue above-mention'd were sometimes reckon'd to bring in 1400000 Rubles per Annum. 6. The Monopoly of *Caviare*, *Isinglass*, and Fishing, for which he pays the Labourers, and sometimes farms the fishing of Rivers and Lakes. 7. By Furs from all Parts of his Dominions, which he sells by his Merchants, and no other must sell till all his be disposed of; so that he rates them as he pleases. 8. The Preemption of all Goods that come to his Country, which he sells as he thinks fit. He generally purchases with his own Commodities, and seldom suffers Gold or Silver to be carried out of his Dominions. 9. Sables, the best Trade of his Country, are all his own, as Tribute, or purchas'd by him at a small set Rate. 10. Five per Cent. of all Goods exported and imported.

His Expences are answerable to his Revenues, his Family being at least 1000 Persons, besides 16000 Musketeers, and 5000 Horse, for his Guards, and 100000 Men in Garisons. His Table consists usually of 50 Dishes. He defrays the Charges of all Ambassadors from their entering his Country till they go out.

The vast Extent of his Dominions; his unlimited Power, and the Splendour of his Court, make such Impressions upon his Subjects, that they glory in their Chains, and despise all other Nations. 'Tis common to hear them say, *I have had, or shall have, the Honour of seeing the bright Eyes of his Czarish Majesty.*

His tyrannical Government is supported by the following Methods: 1. His Subjects are not allowed to travel, lest having seen and tasted Liberty abroad, they should not relish Slavery at home. 2. The Czar never marries a Foreign Princess, for fear she should introduce Customs destructive to his absolute Power. 3. Their Ignorance contributes much to this, for they know nothing of the Foundations of Government, and the Privileges of Human Nature.

The famous Tyrant *John Basilowitz* was the first Inventer of the Czar's Arms, in Imitation of the *German* Emperors: He bears a Spread-Eagle, but the Wings somewhat less than the Imperial Eagle, having on the Breast, in an Escutcheon, one on Horseback fighting with a Dragon, representing *St. Michael*, or rather *St. George*. Above and between the Eagles-Heads, are 3 Crowns, signifying *Muscovy*, and the two *Tartarian* Kingdoms, *Astracan* and *Casan*.

Their POLICY.

THE Czar himself bestows all Places of Honour and Profit on whom he pleases. This breeds a Dependence on him, that he may oblige more of his Subjects, and hinder them from growing too powerful. No Governor is to keep his Post above 3 Years. Tho' the Czar may, yet he seldom takes the Lands of Fathers from their Children. *Dr. Fletcher* says, They pass their Lands by Descent of Inheritance to which of their Sons they please, and commonly after our Gavel-kind, and dispose of their Goods by Gift or Testament, without any Controul:

Yet they pay the Czar an Acknowledgment after the Nature of an Herriot or Relief.

Their LAWS.

NO Law of any Consequence is determined without the Approbation of the Czar: The Chief Justice receives Appeals from all Places, and acquaints his Majesty with them. In 1647, the Czar, with the Advice of his Counsellors, publish'd a Code, containing the Laws the Judges were to observe in all their Sentences, which are printed in Folio, by the Title of, *Solomns Ulofenia*, or Universal Right. The Czar makes Peace or War, and sends Ambassadors ordinarily of the richest of his *Boiars*, who are able to bear their own Charge. When they are recall'd, he takes to himself what he pleases of the Presents that are given them. When extraordinary Laws or Constitutions are to be made, the Czar summons a Meeting of the Clergy, and such of the Nobility as he pleases. One of the Secretaries proposes the Matters that are to pass into Acts; the Clergy are first ask'd their Opinions: If all agree, the Proposals pass into a Law. When the Czar consents, the Secretaries draw them up into the Form of a Proclamation, and send them to the great Cities, with Charge to the Governors to see them observ'd.

The Great COUNCIL.

THE Czar gives the Title of Counsellors to many that never come to Council. Those that belong to the Council, are called *Dumoy-Boyaren*, and are such as the Czar pleases to call. The Great Officers of State belong to this Council. He has also his Privy-Council, who for the most part rather consent and approve of the Czar's Resolves, than argue or give their Opinion. The Patriarch's Advice is ask'd in Matters of Consequence.

Particular COUNCILS.

THE Principal Councils are six; the first is for Ambassadors, and Foreign Affairs; the 2d for Matters of War; the 3d for the Revenues of the Crown; the 4th for Trade and Merchandize; the 5th for Determination

tion of Civil Affairs among themselves; the 6th for Criminal Matters. Every Province is assign'd to a certain Council. They use Tortures if the Criminal deny the Fact. Oaths there are perform'd in the Church, by kissing a Cross; but such as swear thus frequently, become infamous, are prohibited Entrance into the Church, and Persons of Condition will not converse with them. False Swearing, and frequent solemn Oaths, are very scandalous here.

Their PUNISHMENTS.

A Robber is broke on the Wheel; a Sacrilegious Person impal'd; a Traytor and Servant that murders his Master, beheaded: Those in Debt, are kept Prisoners to the Time appointed for paying the Debt: If they fail then, they are every Day brought into the Court, and beat for an Hour upon the Shins and the Calves of their Legs, sent back to Prison against Night, and so on till the Debt be paid; but if they be unable to pay it, they are made Slaves to the Creditor.

OFFICERS of STATE.

1. The Chancellor presides in the Office of Ambassadors, presents Petitions to the Czar, and returns the Answer, which must be in the Czar's own Words. 2. The Treasurer, takes Care of the Revenue. 3. The Constable, who looks after Military Affairs. 4. The Master of the Horse, who, besides commanding the Czar's Guards, oversees his Stables. 5. The Chief Justice, who is always present with the Czar.

Inferior MAGISTRATES.

IN all great Frontier Cities, they have Weywodes, who are Governors of great Quality and Experience. In lesser Cities, the Czar appoints Governors, by delivering them, as a Badge of their Power, a Staff, which at their Return they restore to him again.

Of their COIN.

Their Coin is Silver only, and of an Oval Figure: (No Gold is coin'd here, except Medals upon extraordinary Occa-

sions) It is very small, so that the biggest Piece, called a *Copee* or *Denning*, is worth no more than a Penny. This Money is very troublesome, by reason of its Smallness: 'Tis mark'd with the Arms of *Muscovy*, and has on the other Side the Name of the Reigning Czar, and of the City where it was coin'd. Four Cities only enjoy this Privilege, viz. *Moscow*, *Novogorod*, *Twere*, and *Pleskow*. Rix-Dollars of all sorts, *Joachim* Dollars, and *Spanish* Reals, pass current in *Muscovy*.

Of their NOBILITY.

THE Nobility were formerly younger Branches of the Royal Family, and had great Power; but since the Days of *Ivan Basilowick*, they have been mortified and kept under. Now the chief Degree of Nobility is that of the *Boiars*, or *Boiarents*, who are of the Emperor's Council, and delight in having great Bellies, as generally all *Muscovites* have, by tying their Belts below their Bellies. They who have born any Office in War, as General, Governor, &c. leave something of Title to their Posterity. They also carry a Kettle-Drum at the Pommel of their Saddles, and beat with the End of their Whip, to make Way for them in Crouds in the Streets; and in Wars, to give Notice of Marching, Halting, or the like: The first that bears the Command, beats, and all the rest answer him. The Czar obliges them to constant Attendance at Court, lest they should foment Insurrections among the Subjects.

Of their MILITARY DISCIPLINE.

IN Field-Battles and Sieges, they were formerly reckon'd nothing, being soon brought into Confusion; so that they own'd other Nations were their Masters in this Point: But they defend a Fortrefs to the utmost, not only because they are able to undergo Hardships of all Sorts, but because they know it is present Death for them if they return home, after they have surrendered a Fortrefs by Capitulation; so that their Women sometimes fight stoutly upon the Works, and defend Breaches. They endeavour now to bring the Soldiers under better Discipline; for which End they

make use of a great many *Scots* and *German* Officers, who instruct them in all the War-like Exercises that are practis'd by other *European* Nations. The Martial Genius of the present Czar has accustomed them more to the Use of Arms, than any of his Predecessors. He has also improv'd their Naval Affairs. They fight best under the Command of Strangers. They have four Potent Enemies, the *Turks*, *Tartars*, *Poland*ers, and *Swedes*. The Czar maintains 16000 *Strolitzes*, or Guards, and 4 or 5000 Foot, in the City of *Moscow*, and 100000 Men upon the Frontiers. He has also a Militia, who are to rendezvous and march as he shall command them. They are maintain'd by a great Part of the Empire, let out to those call'd *Sinaboiarsky*, on Condition that they themselves, their Sons and Farmers, shall serve him with Horse and Arms at their own Charge in the Wars. All their Sons are *Sinboiars*, or Gentlemen, and as soon as able to bear Arms, enter themselves in the Great Constable's Office, petition for Maintenance, and are frequently put into mean Employments, till they can be better provided. When the Emperor makes War in Person, he has a select Guard of 15000 Horse, who have from 12 to 70 Rubles *per Annum* each, according to their Degree, besides their Lands. His Nobles and Officers maintain also 60000 Horse at their own Charge, who Muster once a Year on the Borders of *Tartary*: So that besides 100000 Men in Garrison, he has 300000 Horse ready on all Occasions. Their Foot have a Gun, a Sword, and an Ax behind them: Their Horse have Helmets, Corslets, Bows, Arrows, Iron Masses, Scymeters, Targets, Lances; and now they have Fire-Arms. They had formerly a great Drum, carry'd upon 4 Horses, fasten'd together, and 8 Men to beat it. They had in their Wars with the *Tartars* a double Wall, or Fortification of thick Pales, so contriv'd, that it might in a short Time be set up 7 Miles in length, with Holes for their Muskets to fire through. This defended them from the Arrows of the *Tartars*, who had no Fire-Arms. History informs us, That in some Invasions, the *Tartars* have carried off 400000 Captives from that Country.

Of their HISTORY.

ALL that we can be inform'd of as to this vast Monarchy, is, That it was formerly divided into several Principalities and Governments; which being united, brought it to its present Bulk. As to the Origine of their governing Families, Authors are at an Uncertainty; some derive their first Governors from *Beala*, a King of *Hungary*; and 'tis certain, their Imperial Family bore that Name. Queen *Olga*, one of them, went to *Constantinople* in 876, where she embrac'd Christianity, brought it into *Russia*, and is now one of their Saints. They keep her Anniversary on the 11th of July. To her succeeded several other Princes; but the first, of whom we have any Certainty, is, Prince *Wolodimer*, who, in 988, married *Anna*, the Sister of *Basilius Porphyrogeneta*, introduc'd the Christian Religion into this unpolish'd Nation, was baptized at *Constantinople*, in the Presence of the two Emperors, and nam'd *Basil*. Their History is very confus'd after this, till they became a Prey to the *Tartars*, when their Prince *George* was defeated by the *Tartarian* King *Batio* in 1273. The whole Country was miserably enslav'd, and burden'd with an insupportable Tribute for about 200 Years. This *Batio* impos'd very hard Terms on the *Muscovites*, viz. That the *Tartars* should chuse from Time to Time the Princes of *Muscovy*; That when the *Tartars* sent an Ambassador, the Prince should go to meet and wait upon him on Foot, offering the Ambassador a Platter of Mare's-Milk; That if the Ambassador let any of the Milk fall upon the Mane of his Horse, the Prince of *Muscovy* should lick it up; and that he should be bare Headed, and give the *Tartarian* Ambassador's Horse his Provender out of his Cap. But the hardest of all was, That the *Tartars* had a House and Guard in the Castle of *Moscow*. But in 1450, *Joku*, the Son of *Basilius the Blind*, became their Deliverer, and erected the numerous scatter'd Provinces into a great Principality. After a bloody War with the Great Master of the *Teutonic* Order in *Livonia*, he made a Truce with him for 50 Years. He subdued the Dukes of

of *Tiver* and *Great Novogorod*, in which City it is said he got a Booty of 300 Cart-load of Gold and Silver: He built *Ivanogorod*, a Castle near *Narva*. In 1509, his Son *Basilius* took *Pleskow* from the *Poles*: He afterwards took *Smolensko*; but was beat by the *Casan-Tartars*, who at the same time ransack'd the City of *Moscow*. His Successor was his Son, *John Basilowitz*, or *Basilides*, who rais'd the Empire of *Muscovy* to its Height, subdued the Kingdoms of *Casan* and *Astracan*, which alarm'd his Neighbours, especially *Selimus*, the Emperor of the *Turks*; who in 1569 sent 340000 Men to recover *Astracan*, which was bravely defended by *Serebrine*, the *Muscovite* General: So that this vast Army was partly by their unsuccessful Rencounters with him; and chiefly for Want of Provisions, for most part consum'd, and the remainder of them was cast away in the *Black Sea* as they return'd; so that few of them escap'd. He also obtain'd a Victory over the Master of the *Teutonic* Order, *William Von Furstenbourg*, whom he took, and suffer'd to perish in a miserable Prison; which was the Occasion that the City of *Revel*, and all *Esten*, surrender'd themselves to *Sweden*, as the rest of *Livonia* did to *Poland*. He was at first victorious over the *Poles*; but afterwards *Stephen Batori* took *Platsko*, and several other Places, from him. He died in 1584, and was one of the most cruel Tyrants that ever liv'd. To him succeeded his Son *Theodore Ivanowitz*, a mild and simple Prince, against whom the *Swedes* wag'd War about *Ingermanland*. He left the Nation involv'd in grievous Troubles.

This *Theodore*, who was the last of the House of *Beala*, dying without Issue, his Sister's Husband, *Boris Gudénov*, did, by his clandestine and unwarrantable Intrigues, obtain the Empire, but reign'd with very indifferent Success. Before he was Emperor, by his covetous and oppressive Practices, he had gathered together an Estate of 93700 Rubles *per Annum*; upon which, and other Accounts, many did afterwards favour the false *Demetrius*. After his Death, his Son *Fedor Borissowitz* took the Title of *Grand Duke*; when the Impostor *Demetrius* (whose true Name was *Gregorius Utrepeja*) personated his murder'd Brother *Demetrius*, and carried the Matter so far, thro' the Assi-

stance of *Poland*, that he took *Fedor* Prisoner, and causing him to be strangled, proclaim'd himself Czar, July 29. 1605. And the better to establish himself by Foreign Alliances, he married *Maria*, the Daughter of *George Minzack*, Weywode of *Sandomir*, soon after. This alienated the Affections of the *Muscovites*, because by this Alliance they thought he design'd to bring in *Poper*y: And they likewise suspected him of being an Impostor, because he did not conform himself to their Customs of sleeping after Dinner, &c. So that a few Days after, *Basilius Ivanowitz Zuski*, (a *Russian* Prince, of the Royal Family by the Mother's Side) with 20000 Men, surpriz'd and cut in pieces the Bridegroom, imprison'd the Bride, with several of the Nobility, and was proclaim'd Czar, June 1. 1606. but soon after was oppos'd by another Counterfeit *Demetrius*, (*Gregorius Schasopski*, formerly Secretary of *Moscow*) who pretended to be *Demetrius*: That he had escap'd from *Basilius*, instead of being kill'd, as the other report'd, and claim'd his imprison'd Wife. All these Divisions were fomented by *Charles IX.* King of *Sweden*, who at length offer'd his Assistance against the second *Demetrius*. *Zuski* at first refus'd to accept it; but when the other began to grow powerful, he earnestly desir'd it, and promising to deliver *Kockholm* to *Charles* as an Acknowledgment, pursuant to his Request, the King sent to his Assistance *Peritus de la Gardie*, with some Thousands of Men, that were very serviceable to the *Muscovites*; who refusing, upon several frivolous Evasions, to deliver up the Places stipulated to *Charles*, he took them by Force, and by so doing, annex'd *Carelia*, and the rest of *Ingermanland*, to the Kingdom of *Sweden*. Then the *Swedes* were defeated by the *Poles* near *Clusjin*; the Effects of which were the deposing of *Zuski*, whom they shav'd, and shut up in a Monastery, and offer'd the Crown of *Muscovy* to *Uladislaus*, the Prince of *Poland*, who accepted it, on Condition of delivering up *Zuski*. Soon after this, the *Polish* Army being admitted into the City, they quarrell'd with the Inhabitants, and in despite of their General plunder'd and burnt it; at which Time 200000 Persons perish'd, the Treasury was pillag'd, and the Wealth of the Emperor was divided amongst the *Poles*.

Poles. In this miserable Condition, a *Muscovite* Butcher gave out among the People, That if they could find an honest Treasurer, they would soon get good Officers and Soldiers of their own Nation to recover their Country. The People laying hold of this, bid him name a General; and accordingly he nam'd a very worthy, but mean Gentleman, whom they approv'd, and made himself Treasurer. They paid him all that was in Arrear to the Emperor, and what else they could, with which he rais'd an Army, attack'd the *Poles*, and forc'd them to leave the Country. After this, the Nobility chose *Michael Feodorowitz*, (the Son of *Feodor Mikilowitz*, the Patriarch of *Moscow*) Nephew to the Tyrant *John Baslides*, who, by his Accession to the Throne, began the Race of *Alexiewitz*, the present Royal Family: He began to Reign in 1613: and by making Peace with *Sweden* and *Poland*, and a long Reign of 33 Years, he settl'd the Country in a prosperous Condition. He was succeeded by his Son *Alexius Michaelowitz*, who, in 1653, falling upon the *Poles*, took from them *Smolensko* and *Kiow*, and committed great Depredations in *Lithuania*. Then invading *Livonia*, he took *Dorpt*, *Kokenhusen*, and several other Places of less Note; but was oblig'd to raise the Siege of *Riga* with great Loss. Soon after a Peace ensu'd, by which he restor'd to the *Swedes* all the Places he had taken from them. In 1669, one *Stephen Ratzin*, a Seditious Rebel, disturb'd the Repose of his Government, and made him very uneasy; for having master'd *Casan* and *Astracan*, he committed great Depredations all over *Muscovy*, till at last he was taken, and brought to condign Punishment; upon which all the Countries he had overrun return'd to their Obedience. Soon after this, many of the *Cossacks* submitted themselves to the Protection of *Alexius*, who was thereby engag'd in a War with the *Turks*, but not to his Advantage. He died in 1675, leaving his Empire to his Son *Theodore Alexowitz*, a sickly Prince, who was succeeded in 1682 by his Brother *Peter Alexiewitz*, the present Czar, who govern'd in Conjunction with him before, and narrowly escap'd the treacherous Designs of his Sisters *Sophia* and *Maria*, with their Confederate *G. Gallyzin*. He at present sways the Scepter alone, and vigorously endea-

vours, as much as possible, to polish his rude Subjects, by Introduction of Learning and Arts among them.

Their LANGUAGE.

THEIR Language has nothing common with the *Greek*, but comes so near to the *Sclavonian* and *Polish*, that whoever knows the one, may understand the other.

A SUPPLEMENT, from the Travels of the Baron de Mayerberg, the Emperor's Ambassador into Muscovy, Printed at Leyden in 1688.

Of their MANNERS.

HE says, there is great Impurity of Crimes among 'em, and that prodigious Villanies are not punish'd there according to Merit. He gives an Instance of a Criminal, who was apprehended in the very Act of Sacrilege; and when brought before a Judge, he frankly own'd the Fact, and without the least Concern laid the Blame upon the Infirmary of Human Nature, and told, that a Priest was his Accomplice. He also own'd what he had done; upon which he was sent to a Monastery, to bolt Flower for 6 Weeks; and after that, when he said *Gospodi* for some Time, he was absolv'd. The other Fellow was deliver'd to his Master, who was oblig'd to pay the Value of what he had stole.

The Czar washes his Hands after he has saluted Ambassadors of the Popish Religion, because he looks upon them as Pagans, and thinks the Touch of them defiles him.

The *Muscovites*, from their Cradles, are so addicted to Lying, that it is not safe to trust any of them. Not only the Boors and meaner sort are addicted to this Vice, but their Ministers of State. They maintain one Lie with a Hundred; and if they happen to be convicted, they don't blush at it, but smile, as if they had done some worthy Action.

The People drink in Publick-Houses till their Money is gone, and frequently sell all their

their Clothes to pay their Reckoning. Their Priests outdo the People in Drunkenness. It is very ordinary for them, when drunk, to wallow in a Kennel, and then Hackney-Carmen or Coachmen carry them off to some By-way, and rob them.

Their People of Note have many Servants, but are at small Charge for their Maintenance or Cloathing. Their Drink is Water, unless on some Holiday, when they mix a little Leaven with it. They have no Wages, because they are for the most part either Slaves, or the Sons of Slaves. They are much inclin'd to Drunkenness, and set Fire to Houses, that in the Time of the Hurry and Confusion they may have Occasion to rob; and frequently the Guards or Watch go Shares with them in their Robberies and Murthers by Night; so that every Morning almost the Corps of murder'd People are found in the Streets.

Their Beggars ordinarily steal Children, break their Arms and Legs, and sometimes dig out their Eyes, to move the People to Compassion, by pretending they were born so. Their usual Stile of begging is, *For the Sake of God, and the Great Duke.*

The greatest Part of their Knowledge of the Affairs of Europe comes from *Prussian* or *Dutch* Gazets; which Merchants bring sometimes to *Moscow*; and they implicitly believe them as Articles of Faith. Sometimes they use this Method to know the Secrets of State of Foreign Kingdoms. When they take any Prisoners, tho' but common Soldiers, they threaten to torture them, if they will not discover the present State of Affairs in the Countries they belong to; tho' poor Souls they know nothing of the Matter themselves; but understanding the Simplicity of the *Muscovites*, they tell them any thing they know will please them. When their Affairs are prosperous, they are unsufferably insolent; but when otherwise, they are as much dejected; which makes the Negotiations at the Czar's Court very troublesome and uncertain.

No Man is advanc'd to any Business or Command in the Army for Merit and Abilities, but on Account of his Birth, how insufficient soever for the Post. This damps all Courage and Bravery in the Val-

gar, because they have no Hopes of raising their Fortune.

Foreign Ambassador are in effect Prisoners here; all Commerce with their Acquaintance by Letters is forbid, and the Letters from their Masters to them are intercepted.

Of their W O M E N.

They have more Monasteries for divorc'd Wives than for Maids. The Carriage of both is very scandalous; for after their *Matings*, they walk abroad, and having no Guardians of their Chastity, upon the first Temptation they comply with any lewd Proposal, and gratify their own vicious Inclinations.

The Women have not that Regard and Respect paid them here as in most other Nations of Europe. No Man here will undervalue his Sex so much as to bow to any Woman, of what Quality soever. There is nothing heard in *Moscow* of admiring the Female Sex, or of adoring their Divine Beauty and Charms; for they are not liberal in bestowing Incense of that sort.

The Czar's Sisters and Daughters are for most part shut up in Monasteries, or in the Palace, where they are forc'd to continue in Virginity. The Reason is, because the Czar will not marry them to any Prince that is not of their Faith, for all such they reckon Pagans, and all the Children begot of such Marriages they think Bastards. Neither are they allow'd to marry any Subjects, for they are accounted the Czar's Slaves.

The *Muscovite* Women are not asham'd to be seen naked by Men when in the Bath, and very often go naked into the same Bath with them.

The Czar does not suffer his Wife, Sons or Daughters, to eat with him; nor are his Wife, Sisters and Daughters, seen by any. Tho' he has above 1000 Courtiers, yet scarce any one of them ever see them. If the Grand Dutchess be sick, when a Physician comes into the Room, the Windows are all shut, that he may not see her. If he wants to feel her Pulse, she holds out her Arm, cover'd with a Veil of fine Silk.

Of their RELIGION.

ON *Wednesdays* and *Fridays* they abstain from Eggs, Flesh and Milk. Some of the more Religious will not on those Days use refin'd Sugar, because they are inform'd that it is purified with the White of an Egg.

The Week after *Easter*, they abandon themselves to all sorts of Riots and Extravagancies, and commit the maddest and most foolish Things imaginable. All Business is then at a stand, their Shops are shut; but the Taverns, Publick-Houses, and Stews, are open. The Air resounds with their confus'd Cries; and when they meet one another, one says, *Christ is risen again*; and the other answers, *He is certainly risen*. The Priests have their large Share in the Debaucheries of that Time: They have a young Man who goes before them with a Crucifix. They visit their Friends and Acquaintance, and are sure to be drunk. Their Bells toll Day and Night, for they are perswaded that it contributes to the Ease and Comfort of the Souls of their deceas'd Friends.

Their Priests account all those Pagans who are not of the *Muscovite* Faith. A Curate, says the Ambassador, refus'd to give us his Hand, lest by touching us he should be defil'd. None of their Boors, and but very few of their Citizens or Monks, can repeat the *Lord's-Prayer*.

When a *Muscovite* enters a Room, he takes no Notice of the Company, but looks about till he perceives an Image; then he bows to it three times, makes the Sign of the Cross, and afterwards salutes the Company. If any be found worshipping secretly an Image erected at the Charge of another, the Owner upbraids him with Injustice; in designing to have a Share in the Favour of that Image, which is only due to the Proprietor; and they are often oblig'd, by way of Punishment, to pay the Owner some Part of the Money he has laid out for the Image.

When a Man is excommunicated by the Church, his Saint must also partake of the Disgrace, and is allow'd no Place in the Church till the Man be restor'd to Commu-

nion, and then the Image is replac'd. Our Landlord, says the Ambassador, took all the Images out of our Rooms, for fear they should be provoked, if he suffer'd them to lodge with Pagans.

They allow no Preachers, lest they should teach the People Heresie. They are oblig'd to confess before they receive the Sacrament, but are sure to conceal their greatest Sins.

Many of the *Muscovites* are not call'd by the Names they receiv'd in Baptism, for their Parents conceal their true Names, and give them others, lest Magicians, or other wicked Persons, knowing their true Names, should make use of them to their Ruine.

Of the RIVERS of Muscovy.

Ptolmy says, the *Rha* is the greatest River of *Sarmatia Asiatica*, and has its Rise in *European Sarmatia*. The *Muscovites* now call it *Volga*: the *Tartars*, *Edel*; the *Armenians*, *Thamar*. Its Source is in the Province of *Reschow*, from the Lake *Bornow* in the Forrest of *Volkenk*. Out of this Lake runs a small River, which, after a Course of 8 *English* Miles, falls into a Lake call'd *Volga*, with which it joins its Waters for 30 *English* Miles, comes out greater than it enter'd, and has the Name of *Volga* from that Lake: Then it runs E. and waters *Jeroslaw* and *Nisi-Novogorod*, where the *Occa* falls into it: It also runs by *Casjan*. A little lower, the great River *Kama*, that divides *Europe* from *Asia*, falls into it. Then its Course is S. till it reach *Samara*, and runs S. W. to the City *Saratoff*. Then it runs S. and waters *Zariza* and *Astracan*. The *Volga* there is 2216 Foot broad. Twelve Leagues below this, it falls into the *Caspian* Sea, by 25 Mouths, in Lat. 46. Long. 76 $\frac{1}{2}$. and makes it less brackish for many Leagues. From its Source to the *Caspian* Sea, it runs 2900 Miles.

Occa. The Source of this River is not far from the Borders of the *Precopian Tartars*, about Lat. 49. It runs N. till it comes to *Kohn*, in Lat. 55. and Long. 56. Then it turns E. and waters *Resjan*, *Casigorod*, and *Nisi-Novogorod*, where it falls into the *Volga*, in Long. 64.

Dvina, signifies in the *Russian* Language Two, from two Rivers of which it is made up,

up, viz. *Suchina* and *Juga*: The first rises in the Province of *Vologda*, and waters the City of that Name; then it runs N. to the City *Ustjugh*, where the *Juga* falls into it, whose Course is from S. E. to N.W. At this Place it is call'd *Duina*, from the Conflux of those two Rivers. A little lower fall into it the River *Wizogda*, whose Course is from N. E. to S. W. the *Waga*, that runs from S.W. to N. E. and the *Pinega*, that runs from E. to W. Then it waters *Archangel*, and falls below it into the *White Sea*, in Lat. 64½. and Long. 58.

Oby. *Ptolomy*, and others of the Ancients, call'd it *Carambucis*; and their Island *Carambyce* is now call'd *Novia-Zembla*. It has its Source from the Lake *Osero-Kankisan*, in Lat. 48. and Long. 95. and runs from S. W. to N. W. 'Tis the most considerable River in *Siberia*. In some Places 'tis half a League, and in other Places a whole League broad. This River has many Cataracts, which makes the Navigation of it very troublesome. Many great Rivers fall into it, as the *Keta*, which rises in Lat. 51. and Long. 98. It runs N. to *Makofikoi*, in Lat. 56. and Long. 97. From thence it takes its Course W. and falls into the *Oby* at *Keetskoi*, in Lat. 55. and Long. 90. This River has Plenty of Fish, and washes considerable Towns, as *Tomsko*, *Narum*, *Surgut*, *Kozkosa*, and *Berefowa*. It falls into the *Icy-Sea* by six Mouths, in Lat. 68. and Long. 83. The Way by this River to the Sea is seldom passable, because of the Mountains of Ice that for most part choak up the Mouth of it.

Irtis, has its Rise from the Lake *Osero-Susan*, about Lat. 46. and Long. 92. It runs from the S. to the N. W. till it joins with the *Tobel*: From thence, till it falls into the *Oby*, it runs N. E. Its whole S. E. Shore is all high Hills, on which grow some Cedars. The N. W. Shore is low Pasture Ground; and on this Side there's a prodigious Number of great Black Bears, Wolves, Red and Grey Foxes. It falls into the *Oby* N. from *Samarofskoy*, in Lat. 64. and Long. 84. *Tora*, *Tobolska*, and *Samarofskoy*, are seated on this River.

Tobel, has its Source in Lat. 51. and Long. 80½. It runs N. W. till it joins with the River *Tura*, near *Tumcen*: Then it takes its Course N. E. till it falls into the *Irtis* at *Tobolsko*, in Lat. 56½. and Long. 81.

Jenisa, rises out of the *Kalmachian* Mountains, in the S. of *Tartary*, in Lat. 40. Long. 101. and runs N. almost in a straight Line to the *Icy-Sea*. The Water of this River is white and light; but it does not much abound in Fish. It falls into the *Icy-Sea* in Lat. 70. and Long. 92. None have travelled further, either by Water or Land, than to the River *Tarsida*, on the E. of *Jenisa*, because Ice from the Sea drives into it, and makes it utterly unnavigable. Most of the Inhabitants between *Tarsida* and *Jenisa* are *Samoiedes*, and *Tunguzian Tartars*. Three very fine Rivers fall into the *Jenisa*, which are, the *Werguaja-Tunguska*, *Podkamenna Tungusk*, and *Nisnaja-Tunguska*; on all which dwell great Numbers of a barbarous wild sort of *Tunguzians*, which may be ranked with the *Samoiedes*; but are of a less Size, and weaker.

Lena, rises in Lat. 56. and Long. 114. N. from the Lake *Baikals*, and falls into the *Icy-Sea* in Lat. 73. and Long. 123. It is a great River. Small Barks coast it along by the Shore, and go through the Cape to *Saxoxia*, *Onodjeskoy*, and *Kamsatka*, in search of Sea-Calves, Teeth, and Train-Oil. The neighbouring *Tartars* make use of little Leathern Boats on this River, which sail very swift. The Rivers which run from the S. and fall into the *Lena*, are, the *Wittim*, which rises in Lat. 55. Long. 121. and falls into the *Lena* in Lat. 63½. and Long. 115. Its Course is to the N. W. The *Oluckma* has the same Course, rises in Lat. 60. Long. 124. and falls into the *Lena* in Lat. 65½. and Long. 118. *Maia* has also the same Course, and rises in Lat. 63. Long. 126. and falls into the *Lena* in Lat. 70. and Long. 120. All these Rivers fall into the Right Side of the *Lena*.

These are the most remarkable Rivers belonging to the vast Empire of *Muscovy*; concerning which 'tis observ'd, that most of them have their Source from Lakes, are broad and shallow, full of Illands, Flats, and deep Holes.

Of the L A K E S.

Juan-Osero, is a great Lake, 8 Miles E. from *Tula*, in the Province of *Resan*: It is near 500 English Miles long. From this the *Dnn* takes its Rise.

Y

Bielefer

Bielosera, is 64 Miles long, and 48 broad : It lies S. from *Archangel*, in Lat. 60. The River *Schexma*, which falls into the *Wolga*, 4 Leagues below *Mologa*, rises from this Lake.

Ilmin, is 48 English Miles long, and as many broad, and ends about 2 Miles from *Novogorod-Weliki*. It receives the River *Schalona*, and the *Lowat*, which rises in the Forreft of *Wolkowsky*, from a Lake call'd *Bornow*.

Ladoga, is 400 English Miles long, and 240 broad, is full of Isles. The *Neva*, which falls into the German Ocean, rises from this Lake.

Muscovy is divided by some into 4 Parts, viz. *West-Muscovy*, or *Russia*, bordering on *Poland*, containing 22 Provinces. 2. *East-Muscovy*, or *Russia*, which reaches to the Straights of *Weygates*, and contains 7 Provinces. 3. *Muscovian-Tartary*, comprehending the Kingdom of *Astracan*, the Kingdom of *Bulgar*, the Kingdom of *Casan*, the Kingdom of *Siberia*, the Country of the *Samoiedes*, the Tartarian Fortification *Asoph*, and all its Dependencies, with the demolish'd Places *Towan* and *Kasikermen*, and has a free Commerce with the *Black Sea*; all which were confirmed to the Czar, by the Peace with the *Turks* in 1700. 4. The *Muscovite-Lapland*, extending along the *White Sea* to the Swedish Borders.

Some divide *Muscovy* into Southern and Northern : The Northern Part contains 16 Provinces, viz.

1. *Lapland*, belonging to *Muscovy*; chief Town *Kola*.
2. *Kargapol*, S. E. from *Lapland*, near *Archangel*; chief Town *Kargapol*.
3. *Duina*, N. E. from *Kargapol*; chief Town *Archangel*.
4. *Condora*, E. from *Archangel*; chief Town *Wergaturia*.
5. *Juhorski*, N. from *Condora*, near *Weygates* Straights; chief Town *Juhora*.
6. *Petxora*, E. from *Condora*, near the *Samoiedes*; the chief Town *Petxora*.
7. *Obdora*, N. E. from *Condora*, near the Mouth of the *Oby*; chief Town *Beresof*.
8. *Permski*, S. E. from *Condora*, near *Siberia*; chief Town *Perma-Weliki*.
9. *Wiatka*, S. from *Permski*; chief Town *Wiatka*.

10. *Nisi-Novogorod*, S. W. from *Wiatka*, near the *Volga*; chief Town *Nisi-Novogorod*.

11. *Oustiong*, W. from *Wiatka*; chief Town *Oustiong*.

12. *Wologda*, S. W. from *Oustiong*, near the Lake *Onega*; chief Town *Wologda*.

13. *Bielä-Ozera*, S. from *Wologda*, near the *Volga*; chief Place *Bielä-Ozera*.

14. *Novogorod-Weliki*, on the E. of the Lake *Ladoga*; chief Town *Novogorod-Weliki*.

15. *Pleskow*, near *Riga* in *Livonia*; chief Town *Pleskow*.

16. *Czeremissis-Logoway*, W. from *Casan*, upon the *Volga*.

The Southern Provinces are also 16.

1. *Reschow*, S. E. from *Pleskow*; chief Town *Reschow*.

2. *Bielka*; chief Town *Bielka*.

3. *Smolenski*, S. from *Reschow*, upon the *Nieper*; chief Town *Smolenski*.

4. *Novogorod-Sewierski*, S. E. from *Smolenski*; chief Town *Novogorod-Sewierski*.

5. *Czernikow*, W. from *Novogorod-Sewierski*; chief Place *Czernikow* River.

6. *Ukrain*, belonging to *Muscovy*, S. from *Smolenski*, upon the *Nieper*; chief Town *Kiew*.

7. *Worotin*; chief Town *Worotin*.

8. *Rezan*, S. from *Wolodimer*; chief Town *Rezan*, on the S. Side of the *Volga*.

10. *Moscow*, N. E. from *Reschow*; chief Town *Moscow*.

10. *Twer*, N. from *Reschow*; chief Town *Twer*.

11. *Roskow*, N. from *Moscow*; chief Town *Roskow*.

12. *Jarostaw*, N. from *Roskow*, on the N. Bank of the *Volga*.

13. *Susdale*, E. from *Roskow*, upon the *Volga*; chief Town *Susdale*.

14. *Wolodimer*, E. from *Susdale*, upon the S. Bank of the *Volga*; chief Town *Wolodimer*.

15. *Czerimisses-Nagornay*, S. W. from *Casan*, berwixt the *Volga* and *Donn*.

16. *Mordwa*, W. from *Czerimisses-Nagornay*, upon the *Donn*.

OF LAPLAND.

The *Muscovite-Lapland* is much less than that belonging to Sweden. On the West, it has Swedish Lapland : On the N. and N. E. the Frozen Sea; and on the S. and S. E. the White

White Sea. Its Latitude is from 64 to 72 Deg. N. Lat. and its Long. from 43 to 58. It is divided into 3 Parts, viz. 1. *Mourmans-koy-Leporie*, the most Northern Part, in which lies *Kola*, a Sea-Port Town, upon a River of the same Name, which runs into the *Frozen Sea* a little below it. This Port is well known to the *English* and *Dutch*, who buy Furs here. 2. *Terskoy-Leporie*, N. from the *White Sea*. In this Part, there's a little Town call'd *Warfiga*. 3. *Bellamoresky*, S. W. from the *White Sea*. In this are the Towns of *Kandalax* and *Ombay*. This Country is barren; the Inhabitants are the wickedest of all the *Laplanders*. We refer the particular Account of the Manners, Customs, Religion, and Natural History, &c. of the *Laplanders*, till we come to treat of *Swedish Lapland*, which is larger by much than the other two *Laplands*.

KARGAPOL. This Province is desert, and has a Town of the same Name. The Lake *Omga* is on the W. of it: The Town is on the River *Omga*, which runs into the *White Sea*.

DUINA. This Country is so called from the River *Duina*, that runs through it. It abounds with *Isinglass* and *Pitch*; but is otherwise barren, and ill inhabited, tho' 100 Leagues long: 'Tis very cold, which hinders their having any Corn. The People live on dry'd Fish and Venison, and their chief Commodity is Salt. *Archangel* is the chief Town, and lies upon the *Duina*, which runs into the *White Sea* 6 Miles below it. It has a good Trade with the *English* and *Dutch*, and is the greatest Staple-Port belonging to the *Muscovites*, which makes it populous, tho' but small: 'Tis so called from the *Archangel St. Michael*. Customs are very heavy here upon all Commodities. *St. Nicholas* is a Sea-Port, on the Left Branch of the *Duina*, so call'd from a Saint of that Name, in whom they trust more than in *St. Peter* or *St. Paul*, because he is their Countryman.

CONDORA. We know little of it, but that it is over-run with Woods. On the North, it has the *Frozen Sea*. This Country and *Obdora* receiv'd the Christian Faith in 1618, and were not amongst the Czar's Titles till the Reign of *Ivan Bailiwick*. Some say, the Inhabitants are *Sam-*

moiedes, and barbarous Cannibals. *Wergaturia* is their chief Town.

JUHORSKI. It is uncertain where it is situated; but some Maps place it on the *Frozen Sea*. *H. Smith*, who liv'd in *Petzora* in 1580, says, That it lies over against the Streights of *Weygates*. The Baron of *Herbestein* thinks, 'twas from this Place that *Attila* over-ran Europe, and call'd *Pannonia*, Hungary, from the Name of their own Country. He thinks it is evident from this also, that the Remainder of the ancient *Hungarians*, who live betwixt the *Danube* and *Tibiscus*, speak the same Language with the Natives of *Juhorski*. They live after the Manner of the *Samoiedes*. *Juhora* is their chief Town.

PETZORA. It is bounded by a River of the same Name, and is on the W. of *Obdora*. *Petzora* is their only Town, which has 3 Churches: They are a sort of Christians since 1581, and live chiefly upon Geese and other Fowls, which they catch in the Spring and Summer. They sell the Feathers to Merchants; the Flesh they dry and salt for Winter: They are descended of the *Samoiedes*, but civiliz'd a little by the *Muscovites*. They have many Salmon, and great Plenty of Sables.

OB DORA. It has the River *Oby* on the E. and is inhabited by *Samoiedes*, who are Idolaters and Savages. The *Muscovites* have some Castles built there, to keep them in Subjection, and secure their Tribute.

PERMSKI. They have little Bread here, live upon Hunting, and have their Sleds drawn by Dogs, in which they slide over the Snow with great Expedition. *Perma-Weliki*, their chief Town, was formerly very considerable, but now is ruinous: 'Tis a Bishop's Seat. The People have a peculiar Character and Language, and pretend to be very ancient.

WIATKA. It abounds with Honey, Wax, and Furs. *Wiatka* is the Capital. The Country in general is marshy and barren.

NISINOVOGOROD: Is one of the best Countries belonging to *Muscovy*. The chief Town is of the same Name, and lies upon the S. Side of the *Volga*, at the Conflux of that River, and the *Occa*, 100 German Leagues from *Moscow* to the N. E. 'Tis

great City, fortifi'd with strong Stone Walls, has a Castle built of Stone, and a famous Church, built like that of St. Sophia in Constantinople. *Vasligorod* is a small Town upon the *Volga*, and belongs to that Province.

OUSTIOUGH. The Natives there had a Language of their own; but the Czar introduc'd the *Russian*, the People being willing to use it, because it is more advantageous to their Trade. They have Black Foxes, and famous Fairs and Marts. The chief Town is *Oustiough*, a noted Place for Trade in Furs.

WOLOGDA. This Country is marshy, and full of thick Woods. They sell much Tallow to Strangers. The chief Town is of the same Name, and fortified with a Stone-Wall. The Czar, in Time of Danger, uses to secure Part of his Treasure here. Many Places of this Country are unpassable, except on Sleds, during the Winter. It formerly belong'd to the Dutchy of *Novogorod*.

BIELAOZERA. This is the most ancient Dutchy of *Muscovy*: It has its Name from a Lake, in the middle of which the Capital is built: They think it impregnable, being advantageously situated, and having strong Fortifications. The Czar keeps his Treasures here, under the Guard of his principal Officers, and a strong Garison. It is one of the Titles of the Czar, and is distant from *Moscow* and *Novogorod* 100 German Miles.

NOVOGOROD-WELIKI. 'Tis fertile in Flax, fine Hemp, and has Honey, Wax, and Leather. The Capital is of the same Name, well built, strong, and has a good Castle. It is situated upon the River *Volga*, in a great Plain. It was formerly an Independent Republick, under its own Prince, and then was so wealthy and strong, that it became a Proverb, *Who can do any thing against God and Great Novogorod?* The *Hanse-Towns* drove a great Trade here; and the River being navigable, contributed much to its Strength and Riches. *Russian* Leather is better dress'd here than any where else. The Causes of its Decay were, 1. That in 1477, *Ivan Vasilii Grotstein* forc'd them to receive a Governor; after which, pretending a Pilgrimage, he pillag'd it, and carried away 300 Cart-load of Jewels, Gold and Silver, besides many others fill'd with

rich Stuffs and sumptuous Moveables. He transported the Inhabitants, and sent *Muscovites* to dwell in their Place. 2. *Ivan Bassilowick*, in 1569, upon Pretence of a Revolt, cut off the greatest Part of the Inhabitants; upon which there follow'd a great Plague; and then a Famine, so that they eat one another: Then, pretending to punish their Inhumanity, he destroy'd the greatest Part of those that were left. In 1611, the *Swedes* took it by Storm, but it was redeliver'd by Treaty to the *Muscovites*. There are about 100 Monasteries, Churches and Chapels here, that have their Steeples and Towers cover'd with gilt Copper. The Cathedral Church is that of St. Sophia. On the other Side the River, there's a strong Stone Castle, join'd to the City by a large Bridge.

PLESKOW. It abounds with Wax and Honey: The chief Town is *Pleskow*. It is 36 German Miles S. W. from *Novogorod*, and 27 E. from the Borders of *Livonia*. In 1509, it came under the Power of the *Muscovites*, by a Civil War among the Citizens, and was once the only Town in *Muscovy* that had Walls. It is divided into three Parts, every one of which is surrounded with strong Walls. It was besieged by *Stephen* King of *Poland* in 1581, when some say the Garison consisted of 70000 Foot, and 7000 Horse, besides the Citizens.

Southern *Muscovy* has the 16 Provinces following:

RESCHOW. The *Volga* begins in this Province, in Lat. 55. Long. 55. and falls into the *Caspian* Sea, Lat. 46. Long. 76½. It has also the Fountains of the *Dniuna*, *Nieper*, and *Lowat*, all great Rivers. The Hares in this Province are White. Some say, That all Beasts brought hither turn of that Colour. The Inhabitants have a Language proper to themselves. The chief Town is *Reschow*, on the Borders of *Lithuania*, 40 English Miles from *Twer* to the S. W. and 50 from *Bielka* to the E. *Wyelikeluki* and *Torepyecz*, large Cities with Castles, are also in this Country.

BIELKA. This Country has *Lithuania* on the W. and S. and *Twer* on the E. The chief Town is *Bielka*, with a Castle, seated on a River of the same Name.

The Dukedom of SMOLENSKO. It belong'd formerly to *Lithuania*; but has been subject to the *Muscovites* since 1654, that the Czar *Alexius Michaelowitz* took from the *Poles* the chief Town of the same Name, and united it to *Muscovy*. It was taken in 1611 by the *Poles*, after a Siege of 2 Years, with the Slaughter of 200000 *Muscovites*. The *Muscovites* besieg'd it in 1633, but were defeated before it. 'Tis 150 Miles E. from *Warsaw*, 100 Miles from *Vilna*, and 150 N. from *Kiow*. 'Tis a great City, but not populous: The Walls are 6 Cubits broad, and have 52 Towers. There's a strong Castle in the middle of the City. They have Plenty of Wild Beasts, whose Skins are much valued. Here the Czar once a Year diverts himself and the Foreign Ambassadors by Hunting. *Drobohus*, *Wielma*, and *Mosaisko*, are Cities belonging to this Province.

NOVOGOROD-SEWIERSKI It has *Worotin* and *Resan* upon the E. *Lithuania* on the W. from which the *Nieper* divides it, and *Smolensko*, to which it formerly belong'd, on the N. The chief City is of the same Name, and is distant from *Moscow* 150 Leagues. The Inhabitants are Warlike, being kept in constant Exercise of their Arms by the neighbouring *Tartars*. The City and Castle are well fortified after the *Russian* Manner.

CZERNIKOW. It belong'd once to *Lithuania*, and is so call'd from its chief Town on the River *Denzia*, N. from *Kiow*, two Polish Miles from the *Nieper*, and 17 W. of *Novogorod-Sewierski*.

The Muscovite UKRAIN: Was formerly a Part of the *Lower Volhinia*, and is divided in the middle by the *Nieper*. The chief Town is *Kiow*, which was given by the *Poles* to the *Muscovites* for 700000 Florins. Little *Tartary* is on the S. of it.

WOROTIN. Its chief Town is *Worotin*, with a Castle, upon the River *Occa*.

REZAN. *Wladimer* lies N. of this Province, and *Ukraine* and the *Precopian Tartars* to the South. It is situated betwixt the *Donn* and the *Occa*: It had formerly a Prince of its own, but is now subject to the *Muscovites*. The River *Donn* has its Source in this Province, which is fruitful in Corn, Honey, Wax, Fish and Fowl, besides *Ermins*, *Beavers*, and other Furs. The chief

Town is *Resan*, 36 Miles N. W. of *Moscow*. It was formerly considerable, but is now ruin'd by the Neighbourhood of the *Tartars*. *Pereflow*, *Colluga*, and *Tulla*, are Cities in this Province; and *Czirpac*, where they have Iron Mines.

MOSCOW. This Province is bounded on the N. by *Rostow* and *Susdale*, on the E. by *Resan*, on the W. by *Bielka*, on the S. by *Worotin*. It is so healthful a Country, that they reckon it a Wonder to hear of any Epidemical Disease here. The great Number of navigable Rivers contribute much to their Plenty of Provisions in Summer; and their Sledges, drawn by Deer or Horses upon the Ice, bring them all Necessaries at easie Rates in the Winter. The Deer are fed with Moss, of which they have abundance in their Woods. Their Horses travel 50 of our Miles without baiting; so that a Countryman will conduct one 11 or 1200 Miles for 4 Crowns, besides the passing and repassing of so many Governors to and from their Posts, for their Commissions last only for two or three Years, makes Travelling both safe and cheap. The chief City of this Province, and of all the Empire, is *Moscow*. It is in Long. 59. Lat. 56. Some say, That in 1571, when it was burnt down, 80000 Souls were destroy'd in the Flames. It was twice as large then as now. In 1611, 41000 Houses were reduc'd to Ashes, and 200000 Persons slain by the *Poles*. It is situated upon the River *Moskwa*, which begins to be navigable 6 Miles above it. It is 16 Miles in Compass, but not Peopled in Proportion; for within the Walls, they have many Gardens and Meadows. The Streets are not pav'd, except in some Places with round Fir-Trees. People of Fashion ride here in Summer, and are carry'd in Sledges in Winter. Their Houses are ill contriv'd, built of Fir-Timber, squar'd and Dove-tail'd one into another. The Chinks between are stop't up with Moss, and the Roofs are cover'd with Bark. Many *Tartars*, *Greeks* and *Persians*, live here. Some reckon the Number of the Inhabitants to be about 700000. The *Lutherans* and *Calvinists* are allow'd the Exercise of their Religion here. Their Houses are liable to Fire, because built of Wood, and by the Drunkenness of the People. To prevent

its spreading, those upon the Guard are provided in the Night-time with Pole-Axes, to break down the next adjoining Houses. New Houses are purchas'd here at an easie Rate. The Great Duke's Palace, called *Cremelena*, takes up one half of the City: It is fortified with 3 Walls, and a good Ditch, and well provided with Cannon. All the Steeples within the Castle are cover'd with Copper-gilt: One of them, called *Iuan-Veliki*, i. e. *Great John*, is remarkable for its great Height; and another for its Bell, which weighs 33600 lb. and what is more surprizing, was cast by a *Russian* Founder: 'Tis bigger than the great Bell of *Peking* in *China*; than that in *Rouen*, called *George d'Amboise*, and is probably the greatest in the World: Its Height 19 Foot, its Diameter within 18, the external Circumference 64, and the Thickness 2. It was cast in 1653, in the Reign of *Alexis Michaelowitz*. 'Tis never toll'd but upon extraordinary Occasions, when 24 Men pull the Rope below, and several others above. There is a very fine Piece of Architecture of Stone, built after the *Italian* Manner, for the young Prince; but the Czar continues in his Wooden Palace. On the South-Side of the Castle-Gate, without the Walls, there's a Church dedicated to the Blessed *Trinity*, and by some called *Jerusalem*, built by the famous *Russian* Tyrant *John Basilowitz*, who caus'd the Architect's Eyes to be put out, to prevent his undertaking any thing like it for the future. Every Trade have their own Station and Place in this City.

The 2d Quarter is call'd *Czar-Gorod*, or the City-Royal: It encompasses the other like a Semi-Circle, and is walled about with white Stone. The Arsenal, and the Place where the great Guns are cast, are here. The *Muscovites* are now as expert in casting Guns as other Nations.

The 3d Quarter, which encompasses the former from the E. along the N. to the W. is call'd *Skoradam*: The River *Jagusa* passes through it. Here they have a Market for Houses ready built, which are taken to Pieces, and transported to any Place in the Town.

The 4th Quarter, which lies to the S. on the opposite Side of the River *Mosca*, is fortified with Wooden Walls and Ramparts.

It is the Habitation of the Czar's Guards. The Chapels and Churches in this City are 2000, and, by Order of the Patriarch, are now all built of Stone. This City lying betwixt *Narva*, *Archangel*, and *Astracan*, makes it a Place of great Trade.

TWER: Is situated betwixt the Provinces of *Roschow* and *Novogorod-Weliki*. Near this Province rises the *Volga*, which runs 2400 Miles before it falls into the *Caspian* Sea. This Province is rich in Corn and Merchandize, and very populous. They can furnish their Prince with 40000 good Horses, and 80000 Foot. The Capital City is *Twer*, 140 Miles from *Moscow*, and situated on the River *Twertza*, where it runs into the *Volga*. It has about 60 Churches, is a Bishop's See, and has a Mint.

ROSTHOW. It has *Susdale* on the E. and *Twer* on the W. This Province was the Inheritance of some Princes of the Blood of *Russia*; but they were entirely rooted out, and the last Heir murder'd in 1565, by *John Basilowick*. They have Plenty of Salt. The chief Town is of the same Name, lies 26 Miles S. from the *Volga*, 36 Polish Miles from *Moscow*, and 48 S. of *Jaroslau*. *Pereflow*, *Uglisz*, and *Chlopigrod*, are Towns in this Province.

JAROSLAW. It is situated betwixt *Wologda* to the N. and *Roschow* to the S. The chief Town is of the same Name; lies upon the River *Volga*. They had Princes of their own, till *John Basilowick* destroy'd them. Some say, the City is well fortified, and contains about 40000 Inhabitants: It is 45 Polish Miles N. of *Moscow*. They have a great Trade in Leather, make much Linen, and abound with Corn, Cattle, and Honey. They have an easie Passage to *Archangel*. *Romanow* belongs to this Province, and lies also upon the *Volga*.

SUSDALÉ. It has *Roschow* on the W. and *Wolodimer* on the E. The chief Town is *Susdale*, an Archbishopsrick, 80 Miles N. E. from *Moscow*, and 130 Miles S. W. from *Nisi-Novogorod*. It has a famous Nun-nery.

WOLODIMER. *Susdale* is on the W. *Mordwa* on the E. *Resan* on the S. and *Nisi-Novogorod* on the N. of this Province. The principal Town is of the same Name. It is 190 Miles S. from *Nisi-Novogorod*, and was formerly the Metropolis of *Muscovy*, and the

The Dominions of
M O S C O V Y in
EUROPE.

By Herman Moll Geographer.

the Residence of the Great Dukes, till the Seat of the Empire was translated to *Moscow*, by John the Son of *Daniel*, because *Wolodimer* was too near the *Tartars*. It is now the second City of the Empire. The Czar styles himself Duke of this Place. 'Tis an exceeding fruitful Country, and yields frequently thirty for one. It abounds with Honey and Wax.

CZEREMISSES-NAGORNAY. They are People who live on the E. of *Muscovy*, and on the S. of the *Volga*. Some of them are Mahometans, but most of them Pagans. They live on Mountains; and those called *Logoway* live in Champaign Countries.

The MORDWA TARTARS: Are planted betwixt the *Volga* and the *Don*, where it begins to turn Westward towards the *Euxine* Sea. They have the *Czeremisset-Nagornay* to the E. *Wolodimer* to the W. and are near *Little Tartary*, and the Provinces of *Roslan* and *Worotin*. They are savage idolatrous People: They practice Polygamy, and divorce when they are wearied one of another. When a rich Man dies, they kill his best Horse to serve him in the other World, and then they eat the Horse. Both Men and Women are good Archers. They pay Tribute to the Czar.

Having thus given an Account of the Provinces belonging to the *Muscovites* in *Europe*, we come now to those they possess in *Asia*, which formerly belong'd to *Tartary*, as the Kingdoms of *Casán* and *Astracan*, *Samoieda*, *Siberia* and *Dauria*.

SAMOIEDA.

THE Lat. and Long. of this Country is not very certain. *Isaac Massa* makes it to lie both on the W. and E. Side of the *Oby*. *Petzora* lies on the W. but what Countries are to the E. is not known. The Northern Boundaries are, the Streights of *Weygates*, and the *Frozen Ocean*. Their Country extends to Lat. 72. The Ambassadors from the Duke of *Holslein*, in their Travels to *Muscovy* in 1643, tell us they had occasion to discourse in the Czar's Anti-Chamber with two of the Deputies of the *Samoiedes*, who understood the *Russian* Language; and from them they give us this Account: They were anciently comprehended under the ancient *Scythæ*. Their present Name

signifies *Cannibals*, or Man-Eaters; (but the *Hollanders*, who were shipwreck'd on their Coasts, speak much of their Humanity and Kindness.) The *Muscovites* call'd them so, because they us'd to mix the Flesh of their deceas'd Friends with Venison. Their Huts have Passages under Ground, by which they converse one with another during the Winter, when the Sun leaves them for several Months; for their Huts being then cover'd with Snow, they cannot walk abroad, but visit their Friends by those subterranean Walks. The Want of Light they supply by Lamps, fed with the Oil of Fish they take in Summer. This gives Rise to the Fable, That they sleep six Months in Winter, and rise again in the Spring. They don't cultivate the Ground, nor have any Cattle. They eat dry'd Fish instead of Bread. They have also Venison and Honey. They cloath themselves with the Skins of Rain-Deer. They are low of Stature, with broad flat Faces, little Eyes, short Legs, and wear their Hair long, not unlike the *Greenlanders*. When the Sun returns, they creep out of their Huts by the Tops of their Chimnies. They wear large Caps made of Furs, or Pieces of Cloth of divers Colours, which fall down about their Shoulders. Their Shirts are made of the tender Skins of Rain-Deer, and are softer than Linen, under which they wear Drawers, and over their Shirts certain Cassocks, reaching down to their Mid-leg, with Furs on the outside. They put them on in very cold Weather over their Heads, so that their Faces appear only thro' the Cleft at the Neck; which has occasion'd some Historians to say, they were without Heads, and had Faces on their Breasts. The *Samoiedes*, as well as the *Laplanders* and *Finlanders*, wear a kind of Pattins, of an Ell and an half long, made of the Barks of Trees, with which they slide on the Snow without sinking. The *Laplanders* and *Finlanders* have theirs as long behind the Heel as before the Toe; but the *Samoiedes* have them only turn'd forwards. Colonel *Porter*, Governor of *Riga*, gave the *Holslein*-Ambassadors the Diversion of seeing two *Finlanders* belonging to his Garrison run down a Hill with those Pattins; which they did with so much Swiftness, that a Horse in a Gallop could scarcely keep Pace with them.

They

They use the Nerves and Veins of the Rain-Deer instead of Thread, and the Shavings of Beach-Bark serves them for Napkins. When one of those *Samoiedes* was ask'd, What he thought of *Muscovy*? He answer'd, That tho' *Muscovy* was a Country pleasant enough, yet he was confident, if the Czar was sensible of their secure and quiet Life, he would chuse their Retirement before all his Grandeur. They were all Pagans till within these few Years, that they were converted by a *Muscovite* Bishop of *Wolodimer*. They pay Tribute in Furs to the Czar, who has Garisons there. *Stephen Burroughs*, an *Englishman*, in 1556, first discover'd them in his Voyage to find out a N. E. Passage. *Richard Johnson* was also there: His Relation of them is in *Hackluit*. Afterwards, in 1596, *William Barents* gave some Account of them.

Pitt's Atlas has this further Account of them. They have different Languages, but how many, and the Place where each Language is spoken, is not so well known. When the Weather is tolerable, they go from Place to Place, where they can find best Pasture for their Rain-Deer, by which they are carried in Sleds, and can travel 200 *Italian Miles* in one Day. This frequent shifting of their Quarters enables them to be Guides to Merchants; and they seldom mistake their Way in the greatest Mist. They are very nimble, and excellent Archers. Some of them at *Moscow*, for an Essay of Skill, set up a small round Piece of Tin, from which they retir'd as far as they could discern it, yet never fail'd to hit it with their Arrow. The Women have the same Garments with the Men, and are not easily distinguish'd from them: Only they have on either Side a Lock of Hair hanging down below their Ears, and make blue Lines in their Faces, by drawing a Thread dip'd in blue Paint lightly under the Skin. The Fashion of their Habits is not the same in all Places. They have no Bread, or any thing like it. Their Food is Train-Oil and Honey, with raw Flesh and Fish; but they usually dry it in the Sun and Wind.

Their QUALITIES and CUSTOMS.

They are strong and healthful: The Husbands are their Midwives: The Mother washes the Child as soon as born in cold Water or Snow, and next Day is able to wait upon her Rain-Deer and Sleds. They are stout, though not quarrellsome. Their Weapons, besides Bows and Arrows, are long Spears, and short Swords. Those who are not subject to the Czar, are under no Government. They consult the most ancient Persons in Affairs of Difficulty, who are also their Priests. They ask them, which Way they shall move? What Success they are like to have in Hunting, or in Journies? They have but few Controversies, which are determined by a sort of Oath, in this Manner: They make an Image of a Man in Snow, and lay before it a Wolf's Snout: He who is to swear takes a Sword, and tells over the Names of his Wives, Children and Friends; wishes, if he swear falsely, they may be all cut to pieces, as he cuts that Image with his Sword, which he immediately performs. He also wishes, That the Wolf may destroy his Rain-Deer; That hence-forward he may never kill any Beast. Then he cuts the Wolf's Snout to pieces; and so the Controversy is ended.

Their MARRIAGES and BURIALS.

They buy as many Wives as they can purchase for Deer. Persons of Note have 4 or 5. He is reckon'd the richest Man that has most Deer and Daughters, and they sell both to those that bid most. Their Marriages are celebrated without much Ceremony. The Bridegroom makes a Feast, which sometimes lasts 7 Days. After this the Bride, adorn'd with many Brass Rings and Bells, Fish-Bones, &c. is deliver'd to her Husband: Then all the Friends depart from their Tent till next Morning. If they like not their Wives after half a Year or a Year's Trial, they return them to their Friends, and receive back the Deer they paid

paid for them. When a rich Man dies, they strangle one of his Slaves, and bury him beside his Master, to do Drudgery for him in the next World; and they kill 3 of his Deer, with which they feast themselves. If a Child die under 7 Years of Age, they hang it by the Neck on a Tree, and say, it must flee to the other World.

Their RELIGION.

They seem to acknowledge a God, but represent him by such Things as they receive most Benefit from. In a Morning, as soon as they go out, they fall on their Knees, and hold up their Hands to the Sun. They have Images, resembling Men as near as they can make them, to which they sacrifice, and besmear them with Blood. Many Bones and Althes lie before them; and there's a Chopping-Block by them, on which they kill and divide the Beasts that they sacrifice; as *Richard Johnson* tells us in *Hackluit*, Page 283. The Priest wears on his Head a Garland, and a Piece of a Coat of Mail, with Fish-Bones and other Trinkets fasten'd to it. He first beats upon an Instrument like a Half-Drum with a little Mawl; after that he whoops and hollows as our Hunters do, and the People answer him. He roars with great Violence, till he becomes hoarse, and lies as if he were dead for some time. When he recovers, he rises up, and commands 3 Deer to be killed; then he takes a Sword of near a Yard long, and seems to thrust it several times into his own Belly, but without any Wound. He afterwards heats it in the Fire, thrusts it in at his Navel, and out at his Fundament; when, saith *Johnson*, I laid my Finger upon it, but no Wound was to be seen. The Priest being wearied, reposes himself, whilst they heat a Kettle of Water; which being hot, they sing again, and bring a Thing like the Frame of a Sedan, into which the Priest, putting off his Clothes and Shirt, sits down, and puts a Rope about his Neck, and under his Left Arm, with a Slip-knot, gives one End to one lusty young Fellow, and the other End to another: Then they set the boiling Water before him, and cover both the Frame wherein he sits, and the Kettle, so as no Man can see those dreadful Mysteries. The People begin again

to sing furiously, and the two young Men draw the Cord close: Whereupon, hearing something fall into the Water, I ask'd, said *Johnson*, what it was? They told me it was the Priest's Head and Left Shoulder, which the Cord had cut off; but they would not suffer me to go and see if it was so. After more furious singing, the Priest comes from behind the Curtain safe and well. I demanded what their God had said, and whether they were to go? They answer'd, That it was not for them to know what their God had said, but they were to obey what the Priest commanded. This was before their Submission to the Czar; but since that Time, he has sent Preachers amongst them to convert them. We leave the Readers to judge whether these Things be fabulous, if perform'd by Juggling, or by the Assistance of the Devil.

Their Submission to the Czar.

IN the Time of *Ivan*, or *John Basilowitz*, there liv'd a Husbandman call'd *Onyka*, on the River *Witzogda*, who by his Industry became rich. Among other Children, he had 3 Sons, nam'd *Jacove*, *Gregory*, and *Simon*, who were Partners in Trade. They dwelt chiefly with the *Samoiedes*, that came Yearly to the Fairs of *Ofel* and *Onsting*. *Onyka* had not only a Design to carry on his Trade, but had also the Curiosity to enquire from whence they came, and prevail'd with them that 12 of his Servants might go home with them, to whom he gave Orders how they should behave themselves, and make their Observations. At their Return, he treated the *Samoiedes* very kindly, and forbade his Servants to discover what they had observ'd. The next Year he sent more Servants, and some of his Relations, with Goods that the *Samoiedes* wanted, at very low Rates. They went as far as the River *Oby*, and found Furs there to be of small Price; That the People were barbarous, without Cities or Bread, without Laws or Property. Thus *Onyka*, with his Sons and Kindred, manag'd this Trade till they were extream rich. They built many Churches, and some Towns, and acquir'd 300000 Rubles or Marks in Money. They had constantly at work 10000 Men, besides 5000 Slaves, and paid the Emperor Yearly 23000

Rubles for Customs. They also maintain'd several Garisons on the Confines of *Siberia*. At length they discover'd this Trade to *Boris Godenow*, the Emperor's Brother-in-Law, the Advantage that might be reap'd from it, and the Way to those Countries. The Emperor *Pheodor Juanwicz* was so well pleas'd, that he granted *Onyka* and his Family all the Privileges and Honours that Subjects were capable of, and sent him in Quality of Ambassador to *Samoieda*, with some Soldiers and Gentlemen, who had Toys of small Value to give the Natives, in order to gain their Affections. They behav'd themselves with so much Kindness and Humanity towards the *Samoiedes*, and gave them such an Account of the great Power of the Czar, that they perswaded them at length to give him a Yearly Tribute of a Pair of Sables for every Person that could shoot. Tho' this was a small Matter to the *Samoiedes*, it turn'd to a vast Advantage to the Czar. Some of the Natives came to see the Czar's Court at *Moscow*, and thought the *Muscovites* were happy under such Government.

Vibrant Ides, in his Travels, gives this further Account of the *Samoiedes*:

They are under the *Siberian* Government, and subject to the Weyvode of *Pelun* as far as the Sea. There are several Sorts of them, different both in Language and Customs, as the *Berefskians*, so called from *Berefska*, a Town on the *Oby*, Lat. 64. and Long. 85. and *Pustosersians*, who say they are of the same Nation. Another Sort live on the Sea-Coast beyond the E. Side of the *Oby*, as far as *Truckamskoy* or *Mangazeiskoy*. Others reside for the greatest Part of the Year about *Archangel*, near the River *Duina*; and in Summer live in Huts. There are other *Samoiedes* who inhabit the Icy-Coast of the Province of *Siberia*, which has the *Icy* or *Frozen Sea* on the N. and extends to the *Holy Cape* in the Eastern Ocean, which lies in Lat. 73. Long. 147. They can scarce pretend to any thing of Men, but Face and Shape, have little Understanding, and, like Wolves and Dogs, eat the dead Carcasses of Horses, Asses, Dogs or Cats, Whales, Sea-Cows, Sea-Calves, and Sea-Horses, raw. Their Country abounds however with Fowls, Fish and Flesh; but they are too idle to furnish themselves with it.

Their Governors receive their Tribute of Furs, and are obliged to carry the same to the Czar's Cities or Garisons. A Gentleman who had been among them told the Ambassador, That their Hart-Sleds were very convenient, and they run prodigiously fast over Mountains cover'd with Snow. Their Clothes are Buck-skins, with the Hair outward. Their Governors travel in Sleds drawn by 6 or 7 harness'd Bucks, and are cloath'd in Scarlet. The Arrows of the Natives are pointed with the Bones of Sea-Calves, or some other Animal.

They make a very disagreeable Figure, in somuch that such ill-look'd People are not to be found in the whole Earth. Their Stature is short, their Shoulders broad, their Faces flat, with broad Noses, great hanging Lips, and frightful Eyes, like those of the *Linx*. Their Complexion is brown, their Hair dishevell'd; some of them have it red or pale, but most of them black as Pitch. They have very small Beards, and are swift Runners. The Roebucks, which draw their Sleds in Winter, are horn'd and shap'd like Harts, but have crooked hanging Necks like Dromedaries: They are as white as Snow in Winter, and greyish in Summer. They feed on Moss, which grows in Woods.

The *Samoiedes* are gross Idolaters; they worship the Sun and Moon: Their Tents are cover'd with Birch-Barks sew'd together, and their Fire is in the middle of their Tent, round which both Men and Women lie naked in the Night. They lay their Children in Boxes or Cradles made of Birch-Bark sew'd together, fill'd with Shavings of Trees, which are as soft as Wool; and they cover them with Buck-skin. When they design to be merry, they stand in Couples opposite to each other, throw up one of their Legs, and clap the Soles of one another's Feet so hard with their Hands, that it may be heard at a good distance. Instead of singing, they howl like Bears, neigh like Horses, or chirrup like young Birds. They marry within the Degrees of Consanguinity; they buy their Wives with Bucks and Hides, and marry as many as they can keep. They have Conjurors, that play all sorts of Diabolical and Juggling Tricks.

Near this Coast, as far as the Streights of *Weygates*, their Beasts are Wolves, Bears, Foxes and Hares, &c. The Fowls are Ducks, Partridges, &c. that are as white as Snow in Winter, which is so severe, that Rooks and Magpies fall down dead as they fly.

Of the Streights of Weygates.

A Great deal has been said on this Subject by *English*, *Dutch*, and *Danish*, who have twice passed this Icy Channel, to find out a N. E. Passage to *China* and the *Indies*, but were forced to return by the great Fields of Ice; so that from *Weygates* to the *Icy* or *Holy Cape*, the Sea is utterly unnavigable. The Sea of *Siberia* is so full of Ice, that no Ship can come to the Mouth of the River *Jenisea*, which lies 15 Deg. further E. than *Weygates*: Much less can they go farther Northward, or by the Way of the *Icy Cape* sail round *Japan* and *Jedzo*.

The Ambassador adds what he had learn'd from the *Russians*, who have several times sail'd through those Streights, which lie in Long. 75. to the Mouth of the *Oby* in 84.

We go, say they, with our Barks to *Weygates*, to fish for Sea-Calves: If we meet with great Quantities of them, we sail directly into *Weygates*; But if the Wind blows from the Sea, the whole Coast is cover'd with Ice; so we are obliged to put into some Creeks or little Rivulets, where we dare not venture too far, but stay till the Wind blows from the Shore, which clears the Streights of Ice, and drives it several Miles out to Sea: And if we find not such a Creek, our Barks are shatter'd to pieces by the Ice. This Sea, as far as the *Icy Cape*, is sometimes frozen up two or three Years successively, as it was from 1694 to 1697.

About 50 Years ago, the *Russians* that dwelt in *Siberia*, had free Liberty to fetch their Provisions from the Sea-Ports, and to carry their *Siberian* Commodities thither through the *Weygates*, provided they paid the Toll to the Czar: But they brought great Quantities of Goods by Stealth into *Russia* by other Ways and Rivers, whereby the Czar suffer'd much in his Revenues; for which Reason the Importation of Goods to *Russia* thro' the Streights of *Weygates* has been prohibited ever since.

Of SIBERIA.

IT has on the W. the River *Kama*: *Ustuga* is the first considerable City on that Side, in Lat. 55. Long. 73. and the N. Parts reach to Lat. 73. the N. E. Parts to Long. 140. The Lake of *Baikala*, which borders on the Province of *Dauri*, and the Town of *Jekusky* near that Lake, are the furthest Places towards the S. E. This Town lies in Lat. 54. Long. 110. The Places furthest to the S. W. border upon the *Kalmuck Tartars*, in Lat. 50.

Father *Avril*, a Jesuit, sent by Order of the French King to discover a Way by Land to *China*, gives the following Account of the first Discovery of *Siberia*:

The *Zaporozian Cossacks*, who liv'd beyond the *Nieper*, being subdu'd by the *Muscovites*, were resolv'd to shake off that Yoke. In order to this, they advanc'd by the Way of *Kasan*, near the River *Kama*; from thence to the River *Irtish*, at the Conflux of which with the River *Tobol* they built *Tobolski*, the chief Town of *Siberia*, which is 3000 Miles from *Moscow*. They extended their Conquests to the River *Oby*. The adjacent Country they call'd *Siberia*, from *Sibor*, which in the *Slavonick* signifies North. But after all, to carry on their Fur-Trade to the greater Advantage, they thought fit to submit to the Czar. As soon as the *Muscovites* got Possession of this Country, they improv'd it to great Advantage, by sending their Sable-hunters, and banishing their Prisoners of State to this Place. The Desire of getting Sables brought those Hunters by degrees to the River *Yamour*, that runs into the *Amoersham* or *Japan Sea*. Upon this River liv'd those *Tartars* that conquer'd *China* in 1644. So that now the Way to *China* by Land is perfectly known by the *Muscovites*.

Isbrand Ides's Account how *Siberia* became subject to the Czar, is thus:

About 100 Years ago, *Jeremak Timisewitz*, a Robber in the Reign of *Ivan Basilewicz*, plunder'd the neighbouring Countries subject to the Czar; and being pursued, he and his Companions fled up the River *Kama*, and from thence to the River *Juzawaja*, which falls into the *Kama*, where are the

Lands of *Stroginoſſ*, famous for his vaſt Eſtate, which take up the greateſt Part of the Shore, and reach 70 German Miles in Length. The Robber apply'd himſelf to this rich Man's Grandfather for Protection, beg'd his Intereſt to procure him the Czar's Pardon, and offer'd at the ſame time, by way of Atonement, to reduce the whole Province of *Siberia* for his Czariſh Maſteſty. Purſuant to this, he obtain'd from *Stroginoſſ* Barks, Arms, and Men. Being thus provided, and accompanied with his Fellow Robbers in light Barks, he ſail'd up the River *Serebrenkoy*, which runs N. E. of the *Wergaturian* Hills, and falls into the *Juzawaja*; thence he convey'd his Equipage by Land to the River *Togin*, on which he ſail'd to the *Taura*, took the Fort of *Tumeen*, that lies upon it, raz'd it to the Ground, and advanc'd up the *Tobol* to *Tobolsko*, the Reſidence of a *Tartarian* Prince, aged about 12 Years, whoſe Name was *Alſani Kutzumowitz*, whoſe Grandſon at preſent lives at *Moscow*, and is honour'd with the Title of the *Siberian Czarewitz*. This City he took with ſmall Loſs, ſent the Prince to *Moscow*, and put the conquer'd City into a better Poſture of Defence.

After this he went down the River *Jetiſch*, but was attack'd in the Night by a Party of *Tartars*, not far from *Tobolsko*, who cut off a great many of his Men; and as he endeavour'd to ſtep from one Bark to another, he fell into the River, and was drown'd. In the mean while *Stroginoſſ* had obtain'd the Czar's Pardon for *Jeremak*; and ſeveral Hundreds of *Muſcovite* Officers arriv'd, who fortify'd and garison'd the Places he had taken, which compleated the Reduction of the Country.

He ſays, That the Frontiers of *Siberia* in general are every where well garison'd; That the Circuit of this Kingdom is very large; That he took the Latitude of Places with a Mathematical Inſtrument, and was the firſt German that ever went through this vaſt Country to *China*. He owns that the Learned World is oblig'd to *Nicholas Witzzen*, Burgher-Maſter of *Amſterdam*, who firſt drew a Map of thoſe Countries, and diſcover'd to the Europeans all *Siberia*, the *Calmuckan*, *Mugalian*, and other Provinces, as far as the *Chinese* Wall.

The Natives of *Siberia* are Pagans; but the Cities are fill'd with *Ruſſians* and *Coffacks*. They pay Yearly 200000 Rubles in Sables, Martens, and Black Fox-Skins, found nowhere but here and in *Kitay*. They are ſold from 20 to 30 Rubles apiece. They catch the Ermins in Traps, but ſhoot the Sables with Arrows in the Noſe, for fear of ſpoiling their Skins. They alſo make Fire under Trees where the Sables haunt, and being ſtifed with the Smoak, they fall down and are catch'd. Thoſe who are baniſh'd hither, muſt ſtay 7 Years. The Czar's Officers, to encourage the People's Diligence, allow them to kill ſome Sables for their own Advantage.

Ysbrant Ides's Account of the Country and People of Siberia.

THE Western Part of this Country lies on the E. Side of the *Kama*, which is a pleaſant and beautiful River: It ſeparates *Europe* from *Aſia*, and abounds with all ſorts of Fiſh. The Banks of it are very populous, and noted for Salt-works. The firſt *Siberian Tartars* are call'd *Wogulskoi*: They live on the Banks of this River, which are the moſt charming in the World: The Hills are covered with beautiful Flowers and Plants, and all Sorts of great and ſmall Wild-Beaſts in great Numbers. The Inhabitants are ſtupid Heathens. They are naturally ſtrong, and have large Heads. Their Worſhip conſiſts in having once a Year an Offering. Then they go to the Woods, and kill one of each Species of Beaſts, but prefer the Horſe and Tyger: They ſlea off their Skins, and hang up the Carcaſſes on Trees, and pray to 'em, falling proſtrate to the Earth; then they eat the Fleſh together, and return home, and at once finiſh one whole Year's Devotion. They own a God, that made the World: They deny Devils, becauſe they ſay they never ſaw them: They acknowledge a Reſurrection, but know nothing of the Rewards or Punishments of a future State. They bury Money, Apparel and Ornaments, with the Body of the Deceaſ'd. They cry over their Dead in a diſmal manner, and the Husband is oblig'd to continue a Widower a whole

a whole Year. If a favourite Dog die, that has been a good Hunter, they erect a Hut to his Memory. They marry as many Wives as they can keep, and when any one is near her Time, she must retire to a Hut in the Wood, and there be delivered. Her Husband must not come near her for two Months. When any one desires to marry, he is to buy his Wife from her Father. They have no Priests, and marry no nearer than the Fourth Degree of Consanguinity. The Ambassador recommended the Christian Religion to them, as the Way both to secure their Temporal and Spiritual Welfare; but they told him, They daily saw some Russians who were in a starving Condition; and as for Things of another Life, they would adhere to the Opinion of their Forefathers.

Their Dwellings are square Wooden Huts. As soon as the Wood upon the Hearth is burnt to a Coal, they cover the Smoak-hole in the Roof with Ice, which reverberates the Heat into the Room, and also lets in Light.

Their chief Game is Elks, of which they have whole Herds: They cut them in pieces, and hang them round their Houses to dry. If they stink by the falling of Rain upon them, they dry them again, and eat them as a great Delicacy. They don't eat Cocks, Hens, nor Hogs. Their Way of catching Wild-Beasts is very pleasant, for they plant a sort of Bows in the Woods, fastening a String to them, to which they fix some Corn or other Bait, leaving only a Place for the Game to enter; so that the Beast that comes in cannot pass without touching the String, which makes the Bow discharge the Arrow, and it enters the fore Part of their Body. They also dig Pits in the Woods, which they cover with Reeds and Grass; so that if any Beast comes thither, he is sure to fall in. They live along the River *Juzawaia* to the Castle of *Utsko*, 240 English Miles S. E. from *Kama*. Their Country reaches Northward to the *Samoisides*. This Castle is a Frontier Garison against the *Baskirian* and *Uffimischan Tartars*. The latter live upon the *Volga*, as far as *Saratoff*, in Lat. 52. and along the Banks of the River *Kama*, to Lat. 58. the Czar is oblig'd to keep them in awe by Garisons, otherwise they would not pay their Tribute of Furs and Honey. They are some-

times join'd by a Clan of their own Nation near *Astracan*, and together rob *Siberia*. N. from the Conflux of the *Kama* and *Juzawaia* lies *Solikamskoi*, in Lat. 59. Long. 70. 210 Miles from that Confluence, and 211 N. W. from *Wergaturia*. Travellers to *China* must lie here all the Summer, because of the Morasses, till they freeze in the Winter. Here are many Salt-Works or Pits, besides above 50 Salt-Springs, from 25 to 35 Ells deep. Great Quantities of Salt are boil'd there, and stow'd in long Ships, mann'd with 800 Sailors each, and carry 1600 or 2000 Tun. They sail down the *Kama*, till it fall into the *Volga*, and from thence go to *Casan*, *Nisna*, &c. Those Vessels have Kitchens, Bagnio's, and other Conveniencies on board.

Neuianskoi, is 240 Miles S. E. from *Utsko*. The most charming Fields in the World are betwixt these Places: The Ground is fertile, well cultivated, and inhabited by *Russians*. *Tumeen* is 180 Miles N. E. from *Neuianskoi*; the Country all along pleasant and fruitful: The Town lies in Lat. 55. Long. 76. is strong and populous, mostly inhabited by *Russians*; the rest are *Mahometan Tartars*: They drive a Trade with *Bulgaria*. The *Kalmack* and *Cossack-Orda Tartars* make frequent Irruptions into *Siberia*, lay the Villages waste, and cut the Inhabitants in pieces. This and the neighbouring Places afford red Foxes, Bears, and Wolves-Skins. *Heetkoy Wollock*, a Wood 5 Miles distant from this Place, abounds with the very finest grey Squirrels, which keep their Colour both Summer and Winter: They are as large as common Squirrels, and are no where in the *Muscovite* Empire but here. They are all kept for the Czar's Use, and none must sell them to Merchants.

Tobolsko, is seated upon the Confluence of the *Tobol* and *Irtis*. The Course of the *Irtis* is N. W. to *Tobolsko*, and from thence till it fall into the *Ob* N. E. *Tobolsko* lies in Lat. 58. Long. 81. It is the chief City of *Siberia*, and its Jurisdiction of a vast Extent. This Province is every where well Peopled by *Russians*, *Tartars*, *Heathens*, and all sorts of Nations, who pay Tribute to the Czar. An Hundred German Pounds of Rye may be bought here for 16 Stivers, a fat Ox for 11 Shillings Sterling, a large Hog for 30 Stivers. The River *Irtis* produces such

a prodigious Quantity of Fish, that a Sturgeon of 40 Pound Weight may be had for 5 Strivers: When boil'd, their Fat swims above the Water an Inch thick. Elks, Stags, Deer, Hares, and other Wild-Beasts, abound here, as do Pheasants, Partridges, Swans, Wild-Geese, Ducks, Storks, &c. which are cheaper than Beef. This City is naturally strong, and is seated on a Hill: They have a strong Garison of well arm'd Soldiers, and can bring 9000 Men to the Field, besides some Thousands of *Tartars* on Horseback, when the *Kalmuck*, *Kosack-Orda*, *Bucharian*, and *Bakirian Tartars*, invade them. The Metropolitan of all *Siberia* and *Dauria* resides here.

The *Tartars* that live round *Tobolsko* are all Mahometans, and the *Mufti* is an *Arabian*.

The Countries betwixt the *Tobol* and *Oby*, as far as the *Jamuschowa-Oser* Lake, which lies about Lat. 48. and Long. 93. 900 Miles from *Tobolsko* to the S. E. are inhabited by *Kalmakians*. This Lake abounds with hard Salt, which is dug like Ice from the Shore. The *Russians* come here in a Military Way, and load their Vessels in spite of the Natives.

Tora, upon the River *Irtis*, in Lat. 56. Long. 83. is 300 Miles S. E. from *Tobolsko*: It is inhabited by a People call'd *Barabinskoy*. Their Country is extended Eastward to the River *Oby*, and the City of *Tomskoi*. They are a sort of the *Kalmakian Tartars*, and pay Tribute to them and to the Czar.

They have great Numbers of Cattle, as Camels, Horses, &c. They don't eat Hogs. Their Country abounds with fine Sables, Martens, Squirrels, Ermins, Foxes, Hyæna's, Beavers, Minks, Otters, &c. of all which they pay a Tribute.

When they hunt, they carry their Idols with them, and if they have good Luck, their *Saitan*, or Image of Wood, carv'd with a Knife, is set up in a high Place of the House, and cover'd round with fine Furs, which must stay there till they rot; for to take any of them away, would be thought great Sacrilege. This is their Way of Gratitude to their Gods.

Their Drink is *Arak*: They eat the Bulb of yellow Lillies, dry'd, stamp'd, and boil'd with Milk. *Tora* is their Frontier Place. The *Kalmakians* live on the S. and S. W. of it.

Tomskoi lies on the River *Tom*, which falls into the *Oby*, a little below it, in Lat. 52. Long. 95. 660 Miles S. E. from *Tora*, and 200 N. E. from the Lake *Jamischowa-Osera*. It is a Frontier Place belonging to the Czar, and garison'd by *Russians* and *Cossacks*, to prevent the IncurSIONS of the *Tartars* into *Siberia*.

Samorofskoy-Jani, lies on the River *Irtis*, N. E. from *Tobolsko*, in Lat. 63. Long. 83. *Kasinka*, a Rivulet that runs into the *Oby*, not far from this Town, affords fine grey Squirrels: Most of the Inhabitants are *Russian Jemicks*, and supply the Weyvodes, and other Persons concern'd in the Czar's Affairs, with Carriages over the Ice in Winter, and by Water in Summer, at reasonable Rates. They draw their Sleds with Dogs, of a strange sort, which couple with Wolves and Foxes. Horse-Sleds are unserviceable here, because the Snow on the *Oby* is sometimes more than a large Fathom deep. The Sleds are light and thin, and can carry from 2 to 300 *German* Weight. Two yoked Dogs draw one. They run very swiftly, and leave only a Track of an Inch deep in the Snow. If they be inclin'd to hunt, their Master unyokes them, takes his Gun, and puts on his long sliding Shoes, and sometimes in the Woods kills fine black Foxes, which he fleas, and gives the flesh to his Dogs.

Surgut, lies in Lat. 62. Long. 84. It is seated on the famous River *Oby*, 300 *English* Miles N. E. from *Tobolsko*, and 180 S. E. from *Samorofskoy-Ani*. Here are great Numbers of those call'd Cross-Foxes, whose Skins are of a mix'd black and grey, but few black: They have red Foxes, and Hyæna's, that are very mischievous, and live by Prey. They place themselves in the Trees, like the Linx, and lie very still, till a Hart, Elk, Doe, or Hare, runs under the Tree, from which they leap upon him, and eat a Hole in his Body, which by the Pain forces it to lie down. One of the Weyvodes there kept a Hyæna, which he put into the Water, and let two Water-Dogs loose at him: He held one of them so long under Water, till he drown'd him, and would have done so by the other, if he had not been interrupted by throwing Wood at him. They have great Plenty of Beavers, of which the Inhabitants tell incredible Stories:

sies: For which, we refer the Reader to the Ambassador's Travels.

Narum, lies on the E. Side of the *Oby*, 300 Miles E. from *Tobolsko*, and 270 S. E. from *Surgut*, in Lat. 58. Long. 89½. It has a strong Garison of *Cossacks*, and a Castle. All the neighbouring Country abounds with Crofs and Red Foxes, Beavers and Sables, some of which are pale, others as black as Pitch, and the finest and largest Ermins in all *Siberia* and *Russia*; but above all, Black Fox-Skins, which are the finest and richest in the World; the best are reserv'd for the Czar: Some are valued from 2 to 300 Rubles a Skin, and are so very black, that the blackest *Daurian* Sable is not comparable to them. These Foxes are caught by Dogs.

The Southern Banks of the *Oby*, as far as this Place, are inhabited by a People call'd *Ostjacks*: They worship Gods of Wood and Earth, of the Shape of Men and Women, and sometimes dress them in Silks after the *Russian* Fashion: They are plac'd in their Huts, made of the Barks of Trees, few'd together by Hart's Guts. On one Side of the Idol hangs a Bunch of Humane and Horse Hair, and next that a Wooden Vessel with Milk-Pap, which they thrust into its Mouth with a Spoon, till it runs out in such a manner as is enough to make one vomit. When this cleanly God is to be ador'd, they stand upright, and toss their Head up and down without bending their Back, and chirrup or whistle through their Lips, as we do when we call a Dog.

They call their God *Saitan*. Several of 'em came aboard our Ship to sell Fish, says the Ambassador, where one of my Servants had a *Nuremberg* Bear in Clock-work, which he wound up, and made him drum, and turn his Head backwards and forwards, and move his Eyes. As soon as the *Ostjacks* saw it, they perform'd their wonted Religious Worship, and danc'd excessively to the Honour of the Bear, nodding their Heads, and whistling at a great rate. They all said, our Bear was a right *Saitan*, crying out, *What are our Saitans which we make? If we had such a Saitan, we would hang him all over with Sables and Black Fox-Skins.* They ask'd if the Bear was to be sold; but the Ambassador order'd it out of sight, to avoid their Idolatry.

They marry their nearest Relations without any Scruple, and have as many Wives as they can keep. They are a poor People, and live in sorry Huts: They are lazy, and lay up no more Fish or Flesh than will barely suffice them in Winter. All Places here about the *Oby* abound with rich Furs. They have Plenty of Fish, and sometimes sell 20 great Sturgeons for 3 Pennyworth of Tobacco.

They are of a middle Stature, their Hair yellowish or red, their Faces and Noses agreeably broad: They are weak, and not inclin'd to War, being utterly incapable of Military Exercises. Their Weapons are Bows and Arrows, with which they shoot some Beasts. Their Clothes are of Sturgeon and other Fish-Skins: Their Shoes and Stockings are fasten'd together; and their Shoes are of Fish-Skins. If they are overtaken with a severe Frost when a Hunting, which is frequent on the *Oby*, they immediately throw off their Clothes, and leap into the deep Snow, and so freeze to Death. They pull off their Coats, that they may die the sooner, and with less Pain. The Women's Clothes are like the Men's.

Their greatest Diversion is Bear-hunting: Their Arms on this Occasion is a large Knife fix'd to a Stick of a Fathom long.

They have some petty Princes; one of whom is call'd *Kneska*, whose Authority extends over some Hundreds of Huts, and he levies the Tribute which they pay to the Czar's Weyvodes. This Prince came aboard the Ship, and invited the Ambassador to his Palace, which was made, as the rest of the Houses, of the Barks of Trees few'd together. He had four Wives, two old, and two young: One of the young ones had a Red Cloth Coat, and was adorn'd with Glas Corals about her Neck and her Middle, and in the Curls of her Hair, which hung down on both Sides of her Head in two Rows. She had in her Ears great Thread Rings, with long Strings of the same Coral hanging at them. Each of the old ones presented the Ambassador with a Barrel of Birch-Bark few'd together, full of dry Fish. The youngest gave him a Barrel of Sturgeon-Fat, as yellow as Gold. The Ambassador treated them with Brandy and Tobacco, which is to them a great Delicacy. The whole Furniture of the Palace was
some

Some Cradles and Chests, of Barks of Trees sew'd together, in which the Bed-Clothes lie, being of Wood-Shavings, yet almost as soft as Feathers. The Children lie naked in the Cradles. They smook Tobacco thus: Instead of Pipes, they use a Stone Kettle, in which they stick a Pipe made for that purpose. They take some Water in their Mouths, then suck out at once a whole Pipe, and swallow the Smoak; upon which they fall down as if they were dead; their Eyes are distorted, and their Hands and Feet tremble for half an Hour; they foam at the Mouth, and are like People in an Epilepsie. We could not see, says he, where the Smoak vented it self. Some of them lose their Lives this way, by falling into the Water when they travel, or into the Fire when at home; and those of weak Constitutions are frequently suffocated with the Smoak.

They don't till their Land, and have neither Temples nor Priests. Their Shipping or Boats are of Barks of Trees sew'd together; the inside Ribs are of very thin Wood, two or three Fathom long, and one Ell broad. They can secure themselves in the greatest Storms in those Boats. In Winter, they live under Ground in Caves; the Entrance is a Hole in the Surface of the Earth, which also lets out their Smoak. The Snow sometimes falls two or three Inches thick upon that Part of their Bodies which is furthest from the Fire when they are asleep, and when they awake, they turn that Side to the Fire, and warm it by turns.

When an *Ostiac* is jealous of his Wife, he offers the suspected Person some of the Hair of a Bear-Skin: If he be innocent, he takes it; but if not, he confesses; for they are persuaded, if a guilty Person take that Hair, the Bear whose it was will revive, and within 3 Days tear them to pieces, and revenge the Affront for taking his Hair, in order to deny the Truth. They also offer Bows and Arrows, Knives and Axes, to the suspected Person, and believe, that if they be guilty, and take any of them, they shall die by that individual Instrument. The Eastern Shore of the *Oby* is all untill'd, from the *Icy-Sea* to the River *Tom*, (on which lies the City *Tomskoi*) by reason of the extreme Cold; so that there's no Honey,

Corn or Fruit, here, except a few Nuts, which grow on the Cedar-Tree.

The Ambassador sail'd up the River *Keta*, which falls into the *Oby* near *Narum*: The most Easterly Winding of it is near the great River *Jenifia*, which runs into the *Icy-Sea*, in Lat. 70. and Long. 92. The City *Makoskow* is 360 English Miles E. and by S. from *Narum*. The Inhabitants are *Ostiacs*. Here are great Numbers of Woodcocks, Pheasants, Partridges, and other Wild-Fowl, which come in Flocks to the River to drink. About the Banks of it grow Strawberries, black and red Currans, and Blackberries.

The City *Jenizeskey* is 60 Miles E. from *Makoskow*, in Lat. 57. Long. 99. on the River *Jenifia*. Below the City, the River is the third Part of a Mile broad. This City is large and populous; the Citadel indifferent strong. All Provisions are plentiful here; but they have no large Fruit-Trees, by reason of the Cold, only some Strawberries, Gooseberries, Currans, &c. From this City to the Lake *Baikal*, there's a continu'd Ridge of Hills, where there are Sables and Cabardines.

The City *Ilinskey* is in Lat. 56. Long. 105. 360 Miles S. E. from *Jenizeskey*: It lies on the River *Ilin*, which runs from the S. S. W. to the N. N. W. and falls into the *Tunguska*. Some few Days Journey from hence, is the great Rocky Water-fall, call'd the *Negromantick-Fall*, because a Conjuror lives there, who deludes the People. It is a Descent of half a Mile long; the Shore and Ground of the River is rocky: The Noise it makes, may be heard in calm Weather 3 German Miles. They cannot perform the Voyage against the Stream in less than 5, 6, or 7 Days; the Ships must be empty, and are frequently obliged to cast Anchor, and in some Places they must tow a whole Day, before they can get forward the Ship's Length; but they sail down this Torrent in 12 Minutes; the Ships must have Rudders fore and aft, and Rowers on both Sides: The Pilots give their Orders by a Handkerchief, for no Voice can be heard; the Ships are closely shut up, that the raging Waves may not enter and sink them. Many Ships are cast away here every Year.

The

The Natives are call'd *Tungusians*: Their Country reaches 600 Miles further North and East to *Argunskoy*. They pay a Tribute of Furs to the Czar for every Bow. The Men are tall and strong, have long black Hair, which is bound up like a Horse's Tail, and hangs down upon their Backs: They are broad Fac'd, have flat Noses; but their Eyes are larger than those of the *Kalmachians*. Both Men and Women go naked in Summer, except only a Leathern Girdle of 3 Hand-breadths, that they cut in the Shape of Ribands, and wear it about their Waste. They carry a Pot on their Left Arm full of old Smoaking-Wood, to prevent the biting of the Moskitoes. They admire Beauty in their own Way; and to improve it, they adorn their Forehead, Cheeks and Chins, with several Figures, which they make by running a Needle with Threads greas'd with black Grease thro' the Skin, and leave the Threads there for several Days; which, when drawn out, leave Marks behind them. Some of these Figures are Lozenge-wise, and others Semi-circular.

Their Winter-Habits are of Doe-Skins, border'd with Dog-Skins: Their Breast-Piece is hung with Horse-Tails: They know not the Use of Flax or Wool. Their Nets and Sowing-Thread are of Fish-Skins: Their Caps are a Roebuck's-Skin, with the Horns sticking out on the Crown of their Heads. By this means, and by creeping on the Grass, they deceive the Beasts, and get near enough to shoot them. They lay their Dead upon Trees, and after they are rotten, burn their Bones.

The Conjurers are their only Priests. In their Huts they have Wooden Idols, of half an Ell long, of a Humane Figure, which they feed as the *Ostiacks*. Their Huts are made of Birch-Bark, and are hung round with Horses-Mains, Tails, and other Baulbes. Before the Doors they hang their Bows and Quivers, and young dead Dogs by 'em. Their Boats are made of the same Materials with their Houses, are long, slender, and without Benches. They sit upon their Knees, and can bear up against violent Streams. They subsist chiefly by Hunting and Fishing. There's another Clan of them near the Borders of *China*.

They marry as many Wives as they please, buy them one of another, and think nothing the worse of 'em for having liv'd with another Man. They acknowledge a God, but perform all their Worship to their *Saitans*, in the Night-time, by beating Drums, and Exorcisms, when they are to go a Hunting or Robbing. They fuddle themselves now and then with *Arak*, a sort of Brandy, made of distill'd Mare's-Milk. Men, Women and Girls, drink it to that Excess, that they become insensible for a long while. Both Sexes ride on Horseback, arm'd with Bows and Arrows. Their Bread is a refin'd Flower, of the Bulbs of yellow Lillies, of which they make also a sort of Pap; and sometimes eat the Bulbs dry. They know nothing of Agriculture: Their Trade is by bartering Furs with the *Targansians* and *Kixigarthians*, who live under the *Chinese*, for Blue Callicoos, Linen and Tobacco.

The City *Buratskoy* is S. from *Iliniskoy*, upon the River *Angora*. *Bulaganiki* is on the same River, 90 Miles S. from *Iliniskoy*. The *Buratsians* live here. Their Country reaches S. from this Place 360 Miles. They have great Plenty of Cows: Their Bulls are more hairy than Goats. Their Dwellings are low, made of Wood join'd together, and cover'd with Earth, and are commonly near Rivers. They have nothing of Agriculture. In Spring and Harvest, they go a Hunting by Hundreds together. When they have found out their Game, as Wild-Sheep, Stags, or Roebucks, they form themselves into a Circle, surround the Beasts, and shoot them; each Hunter having 30 Shot. When the Hunting is over, every one finds his own Arrows by his Mark. Both Men and Horses are frequently wounded by this confus'd Method. They hunt no more till all their Provisions be done. Their Hills are full of Wild-Sheep, as white as Snow. They furnish Travellers to *China* with Oxen and Camels of an extraordinary Size. They deal by Barter, and truck Pale-Sables for Pewter and Copper Basins, Red *Hamburg* Cloths, Otters-Skins, *Persian* Shaggy Silk of all Colours, and Gold and Silver Bullion. An Ox of 800 or 1000 *German* Pound Weight, is valu'd at 5 Rubles; a Camel at 10 or 12. One of their Rubles

is two Rix-Dollars. The Men are robust, large, and have handsome Faces, as Beauty goes here. They are something like the *Chinese Tartars*.

In Winter, both Sexes wear Coats made of Sheep-Skins, and in Summer of Red Cloth. They never wash their Face, or any Part of their Body, nor do they cut the Nails of Hands or Feet; so that they look strangely. The Hair of their young Women sticks close together in Plaits, and stands on End, which makes them look as Envy is represented by Painters. Married Women have two Plaits that hang down on each Side their Head, adorn'd with Tin-Figures. When they die, they are buried with their Ornaments, Clothes, Bows and Arrows.

Their Religion consists in worshipping dead Bucks and Sheep, stuck on Poles before their Doors, till they be putrified, and then they put others in their stead. Their Adoration is perform'd by bowing their Heads, and sitting on their Knees with their Hands join'd, without speaking a Word.

They have some Priests, whom they kill now and then, and bury them with their Clothes and Money. The Reason they give for it is, That they need Priests to go before them to the other World, and pray for them. When they take an Oath, they go to the Lake *Baikal*, near which there's a Hill, which they account Sacred. There they take the Oath, and are perswaded, that those who swear falsely, can never come down alive. To this Hill they offer up all sorts of Cattle, and have done so for many Years.

They have Store of Musk-Cats, which look like young Bucks without Horns, only their Hair is somewhat black, and their Head much like that of a Wolf. The Musk is contain'd in a Swelling at their Navel, like a little Purse, of a thin Skin, cover'd with very fine Hair. The *Chinese* call it a Musk-Hart, because it resembles that Creature. It has two Tusks, like those of a Wild-Boar. *Philip Martinus*, in his *Chinese Atlas*, says, this Animal is found chiefly near the City of *Lao*, in the Province of *Xamsi*, and in *Xenxi*, but especially in that of *Hanching-Bu*. He describes it thus: It is like a young Doe or Hart; but more brown, flow and unactive; so that the greatest Difficulty is

to put him up; but when that is done, he suffers himself to be tamely shot. His Blood is drawn off and reserv'd. They take off a Bladder near his Navel, which is fill'd with Blood, or some other odoriferous Liquor that gathers naturally there; after which they flea and cut him to pieces.

When the *Chinese* design to make the best Sort, they take the hinder Part of the Animal, beginning from the Kidneys, which they stamp and bruise to a Jelly; then they dry it, and put it in small Bags, which they make of his Skin.

But if they design a coarser Sort, which is still very good, and not sophisticated, they beat all the Parts of the Animal together to a Jelly in a Mortar, with a little of his Blood, and put in Bags as before.

There's yet another Sort of Musk, highly valued, tho' not so good as the former: This is prepared from the fore Part of the Animal to the Kidneys, which they particularly lay by, in order to make the common Musk; so that none of this Creature is thrown away, all Parts of it being good for Musk. But whether the Barbarians make the same Use of the Musk-Cat as the *Chinese* do, is not known.

Jekutskoi, is situated on the River *Angora*; whose Course is from N. to S. Its Source is from the Lake *Baikala*, 8 Miles from this Place, in Lat. 54, Long. 110. This City is lately rebuilt, and strongly fortified; the Suburbs are large, and there is great Plenty of all Grain here; so that 100 German Pound Weight of Rye is sold for 7 Stivers. On the E. of this City, there's a burning Cove, which flam'd very much formerly; but now is almost extinguished, and little or no Smoak issues out of it at present. In Harvest, Earthquakes are frequent, but not very prejudicial in this Country. A *Mongolian* Baron resides here, who embrac'd the *Grecian* Faith, under the Protection of the Czar. His Sister was a Pagan Devotee, and well nigh perswaded to receive the Christian Faith. She said, The Christians God must necessarily be a strong God, since he hath beat their God out of Heaven; but alledg'd, he would return thither, and be beat out the second time. The Rules of her Order would not allow her to salute any body. She had a *Refery*, or String of Beads, which

which she incessantly turn'd round her Fingers. I found a Priest with her, says the Ambassador, who by the same Practice had his Thumb worn up to the Knuckle; which rubbing off by Degrees, did not at all pain him.

Of the Province of DAURI.

THE Lake of *Baikala* is the Western Frontier of this Province, and the River *Gobritz* the Northern. The W. and N. Side of this River belong to the Czar, and the Eastern to *China*; but the Southern Boundary is not so well known. The River *Argun* is its Boundary on the S. E. 'Tis a fine Country, well water'd with Brooks: The Hills and Vallies abound with the most charming Herbs and Flowers; and in some of the Vallies, there's long Grass about half a Man's Height. Tillage is not much practis'd here, the People being lazy: They are *Tartars*, subject to his Czarish Majesty.

The Lake *Baikala* is 6 German Miles broad, and 40 long. The Ice about the beginning of *March* was full two Dutch Ells thick, and dangerous, when Passengers are overtaken with a great Snow or high Wind. The Ice is slippery, so that the Horse must be sharp shod. The Camels have a high Shoe or Boot ty'd about their Legs, and sharp at Bottom. The Oxen have Irons struck thro' their Hoofs. The Ice of this Lake is sometimes tore open for several Fathoms by stormy Winds, with a Noise as loud as Thunder-Claps; but after a few Hours, the Ice joins close as before. About this Lake, there are very fine Black Sables and Caberdines.

The Water of the Lake tastes fresh, is clear, and of a deep green Colour, where the Ice is open. Sea-Dogs appear blackish here, and not variegated as in the *White Sea*. They have great Plenty of Jacks and Sturgeon, some of which weigh 200 German Pounds.

Ilunskoy, lies on the S. E. of the Lake, Lat. 53 $\frac{1}{2}$. Long. 116. It is a very large Town. Most of the Inhabitants are *Russians*. In Winter, they go a Sable-hunting, and till no more Ground than Necessity requires. The Castle of *Tanzieniskoy*, near this

Place, is provided with a strong Garison of *Cossacks*, to cover this Country from the Incursions of the *Mongolians*, who border on it. *Udinskoy*, a Fortrefs N. E. from *Ilunskoy*, is situated on a Hill; but most of the Inhabitants live at the Foot of it. This Place has also a strong Garison of *Russian Cossacks*, because they border on the *Mongolians*, who in Summer carry off their Horses. No Trees are to be seen here: They have abundance of Carrots, Cabbage, and Turneps.

Jarauna, is 120 English Miles S. E. from *Udinskoy*. The Country betwixt them is uninhabited: It is also garison'd with *Cossacks*, and inhabited by *Russians*, who live by Sable-hunting. The Heathens here are called *Koni-Tunguxi*. When any one dies, he is buried, with his Clothes and Bows, under Ground. Stones are laid upon his Grave, and a Pole erected, to which they tie his best Horse, being first shot to Death.

A *Tungusian* Prince came to visit me, says *Tibrant Ides*, who had prodigious long Hair, bound up with Leather, tied three times about his Shoulders. I was very curious to see if his Hair was really so long as I was told, and drunk him with Brandy, for which Favour he allow'd me to loose his Hair. I found it to be all natural, and 4 Dutch Ells long. He had a Son of 6 Years of Age, whose Hair was near an Ell long. They live on the Hills, and grow rich by catching fine and beautiful black Sables, inferior to none in the Province of *Siberia*. Here are also very fine Linxes, and a sort of Squirrels, for which the *Chinese* are their chief Merchants.

Nerzinskoy, lies on the River *Nerza*, (that runs N. N. E.) in Lat. 53. Long. 124. 540 Miles from *Jekutskoi*. 'Tis the chief City of *Dauria*, is pretty strong, with Brass Guns, and a great Garison of *Daurian Cossacks*, both Foot and Horse. The Fields about it are very fruitful. Above and below the City, for some Miles, dwell several *Russian* Gentlemen and *Cossacks*, that live by Tillage, grazing of Beasts, and Fishing. Among the Hills, and round the City, there are very fine Garden-Trees and Plants, as *Bastard-Rhubarb*, of an extraordinary Thickness and Length, fine White and Yellow *Lillies*, vast Quantities of Red and Snow-

white *Peonies*, which have a fragrant Scent. Here's Plenty of *Marjoram*, *Rosemary*, *Lavender*, *Thyme*, and several other odoriferous Plants and Flowers, unknown to our Authors. Their Fruits are only Red and Black Currans.

The *Konni-Tunguzians* are obliged to be ready on Horseback at the Command of the Weywode, when the roving *Tartars* make any Incursions on the Frontiers; and the *Oleni-Tunguzians* must be ready on Foot when there is any Occasion in the City. The Prince of the former was under the Emperor of *China*; but falling into Disgrace, he and his Clan retir'd to *Dauria*, put himself under the Protection of the Czar, and embrac'd the *Greek* Religion. He can in one Day raise 3000 well appointed Horsemen. They are good Soldiers, and 50 of them will rout 400 *Mongolians*. They live chiefly by grazing; but those on the River *Schilka* and *Amur* maintain'd themselves by hunting Black Sables.

Their Religion is much the same with the other *Daurian* Heathens; for throughout all Great *Tartary*, to the beginning of the *Mongolian* *Tartars*, there's a great Similitude in Religion.

Their common Drink is Water; but the better Sort drink Black Tea: They boil it in Mare's Milk and Water, to which they add a little Butter or Lard: They also use *Arak*. None of the Cows in *Siberia* or *Dauria* will suffer themselves to be milk'd; for which Reason Mare's Milk is much used by those People.

In Spring and Harvest, they go a hunting to provide Flesh against Winter, which they dry in the Sun. They gather the Pulp of yellow Lillies, and when dry'd and beaten to Meal, they make 'em into several sorts of Dishes.

They are dextrous at shooting Fish in the Water, with a sort of Arrows that are heavy, round, solid, and about 3 Fingers thick at the Head. At the End of 'em, under the Iron Point, there's a Ball of Bone bored through, that makes a loud whistling Noise as the Arrow flies, which is commonly no more than 15 or 20 Fathom. When they hit the Fish, they make a very large Orifice.

Their Way of Exculpation by Oath is very extraordinary: The accus'd Person takes a live Dog, lays him on the Ground, pierces him in the Belly with a Knife, claps his Mouth to the Wound, and sucks out the Dog's Blood as long as he can; after which he lifts him up on his Shoulders, and claps his Mouth to the Wound, in order to suck out the remaining Blood. When he has gone thro' this Trial, he is set at Liberty, and the Accuser is punish'd for his false Accusation.

Argunskoy, is on the River *Argun*, which runs from S.W. to N.E. and falls into the *Amur*. By a Treaty betwixt the Czar and the Emperor of *China* in 1689, this River was made the Boundary of their Dominions on that Side. The W. of the River belongs to the Czar. On the E. of it, begins the great uninhabited *Tartarian* Wilderness: It lies about Lat. 50. and Long. 125. This Country is very populous. The *Tunguzians* pay a voluntary Tribute to the Czar of Linxes and grey Ferrets, which are very fine here.

The Country betwixt the Rivers *Tugur* and *Uda*, and further North, belongs to the Czar. There's great Plenty of Black Sables here. The Natives are *Tunguzians*, *Jakutians*, *Amurians*, and *Korlitzians*. They are under the Jurisdiction of the Governor of *Jekutzkoy*, on the River *Lena*, which is the Capital of those Northern Provinces. All the Woods here are strongly guarded, to prevent the *Chinese* *Tartars* from hunting Sables.

The Country on the Rivers *Lena* and *Amga* is inhabited by a sort of People called *Jakutians*: Their upper Coats are Furs of different Colours, border'd with Buckskin. They have long Hair, and wear no Shirts. They believe there is a great Being above in Heaven, who gives them Wives and Food. They celebrate a great Festival in the Spring, when they offer *Arak* to that Being. During this Feast, they dont drink themselves, but make great Fires, and continually sprinkle the *Arak* towards the E. When any of them dies, his nearest Relation is buried alive with him. About one half of their Language agrees with that of the *Mahometan* *Tartars* near *Tobolskoy*, which

is derived from the *Bulgarian*. They take as many Wives as they can maintain. Stags are their chief Beasts of Burden, upon which they also ride, and make great Journeys in a little Time. They are a valiant quick-witted People, and seem to be great Lovers of Truth. When the Governors of *Jekutzkoi* are remiss, they do one another all possible Mischief. They say, their Ancestors came from *Kalmuckia*, from whence they were driven by the *Russians*, and were forc'd to take up their Abode in that cold District. They are much afflicted with the Scurvy, which they soon drive away by eating raw Fish, and a sort of Tar.

The *Jugogayars* are Heathens, and inhabit Part of this Country. They cut off all the Flesh of their dead Relations, dry the Skeleton, hang it with Glass-Corals of all Colours, carry it round their Huts, and worship it.

To the Shores of *Tugur* and *Uda*, come Yearly a tall People out of the Island in the Neighbourhood, well dress'd in fine Fur-Surtouts, under which they have Silken Coats, as rich as those of *Persia*. They come in small Barks to the *Siberian Tartars*, buy Girls and Women of them, and give 'em in Exchange rich Sables of Black Fox-Skins, which they have in great Quantities in their Islands. These two Rivers fall into the *Amoerschoan* or *Chinese* Ocean, Long 150. The Mouth of the *Uda* lies in Lat. 58.

Northwards of those two Rivers rises the *Ogela*, which runs N. E. and falls into the *Chinese* Ocean, in Lat. 64. and Long. 145. All the Coast from the Mouth of this River to the *Ky-Cape* abounds with Whales, Sea-Horses, and Sea-Dogs.

K A M S A T K A,

Lies in Lat. 71. and Long. 146. near a River of that Name, that falls into the *Chinese* Ocean. The People are call'd *Xuxi* and *Koeliki*, and have each a peculiar Language. Those who live near the Sea are cloth'd in Seal-Skins, and dwell in Caves. Those who inhabit the Inland Country, are generally rich. They hunt Harts, eat Flesh and Fish raw, and wash themselves with

their own Urine. They are a false and treacherous People.

C A S A N.

THIS Province reaches on the Left of the *Volga* as far as *Siberia* to the North, and to the *Nugayan Tartars* on the East. It was formerly under the *Crim Tartars*, and was capable of bringing 60000 Men to the Field. The Great Duke *Basil Janowitz*, Father to the famous Tyrant *John Basilowitz*, after a Victory over these *Tartars*, made one *Shenle*, a weak Man, their Governor, whom the *Casan Tartars*, join'd by the *Crim Tartars*, obliged to quit the Country, and give up all their Conquests. Not contented with this, they march'd their Army into the Heart of *Muscovy*, under the Conduct of two Brothers, called *Mendigleri* and *Sapperi*, forced the *Muscovite* Lines near the River *Occa*, and had the Chase of them to *Nisi-Novogorod*. Having thus master'd all Difficulties, they march'd streight to *Moscow*, which they besieged, took and plunder'd. The Castle was also obliged to capitulate on scandalous Terms, viz. That the Czar and his Subjects should be Tributaries to them for ever; and as a Sign of their Subjection, the Great Duke should be obliged to smite his Head before the Statue of *Mendigleri*, erected in the Market-place of *Moscow*, as often as the Tribute should be paid to the *Tartars*; and these Articles were sign'd and sworn to by the Czar; so the Kingdom of *Casan* fell to the Share of *Sapperi*, and *Crim Tartary* to *Mendigleri*; who proposing nothing less than the entire Conquest of *Muscovy*, they invaded the Country again, sat down before *Razan*, summoned *Kowar*, the Weywode of the Castle, to surrender, and told him the Czar himself was now his Subject. The Weywode pretended Ignorance, desired to be satisfied about it, and then promised to surrender. *Mendigleri* sent him the Instrument of Subjection, sign'd and seal'd by the Czar. *Kowar* having gain'd this Point, he sent him Word, That he would keep both the Czar's Original Letters and the City to the last Drop of his Blood; which he did accordingly,

dingly, and obliged the *Tartars* to raise the Siege with great Loss. He sent the Original Letter to the Czar; upon which the Statue of *Mendigleri* was broke down; and the Czar afterwards laid Siege to *Casan*: But after much Bloodshed on both Sides, he was forced to raise it. His Son *John Basflowitz*, to revenge this Affront, began his Reign with the Siege of that Place. He batter'd the City furiously two Months, and offer'd 'em honourable Terms, if they would surrender; which they rejected, in hopes of being relieved by the *Crim-Tartars*. Upon this he immediately order'd his Mines to be sprung, buried a vast Number of *Tartars* in the Ruins, and so took it by Storm on the 9th of July, 1552. The *Tartars* defended themselves with the utmost Bravery in two Intrenchments within the City, after the *Muscovites* made themselves Masters of the Breach, and at last forced their Way at one of the Gates through the *Muscovite* Camp to the other Side of the River *Casanka*. The Czar order'd the Breaches to be immediately repaired, because the whole Province depended on the Fate of this City, which has remained in the Possession of the *Muscovites* ever since.

Casan is situated in a large Plain on the River *Casanka*, about 7 Versts from the *Volga*, in Lat. $55\frac{1}{2}$. Long. $69\frac{1}{2}$. This City is considerable for its Extent and Situation, as well as its Strength: The Castle and its Fortifications are of Stone, well provided with Artillery, and a good Garison of *Muscovites*. The *Tartars*, who are allowed to live here, are forbid, on pain of Death, to set a Foot between the Walls of the Castle. The Country is fertile, especially of all Sorts of Fruits, and Melons of an extraordinary Taste, as big as our Pumpions; but it is not populous, because frequently ravaged by the *Cossacks*. The Duke of *Holslein's* Ambassadors observe, That the Course of the River *Volga* from *Nish-Novograd* to *Casan* is E. and S.E. but from *Casan* to *Astracan*, and to the *Caspian* Sea, it runs from N. to S. Seventy Miles from *Casan* stands *Rockshagra*, and 130 to the N. *Malmisch*, on the *Casanka*. On the W. Side of the *Volga* lies *Tetus*, on the Borders of *Bulgaria*. 'Tis irregu-

larly built, and resembles a Village rather than a City.

BULGARIA.

THIS *Tartarian* Province is South from *Casan*. *Bulgar* is the Capital; and the River *Ulka* rises in its Neighbourhood. The Ruins of many Cities destroyed by *Tamerlane* are to be seen all along the Banks of the *Volga*. *Samara* lies on the E. Side of the *Volga*, about two Miles from the Shore, Lat. $52\frac{3}{4}$, and Long. $70\frac{1}{4}$. about 200 Miles S. from *Casan*. It is square, and built all of Wood, except the Churches and Monasteries. The River *Samara*, from whence it has its Name, falls into the *Volga* 3 Miles below it.

They have Plenty of Fish and Caviar in this Country. The Soil is fruitful: They have fine Meadows and Pastures, and Plenty of Apple-Trees in the Vallies, of which they make Cyder. Their Mountains are cover'd with Pine-Trees; but much infested by the *Cossacks*, who lurk there.

ASTRACAN.

THE Kingdom of *Astracan* has the *Caspian* Sea on the S. the Kingdom of *Bulgaria* on the N. the *Nogai* *Tartars* and the River *Donn* on the W. and the *Kalmuck Tartars* on the N. E. The Duke of *Holslein's* Ambassadors are singular in their Observation, That the Elevation of the Pole in the City of *Astracan* is only 26 Degrees 22 Minutes; and Dr. *Comnor* follows them in this Mistake: But Father *Avril* says, the Lat. is 48 Degrees. Mr. *Moll* makes it 47. They had a King of their own; but in 1554, the City and whole Kingdom was taken by *John Basflowitz*. Before this it belonged to the *Tartars* of *Nagaia*, and had its Name from a *Tartarian* Prince named *Astra-Can*, its Founder. It is situate in the Isle of *Dolgoi*, in the *Volga*, which is all over sandy and barren, except some Gardens and Grounds cultivated with great Care: So that *Herbeftin* is mistaken when he says, that

it lies some Days Journey from that River. The Ambassadors observe, That the Heats were as excessive there in *September* and *October*, as in *Germany* in the middle of Summer. The Winter lasts only two Months; but is so exceeding cold, that the River is frozen up, and bears Sledges. On this Side the *Volga*, there's a Heath extending 70 *German* Leagues to the W. and another of 80 *German* Leagues to the S. Those Heaths are remarkable for Salt-Pits. The Heat of the Sun bakes the Salt, so that it swims upon the Surface of the Water an Inch thick, and appears like Rock-Chrystal. They have such Quantities of it, that for an Half-penny one may buy 40 Pound Weight. The *Volga* some Miles lower abounds with Salmon, Sturgeon, white Fish, and Belluga, of the Roes of which Caviar is made. Twelve large Carps may be had for Two Pence, and 200 young Sturgeons for half a Crown. They have an incredible Number of Wild-Fowl, especially Geese and Ducks, which the *Tartars* hunt with Hawks, whereof each House has one, and they are very expert in breeding them.

The Fruits about *Astracan* are equal in Goodness and Beauty to those of *Persia*, especially their Apples, Quinces, Nuts, Peaches, and Melons; but chiefly that Sort called *Carpus*, whose Rind is of a lively Green, and the Meat of a Carnation Colour. Grapes were first brought hither in 1613, by some *Persian* Merchants, and planted by an old *German* Monk. Now they have a Vineyard, that produces 60 Pipes of excellent Wine in one Year; and every House has its Walks or Arbours of Vines. The Herb *Esula* grows here as high as a Man, and the Root of *Angelica* as big as one's Arm. About *Astracan*, and many Miles further N. there grows a prodigious Quantity of *Liquorish*: The Stalks are sometimes above four Foot high, and very thick; yet 'tis inferior both in Bigness and Taft to that in *Asia*, near the River *Araxes*. They have 500 great Brass Cannon, besides many Mortars, in *Astracan*. The Garison consists of 9 Regiments, of 500 Musqueteers each, to keep the neighbouring *Tartars* in Awe. The Town is fortified with a double Wall, and

some Towers, within half a Musquet-shot of one another. The Fortifications are all very high, and of Stone, which make a noble Figure, especially towards the River; but the Town is not answerable, because the Houses are low, and of Wood. *Michael Phedorowitz* built that Part of the City called *Stelitzza-Gorod*, i. e. the Soldiers-Town. The Ruins of the great City *Czarsgorod*, with its Palace, and Walls of Brick, demolish'd by *Tamerlane*, have furnished the City of *Astracan* for many Years with Materials for their Publick Buildings.

The City is inhabited by *Muscovites*. The *Armenians* and *Nagarian Tartars* have each of them a peculiar Suburb. The *Tartars* have 1000 Houses, which are most Part of Bukrushes; but they are not allow'd to come within the Walls.

As this City is in a manner the common Frontier on this Side betwixt *Asia* and *Europe*, not only the *Crim*, *Precopense*, *Bulgars*, and *Nagarian Tartars*, but also the *Armenians*, *Persians* and *Indians*, have a particular Place assign'd them, and drive a considerable Trade here; so that the Customs of this Place, when at the lowest, amount to 250000 Crowns per Annum. Others of the most remarkable Towns belonging to this Kingdom are, *Soratoff*: It lies in Lat. 52. and Long. 67 $\frac{1}{2}$. in a large Plain upon a Branch of the *Volga*, about 4 Miles from the main Stream. 'Tis garison'd and inhabited only by *Muscovites*, who serve as a Guard against the Invasions of the *Kalmuck Tartars*, that inhabit a vast Country N. and E. from the *Caspian* Sea. *Zariza* lies in Lat. 49. Lon. 42. and is situated on the W. Bank of the *Volga*. It is fortified with several Bastions and Towers of Wood, and is a Frontier Garison against the neighbouring *Tartars* and *Cossacks*. The Soldiers also convoy the Vessels that pass up and down the River. The Soil here is barren. *Szornagor* lies on the Right Side of the *Volga*, on a high Ground: It is square, fortified with Wooden Towers and Ramparts; and is also a Frontier Garison against the *Cossacks* and *Tartars*.

The *Nagarian-Cossack Tartars* were unknown to ancient Geographers. They are said to have been *Indians*, who revolted from.

from their Kings, and about 1212 settled near the *Euxine* Sea, upon the *Palus Meotis*, where the ancient *Getae* dwelt, and extended their Conquest first to the River *Don*, and afterwards to the *Volga*, where they now inhabit. Those of *Nagaisa* lie betwixt the *Volga* and *Taika*, as far as the *Caspian* Sea. Their principal City then was *Astracan*.

They live in round Huts of Bulrushes, about 12 or 13 *English* Yards in Compass. The *Muscovites* call them Vagabonds, because they ramble in Summer from Place to Place, to seek Grass for their Cattle, and carry their Huts in Carts. In Winter they dwell near *Astracan*. They pay no Tribute to the Czar, but are obliged to serve him in his Wars. They have petty Princes of their own, some of whom the Czar keeps as Hostages in the Castle of *Astracan*.

They are generally *Mahometans*, and very few of them of the *Muscovite* Faith: They vow some of their Children to God, or to some Saint, which are distinguished by a

Ring in their Nostrils, if Girls; and in their Right Ear if Boys.

They eat Fish dry'd in the Sun instead of Bread, and have sometimes Cakes of Meal and Rice. Their Drink is generally Milk and Water; but there is Beer, Wine, Mead, and *Aqua-Vite*, at *Astracan*. Their Cattle are large, and the Tails of their Sheep so fat, that some of them are 30 Pound Weight. Their Ears hang down like Spaniel-Dogs. Their Horses, tho' small and ill shap'd, are hardy and strong. Those *Tartars* have bad Lineaments, are low and fat, with large Faces, and little Eyes, of an Olive Complexion, and full of Wrinkles. They wear little Beards, and keep their Heads shaven; but the Women are tolerably handsome. The Men's Clothes are a loose Coat of coarse Cloth, with a short Cloak of Sheep-Skins, the Wool outwards, and a Cap of the same, but commonly black. The Women wear white Linen, and have plaited Coifs on their Heads, with a great many *Muscovian* Pence hanging down on both Sides.

C H A P. XII.

LITTLE TARTARY.

THIS Country had anciently several Names: 1. *Chersonesus-Taurica*, from the *Tauri*, or the *Tau-ro-Scythæ*, who inhabited there, as *Pliny*, *Ptolomy*, and *Ovid*, inform us, and *Chersonesus*, because it was a Peninsula. 2. *Crim Tartary*, from a City of that Name. 3. *Precopian Tartary*, from the City *Precopz*. 4. *Little Tartary*, to distinguish it from the *Great Tartary*. 5. *Strabo* calls it *Chersonesus Scythica*. 6. Others call'd it *Gazaria*. It has the *Euxine Sea* on the S. which *Pliny* tells us, was formerly called *Azenos*, i. e. Inhospitable. On the E. it has the *Bosphorus Cimmerius*, so call'd from the *Cimmerii*, a People inhabiting there, now call'd the *Streights of Caffa*. It has the *Sinus-Carcinius*, the Mouth of the *Borysthene*s, on the W. and the Rivers *Psol* and *Desna* on the N. W. They both fall into the Left-Side of the *Nieper*, and run from N. E. to N. W. The Boundary on the N. E. is the *Great Donn*, and the *Lesser*, call'd sometimes the *Donetz*. On the N. lies the Province of *Muscovy*, call'd *Rezan*. The Mouth of the *Nieper* is 150 English Miles S. W. from the *Taurica-Chersonesus*; and the Mouth of the *Donn* is 135 N. E. from it. The most Southern Promontory of that *Chersonesus* is 315 N. E. from *Constantinople*. The Town *Precopz* is 580 S. from *Moscow*. According to *Brietius*, from the Mouth of the *Nieper* to the Conflux of the *Greater* and *Lesser Donn*, i. e. from 49 to 60 $\frac{1}{2}$ Long. is 11 $\frac{1}{2}$ Deg. which make 690 Miles. But he not observing the Diminution of the Degrees of Long. is out in his Reckoning: The Mouth of the *Nieper* is in 50, and the Conflux of the *Donn* and *Donetz* in 61 $\frac{1}{2}$ Long. so that the Distance is only 375 English Miles; and the Breadth is from the most Southern Part of the *Chersonesus* in Lat. 46. to the most Northerly Winding of the *Little Donn* in Lat. 52. about

360 Miles. The most Southerly Promontory of the *Chersonesus* is in Lat. 44 $\frac{1}{2}$. and that Confluence in Lat. 49 $\frac{1}{2}$, makes 320 Miles.

Of the History of Little Tartary.

THIS Country was famous for its fruitful Soil, and Plenty of Fish. It was subject to several Masters, call'd the Princes of *Bosphorus*; but had no certain Form of Government. After that the *Tauri*, a *Scythian* People, conquer'd it, and call'd it *Taurica*, as formerly mention'd. It is probable they were the *European Scythians*; whom *Darius*, the Son of *Hystaspes*, made War upon with an Army of 700000 Men, and was routed by them, as *Herodotus* informs us. *Mithridates* King of *Pontus* defeated them, and annex'd *Taurica-Chersonesus* to his own Dominions. But being overcome by the *Romans*, he not only lost his new Conquests, but also his Kingdom of *Pontus*. After that the *Romans* set up Kings there, whom they call'd the Kings of *Bosphorus*. Upon the Division of the Empire among the Sons of *Constantine the Great*, those Provinces fell to the Share of the Eastern Emperors. (The *Tartars* now inhabiting *Crim-Tartary* are originally from *Asia*, and began to be famous about 950, in the Greek, Latin, and Arabian Histories.) The *Genoese* taking Advantage of the Confusion and Disorders among the *Greeks*, about the Time of the Holy War, and being then powerful at Sea, possess'd themselves of the greater Part of *Crim-Tartary*, and especially of *Caffa*, call'd by the *Greeks Theodosia*. In 1250, the *Tartars*, puff'd up with the great Victories they had gain'd under their Prince *Batu*, who ravag'd for two Years together *Hungary*, *Slavonia*, *Bosnia*, *Rascia*, *Bulgaria*, and the Countries on both Sides the *Danube*, and also wast'd great Part of *Russia*, they invaded the Pla-

ces belonging to the *Genoese*; and tho' not able to expel 'em, yet they oblig'd them at length to pay Tribute. Some are of Opinion, that the *Tartars* suffer'd the *Genoese* to continue in that Country, because of the Gain they made by their Traffick, principally of Slaves, which the *Genoese* furnish'd to a great part of the World, but especially to *Egypt*, who generally had all their *Mamelukes*, as long as that Government lasted, from *Cassia*; or rather, the *Tartars* having no Skill in besieging Towns, especially such as might constantly be relieved, could not totally drive them out. Those Plantations were very convenient for the *Genoese*; for they had a great Colony at *Pera* near *Constantinople*, by which they enjoyed the whole Trade of the *Black Sea*. At this Time the *Tartars* were Masters of the other Coasts of that Sea, of the *Palus Meotis*, and of many Places in the *Peninsula* and Continent, together with those where the *Nagaian Tartars* now live. But when the Emperor of the *Turks*, *Mahomet II.* had taken *Constantinople* in 1452 by Storm, he applied his utmost Force to drive the *Genoese* from his Neighbourhood; which by degrees he effected, and took *Cassia*, their principal Town, in 1475, after a Siege of 14 Years, when some say the Garison was brib'd to betray the City. 'Tis now the Residence of a *Beglerbeg*.

The *Tartars* of this Country acknowledged the Superiority of the Great Cham till 1400, that *Lochlan Chan*, one of the Descendants of *Batu*, refus'd Obedience, and took upon himself the absolute Dominion over all those Parts, except some few Places in *Taurica*, which still remain'd in the Power of the *Genoese*. But in 1584, their Independency was taken from them by *Amurath III.* who order'd their Prince's Throat to be cut, and set up *Iffan*, the Brother of *Mahomet*, their last Prince, under such Conditions and Marks of Slavery as the Grand Seignior pleas'd. The *Tartars* then were possess'd of all the Country of *Budziack*, which lies between the *Nieper* and *Borysthenes*; but the *Turk* seiz'd upon that; so that their Dominions reach only from the *Borysthenes* or *Nieper* to the *Dona* or *Tanaïs*, of which the *Peninsula* is the chief Part. This Conduct of *Amurath III.* was contrary to a League betwixt *Selim I.* and the *Crim-Tartar*, who married the Daughter of the

Grand Seignior, and assisted him with an Army of 150000 Men against his Father; by which League it was provided, That the *Tartars* should assist the *Turk*, when required, with 50000 Horse, headed by the Cham's Son, or some principal Officer; but when the Grand Seignior went to War in Person, the Cham was oblig'd to attend him with 100000 Horse. The *Turk* sometimes keeps the young Princes as Hostages for Performance of the Conditions: One of which is, not to make War, except against the *Muscovites*, without Consent of the *Turk*; and that they should pay him Yearly a Tribute of 300 Christians, some Furs, Butter, and such other Things; for which the *Turk* is to pay them 5500 Ducats: And the Cham is to succeed to the *Turkish* Empire, if the Males of the *Ottoman* Line fail. In 1663, the *Tartars*, being call'd to the Assistance of the *Turks*, made Incursions into *Hungary*, *Moravia*, and *Silesia*, sack'd and burn'd Cities and Towns, and carried off in one Year 160000 Captives, that they sold to the *Turks*, who trade with them for this Merchandize; as *Sir Paul Ricaut* informs us.

Of the MANNERS of the Tartars.

THIS Country is very populous, by reason of their Polygamy; so that they talk of a *Tartar* who had 40 Children born in one Year by his Wives. They endure Thirst, Hunger, and Toil, with great Patience, and feed upon raw Flesh and Mare's-Milk. A Horse's-Head is a choice Dish with them: They prepare their Horse-Flesh thus; They cut it out in thin Pieces, lay it upon their Horses-Back, ride on it all Day, and at Night eat it. They think the Heat of their Thighs, and the Sweat of the Horse, gives it a pleasant Taste. This is all their Cookery. They eat Garlick in abundance, which they say helps 'em to digest their raw Mear. They reckon it unworthy of a Man to till the Ground; and have no fix'd Habitations, but with their Flocks and Families wander from Place to Place over the large Countries betwixt the *Dona* and the *Nieper*. They think it the greatest Curse they can give their Enemies and Children, when angry with them, to wish,

wish, *That they may live as long in one Place as the Christians do.* They use no Finery in Apparel, but are great Slovens. Most of them are Atheists, and place their Happiness in the Pleasures of Sense; but some of them are *Mahometans*; yet *Jews, Armenians*, and other Christians, dwell in *Cassa*, &c. and are allow'd the Freedom of Worship. The Natives have no Table-Cloths: They fast long, and when they get Meat, eat so much, that they sleep for two Days. During this Surfeit, the *Poles* frequently surprize and kill them. Their Drink is Water, Milk, and Ale of Millet. They are mighty Lovers of sour Milk, think it a great Cordial, a help to Digestion, and use it also as a Purge. They feed likewise upon Herbs that grow on the Banks of the *Dunn*, but chiefly on one call'd *Paltraca*, which they say is nourishing, and makes them sprightly. If they have enough of this Herb, they are not afraid to go thro' the most wild and desolate Places of *Tartary*. They are, generally speaking, of an ordinary Stature, well set, have short Necks, broad Faces, large Foreheads, Eyes black and hollow, but very lively, with other Features peculiar to themselves, by which they may be distinguish'd from other Nations. They have long Beards, but shave all other Places of their Bodies. They have no Notion of Justice and Equity, but take any thing they want, without any Scruple, wherever they find it: Yet they keep their Promise to their Enemies; so that the *Poles* often let the *Tartarian* Prisoners go upon their Parole of Honour, to endeavour the Recovery of their Liberty by Exchange of Prisoners, which if they cannot obtain, they never fail to return by the Day prefix'd. When any of them are summon'd before a Judge, and convicted of Theft or Robbery, they do not deny the Fact, but insist upon this as an Excuse, That they needed those Things; upon which the Judge gives Sentence, by telling the Plaintiff, That if he wants any thing, he may also furnish himself from his Neighbour's Goods. They sell *Polish* Virgins, whom they take Captives, at great Prices to the *Persians* and *Indians* for their Seraglio's, after the *Cham* has had his Share of them. If Murderers be apprehended, their Punishment is to take from them their Clothes, Arms, and Horses, and then absolve them,

and sometimes allow them a Horse and a Bow; and the Judge discharges them, with an Advice to go and mind their Affairs. They know no such thing as Boundaries and Limits of Lands, but live where they can. It is reported by most Authors, That for some Days after their Birth, they don't open their Eyes. Their Mothers and Nurses wash them every Day in salt Water, to harden and thicken their Skins against Cold, which is absolutely necessary; for from 7 Years old, that they leave their Huts of Osiers or Reeds, of about 12 or 15 Foot wide, and cover'd with a coarse Hairy Felt, or Cloth, they never sleep in an House, but in the open Air, tho' it be Frost and Snow; nor do they eat any thing but what they shoot with their Arrows. At 12 or 15 Years of Age, they go with their Fathers to the War. Their Cloathing is a short Shirt, with coarse Drawers, and a Sheep-Skin with the Wool on it over their Shoulders. The Women are distinguish'd from the Men by a Linen-Coif, or a Piece of Cloth round their Heads. The Wives of the *Cham*, and of Persons of Note, wear a Veil over their Faces when in publick, and are cloath'd in Silks, Callicoes, &c. The chief Men have their Horses of *Arabian* Breed, and use *Turkish* Saddles. They allow no Change in the Fashion of their Clothes, and punish Adultery with Death.

Of their SOIL.

THE Country is plain, and the Air unhealthy, because they don't cultivate the Ground. Tempestuous Winds rage frequently here. The *Chersonesus* is the most fruitful and best improv'd of all the Dominions of the *Crim-Tartars*. They say, the Country is naturally fertile, yields 100 Measures of Millet for one, and 50 for one of other Grain. Their Horses are little, ill shap'd, have ugly low Necks, but are strong, and endure Cold and Hunger without much Prejudice. They are very swift, and ride sometimes 20 or 30 Leagues without baiting. Their Food oftentimes is nothing but Leaves, Branches and Bark of Trees; and sometimes they dig up the Roots of Grass with their Hoofs, which altogether, makes them preferable to any other Horses in the World. The *Tartars* are most terri-

ble, and do most Execution, when mounted on their own Horses. Their Oxen are large, and grow very fat, upon the good Pastures on the Banks of the *Borysthenes*.

Their MILITARY AFFAIRS.

THeir Arms are Bows, Arrows, and Darts, in the use of which their Women are expert. The *Tartars* Way of fighting is to dissemble a Flight, and then throw their Darts behind them with great Dexterity. When they are at the Point of Death, they will fight with their Teeth and Heels, and then are most revengeful. Their Saddles and Stirrups are of Wood, and they breed their Horses to swim Rivers. When their Enemies chase, and are ready to catch 'em, they throw away their Saddles, Clothes, and every thing else but their Arms, that they may ride off with the greater speed. They frequently retire on purpose to make their Enemies break their Ranks, and then they rally, and attack them with great Fury. When they fight in a plain Country, they don't draw up their Forces as other Nations; but when within Arrow-shot, they endeavour to surround the Enemy, that they may have the greater Opportunity of throwing their Darts and Arrows upon them from all Sides. Their Method of advancing and retiring is very surprizing: They carefully follow their Leaders; but if they be shot, or mistake, their whole Army is disorder'd, and can never rally again. They cannot fight in narrow Passes, because they have no Arms of Defence. They use short Stirrups, and are such excellent Horsemen, that if any thing fall to the Ground, they can take it up again, tho' their Horse run at full speed. They can avoid the Enemy's Spears, by throwing themselves to the other Side of the Horse, where they hang by one Hand and one Foot; and when the Danger is over, speedily mount again. When they make Inroads into the neighbouring Provinces, each Man provides himself with two or three Horses, that when one is wearied, he may have another at hand. They don't use Spurs, but have fine Whips, so well twisted, that ours

are much short of 'em. Their Saddles serve 'em at Night for Pillows, and they tie their Horses to their Legs. If the Cham go in Person upon an Expedition, he seldom has fewer than 80, and sometimes more than 100000, under his Command; but if a Mirza be General, he has never more than 50000. They chuse to march in the Winter, when the Rivers are frozen, and as much as they can take unfrequented Ways, to shun the Scouts of the *Cossacks*, and have a Compass to direct them through those Deserts. An Army of 80000 has commonly 200000 Horses. They return always by another Way than they came. The Wings of their Army divide themselves into small Troops, ravage and burn the Country all round for 10 or 12 Leagues, and kill all that resist. Such as yield, they bind, and carry away Prisoners, with all their Cattle, except Swine, which they burn as unclean Creatures. As soon as those Wings have done with their Ravage, they return to the Body of the Army, and others are sent out in their turn. To prevent the Consequences of such Invasions, their Neighbours have always their Houses fortified, or Places of Strength and thick Woods, to which they retire. The *Cossacks* fill their Grounds full of Trenches and Hedges, to hinder their March, and keep very diligent Watches every where. If they cannot overtake them, they repair to the Passages of the *Nieper*, where they lie in Ambush, and frequently recover much of the Prey. When the *Tartars* return to their own Country, they divide the Plunder, and first consider those who have lost their Horses in the Service: In the next place they give a Share to the Kindred of the Slain; then the Cham has his; after him the Officers; and the rest is divided among the Soldiers. If any of the Captives be old, they give them to their Boys, that they may learn to shoot, throw Darts, and kill them, which is charming Sport to their Youth. They carry their Household-Furniture over Rivers, by tying Branches of Trees twisted together to the Tails of Horses, upon which they lay their Goods, and ferry them over; but if the River be broad, they kill their worst Horses, and make Boats of their Hides.

Of the REVENUES of the Cham.

HE has no certain and fix'd Revenue; but his Funds are, 1. The Tenth of all Captives; for every Captive of Distinction, 3 Sequins, and a Dollar for every one else. 2. One half of the Tribute of the *Taurica-Chersonesus*, the Grand Seignior having the other. 3. The Grand Seignior pays him every Day 25 Dollars, to the Sultan *Galgas* 12 $\frac{1}{2}$, and to the Sultan *Hostage* 12 $\frac{1}{2}$, besides Lands; and all the great *Tartars* have Salaries from him, but uncertain. 4. Donatives sent him Yearly by neighbouring Princes. The *Muscovites* and *Poles* having given Money to the Cham, to prevent his Invasions, they afterwards claim'd it as a Tribute. The Prince of *Moldavia* presents him Yearly with 20 Cart-load of Honey, each Cart drawn by 4 Oxen. 5. For every Well in the Country, he has a Horse. 6. The richer and better sort of *Tartars* furnish him with Provisions, and in case of Necessity, all the Nation contribute towards it. 7. He has vast Flocks and Herds kept by his Factors. 8. He coins Copper Money, which is only current in his own Dominions, and once in 4 or 5 Years he calls it all in, and coins a new sort. The Forces of the Cham are reckon'd to amount in all to 300000 Horse. He has no Foot, but a few Janizaries he borrows from the Turk for the Guard of his Person when he goes to War. He has also a green or purple Standard sent him from the Port; and the Grand Seignior obliges such *Tartars* as are his Tributaries to join the Cham with some Auxiliaries, when he designs any Invasion upon Christians. The *Beglerbeg* of *Cassa* manages the *Turkish* Affairs in these Parts.

Of the Division of Lesser Tartary.

IT is divided, 1. Into *Gazaria*, or *Preecopia*, belonging to the *Turks*: The chief Towns are *Cassa*, *Sogdat*, and *Sarigermen*. This Country is call'd the *Peninsula*, or *Chersonesus*.

The *Preecopia*, or *Cumania*, belonging to the *Tartars*: The chief Towns are *Preecopz*, *Crim*, and *Buccasar*. All these Places are in the *Peninsula*.

2. Into *Crim-Tartary*, properly so call'd: The chief Towns are *Okzakow* and *Asoph*.

Of the CHERSONESUS.

THE *Chersonesus* is 140 German Leagues in Compass, 180 English Miles long, 120 where broadest, and one Mile over where narrowest. This is the fruitfulest Country that belongs to the Cham. Towards the S. it is Mountainous, and well Water'd: The rest is Champaign, and ill Water'd, so that they are oblig'd to dig deep Wells. The principal Cities are, 1. *Cassa*, anciently call'd *Theodosia*. *Pliny*, *Strabo*, *Ptolemy*, and *Ammianus*, mention it. *Appian*, and *Stephanus Byzantinus*, call it *Theodosia*: 'Tis in Lat. 44 $\frac{3}{4}$, Long. 55 $\frac{1}{4}$. a great City, a noble Mart, with a large and safe Port, and lies 380 Miles N.E. from *Constantinople*. Here are many *Armenian* and *Greek* Christians; all of them, when above 15 Years of Age, pay a Tribute of a Piaster and 2 half to the Grand Seignior, as Lord of the City, tho' the Cham's Jurisdiction reaches to the very Walls of it. Sir *John Chardin* gives this Account of *Cassa*: 'Tis a great City, built at the bottom of a little Hill, upon the Sea-Shore, and encompass'd with strong Walls, that advance a little into the Sea: It has two Castles, one of them the Residence of the *Basha*, and about 4000 Houses, 3200 of which belong to *Turks* and *Tartars*, the rest to Christians. The Houses, Bazars, Mosques, and Baths, are small, and built of Earth. The Soil about it is dry and sandy, the Water bad; but the Air pure and wholesome. Provisions are very cheap; good Mutton not above a Farthing a Pound, and other Things in proportion. The Harbour is safe, where Ships lie close to the Shore, in 10 or 12 Fathom Water. They have a great Trade in Fish and *Caviar* taken in the Lake *Meotis*, 26 Miles distant from it, and transported into *Europe* and the *Indies*. They likewise export Corn, Butter, and Salt, to *Constantinople*, and other Places. Their Butter is the best in *Turky*. 2. *Ingermen*, on the S.W. where there's now only a Castle, possess'd by the *Turks*. It has been a great Town, as appears by its Ruines; among which are many Caves cut out of the Rocks, with Wells, and old Greek Buildings.

dings, as appears by the Inscriptions. 3. *Sa-rigermen*, anciently call'd *Corfuna*, and then the noblest and most populous City of all the Peninsula, but now desolate: 'Tis still compass'd with a Stone Wall; and several Aqueducts, with other noble Buildings, remain intire: It lies W. from *Cassa* 120 Miles. 4. *Volodimer*: The Czar took this Town from *Joannes Zimisces*, and, with other rich Plunder, carried off two large Brazen Gates to *Kiow*; from whence *Boleslaus II.* King of *Poland*, transported them to *Gnesna*, where they still remain.

Of the Places belonging to Crim-Tartary in Taurica-Chersonesus.

1. *Precopz*, anciently call'd *Taphra*, or *Taphre*. The *Tartars* call it *Or*, and the *Polanders*, *Precop*, which signifies a Ditch: It was taken by the Emperor *Trajan's* Army. 'Tis the chief City of the Country, and gives it the Name of *Precopian Tartary*. It has the Gulph of *Nigropoli* on the W. and the Lake of *Bugey* on the E. This City lies 90 Miles N. W. from *Cassa*, 120 W. from the *Bosphorus-Cimmerius*, 380 S. W. from the Mouth of the River *Donn*, and is situate in the *Isthmus*, near the Ditch, built by the *Tartars* to defend the *Chersonesus*: It is not well fortified, but has a strong Castle, the Residence of the Governor, who commands the Guards upon the *Donn* and *Nieper*; examines all Strangers, and suffers none to pass without the Cham's Letters. 2. *Sackingerai*, where the Great Cham overthrew the *Nagay-Tartars*, and rais'd 17 Forts upon the Dyke, some of them of the Skulls and Bones of the Slain. 3. *Sackingeri*, on the *Black Sea*: It has 2000 Houses, and a good Trade. 4. *Balacra*, call'd *Jemboli* by the *Genoese*, now possess'd by the *Turks*, who build their Gallies here. 5. *Mongut*, an inland Town, once a great City, but now in Ruines: It is inhabited by *Turks* and *Greeks*. 6. *Pontico*, anciently call'd *Panticapeum*, and formerly the chief City of this Country, on the Mouth of the Straights of *Cassa*. 7. *Kersa*, S. E. from *Precop*, on the Straights, and has above 1000 Houses. 8. *Arbetok*, on the S. of the *Palus Meotis*, 60 Miles S. E.

from *Precop*: It has two Castles, and the Cham keeps 70000 Strads here. Other Towns belonging to the *Chersonesus* are, *Kossos*, S. W. from *Precop*, on the *Black Sea*; *Bolushaf*, S. E. from *Kossos*; *Belbeg*, S. from *Bolushaf*, and S. W. from *Cassa*; *Keraber*, E. from *Bolushaf*: But we forbear the Description of them, because they have nothing remarkable. 9. *Grim*, 25 Miles from *Cassa*, formerly a large City, but now almost reduc'd to a Village: It gives the Name of *Crim-Tartary* to the Country. The Cham has his Mint and Seraglio here. 10. *Bacca-Saray*, or *Baccasar*, alias *Bostan-Serail*, the Residence of the Cham: It has about 4000 Houses, and a Mosch, with a magnificent Palace, and divers stately Sepulchres of the Chams. This City lies in a Country proper for Hunting and Fowling, in which the *Tartars* are very skilful. It is adorn'd with Baths, Gardens, Orchards, &c. stands 55 Miles N. W. of *Cassa*, and about 50 S. from *Precop*.

Of CRIM-TARTARY, properly so call'd.

IT lies N. from *Precop*, and has but few Towns: The Soil is fertile, and had formerly many Colonies of *Greeks*, most of 'em being now demolish'd. The Town of *Nigropoli* is near the Sea, and gives Name to the Gulph. *Oczakow*, was once a Town of *Podolia*, and taken from the *Lithuanians* by the *Tartars*. It is sometimes the Seat of the Cham, and lies near the Mouth of the *Nieper*, on the *Sinus-Carcinatus*. The Inhabitants are *Tartars*; but it is garison'd with *Turks*, and lies in Lat. 46. Long. 51½. Betwixt the *Nieper* and *Niesler* live the *Tartars* of *Oczakow*, otherwise call'd the *Tartars* of *Budziack*. The *Niesler* parts them from *Bes-Sarabra* on the S. They are subject to the Turk; and to secure their Dependance, the Grand Seignior has built Towns on the Sea-Coasts, and along the Rivers. They are said to be a Nation of Banditi and Libertines, who regard neither God nor Man. They go to their Rendezvous in small Parties. All Authors take Notice of an Advantage they have over other Nations, viz. That they can see further and better; info-

much

much that a *Tartar* will discern a single *Russ* further than a *Russian* can discern a whole Troop of *Tartars*. Sometimes the *Cossacks* pursue them in their own Country, and when they do so, march always in their Tabor; that is, in the middle of their Chariots, and send out Centinels on every Side at a good distance. If they first spy the *Tartars*, they leave their Tabor, and fall upon them, and commonly have the Advantage; but if the *Tartars* first see the *Cossacks*, they assault them in their Tabor with their Arrows, which, tho' they reach further than the *Cossacks* Guns, yet their Tabor is so good a Defence, that 50 *Cossacks* will not flee from 500 *Tartars*.

Of the RIVERS of Lesser Tartary.

1. **TANAI**, so called by the Ancients, as *Strabo*, *Pliny*, and *Pomponius Mela*, was the old Boundary betwixt *Europe* and *Asia*. 'Tis now called *Donn*, by those of the Neighbourhood. The *Italians* call it *La Tana*. Its Source is in the Province of *Rhesan* in *Muscovy*, in Lat. $54\frac{1}{2}$, Long. 58. 110 Miles from *Moscow*, and rises from the Lake *Ivanouva* *Leziora*, which is 500 *Russian* Versts broad. The Ancients believed this River had its Fountain in the *Riphean* Mountains. It runs first Eastward. Some Maps place the most Easterly Winding of that River in Lat 53; but Mr. *Moll* places it in 48: then it turns S. W. runs through the Country of the *Præcopian Tartars*, and falls into the *Palus Mæotis*, according to Mr. *Moll*, in Lat. 46; but according to others, in 50. Near the Mouth of this River, is the City of *Asoph*, as the *Germans* call it. *Ptolomy*, and *Stephen of Byzantium* name it *Tanais*; the Natives *Azack*; and the *Italians*, *La Tana*. The River *Donn* divides it: It is situated at the Foot of a Hill; is of a square Figure, and has a Castle of great Strength. It is 300 Miles N. E. from the Streights of *Cassa*. It was formerly taken by the *Muscovites*, and retaken by the *Turks*. But the present Czar designing to make War upon the *Crim-Tartars*, and proposing no less than the Conquest of their Capital City *Præcop*, he resolved first on the Siege of *Asoph*; which being situated upon the Mouth of the River *Donn*, is an Inlet to *Lesser Tartary*. 'Tis strange that the *Turks*, who are so much bent on Conquests, were

so careless of such a considerable Place as *Asoph*, and did not improve the Opportunity they had of joining the Rivers of *Donn* and *Volga* together by means of a Canal, which was very practicable, because there are two Rivers there of less Note; one call'd *Ilaffa*, which falls into the *Donn* from the N. E. the other, call'd *Camisfinca*, falls into the *Volga* from the N. W. Those two Rivers are not above 5 *English* Miles asunder, which is not taken notice of by ordinary Maps; but they mention the Canal of *Camons*, which has no Being. The Ground betwixt these two Rivers is easie to be dug; and by this Canal, they might have open'd their Way into the Heart of *Muscovy*: and by the *Volga*, into *Persia*. The *Turkish* Garrison consisted of 10000 Men; the Czar's Army was 100000 Foot, and 20000 Horse; but being destitute of Shipping, the *Turks* got in Supplies whenever they pleas'd, and the approaching Winter oblig'd the *Muscovites* to raise the Siege: But the Czar being eager to repair that Disgrace, made greater Preparations of Artillery and Bombs than formerly, and also of large Gallies, some of them 100 Foot, which in a Sea-Fight took or sunk the *Turkish* Saigues, laden with Supplies and Provisions. The Czar himself boarded the *Turkish* Admiral, and gave 50000 Ducats, found in the Enemy's Ships, to his Men. Upon this Naval Victory, the Garrison capitulated: The Czar, after taking this City, order'd it to be repair'd, and fortify'd more regularly; then he commanded,

1. The building of 80 Gallies, and 150 Brigantines.
2. The making a good Harbour on that Side.
3. The Conjunction of the two Rivers *Volga* and *Donn*, and immediately 20000 Men were employ'd in that Work. A new Draught of that artificial Channel, and the Dams and Locks, &c. in order to a Passage of Ships through the Rivers of *Ilaffa* and *Camisfinca*, and to the *Volga*, as also to the *Donn*, for a Communication betwixt the *Euxine* and *Caspian* Seas, is drawn by Mr. *Moll*.
2. The *Borysthenes* of *Ptolomy*, which the Natives call *Nieper*, the common Boundary of *Lithuania* and *Muscovy*, rises in *Muscovy*, in the Dutchy of *Bielka*, near the Village of *Dniepersko*, in Lat. $56\frac{1}{2}$, Long. 55. 10 Leagues from the Lake of *Fronovo*; from whence, continuing its Course to the S. near *Wiesna*, it runs Eastward.

ward, and passes by the Cities *Progonus*, *Smolensko*, *Orska*, *Du*, *Crowna*, and *Mobilow*: From thence it runs S. and passes by *Kiow*, near the *Circassian Tartars*, and from thence towards *Oczakow*, a City of the *Precopian Tartars*, and disembogues into the *Euxine Sea*, 50 Miles from the Mouth of the *Niester*, and 100 N. from the Mouth of the *Ister* or *Danube*. Seventy five Miles above the Mouth of the *Niester*, there are 13 Cataracts, which hinder the Navigation of this River; the Fountain of which was unknown to *Herodotus*. 3. The *Niester*, call'd the *Tyras*, by *Protony*, *Strabo*, *Herodotus*, and *Pliny*. The Spring of this River is in *Red Russia* in *Poland*, from a small Lake 9 Miles E. from *Preflow*, and 4 from *Leopold*; then it runs E. and separates *Podolia* and the *Palatinate of Bracław* from *Moldavia*, and falls into the *Euxine Sea* 6 Miles N. from the Mouth of the River *Danube*. *Ovid* makes mention of this River in *Lib. 4. de Ponto*.

Of the COSSACKS.

SOME say, the Word *Cossack* is *Russian*, and signifies *Free-booter*, or *Banditi*. Others derive it from *Cosa*, signifying a *Goat*, because of their *Nimbleness*. Some say, That *Cosa*, in the *Slavonian Language*, signifies a *Syth*, their ordinary Weapon. They are thought to have come first from the Islands of the *Borysthenes*, near the Mouth of that River, and were called *Zaporienfes*, from the *Porowis*, or Cataracts and Rocks in the *Niester*. The *Turks* call them *Russians*: They dwell in a Part of *Red-Russia* in *Poland*, and in *Bessarabia*, betwixt the Rivers *Borysthenes* and the *Niester*. They are terrible to the *Turks*, because of their Invasions by way of the *Black Sea*. In 1548, in the Time of *Sigismund I.* King of *Poland*, these *Cossacks* were only *Voluntiers* of the Frontiers of *Russia*, *Volhinia*, *Podolia*, and the other Provinces of *Poland*, who assembled together, partly to defend themselves from the *Tartars*, by fighting them at the Passes of the *Niester*, as they returned with their Prey, and partly to rob upon the *Black Sea*, where, getting rich Booty, they drew more into their Association. Sometimes they made Descents upon *Natolia*, and plundered the great Towns, as *Trebisond* and *Sinope*. At other

Times they advanc'd within two Miles of *Constantinople*, and brought off Booty and Prisoners. At first they were about 6000, under *Eustachius Deskevicius*, their General; but their Numbers were quickly increas'd by their Neighbours, because of the Gain they made by their Pyracies, part of which they laid in their *Schorbinza Woskoma*, or Magazine, and the rest they brought home to their Houses. About the end of the Season, these Adventurers separate, and agree upon the Time and Place of Rendezvous next Spring in the Isles and Rocks of the *Niester*, whence they return to their Piracy. *Stephen Battori*, King of *Poland*, who began his Reign in 1576, considering the Service that might be made of those Thieves, for guarding the Country and Frontiers against the Inroads of the *Tartars*, formed them into a regular Body, and they serv'd him as Foot-Soldiers; for the *Polish Army* consists of Horse for most part. He gave them the Town and Territories of *Trehimorow*, about 80 Miles in length, in the *Palatinate of Kiow*, upon the *Borysthenes*; which Town they made their Magazine, and the Residence of their Governor-General, whom they nam'd, and gave him Power to chuse Subalterns. *Stephen Battori* also join'd 20000 Horse to this *Cossack Infantry*, to whose Maintenance he assigned the 4th Part of his Royal Revenues; whence they are call'd *Quartani*. These Forces did so secure the Frontiers, that the Country beyond *Bracław*, *Bar*, and *Kiow*, betwixt the *Niester* and *Nieper* was re-peopled, the Towns rebuilt, and Colonies planted there from the neighbouring Places. The *Cossacks* being thus brought into good Discipline, did frequently considerable Service to the Crown of *Poland*; but have since done the Republick much Mischief by their frequent Rebellions; for the *Cossacks* knowing their own Strength, and of what Importance they were to the *Poles*, began to set up for themselves, and would not obey the Orders of their Superiors, nor acknowledge the Power of the *Poles* over them. Their first Rebellion was in 1587, under their General *John Podkowa*, who was taken, and his Head struck off in 1596. *Sigismund III.* upon the Complaints and Threats of the Grand Seigneur, forbade them to pillage any more upon the *Black Sea*. They obey'd his Orders for a while; but then turn'd their Force against

ganst *Russia* and *Lithuania*, under the Command of their General *Nalewaiko*; and having had some Advantages over the *Polish* Army, commanded by General *Zolskiewski*, they looked upon themselves as invincible; yet that able Warriour found Means to block them up so close, that he forced them to deliver him their General, who was beheaded.

In 1637, the Ground of a new War with the *Cossacks*, was laid thus: The Numbers of the *Cossacks* being greatly increas'd, by the Multitude of Boors who frequently ran over to them, to share their Privileges, some great Men in *Poland*, who had got Estates in the Places appointed for the Quarters of the *Cossacks*, were of Opinion that their Revenues would be considerably increased, if the Liberties of the *Cossacks* were abridg'd. Whereupon they advis'd the King to restrain 'em, and began to use the same Severity to the *Cossacks*, as to the *Polish* Boors, who are obliged to work 3 Days in a Week with Man and Horse for their Lords, and to pay so much Corn, Poultry, &c. to carry home their Master's Wood, to pay him so much Money, and the Tenth of their Possessions. The *Polish* Lords being absolute at home, and not punished for killing their Slaves, they represented, That the *Cossacks* deprived them of all the Advantages they could expect from their Lands in the *Ukrain*; for when the Boors were disoblig'd, they went over to them. Therefore they resolv'd to build a Fort at *Kudac*, a Place near their *Perongki*, at a Point where the River *Zwamer* falls into the *Dni-per*, or *Borysthenes*, and therefore very convenient to bridle the *Cossacks*; who understanding the Design, cut in Pieces 200 Men that guarded the Builders; but being attacked by the *Polish* General *Potoski*, and divided among themselves, they were routed at *Korsun*, and forc'd to deliver up their General, and four more of their Chief Officers, who were put to Death at *Warsaw*, tho' *Potoski* had promis'd them their Lives. After this, all their former Privileges were taken from them, with their Fortrefs *Tschitino-avia*, and in their stead a new Body of Militia was settled there. This more and more enraged the *Cossacks*, who again tried their Fortune with *Potoski*; but were worsted, tho' they fought

with great Bravery; then they fortified themselves upon the River *Staveza*, beyond the *Borysthenes*. After this, the *Poles* having lost so many Men by endeavouring to suppress them, they were forc'd to promise, That thier Ancient Privileges should be restor'd. and that their Militia of 6000 should be re-establish'd, under a General appointed by the King. The *Cossacks* returning to their Homes, and laying down their Arms upon the Faith of this Treaty, were kill'd or plunder'd by the *Polish* Soldiers, and another Militia set up, excluding the ancient and true *Cossacks*; and, among other oppressive Methods, the *Poles* took from them some of their *Greek* Churches. But the *Tartars* afterwards ruining a great Part of the *Ukrain*, convinc'd the *Poles* of the Necessity of restoring the *Cossacks*. *Uladislaus IV.* making War upon the *Tartars*, was very careful to see it done, and gave them for General, *Pogdan*, (or *Theodore Chmielinski*) and granted him a Privilege to build some Mills; but a *Polish* Gentleman nam'd *Jarinski* burnt them, ravish'd his Wife, and afterwards kill'd both her and her Son. The *Cossacks* were also highly provok'd by their Landlords, who had farm'd out their Lands to the *Jews*, that monopoliz'd all the Trade and Advantage of the Country, and got so much Power, that they would not suffer them to marry or baptize but upon their own Terms. *Theodore* and his *Cossacks* obtaining no Redress or Satisfaction for those Injuries, rais'd an Army of 200000 Men, who burn'd, plunder'd, and ravag'd the Country, and did what Mischief they could to the *Polish* Nobility. Upon which the Senators desired the King to march against them, who answer'd, That they ought not to have burnt down their Mills. King *John Casimir* did also favour them under-hand, and design'd to make use of them for the Conquest of *Crim-Tartary*; at which the *Poles* being dissatisfied, they levied an Army of 50000 Men, whom the *Cossacks* defeated, kill'd 10000 upon the Spot, and took the City of *Kiow*. To revenge this Affront, the *Poles* summon'd the 7th Man throughout the Kingdom, and march'd against the *Cossacks*, without the Consent of the King, and were again defeated by them. But

while *Chmielniski* was celebrating the Nuptials of his Son with the Daughter of the Prince of *Wallachia* at *Kiow*, the *Poles* surpriz'd the *Cossacks*, plunder'd the City, and took the *Grecian* Patriarch Prisoner. The *Cossacks* sent to the King, to know whether this had been done by his Authority? He answer'd, No; and that it was done by the Nobility out of Revenge. Upon this *Chmielniski* call'd in the *Crim-Tartar* with 100000 Horse, against whom the King went in Person, at the Head of the Nobility; and having routed them, tho' they were three to one stronger than the *Poles*, *Chmielniski* gather'd up the Remainders of his scatter'd Army, and continually harass'd the Country, so that the King was oblig'd to make an Agreement with them; but the Nobility were discontented at it, and alledg'd, the King had granted too much to the *Cossacks*. This Peace was made in 1649. *Chmielniski* fearing the *Poles* would not observe that Treaty, made an Alliance with the Grand Seignior and the Prince of *Moldavia*; and at a Diet he propos'd such Terms as shew'd he intended to make himself an absolute Prince, under the Protection of the *Turks*. Thus a new War broke out in 1651, when the *Cossacks* and their Confederates besieg'd *Smolensko*, took it next Year; and having ravag'd *Lithuania*, they took *Wilna*, and some other Cities, where they committed great Barbarities. It was chiefly owing to them that the *Muscovites* got Possession of the Provinces of *Smolenska* and *Seweria*, and the greatest Part of the Palatinate of *Kiowia*, which were confirm'd to them by the Treaty of Peace at *Oliwa* in 1666. What became of *Chmielniski* and his *Cossacks* since, we have little Account; only, that part of them have submitted themselves to the *Muscovites*, who garison many of their Cities in *Siberia*, and other Places that border upon the *Asiatick Tartars*. By an Agreement in 1677, betwixt the Grand Seignior and the King of *Poland*, *Ukrain* and the *Cossacks* were to be under the *Turks*. They have also a Prince of their own, subject to the Grand Seignior; some of them are also under the *Tartars*, and some continue subject to the *Poles*, who on that Account are called the *Loyal Cossacks*.

Their RELIGION.

THE Common Sort are of the *Greek* Church; their Worship is the same with that of the *Russians*: Their Metropolitan resides at *Kiow*, is consecrated by the Patriarch of *Constantinople*, and subject to him. The Whole of their Religion consists in Fasts and Holidays; but the greater Part of the Gentry are Papists, and a few of them Protestants.

Their MARRIAGES.

THEY differ in this from the *Poles*. 'Tis very common in this Country for Maids to woo the Men: If a young Woman be in Love with a young Man, she is not ashamed to go to his Father's House, and reveal her Passion in the most touching Expressions, and promises all Love and Obedience, if he please to accept of her in Marriage. If she be rejected by the young Man, because he is too young, or not dispos'd to marry, or the like, she tells him, That she is resolved never to go out of the House till he consent, and accordingly takes up her Lodgings there. To force her out, would be to provoke all her Kindred: Nor would the Church suffer them to use any Violence to her, without inflicting heavy Penances, and branding the House with Infamy; so that after two or three Weeks, the Parents, or the young Man himself, being mov'd with the Constancy of the Woman, accommodate Matters as well as they can, and make up the Match.

Of their MANNERS.

THEIR Manners are like those of Soldiers, not solicitous for what's to come, but spend freely what they have among their Companions, and leave Futurity to shift for it self. They are very inconstant, mutinous, and pursue their present Advantage, rather than their Faith or Promise. They are great Drinkers; but by reason of their Labour and Hardships, they have so much Health, that Physicians are of little use among them. They are of a good Stature, strong,

strong, nimble, great Lovers of Liberty, uneasie under any Yoke, and indefatigable. They are much given to Fishing and Hunting. None know better than they the Way of preparing Salt-Petre, and making Gun-Powder. Their Country abounds with Salt-Petre, and several Parts of *Europe* are furnish'd from thence. They have an odd kind of Distemper, particular to themselves; the Country-People call it *Goschett*; and the Physicians, *Plica*. They that are troubled with it, lose the Use of their Limbs, as if they had a Palsie, and feel great Pains in their Nerves, which commonly continues a whole Year: After that they fall into a great Sweat at Night, and next Morning their Hair is glu'd together, and has a nauseous Smell, which remains for ever. From this some think the *Poles* first made use of Powder for their Hair. The Humour falls on their Eyes, and deprives 'em of their Sight, if they cut their Hair. This Distemper is infectious, and, like the Venereal Disease, communicated by Coition. Some Children bring it with them into the World, but it decreases by degrees. The great Numbers of Arsenical Mines in *Poland*, which communicate their poisonous Qualities to the Waters, seems to be the Cause of this Distemper. Their Horses also have it, and have such a Knot in their Manes or Fore-top, of which, if the least Part be cut off, the Horse either dies, runs mad, or becomes blind and lame. Dr. *Cowper* says, That Foreign Physicians have cur'd this Distemper by the same Medicines as are us'd in Venereal Cases.

Of the SOIL.

THIS Country was almost a Desert, till improv'd by the Industry of the *Cossacks*, and other Colonies. The many Rivers add much to its Fruitfulness. They have some Animals peculiar to their Country. 1. A Beast call'd *Bobac*, not unlike a *Guiney Pig*: It makes Holes in the Earth, which it enters in *October*, and comes not abroad till *April*. Within these Holes, there are many little Apartments, for they dispose of their Provisions, Lodgings, and Dead, in separate Places. Eight or Nine Herds of those Beasts live together in such Caves:

They are easily tam'd, and are very diverting. When they go out for Provisions, they set a Centinel, who, as soon as he spies any body, gives a Signal, by making a Noise, and they all run to their Caves. 2. *Sounaky*, a kind of Goat, remarkable for his beautiful Fur, resembling Sattin, and white, shining, smooth, delicate Horns. He has no Horn in his Nose, as some report; but as he feeds, goes backward. They have many Wild-Horses, of no Value but for their Flesh, which they sell in their Markets, and think it better than Beef or Veal. When those Horses come to be old, their Hoofs never being par'd, do so contract their Feet, that they cannot go. In Summer, they are mightily incommoded with Flies and Grasshoppers, in such vast Numbers, that they form a Cloud of 5 or 6 Leagues long, and 3 or 4 broad, darken the Air in the clearest Day, and destroy the Corn they light on in less than two Hours time.

Of their SEA-AFFAIRS.

WHEN they rendezvous upon the Islands of *Sharbniza-Waskowa*, the first thing they do is to chuse their General for that Expedition, and to make their Boats, which they call *Colna*, of about 60 Foot long, 12 Foot deep, and as many wide: They are built very light, one Plank being pinn'd on the Edge of another, and widening upwards. They have a Stern at each End, and about 12 or 15 Oars of a Side. They have no Deck; but to prevent their sinking, tho' full of Water, they encompass them round with a Border of Reeds, as big as a Barrel, ty'd together, and fasten'd to their Boats with Ropes. They have a sorry Mast and Sail, but seldom use them, except in fair Weather. Their Provision is a Tun of Bisket, which they take out of the Bung as they use it; a Barrel of boil'd Miller, and another of Paste, made with Water, which they eat with their Miller. Every Boat carries about 60 Persons, every Man having two Guns, and each Boat five or six Falconets. They set out about the beginning of *June*, and return about the first of *August*. They wait for a dark Night, that they may pass undiscovered by the *Turks Gallies*, which lie at *Oczakow* to intercept them.

them. With these Boats they cruise over the *Black Sea*. If they spy a Galley, they keep at a distance till Night, observe the Course of the Vessel, and when it is dark, come up and board it: They take out all the Cannon, Money, and Merchandize, and sink the Ship, because they have neither Skill nor Opportunity to use it. No sooner have the *Turks* Intelligence that the *Cossacks* are abroad at Sea, but the Alarm is taken immediately, which reaches quickly to *Constantinople*: From thence Couriers are dispatched to the Coasts of *Natolia*, *Romelia*, and *Bulgaria*, to bid them be upon their Guard; but the *Cossacks* are generally too nimble for them, and are 40 Hours upon the Coasts of *Natolia* before them. If a Galley spy them in the Day-time, which is not ordinary, for their Vessels are not above $2\frac{1}{2}$ Foot above Water, they avoid fighting, by rowing away from her, or retiring to Shallows, and among Reeds, where the Gallies cannot follow them. This was their Way of living, till the Grand Seignior oblig'd *Sigismund* King of *Poland* to prohibit those Pyracies, as was said before. 'Twas bad Policy in the *Poles* to suffer them to chuse their own General; for their General being their own Creature, is forc'd to comply with their Methods. They handle their Guns very dextrously, and have Sythes set long-ways upon Poles, with which they fight very fiercely and skillfully.

Their Manner of Fighting by Land.

They are very indifferent Horsemen, but excellent Soldiers on Foot. They are inur'd to all manner of Fatigues and Hardships, obedient to their Commanders, active and dexterous in intrenching themselves, not only in the ordinary Way, but also by making a Fence of their Baggage-Waggons as they march. These moving Intrenchments are absolutely necessary for them when they march without Horse in open Plains, and the Desarts of the *Tartars*, against whom they are forced to stand wherever they meet them. There have been several Instances, that 1000 *Cossack* Foot marching betwixt their Chariots and Waggon, have in a Plain repuls'd 5 or 6000

Tartars on Horseback. Their Horses, tho' swift, are but weak, and stopp'd by the least Barricado. This Way of marching in the midst of their Baggage and Ammunition-Waggons would scarcely be practicable in any other Country but *Poland* and the Desarts of *Tartary*, which lie all upon a Level.

Of the Country of the Cossacks.

THE *Ukrain* signifies a Frontier Country, and lies betwixt 48 and 52 Deg. of N. Latitude; the *Niester* is the Western, and *Nieper* their Eastern Boundary, according to some; but *Baudrand* says, it divides the *Ukrain*; the East-Side belongs to the *Muscovites*; *Razkow*, *Kalnick*, *Broclaw*, *Kimirow*, *Bialocerkiw*, *Pawvolocz*, *Korestefow*, *Mohilow*, and other Places, belong to *Poland*: *Kiow* is the chief Town, and belongs to the *Muscovites*, being taken from the *Poles* in 1653, by the Confederate Army of the *Muscovites* and *Cossacks*. This City gives Name to the Palatinate of *Kiow*, which had Princes of its own, till 'twas reduc'd to a Province by *Casimir* III. who began his Reign in the Year 1333. *Pit's* Atlas says, this City was the Metropolis of the *Russians*; but being ruin'd by War, *Volodomir* translated the Seat of the Empire to *Volodomir*. The Ruins of the Walls shew it to have been 8 Miles in Compass. Here are to be seen still the Ruins of many Arcades, high Walls, Churches, and the Sepulchres of many Kings, with Greek Inscriptions. The Church of *St. Sophia*, whose Walls are lin'd with excellent Mosaick Work, and that of *St. Michael*, remarkable for its gilded Roof, are still in a tollerable Condition. Betwixt this Town and the *Nieper*, lies *New Kiow*, along the Banks of the *Nieper*, which has about 6000 Inhabitants. The Papists have 4 Churches, and the Greeks 10, with a sort of an University. The second Town of Note is *Perejlaw*, on the E. Side of the *Nieper*, upon the River *Trubicz*, which falls into the *Nieper* two Miles below it: It lies 10 German Leagues S. E. from *Kiow*, is a strong Town, and contains 6000 Families. Here the *Cossacks* have a Regiment, and another at *Kaniow*, a little lower on the E. Bank of the *Nieper*. On the same Side is *Cirkasht*, the Center of all their Retreats, which was burnt

burnt by the *Polanders* in 1637. On that same Side lies *Krilew*, and below that *Cremierczow*, the lowest Town upon the River, all the Country below it being desart. Further down the River, there are many Isles, most of them uninhabited, because overflow'd in the Spring, but much frequented by Fishers. Several other Rivers increase the *Nieper* at *Romanow*, but chiefly *Samar*, which supplies the Country not only with Fish, but with other Commodities, as Honey, Wax, Venison, and especially Timber. The *Cossacks* call this River the *Holy River*. In the Spring, they catch Sturgeons and Herrings here. A little below this, the *Poles*, in 1635, built a Fort at *Kudac*, which is the first of the *Porohi*. *Constantinow*, on the River *Slicz*, which runs into the *Nieper* N. from *Kudack*, is a small Town, in Lat. 54. *Braclovia*, lies upon the River *Bog*. *Winnicza*, *Human*, *Gzernikow*, *Lubnie*, *Powolocz*, and *Chwaslow*, are other Towns, but inconsiderable, and not worth insisting upon.

Porowi, or *Porohi*, in the *Russian* Language signifies a Rock: Of these there are 13 Chains, that cross the *Nieper*, and render the Navigation from the *Ukrain* to the *Black Sea* impossible; so that tho' the *Ukrain* be fruitful in Corn, yet the Inhabitants not being able to export it, suffer much of it to lie untill'd. Of these Rocks, some are under Water, some above it, as big as Houses, very near to one another, and stop the Course of the River; so that when it is low, they make Cataracts sometimes of 15 Foot high; but in the Spring, when the melted Snow swells the River, all the Rocks are cover'd with Water, except the 7th, which still hinders the River to be navigable. Near the lowest *Porohi*, the River is not above 150 Paces broad, and is the best Passage for the *Tartars*. Below that lies the Isle *Toma-bouka*, the Place where the *Cossacks* rendezvous: But their chiefest Retreat is below the *Czertomlick*, (about 18 German Leagues from the Mouth of the *Nieper*) upon an Island, surrounded with a vast Number of small ones, some of them dry, and others overflowed in the Spring: Some of them are Morasses, but all of them cover'd over with Reeds and Canes, as big as Pikes, which hide the Passages between the Islands, and make it a Labyrinth, known only to the *Cossacks*, who call it *Starbniza-Woykowo*, or

the Treasure of the Army. Here they lay up their Money and Ordnance. The *Turks* have lost many Gallies among these Islands, which not being able to disentangle themselves, fell into the Hands of the *Cossacks*.

From these *Porohi*, the *Cossacks* are called *Zaporouki*, which is the great Body of the Nation, and none can be listed among that Number, till he has passed in his little Boat all the *Porouki's*, and from thence by the Mouth of the *Nieper* to the *Black Sea*. The River there is three Miles broad, yet both the *Cossacks* and others pass it in this manner; They furnish themselves with Flat-bottom'd Boats, at the Stern of which they fasten cross Poles of a good length, to which they tie the Heads of their Horses, as many on the one Side as on the other, to ballance them; and putting their Baggage in the Boat, they row over, the Horses swimming after them.

The *Ukrain* is a very fertile Country, tho' the third Part of it is scarcely cultivated: It produces such a vast Quantity of Grain of all Sorts, that the Inhabitants are at a loss how to consume it: They cannot export any of it, because their Rivers are not navigable. They abound in Honey, Wax, Wood, Cattle, Fowl, and Fish. *Hungary*, *Transilvania*, *Wallachia*, and *Moldavia*, supplies them with Wine. They also make good Beer and *Aqua Vita* out of their Corn. They have much Mead. The Salt-Pits near *Cracow* furnish them with Salt. They have also some out of the Country of *Pokutia*, on the Borders of *Moldavia* and *Transilvania*, where there are Salt-Springs. Their Houses are of Wood, and their Fortifications of Earth and Wood, which they account better against Cannon than Brick Walls; but they are soon set on fire.

The Rivers of Note here are, the *Borysthenes*, or *Nieper*; the *Bog*, *Tyras*, or *Nieser*, the common Border betwixt them and *Wallachia*; the *Dezna*, the *Ros*, the *Horin*, the *Stucz*, and the *Ster*, near which was fought the last Battle betwixt the *Poles* and *Cossacks* in 1651, which oblig'd the *Cossacks* to seek Protection among the *Muscovites* and *Turks*.

The Language of the *Cossacks* is a Dialect of the *Polish* Tongue, as the *Polish* is of the *Sclavonian*: But that of the *Cossacks* is much more smooth, and full of Diminutives, which makes it very agreeable.

C H A P. XIII. Of P O L A N D.

POLAND was anciently a Part of the *Sarmatia Europea*. The old Inhabitants were the *Carini*, who dwelt in the N. of Poland, on the E. of the *Oder*. The *Burgundiones* lay S. W. from them, according to some; but the Seats of those People are not very certainly describ'd, because the *Romans* went no further that Way than the *Elbe*. *Zozim. Lib. 1. Cap. 67.* says, That the Emperor *Probus* fought with the *Burgundi* and the *Vandali*: But *Valesius* thinks the German and *Sarmatian Burgundi* are different People. The *Lugii* were S. E. from the *Burgundiones*, upon the Banks of the *Vistula*. *Cluverius* joins them with the *Vandali*, and says, that some Places betwixt the *Oder* and *Vistula* have still a Resemblance of those Names. The *Burii* lay S. W. from the *Lugii* on the *Oder*. *Tacitus, Cap. 43.* places them N. E. from the *Marcomanni* and *Quadi*. The *Legiones* were situated E. from the *Burii*, and the *Osi* S. from them, on the *Oder*, near the Head of the *Vistula*. The *Gothini* were near the *Quadi* to the E. and the *Osi* to the N. They seem to be the same whom *Pliny* calls *Guttones*. *Cluver. Germ. Antiq. Cap. 34.* is at much Pains to prove that the *Goths*, who over-ran the Roman Empire, came from this Place: but most incline to follow *Jornandes*, who tells us they came from *Scandinavia*. The *Bastarni* were on the E. Side of the *Vistula*, and had the *Carpathian* Mountains, and the River *Nießer*, anciently call'd *Tyras*, on the S. the *Venedi* on the N. and the *Peucini* on the W. *Cluverius* thinks they possessed the Countries of *Red Russia*, *Podolia*, and *Volhinia*, where lay *Ptolomy's* *Oppida-Bastarnica*, as *Carrodunum*, now *Lemberg*; *Clepidavia*, now *Caminiec*; and *Vibansavarium*, now *Bar*. The *Venedi*, *Jornandes* calls *Winidi*: This Name is preserv'd in their Successors still, call'd *Die Binden*. They

had the *Alauni* on the N. the *Æstiei* on the W. the *Hamaxobii* on the E. and the *Bastarni* and *Peucini* on the S. *Brieti* and *Cluverius* think they inhabited the Great Dutchy of *Lithuania* and *Livonia*, where lay Part of the *Hercinian* Forrest; and from this People the *Sinus Venedicus*, now the Gulph of *Dantzick*, had its Name. The *Æstii* were to the N. W. of the *Venedi*, near the *Insula Eleftrides*, so call'd from the Plenty of *Amber*. They inhabited along those Coasts, in Part of *Poland*, *Prussia* and *Samogitia*. *Cluverius* thinks that *Esthonia*, a Part of *Swedish Livonia*, derives its Name from them. The *Peucini* had the *Bastarni* to the E. the *Venedi* to the N. the *Lygii* to the W. and *Dacia* to the S. Their Country, according to *Sanson* and *Orbelius*, is that now call'd *Lesser Poland*.

Poland is by the Natives call'd *Polska*, and as some think from *Pole*, which in the *Sclavonian* Language, commonly spoke here, signifies a *Champaign Country*, as *Poland* is known to be. Others derive that Name from *Polinezæ*, a little Town on the *Vistula*: And some will have it that *Polachi*, or *Polacki*, signifies the Posterity of *Lachus*. 'Tis urg'd in Favour of this Opinion, That they are by themselves call'd *Polacki*; by the *Italians*, *Polacchi*; and by the *Muscovites*, *Greeks*, *Tartars* and *Turks*, *Lachi*. *Cromerus* says, the present Name is not old; for in the Time of *Alfred* King of *England*, about 880, this Country was call'd *Weomodland*, which seems to have been derived from the *Winidi*.

This Nation did formerly inhabit nearer to the Country of the *Tartars*; but after vast Numbers of People from *Germany*, as *Goths*, *Vandals*, &c. enter'd the Roman Provinces, the ancient Inhabitants mov'd further to the W. The *Poles* are undoubtedly the Posterity of the *Slavi*, or *Sclavonians*.

Jornandes tells us, That in Justinian's Time, they were seated on the N. of the Carpathian Mountains, from the Fountain of the Weissel to the Nieper, and thence extending themselves Westward to the Danube, and Eastward to the Euxine Sea; from whence they made Inundations upon the Roman Provinces, being join'd by others of the ancient Inhabitants. Some think this People, after their Conquests, took the Name of *Slavi*, which in their Language signifies *Fame*, or *Glory*; and their Posterity, as *Cromerus* observes, still retain it in their Compound Names, as *Strani-Slavis*, *Wenceslavis*.

The Extent of Poland was not formerly so large, as *Cluverius* informs us: The Length then from *Schwibussen* in *Silesia*, 30 Miles S. E. from *Frankfort* on the *Oder*, to *Leucania* on the Borders of *Russia*, was not above 80 German Leagues; and the greatest Breadth, from the Springs of the *Vistula*, to *Wangrow* in *Masovia*, was 60 Leagues: But since that Time, *Lithuania*, *Black Russia*, *Podolia*, *Volhynia*, *Masovia*, *Samogitia*, and Part of *Livonia*, have been added at different Times to this Kingdom. *Brieti* says, the Length of it, from the most Westerly Place of *Silesia*, to *Smolensko* in *Muscovy*, is 690 English Miles; and the Breadth of it, from the Mouth of the *Nieper*, to the most Northerly Parts of *Livonia*, is 640. The Longitude, according to *Staravolskius*, quoted by *Pie's* Atlas, is from the Marquisate of *Brandenburgh*, in Deg. 38. to the Mouth of the *Borysthenes* or *Nieper*, in Deg. 54. and the Lat. from the Palatinate of *Pocence* in *Red Russia*, in Deg. 48. to the most Northerly Place of *Livonia* subject to this Crown, in 58. According to *Mr. Moll*, the Long. is from 36 to 53 Deg. and the Lat. from 46½, to 56½. *Du Pleffis* says, the Situation is betwixt *Polsna* in *Great Poland*, in Long. 38. to *Kudack*, a Fort upon the *Nieper*, in Long. 60. The Lat. is from the most Southerly Point of the Palatinate of *Red Russia*, in 47, to the most Northerly Place of *Curland*, in 58.

The Boundaries of Poland on the N. are the *Baltick*, the *Swedish* Sea, the *Gulph* of *Finland*, *Swedish* *Livonia*, and a Line drawn from *Pernaw* in *Livonia*, to the Fountains of the River *Dwina*. *Muscovy* is upon the N. E. and E. *Little Tartary* on the S. E. The Limits on the S. are *Bessarabia*, *Moldavia*, from which it is separated by the River *Nieper*;

Transylvania, and Part of *Hungary*, from which it is divided by the *Carpathian* Mountains. On the W. the Marches are *Silesia*, the Marquisate of *Brandenburgh*, and the further *Pomerania*.

Of the HISTORY of Poland.

DU GLOSSIUS says, The Reason why we have no early Accounts of Poland, is, That they had few Governors who left any Fame behind them; but 'tis rather to be charg'd upon the Ignorance and Barbarity of those Times. Historians reckon four remarkable Changes in Poland: The first began in 550, under *Lechus*: His Posterity, call'd *Lechida*, continu'd till 830; then *Piasum*, a private Man, succeeded, and his Line was call'd *Piasii*. Others say, the second Race began in *Cracus*, in 700, who built *Cracom*. The Jagellonian Family began in 1386, in *Uladislaus Jagello*. Their Elective Kings began in the Person of *Henry Valois*, Duke of *Anjou*, in 1574.

Of the LECHIDÆ.

In 550, *Lechus* and his Followers possess'd themselves of this Country, and laid the Foundation of Government: Finding it abandon'd by the old Inhabitants the *Vandals*, or *Venedi*, he took up his Residence at *Gnesen*, where finding an Eagle's Nest, he call'd the Place *Gniazdo*. This he took for a good Omen, and made a Spread-Eagle the Arms of this new Commonwealth. He also built *Polsna*. Their Limits then reach'd no further than the *Greater* and *Lesser* Poland.

Historians are not agreed about the Country of *Lechus*, whether he was a *Croatian* or not, when he began his Reign; nor who were his Successors, and what Actions they perform'd. Their first Governors did not assume the Name of King, but only that of Dukes. After the Race of *Lechus* was extinguish'd; they chose 12 Governors, call'd *Woiewodes*, i. e. Captains of War, who polish'd this rude and barbarous People by good Laws; but at last, falling into Parties, the People were forc'd to chuse a King, who was *Cracus*, a Man of great Interest and Prudence, and well vers'd in the Arts of Government. He restor'd the Republick.

to its former Tranquility, built the City of *Cracow*, so call'd from his own Name, and there kept his Court. *Lecous II.* his second Son, succeeded him, having first murder'd his elder Brother to make Way for himself: Upon the Discovery of which, he was banish'd. His Sister *Wenda*, a Virgin, succeeded, who chose rather to rule alone, than to be the Wife of a King. She defeated one *Ridiger*, a German Prince, who would have oblig'd her to marry him; upon which he kill'd himself; and the Queen, lest any adverse Fate should endanger her Honour and Virginity, leap'd from the Bridge of *Cracow* into the *Weissel*, and drown'd her self. After this, the Government was for some time in the Hands of *sz Vauwodes* or *Palatines*. Then, in 760, the People elected *Premislaus*, or *Lescus I.* a Goldsmith, in Consideration that he routed, by a Stratagem, the *Hungarians* and *Moravians*, who invaded their Country. He died without Issue. The People, to determine who should succeed, appointed a Horse-Race, and declar'd, he that won it should be King: Upon this one of the Candidates strow'd Iron Hooks in the Ground, which he knew, and therefore avoided; but the other Horses were lam'd, and he came first to the Mark: But the Fraud being discovered, he was kill'd on the Spot; and a poor Fellow call'd *Lescus*, who had run the Race on Foot, being next to the Impostor, the People saluted him Prince in 776. He always kept his sorry Clothes, to put him in mind of the Meanness of his Original. This *Lescus II.* was slain in the Wars with *Charles the Great*, and his Son *Lescus III.* in 804, made Peace with him, and acknowledg'd himself his Vassal. He left *Poland* to his lawful Son *Popiel I.* and *Pomerania*, *Mark*, *Cassubia*, and other Places, to his Bastards. *Popiel II.* succeeded his Father *Popiel I.* and, by the Persuasion of his Lady, murder'd his Father's Brethren; after which he with his Wife and Children were eat up by Rats or Mice, which some say came out of the Corps of his Uncles.

In 820, the *Poles* exalted to the Royal Dignity *Piasum*, or *Piasus*, a Wheelwright, Son to *Cossiscow*, a Citizen of *Cruswic*, of noted Hospitality and Charity; and he being the first King of that Name, all Natives that

came to the Crown after him were call'd *Piasii*; and thus began the second Period. Others place this in 843. 'Tis said, that he was 120 Years old before he died: His Posterity reign'd long in *Poland*, and from them descended the Race of the Dukes of *Lignitz* and *Brieg* in *Silesia*, which is but lately extinguish'd. When *George William*, the last of that House, dy'd in 1675 without Issue, the Dukedom fell to the Emperor. His Son *Ziemowicus* succeeded in 895, a Prince of a Martial Spirit. After him reign'd his Son *Lescus IV.* of a peaceable Genius. His Son *Ziemomyslus*, of the same Temper, succeeded him in 921. He had but one Son, who was born blind; but at 7 Years of Age he got his Sight; and being the Time when, according to their Custom, he was to be shav'd and nam'd, 'twas look'd upon as an Omen that he should be enlighten'd with the Christian Faith: His Name was *Mieslaus I.* He began to reign in 962. He had no Children for some time by his many Wives; upon which some *Germans* told him, That if he left Paganism, and turn'd Christian, he would be bless'd with Children: But some say, his Conversion was owing to the Arguments of his Wife *Dambrawca*, the Daughter of *Bogislaus* Duke of *Bohemia*. He first introduc'd the Christian Religion into *Poland*, as also the Custom of drawing out half their Swords when the Gospel is read at Mass, to signify they were ready to fight for the Christian Faith. He founded the Archbishopricks of *Gnesna* and *Cracovia*, and gave the Tythes of the whole Kingdom to the Clergy.

His Son *Boleslaus Chrobry* was, in 999, by the Emperor *Otto III.* created first King of *Poland*, (his Predecessors being only Dukes) in Consideration of his Devotion to the Shrine of *St. Adelbert*, Bishop of *Gnesen*, then famous for Miracles, and at that time visited by the Emperor, to fulfil a Vow made in his Sickness. This first King of *Poland* enlarg'd his Dominions by his Wars against the *Red Russians*, the *Bohemians*, *Saxons*, and *Prussians*. But his Son *Mieslaus*, who began his Reign in 1025, lost all his Father's Conquests: He died in 1034, leaving one Son, call'd *Casmir*, and his Queen *Rixa*, behind him, who, during her Son's Minority, had the Administration of the Govern-

vernment. Her bad Conduct occasion'd Factions and Parties against her; which oblig'd her to leave the Kingdom, with her Son: He travell'd thro' Hungary, Germany, Italy, and France, where he assum'd the Order and Habit of a Monk in the *Benedictine* Convent at *Cluny*; but he was invited from thence by the *Poles*, who, to procure the Pope's Dispensation, promis'd a perpetual Tribute of a Farthing for each Head, except those of the Nobility and Clergy, towards the maintaining of a perpetual Lamp in St. Peter's Church, from thence called *Peter's Pence*; and also to cause their Heads to be shaved above their Ears like Monks. After he came to the Throne, he defeated *Maslaus* and the *Prussians*, and restor'd the Kingdom to its former Tranquility.

His Son *Boleslaus II.* called the *Bold*, began to reign about 1059. At first he made War successfully against the *Prussians*, *Bohemians*, and *Russians*; but having order'd *Stanislaus*, Archbishop of *Cracow*, who exhorted him to amend his vicious Life, to be cut in pieces before the Altar, the See of *Rome* took it so ill, that Pope *Gregory VII.* excommunicated and depos'd him; upon which he murder'd himself. This Bishop *Stanislaus* was canoniz'd by Pope *Gregory VII.* and has since that time been receiv'd as the Patron of *Poland*. *Boleslaus's* Successors were depriv'd of the Title of King, and the Bishops were forbid to anoint any of them. This continued 213 Years, till the Reign of *Premislaus*.

Uladislaus I. in 1082, succeeded him, but durst not take the Title of King, for fear of offending the Pope. He was successful both in his Foreign and Civil Wars. In 1103, *Boleslaus III.* his Son, succeeded, a brave Prince, and good Soldier, famous for 47 Battles, in most of which he was victorious: The greatest was that at *Huntsfield* near *Breslaw*, against the Emperor *Henry V.* In his last Battle against the *Red Russians*, he was defeated, by the Cowardice of the *Weyvode* of *Cracow*; for which, as a Mark of Disgrace, the King sent him a Hare-Skin, and a Spinning-Wheel, which did so vex him, that he hang'd himself; and the King was so much troubled at this Defeat, that he died of Grief.

He left four Sons behind him, one of whom, *Uladislaus II.* in 1139, obtain'd a

great Part of the Kingdom, with the Name of Prince, and the other Brothers shar'd several Provinces among them, according to their Father's last Will. This occasion'd Civil Wars between them and *Uladislaus*, who pretending to dispossess the rest, was himself oblig'd to quit the Country. After him, his Brother *Boleslaus Crispus*, or the *Curl'd*, was in 1146 made Prince of *Poland*: He was engag'd in a War against the Emperors *Conrade III.* and *Frederick I.* who design'd to restore *Uladislaus*: But at last a Peace was concluded, by which *Poland* remain'd to *Boleslaus*; but he was obliged to surrender *Silesia*, that then depended on *Poland*, to *Uladislaus*; which being afterwards divided into a great many Dukedoms, at last fell to the Crown of *Bohemia*, and has never since been in the Possession of the *Poles*. This *Boleslaus* receiv'd a great Overthrow from the *Prussians*, his Army, by the Treachery of a Guide, being misl'd into Morasses and Bogs. His Brother *Miceslaus*, Senior, so call'd for his Prudence, tho' but a young Man, succeeded in 1174; but was depos'd, because he follow'd the Advice of evil Counsellors, and twice, by his Cunning, regain'd the Kingdom. In 1178, his Brother *Casmir* succeeded. This Prince having received a Box on the Ear from one of his Pages, whose Money he had won at Play, pardon'd the Boy, saying, *That the Lad was enrag'd with the Loss of his Money, and that he himself had been justly punish'd for prostituting his Dignity*. He is famous for curbing the *Prussians* by War: He also made a City of *Danzick* in *Prussia*, which before was only a poor Fisher-Town. He died in 1194. His Son *Lescus the White* succeeded in 1195; but was oblig'd to contend with the banish'd *Miceslaus* for the Kingdom, with various Success, till *Miceslaus* died. This *Miceslaus* is noted for saying, *That a King was no longer oblig'd to keep his Oath, than while it was neither safe nor beneficial for him to break it*. *Uladislaus*, *Miceslaus's* Son, gave him some Disturbance for a while; but at last was forc'd to leave him in quiet Possession. In the Reign of this *Lescus*, the *Tartars* made their first Inroads into *Russia*, and have since prov'd very troublesome to *Poland*. *Lescus* was forc'd to make War against *Suentopock*, whom he had made Governor of *Pomerania*, where

where he set up for himself, under the Title of Duke of *Pomerania*, and dismembred it from *Poland*. *Conrade*, the Brother of *Lesius*, possess'd himself of *Masovia* and *Cujavia*; but not being strong enough to make Head against the *Prussians*, who invaded his Country, he invited in the Knights of the *Cross*, and of the *Teutonic Order*, who were driven by the *Saracens* out of *Syria*. To them he surrendred the Country of *Culm*, on Condition, That such Places as by their Assistance were conquer'd in *Prussia*, should be divided betwixt them, which afterwards prov'd an Occasion of great Wars betwixt those Knights and the *Poles*.

In 1226, *Boleslaus the Chast* succeeded his Father *Lesius*. In his Reign, the *Poles* receiv'd so great a Defeat from the *Tartars* in a Battle near *Lignitz*, that they fill'd 9 great Sacks with the Ears of the *Poles* they cut off. His Reign was also disturb'd by Civil Wars. In 1279, succeeded his Cousin *Lesius*, surnam'd the *Black*, who was very fortunate against the *Russians*, *Tartars*, and *Lithuanians*. The *Russians* were headed by *Leo* their Duke: The Place of their Defeat was call'd from him *Leopol*. They invaded *Poland* a second time, with a far greater Number of Men, and an innumerable Company of Mastiff-Dogs, train'd to War. He also rooted out the *Jazygians*, who inhabited *Podolia*. During his Reign, the *Tartars* made another Incursion, and carried away so many Captives, that there were reckoned 21000 Virgins among them. They murth'rd the Men, and poisoning their Hearts, cast them into the Waters, from whence several new Diseases were occasion'd in the Country, and among others (as some say) the *Plica Polonica*.

After the Death of *Lesius*, there were great Contests in *Poland* concerning the Succession, till at last *Premislaus*, Lord of Great *Poland*, carried it in 1295. He re-assum'd the Title of King, after it had been disus'd for 213 Years, and was Crown'd by the Archbishop of *Gnesen*. One Reason why his Predecessors were not ambitious of that Title, was, because the Country was divided among several Princes; but *Premislaus* thought himself powerful enough to re-assume it. He was barbarously murth'rd by Assassins, Servants to the Marquis of *Brandenburgh*. After him succeeded *Ulada-*

slaus Lockius, so call'd from the Shortness of his Stature; *Lokiek* in their Language signifying an Ell. He did not assume the Title of King, but of Heir of *Poland*, and was depose'd for Male-Administration. In 1300, *Wenceslaus* King of *Bohemia* was elect'd in his stead: He died in 1309, when *Lockius* was restor'd, and had long Wars with the Knights of the *Teutonic Order*, whom at last he vanquish'd in a great Battle. In his Reign, the Dukes of *Silesia*, who were formerly Vassals of *Poland*, submitted to the Crown of *Bohemia*. He died in 1333, and was succeeded by *Casimir III.* surnam'd the Great, the last of the *Piastian* Race: He introduced the Laws of the *Teutonic Order*, call'd *Magdeburg Laws*, and invited the *Germans* to till the Ground, by whose Industry and Example the Villages grew into great Towns; and several wall'd and fortified Cities, as well as Churches and Monasteries, were built. He very much improv'd and enrich'd his uncultivated Country. In his Reign, the Duke of *Masovia* did first submit himself as a Vassal to the Crown of *Poland*. He died in 1370, without Issue.

After his Death, the *Poles* were displeas'd with his Successor, *Lodowick* King of *Hungary*, his Sister's Son, because he prefer'd his *Hungarians* before his *Polish* Subjects. This Prince being very curious to know what Opinion People had of him, he frequently disguis'd himself, and ask'd the People, *How they lik'd their King, and what they thought amiss in him*; and according to their Answers, reform'd Grievances. He died in 1382; and for want of Male-Heirs, they Crown'd his Daughter *Hedwig* Queen. She married *Jagello* Duke of *Lithuania*, on Condition that he should embrace the Christian Religion, oblige his Subjects to do the same, and annex his Dutchies of *Lithuania*, *Samogitia*, and Part of *Prussia*, to the Kingdom of *Poland*. The first Condition was immediately perform'd, for he was baptiz'd, and call'd *Uladislaus IV.* The Kings of *Poland* his Successors delay'd the Performance of the other Condition, on Pretence that the *Lithuanians* were not satisfied with it; but the true Reason was, That they were unwilling to surrender their Right of Succession to the Dukedom of *Lithuania*; so that this Union was not perfected till the Reign of King *Sigismundus Augustus*. *Uladislaus*.

John was oblig'd likewise to pay 200000 Florins to *William Duke of Austria*, forfeited by *Hedwig*, who was before-hand contract-ed to that Duke. *Uladislaus* defeated the Knights of the *Teutonic Order*, kill'd 50000 of their Men in one Battle, took from them a great many Cities in *Prussia*, and had certainly destroy'd that Order, had not the Em-peror *Sigismund* come to their Relief; so that they afterwards recover'd themselves. He founded the University of *Cracow*, and died in 1434. In him commenc'd the 3d Epoch of the *Polish History*. His Son *Uladislaus V.* succeeded, and was afterwards made King of *Hungary*, where he was engag'd in a War with the *Turks*. During this War, *John Huniades* first defeated the *Turks* near the River *Moravia* in *Hungary*, where they lost 30000 Men, and *Uladislaus* beat them upon the Frontiers of *Macedonia*; so that they were forced to make a Truce for 10 Years: But by the Perswasion of the Pope, who sent Cardinal *Julian* to absolve the King from his Oath, the Truce was broken; and not long after, that memorable Battle was fought near *Varna*, where the King himself was kill'd, and his Army defeated, to the great Shame and Prejudice of *Christendom*. Af-ter this, the *Turks* were implacable against the Christians, because they thought they would never keep their Oaths or Word: And not long after, in 1453, *Mahomet the Great* took *Constantinople*.

Casimir IV. was made King in 1445. A great Part of *Prussia*, weary of the Govern-ment of the Knights of the *Teutonic Order*, submitted to him, This occasion'd a War betwixt the *Poles* and those Knights, which was carried on with various Success, till a Peace was at last concluded, the Pope Me-diator; by which the *Poles* got *Pomerellia*, *Culm*, *Marienburg*, and *Elbing*; and the rest remain'd to the Knights, on Condition that the Master of the Order should be a Vassal of *Poland*, and a Duke and Senator of that Kingdom, and maintain the King and his Court for 4 Days, whenever he should be pleas'd to come among them. Much about the same Time, the Dukes of *Wallachia* and *Moldavia* submitted themselves, did Homage to the King of *Poland*, and paid him Tribute. In this Reign, the De-puties of the Provinces first appear'd at the Diets of the Kingdom. *Loecenius* reports

of this King, That meeting with *Charles* King of *Sweden* at *Dantzick*, *Casimir* was forc'd to get a Monk to talk Latin with him, because he understood no *Polish*, but spoke Latin accurately; upon which *Casi-mir* was so sham'd of the Ignorance of him-self and his Retinue, that when he return'd home, he issued a Proclamation, That from thence-forward, no Man should be advanc'd to any Dignity, except he were able to speak Latin. Hence it came, says *Loecenius*, that the *Polanders* have ever since excell'd in the Latin Tongue. *Casimir* died in 1492, and was succeeded by his Son *John Albert*, who was defeated by the *Turks* and rebellious *Wallachians*, when they carried away about 100000 Captives. The former invaded *Poland* again; but by a sudden great Frost, above 40000 of them were starv'd to Death. The *Tartars* also in his Reign laid waste *Red Russia*, *Podolia*, and several other Parts of the Kingdom; but they were beaten back with Loss, and about 20000 of them kill'd. His Brother *Alexander* succeeded in 1501, and was so great a Prodigal, that had he rul'd long, he would have beggar'd the Kingdom. His Queen *Helena* was not Crown'd, because being Daughter to *John*, Great Duke of *Muscovy*, and a *Greek*, he would not conform to the *Roman Church*. He died in 1506. *Sigismund I.* his Successor, was the greatest Prince in his Time. *Paulus Jovius* says, That the Emperor *Charles V.* *Francis I.* of *France*, and this King, being cotemporary, were the Three Worthies of *Europe*; and that each of them deserv'd to be Universal Monarch. *Sigismund*, besides the great Abil-ities of his Mind, was also remarkable for his vast Strength; for in his Youth, he was able to break Horse-shoes and strong Ropes in pieces with his Hands. He had three fe-veral Wars with the *Muscovites*, whom he always beat in the Field; but the *Muscovites* got *Smolensko* by Treachery, and kept it. His War in *Prussia* with the Knights of the *Teutonic Order* was concluded, on Con-dition that *Albert Marquis of Brandenburg*, who was then Master of that Order, should hold the Eastern Parts of *Prussia* of the King of *Poland* as an Hereditary Fief, and acknow-ledge himself a Vassal of that Crown. In his Reign, the whole Country of *Masovia* was re-united to *Poland*. He had great Suc-cess against the *Wallachians*, and died in 1548.

His Son *Sigismund Augustus* succeeded. About this Time *Livonia* submitted to the Crown of *Poland*, because not able to defend it self against the *Muscovites*, who had taken *Dorpt*, *Elm*, and several other Places from them. During this publick Conster-nation, *Eslad* and *Revel* surrendred to *Erick* King of *Sweden*: But the Archbishop of *Riga* and the Master of the *Teutonic* Order fought the Protection of the King of *Poland*, which he would not grant on any other Terms, than that they should swear Fealty to him: Whereupon the Master of that Order having abdicated the Dignity, surrendred the Castle of *Riga* and other Places; in lieu of which, he was created Duke of *Sennigal* and *Carland*. This gave Rise to a War betwixt the *Muscovites* and *Poles*, in which the latter lost *Plotzo*. This King encourag'd the *Lutheran* and *Reform'd* Religion. He died without Issue, and put an end to the *Lithuanian* or *Togellon* Line, which made Way for the 4th and last Revolution: Since which, their Kings have been elected out of several Nations.

After his Death, there were great Contentions about the Election of a new King. At last *Henry de Valois*, Duke of *Anjou*, Brother to *Charles IX.* of *France*, was elected; and after a Reign of 5 Months, the Throne of *France* being vacant by his Brother's Death, his private and hasty Retreat convinc'd the World, that he did not think the one worth keeping, when he could come at the other: He made his Escape in the Night, during a thick Fog, lest the *Poles* should detain him. He travell'd thro' *Austria* and *Italy* into *France*, and was there-upon deposed by the *Poles* in 1574. The *Poles* falling into Dissention, chose two Kings; the Archbishop of *Gnesen* and his Followers adher'd to *Maximilian* of *Austria*, and the Nobility to *Stephen Bathori*, Palatine of *Transilvania*, who was declar'd King in 1576, by Plurality of Votes. He married *Anna*, the Sister of *Sigismund Augustus*, to confirm his Title, and became famous for many great Actions. He reduc'd the City of *Dantzick*, which sided with *Maximilian*, and took *Potzko* and the neighbouring Countries from the *Muscovites*. The Articles of the Peace he made with the *Muscovites* were, That they should resign to him the whole Country of *Livonia*; in lieu of which, he

was to restore all the Places he had taken from them. He made good Laws, and establish'd the Soldiery of the Republick upon a good Foot. What he did towards bringing the *Cossacks* under Discipline, has been mention'd before in the History of the *Cossacks*. This brave King, while he was making Preparations against the *Turks*, died in 1586. After his Death, there was another double Election, in which *Sigismund III.* the Son of *John III.* King of *Sweden*, who pretended to be defendcd of the *Togellonick* Race by his Mother *Catharine*, whom he gave out to be Sister of *Sigismundus Augustus*, was chosen. *Maximilian* of *Austria* was elected by the other Party, but defeated and taken by *Sigismund*, and obliged to sign a Resignation of the Crown. *Sigismund*, after his Father's Death, went to *Sweden*, where, in 1592, he was Crown'd King; but was depos'd by his Subjects for attempting to introduce Popery, and his Uncle *Charles IX.* Duke of *Sudermania*, was elected in his place. This occasion'd a War betwixt *Poland* and *Sweden*: In the beginning of which, *Charles IX.* took a great many Places from the *Poles* in *Livonia*, which were all retaken by the *Polish* General *Zamoiski*. The King of *Sweden* was also routed in a Battle near *Riga*: But *Sigismund* being in danger of his Life, by some Broils betwixt himself and the Nobility, it gave King *Charles* an Opportunity to recover himself, and recruit his Army.

At this Time began a new War betwixt the *Muscovites* and *Poles*, because the latter concern'd themselves in the Affair of the false *Demetrius*, who pretended to be the Son of *John Basilowitz*, Grand Duke of *Muscovy*, said to have been murder'd by the Order of *Boris Gudenow*, who hop'd thereby to succeed to the Empire after the Death of *Theodore*, the eldest Son of the said *John Basilowitz*. *George Minzeck*, Weyvode of *Sandomir*, gave *Demetrius* great Encouragement, on Promise to marry his Daughter. Upon the Hopes of so honourable a Match, the Weyvode, with other *Polish* Lords, gather'd an Army, and marched with *Demetrius* into *Muscovy*. The Czar, *Boris Gudenow*, happening to die suddenly at that Time, *Demetrius* was well receiv'd by the *Russians*; and having worsted those that declar'd against him, he marched to *Moscow*, where he was pro-

proclaim'd Czar: But he presently became odious to the *Muscovites*, who suspected him to be an Impostor, because of his Aversion to their Customs, as mention'd already in the History of *Muscovy*. They conceal'd their Resentment till the Arrival of his *Polish* Bride, when the *Muscovites*, headed by some of the House of *Zuski*, related to the Czars by the Mother's-Side, assembled an Army of 20000 Men; and while the Nuptials were celebrating, they rais'd a Tumult, attack'd the Castle, kill'd *Demetrius*, and a great many *Poles* of his Bride's Retinue. Some of the Chief of them defended themselves bravely, and got off. Then *Basilius Zuski* was proclaim'd Czar, who caus'd the Body of *Demetrius* to be expos'd in publick; but his Face being much wounded, the Multitude could not discern his Features; upon which a Report was immediately spread, That *Demetrius* had escap'd: And soon after another appear'd who gave himself out to be the Man; but whether he was so, is not yet determin'd. The *Poles* acknowledg'd him, and gave him all the Titles and Regard due to the Czar. Some say, their Desire to revenge the former Affront, and the Death of their Friends, inclin'd them to declare for him. This *Demetrius*, with an Army of *Poles* and *Cossacks*, march'd into *Muscovy*, beat *Zuski* in several Engagements, and oblig'd him to restore the Captive Bride, who acknowledg'd this *Demetrius* for her true Husband, which strengthen'd his Party both in *Muscovy* and *Poland*; so that had not the King of *Sweden* sent *Pontus de la Gardie* to reinforce *Zuski's* Army, he must have been ruin'd. *Sigismund III.* of *Poland*, design'd to make his own Advantages of those Civil Wars, and had the Recovery of *Smolensko* and *Seweria* in View. He invest'd *Smolensko* in 1609, and took it by Storm in 1611, when he recalled his Forces that had hitherto supported *Demetrius*, not thinking it fit that such a considerable Army of his Subjects should be under the Command of a Foreigner. The *Polish* Army being thus withdrawn, *Zuski* had Time to recruit his Troops; and being join'd by *Swedish* Auxiliaries, he march'd to *Smolensko*, to oblige the *Poles* to raise the Siege; but was routed near *Clusin*. After this Defeat, *Zuski's* Affairs were in great Disorder, the *Poles* gain'd Ground, and they who former-

ly declar'd for him, now depos'd him, to avoid the Threats of the *Poles*, and offer'd the Crown of *Muscovy* to *Uladislaus*, the Prince of *Poland*; by which they hop'd to be reconcil'd to the *Poles*, and to ruine *Demetrius*; and when their Affairs were in a better Posture, they doubted not to get rid of the *Poles*. This had the desir'd Effect, for immediately the *Poles* abandon'd *Demetrius*. *Zuski* was surrender'd to them, and the *Poles* promis'd to the *Muscovites*, who had sworn Allegiance to *Uladislaus*, that he should appear in Person in 1610. But King *Sigismundus* refus'd this Offer of the *Muscovites*, inclining rather to found his Right to that Kingdom upon Conquest, than on the Consent of the People; and 'tis said, had he march'd his Army straight to *Moscow*, he might have taken it at the first Assault: But as soon as the *Muscovites* discover'd his Design, they revolted from *Uladislaus*; but before this Revolt, *Demetrius* was murder'd by his *Tartar* Guards. The *Muscovites* attack'd the *Polish* Garison in the City of *Moscow*, consisting of 7000 Men, who defended themselves bravely, and set Fire to the Town, which then had 180000 Houses, where abundance of People were burn'd: But notwithstanding this, the *Muscovites* recover'd themselves, and besieg'd the Castle of *Moscow*; and *Sigismund*, by not sending Supplies to them after the taking of *Smolensko*, made all his Affairs miscarry; for he march'd his Army back to *Poland*, and sent the Besieged neither Men nor Money, who, after they had plunder'd the Treasury of the Great Duke, left some to guard the Castle, fought their Way through the *Muscovites*, and came to *Sigismund* to demand their Pay. He apply'd himself afterwards to retrieve his Affairs in *Muscovy*; but his Designs were baffled by Jealousies betwixt his Generals, so that his Guards in the Castle of *Moscow* were forc'd to surrender by Famine. Thus all *Sigismund's* Expectations came to nothing, which griev'd him the more, because he promis'd to himself that the Conquest of *Muscovy* would open his Way to that of *Sweden*. That same Year, the *Poles* were worsted in *Moldavia*. In 1617, Prince *Uladislaus* undertook another Expedition into *Muscovy*; but to no purpose; then he made a Truce with them for 14 Years: The Articles of which were, That the

Poles should keep Possession of *Severia*, *Zernigo*, and *Novogorod*, which they had taken in the last War. In 1620, the *Poles* were engag'd in a War against the *Turks*, by the Practices of *Bethlem Gabor*, Prince of *Transylvania*, because the King of *Poland* assisted the Emperor in his War against him. Upon this the *Turks* enter'd *Moldavia*, with an Intention to banish the Duke of that Country, because he sided with the *Poles*. The Polish General *Zolkiewski* march'd to the Duke's Assistance; but advanc'd too far into the Country, and as he retir'd, his Army was totally routed, and himself slain on the Spot. In 1621, the *Turks* marched against the *Poles* with 39000 Men; the Polish Army consisted of 65000. The *Turks*, commanded by their Emperor *Osman*, assaulted the Polish Lines three times; but were as often repuls'd with great Loss, tho' the *Poles* at that time suffer'd much by Want of Provisions and Ammunition, Sickness, and a great Mortality among their Horses. In these three Attacks, the *Turks* lost 60000 Men, and were forc'd to make Peace upon Terms very honourable to the *Poles*. They also lost a far greater Number in their Return to *Constantinople*. In 1621, *Gustavus Adolphus* took *Riga* without any great Resistance, and conquer'd all the rest of *Livonia*, except *Dunneburgh*. That same Year he enter'd *Prussia*, and took *Martensburgh* and *Elbing*. In 1629, *Hans Wrangel*, the Swedish General, defeated the *Poles* near *Gorzno*. The Emperor sent Auxiliaries to the *Poles*, who in a Battle near *Stum* had almost taken *Gustavus* Prisoner; but they lost the Day. By those Defeats, and other Discouragements, the Affairs of the *Poles* were in a very bad Condition, which obliged them to make a Truce with the *Swedes* till 1634; the *Poles* being allow'd to keep *Elbing*, *Memel*, *Braunsberg*, *Pillau*, and what else they had taken in *Livonia*. *Sigismund* King of *Poland* died in 1632.

His Son *Uladislaus IV.* succeeded in 1633. He obtained a great Victory over the *Muscovites*, who besieg'd *Smolensko*, forc'd them to raise the Siege, and then to surrender their Army Prisoners of War. The *Turks*, who design'd to give him a Diversion, were also repuls'd. This *Uladislaus* (who, as we said before, was elected Czar) made Peace with the *Muscovites* on Terms very honou-

rable to himself, by which *Smolensko* and *Czernickow* were granted to the *Poles*. The Fame of this Martial Prince so terrified the *Turks*, that the Grand Signior allow'd him the Charges of the War; and to pacify him, strangled the *Bashaw* that commanded the Forces against him. His Truce with *Sweden* was renew'd for 26 Years; and the *Swedes* were obliged to restore to the *Poles* the Places they held in *Prussia*; for the *Swedes* being defeated at *Norlingen* by the *Germans*, were much mortified; and were also embroil'd with the *English* and *Dutch*, who were displeas'd with the Tolls they paid them in *Prussia*. In 1637, began the War betwixt the *Poles* and *Cossaks*, mention'd already in the History of the latter.

In 1637, *Uladislaus* died: *John Casimir*, his Brother, succeeded: He was design'd for a Monk, and had liv'd two Years of his Novitiate among the *Jesuites*. *Hartknock* says, *Innocent X.* made him Cardinal. He afterwards married his Brother *Uladislaus's* Widow. His Wars with the *Cossaks* we have related before in their History. In 1655, *Charles Gustavus*, King of *Sweden*, enter'd *Poland* with an Army of chosen Men. He conquer'd Great *Poland*, *Masovia*, *Lesser Poland*, and the Capital City *Cracow*; and all the Cities of *Prussia*, except *Danzick*, open'd their Gates to him. Many of the Citizens of this Town were also inclinable to follow the Example of the rest; but by the Perswasion of some Ministers, were kept in Obedience. This put a Stand to the Victories of the *Swedes*, and alter'd the Face of Affairs to that degree, that they could not maintain themselves in *Prussia*, tho' the Militia of *Poland* and *Lithuania* was under their Command, and that they had obliged *John Casimir* to flee to *Silesia*. After the Consternation was over, the *Poles* join'd the *Tartars*, and kill'd such of the *Swedes* as they found straggling; and the *Lithuanians* kill'd all the *Swedes* in Winter-Quarters among them. *Charles Gustavus* had also weaken'd his Army by his great March to *Jersaw* and *Czerneski*; so that the Polish General, by his Light Horse, cut off the Rear of the *Swedes*. At this Time the *Poles* retook *Warsaw*; but King *Charles* being join'd by the *Brandenburghers* at *Warsaw*, fought that memorable Battle, which lasted 3 Days, wherein the *Poles* and *Tartars* were routed; upon which

all

all the Princes and States of *Europe* began to look upon the Success of *Sweden* with a jealous Eye, and thought the Greatness of that Prince inconsistent with the Ballance of *Christendom*. The *Muscovites*, to give them a Diversion, fell into *Livonia*, and besieg'd *Riga*; and the *Hollanders* did as much as they could to hinder the King of *Sweden* to be Master of *Prussia*. At the same Time the *Danes* made War against the *Swedes*, which obliged them to leave *Poland*. At this Time *Ragotzi*, Prince of *Transylvania*, enter'd *Poland*, fancying he might get the Crown to himself; but was routed, and forc'd to make Peace on disadvantageous Terms. Upon this *Cracow* and *Thorn* were recover'd by the *Poles*; the *Swedes* were forc'd to quit all their Conquests in *Curland*, and the *Poles* took the Duke of *Curland* Prisoner; but were obliged to rise from before *Riga*. By the Peace of *Oliva*, the *Poles* recover'd all *Prussia*, but were obliged to quit their Pretensions to *Livonia*: The *Muscovites* got *Smolensko*, *Serweria* and *Kiow*: And how the *Cossacks* dispos'd of themselves, has been told before. In short, *John Casimir's* Reign was very unhappy, so that at last, being tired with the *Cossackian*, *Muscovian*, *Tartarian*, *Swedish*, *Siebenburgian*, and Civil Wars, he voluntary resign'd the Crown in 1668, retir'd to the Abbey of *St. Germain*, and there died a few Years after. He was succeeded by two *Piasti*, or Natives; the first was *Mickael Koributh*, Duke of *Wisnowiski*, whose Reign was disturb'd with Civil Wars; and by his Male-Administration, the *Turks*, in 1672, took *Caminiec*, which was formerly thought impregnable, and by this means open'd their Way into *Poland*. He concluded a Peace with them, by which the said Town was left in their Hands, and the *Poles* were also obliged to pay them a Yearly Tribute. He died in 1673, and was succeeded by *John Sobieski*, who was formerly General against the *Turks*. In 1673, he forc'd the Camp of the *Turks* at *Kotchim*; so that of 32000, scarce 1500 escap'd. This War with the *Turks* continu'd till 1676; when a Peace was concluded, by which they kept *Caminiec*; but the *Poles* got off the Yearly Tribute. In 1683, when *Vienna* was besieg'd, the Relief of it was chiefly owing to his timely Succour; for it could not have held out much longer against the

Turks, if he had not marched in Person with his *Poles*, and routed their Army. Tho' he was married to a *French* Lady, ow'd his Exaltation to the Throne to the Intrigues of *France*, and had vast Promises made him by that Crown if he would invade *Silesia*, when the *Turks* fell into *Hungary*, he disdain'd those Offers, would not in the least assist the Common Enemy of *Christendom* in their Designs against the Empire, but enter'd into a League Offensive and Defensive with the Emperor. He also had his Share with the Duke of *Lorraine* in the Victory obtain'd over the *Turks* at *Barkan*, where 10000 *Turks* were cut to pieces. These great Actions vex'd the Court of *France*, who design'd to ruine the House of *Austria*. Therefore they form'd all the Factions and Parties they could against the King of *Poland*, which was the Occasion that his following Campaigns had not the wish'd-for Success; so that seeing himself thus embroil'd, he thought it most advisable to apply himself to enrich his Family. In 1684, he made himself Master of the Fortrefs of *Jaslowitz*, marched to *Caminiec*, bombard'd it, and routed a strong Detachment of *Tartars*. In 1685, the *Tartars* ravag'd *Podolia*. In 1686, the King marched in Person at the Head of a great Army into *Moldavia*, and took the City of *Jassi*, the Residence of the *Hospodar*, who fled upon the Approach of his Army. He then marched to the Country of the *Budziack Tartars*, where the Court-Marshal routed 8000 of them; but when the *Polish* Army marched further, they found the Country laid desolate, and burn'd by the *Tartars*; so that they were oblig'd to march back to *Jassi* in 6 Days; but all the Foragers were intercepted by the *Tartar* Sultan *Muradin*. Some Time after, a *Moldavian* Spy brought him an Account, That a Detachment of 4000 *Tartars* were posted at some distance from their main Body. The King sent the Court-Marshal with some select Troops, who surpris'd and routed them. The King himself marched up to their main Body, and oblig'd the Sultan to leave his Camp to the Mercy of the *Poles*; but this Action was more glorious than advantageous to them; for the advanc'd Season obliged the King to quit *Moldavia*, and march back his Army to *Poland*. While his Army was busie with the *Tartars*, the Garrison of *Caminiec* had

rais'd

rafs'd the Country, and committed great Outrages. In 1687, the King's eldest Son, Prince *James*, bombarded *Caminiec*, but with no Success. The Diet of *Grodno* broke up in Confusion, which disabled the *Poles* from appearing against the *Tartars* next Year. The *Tartars* and *Turks* perceiving the King of *Poland* embarrass'd, sent an Envoy to persuade him to a separate Peace; but finding themselves disappointed, they laid waste the Province of *Volhinia*, before the *Poles* were ready to march out of their Winter Quarters; but when they took the Field, they obliged the *Tartars* to repass the *Nieper*; who perceiving the *Polish* Army in Disorder, they were encourag'd to repass it, and fall upon the *Poles* before they were drawn up, when they cut 17 Companies of them to pieces, and made a new Invasion. This obliged the King to march an Army of 19000 into *Moldavia*, where he garrison'd *Seckow*, upon the S. Bank of the River *Sereth*; and so this Campaign ended. In 1691, the King enter'd *Moldavia*, took *Jassi*, *Nimick*, and several other Places, without Opposition: But the Season being far spent, and the *Tartars* still troublesome on his Rear, it disappointed his Design of invading the *Budziack Tartars*; only the Chastellan of *Chelm*, assisted by the *Cossacks*, defeated 4000 *Tartars*, and made himself Master of the Fortrefs of *Serock* upon the *Nieper*. In 1692, the *Poles* block'd up *Caminiec* in September, but to no purpose; and doing nothing remarkable that Campaign, the Imperial Court were jealous that they inclin'd to a separate Peace with the *Turks*. The Ground of this Suspicion was, besides some Differences betwixt the King and Emperor, That the King of *Poland* had sent an Envoy to *Adrianople*, to whom the Cham of *Tartary* made several Proposals for a separate Peace; but they did not take. The *Tartars*, in 1694, with an Army of 20000 Men, relieved *Caminiec*, and furnish'd it with Men and Provisions; but going on to plunder and harass the Country, according to their usual Custom, they were routed by the *Poles*, and 2000 of them slain. In 1695, the Contest betwixt the General of *Lithuania* and Bishop of *Wilna* defeated all the King's Designs for that Campaign; and in 1696, the King's Death put a Stop to all his Projects of War. He was 71 Years of Age when

he died, was a Prince of great Bravery, and ow'd his Advancement chiefly to his own Merit and Valour.

After his Death, several Competitors appear'd for the Crown, among whom was his Son Prince *James*; but he had not Interest enough. The *French* King set up the Prince of *Conti*, who was elected by a Party that was not able to support him; so that tho' he was sent to *Polish Prussia* by a *French* Squadron, he was obliged to return without being put in Possession. *Frederick Augustus*, Elector of *Saxony*, having renounc'd his Religion to make himself capable of being chosen, carried it by the Assistance of the Allies, notwithstanding the long and vigorous Opposition by Cardinal *Radzinski* and the *French* Faction; and probably might have continued in peaceable Possession, had he not made War upon the *Swedes*, which brought their young King *Charles XII.* upon him, who in 1704 set up *Stanislaus*, a *Polish* Nobleman, Palatin of *Posen*, against him; and by several Battles, and at last by invading *Saxony*, has obliged King *Augustus* to surrender all but the Title; tho' King *Stanislaus* is not yet in quiet Possession of the Crown, the Chief General, and a great Part of the *Poles*, having form'd a Confederacy against him. These Things being fresh in Memory, we need insist no longer upon hem.

Of the A I R.

THE Air of this Country is according to the Differences of the Climate, and sometimes so very cold, that Rain freezes ere it falls to the Ground; and Lakes and Rivers are so frozen, that Coaches and loaded Carts pass over them for 5 or 6 Months together. The Air of *Poland* is more healthful than that of *Lithuania*, because of the many Morasses there. This Cold is not so much to be imputed to its Northerly Situation, as to its nearness to the vast and cold Countries of *Muscovy*, from whence the cold Winds blow.

Of the S O I L.

THE Soil for most part is Champain and open; but towards the Borders of *Hungary*, Mountainous and Woody; so that 'tis

'tis observ'd, the Places furthest distant from *Hungary*; are most fruitful. There is only one great Mountain in the middle of *Lesser Poland*, call'd *Mons Calvus*: It has a Monastery on the Top, famous, as they pretend, for the real Cross of Christ. What other Hills one meets with here, are rather to be esteem'd rising Grounds than Mountains. The Eastern Part of the Kingdom is full of Woods, Forrests, Lakes, Marshes, and Rivers, which afford a delightful Prospect to the open Country.

The PRODUCT.

Poland is said to have been formerly almost all Wood; but now, being cultivated by the Inhabitants, it is very fertile, and produces every where all kinds of Fruit, Corn and Herbs. A great Part of the Corn made use of in *Holland* comes from this Country, by Way of *Dantzick*. They have a good Breed of Horse, so that their Cavalry is numerous, and well mounted. Their Pastures are good, and feed a great many Cattle, which they export to Foreign Countries. The Forrests abound with Wild-Beasts, and also with Bees, that afford vast Quantities of Honey and Wax. They have also abundance of Flax and Hemp, and Vines in many Places, whose Grapes are grateful to the Taste, especially if the Summer and Harvest be favourable; but the Wine is generally very sharp when drawn off. In the Mountains, there are Mines of Lead, Silver, Copper, and Iron, with other kinds of Minerals, as Quicksilver at *Tustan* in *Red Russia*, and Vitriol near *Biecz* in the Palatinat of *Cracovia*. But the most considerable of all are the Salt-Mines at *Bochnia* and *Veliska* in *Lesser Poland*, which are the chief Riches of the Country, and bring most Money into the Exchequer. They work in those Mines as we do in our Coal-Pits; the Salt is generally of a bluish Colour, but some of it white and transparent, like Chrystal. When it is new dug, it has a brackish Taste; but when expos'd to the Air, becomes brittle, and more sweet. They have also some Veins of *Sal Gemme*.

Of their BEASTS.

THE Woods are well stor'd with Hares, Conies, Squirrels, Deer, Foxes, Bears, Wolves, and Boars. The *Masovian* Forrests have Plenty of *Elks*, *Wild-Asses*, *Uri*, which *Dr. Charlton* interprets *Owres*; and the *Bisontes* *Jubati*, by some rendred *Buffs*. *Aldrovandus* says, these *Bisontes* in Shape and Horns resemble an Ox, have Mains like Horses, Beards on their lower Jaws, Tongues rough, like a File, and very hard; a Bunch upon their Backs, and their Hair smells like Musk. They are incredibly strong. The *Polish* Nobility hunt them, and esteem their Flesh when powder'd a great Dainty.

The *Owr*, or *Urus*, call'd by the *Polanders*, *Thur*, is a kind of Wild-Ox, bigger, stronger, and swifter, than the Tame. He has a short black Beard, a Bush of Hair upon his Forehead, and Horns very wide and large. *Pliny* says, the *Romans* made Lanthorns of them.

The *Elk*, call'd by the *Poles*, *Lofs*; by the *Germans*, *Ellend*, which signifies Miserable, because of the Falling-Sickness it is troubled with; is about the Size of a large Horse, Bodied like a Stag, but broader; its Legs longer, and its Feet cloven, and large. Their Hoofs are reckon'd a Specifick against the Falling-Sickness. In the Deserts near the *Nieper*, *Herbststein* says, there is a sort of Wild-Sheep call'd *Solbac*, shap'd like a Goat, but with shorter Legs and Horns, growing straight up. They are exceeding swift, and leap very high. They have a Sort of Wild-Horses in the *Ukraine*, call'd by them *Dzikie-Konil*, which their Nobles eat for a great Rarity.

In *Lithuania* and *Muscovy*, there's a voracious unserviceable Beast, not found elsewhere, as *Mat. a Michovia* tells us, called *Rossomaka*, with the Body and Tail of a Wolf, and the Face of a Cat: It feeds on dead Carcasses, and eats till its Belly is swelled to the utmost Stretch; then it squeezes it self betwixt two Trees, forces the Load from its Stomach, and returns to its Prey, devouring and disgorging successively, till all is consumed.

The *Wolf*, resembling a *Hart*, or the *European Lynx*, called by the *Latins*, *Lupus Cervarius*, and by the *Natives*, *Rus*, with Spots on its Belly and Legs; affords the best Furs in *Poland*.

The *Quails* in *Podo'ia* have green Legs: Their Flesh is unwholesome, and if immoderately eaten, breeds the Cramp.

Their Trade of EXPORT.

THE Western Parts of this Kingdom produce a great deal of Corn of all Sorts, which is exported from *Dantzick*; as also Honey, Wax, Amber, Hides, Tann'd Leather, *Muscovite* and *Polish* Furs, Oak, Wainscot, Masts, Planks, Fir, Deal, Pitch, Tallow, Salt-Petre, Hops, Hemp, Flax, Salt, Beer, Pot-Ashes, Opium, *Frussia* Wool for coarse Manufactures, Vitriol, *Lapis Lazuli*, Vermilion, Brass, Lead, Iron, Copper, Glass, and Earthen Ware, Oxen, Sheep, Hogs, &c.

Their Trade of IMPORT.

STuffs of Silk, and Worsted, *English* Cloths, Tapestry, Jewels, Sables, Salt-Fishes, Tin, Steel, Martens, &c. Iron Ware, *Rhenish*, *French*, *Spanish*, and *Hungarian* Wines, Spirits, *Aqua Vite*, Brandy, Spices, of which they make a great Consumption. They might be much richer, if they were industrious and frugal, and applied themselves to Manufacturies: But the *Poles* are little inclin'd to either; for, the Gentry are absolutely forbid to follow Trade of any kind, on Pain of forfeiting their Honour; and the Commonalty want Funds; so that all the Trade there is chiefly carried on by Foreign Merchants: Besides, such of the *Poles* as have any Fortunes, spend too much of their Revenues in costly Habits and Luxury, to be able to undertake any considerable Traffick; nor have they any good Ports except *Dantzick*, which is not enough to improve the Trade of so large a Country.

The Complexion, Constitution, Genius, and Manners of the Poles.

THEIR Complexion is generally inclining to Fair, and their Hair of a pale Yellow. Their Stature is commonly somewhat above the middle Size. Their Constitutions are generally good, and their Bodies gross; so that the Women of Quality make it their chief Study to be lean and thin. They abhor Painting and Washes to improve their Complexion; nor have they any occasion for it.

The Gentry are civil, value themselves upon their Honour, are affable to Strangers, brave, sincere, not vers'd in the Arts of Dissimulation, but excessively jealous of their Liberty, and rather compel than invite their Kings to observe their Laws. The Gentry claim such Prerogatives, as they can scarce be found guilty of any Crime; and when they happen to be, the Prince has scarce Power enough to punish them. They have no manner of Regard to their Clergy, but act and talk as they please against them, and think themselves sufficient to be their own Guides.

The *Poles* exceed most Nations of *Europe* in Vivacity of Spirit, Strength of Body, and long Life, which cannot be occasion'd by their Climate, because the *Swedes*, *Muscovites*, and *Germans*, tho' they live under the same Parallel, yet enjoy not the like Vigour and Health; so that 'tis reckon'd to proceed; 1. From their Diet, which is generally fresh Meat, or Fowls roasted. 2. From their Drink, which is spiritous and strong, as *Hungarian* Wine, Aniseed-Water, &c. The poorer Sort have a Liquor distill'd from Wheat, Barley, Oats, and Cyder, which the Gentry rectify with Anniseeds and Spices. 3. From their hard Way of living, for they hate Effeminacy, and love a Cottage as well as a Palace. The common People frequently weave Tapestry and Arras as they travel. They sleep frequently in Snow and Frost, without any Bed or other Conveniency; and Children of two Months old are carried about stark naked. 4. From their

their Hunting much. 5. From their Exercises, for they are much inclin'd to Dancing and Vaulting, and are expert Horsemen. 6. From their hard Beds, which contribute much towards strengthening their Bones. Their Slaves have no Beds, and their Gentry seldom any but Quilts. 7. From their Freedom and Liberty, for Slavery dulls the Mind, and enervates the Body.

Of their NOBILITY.

Selden, in his Titles of Honour, says, in Poland and the Great Dutchy of Lithuania, there are many Weyvodes, which is not a Feudal or Hereditary Title, but Office, and for Life only. They command the Territories committed to them, like the Lords Lieutenants in England, and have Castellans under them in all Places but Cracow, where the Weyvode is subject to the Castellan, in Memory of the dishonourable Flight of the Weyvode of Cracow, under King Boleslaus Krziwousti, from a Russian Ambush. This Office and Title is almost of 1000 Years standing. The modern Greeks make use of the Word Βεββδος, to denote a Weyvode.

In the Laws of Poland, the Secular States are call'd *Comites, Barones, Principes, Nobiles, & Milites*: But the Archbishop of Gnesna signs himself, *Legatus Natus, & Regni Poloniae Primas, & primus Princeps*. Cramerus says, the different Titles us'd there import no Distinction of Honour, and that all their Noblemen have equal Power as such; so that what Inequality is among them, proceeds from their Publick Employment.

Dr. Connor's Account of their NOBILITY.

HE says, they engross all Preferments and Posts of Honour; and no Foreigner, however Noble and deserving, can rise higher than a Colonel, or at most to be a Major-General, which is much the same as our Brigadier. Their common People can have no Possessions, unless a few Houses in a City, or a small Piece of Land about a League off in the Country: But the Citizens of Danzick, and other Places of Prussia,

with those of Cracow, Leopold, and Vilna, are excepted from this Badge of Slavery.

Every Gentleman or Nobleman, which is the same thing there, has his Coat of Arms granted by the Republick; but then he or some of his Family must have an Estate there in Land. They are capable of the greatest Employments and Offices in the Kingdom, and may buy Lands where they please all over the Country, and have a Right to be elected King, if their Credit and Interest can procure it. Every Gentleman is a Sovereign Prince in his own Lands, and has Power of Life and Death over his Tenants, or rather Slaves, who have no Laws nor Privileges to protect 'em. They dare not leave his Lands to go to another's, on Pain of Death, unless he sells them; and if he do, his Tenants are made over with his Lands. But if their Lord ravish their Wives or Daughters, the Tenants may leave his Service; and they are many times glad when their Wives or Daughters give them such an Opportunity.

If one Lord kills another's Slave, he is not punish'd for it, but only obliged to give another in his room, or as much Money as will buy one, and to maintain the Family of him that is kill'd. If he kills one of his own Slaves, he only pays 15 Livres. Nay, if one Gentleman kills another, he cannot be apprehended or imprison'd, unless convicted by a Court of Justice, which gives him Time enough to escape; and when condemn'd, he cannot be executed without the King's Consent. No Soldiers can be quarter'd upon the Gentry: If any Officer do it, the Diet either sentences him to die, or declares him infamous. Since 1433, the King himself cannot lodge at a Nobleman's House without asking his Leave. If a Foreigner dies without Heirs, his Estate falls to the Lord of the Manor where he died, and not to the King. The Houses of the Nobility are Sanctuaries; so that no Delinquent can be taken thence by Force, tho' he may be arrested.

If a Nobleman will swear that his Goods were not bought, but are the Product of his Lands, he may send them any where out of the Kingdom without Custom, and after he has sworn, his Certificate suffices to exempt the Purchaser from the Duty. In Prussia, the Nobles are not only free from

Customs, but likewise all the other Inhabitants, by the *Magna Charta* of *Culm*. The *Polish* Noblemen have also the Privilege of Pre-emption.

All the Gentry of *Poland* are equal by Birth: They don't value Titles of Honour, and think that of a Noble Pole, or Gentleman of *Poland*, the greatest they can have. Neither the King nor Republick creates any with the Title of *Prince*, which belongs only to the Sons of the Royal Family; for tho' some are made Princes of the Empire, and enjoy the Title of *Prince*, as we shall afterwards hear, they have no Precedency upon that Account; nor have they any Dukes, Marquisses, Counts, Viscounts, or Barons, but what have Foreign Titles, which the rest generally despise; for they don't value any borrow'd Character, or external Denomination, but say, that 'tis only intrinsic Worth, and Services done to their Country that deserves Preferment.

King *Sigismund III.* establish'd an Order of Knighthood of the *Immaculate Conception*, created several Knights, and allow'd them Privileges and Superiority above others; but they were so much undervalued and despised by the rest of the Gentlemen, that the Order soon came to nothing.

When they travel into *France*, *Italy*, or *Germany*, they assume the Titles of Counts and Barons, because they are admitted more easily to People of Quality, especially in *Germany*, where they scarce think any a Gentleman under a Baron, and consequently not fit for their Conversation.

Those great Privileges make the *Polish* Gentry powerful. Many of them have also large Territories, with a Despotick Power over their Tenants, whom they call their Subjects. Some of them have 5, some 15, some 20, and some 30, Leagues of Land, contiguous; but the poor Gentry have their Votes in the Diet as well as the richest. Some of them are Hereditary Sovereigns of Cities, with which the King has nothing to do. *Lubomirski* possesses above 4000 Cities, Towns and Villages. Some of them can raise 5, 6, 8, and 10000 Men, and maintain them at their own Charge. Dr. *Connor* says, Prince *Lubomirski* had actually in his own Pay, when he was in *Poland*, 7000 Horse, Foot and Dragoons.

The Gentry of Note have Horse and Foot Guards, which keep Gentry Night and Day at their Gates. They make an extraordinary Figure when they come to the Diet: Some of them have 5000 Guards; and *Hautenville* says, some of them had formerly 10000. They esteem themselves, especially the Senators, above any Prince in *Germany*, and want nothing of Sovereign Power, but the Liberty of coining Money, which is reserv'd to the Republick. Foreign Ambassadors are oblig'd to make a great Figure here, otherwise the Gentry despise them. When great Men have Suits at Law, and the Diet or other Tribunals decide it, yet the Execution of the Sentence must be left to the longest Sword; for the Justice of the Kingdom is commonly too weak for the Grandees. Sometimes they raise 5 or 6000 Men of a Side, plunder and burn one another's Cities, and besiege Castles and Forts; for the Grandees think it below 'em to submit to the Sentence of a Company of Judges without a Field-Battle.

Yet formerly their Noblemen were little better than Slaves. *Cromerus* says, they were oblig'd to keep the King's Dogs. Their first Rifle is ascrib'd to the Privileges granted by *Boleslaus* the Chast to the Clergy; and afterwards, when *Poland* was harass'd by Civil Wars, the Gentry obtain'd many Privileges from their Kings, which they have since taken Care to get augmented at every new Election.

The most flourishing Families in *Poland* are, 1. That of *Radziwil*, which has the Title of Prince. 2. The Dukes of *Wisniowiec* and *Zharaw*, one of which Family was elected King of *Poland* in 1664. 3. The Princes of *Lubomirsky*, who are Princes of the Empire. 4. The Princes of *Ozartorysky*. 5. The Princes of *Sapieha*, Great Governors of *Lithuania*. 6. The Family of *Leszczinski*. 7. The Family of *Joblonowsky*. 8. The Family of *Przyemski*. 9. That of *Lipski*.

Those that are not Noble by Birth, may be created Noblemen: This was formerly at the King's Pleasure, but of late is at the Disposal of the Senate or Diet. All the little Diets of the Republick must give their Consent, which must afterwards be approved by the great Diet, before they have their

their Patent. A Jew is made a Gentleman by turning Christian; and by signaling himself in the Wars; but the King must propose it, and the Diets approve it. The new-made Nobility are liable to several Impositions and Inconveniencies, from which the others are exempted. If any one be a Magistrate in *Cracow* or *Vilna*, he and his Posterity are Noblemen.

Nobility is forfeited here three Ways: 1. By some heinous Crime; for Instance, when a Nobleman permits one that is Ignoble to usurp his Coat of Arms. 2. By exercising any Trade or Merchandize. Sometimes Posterity are restored, when Parents have quitted their Title thro' Poverty. And, 3. By bearing Office in any City that is not priviledg'd.

Of the PEASANTS.

They are born Slaves, have no Notion of Liberty, but live very well satisfied without it. In *Courland*, they are as subject to their Landlords as in *Poland*, and in both Countries almost adore them. They love their Landlords, fight willingly for them, and all they have is absolutely at their Devotion. When they debauch their Wives or Daughters, those poor Wretches don't think their Women the worse, or that they themselves are injur'd or dishonour'd by it. They have scarce any Religion, but, like Brutes, work on *Sundays* for their own Subsistence, being obliged to work 3 or 4 Days each Week for their Masters, without Meat or Wages. Each of them earns his Master at least 100 Livres *per Ann.* They have no Property, nor can they be made free, except they get into some Convent, be ordain'd Priests, or that their Masters debauch their Wives or Daughters, as has been already mention'd.

When a Lord lets any Ground to a Peasant, he orders his other Peasants, at their own Charge, to build him a House, to give him a Cow, Hens, Geese, and as much Rye as will keep him a Year. A Slave cannot send his Son to the University without buying a Liberty from his Lord. They reap their Master's Corn, and have rigid Tax-Masters over them, who punish them severely if they don't work as much as is

requir'd of them. Their Masters commonly boast of their Clemency, and say, That tho' they have an absolute Power over them, they seldom make use of it, any more than other Christians do over their Horses and Dogs.

Dr. *Comnot* says, he ask'd some *Polish* Noblemen, Why they so inhumanely treated and undervalued their Boors? Who answer'd, That formerly all the Boors revolted from their Landlords, and conspir'd to extirpate and destroy them, and murder'd so many, that the rest were obliged to hide themselves, or to leave the Kingdom; but at last, the Gentry getting together from all Parts, and being assisted by their Neighbours, they quelled the poor Peasants, who intended to have set up a Commonwealth of their own; and brought them to such Extremities, that ever since they have been contented to live like Slaves.

Of the APPAREL of the Gentry.

ALL of them love to make a Show, and to be splendidly Clad: They formerly delighted in Foreign Fashions. When they had Wars with the *Muscovites*, they follow'd theirs; and when with the *Turks*, they took their Habits. Their present Fashion is, a Vest that reaches to the middle of their Legs; with a long Robe lin'd with Fur, and ty'd about the Middle with a Sash: Little Boots, with Iron Heels, and Furr'd Caps, and a Sabre by their Side. When they ride, they have a short Cloak like an *Irish* Mantle furr'd within and without. The better Sort have rich Furs from *Muscovy*; but the poorer Gentry content themselves with the Skins of Tygers, Leopards, Panthers, and a kind of grey Furs. The finest of their Furs cost above 1000 Crowns; are worn only at Diets, and descend from Father to Son. Some of the *Polish* Gentry imitate the *French* Fashion, and wear Linen, Lace, Point, Perukes and Swords. The ordinary sort of Gentry put Chaff into their Boots, which serves them instead of Socks. Some of the Nobles have 50 Suits of Clothes, all as rich as possible; and they love to have their Servants as well Apparel'd almost as themselves.

-Of the HABITS of the Boors.

IN Winter, they wear a Sheep-Skin, with the Wool inwards; and in Summer, a Close-body'd Coat, of coarse Stuff, of a Colour much like our Chimney-Sweepers, with sorry Caps: Their Boots are ordinarily the Rinds of Trees wrapp'd about their Legs, with the thicker Part to guard the Soles of their Feet against the Stones. They cut their Hair close like Monks, and shave all from their Faces but a large Whisker. They walk gravely, with a Poll-Ax in their Hand, and a Sabre by their Side, which they never put off till they go to Bed: It hangs by a Strap of Leather, to which there is fasten'd a Handkerchief, and Knife and Sheath, and a small Stone to whet their Knives.

In *Lithuania*, the Boors Shoes are of the Barks of Trees, and their Stockings of thin Bark, which they wrap about the Calves of their Legs. Before they enter any Town, they always take Care to put on fresh Shoes. They also wear a Sort of Ash-colour'd Habit, with Sleeves woven all of a Piece. The Boors here are more miserable than in *Poland*, for Gentlemen commonly go into Boors Houses, tho' not their own, take all they have, and beat and wound them shamefully, because they are not able to bribe such as have Power to do them Justice.

The *Prussian* Gentry are not so gaudy in their Habits as those of the more Southerly Parts of *Poland*. Their Peasants differ also in Habit from those of *Poland*, and wear sometimes long straight Coats of Leather.

-Of their Meat, Drink, Houses, Marriages and Burials, &c.

THE *Poles* never live above Stairs, and their Apartments are not united: The Kitchen is on one Side, the Stable on another; the Dwelling-House on the third, and the Gate in the Front. Their Houses are for most part of Wood; but they have some of Brick and Stone.

Their Houses are generally hung with Tapestry or Arras; but towards *Tartary*, they keep no extraordinary Furniture, because of the Incursions of that barbarous

People. They content themselves with a few small Beds with Taffety Curtains; and if any one lodge at their Houses, they must carry their Bedding with them.

The Moveables of the Peasants are a few Earthen and Wooden Dishes, a hard Bed, and a wretched Coverlet. Their Children are not allow'd Beds till they marry, but lie upon Boards by the Fire. They have no Chimnies, but little Holes in the Tops of their Houses.

The Peasants Children go naked till they are 4 or 5 Years old, and frequently eat in the same Trough with the Pigs. They crawl on Hands and Feet till they are strong enough to walk; and when they are dirty, the Mother washes them in cold Water, which makes them exceeding hardy. *Hanteville* says, he has seen Children there stark naked slide upon the Ice a great Way.

The Peasants of *Lithuania* and *Samogitia* build their Houses round, narrow, and open at Top, to let out the Smoak and Stink: They are generally cover'd with Boards, Straw, or Bark of Trees, and, with the Family and Cattle, are under the same Roof.

The *Polish* Gentry have seldom any Gardens or Orchards, tho' their Country be very proper for it, and might, by making Cyder and Perry, save a great deal of Corn, which they consume in Beer.

Their ordinary Meat is Beef and Veal, and they leave the Mutton to their Servants. They have Store of grey, but no red Partridges; many Hares, but no Rabbits; than which, they say, they would sooner eat Cats; but they breed white Rabbits for the Sake of their Furs. They have many Roebucks, but few Stags, Plenty of Wild-Oxen, Wild-Boars, Hogs, Poultry, Pigeons, &c. There are many Heath-Cocks and Pheasants in *Lithuania*, and Bustards in *Prussia*.

The *Baltick* Sea has scarce any Fish; but that Defect is supplied by great Plenty of Fresh-Water Fish from Lakes and Rivers. The *Poles* have a peculiar Way of preserving Cabbage: They chop it small, put it into a Tub between Lays of Salt, press it very hard, and afterwards pour warm Water upon it, which makes it ferment, and serves them for Pickles. This they preserve all Winter, and sometimes the whole Year.

Tho

Tho it smells strong at a distance, yet they think it a great Dainty.

Their usual Drink is Beer, which in *Prussia* is made only of Malt; but in the rest of *Poland*, of Wheat ground small, and boil'd with Hops. Sometimes they mix it with Oats, and Spelt, a kind of Wheat which grows in *Italy* and *Flanders*.

In *Lithuania*, *Russia*, and *Ukraine*, they make both a red and a white Liquor with Honey, which they call Mead. At *Warsaw*, they mix it with Spice and Juice of Cherries and Blackberries.

The *Lithuanians* and *Poles* have Wine from *Hungary*, *Italy*, *France*, and *Germany*. That of *Hungary* exceeds *Spanish* Wine in Strength, is brought to *Cracow* over the *Carpathian* Mountains in large Casks drawn by Oxen, and sold at 20 Shillings the *Polish* Pot, which is about 3 Quarts. The *Italian* Wine is also brought over Land, and on that Account is dearer than the other.

In the Morning, both Men and Women generally drink Ginger, Yolks of Eggs and Sugar boil'd together in Beer. They are immoderate Lovers of rusty Bacon and Pease. They eat all manner of Mushrooms, and preserve them for Pickle. They eat great Quantities of Poppy-Seed, drink the Milk of them, and make it into several Dishes and Sauces. They make likewise abundance of Oil of the Seed of Hemp and Flax, which they eat on Fast-Days. They use Spice to that Excess, that some great Men spend above 50000 Livres *per Ann.* in that single Commodity. They use Spice and Pickles in all their Sauces, which differ much from ours: Some of them are yellow, made with Saffron; others white, made with Cream; some grey, made of Onions; and others black, made of the Juice of Plumbs. They have all Sorts of choice Pot-Herbs, and some that are found no where else. They have also Confections of several kinds, and make much use of *Pistacho-Nuts*.

They generally eat a great deal of Meat to a little Bread, tho they have Plenty of Corn, especially Rye, which is much better than in other Countries. They are great Admirers of Roots, have a Dish call'd *Crachat*, made of coarse Flower of Wheat; Barley, Millet, or Oats, and sometimes of

a small Grain they call *Maina*. On Flesh-Days, they eat it with Milk and Butter; and on Fast-Days, with Oil. When the Boors want Bread, they make it of Acorns dry'd and groun'd.

Near the Mountains of *Hungary*, there are Wild-Goats, which they admire as very good Meat. They also make a Dish of Beavers-Tails, but throw away the Body. Bears-Paws pickl'd they reckon a great Dainty. When they kill Elks, they don't gut 'em for 14 or 15 Days, and in Winter not in a Month. When the *Grande*s come to the Diet, they bring them in their Skins and Guts, and hang them at their Windows by 5 or 6 at a time, till they grow rank; then they roast some, and dress others like Beef *A-la-Mode*; and none but great Men have this Dish at their Tables.

The *Poles* are generally open Hearted, courteous and hospitable to Strangers, invite them to their Houses, converse with them freely, and endeavour to imitate 'em. *Hautenville* says, he has known them entertain Strangers whom they knew nothing of, merely because they were out of Employment.

The Slavery of their Boors is so much the more tolerable to them, because they seldom want Victuals and Drink: They have generally three or four Sorts at a Meal, one of Pease with slic'd Bacon, another of *Crachat*, and two more of several Sorts of strengthening Roots, which they have in great Plenty.

In *Lithuania*, their Bread is coarse and black, made of Rye, Smutty Wheat, and Barly, all groun'd together. They have abundance of Flesh, Fish, and Fowl; and what Cattle or Poultry they think they cannot keep in Winter, they kill in Harvest. They are good Marks-men, and maintain their Families in a great measure by Fowling. Every House has 4 or 5 Hand-Mills to grind their Corn.

The Peasants of *Samogitia* are not so laborious as those of *Lithuania*, and consequently have not such Plenty. Instead of Bread, they eat a sort of Turnep as big as one's Head, which grow of themselves, without Cultivation. They quench many red hot Stones one after another in their Beer, Metheglin, and Mead, after they have boil'd

boil'd it a whole Night, in order to make their Bellies soluble. This Liquor they put up in Vessels made of Barks of Trees.

They reward the stoutest Drinkers at their Merry-meetings with a Shirt, Handkerchief, Frock, or the like. They live longer here than in *Lithuania*, and many of 'em reach to 120 Years of Age.

Formerly, the *Prussians* dwelt in Wagons, or Huts made of Boughs; and the Peasants are not yet much improv'd in Architecture, for they generally live in Hovels built of Stakes, Roof and all twisted over with Rods, without other Covering. Their Furniture is not much improv'd, for the old *Prussians* slept on the Ground, or on the Skins of Beasts, and these lie upon the Straw.

They are content with a spare Diet, and more addicted to Sloth than Gluttony; yet, like the *Poles* and *Lithuanians*, they drink hard, especially at Feasts, where they frequently get drunk. Their former Drink was Water, or Mare's Milk, mix'd sometimes with Blood; but now it is Mead and Beer. Their ordinary Food is Fish. They knew not the Use of Roots, till the Knights of the *Teutonic* Order came among them; but now the Peasants make them their chief Dainties.

When the Gentry make a Feast, they never supply their Guests with Spoons, Knives or Forks, so that they must bring them with them. They have a broad Piece of starch'd Linen sow'd round the Table-Cloth for Napkins: The Reason they give for it, is, to prevent their Servants from stealing 'em.

Their Servants have their Meat reach'd them by their Masters, which they eat behind their Backs. They bring twice as much Wine as their Masters need, and drink the remainder themselves. They seize on what is left after Dinner. And their Ladies each of them carry a Napkin to prod for dry'd Sweet-meats or Fruits.

These Feasts are made by Friends and Neighbours to one another by turns. Full Brimmers are much in use among the *Poles*, for they will scarce excuse a Man unless he pledges them *Super-Naculum*. This Vice reigns equally in Feasts and Taverns; and Saints-Days are not excepted out of their Drunkards Calendar. Those Disorders are tolerated, because of the great Excise they

bring to the State. The Master of a Feast is esteem'd an unreasonable Niggard, that does not allow his Guests as much as will sufficiently fuddle them.

The Inns in this Country are long Stables, built up with Boards, and cover'd with Straw, without Furniture or Windows. There is a Chamber at one End, but none can lodge there because of Flies, Fleas, Bugs, and noisome Smells; so that Strangers chuse rather to lodge among the Horses, where there is also an intollerable Smell of rotten Cabbages, which those People keep always by them. Travellers are oblig'd to cary Provisions with them, and when Foreigners want, they apply themselves to the *Lord of the Village*, who forthwith supplies them *gratis*.

Poland being for most part a Champagne Country, a Calash and two Horses will ride a great deal of Ground there in a Day.

Travellers ought to take more than ordinary Care as they pass Bridges in this Country, because they are generally very bad, and seldom repair'd. In Winter, they use a Furr'd Sack for their Feet; but there is no resting at Nights in their Inns, especially on Holidays, the Boors make such a continual Noise with their excessive Singing, Drinking, and Dancing, in the same common Room where you are oblig'd to lodge; for they have no Fire elsewhere.

When they go a hunting for Bears, they take those of the biggest Size with Nets; and when they have hamper'd him, all the Hunters ride about him, and having pinn'd down his Head and Feet with great Wooden Forks, they bind him so about with strong Hempen Cords, that he is not able to stir; then they roul him into a great Wooden Chest: The Knors of the Cords are so contriv'd, that with one Pull they may be untied. The Bear is kept thus till they have a mind to hunt him, and then they let him out at a Trap-Door made on purpose.

They surround their Wild-Bulls with a great Number of Horsemen, when each of them rides up and darts an Arrow at him: Upon this the Ox pursues his Enemy; then another darts him behind; and as he turns about to pursue him, they dart him so by turns, till the Beast being tir'd with pursuing so many Assailants, falls down, and is easily taken or killed. They have another

Way

Way of hunting, by making the Boors fell a great Number of Trees, and enclose 'em: Each Hunter has his Post assign'd him, at which they throw Darts; and as the Bull runs towards his Enemy, the Hunter runs behind gives him his Death's Wound: But if he breaks thro' the Inclosure, the next Hunter holds out a Piece of red Cloth, against which the Beast having an Antipathy, he forthwith leaves that Person, and runs at another, who being provided for him, commonly kills him. If the Beast catch a Man by the Cloaths, he pulls him to him with his Teeth or rough Tongue, and endangers his Life, if he be not speedily rescued.

Of their W O M E N.

THE Polish Ladies are generally very modest, and do not abuse the great Liberty allow'd them. They seldom stir out of Doors without a Coach and Six, to Church, or to visit a near Neighbour, and are always attended by a great Number of Servants. When they go abroad at Night, they have 24 or more Flambeaux carried before their Coach. Their Train is born up by He or She Dwarfs; and they have always an old Woman attending them, whom they call *Gouvernante*, and an old Gentleman for their Usher.

Notwithstanding all those Honours done the Women, they are intirely managed by their Husbands, and dispose of no Money without his Leave. When they want any thing, they must ask him for it kneeling, embrace his Knees, and call him their Benefactor: But some few Trifles are allow'd them of course. The Fashion of the Women's Cloaths comes nearer to that of the Men, than in most other Countries. They formerly wore Garlands on their Heads, compos'd of Gold, Jewels, Flowers, Silk, and the like; but now they wear Silk Caps lin'd with Fur, like the Men. In King John III's Time, they imitated the French Mode, because the Queen was of that Nation.

The Peasants Daughters are so extremely reserv'd, that they will draw a Knife at any Man that offers to kiss them: Besides, their Mothers have a watchful Eye over them, and make them wear little Bells before and

behind, to give Notice where they are, and what they are doing; but those Precautions don't always preserve their Chastity.

The Country Women are Habited as in other Countries, but that their Petticoats are very short. Those in *Red Russia* go generally in Summer with an Apron before them, that reaches lower than ordinary.

Their M A R R I A G E S.

THE Wedding-Feasts of the Gentry last ordinarily three Days. If a Lady marry any of her Waiting-Maids, she costs her almost as much as one of her Daughters. On the second Day all the Guests present the Bride with something new, which makes commonly a good Part of her Portion. The late Princess of *Poland*, when married to the Elector of *Bavaria*, had above 100000 Crowns presented her.

Among the Boors, a Maid never marries till she be 24 or 30 Years of Age, and has wrought with her own Hands several Baskets full of Cloths of different Sorts, which, at the time of her Espousals, she is to distribute among the Guests that her Husband brings with him. She must also have serv'd her Mother in all Domestick Affairs for a certain Time. The same Rule is observ'd with respect to their Sons. 'Tis also observable, that those employ'd to make up the Match, always enquire more strictly into the Manners and Behaviour of the Persons, than after their Stock of Corn and Cattle, which is their usual Allotment.

Their Godfathers and Godmothers are always accounted Relations, tho' they be nothing a-kin, and cannot marry this suppos'd Kindred without a Dispensation from the Bishop.

The *Sieur de Beauplan* gives this Account of the Weddings of the *Cossacks*: After the Married-Couple go to Bed, the Company wait in the same Room till the Marriage is consummated, and the Bride shifts her self. If they find the Tokens of Virginity, they make joyful Acclamations, in which all the Kindred join, and next Day carry her Shift publicly about the Town like a Banner, that all the People may be Witnesses of the Bride's Virginity; and the People follow with Musick, Singing, and Dancing.

But if they don't find those Marks, every Man throws down his Glass, all the Jollity is at an end, and the Bride's Kindred out of Countenance: Then the Guests commit 1000 Extravagancies in the House, break the Pots and the Earthen Cups, put a Horse's Collar about the Bride's Mother's Neck, make her drink out of one of those broken Cups, and upraid her for not having been more watchful of her Daughter's Chastity; and after they have treated her with all the vile Language imaginable, the Company breaks up: The Friends of the Bride keep within Doors for some Time, being atham'd to go abroad. The Bridegroom may put away his Bride if he pleases; and if he keeps her, he must resolve to put up abundance of Affronts.

Of their BURIALS.

THE Burials of those of Quality are celebrated with such Pomp and Magnificence, that they are more like Triumphs than Interments. The Corps is carried in a Horse or Chariot with Six Horses, all cover'd with Black: The Coffin has a large Black Vellvet Pall over it, with a Cross of Red Sartin in the middle, and Six long Black Silk Tassels, supported by as many of the Deceased's Domestick Servants in close Mourning. Several Priests, Monks, and others, march before the Horse, each of 'em having a white Wax Torch in their Hand. Immediately before the Horse, come 3 Men on Horseback, who carry the Arms of the Deceased, one his Sword, another his Lance, and the third his Dart. After the Burial-Service is over, those that carry the Armour enter the Church on Horseback, and riding furiously up to the Coffin, break the Arms of the Deceased upon it; after which the Body is interr'd. Then there is a Feast, where the Lay-Guests not only drink to Excess, but likewise force the Clergy to follow their Example. When the King dies, he is laid on a Bed of State, and a certain Number of Senators, Ecclesiastical and Temporal, are appointed to attend his Corps. The Republic defrays the Expences out of the Revenues of the Crown. The deceased Queen has the same Ceremonies and Honours allow'd her.

When Women of Quality mourn, they are Apparell'd in a coarse black Stuff; and their Linen is not much finer than Canvas; and the greater their Quality, their Mourning-Weeds are the coarser. All Senators, Deputies and others, that appear at the Diet for electing the next King, must be in Black.

The King's TITLES.

THE Titles given him by Ambassadors, and commonly made use of in the Acts of the Diet, are, *King of Poland, Great Duke of Lithuania, Duke of Russia, Prussia, Masovia, Samogitia, Kiovia, Volhonia, Podolia, Podlachia, Livonia, Smolensko, Severia, and Czernichovia.*

Of the ELECTION of the King.

WHEN the Throne becomes vacant by Death, Deposition, or voluntary Abdication, the Archbishop of *Gnesna*, as *Inter-Rex*, issues Circular Letters to acquaint the Provinces with it, and to summon a General Convocation of the Gentry to meet at *Warsaw*. Before this Meeting, the little Diets take Care to secure the Roads from Thieves, and to guard the Frontiers against Invasions; and Spies are sent into all neighbouring Countries to discover their Designs. They suffer none to go out or come into the Kingdom without Passports till the Election is over: All Foreign Letters, tho' to Senators, are intercepted; the High-Ways are block'd up with Trees, and Ambuscades are plac'd about them. None must write to the Army during this Time; the Use of Fire-Arms is forbid to the People; and all Taverns are shut up.

The Diet consists of the Archbishop of *Gnesna*, who represents the King; and the other Senators, with the Deputies of the Provinces.

In the first Place, they send some of the Senators to the Army to direct the Affairs of War: Others have the Charge of the Treasure; and, till a King is elected, the Senate claims the Title of *Serene* from Foreign Governments. The Diet for ordering Affairs relating to the Election sits only a Fortnight, during which Time all Courts of Judicature cease, except that of the Marshals.

thals. Most Crown'd Heads, Princes and States, send Ambassadors at such Times to the Senate, and the Pope sends his Nuncio. A Gentleman is appointed to attend every such Foreign Minister, to prevent their corrupting the Electors with Money: But this Precaution is of little Use now, since Avarice bears so great Sway here.

When the Diet ends, the Deputies retire to their respective Provinces, acquaint their Constituents with their Proceedings, and of the Day appointed for the Election; and then the Gentry advise what is fit to be propos'd in the Diet.

This Diet of Election, before the Union of Poland with the Great Dutchy, was held at *Pétriow*; but since that Time, it is kept in an open Field half a League from *Warsaw*, near the Village *Pola*, and must not continue above 6 Weeks. There is a great Hall of Boards erected here for the Senate. They first go to Church, to pray God to direct them in their Choice: Then the Nobility chuse their Speaker, who takes an Oath that he will receive no Bribes, keep no Correspondence with any of the Competitors, and do nothing without Consent of the Republick. The Deputies sit in the open Field.

After they have appointed a Court of Justice during the *Interregnum*, all the Senators and Deputies take an Oath on their Knees, administred by the Primate, to maintain an Union among themselves, and to acknowledge none for King but him who is lawfully and unanimously elected; and swears to preserve inviolable the Rights and Privileges of the Republick. Then they oblige themselves not to give their Votes for any, till all the Disorders and Irregularities of the former Reigns be consider'd and redress'd. They annul all the Decrees of Tribunals, and all the Statutes of Kings that intrench on their Liberties; and the Generals are sworn to remove the Forces from the Place of the Diet.

Then the Diet gives Audience to Ambassadors from the Competitors or others, who must be very liberal to the Deputies, by giving Presents, and keeping an open Table, &c. After the Ambassadors have Audience, they proceed to the Election. If the Votes be equal, the Archbishop of *Cnesna* demands three times, If the Exorbitancies and Grievances be redress'd. And if

answer'd in the affirmative, he declares the King Elect, which is also done by the Marshal of the Crown, and the Great Dutchy; and then *Te Deum* is sung.

'Tis a Rule with the Poles never to elect any powerful neighbouring Prince, lest they be subdued, and brought under an absolute Power. Hence it is, that they never elected a King of the House of *Austria*, lest they should be treated by them as are the *Hungarians* and *Bohemians*. The Candidates must not only bribe the Senators and Deputies, who have a Vote in the Election, but also the other Gentlemen who come in great Numbers to the Diet; for they often threaten the Senators and Deputies, if they don't elect whom they propose.

The Qualifications now requir'd in a Candidate are, That he must not be a Native, nor present at the Election; but must be rich, and no absolute or neighbouring Prince. He must either actually be a Roman-Catholick, or promise to become one before he be Crown'd. He must also have the Reputation of a great Soldier. The Person elected commonly expends some Hundred Thousand Pounds Sterling; and the other Competitors generally as much a-piece; so that the Members of the Diet make great Advantage of the Election; and this seems to be one main Reason why they keep their Kingdom Elective.

Their chief Reasons are, 1. That they will rather obey a King than their own Creature, than a Prince whom Hereditary Succession obliges them to obey. 2. They think this Form of Government not liable to the Inconveniencies and Hazards of a King's Minority, which is always attended with Confusions and intestine Broils. 3. They say, when a King owes his Crown to the free Election of the People, he will be more like, in common Gratitude, to make suitable Returns by Clemency and Justice. 4. That no Princes take so great Care to educate their Children as theirs, that they may set up for the Succession on the Bottom of their own Merit, and not on the Plea of Blood. The Power they have of limiting their Kings by the Diet, and redressing the Grievances of former Reigns.

At the Time of this Election, the Diet forms an Act for the Security of their Rights and Privileges, which

Passa Convventa. The King Elefts Ambassador, figns thofe Articles, and takes the Oath for him: Then the King himfelf fwears to keep this Contract inviolable before the Altar in the Church of St. John at Warfaw. The Form of the Contract is,

1. That the King fhall not appoint any Succeffor, but preferve all the Laws made for the Freedom of Election. 2. That he fhall pretend to no Right of Coining of Money, but leave that, and the Profits arifing from it, in the Hands of the Republick. 3. That he will ratify and confirm all the former Articles of Peace made with Foreign Princes. 4. That he will maintain the Peace and Tranquillity of the Publick. 5. That he will not declare War againft any Prince, bring Foreign Troops into the Kingdom, or fuffer any to go out, nor levy any new Troops without Conſent of the Diet. 6. That all Field-Officers fhall be either Poles or Lithuanians, or Natives of thofe Provinces depending on the Crown of Poland. 7. That all the Officers of the Guards fhall be Poles or Lithuanians, and their Colonel a Polish Nobleman, who muſt all ſwear to be ſubjeft to the Grand Marſhal. 8. Not to uſe his Privy-Seal in Affairs that concern the Republick. 9. That he fhall give no Man more Places than the Law allows. 10. After a Place has been vacant 6 Weeks at furtheſt, he fhall beſtow it on ſome well qualify'd Polish Gentleman. 11. That he fhall not marry without Conſent of the Senate, who fhall aſſign him what Retinue they pleaſe. 12. That, by the Conſent of his Council, he fhall regulate the Number of his Troops, and preferve good Diſcipline among 'em. 13. That he fhall build no Fleet without the Advice of his Senate and Gentry. 14. That he fhall not diminifh his Treafure in the Caſtle of Cracow, but rather increaſe it. 15. That he fhall borrow no Money without Conſent of the Diet. 16. That he fhall always adminiſter Juſtice, by the Advice of his Senators. 17. That he fhall be content with thoſe Revenues his Predeceſſors had. 18. That no Strangers be introduc'd into his Council, and that he fhall beſtow no Offices or Dignities upon them. 19. That he fhall not diminifh any of the Offices at his diſpoſal, in the Republick or Countie. 20. That he fhall maintain and defend all Rights, Liberties, Immunities, and Privileges, granted by former Kings to the Poles or Lithuanians, or to any of the Provinces that depend on thoſe two Nations. To theſe Articles they commonly add others, according to the Circumſtances of Time, or the Quality of the Perſon

elect'd. When the King has ſworn to obſerve the *Paſſa Convventa*, the Chancellor preſents him with the Decree of his Election, ſign'd by all the Senators; and the King Eleſt may appoint a Day for his Coronation, which is now perform'd at Cracow. When the King is in the Church, the Archbiſhop of Gneſna asks him, If he will ſupport and maintain the Catholick Faith? If he will rule according to Equity and Juſtice? Then the King Eleſt kneels, kiſſes the Archbiſhop's Hand, and laying his owa upon the Evangeliſt, ſwears to perform all that he had before ſworn at Warfaw: The Subſtance is, That he will maintain all the Rights and Liberties of both theſe Nations granted at any Time to them, or agreed to by his Ambaſſadors, and to perform whatever has been enact'd in the Diet of Election; to reſtore to the Kingdom whatever has been alienated or diſmembred from their Lands and Revenues; not to leſſen the Boundaries of the Kingdom, but to defend and enlarge them; to eſta bliſh Courts of Juſtice throughout the Kingdom, and Great Dutchy; and to ſee that Juſtice be render'd without Delay, without any Favour to Perſons or Things; And laſtly, he conſents, That if it ſhould happen, which GOD forbid, that he the ſaid King Eleſt ſhould violate this his Oath, or any Part of it, that the Inhabitants of the Kingdom, and all his Dominions, ſhall be totally diſcharg'd from paying him Obedience and Fidelity.

After the King is thus Sworn, he riſes, hears the *Paſſa Convventa* read again, and confirms the Oath which he had taken concerning them. Then kneeling, he receives the Benediction of the Archbiſhop and Biſhops; and his upper Garment being put off, the Archbiſhop anoints his Right Hand and Arm up to his Elbow; and his Shoulder, with conſecrated Oil, with theſe Words, I anoint thee King with conſecrated Oil, in the Name of the Father, Son, and Holy Ghoſt. Amen. Then he is led to a Chapel, where he is Habited much like a Biſhop: After which he has other Ornaments put on by the two Marſhals of the Kingdom and Great Dutchy; and then he is convey'd to the Throne erected in the Church, by the Senators, who are Officers of State, the Standard-Bearer of the Kingdom walking before. After hearing Maſs, he is brought back to the Altar, where the Archbiſhop delivers a drawn Sword into his Right Hand, ſaying, Receive

this

this Sword, and cordially protect and defend the Holy Church against all Unbelievers. Then the King delivers the Sword to the Great Sword-Bearer of the Kingdom: He puts it up in the Scabbard, and returns it to the Archbishop, who girds it to the King's Side; upon which the King rises, and drawing it again, flourishes it three times over his Head, to signify that he will defend the Trinity and Church against all Unbelievers. Then the King kneels, and the Archbishop puts the Crown on his Head, which the Bishops of Cracow and Cujavia support with their Hands. In the mean time the Archbishop says some Prayers; after which he puts the Scepter into the King's Right Hand, and the Globe into his Left. Then his Majesty is brought back between the Archbishop and the two Bishops to the Throne, where he is plac'd by the Archbishop, with these Words, *Sit, and maintain the Place given you by GOD, &c.* The King being thus seated, the Archbishop and Bishops return to the Altar, where they sing *Te Deum*; which being ended, the King comes and offers him Gold, kisses his Hand, and having made his Confession, receives the Sacrament and Benediction from him. Then the Court-Marshal cries, *Vivat Rex, Vivat Rex.*

Next Day the King goes in great Pomp to the Town-House, the Senators carrying the *Régale* before him; and the Great Treasurer of the Kingdom scatters among the People a great Number of Gold and Silver Medals. He is then Habited anew with his Royal Robes, and seated on a splendid Throne. Then the Magistrates of Cities pay him their Homage, assure him of their Fidelity, and present him with the Keys of their City-Gates: Then they take the Oath of Fealty on their Knees. After this the Primate lays down his Authority as *Inter-Rex*, and all the Members of the Diet take the Oath of Allegiance to the King.

The A R M S of Poland.

ARE Quarterly: In 1st and 4th *Quarters*, an Eagle-Argent Crown'd and Arm'd Or, for Poland. In the 2d and 3d *Quarters*, a Cavalier Arm'd Cap-a-pee Argent. In the *Dexter*, a naked Sword of the same. In the *Sinister*, a Shield-Azure, charg'd with a double-barr'd Cross Or mounted on a Courtes

of the 2d, barb'd of the 3d, and neil'd of the 4th for *Lithuania*. For the Crest, a Crown heighten'd with 8 Flurets, and clos'd with 4 Demi-Circles, ending in a *Mantle*, Or, which is the Crest of Poland: The Motto is, *Habent sua fidera Reges.*

Piszecki, in his Chronicle, says, That after the Defeat over *Varnus*, the Germans took a Black Eagle, one of the Roman Standards, and the Sarmatian Auxiliaries a White one. Upon this Account the Poles have still for their Arms, in a *Field-Gules*, an Eagle-Argent, and the Germans a Black Eagle.

Of the King's REVENUES.

WHEN the King is Crown'd, the Diet allows him a Pension of above 140000 *l. per Annum*, which, together with his Patrimonial Estate and Crown Lands, maintains him a very splendid Court in that cheap Country. He has besides great Sums of Money for Nominations to Employments, Civil and Military. *John Sobieski* had in Revenues, Pensions, his own Estate, and other Casualties, about 300000 *l. Sterling per Annum*. The Crown Revenues are Imposts on Merchandizes, and the *Jews*, Part of the Customs of *Dantzick*, and the Revenues of the Salt-Mines of *Cracow* and other Places. The Republick frequently allows the Queen an Annual Pension, which is generally computed at 30000 *l. Sterling*. The King has his *Polish*, *German*, and *Hungarian* Guards, and the same Officers of his Household as other Kings.

The Power of the King is much limited, for the Subjects have all along secur'd their Liberties by their Prudence and Valour. They don't relish the Slavish Temper of the *Turks* and *Muscovites*, who suffer themselves to be govern'd according to the Humour or Pleasure of their Prince. He cannot name any of his Children to Places of Profit or Honour, nor purchase Land for them in any Place of the Kingdom, without Consent of the Diet. When a *Polish* Nobleman is in any Preferment, tho' he commit Crimes against the Crown or State, the King has no Power to turn him out, without the unanimous Consent of the Diet; for every Member has a negative Voice, which occasions great Inconveniencies; for neither the King nor the State are well serv'd.

Of the SENATE of POLAND.

THE Government is intirely in the Hands of the Gentry, who are not the tenth Part of the Kingdom: Their Vassals or Slaves have no more Property, or Benefit of the Laws, than our Negroes in the *West-Indies*. The Senators are nam'd by the King, and continue for Life: They take an Oath to conserve inviolable the Rights and Liberties of the Republick; by which they think themselves oblig'd to contradict the King when he designs to invade their Rights: Even the Nuncio's in the Diet assume this Liberty. They have the same Power the *Tribuni Plebis* had among the *Romans*. These Nuncio's or Deputies sometimes affront and huff their Kings; as they did to *John Sobieski*, whom they call'd a *Nero* and Tyrant. Four of the Senators always attend the King, and he is oblig'd to consult 'em in all Affairs.

There are 17 Ecclesiastical Senators. The Archbishop of *Gnesna* is Primate of the Kingdom, and styles himself, *The Popes Legate born*. He can reverse whatever is done in any of the Bishops Courts; and it is Death to draw a Sword in his Presence. A Golden Cross is carried before him when he goes to the Diet, or to the King; and when he sits, his Chaplain holds it behind his Chair. His Marshal, who is a Senator, carries a Staff before his Coach, and salutes none with it but the King. He visits no Ambassadors, tho' they visit him. During the *Interregnum*, he may coin Money in his own Name, the Revenues of the Crown belong to him, and he has then the same Officers with the King; but at all times he has Drums beating and Trumpets sounding within and without, before he sits down to Table; and he may visit the King when he pleases.

The Lay-Senators are 128. The Diet or Parliament consists of King, Senators, and Deputies. The King is oblig'd every 3d Year to call a Diet; two must be held at *Warsaw*, and the 3d at *Grodno* in *Lithuania*; because, at making the Union, the *Lithuanians* alledg'd it was inconvenient for them to come always as far as *Poland*. The King must send his Circular Letters six Weeks before the Session, and a List of all the Affairs

and Articles he proposes to be treated in the Diet. Upon this, a little Diet, of all the Gentry in each Palatinate, meets, and resolves what is to be done about the Articles sent by the King, and chuse Nuncio's or Deputies to represent their Decisions, to the Diet. The Decision here, as well as in the great Diet, goes not by Plurality of Votes, but by Unanimous Consent; which often occasions great Confusions, and the Diets to break up without doing any thing. The Number of those Deputies is, 178 for *Poland*, and 70 for *Prussia*, according to the Number of their Provinces and Towns. Sometimes they disagree about chusing a Speaker, and break up as in the Grand Diet, in 1695. *Hauteville* says, the Poles employ more Time in drinking and feasting, than in debating Matters of State; for they never think on that Work 'till they begin to want Money and Hungarian Wine. In the Grand Diet, the Lower House is made up of the Deputies, and the Higher of the Senators; the latter are Judges of Criminal Affairs, and the Deputies bring up Bills to them to be debated. Five Days before the Conclusion of the Diet, the Senators and Deputies meet together in the Upper House. The Diet is not to sit above 6 Weeks, and when that Time is expir'd, the Deputies send their Speaker to the King, to take leave of him in their Name, and will not sit any longer, be the Affairs of the Republick ever so pressing; as they did in 1649, when the *Tartars* and *Cossacks* had almost over-run the Kingdom. The Reason of this is, that by this Time their Provisions are spent by their great Train of Guards and Domesticks. The King, during the Diet, is oblig'd to increase his Guards, otherwise he might be expos'd to the Insults of the Gentry, who frequently take Liberty in the Diet to threaten and abuse him to his Face.

There is no Assembly in *Europe* more subject to Disorders, Factions, and Bribes; so that it seldom concludes in Peace. These Intrigues and Mismanagements are generally fomented by the *French* and *Austrian* Factions.

Their L A W S.

THEY bear Date from the Time of *Cassimir the Great*, before whose Time they have none in Writing; being then govern'd by the Customs of their Ancestors: But

But he brought in the *Magdeburgh Laws*, which are now call'd the *Constitutions of Poland*. *Lithuania* and *Polinia* have still their own Laws and Customs: And the *Regal* and *Ducal Prussias* have also their own Municipal Laws, call'd the *Laws of Culm*.

The *Poles* admire this Form of Government, because it defends them against the Oppressions and Tyrannies of absolute Governments; of which their Neighbours, the *Turks* and *Muscovites*, are miserable Examples. Their former Miseries, under the *Weywodes*, made them abhor *Aristocracy*, and their Gentry are averse to *Democracy*, because of its levelling Principles.

Of their MILITARY AFFAIRS.

IN the Infancy of the *Polish* Government, the *Poles* were obliged to fight their King's Quarrels whenever requir'd. *Bolslaus Chrobry* first instituted a Militia of Horse and Foot, to be levy'd out of every Palatinate and District. *Boterus* says, the *Poles* can raise above 100000 Horse, and the *Lithuanians* 70000. Their Foreign hir'd Foot have sometimes exceeded 30000. The *Cossacks*, when subject to the *Poles*, serv'd on Foot, and were of great Use in their Wars, especially in those against the *Tartars* and *Turks*. *Amurath the Great* used to say of 'em, *That in spite of the other Potentates of Europe, he could sleep on both Ears; but that those Gad-flies, meaning the Cossacks, would scarce suffer him to sleep on either.* They had at one Time, when in Rebellion against *Poland*, an Army of 100000 Men.

The *Polish* Armies are badly pay'd, which occasions frequent Mutinies: The Soldiers are also obliged to rob for Sustainance. They seldom make use of Spies, so that they know little of the Designs of their Enemies. Provisions are frequently scarce in their Army, because they have no such Thing as Suters or Magazines; and, which is extremely impolitick, if their Army consist of 20000 Men, they have certainly 20000 more Servants and idle Fellows attending them.

It is not in the King's Power to chuse Men of greatest Experience and Merit for Generals; but he is often obliged to give the Charge of the Army to a rich Nobleman, who knows nothing of the Matter;

and when he once gets his Commission, the King cannot recal it. The Subalterns don't come to the Place of Rendezvous till six Weeks after the Time appointed, and leave the Army a Month before the Campaign is ended, which Grievance is not to be redress'd without great Danger.

Monsieur Dalerac's Account of their Military Affairs.

THE Republick has two separate Armies, under two different Generals, who are not subordinate nor dependant upon one another: The first is that of the Kingdom of *Poland*, and the second is that of the Grand Dutchy of *Lithuania*, which is an Auxiliary State, and Ally to the other, and not a subjected Province; so that their best concerted Expeditions frequently miscarry, for want of Union and Expedition: For Instance; At the Siege of *Vienna*, in 1683, the King was returning back to *Poland*, when the *Lithuanians* join'd him in *Hungary*. The Army of the Kingdom is to consist of 36000 Men, and that of *Lithuania* of 12000.

Each Army has a great and little General; and their Badge of Command is a great Lance, adorn'd at the End with Feathers or Knots of Ribbons, under a great Ball of some rich Stuff: It is carried before the two Generals. The King's has a Plume of *Heron's* or *Eagle's* Feathers; and when he commands in Person, his only is carried aloft: They have also a Battoon given them, as the Marshals of *France*. A Great General is only accountable to a General Diet, and has an Allowance of 60000 Francs, at 10 Sous per Franc.

The *Hussars* are the first *Gens d'Arms* of the Kingdom, and the finest Cavalry in *Europe*: They are compos'd of handsome Men, mounted on the finest Horses of the Kingdom, with Led-horses richly capparison'd; their Bridles adorn'd with Plates and Nails of Silver, or Vermilion gilt; embroider'd Saddles, with gilt Boy's; Houz's according to the *Turkish* Fashion, with Fringes of Gold and Silver; and a rich Sword fix'd to the left Side of the Saddle, under the Horseman's Thigh. They have also Pistols; do no Duty, are all of them Exempts, and reserv'd

serv'd for Battle, and other distinguishing Actions. The King and Generals call them *Tovariches*, which signifies Comrade. They have much Equipage, fine Tents, and a great Number of Servants. They are arm'd with Back and Breast, a scal'd Head-piece, adorn'd with Pendants of Iron Plates quilted, which come down to their Shoulders: They have a Gantlet of Mail: Over this they wear a great Leopard's or Tyger's Skin, in Form of a loose Coar, made in a Warlike Fashion.

Their Lances are larger than the *French* great Pikes, and pointed with Iron; the upper Part has a Streamer of Taffeta, in Form of a Standard, 3 or 4 Ells long: Because of its Weight, it must be carried in a Boot fix'd to the Saddle. When they attack their Enemies, they never retire, but break through all that oppose them, except they be encompass'd; but if their Enemies open their Ranks, the Danger from them is over. If the Horse be kill'd, the *Hussar* cannot raise himself, because of the Weight of his Armour; so that they are only of Service in Plains.

They have two Servants, each arm'd with Head-pieces and Lances, have Coats of the Skins of White Wolves, and behind their Backs a great Wing of Eagle's Feathers, which is good for nothing but to frighten Children. The King, the Princes of the Blood, the Senators, Bishops, and Ministers of State, have all Companies of them to attend them.

The 2d Sort of *Gens d'Arms* is the *Pancernes*, inferior to the *Hussars*, but above the rest of the Cavalry; they have a Coat of Mail, with an Iron Cap, cover'd with a Net-work of the same, which comes down to their Shoulders, and shewing only half their Visage, with their great Whiskers, makes them look like Satyrs: They have Falcheons and Muskets: They are as well mounted as the *Hussars*, but not so richly equip'd. In lieu of a Trumpet, they have an Instrument of Copper, not much bigger than a Flageolet, crook'd and hollow like a Cornet, which makes a shrill and savage Noise: 'Tis suppos'd to be the *Litnus* of the Ancients.

The rest of the *Polish* Army consists of *Walachians*, *Cossacks*, *Poles*, and sometimes *Tartars*.

That which they call the Foreign Army has another Sort of Discipline than the former; they are arm'd like those of *Germany* and *France*; only the Dragoons are mounted on sorry Jades, and are almost naked. The Infantry is more tatter'd than any *Spaniards* or *Italians*, and not uniform in their Cloaths: They have no Swords, but long Battle-Axes which are of admirable Use; they serve as Rests to their Muskets, and there's nothing comparable to them for covering a Battalion, and defending them against Horse. All Foreigners may be employ'd in this Army. In a Word, they are the Safety of the whole, and do all the Service, the rest being little more than Ornament.

The old Weapons of the *Poles* were Scimiters, Lances, Gides, Javelins, Bows and Arrows. At present they use Fire-Arms; so that now they have nothing of the old *Sarmatian* Armour left but the Bow and Arrow. The *Poles* had formerly Bucklers of Osier of a round Figure, cover'd with Skins a little rais'd and pointed in the middle, where there was a Piece of Iron, but is now almost quite out of Use. Some of these Bucklers cost 300 Ducats of Gold. At the Siege of *Vienna*, *John Sobieski* had one of beaten Gold fix'd to his Saddle: It had upon it the Representation of the Battle of *Kotchim* in *Basso Relievo*.

The *Poles* have a Scimiter longer and heavier than those of the *Turks*, but they don't cut so well.

The *Cossacks* are the only Persons employ'd to bring them Intelligence; of which our Author gives a pleasant Instance: One of them having catch'd a *Turk*, threw him down like a Bundle into King *John Sobieski's* Tent, went to the Treasurer for his Premium; which having receiv'd, he went back to the King's Tent, and said, *John, they have paid me, God restore it thee, and good Night*. The *Poles* know little of the Stratagems of War, or of carrying on Sieges. Till of late, they had neither main nor ordinary Guards, nor Convoy for their Foragers. Their Intrenchments were like the Tabor of the *Cossacks*. The Marches of their Army ruins the Country more than the Incursions of the Enemy: For if an Officer be only to march from *Warsaw* to *Leopol*, which is but 50 Leagues, he is sure to march to the Left and to the Right, and

make

make a long *Tour*, for they have no such thing as a *Route* appointed; so that he will spend in that Journey two or three Months, eating up the Peasants at Discretion: And if he does but come at the Time appointed, there is no Enquiry made; so that an Officer will make 5 or 6000 Francs by a small Journey.

Their RELIGION.

THE Poles were first converted in 964, in the Reign of *Miecslaus I.* as is said already in the History of his Reign. The Day of that Prince's Conversion is observ'd as an Anniversary, when the Boys dip Statues in Rivers in Memory of his Baptism. Together with Christianity, they receiv'd all the Errors and Corruptions of the then Church of Rome. Those of *Red-Russia* entertain'd the Faith of the Greek Church, which they follow in many Places to this Day, and call the Roman-Catholicks *Latins*, by way of Contempt. Some of the Greek Church in this Kingdom are call'd *Uniate*, and differ only from the Papists by having their Worship in the Greek Language. Their Priests are call'd *Popi*.

Formerly Poland swarm'd with *Anabaptists*, *Arians*, *Tritheists*, *Photinians*, *Ebionites*, *Nestorians*, and *Socinians*: The last were expelled by *John Casimir*, who obliged them by an Edict to leave the Kingdom, and allow'd them 3 Years to remove their Effects. Notwithstanding this, they were encouraged by some of the Gentry, and among others by *George Blandrata*, a Physician, till *John Sobieski* publish'd a more severe Edict, whereby the *Socinians* were immediately driven out. One Reason was, that they publish'd a Book, Entitled, *Tormentum Trinitatem Throno deturbans*.

The Lutherans are tolerated in *Polish Prussia*, the King being oblig'd to it by his Coronation-Oath. There are also some Calvinists in this Kingdom. *Nicholas Radziwil* was the first Polish Nobleman that embrac'd Calvinism, in the Reign of *Sigismundus Augustus*, and protected all of that Profession.

They have also *Armenians*, chiefly in the Towns of *Russia* and *Podolia*: They have their Worship in their own Language, but acknowledge the See of Rome. There are Jews every where in Poland; but they must

not trade within 12 Leagues of *Warsaw*. They pay about 120000 Florins per Annum to the State. In the Great Duchy of *Lithuania*, there are about 30000 *Tartars*, who are *Mahometans*, and are oblig'd to send 1200 Men Yearly to the Wars against the *Turks* and *Tartars*. There are many Pagan Idolaters on the Frontiers of *Livonia*, *Prussia* and *Samogitia*, who still retain their ancient Superstitions, whereof one is, That when any one dies, they dig up the Body of the last deceased of that Family, and cut off its Head, to prevent the Death of any more of their Friends.

The Poles are generally bigotted Papists, and formerly would make no Alliance with Protestants: So that *Uladius Jagello* rejected the Crown of *Bohemia*, because the *Hussites* had then over-run that Kingdom.

Bishops preside in the Assembly of their States, that the Church may receive no Prejudice. The lesser Clergy have Seats in all Tribunals, and the Great Secretary of the Kingdom is always a Churchman.

The Regular Clergy are more esteem'd than the Secular. Fryars-Mendicants may enter the privatest Part of any House without knocking at the Door. The Regulars there are all rich, but debauch'd, immodest, and avow'd Drunkards: Nor do their Superiors or the People rebuke them for it.

On Fast-Days, the Poles abstain from Milk, Eggs, Flesh, and boil'd Fish, at Nights only; but may drink all Day if they please. On *Fridays* and *Saturdays*, they forbear Butter, Cheese, Milk, and Eggs. On Fast-Days, they won't eat Butter or Cheese, tho' the Pope give them a Dispensation, as he did in Cardinal *Radziwiski's* Time; for which they call'd the Pope a Heretick.

The Inferior Secular Clergy never attend at the Offices of their Church, but give poor Scholars Two-pence a Day to say their Hours for them in the Quire. All the Priests here neglect their Cures, and the Bishops never correct the Inferior Clergy when they do amiss.

The Poles, at the Elevation of the Host, beat themselves, and knock their Heads against the Pavement, or the Benches where they sit, with so great Violence, that it may be heard at a considerable Distance. In Winter, the Ladies, and some of the ni-

cest Men, have Furr'd Bags in Church, to preserve their Feet from the excessive Cold. Their Churches are fine, and well adorn'd. The Jesuits of *Leopol* have a Cope they wear at Mass, so thick set with Pearls, that a Man is scarce able to bear its Weight.

Their LEARNING.

IN the Universities of *Cracow* and *Vilna*, their chief Study is to speak Latin; but they are Strangers to Polite Learning. They disregard the Oriental Languages; but are so fond of Latin, that their Servants and common People speak it fluently, and so much the more easily, that the Latin Syntax agrees with that of their Native Tongue: In every Village, they have Schoolmasters to teach it; and the Jesuits in all Towns of Note have Colleges to instruct their Youth in that Language. The Poles value themselves upon this as the greatest Improvement of Humane Nature.

Their Theology is a Mixture of *Aristotle's* Logicks and Metaphysics with School-Divinity. They talk constantly of *Quiddities*, *Modes*, *Entities*, *Substantial Forms*, and *Essences*. They quote *Albertus Magnus* upon all Occasions, and admire *Thomas Aquinas* and *Scotus*. Their Divines know little of the Scriptures, Practical Divinity, Church History, or Antiquities; but give an implicit Faith to Councils and Church Decisions.

Dr. Connor says, they have few Physicians, except Foreigners. The Gentry have little Opportunity to improve themselves at home, and none but the richer Sort can go abroad, who are generally too lazy or proud to give the necessary Application to that Study: Tho' such of the Natives as are Physicians, use some of the same Medicines that we do, they know not how to apply them. They don't use Salivation in Venereal Distempers, but pretend to cure it by sweating or Bathing in a hot Decoction of Herbs. The Poles are seldom troubled with the Scurvy or Malignant Fevers. Pleurifies are not so dangerous there as in other Countries; but they think Wounds and Ulcers in the Legs incurable.

The *Sieur de Benuplan* says, he has seen *Cossacks* sick of a Fever, who us'd no other Medicine but half a Bandaleer of Gun-

powder, dissolv'd in half a Pint of *Aqua-Vita*, mix'd well together, which they drank off, went to Bed, and rose next Morning in perfect Health. He says, others mix Ashes with *Aqua-Vita*, and it has the same Effect. Many of their Diseases proceed from Drunkenness, to which they are generally so much addicted, that they have a Proverb, *That a Man had as good drink Water, if he does not feel the Effects of drinking.*

They have had some very great Scholars however, as *Stanislaus Hossius*, Cardinal and Legate at the Council of Trent, and *Martinius a Michovia*; *Johannes Dlugossius*, *Martinus Cromerus*, and *Starowolscius*, reckon'd good Historians; *Nicholaus Copernicus*, the great Astronomer; *Martinus Smiglecius*, a Logician; *Abr. Brzovius*, the Continuator of *Baronius's* Annals; *Sorabrevius*, and *Johannes a Lasco*, a Nobleman, a famous Reformer. *Casimir* has in his Odes endeavour'd to imitate *Horace*, and his Language is not contemptible.

Their LANGUAGE.

AS the Poles have the same Origin with the Muscovites, Bohemians, Croatsians, Moravians, Silesians, Cassubians, Bulgarians, Rascians, Servians, Illyrians, &c. *Cromerus* says, they have the same Sclavonick Language, but differ so much in Dialects that they scarce understand one another. The Terms of Mechanick Arts are German, and in some Towns and Villages they speak that Language. Many of the Gentry speak French and Italian. The Polish Tongue is not copious, and very harsh, and difficult to pronounce, and abounds so with Consonants, that some Words, for Instance, *Chrzesciez*, a Gad-fly, have 7 or 8 Consonants without any Vowel; yet in speaking, they sound them with Vowels.

Of the Divison of POLAND.

IT is divided into the Kingdom of Poland and Dukedom of Lithuania, which was united to that Kingdom in 1569, by the Diet of Lublin, in the Reign of *Sigismundus Augustus*. The Kingdom of Poland contains Great and Little Poland, Red Russia, and Prussia. The Dutchy of Lithuania is divided into Lithuania, White Russia, Samogitia,

Polish Livonia, and Curland. These are divided into Provinces, which are subdivided into Palatinates or Governments.

GREAT POLAND.

IT is bounded on the N. W. by *Pomerania*, on the W. by the Electorate of *Brandenburgh* and *Silesia*, on the S. by Part of *Silesia*, on the S. E. by *Little Poland*, on the E. by *Mazovia*, and on the N. by *Regal Prussia*: 'Tis generally a Level and Champagne Country, has pleasant Rivers, Lakes and Ponds, and is well furnish'd with all manner of Fish and Fowl. Some Parts of *Cujavia* are more Mountainous: The Hills there abound with Sheep and other Cattle, and the Vallies have Plenty of Corn. Great Poland is so call'd, because *Lechus* chose *Gnesna*, a City belonging to this Country, for his Residence: It comprehends 3 Provinces, viz. *Poland*, properly so call'd, *Cujavia*, and *Mazovia*: The Metropolis is *Posna*, or *Posnan*, in Lat. 52 $\frac{1}{2}$. Long. 37. and gives Name to a Palatinate: 'Tis seated upon the River *Worta*, 10 German Miles S. W. of *Gnesna*, and 50 N. from *Cracow*. This City is famous for Trade, and for an University, founded by Bishop *John Lubrinski*. The Jesuits College is a fine Place, where Learning is much encourag'd, and the Monastery is neatly built. The People here are richer in their Apparel than in any other Place of *Poland*, except *Cracow*, to which it is not inferior in Trade, Beauty or Riches. The Inhabitants are most Papists. Here are also many Jews, who have greater Privileges than the Citizens. The Bishop is subject to the Archbishop of *Gnesna*. This City is strong, and has a good Castle: It is surrounded with a double Wall, and a deep Ditch. The Suburbs are encompass'd by a Morass and deep Lake, and are frequently laid under Water by the overflowing of the *Worta*. Other Towns of Note are, 1. *Koscien*, built among Marshes, defended with a broad and deep Ditch, and a double Wall, and lies 28 Miles from *Posnan*. 2. *Uskow*, a Wall'd Town, in a Plain, 44 English Miles from *Posnan*. 3. *Sremisk*, *Krzwin*, *Premeck*, Timber-Towns belonging to this District. 4. *Miedzycze*, on the

Confines of *Silesia*, 60 English Miles from *Posnan*: The Castle is thought impregnable, and several German Princes have found it so. 5. *Slupca*, upon the *Worta*, with a very strong Wall, and other Fortifications. 6. *Plydra*, a Wall'd Town, upon the *Worta*, 36 Miles from *Kalish*. Most Towns of this Palatinate are built of Wood, except the Publick Edifices.

The Senators are, the Bishop, Palatine and Castellani of *Posnan*, the Castellans of *Miedzycze*, *Ragozna*, *Santoc*, *Krzwin*, *Premeck*, and *Srymsk*.

The Standard and Arms of this Palatinate are, in a Field-Gules, an Eagle expanded Argent.

Of the Palatinate of KALISH.

IT has the Palatinate of *Posna* to the W. that of *Siradia* to the S. and *Lencicia* to the E. has its Name from the City of *Kalish*, mention'd by *Ptolemy*, on the River *Prośnie*, which a little lower falls into the *Worta*: It is fortified with a strong Brick Wall. *Stanislaus Karnicow* founded here the stately College of Jesuits. It is 20 Miles E. from the Confines of *Silesia*, and as many N. from *Siradia*. It has the Ruins of a strong Castle, destroy'd by the *Teutonic* Knights. The other remarkable Towns are, 1. *Gnesen*, or *Gnesna*, in Lat. 52 $\frac{1}{2}$. Long. 38. It was formerly the Metropolis of all *Poland*, but now only of *Great Poland*: It was built by *Lechus*. In the Cathedral, there's inestimable Treasury of Gold, Silver, and curious enamell'd Vessels, left by *Sigismund III.* other Princes of *Poland*, and the Archbishops of this See; but most of it is owing to the Tomb of *St. Adelbert*, which is cover'd with Silver. The Legacies of *Henry Firley*, late Archbishop, has greatly increas'd it; for besides many costly Vessels and Priests Vestments, he gave them his own Mitre, worth 23000*l.* Sterling. The Gates of the Cathedral are of Corinthian Brass, curiously wrought: They were brought from the Grecian Monastery of *Corfuna*, in the *Taurica Chersonesus*, to *Kiow*, and from thence to this Place, by *Bolleslaus II.* In 1611, this City was burnt down, daily loses Part of its ancient Glory.

and is now only considerable for being the Seat of the Cardinal Primate. 'Tis 28 English Miles N. W. from *Kalisz*, 28 E. from *Pozna*, 132 N. W. from *Warsaw*, 120 S. from *Danzick*, and 52 from *Thorn*. 2. *Kolo*, a Timber-built Town, on the *Warta*, 20 English Miles from *Kalisz*. 3. *Land*, on the *Warta*. 4. *Naklo*, a Timber-Town, near the Lake *Goplo*, with a Wall'd Castle, situated among Marshes. 5. *Chocia*. *Andrew Lipski*, Bishop of *Cracow*, founded a Collegiate Church here, with vast Expence.

The Senators are, the Palatine and Castellan of *Kalisz*, and the Castellans of *Land*, *Naklo*, and *Kamin*.

The Standard and Arms of the Palatinate are, in a *Field-Argent* and *Gules*, a Buffalo's-Head eras'd *Sables*, with a Crown betwixt his Horns, all in a *Chieky*.

Of the Palatinate of SIRADIA.

IT has *Silesia* on the W. and *Little Poland* on the S. and S. E. *Kalisz* on the N. and *Lencicia* on the E. The chief Town is *Sirad*, 24 English Miles S. from *Kalisz*, and 40 S. W. from *Lencicia*. It is situated upon the River *Warta*, fortified with a strong Brick Wall and a Castle: The Houses are of Wood, very mean, and low. This City, and the Territories about it, was made formerly a Dukedom, and was usually given to the King's Second Son. Other Towns of Note are, 1. *Petricow*, 28 English Miles E. from *Sirad*, and 16 English Miles N. from the Frontiers of *Lesser Poland*. 'Tis situated in a Fenny Place, but is a neat well-built City. The Diet of *Poland* sits once *per Ann.* here, as does one of the Great Tribunals in the Suburbs. In 1640, this City was burnt down. The King had a Palace here, which is now gone to Decay. 2. *Vielum*, which borders on *Silesia*. 'Tis not equal in Beauty to the other Cities of these Parts, tho' its Houses are of Brick. A great Part of it was burnt in 1656, during the *Swedish War*; but 'twas afterwards repair'd. 3. *Rospirza*, seated among Marshes. 4. *Spicimir* built of Wood. 5. *Wort*, built on a River of the same Name. 6. *Lusk*, where *Johannes Las-*

cus, Archbishop of *Gnesna*, founded a Church, and richly endow'd it at his own Charge. 7. *Ostresow*, built of Timber, on the Borders of *Silesia*, and encompass'd with Woods.

The Senators are, the Palatine and Castellan of *Sirad*, the Castellans of *Rospirza*, *Spicimir*, and *Konarzew*.

The Arms of this Palatinate are, in a *Field-Vert*, a *Lion-Gules*, and *Engle-Sables*, both Counter-coup'd in the middle.

Of the Palatinate of RAVA.

IT is situated between *Lesser Poland*, *Masovia*, *Cujavia*, and the Palatinate of *Lanschet*. It is so called from its principal Town *Rava*, on the River of that Name, 60 Miles S. W. from *Warsaw*, and 44 S. from *Ploczko*: It is built for the most part of Wood, and tolerably populous. Prisoners of Quality, and Part of the Revenues of the Crown, are kept in the Castle. In this City the Jesuits have a College, much visited by Learned Men.

Other Towns are, 1. *Lowitz*, more populous than the former, and lies 20 English Miles from it. The Castle is surrounded by the River *Bsure*. The Archbishop of *Gnesna* has his ordinary Residence in his Palace built here among the Marshes. The Church is a beautiful Structure. In this City are many great Fairs, frequented by Merchants from all Places. 2. *Volhovia*, a populous Town, where the Bishop of *Cujavia* has his Palace. 3. *Gombin*, a large Town, built with Timber. 4. *Sochaczow*, defended with Palisadoes, and a Castle built on a Rock. 5. *Gostinin*, built of Wood, among Marshes. *Demetrius Zukki*, Czar of *Muscovy*, was imprison'd and dy'd here. 6. *Viasdum*, remarkable for its Strength, and the Beauty of its Castle: It lies near *Rava* to the W.

The Senators are, the Palatine and Castellan of *Rava*, and the Castellans of *Gostinin* and *Sochaczow*.

The Standard and Arms are, in a *Field-Gules*, an *Engle-Sable*, with the Letter R. on his Breast.

The Palatinate of LENCICIA, or LANSCHET.

IT is situated betwixt *Rava* to the S. E. *Siradia* to the S. W. *Kalish* to the W. and *Little Poland* to the S. The chief Town is *Lenicia*, seated upon the River *Bure*, among Lakes. It has a Castle built upon a Rock, is encompass'd with a Ditch and Brick Wall, and has a great Fair once a Year. It was burnt in 1656. 'Tis about 10 English Miles from the River *Warta*, and 40 Miles S. E. from *Gnesna*. One of the little Diets meets here. *Orlow*, is built of Timber, seated among Lakes, and is 16 Miles from *Lanschet*. *Piantkum*, built among Marshes, on the Banks of the River *Bure*, Beer is transported from this Place all the Kingdom over. Here is also a Monastery. *Uniejovia*, has a famous Castle, founded on the *Worta*.

The Senators of this Palatinate are, the Palatine and Castellan of *Lanschet*, and the Castellans of *Bresina*, *Inowlacz*, and *Biechovia*.

Their Arms are, in a Field-Gules, an Eagle-Argent, and Lion-Sables, both Counter-coup'd in the middle, and the latter Crown'd Or.

The Province of CUJAVIA.

IT has *Masovia* on the E. *Kalish* on the S. and *Regal Prussia* on the N. It contains two Palatinates, viz. *Brzestye*, which lies to E. and S. and *Inowladyslaw*, or *Inowlacz*, to the S.

The Palatinate of BRZESTYE.

THIS Palatinate is so call'd from *Brzestye*, a small Town, 16 English Miles W. from the *Weissel*, 32 S. from *Thorn*, and 40 from *Lenicia*. It is situated in Fenny Ground, is built of Brick, and Wood inter-laid, and defended with a very strong Wall, and deep Ditch. Other Towns are, 1. *Uladyslaw*, the chief Town of the Province of *Cujavia*, lies upon the *Weissel*, and is the Seat of the Bishop of this Province, and of *Pomeran*, who have been under the Arch-

bishop of *Gnesna* since 1173. The Cathedral is a sorry old fashion'd Building, but well furnish'd with Plate, rich Ornaments, and Relicks. The Houses are generally of Brick, and it has a Castle indifferently fortified. *Matthias Golanciew*, 42 Years Bishop of this See, built a stately Palace here, and founded the Church of St. *Vital* the Martyr. This City lies betwixt *Thorn* and *Poloczko*, 20 English Miles S. W. from the first, and 20 S. E. from the latter, 60 Miles N. E. from *Gnesna*, and 88 S. E. from *Warsaw*. 2. *Cruswie*, upon the North Bank of the Lake *Goplo*: It has a Brick Castle in the middle of the Lake, to which *Papiet* retir'd, and was destroy'd by Mice and Rats, as a Punishment from Heaven for poisoning his Relations in a Banquet. It is next to *Gnesna* for Antiquity. Upon the same Shore with *Uladyslaw*, and not far from it, lies, 3. *Niesowia*, a Wall'd Town. 4. *Radziew*, built of Timber, near a very great Lake. The Diets of this Palatinate, and of *Inowladyslaw*, are kept in this Town. 5. *Kosnow*, which has a strong Castle. 6. *Kowalew*, built of Timber, among Marshes.

This Palatinate is very fertile, and abounds with all Sorts of Grain, which not only suffices the Inhabitants, but is transported in vast Quantities to *Dantzick* by several navigable Rivers.

The Senators are, the Bishop of *Uladyslaw*, the Palatine and Castellan of *Brzestye*, and the Castellans of *Cruswie* and *Cowal*.

The Arms are, in a Field-Or, an Eagle-Gules, and Lion-Sables, Counter-coup'd in the middle.

The Territory of *Dobrzin* is separated from *Cujavia* by the *Weissel*, and is so call'd from the chief Town of that Name, on the River *Weissel*, betwixt *Poloczko* and *Uladyslaw*: 'Tis fortified with Palisadoes, and is seated on a Hill. It had formerly a Castle, and was given to the Knights of the *Teutonic* Order by the Duke of *Masovia*.

The Palatinate of INOWLA- DISLOW.

IT has *Prussia* on the N. *Brzestye* on the S. E. the *Weissel* on the E. and *Kalish* on the S. It contains the Territories of *Bydgosz*, *Petro*,

Bebro, and *Nowolacz*: This Palatinate sends to the Diet of Poland, besides the Palatine, 4 Castellans, viz. of *Nowolacz*, *Bydgosz*, and *Czanow*; the chief Town is *Nowolacz*, on the River *Notec*: It is little, but has a strong Castle, and lies 28 English Miles W. from *Uladislaw*. *Bydgosz* is a Wall'd Town, on the River *Barde*, by which all Sorts of Merchandize are brought to it from the *Weissel*. It has a good Trade in Salmon.

The Province of MASOVIA.

THIS Province had Dukes of its own till 1526, that, by the Death of its Duke, is fell to the Kings of Poland, who now reside frequently there: It has *Lithuania* on the E. *Prussia* on the N. *Great Poland* on the W. and *Little Poland* on the S. It contains three Palatinates. It was subjected to Poland by *Casimir the Great*. 'Tis said, there are 40000 Nobles in this Province, and that 15000 of them met at the Election of *Sigismund III*.

The Palatinate of MASOVIA.

IT has *Polachia* on the E. and *Ducal Prussia* on the N. and is very fruitful in Corn. *Warsaw* is the chief City, seated upon the *Weissel*, in Lat. 52, Long. 39 $\frac{1}{2}$, in the very Center of the Polish Dominions: It is encompass'd with a double Wall, and deep Ditch. The Diet of Poland meets here, and the King keeps his Court in a large Palace built by *Sigismund III* and beautified by his Successors. The Wooden Bridge over the River is of admirable Workmanship. St. John Baptist's Church here is a fine Structure. In the Suburb call'd *Cracow* there's built, as a Trophy of the Victory over the *Muscovites*, a small Chapel, for the Sepulchre of *Joannes Demetrius Zucki*, *Czar* of *Moscovy*, who, with his two Brothers, died in the Castle of *Gostinin*. It lies 12 English Miles N. E. from the Borders of *Little Poland*, 96 E. from *Lencicia*, 132 E. from *Gnesna*, 160 from *Pesna*, 116 S. E. from *Thorn*, 96 N. from *Lublin*, and 160 N. from *Cracow*. In the Neighbourhood of this Place, the Kings of Poland are elected in the Fields; the No-

bility have their Tents, and are encamp'd during that Time. Merchant Goods are brought by a River from the neighbouring Provinces, and from hence to *Dantzick*. This City was taken by the *Swedes* in 1655. Other Towns of Note are, 1. *Czersko*, 40 English Miles S. from *Warsaw*, upon the River *Weissel*. 2. *Wisna*, in a Plain, near the River *Narew*, with a Castle on an adjoining Hill. 3. *Wissigrod*, built of Timber, on a Plain, has a strong Castle, and lies 48 English Miles from *Warsaw*. 4. *Ciekanow*, at the like Distance from *Warsaw*, and has a strong Castle in the middle of a Morass. 5. *Lombae*, on the River *Narew*, handsomely built, and about 96 English Miles from *Warsaw*. 6. *Rdzan*, in a Plain, near the River *Narew*. 7. *Liw*, built of Timber, with a Castle, on the Banks of the River *Limejecz*. 8. *Pulawia*, the Bishop of *Plosko*'s Residence: The Houses are of Brick; the Castle is strong, and the Publick Edifices stately. 9. *Akroczim*, built with Timber, on the *Weissel*, with a good Castle, 32 English Miles from *Warsaw*. 10. *Varka*, a large Town, near the River *Pilecz*, about 32 English Miles from *Warsaw*. 11. *Blonye*, 16 Miles from *Warsaw*. 12. *Pultowsko*, a Wall'd Town, with a Castle, on the River *Narew*. 13. *Tarcin*, 20 English Miles from *Warsaw*. 14. *Grodzyec*, 28 English Miles from *Warsaw*, and 8 from *Tarcin*. 15. *Prasnia*, a large Town, with many fair Edifices of Stone.

The Palatine of *Masovia*, the Castellans of *Cyrna*, *Warsaw*, *Wissigrod*, *Wisna*, *Liw*, *Ciekanow*, and *Zakroczin*, are the Senators of this Palatinate.

The Arms are, in a Field Gules, an Eagle expanded Argent.

The Palatinate of PLOCZKO.

IT lies E. from *Masovia*, between the *Weissel* and *Ducal Prussia*, and has its Name from *Ploczko*, the chief City, seated on a high Bank of the *Weissel*, from whence there's a Prospect of a pleasant and fruitful Country: It is a Bishop's See, and very populous: It has Churches very well endow'd, besides the Cathedral, and also many Religious Houses, especially the Abbey of the *Benedictines* in the Suburbs, where they keep the

the Head of *St. Sigismund* in a Gold Shrine, given by *Sigismund III.* The Church is dedicated to him. It has a Castle, on the *Weissel*, and lies 56 English Miles S. W. from *Warsaw*, 36 S. E. from *Thorn*, and 40 N. E. from *Lencicia*. This City is enrich'd by the *Weissel*, which is navigable here. The other Towns are; 1. *Sieprez*, built with Timber, among Marshes, 20 English Miles from *Plockow*. 2. *Srensko*, also of Timber, with a Castle: It lies among Bogs, 40 Miles from *Plockow*. 3. *Mlaw*, on the Confines of *Prussia*, seated on a River of the same Name, 40 English Miles from *Plockow*. 4. *Radzanow*, a Timber Town, on the River *Ukra*, with a Castle, on a Rock.

The Senators are, the Bishop, the Palatines and Castellans of *Plockow*, the Castellans of *Sieprez* and *Radzanow*.

The Arms are, in a Field Gules, an Eagle expanded Sables, with a P. on the Breast.

The Palatinate of DOBRINA.

IT lies towards the W. between *Cujavia* and *Prussia*, and abounds with all Sorts of Fruit and Fish. *Dobrina* is the chief Town, built of Timber, on the *Weissel*: The Castle was demolish'd by the Knights of the *Teutonic* Order. The other Towns are; 1. *Ripin*, 20 English Miles from *Dobrina*, on the River *Odlek*. 2. *Slask*, on the *Weissel*, 8 Miles from *Dobrina*. 3. *Gorzno*, a Town, built of Wood, and strong both by Nature and Art. This Palatinate was formerly the Cause of many Quarrels betwixt the *Teutonic* Knights and *Poland*.

The Senators are, the Castellans of *Dobrina*, *Ripin*, and *Slonsk*.

The Arms are, in a Field Gules, a Man's Head Proper, doubly Crown'd Or and Argent.

The Palatinate of POLACHIA.

IT has *Lithuania* to the E. and *Masovia* proper to the W. and was united to the Crown of *Poland* in 1369. The Chief Town is *Bielsko*, on the River *Biel*, with the Fortifications and Castle of Timber, formerly,

burnt by Lightning. It has *Gradus* on the N. and *Bresle* on the S. Other Towns are, *Mielnik*, *Digitzin*, and *Tykotin*, where they coin Money, and keep the King's Treasure.

LITTLE POLAND.

HAS Part of *Hungary*, and the Mountains of *Crapack*, on the S. *Silesia* on the W. and *Great Poland* on the N. from some Part of which it is separated by the River *Warta*, and from others by the *Pulcna*. It has *Red Russia* on the E. and contains three Palatinates; viz. *Cracow*, *Sandomir*, and *Lublin*; is about 50 German Leagues in Length, and as many in Breadth. This Country was formerly overgrown with vast Forests, in which Robbers skulk'd, and laid many Places under Contribution. In 1450, *Casimir* call'd an Assembly of the Nobles of *Little Poland*, to consider of Ways and Means to suppress them; but not being then satisfied with *Casimir's* Title to the Crown, they did not fall in with his Proposals, by which the Robbers increas'd in Number and Boldness; and under the Conduct of two Noblemen, *Casco Szeborauski*, and *John*, his Brother, they fortified the Mountain *Zeborze*, near *Oswnikim*, and other Places, where they intrench'd, and great Numbers of *Russians* joining them, they were not suppress'd without great Bloodshed and Hazard. The chief City of *Little Poland* is *Cracow*.

The Palatinate of CRACOW.

IT has *Silesia* on the W. the Palatinate of *Sandomir* on the E. *Hungary* on the S. and *Siradia* on the N. It takes Name from *Cracow*, the Metropolis of the Kingdom, 36 English Miles E. from the Confines of *Silesia*, 86 S. W. from *Sandomir*, 44 from the Borders of *Upper Hungary*, 100 S. W. from *Warsaw*, 140 S. E. from *Breslavia*, 120 W. from *Olmutz*, 160 N. E. from *Vienna*, and 200 from *Budapest*. It is in Lat. 50, and Long. 38. Some think it to be the *Coradunum* of *Ptolomy*. It is seated on a Rocky Bank of the *Weissel*, and is the largest and best built City in *Poland*; the Houtheart of Bre-Stone,

4 or 5 Stories high, cover'd with Boards. There are many *Italian* and *German* Merchants here, who import such Foreign Goods as the Country needs: 'Tis very Populous, and divided into 4 Parts; 1. *Cracow*, or the Ancient City. 2. *Czimiria*, join'd to the other Parts by a Wooden Bridge over the *Weissel*. 3. *Stradonia*, which lies betwixt *Cracow* and the Bridge. 4. *Cleperia*. The King's Palace is on the Top of an high Hill, and overlooks both City and Country. It was rebuilt by *Sigismund* the Elder, who added the Gallery on the North Side, which has one of the best Prospects in *Europe*. The University of *Cracow* was first begun by *Casimir the Great*, finish'd by *Uladiassau Jagello*, in Performance of the last Will of his Queen *Hedwig*, and had its Privileges confirm'd by Pope *Urban*. All Sorts of Learning are taught here, and it contains 11 Colleges. In 1549, the Students left the University, because the Magistrates would not punish the Servants of *Andrew Czarnickowski*, who had murder'd many of the Scholars. They dispers'd themselves over *Germany*, where they learn'd the *Lutheran* Principles, and on their Return, spread them all over *Poland*. There are 14 Grammar Schools in the City, and University Learning is taught in some of them. *Cracow* was made an Archbishoprick when Christianity was first planted here: But, 100 Years after, *Lampert Zula* refusing to receive his Pall from the Pope, as his Predecessors had done, it was degraded into a Bishoprick. In the Reign of *Boleslaus the Chast*, which began in 1226, a Contest arising betwixt two Bishop of this See, and the Bishop of *Breslaw*, about Precedency, the Bishop of *Cracow*, upon his Submission, was restor'd to the Dignity of an Archbishop; which lasted only during his Life. At this Time, the Bishops of *Cracow* wear an Archbishop's Pall, set richly with Jewels; which is the only Relique they have of their ancient Honour. The Streets are badly pav'd, tho' broad and straight. The Market Place is one of the greatest in *Europe*, and has a stately Church dedicated to the Virgin: Those of the Jesuits and Dominicans are very fine, and well built. The Cathedral is within the Castle, but neither great, nor of good Architecture: 'Tis re-

markable for being the Sepulchre of the Kings of *Poland*, and the Place of their Coronation. The Reliques of *St. Stanislaus*, once Bishop of this See, to whom it is dedicated, are kept there. This Saint is the Patron of the *Poles*; and being murder'd, in 1079, in this Church, by *Boleslaus the Bold*, the Kings of *Poland* go to his Shrine upon Foot, in Procession, with all the Nobility, the Day before the Coronation; which they do to expiate that cruel Action. *Sigismund III.* and *Uladiassau VII.* offer'd on that Tomb many Gold and Silver Vessels. *Sigismund I.* built a Silver Altar over it, with Golden Crucifixes, and many Vestments embroider'd with Jewels of all Sorts; so that this Cathedral is remarkable for its Chapter and Treasury. There are 50 other Churches in the Town and Castle. The Archbishop of *Cracow* is the Chancellor of the University.

The Castellain here has the Precedency of the Palatine, and takes Place of all the Lay Senators of the Kingdom: The Reason is, because a former Palatine deserted King *Boleslaus* in the *Muscovite* War; as has been already mention'd. *Cracow* was taken by the *Swedes* in 1655, but was retaken in 1657.

Dr. Comor gives this Account of the Salt Mines near *Cracow*: The Depth is about 300 Geometrical Paces: One can scarce go over all the Alleys and Passages of them in a Week's Time: There are sometimes such fierce Winds in 'em, that nothing can withstand them; and the Cold, in general, is hardly to be endur'd. The Yearly Revenue of these Mines is about 400000 *French* Livres; of which 50000 go to the King, 10000 to the Queen, and some Thousands more to the Officers of the Crown: Besides which, the Proprietor is oblig'd to make a Yearly Present to all the Cities of *Poland*, and to their Starosta's. They were discover'd in 1548. There are 4 Kinds of Salt here; one is extream hard and rocky, like Christal; another less hard, and clearer; a third white and pure, but brittle and softer: They are all brackish; but the fourth is somewhat fresher. In these Mines, there's on one Side a Stream of Salt Water, and on the other one of Fresh. There are some Places in these Mines where none can work, because they dare not

not carry a Candle for fear of setting the Vapours on Fire; which being nitrous, are easily inflam'd.

Other Towns in this Palatinate are; 1. *Zator*, upon the *Weissel*, 24 English Miles W. from *Cracow*, and 20 from the Confines of *Silesia*: It has a strong Castle, and gives Name to a Dutchy. 2. *Severil*, which gives Name also to a Dutchy, has a strong Castle, and Mines of Silver and Lead. 3. *Biecz*, a Wall'd Town, water'd by the River *Rapa*, a Branch of the *Weissel*, of the Froth of which they make Sulphur: It is 60 English Miles from *Cracow*. 4. *Wojnicz*, built of Timber, on the River *Dnaniex*, 36 English Miles from *Cracow*. 5. *Sandecz*, a Wall'd Town, on the former River, 44 English Miles from *Cracow*. It has a Collegiate Church, with several Monasteries, and its Inhabitants are Industrious. 6. *Lelaw*, surrounded with an old Wall, and has a strong Castle on a Hill, with a Palace and Gardens after the *Italian* Manner: 'Tis seated on the River *Lelaw*, 44 English Miles from *Cracow*. 7. *Oswieczin*, upon the *Weissel*, the Capital of the Dutchy of the same Name, built of Timber, among Marshes, with a Wooden Castle, plaster'd only with Clay: It is 28 English Miles from *Cracow*, and 12 from the Borders of *Silesia*, to which it formerly belong'd; but since 1454, it has been possess'd by the *Poles*. 8. *Czestochowa*, famous for good Beer, transported to most Places of *Poland*, and the neighbouring Countries of *Germany*. Without this Place, stands a famous Monastery, where they have a Picture of the Virgin *Mary*, said to be painted by *St. Luke*, to which Pilgrims come from all Places and make their Offerings. It has vast Quantities of Gold and Silver Plate, many rich Ornaments for Altars, and Habits set with all Sorts of Jewels, and particularly Pearl. Not only great Families give large Gifts to this Convent, but the Commons impoverish themselves to enrich it. The Monks are Masters of a great Territory near it, and maintain a Garison of 300 Men, which are in a better Condition than any other Soldiers of the Republick. In a Word, this is the *Loretto* of *Poland*. 9. *Slawcovia*, in the same Dutchy, famous for Silver Mines. 10. N. of *Cracow*, lies

Proszowice, built of Timber: The King has a Palace here, on the Banks of the River *Saxeniorva*. 11. *Ilkusk*, 20 English Miles from *Cracow* to the W. is famous for Mines of Silver and Lead. This Town is encompass'd with a Wall of Brick. Their Bread is extraordinary good, and their Beer the best in *Poland*. 12. *Wielickz*, and *Bochna*, remarkable for Quarries of excellent Rock-Salt. These two Mines were discover'd in 1252. This is the only Province in *Poland* that has Metals and Minerals; and besides those already mention'd, has Marble, Salt-Petre, Vitriol, Brass, and Gold.

The Philosophical Transactions of the English Royal Society, N. 61, P. 1099. give this Account of the Salt-Gemme-Mines of *Wilickz*: The Mines are below the Town, out of which they dig and cut three Sorts of Salt; one common, coarse, and black; another somewhat finer and whiter; the 3d very white and clear, like Christal. The coarse and black is cut out in great Pieces, 3 Polish Ells long, and one thick, which cost from 50 to 70 Polish Florins; but the Inhabitants of *Cracow* have them at 8 Florins a-piece. They lay the greatest Pieces before their Doors, that their Cattle may lick them. They use Mills and other Engines for grinding it. The Mine belongs to the King, and is one of the best Branches of his Revenue. 1000 Men are constantly employ'd in these Mines. The Horses that work below Ground grow blind by the Sharpness of the Salt. This Salt-work has beneath it several Salt Springs, whence the Salt Water is convey'd by Channels to the Places where it is boyl'd to Salt.

The Mineral Salt-work at *Bochna* is not so well order'd as the former.

The Senators of this Province are, the Bishop, Castellan, and Palatine of *Cracow*; the Castellans of *Wounitz*, *Oswieczin*, *Sandecz*, and *Biecz*. The King names the Mayor of *Cracow*, who was a *Scotts-man* when *Dr. Connor* was there.

The Arms are, in a Field Gules, an Eagle expanded Argent, Crown'd Or, with a Baton cross its Wings of the Second.

In this Palatinate, there is a particular Sort of *Manna*, which they gather in May and June, and sweep it off the Grass, with

Hh

Sieves,

Sieves, together with the Dew. They eat this *Manna*, and make several Dishes of it for their Table.

The Palatinate of SENDOMIR.

IT has *Red Russia*, and the Palatinate of *Lublin*, on the E. *Mazovia* and *Great Poland* on the N. the Palatinate of *Cracow* on the W. and *Hungary* on the S. It has its Name from *Sendomir*, the chief Town, upon the Bank of the *Weissel*, where that River receives the *San*, and has a strong Castle. This City was sack'd by the *Tartars* in 1240, taken by the *Suedes* in 1655, and retaken the following Year: 'Tis 112 *English Miles* N. E. from *Cracow*, and 128 S. from *Warsaw*. The Fortifications and Castle were built by *Casimir the Great*, who died of a Surfeit, by eating too liberally of the Fruits of this Country, which are reckon'd the fairest and best in *Poland*. The *Affizes* are kept here by the Magistrates of the Palatinate. Other Towns are, 1. *Kunow*, famous for its Marble. 2. *Schydłowicz*, which has store of Iron and Steel in its Neighbourhood: It formerly belong'd to the Dukes of *Radziwil*, and is encompassed with an old Wall: The Castle is pretty well fortified. 3. *Opatow*, 16 *English Miles* from *Sendomir*, in a pleasant Country, and wash'd by the River *Pilcza*. 4. *Viasden*, a new built Town, which has a good Trade, and is well fortified. 5. *Radom*, Capital of that District, built in a Plain, surrounded with strong Walls, and other Fortifications. 6. *Jedlink*, famous for a School, and a well built Church. 7. *Solecia*, on the *Weissel*, has a noted Castle, which was repair'd and beautified by its ancient Duke *Christopher Zborawius*. 8. *Ilza*, a neat Town, built with Brick, belonging to the Bishop of *Cracow*: It is remarkable for Earthen Ware, with which it furnishes all *Poland*. The Castle is an old Building; but the Bishop's Palace is new, and very stately. 9. *Rozentin*, which has great Plenty of Iron: It belongs also to the Bishop of *Cracow*, who has a House and pleasant Garden here: 'Tis beautiful, and well fortified, and lies near the bottom of *Mons Calvus*, which is by much the highest in *Poland*. 10. W. from this

Town lies *Kielcz*, famous for Mines of Copper, and *Lapis Lazuli*. The Bishop of *Cracow* has a fair Collegiate Church here. 11. *Chencin*, 12 *English Miles* from *Kielcz*: It abounds with Lead, Marble, and Silver, belongs to the King, and has a Castle on a Rock. Justice is administred here to the District. 12. *Malagofsch*, noted for being a Castellany, and is built of Wood. 13. *Stenzicz*, Capital of the District of that Name: It has a stately Monastery of *Benedictine Monks*. 14. *Slupiecz*, situate also at the Foot of *Mons Calvus*; at the Top of which is the Abbey of the *Holy Cross*. 15. *Racovia*, formerly a Nest of *Socinians* and *Photinians*, and the Center of their Religion: It was pretty populous, and had a considerable Academy to instruct Youths, which was prohibited, on Account of their Errors, by a publick Edict. 16. *Cortzin*, Capital of the District of the same Name, a new Town, built with Timber: It has a Castle, lies near the River *Wislock*, and is surrounded with Marshes. 17. *Wislicz*, on the River *Nida*, built of Wood, and situated on a Rock: The Cathedral is built of square Stone, with beautiful Cloysters for the Canons. The adjacent Country abounds with all sorts of Serpents and Insects; but the ignorant Inhabitants say, that being interdicted by the See of *Rome*, they have no Power to do any Harm. When they are transported elsewhere, they immediately die. 18. *Pilzno*, a Timber Town, on the River *Wislock*. 19. *Bolowicz*, also built of Timber, among the Hills, and is a Castellany. 20. *Zawichoff*, also of Wood, lies on the *Weissel*, and has a Castle, with a double Wall, on the other Side of the River: 'Tis likewise a Castellany. 21. *Zaslisin*, famous for a considerable Market. 22. *Lexaick*, has a noted Monastery, where they pretend several Reliques are miraculously kept, which draw thither great Crouds of People from all Parts.

The Senators are, the Castellan and Palatine of *Sendomir*, and the Castellans of *Wielicz*, *Radom*, *Zarnow*, *Sechow*, *Polewicz*, *Malagofsch*, and *Zawichoff*.

The Arms are, *Party per Pale Argent* and *Azure*; in the 1st 3 Bars *Gules*, and in the 2d 3 Stars *Sables*, two and one.

The Palatinate of LUBLIN.

THIS Palatinate was taken out of that of *Sandomir* by *Casimir Jagellonides*, because too big for one Palatinate: It has adjoining to it the Territory of *Lucovia*, which contains near 2000 Gentlemens Houses. This Palatinate, and the other two, is the Diocefe of *Cracow*, which comprehends 1018 Churches, 13 of which are Collegiate. It has *Red Russia* and *Sandomir* on the S. E. and *Masovia* on the N. It takes Name from the chief City, *Lublin*, 20 *English* Miles from the Frontiers of *Red Russia*, 96 S. from *Warsaw*, 48 W. from *Chehn*, 144 N. E. from *Cracow*, 56 N. from *Sandomir*, in Long. 42, and Lat. 51 $\frac{1}{2}$. It is a well-built City, and pleasant, but not large. The Morasses about it are a greater Fortification than its Walls. *Casimir the Great* Wall'd it, and the *Russians* built the adjoining Castle. The great Church was built by *Lesius the Black*, upon a Conquest obtain'd over the *Lithuanians* near this Place: He dedicated it to *St. Michael*, who they say appear'd before the Castle. *St. Bridget's* Monastery was founded by *Uladislaus Jagello*. Two Courts of Judicature are kept in *Lublin*, from which there's no Appeal, except to the Diet of *Poland*. It lies on the River *Ryszticz*, and is a Place of great Trade, and frequented by *Turkish*, *Armenian*, *Muscovite* and *German* Merchants, especially at the four Yearly Fairs, of a Month's continuance each. The *Jews* possess the Suburbs. Other Towns of Note are, 1. *Casimir*, a very fair Wooden City, with a beautiful Palace, built by *Henry Firleius*, Archbishop of *Gnesna*, and adorn'd with delightful Gardens. 2. *Urzendow*, a large Town, built of Timber, on a Lake, 28 *English* Miles from *Lublin*. 3. *Lulow*, Capital of the Territory of *Leucovia*, defended partly by Bogs, and partly by Palisadoes, 56 *English* Miles from *Lublin*: It has a considerable Jurisdiction. 4. *Parkow*, also built of Wood, near a very large Lake, 36 Miles from *Lublin*.

The Senators are, the Palatine and Castellan of *Lublin*.

The Arms are, in a *Field-Gules*, a *Stag Passant Argent*, Collar'd Or.

RED RUSSIA.

OTHERWISE call'd *Roxalania*, from the ancient Inhabitants: The Southerly Boundaries are a Part of *Hungary*, *Transylvania*, *Moldavia*, and *Bessarabia*; on the N. *Polesia*; on the W. *Little Poland*; and on the E. the Desarts of *Little Tartary*. It abounds in Corn, Beasts of all kinds, Fish, and Honey. There are Trees found in the Banks of the River *San* very hard, and black as Ebony. The Country People say, they have lain there since the Deluge; but it is probable they have been wash'd down by the Course of the River many Years ago. The Capital is *Leopol*, or *Lemberg* according to the *Germans*; but the *Poles* call it *Lnow*, or *Lunow*: 'Twas call'd *Leopolis*, because founded by Prince *Leo* about 1289. It was made an Archbishoprick in 1414. It is built among Hills, on the River *Peltew*, and is a Place of Strength, with two Castles, one within, and the other without the Walls, on a high Mountain. It lies in Lat. 49 $\frac{1}{2}$. Long. 42 $\frac{1}{2}$. 60 Miles N. from the *Carpathian* Mountains, 60 N. E. from *Premislaw*, 160 E. from *Cracow*, 200 S. E. from *Warsaw*, and 120 N. W. from *Gaminiec*. It was besieg'd in vain in 1648 by *Chmielnicz*, the General of the *Cossacks*, with an Army of 120000 Men. In 1672, the *Turks* took it, but quitted it again by Treaty. It has lost much of its ancient Splendour, being impoverish'd, as the whole Province is, by the Civil Wars, and the Incurfions of the *Turks* and *Tartars*. Many *Turkish*, *Moldavian*, *Armenian*, and *Greek* Merchants, reside here, and drive a considerable Trade. This City gives great Encouragement to Learned Men, who are very civilly entertain'd by their Academy, which is supply'd with Professors from that of *Cracow*. The River *Roxalania* is near it, where are taken Barbels of a great Size. It has likewise a vast Number of Fish-Ponds, full of several sorts of fat Fish, which are salted, and transported all over *Poland*. The Churches are generally fair, and well built, and abound with costly Ornaments. 2. *Godeck*, a Pallisado'd City, with a Castle, built in a Plain, and surrounded with Bogs: It lies

H h 2

about

about 10 English Miles from Leopold. 3. *Jaworsko*, famous for a natural Bath in a neighbouring Village, which disperses several stubborn Distempers, as *Sixtus Leo*, a Physician of great Experience, testifies in his Treatise concerning it. 4. *Zolkiew*, a Town defended by a Castle, has many pleasant Gardens, and a Church built with various sorts of Marble. This City was the Seat of *John Sobieski*. The Arms of this District are, in a *Field-Azure*, a *Lion-Passant*, Crown'd Or, by a *Rock-Sablas*.

Other Towns are, 1. *Premislaw*, upon the River *San*, a Bishop's See, with a Castle, on a Hill: It is a pleasant and populous City, and lies in Lat. 49½, and Long. 41. 48 English Miles N. from the Borders of Hungary, 40 Miles E. from the Frontiers of the *Lesser Poland*, and 64 S. E. from *Sandomir*. They have one Bishop of the Russian Church. The Jesuits have a College here. The Citizens are addicted to Trade. Near this City the King has a Park, full of all kinds of Wild-Beasts; and the Country has many Castles, for fear of the *Tartars*. 2. *Chelm*, an Episcopal See, 40 English Miles E. from *Lublin*, 96 N. from *Premislaw*, and 48 N. from *Beltz*. It has been oft laid waste of late by the *Tartars* and *Turks*. It is of no great Compaſs, has a Castle of Wood, and is the Capital City of a Territory of the same Name, which has *Volhinia* to the E. *Little Poland* to the W. *Lithuania* to the N. and *Bielza* to the S. 3. *Krasnoslaw*, on the River *Wieprz*, 20 English Miles S. W. from *Chelm*, and 20 S. E. from *Lublin*. It is a strong, tho' small Town. 4. *Sambor*, a Palisado'd City, with a Castle, upon the River *Tyrra*, near the Borders of Hungary. 5. *Jaroslaw*, famous for a Fair on *Lady-day*, which is the most celebrated in Poland. Goods are brought hither from *Persia*, *Constantinople*, *Venice*, *Moscow*, and *Amsterdam*. They say, there is usually brought hither above 400000 Black Cattle, and 200000 Horses. The Jesuits have a College here, and without there is a stately Nunnery of modern Architecture. The Castle is seated on the River *San*. 6. *Lancut*, noted for several magnificent Churches, founded by *Ladislaus Ludomirski*, Palatine of *Cracow*: It has a Castle well fortified, as a Security against

the *Tartars*. 7. *Resovia*, which has a good Castle, many Monasteries, and a Fair on the Feast of *St. Albert*. This Town is famous for a Linen Manufactory, manag'd by *Germans*, whose Ancestors were taken Prisoners by *Casimir the Great*, and settled in and about this Place.

The Arms of the District of *Premislaw* are, in a *Field-Azure*, an *Engle* expanded with two Heads, both Crown'd Or.

HALICZ, is the Metropolis of a District of that Name, which is encompass'd towards the W. with the Mountains of *Transylvania*; on the S. by the Beech Woods of *Transylvania*: Towards the E. it is divided in two Parts by the *Nieſter*, a rapid River, which has its Rise among the *Carpathian Mountains*. The S. Division of this District is call'd *Pocutze*, or *Potutze*. *Halicz* was formerly the Metropolis of the Russian Kingdom, then divided into several Tetrarchies, each of which had its proper Duke. It is a large Town, built with Timber, and separated from *Moldavia* by the River *Prut*, and on the other Side wash'd by the *Nieſter*. The Inhabitants are Boorish, and more inclin'd to Husbandry than Trade. Other Towns are, 1. *Coloni*, near the River *Prut*: It is much frequented on Account of its fine Salt, with which it furnishes all the rest of *Russia* and *Lithuania*, there being none in those two Provinces, except in the District of *Premislaw*. All over this Country there are deep Wells, whose Waters are boil'd up into Salt. 2. *Martinow*, with a Castle, situated among Marshes. 3. *Dolina*, seated among Hills. 4. *Podock*, on the other Side of the *Nieſter*, defended by a Castle, and has a fair Monastery, built by *Stephen Potucina*, Palatine of *Breclaw*, who is buried here. 5. *Brezana*, a populous Town, with a Castle, on a Hill. 6. *Buczavia*, or *Buzko*, built among Marshes, near the Spring of the River *Bug*, by which Goods are carried to *Lemberg*. 7. *Sanock*, is another District of *Red Russia*, near the Mountains of Hungary and *Transylvania*. The Town of *Sanock* lies near the River *San*, and has a Castle, pretty strong, founded on a Rock. 8. *Croſna*, the Staple of Hungary, whither they bring all their Metchandize and Wines.

There

Therefore the Marts and Fairs here are more celebrated than those of their Neighbourhoods. The Jesuits have a College in this City. The other Cities of *Brozovia*, *Rimamovia*, *Dinovia*, and *Lesko*, are Places of Strength, to prevent the Incursions of the *Tartars*.

The Palatinate of BELCZ.

THIS Palatinate lies near that of *Leopol* and *Gheln*, and contains 4 Territories: It has its Name from *Belcz*, the chief Town, 20 Miles from the River *Bog*. *Lemberg* is on the S. E. *Sandomir* on the N. W. and *Samoscie* on the N. *Samoscie* stands upon a Lake, and is erected into a Principality: It lies 56 English Miles E. from *Sandomir*, 60 N. from *Lemberg*, and 36 S. from *Lublin*. It was built by *John Samosky*, Great Chancellor of Poland, in a pleasant Plain not far from the River *Vapr*. The *Cossacks* besieged it in 1681, but were obliged to raise the Siege. There is an University in this City. *Brady* belongs to this Palatinate, and lies E. from *Belcz* 60 English Miles. *Olesko* lies 50 N. E. from *Lemberg*. There's another Town call'd *Grobs*, with a Castle, but otherwise of no great Note.

The Palatinate of UPPER VOLHINIA.

IT has *Red Russia* on the W. *Podolia* on the S. *Ukrain* on the E. The chief Town is *Lucko*, on the River *Steer*, near a Lake, 24 English Miles E. from *Red Russia*, and 100 N. from *Lemberg*. The City is large, and has a greater Number of *Greeks*, *Jews*, and *Protestants*, than *Papists*. The Trade is managed by the *Jews*. *Uladaimierz*, lies on the River *Lug*, which falls into the *Bog* a little lower, and is 48 Miles W. from *Lucko*. *Creminec*, is a little Town, upon a Hill, 30 Miles from *Lucko*. The *Tartars* have often visited this Place, and done it much Mischief. *Baranouka* is 80 English Miles N. E. from *Lucko*, and 44 W. from the Castle of *Korsee*. It lies on the River *Horin*. The *Turks* have done great Damage to this City. Other Towns are, *Oiska*, *Zassaw*, *Osfrog*, and *Zytomierz*.

LOWER VOLHINIA, or, The Palatinate of KLOW.

THIS Palatinate was Part of the *Ukrain*, the Country of the *Cossacks*, which we have describ'd in the former Account of the *Cossacks*. The *Poles* have only now some small Towns here, as *Bialacerkiew*, 64 English Miles S. W. from *Klow*, and 140 N. from *Broclaw*; *Zerkass*, and *Czernobel* upon the River *Usz*, 72 English Miles W. from *Czernikow*, and 8 from the *Nieper* and *Kudac*.

The Province of *Podolia* is divided into *High* and *Low*.

HIGH PODOLIA.

HAS *Red Russia* on the W. *Upper Volhinia* on the N. *Lower Podolia* on the S. E. and the *Nieper* on the S. It is a fruitful Country, tho' Mountainous, and has Plenty of Honey. The Vallies are well Water'd: It has been the Seat of the *Tartarian*, *Cossackian*, and *Turkish* Wars, for many Years, and expos'd to their Barbarities. The chief City is *Kaminiec*, upon the River *Smotrick*, which a little lower runs into the *Nieper*. The City lies 120 English Miles N. E. from *Lemberg*, and is a Town of the greatest Strength of any in Poland, defended by high Rocks, so that the Tops of the Houses cannot be seen. It has held out many Attacks of *Tartars*, *Turks* and *Wallachians*, and was much damaged by Fire in 1669. It has two Bishops, one a *Papist*, the other an *Armenian*. It was taken by the *Turks* in 1672, and all the adjacent Country was subject to them, till the Peace of *Carlowitz* in 1699; by which this City, all *Podolia*, and the *Ukrain*, were restor'd to the *Poles*, who frequently endeavour'd to retake it, but in vain. It lies 60 English Miles S. W. from *Bar*, 280 S. W. from *Klow*, 120 S. E. from *Lemberg*, 320 S. E. from *Warsaw*, and 680 N. from *Constantinople*. The other Cities here are, 1. *Trembowla*, which lies under a great Mountain, with a strong Castle upon it. 2. *Latyckow*, which is well fortified.

has a strong Castle, and Warlike Inhabitants. 3. *Bar*, a strong Town, on the River *Kiow*, and is surrounded with Lakes: It lies 72 English Miles N. E. from *Kaminiec*, and 72 N. W. from *Broclaw*. The Castle is built upon a Rock. This City was founded by *Bonno Sforza*, the Duke of *Milan's* Daughter, Wife to King *Sigismund*. 4. *Husiatnow*, well fortified. 5. *Czortkow*, with a strong Castle, and well fortified. 6. *Chmielnick*, on the River *Bog*, defended only with Palisades, and a Wooden Castle. 7. *Muedzibofz*, with a large Wooden Castle: 'Tis situated among Marshes, and has no Avenue but over Bridges. This Place was formerly much infested by *Tartars*. The Senators are, the Bishop, Palatine, and Castellan of *Kaminiec* and *Podolia*. The Arms are, in a Field-Azure, the Sun in its full Glory. Most of the Cities of *Podolia* are fortified, to protect them from the Inroads of the *Tartars*. This Country is so fertile, that it may vie with *Italy* or *Hungary*.

LOW PODOLIA, or the Palatinate of BROCLAW.

THIS Palatinate has the ancient *Tyras* or *Nießer* on the S. W. and *Lower Volhinia* on the E. *Upper Podolia* on the N. and *Budziack Tartary* on the S. and S. E. The chief Town is *Broclaw*, on the River *Bog*, in Lat. 48 $\frac{1}{2}$, and Long. 47. In 1672, it was taken and plunder'd by the *Turks*. *Winniczka*, is a fortified Town, upon the *Bog*, 48 English Miles E. from *Bor*, and 40 N. from *Broclaw*. In 1560 it was taken by the *Cossacks*. This City is famous for a Meeting of the Gentry, and a Court of Justice. The *Jesuits* have a College here. This City has been very much infested by the *Tartars*. The Senators are, the Palatine and Castellan of *Broclaw*. The greatest Part of *Podolia* was restor'd by the *Turks* to the *Poles*, Sept. 22. 1699. by the Peace of *Carlowitz*.

Of the RIVERS of Poland.

THE Chief Rivers in Poland are, 1. the *Weissel*; *Ptolomy* makes it a River of *Germany*, and calls it *Viadus* and *Sucvus*; *Pliny* calls it

Vistillus; and *Mela*, *Visula*: 'Twas the ancient Boundary of *Germany* and *Sarmatia*, according to *Agathemerus*. The *Poles* and *Slawonians* name it *Wissa*; the *Germans*, *Der Weissel*. It has its Source in the *Higher Silesia*, from the *Carpathian Mountains*, in the Borders of *Hungary*, now call'd *Krapock*, about Lat. 49 $\frac{3}{4}$, and Long. 41; *Moll* makes it Long. 38. It takes its Course N. E. runs into Poland, and waters *Oswiecin*, (near which the *Sala* falls into it) *Zator*, and *Cracow*, where it begins to be navigable; then the River *Nida*, whose Course is S. E. the *Dunaiac*, near to *Polanice*, and the *Wislick*, which runs N. E. fall into it. Below *Sendmir*, it is augmented by the *San*, which has also its Source in the Mountains of *Krapack*, and runs N. After this the *Weissel* runs N. The River *Vieprex*, which rises in the Palatinate of *Belcz*, and runs thro' that of *Lablin*, falls into it near the W. Borders of that Palatinate. Next, the *Pileza*, which rises in the Palatinate of *Cracow*, and runs by the N. Borders of *Sendmir*, falls into it 15 English Miles above *Czersko*. After this, the *Weissel* runs thro' the Province of *Masovia*, and waters *Czersko* and *Warsaw*: Then it runs N. W. thro' the Palatinate of *Plocksko*, and runs by *Plockzko*, *Dobrzin*, and *Wladislaw*. Next it goes thro' *Polish Prussia*: Then its Course is N. E. and waters *Thorn*, *Culm*, *Graudentz*, and *Newenburgh*. Twenty English Miles below that Town, it divides it self into two Streams; the Easterly one, call'd *Nogat*, runs by *Marienburg* and *Elbing*, and falls into the Bay of *Frisch-Haff*, or the Cold Bay, in Lat. 54 $\frac{1}{2}$, and Long. 42 $\frac{1}{2}$. according to *Jailor's* Map; but Long. 38 by *Moll's* Map. The Westerly Stream waters *Dirfaw*; then, at the Castle of *Heust*, it divides again into two: That to the E. falls also into the *Frisch-Haff*: The Westerly Branch waters *Dantzick*, and falls into the *Baltick*, after a Course of more than 400 English Miles, in Lat. 54 $\frac{3}{4}$ and in Long. 37. near the Fortrefs of *Munda*, or *Weisselmund*, and surrounds the greatest Part of the Island *Neringa*.

The *Romans* had no certain Knowledge of this, or of other Rivers beyond the *Elbe*.

The 2d River is *Worta*, which rises in the Palatinate of *Cracow*, in Lat. 52 $\frac{1}{2}$, near the City of *Cromlow*. It runs N. thro' the

the Palatinate of *Soradia*, and waters *Sirad*, *Worta*, and *Kamia*; then it runs W. crosses the Palatinate of *Kalisch*, and Waters *Laudick*, *Pfydry*, and *Srin*: Next it runs thro' the Palatinate of *Posna*, takes its Course N. and waters *Posna*. The *Notecz*, which rises in the Palatinate of *Cujavia*, and runs thro' that of *Posna*, falls into this River at *Zantok*. The *Obra* has its Spring in the Palatinate of *Posna*, runs N. W. and falls into the *Worta*, 3 English Miles S. of the Mouth of the *Notecz*. Afterwards it runs thro' some Part of the Marquisate of *Brandenburgh*, and waters *Landsperg*, and *Kustrin*; not far from whence it falls into the *Oder*.

3. *Tyras*, *Pliny* calls it *Tyra*; *Mela*, *Tyras*; *Ptolomy*, and *Scimnus Chius*, call it *Tyras*. The last gives a Description of it, and says, it was a deep navigable River, and had plenty of Fish. *Ovid* speaks of it, *Lib. 4. de Ponto*, *Epist. 10. Vers. 50.*

--- Nullo sordior amne Tyras.

It rises in *Black Russia*, in the Palatinate of *Lemberg*, from the Lake of *Leopol*, 16 Miles S. from *Lemberg*, about Lat. 49° and Long. 46°, according to some Maps; but *Moll* makes it Long 42°. It runs S. E. thro' the Province of *Pocuce*, and waters *Halicz*: Then it runs thro' *High Podolia*, or the Palatinate of *Caminiec*, and waters *Crudeck*, *Dzwingrod*, *Zwaniecz*, *Kylaigrod*, and *Ladawa*: Then it runs thro' *Lower Podolia*, and waters *Lampol*, *Kaminicze*, *Raskow*, and *Tekin*, or *Bender*. Then it takes its Course through the *Tartars* of *Oczakow*, and falls into the *Black Sea*, near *Bialogrod*, in Lat. 47°, and Long. 56°, according to *Jailor's* Map. Its Mouth lies 60 Miles N. from the Mouth of the *Danube*; whereas *Strabo* makes it but 300 Furlongs.

4. The *Bug*, which has its Spring in *Red Russia*, near the Town *Olesko*, in Lat. 49°, and Long. 48; but according to *Moll*, in Long. 44°. It runs N. thro' the Palatinate of *Belcz*, and waters *Krylow*: Then it runs thro' the Palatinate of *Chelm*, and waters *Dubna*, and other small Towns; and taking its Course N. W. it divides the Palatinate of *Belsk*, where it waters *Mielneck*, and *Groddeck*: Then it runs through the Palatinate of *Czersko*, where the *Narew* falls into it,

whose Course is S. W. and is noted for this, That no Venemous Creature will live in its Streams; so that Snakes, sticking to the Sides of the Boats that come out of the *Bug*, as soon as they enter this River, give a Hiss, and swim back to the *Bug*; which falls into the *Weissel* near *Wischegorod*, in Lat. 52°, and Long 43; but in *Moll's* Map, in Long. 39.

5. The *Bug*. *Herodotus* and *Pliny* make mention of it, and call it a River of *Sarmatia Europea*. Its Spring is in the Borders of *Podolia*, (in Lat. 49°, Long. 50. *Moll* makes it lie in Long. 45.) which it separates from *Volhinia*. It waters *Ghmielnick*, *Winnicza*, and *Braclow*, runs through the Palatinate of that Name, and at last falls into the *Nieper* near *Oczakow*; and a little lower, both of them fall into the *Euxine Sea*, in Long. 57°, after it has run a Course of more than 400 English Miles, from W. to S. E.

5. The *Niemen*, anciently call'd *Chironus* by *Ptolomy*, who says it is a River of the *Venedi*, in *Sarmatia Europea*. *Ammianus Marcellinus* makes mention of it. The *Germans* call it *Memel*. It rises in the Palatinate of *Minski*, near the Borders of that of *Novogrodeck*, and is the Boundary of those two Palatinates. Its Spring is in Lat. 53°, and Long. 51°. It runs N. W. and waters *Bielcz*, where it enters the Palatinate of *Troki* in *Lithuania*, and there begins to run W. 'till it reach *Grodno*, which it waters: Then it takes a Northerly Course, 'till it comes to *Kouno*, where it enters *Samogitia*; Then it runs W. and waters *Geersburg*, on the Borders of *Ducal Prussia*, where it is call'd *Rufs*. Next it waters *Tilse*, and afterwards is divided into two Branches, which fall into the Lake call'd *Kurisch-Haff*, and both they and the Lake fall into the *Baltick*, near *Memel*, in Lat. 55°. Long. 44°. but in Long. 40. by *Moll's* Map. Some think the *Mare Cronium* has its Name from the ancient Name of this River.

6. *Dniina*. The *Poles* call it *Duna*. It has its Spring in *Novogrod*, a Province of *Muscovy*, near the Lake *Volga*, and the Fountains of the River *Volga*. It runs S. W. and crosses the Palatinate of *Witepsk*, waters the City of *Witepsk*, turns N. W. and en-

ters

ters the Palatinate of *Poloczke*, which it divides, and waters the City of *Poloczke*. Afterwards the River *Dryssa*, which runs S. W. and the *Dzicna*, which runs E. fall into it. Then it goes thro' *Livonia*, which it separates from *Semigallia*, waters *Düneburg*; and still keeping the same Course, runs by *Riga*; below which it falls into the Bay or Gulf of *Riga*, the ancient *Sinus Clilipenus*, in Lat. 57, and Long. 47 $\frac{1}{2}$. but according to *Moll*, in Long. 43. after a Course of 130 Leagues. It was anciently call'd *Rubo*, as some Moderns think.

The L A K E S.

Great Poland, *Cujavia*, and the Territory of *Lublin*, have several great and remarkable Lakes, abounding with Fresh Fish of all Sorts. The chief of them is *Gopole*, in the Palatinate of *Brzesky*, 5 Miles in

Length, and half a Mile in Breadth. It lies 24 *English* Miles W. from *Brzesky*, and 32. N. from *Lanscher*.

2. *Briales*, or the *White Lake*, so call'd by an *Antiphrasis*, becausè, in April and May, it dyes the Skins of those that wash in it of a swarthy Colour.

Puffendorf says, That *Poland* is very Populous, and full of Towns and Villages. Some have computed, that the King and the Nobles have in their Possession Ninety thousand Cities and Villages: The Bishops and Canons One hundred thousand five hundred and fifty: The rest of the Clergy, Monks, and Nuns, Sixty thousand nine hundred and fifty: Which in all amount to Two hundred and fifty thousand, nine hundred and fifty Towns and Villages: But he says, he will not be answerable for the Exactness of this Account.

C H A P. XIV.

P R U S S I A in General.

PRUSSIA in general has on the N. the *Baltick Sea* for near 200 *English Miles*; on the N. E. the *River Memel*, which, at its Mouth, is called *Rusi* and *Chironon* by the Ancients. On the S. lie *Podlachia* and *Lithuania*; and on the W. *Great Poland*, *Masovia*, *Cosubia*, and *Pomerellia*. *Cluverius* says, the Extent of it, from *Thorn* upon the *Weissel*, to the Mouth of the *Rusi*, is 45 *German Leagues*, or 180 *English Miles*: The Breadth, from *Raigrodt* in *Polachia*, to the Mouth of the *Weissel*, as many: Its Long. according to *Mr. Toll's Map*, is from *Thorn* in 38, to the *Rusi* or *Mimel* in 41 *Deg.* and its Lat. from *Raigrodt* in 53 $\frac{1}{2}$, to the Mouth of the *Rusi* in 55 $\frac{1}{2}$.

Whence *Prussia*, *Borussia*, or *Preussen*, has its Name, is not certain. *Cluverius*, in *Germ. Antiq.* thinks *Helmoldus* (who flourish'd in the 12th Century) to be the first who makes mention of *Prussia*; but *Dithmarus*, who liv'd in the 12th Century, and the Anonymous Author of the Life of *St. Adelbert*, in the End of the 10th, speak of it. *Marianus Scotus* says, the Name came from the City *Aprutis*, where *Adelbert* suffer'd Martyrdom in 995: But this Opinion is rejected, because none else make mention of any such City. The most probable Opinion is, That they derive their Name from the *Borussi*, who dwelt, as *Strabo* says, in *Russia*, near the *Riphean Mountains*, and remov'd from those cold Places to *Prussia*. The Affinity of the Name and Language, (for the ancient *Prussian* is only a Dialect of the *Russian*.) makes some People to embrace this Conjecture. Others say, the *Venedi*, a Colony of the *Slavonians*, planted this Country, and quote *Palmus* for it, who says, That the *Venedi*, upon the *Vistula* or *Weissel*, had the *Phynni* and *Gythones* on the S. which is favour'd by *Cluverius's* Observation, That

several Places in *Liesland* still retain the Name of *Wenden*, *Windaw*, *Ushewinds*, &c. All Geographers, ancient and modern, place the *Electrides Insula* over against the Mouth of the *Weissel*, from whence *Amber* was carried all over *Greece* and *Italy*. This occasion'd some Latin Poets, who read that *Amber* came from the *Venedi*, to confound them with the *Venetians*. *Hartknock* alledges, from the Idolatrous Worship us'd anciently in *Prussia*, That the *Goths* were sometimes Masters of that Country.

The HISTORY of Prussia.

THE Origine and earliest Times of this People, as of most others, are very obscure. History tells us, they were at first a free and independent State, and had many Wars with their Neighbours; then they united with the *Slavi*. After 997, they were harass'd with Invasions by the *Poles*, till at last *Boleslaus Chrobry* conquer'd and impos'd a Tribute upon 'em, because, as some say, they murder'd *St. Adelbert* at *Fischhausen*. This perfidious Pagan Nation, tho' frequently worsh'd by their Christian Neighbours, did still disturb the Peace of all Kingdoms within their reach, which induc'd *Conrade*, the Duke of *Masovia*, to invite the Knights of the *Cross*, or of the *Teutonic Order*, to assist in reducing them. But the present State of *Europe*, printed in *Germany*, gives this Account of it, viz. That the uneasy *Prussians* endeavour'd often to free themselves from the *Polish Slavery*; and in 1300, in order to moderate the *Polish Rigour*, *Conrade* Duke of *Masovia* invited *Herman van Saltza*, Great Master of the *Teutonic Order*, and his Knights, to his Assistance, on Condition, That if, by their successful Arms, they should wrest *Prussia*

and *Culm* from the *Poles*, half the former should remain to them, as a Reward of their Valour, and the other half, with the latter, should continue to the *Prussians* themselves. These Terms were accepted, but not perform'd by the Knights; for in 53 Years Time, they extirpated the old *Prussians*, and became absolute Masters of the Country, as we shall hear more at large anon. This Order was instituted in 1191, by *Henry*, Patriarch of *Jerusalem*, and other Christian Princes, in Favour of the German Nation, upon this Occasion. When the Emperor *Frederick* took the Cross to recover *Jerusalem*, and the *Holy Land*, whereof *Saladin* Sultan of *Egypt*, had made himself Master in 1187, a great many German Noblemen and Gentlemen follow'd him as Volunteers, who signaliz'd themselves upon all Occasions; and wanting a Leader after the Emperor's Death, when the Christians besieg'd *Acre*, they chose *Frederick* Duke of *Suabia*, Second Son of the Emperor, and *Henry* Duke of *Brabant*, for Captain-Generals of their Nation, under whom they distinguish'd themselves with so much Bravery at the taking of *Acre*, and other Places of that Country, that *Henry* King of *Jerusalem* propos'd the instituting of an Order in their Favour; and, with the Patriarch and other Princes, form'd the Statutes according to the Model of the Knights of *St. John* of *Jerusalem*, and excerpted what they thought most agreeable to an Order both Military and Hospitable; so that the Priests of this Order might celebrate Mass arm'd Cap-a-pe. The Statutes, among other Things, bore, That the Knights should be of a Noble Race; That they should vow the Defence of the Christian Religion, and the *Holy Land*; and finally, That they should call themselves, *Knights of our Lady of Mount Sion*. The Emperor *Henry VI.* and Pope *Celestin III.* approv'd the Institution, order'd that they should be clad in White, and wear a Black Cross, like that of *St. John* of *Jerusalem*, in their Habits, Standards and Arms, and live according to *St. Austin's* Rule. Hereupon the King of *Jerusalem*, with *Frederick* Duke of *Suabia*, created the first Knights, to the Number of 40, making *Walpot* their Great Master. All Christian Princes shew'd their Affection to this Order by their Gifts, which began to be con-

siderable under their fourth Great Master, *Herman* of *Salza*, in whose Time these Knights rescu'd *John*, Son of *Henry* King of *Jerusalem*, in a Battle which the Christians lost against *Conradin* King of *Syria*; in Acknowledgment of which good Service, the same *John* honour'd them with the proper Arms of the Kingdom of *Jerusalem*. This Order consisted of 12 Provinces, viz. that of *Alsace* and *Burgundy*, *Austria*, *Coblenz* and *Esch*, still call'd Provinces of the Jurisdiction of *Prussia*; the Provinces of *Francia*, *Hesse*, *Bieffen*, *Westphalia*, *Lorraine*, *Thuringia*, *Saxony* and *Utrecht*, which are of the Jurisdiction of *Germany*; but now the *Hollanders* are Masters of all that belong'd to them in the Province of *Utrecht*: Each Province had its Commanderies, and the ancientest of the Commanders was call'd the *Provincial*; but all are under the Great Master, as their Chief. The 12 Provincial Commanders assembled together, to chuse a Great Master or Coadjutor. The Great Master keeps his ordinary Residence at *Mariendal* in *Francia*, since the Order was forc'd out of *Prussia*, and is worth about 20000 Crowns per Annum. The most Part of the Commanderies are possess'd by German Lords, or Princes younger Sons. To return to the History of *Prussia*: The Duke of *Masovia* in *Poland* gave these Knights a Grant of what Lands they could conquer from the Pagans in *Prussia*, which the Pope and Emperor confirm'd. They engag'd them in several Encounters, defeated them intirely, and in less than 60 Years drove the Pagans out of *Prussia*, and made themselves Masters of *Pomerellia*, *Samogitia*, *Livonia*, and *Curland*; and having built several Towns, Churches and Castles, and planted several German Colonies, they enter'd *Russia*, where they establish'd the Christian Religion. Whilst they were victorious here in *Europe*, in 1291 the Town of *Acre* was taken by the Sultan of *Egypt*, and the Knights were oblig'd to return to *Germany*. About 1400, their Affairs were very prosperous: They then made a considerable Figure in *Europe*; but at last, being flush'd with their frequent Victories, and a long Succession of good Fortune, they attempted to conquer *Lithuania*, and were very troublesome to all the neighbouring States, till in 1410, they were intirely routed by *Bolissaus* King

of *Poland*, at the River *Debrantz*, on the Borders of *Masovia*. Upon this they lost a great Part of *Prussia*, and would have lost all their Conquests, if their Subjects had not been true to their Interest. After this they fell into Civil Wars, and, by their great Exactions and Severities, they alienated the Hearts of their Subjects. Moreover, some of their Commanders having Designs upon the Liberties of the People, built Citadels and Castles in Cities, to bridle the Citizens. They invited also some of the Senators and chief Citizens of *Dantzick* into the Castle there, on Pretence of Kindness and Friendship; but when they came into the Castle, they murder'd them. After this they stuck at no Villany, but debauch'd the Wives and Daughters of honourable Citizens, and us'd their Subjects as Slaves. The Nobility and Citizens, exasperated with such Tyrannical Government, assembled at *Culm*, and enter'd into a League, obliging themselves to defend their common Liberty and Privileges, and agreed to give in a Memorial to the Provincial Meeting of the Estates, of their Sufferings from the Master of the Order and the Commanders. The Emperor *Frederick III.* declar'd what they had done was a Rebellious Confederacy, and by his Edict commanded them to abjure that League, to obey the Master of the Order without Reserve, fin'd them in great Sums, and depriv'd them of their Liberties and Privileges. Upon this they renounc'd their Allegiance to *Lewis Erlsbua*, the Grand Master of the Order, who defeated the *Poles* in a Battle, kill'd 30000 on the Spot, and took 136 of their Noblemen Prisoners; but was at last worsted by them. In 1454, the *Prussians* revolted to *Casimir* King of *Poland*, and swore Allegiance to him. In 1466, when the Knights of the Order had lost many of their Castles and Places of Strength, they were oblig'd to enter into Articles with the said *Casimir*, by which they quitted all Pretences for ever to the Territories of *Gulm*, *Michelaw*, *Pomerellia*, *Elbing*, *Christburg*, *Stum*, *Tolkemisch*, and all the Castles and Dependencies of those Places, with *Nerung*, an Island in the *Baltick*, which has the *Weissel* on the S. W. and the Diocese of *Varmia*; reserving

to themselves only that Part of *Prussia* of which *Koningsberg* is the Capital, and held it of the King of *Poland* by a Feudal Tenure. Most of the Knights swore Fealty to the Republick, except *Frederick* the Duke of *Saxony*, and Grand Master of the Order, who relying upon the Friendship and Assistance of the Emperor and Princes of the Empire, still asserted the Independency of *Prussia*; but when he saw the Military Preparations of the *Poles*, who design'd to decide that Controversy by the Sword, and knowing he was not able to encounter them, he fled to *Germany*. After his Death, he was succeeded by *Albert* Marquis of *Brandenburgh*, the 34th Great Master, who also refus'd to do Homage to the King of *Poland*, and gave this for Reason, That both the Emperor and Pope forbade him. This brought on a War between the Marquis and *Poland*, which he carried on for some time with great Vigour; but finding himself over-march'd, he made Peace with *Poland*, on these Terms, That he should be made Hereditary Duke of *Prussia*, and hold it as Vassal to the King of *Poland*. Thus in 1525, he was created the first Hereditary Duke of that Part of it he then possess'd, which was afterwards call'd *Ducal Prussia*, to distinguish it from that Part of the *Polish* Dominions which was called *Regal Prussia*: And thus the Knights were wholly drove out of that Country. His Successors thought this Treaty too favourable to the *Poles*, as they believ'd it too advantageous for him: But *George William*, Elector of *Brandenburgh*, and his Son *Frederick William the Great*, succeeded so well in their Design, that in 1657, at a Treaty then on foot, the Sovereignty of *Prussia* was afterwards at *Koningsberg*, October 18, 1663, confirm'd to him and his Heirs by the *Polish* Ambassador, on Condition, That in case of the Failure of his Heirs, it should return to the *Poles*, and become a Fief of that Crown. This prosperous State of *Prussia* has been highly improv'd by the Son of that great Prince, who so far honour'd this Country, as to cause himself to be proclaim'd King of it, with an unusual Magnificence, January 18, 1701.

Of the RELIGION of the Prussians.

WE have no certain Accounts of the Manner of their Worship while Pagans, nor at what Time, or by whose Means, they embrac'd Christianity: But all agree in this, That towards the End of the 10th Century, St. *Aldbert*, or *Adalbert*, Bishop of *Prague* in *Bohemia*, and afterwards Archbishop of *Gnesna*, as the *Poles* say, came thro' *Poland* into *Prussia*; where he either first plant'd or restor'd Christianity. But the Pagan Priests seeing their Gain struck at, so inflam'd the People against St. *Albert*, that they murder'd him barbarously at *Rasthausen* in *Sambland*, in 997. Upon which, *Bolleslaw* King of *Poland*, as has been already said, conquer'd them, and oblig'd them to embrace Christianity; and to prevent their Relapse into Idolatry and Superstition, he burnt the great Oak at *Romanow*, the Temple of three of their Superior Gods: Yet no sooner had the *Poles* withdrawn their Troops, but they return'd to Paganism. In the Beginning of the 13th Century, the Civil Broils among the Polish Nobility occasion'd the Neglect of the Conversion of the *Prussians*. About 1215, *Christianus*, a *Cistercian* Monk, endeavour'd to re-convert them, and for that End, by the Pope's Command, took upon him the Office of a Bishop; but finding his own Power insignificant, he was quickly forc'd to beg the Assistance of *Conrad* Duke of *Masovia*. This Expedient also prov'd unsuccessful; for the Knights of *Dobrin*, whom the Duke had oppos'd to the Fury of the *Prussians*, making Incursions into *Masovia*, were all vanquish'd and slain by the Idolaters. When all those Expedients prov'd unsuccessful, the Christians began to consider of some other Means of converting the *Prussians*, and pitch'd upon the Knights of the *Teutonic* Order, who were famous at that Time over all *Christendom*, as most likely either to persuade or force them to Christianity. *Conrad* Duke of *Masovia*, pleas'd with these Proposals, immediately dispatch'd Letters to the Master of the Order, profering him the Land of *Culm*, and Auxiliary Forces, in case he should meet with any Opposition. Upon this, in 1226,

Herman de Salza, 4th Great Master of that Order, forthwith sends *Herman de Balke*, one of his Knights, among the *Prussians*, with the Title of *Superintendent*, (afterwards chang'd into *Provincial* of *Prussia*;) But so vigorously did the Heathens oppose those Undertakings, that it was 53 Years before they could be brought to renounce their Idolatry. After Christianity began to take Root among them, several Bishopricks and Monasteries were founded; notwithstanding which, many Heathens were wink'd at; for the barbarous Commonalty could not be brought from their ancient Folly but by degrees. Besides, the Masters of the Order minded the Enlargement of their own Power and Dominion, more than the Preaching of the Gospel, and (tho' Papists) despis'd the Canons and Constitutions of the Church of *Rome*, and mock'd the Pope's Threats and Excommunication, which made Way for many Divisions: And at this Time the *Waldenses*, *Wiclefites*, and *Hussites*, prevail'd mightily in *Prussia*. However, the *Teutonic* Order still profess'd Popery, till the Time of *Albert* Marquis of *Brandenburgh*, last Master of that Order, and first Duke of *Prussia*, who having cast off the Polish Yoke, not without a great deal of Blood, about 1520, he embrac'd the Protestant Religion, and, by his own Authority and Example, perswaded the greatest Part of the Knights to marry; and by Degrees brought over the whole Country to Lutheranism. *Frederick William* the Great, who died in 1688, was a Calvinist, and countenanc'd Calvinism in *Koningsberg*, and other chief Cities of *Ducal Prussia*: But in *Dantzick*, and the other Towns upon the *Weissel* which are subject to the Crown of *Poland*, the People are Lutherans.

Of the MANNERS of the Prussians.

THE Inhabitants are generally strong Body'd, and long liv'd. *Adam Bremen*sis, in his Description of *Denmark*, and the Northern Parts of *Europe*, tells us, the *Prussians* were grey Ey'd, and yellow Hair'd. The Ancients, as *Sidonius Apollinarius*, and *Ausonius*, had the same Opinion of all the Northern Nations: But since the *Prussians* have

have mix'd with other People, and admitted the modern Luxury of other European Countries, they are neither so healthy, nor of the same Complexion, as formerly. The Apparel of the Prussian Gentry is not much different from that of the more Southern Nations, tho' not altogether so gaudy. The Boors wear long and Strait Coats, of coarse Wool or Leather, after the Fashion of their Forefathers; but their rich Yeomen wear coarse English Cloth for a Holiday Suit. Tacitus tells us, the Venedi were the first of the Scythian Race that forsook their Waggon, and began to build Houses; yet their Successors are not arriv'd at any great Skill in Architecture. Near the Weisfel, which is the ancient Seat of the Venedi, the Houses are magnificent, compar'd with the Wooden Huts which you meet with towards the wild Confines of Lithuania. Tacitus tells us, the Phenni, who dwelt in those Parts, had no other Shelter from the Injuries of the Weather and Wild-Beasts, but the Boughs of Trees twisted together: And to this Day the Invention is not much improv'd; for the Boors now have no other Houses than Hovels made of Stakes, interwoven with Rods, and cover'd with Earth, or, at best, a little Fern. The many Incursions which have been made into this Country upon the several Quartels of the Electors of Brandenburg, with the Poles and Swedes, have forc'd them to raise some Castles and Fortifications of Stone; but otherwise, a Stone House here is a Rarity. The ancient Prussians slept on the Ground, or sometimes on the Skins of Beasts; and now they sleep on Straw; as was mention'd before.

Of the AMBER in Prussia.

THE old Prussians traded by exchanging one Commodity for another: Their chief Trade was the *Electrum*, or Amber, so famous among the Ancients; but was at last neglected by the Idleness of the People, who contented themselves with bare Necessaries. All those who have wrote of Prussia, have endeavour'd to find out the Nature of this *Electrum*. Ovid feign'd it to be the Tears of the *Heliades*, deploring the Fate of their Brother *Phaeton*. Some Philosophers fancied it to be the Fat of the

Sea: Others alledg'd it to be the Gum of a Tree; but could not say of what kind, whether Cedar, Poplar, or Elm. Kircher thinks 'tis a Bituminous Substance, which rising from the bottom of the Sea, is toss'd by the Waves till it be brought to a Consistency; but none that liv'd on the *Baltick*, could ever yet observe any such Bitumen in those Seas. Besides, the Veins of Amber found under Ground in Places far distant from the Sea, do sufficiently prove the contrary: So that when 'tis found in the *Baltick*, and in the adjoining Lakes and Rivers, we must suppose 'tis broke off from some Vein under Ground by Floods or Tempests. Mr. Hartman, in his Treatise *De Succino Prussico*, gives this Account of it: Since (says he) it can neither be melted, nor is malleable, 'tis impossible it should be Metal: And because it is too solid a Body to come under the Species of Sulphur or Bitumen, it must needs be rank'd among Precious Stones. Amber, or *Succinum*, is a Coagulation of *Petroleum*, which being of divers Colours, White, Yellow, Red, and Black, accordingly grows into several Substances of those Colours: While 'tis very liquid, like Oil, it is call'd *Petroleum*: When somewhat thicker and clammy, 'tis call'd *Naptha*: When still more thick, we call it *Bitumen*: But when it comes to be a Hard or Stony Substance, it becomes White, Yellow, Red or Black Amber. If very Black, it is call'd *Gagati*, or Jet. When our Men broke the Rocks near *Tangier*, to form the Mole, they frequently found Amber in the Clefts of the Stones. The Marquis de Binot, Envoy Extraordinary from the King of France to the King of Sweden, in a Letter to the Royal Academy of Sciences at Paris, says, he saw in some Places near *Dantzick* Yellow Mineral Amber, of the same Sort with that found on the Sea-Coast. The Academy gave their Opinion about it: Messieurs *Giffini* and *Miraldi* observ'd, That Jet, and a sort of Yellow Amber, was found at *Bugarch* in *Languedoc*, 27600 Fathom from the Sea; and that it is also found in the Rocks of *Provence*, and in *Sicily*, along the Coasts of *Agriento*, *Catanea*, *Leocata*, and on the Shores of *Corsica*, *Bowonia*, *Ancona*, and *Umbria*. They farther observ'd, That the Insects inclos'd in the Amber were of the Terrestrial kind, as Bees, Emamets, &c. and that none ever observ'd.

observ'd Trees distilling Amber, as they do Pitch, Resin, &c. from whence they infer, That Amber may probably be an Oil distilled from Rocks, like *Petroleum*; and that those Insects are entangled in it when it is liquid. Amber is also found sometimes in great Lumps on the Coasts of the Scottish Islands. *Pliny* tells us, the ancient Germans call'd it *Glessum*, or Glass, because of its Transparency; whence the Romans call the Island where it was gather'd *Glessaria*; and the Barbarians call'd it *Austinaia*. But some think, the true reading of that Word in *Pliny* is *Austania*, because the ordinary German Word for Amber is *Augstein*; and they are suppos'd to have given it that Name, on Account of its being good for the Eyes. *Tacitus de Moribus German. Cap. 45.* says, the *Esti*, dwell in that now call'd *Prussia* and *Curland*, and were so call'd, because they lay Eastward from the *Eveni*. He adds, That they search'd the neighbouring Sea, and were remarkable for their peculiar Skill in gathering Amber. *Cassiodorus*, who liv'd in the 6th Century, quotes a Letter which *Theodoric*, a King of the *Goths*, wrote to those *Esti*, thanking them for their Present of Amber, which he told them was very acceptable. Their Ambassadors, who brought it, could not inform him how it was generated; but told him that it was only found in their Country. *Heylin* thinks, Amber proceeds from the Juice of a Stone, which grows like Coral, in a Mountain on the *Baltick*; but by the Violence of Storms is tore from the Rock, and is cast out on the Coasts of this Country, and sometimes on those of *Pomerania* and *Sweden*. The People who gather it leap into the Sea, tho' ever so raging, from whence they first take up some Wads, after that this Liqueur; which being expos'd to the Air, turns hard like Coral. It is good against bleeding at the Nose, Agues, Falling-Sickness, Dropsies, Stone, Cholick, Weakness of the Stomach, Head-Ach, and the Yellow-Jaundice.

Of their MONEY.

THE *Prussians* had little or no Knowledge of Money before the Arrival of the *Teutonic Order* in 1230, who coming out of *Germany*, brought with them the

Coin of their Country. Among the rest of their Pieces, the Broad *Bohemian Gros* was long current both in *Prussia* and *Poland*; but knowing that this small Stock would not go far, they set up Mints, and coin'd Pieces of their own; which they did exactly, that most Nations have own'd, that they first brought the Art of Coining to Perfection. Hence the Learned *Sir Henry Spelman* think, that our English Word *Sterling* is deriv'd from the *Eastwings*, who coming out of *Prussia*, first taught the Art of Refining and Coining purer Silver in *England*, than before their coming had been made use of. The Species of Money now current in *Prussia* are;

1. A *Schilling*, which contains Six-pence, or Pfennings; no single Pence being now in use there.
2. A *Gros*, which consists of 3 Schillings, and 20 of them make 1 Mark.
3. A *Mark*.
4. A *Gulder*, which contains 30 Grosses.
5. A *Dollar*, (or *Thaler*) worth 3 Gulders.
6. A *Ducate*, equal to 2 Dollars, and is valued at 9 Shillings-English.

Swedish and *Danish* Money is also current here. Some late *Prussian* Writers derive the Word *Schilling* from one *Barnhard Schilling*, who first stamp'd this sort of Coin; but this is confuted by *Schortelius*. The *Gros* was so call'd, because it was the greatest Piece in the Infancy of their Coinage, and from thence perhaps we have our Groat. A *Mark* was no peculiar Piece of Coin, but a certain Weight, equal to 36 of the now *Prussian* Marks; so that it had not its Name, as *Loccenius* thinks, from the German Word *Mark*, because 'twas mark'd or stamp'd with some particular Impression, but was only us'd in that Country in reckoning of Money, as we do by Pounds and Marks, and the *French* by *Livres*; tho' neither of us have any Piece of that Value. *Gulder* signifies no more than a Piece of Gold Coin. The *Dollar*, (or *Thaler*) as the Germans call it, has its Name from the German Word *Thal*, a Valley, or Dale, because that Piece was first coin'd at the Mines in *Joachim's Dale* in 1517; whence for some Time, instead of the Word *Thalerus*, they us'd *Joachimicus*.

chymicus for a Dollar. The Value of these is alter'd frequently by Allays of Brass and Copper, according to the Humour of several States or Sovereigns.

Their LANGUAGE.

THAT the *Venedi*, the first Inhabitants of some Parts of *Prussia*, spoke *Sclavonick*, is beyond all Controversy. After them, the *Goths* brought in a Dialect of the *Celtick*, differing a little from the *German*: But this did not take with the *Prussians*; for till the Arrival of the Knights of the *Teutonic* Order, they spoke, as they do still in many Places, a Language materially the same with what the *Muscovites*, *Poles* and *Lithuanians*, now use. *Grunovius*, a *Prussian* by Birth, is of another Opinion, because the *Poles* do not at all understand the *Prussian*, and scarce any thing of the *Lithuanian* Tongue: But this Argument is not conclusive, if we consider what Difficulty an *Austrian*, *Lunenburgber*, and *Fleming*, have to understand one another; and how much harder 'tis for a *Dan.*, *German*, and *Englishman*, to discourse together, tho' their Language be of one Origine: So that a Mixture of the *German* and *Sclavonian* Tongues, and a Revolution of perhaps 2000 Years, must needs have much alter'd the *Prussian* Language from what it was at first.

This Country is large and fertile, being water'd with 2037 Rivers and Lakes, as their Monks have reckon'd, which afford them store of Fish for their ordinary Food. This Province has no great store of Mines, but abounds with Cattle, Wild-Beasts, Fish and Fruit of all Sorts, and enjoys a very temperate Climate. The Goods they have from *Poland*, *Russia*, and *Lithuania*, they export in great Quantities, and import whatever *Europe* or the *Indies* afford, but chiefly by Way of Exchange; whence the Inhabitants live richer and better than in any other Province of *Poland*. In this Country, they make Glass of Ashes of a certain sort of Wood, or of the largest sort of Pebbles, which they boil 12 Hours before they vitrify. When they would have their Glass clearer than ordinary, they mix with the Ashes a certain sort of Earth of the Hard-

ness of Tartar, which renders the Glass of different Colours, according to the Quantity mix'd with the Ashes. They observe, That if Salt be mix'd with Glass, it is much easier blown by the Artificer.

The principal Rivers of this Province are, the *Weissel*, the *Memel*, *Nogat*, *Elbing*, *Wesser*, *Passer*, *Alla*, *Pregel*, *Ossa*, *Drebnick*, *Lica*, and *Lavia*.

The chief Lakes are, *Habua*, near 15 Miles long, and 2 broad, disjoin'd from the Sea by the Peninsula *Neringa*, which has a Communication with the Sea, where the Inhabitants gather Amber in Nets of a Conick Figure, with a large Mouth, and narrow at Bottom, which they tie to a long Pole, and put into the Sea when it begins to flow, and sometimes hale up Pieces of Amber as big as one's Fist. *Comor* was of Opinion, That the Amber was form'd by great Quantities of Resin or Turpentine, which drop'd from the Fir-Trees into the Lake, and being carried into the *Baltick*, was by the Waves congeal'd into Amber; but was afterwards inform'd, that Amber is a Mineral Juice that runs into the Sea, which at first taking up is soft, but is quickly harden'd by the Air.

Of POLISH PRUSSIA.

THIS Country is divided into 3 Palatinates, *Pomerellia*, *Culm*, and *Marienburg*.

The Palatinate of POLISH POMERANIA, or POMERELLIA.

THIS is the most Easterly, and least Part of *Pomerania*: It has *Brandenburg-Pomerania* on the W. the *Baltick* on the N. the *Weissel* on the E. and *Great Poland* on the S. When the *Goths* abandon'd this Province, the *Borussians* and *Scythians* settled here. The Palatine of *Pomerellia*, and the Castellan of *Dantzick*, are the Senators of this Palatinate. The chief City is *Dantzick*, which lies in Lat. 54 $\frac{1}{2}$, Long. 38. call'd in Latin *Godanum*; by the Natives, *Gdanek*; by the *Poles*, *Danzik*; by the *Germans* and *Fench*, *Dantzick*. 'Tis one of the chief Hans-Towns, and has the greatest Part of the Trade of *Poland*. It is seated upon the *Weissel*, which 4 English Miles below falls into the Gulph of *Dantzick*.

Danzick, anciently call'd *Venedicus Sinus*. When and by whom this City was built, is not certain. *Beccius* and *Pontanus* think it was built by the *Danes*, about 1165, when *Woldimar* King of Denmark, having then War with *Sobeslaus* I. Prince of *Pomerania*, built a Fortrefs here, and call'd it *Daneswick*, which *Sobeslaus* took from them in 1116. Some think it is more probable, that to the Word *Dan*, *Gedan*, *Gdun*, or *Gdan*, the *Sclavonian* Termination *Ske* was added, which made it *Danske*, or *Gdanke*, and was afterwards chang'd into *Danefick*. *Cluverius* is of this Opinion, and thinks the Name is deriv'd from the *Sinus Codanus*, so call'd from an ancient Idol of the Germans. It continued a Village till 1295, that *Premislaus* King of Poland made himself Master of it, and, by adding many Buildings to it, gave it the Form of a City. In 1343, it was Wall'd, as *Cluverius*, in his *Germ. Antiq.* informs us. The chief Part of the City, call'd *Die Rechte Stadt*, was built by *Conrad Wallenrode*, Master of the *Tentonic Order*, about 1390. In 1454, it submitted to *Casimir* King of Poland. They afterwards declar'd for the *Augsburg* Confession, and sided with *Maximilian* of *Austria* against *Stephen Battori* King of Poland, who proscrib'd and besieg'd them in 1577, but was oblig'd to raise the Siege. In 1579, they were restor'd to their Privileges, with a Reservation of many more; for they have a Suffrage in the Diet of that Kingdom, and are govern'd by their own Magistrates, who finally determine all Criminal Causes without Appeal, and all Civil Causes not exceeding 1000 Livres; and, with the Approbation of the Council of 100, impose necessary Taxes upon the Inhabitants. It lies 24 *Engl.* Miles N.W. from *Morlenburg*, 32 W. from *Elbing*, 88 N. from *Thurn*, 120 N. from *Gnesen*, and 160 N.W. from *Warsaw*. In 1626, during the *Prussian* War, it was faithful to the Interest of the King of Poland. And lately, in 1655, when *Charles Gustavus*, King of Sweden, had over-run Poland, all the Cities open'd their Gates to him except *Danzick*, which put a Stand to the Swedish Victories: So that the Faithfulness of this City retriev'd the Affairs of *John Casimir*, when almost desperate. It is water'd by the *Widlaw* and *Rodawn*, and is built partly of Stone, and partly of Brick. The Hou-

ses are generally 6 or 7 Stories high. It consists of 3 Cities; the first call'd *Voorstat*, or the *Fore City*; the 2d *Alstat*, or the *Old City*; the 3d *Rechte Stadt*, or the *Empero's City*. All the 3 are encompass'd with a high Wall, so broad, that Coaches easily go round it, and the Fortifications are of a vast Extent; but being commanded by two Hills on the S.W. it cannot well hold out a Siege. *St. Mary's Church* in *Danzick* is the stateliest Fabrick in *Prussia*, has 48 Altars, and 3722 Windows. The Font was made at *Antwerp*, and cost 24000 *Rix-Dollars*. The principal Trade here is in Corn, which comes from *Poland*; and one Year with another, 'tis computed that they export 730000 Tuns of Wheat, 2 Tuns making up a Last. The Citizens have many Privileges, and particularly this, That they may buy up Corn as soon as it enters the Haven. This City is the Granary of *Holland*, and of other Northern Countries. Travellers and Merchants tell us, That the Granaries of *Danzick* are generally 7, and some 9 Stories high, having each of them a Funnel to let the Corn run down from one Floor to another, to save the Labour and Charge of Carriage. These Granaries are surrounded with Water, so that Ships lie close to them to take in their Loading; and no Houses are suffer'd to be built near them, for fear of Fire, as we are inform'd by *Phil. Transact.* of R. S. N. 25. P. 466. Merchants import Foreign Commodities to this Place, which furnishes all *Poland*; and this contributes to the enriching of it. One Half of the Port-Customs belongs to the King of Poland, since the Reign of *Sigismundus Augustus*: And one Mill brings him in every Hour of the Day and Night 24 Gold Ducats: It is built on the *Rodawn*, which runs through the City. The Yearly Revenue of this Mill is 4320 *l.* Sterling to the State, beside the Profit it brings to the Proprietors. The Harbour is not deep, so that Ships of Burden can scarce reach the City. Tho' it is subject to the King of Poland, their Form of Government is Republican: The Establish'd Religion here is *Lutheranism* since 1525; the Calvinists are tolerated; and some Papists and Anabaptists are allow'd the Exercise of their Religion. *Cluverius*, the most eminent Geographer of his Time, was born here. There

are 20 Parishes in the City and Suburbs. One Half of the latter belongs to the Crown of Poland, and the other to *Dantzick*. The Streets are dirty in Winter, as in most Towns of Poland. The greatest Part of the Inhabitants are Germans, and are reckon'd above 200000 in all. The Town-House, where the Magistrates meet, is a very magnificent Structure, and has an exceeding high Spire. This City has 3 Magazines, well provided with Stores and Ammunition for Land-Forces. They have a College, with Professors of all Faculties; but don't give the Degree of Doctor. The Jurisdiction of this City extends above 40 English Miles in Circumference. They send two Deputies to the Diet of Poland. The Senators, when once created, continue for Life: Four of the Senate are Calvinists. Out of the 4 Proconsuls or Burgoasters, the King nominates a Burgrave to represent him in the Senate, who signs all Sentences of Death. To represent the Grievances of the People, and to maintain their Privileges, there are 100 Burghers chosen to inspect the Conduct of the Senate. The *Centum-Viri* and Senate chuse their Ministers, which is the Manner in all Lutheran Countries. When the King comes hither, the City treats him for 3 Days; but he is allow'd only to bring a few Guards with him. They have a Secretary always at the Court of Poland. They can coin their Money without the King's Leave: His Effigies is on one Side, and their own Arms on the other. If any appeal to the Tribunal of Poland, he is to lay down 100 Guilders in the Town-House of *Dantzick*, to prevent the Frequency of such Appeals. They have constantly above 200 Soldiers in Pay, can easily maintain 12000, and sometimes they have had an Army of 60000. They have no Men of War, but abundance of Merchant-men of 3 or 400 Tuns, and 30 or 40 Guns apiece. They never Trade into the East or West Indies, but into the *Streights*, and all over Europe. In 1642, the Declination of the Magnet here was 3 Deg. 5 Min. W. In July, 1670, it was 7 Deg. 20 Min. The Scots, in Consideration of the eminent Service they did to this City against the Poles, under the Conduct of one of the Family of Douglas, were allow'd to be Freeman of the Town, and other Privi-

leges, beyond other Foreigners; and one of the Suburbs is still call'd *Scotland*, in Remembrance of this Exploit, and was mostly inhabited by Scots. The Arms of Scotland was also set up over the Gate, from whence they sallied upon the Polish Army, and continued there till lately, that the Gate was rebuilt.

Not far from *Dantzick* to the E. is *Olivka*, an Abbey of the *Benedictines*, remarkable for a Peace concluded there in 1660, betwixt the Emperor, the King of Poland, and the Elector of Brandenburg, on the one Side, and the King of Sweden on the other. *Munde*, or *Weisselmunde*, is a strong Fortress, upon the Mouth of that Branch of the *Weissel* which runs by *Dantzick*, and can hinder the Entry of Ships. *Cenitz*, lies upon the Borders of Brandenburg *Pomerania*, upon the River *Ebro*, 32 English Miles W. from *Culm*. *Dirschow*, is seated upon the *Weissel*, 12 English Miles W. from *Marienburgh*, and 24 S. from *Dantzick*; was once a Place of Strength, but now dismantled: 'Tis an ancient Monument of the Magnificence of the Teutonic Knights. *Pautzke*, lies upon the Gulph of that Name, which is a Part of the *Baltick*, near *Dantzick*: It has a strong Castle, which was taken by the Swedes in 1626, and retaken in 1627. In 1655 the Swedes besieg'd it, but were oblig'd to raise the Siege. *Hella*, is a small Town near *Pautzke* to the W. *Schlau* belongs also to this Palatinate.

The Palatinate of CULM

IT lies betwixt the *Weissel*, Great Poland, and Ducal Prussia, and was one of the 13 Parts of Prussia: It has its Name from *Culm*, the chief City, in Lat. 53 $\frac{1}{2}$, Long. 39. 16 English Miles N. from *Thorn*, and 60 S. from *Dantzick*. This City was built by the Teutonic Knights in 1213, is situated upon a Hill, the Foot of which is washed by the *Weissel*, and was an Episcopal See, under the Archbishop of *Gnesna*. It has few Inhabitants, and no Trade since the Swedish Wars; therefore the Bishop's See is translated to *Colmetssee*, 12 English Miles S. E. from it, *Herman de Saltza*, Master of the Teutonic Order, gave Laws and Constitutions for the Government of this Town; a Specimen

of which is given by *Lambecius*, from an old Dutch MSS. in the Emperor's Library at *Vienna*. The Municipal Laws of this Place are famous all over *Prussia*. It is still reckon'd one of the *Hans-Towns*. *Thorn*, is a *Hans-Town*, on the *Weissel*, which divides it: It lies in Lat. 53, and Long. 39. 16 English Miles S. from *Culm*, 72 S. from *Marienburg*, 88 S. from *Dantzick*, 60 N. from *Lancicia*, and 116 N. W. from *Warsaw*. It was built at the same time with *Culm*, by the Knights of the *Teutonic Order*, as a Garrison to curb the Pagan *Prussians*, but not in the Place where it now stands. Old *Thorn*, was seated a Mile W. from the New; but by whom and when New *Thorn* was built, is not certain. *Cluverius* says, it was a famous Mart, long before *Dantzick* was considerable for Trade. It has a Bridge over the *Weissel*. In 1454, both Old and New *Thorn* revolted from the *Teutonic Knights* to the *Poles*, who allow'd them great Privileges; whereas the Knights govern'd them in an Arbitrary Manner. It has its Name from the German Word *Thor*, a Gate, because built by the Knights to receive such Forces into their Dominions as they needed. Hence the Arms of *Thorn* are a Castle and a Gate half open. This City is the neatest and best built of any in *Prussia*: The Houses are more stately, and the Streets broader, than at *Dantzick*. It owes much of its Beauty to *Henry Strickland*, Burgo-Master of the Town, who died in 1609. He built the University, and endow'd it with a considerable Revenue. The Professors here are Men of great Learning. He founded also the Town-Hall, which, next to the *Stadthuis* in *Amsterdam*, is reckon'd the stateliest in *Europe*. He built a Hospital, and founded a Library, where two of *Cicero's* Epistles are preserv'd upon Tables of Wax. *Nicolaus Copernicus*, the great Astronomer and Mathematician, and remarkable also for his Piety, was born here in 1473, and died here in 1543.

In 1645, by Order of the King of *Poland*, a Conference was held here betwixt Lutherans, Calvinists and Papists, which had no Success. The Acts of this Conference were printed at *Warsaw* in 1646, and *Georgius Calixtus* wrote Animadversions upon it. This Place is famous for holding out a long Siege against the *Swedes*, who took

it in 1655. The *Poles* retook it in 1658, after a Siege of 6 Months. The *Swedes* recover'd it afterwards; but in 1665, the *Poles* surpris'd it. The Fortifications were formerly very considerable; but *Charles* the XIIth. the present King of *Sweden*, having taken it October 14, 1703. dismantled it.

Other Towns of Note here are, 1. *Graudenz*, a pleasant and strong Town, upon the *Weissel*, where the *Ossa* falls into it, and is now well fortified; so that it is in no Danger from any Surprize. It lies 36 English Miles N. from *Thorn*, and 44 S. from *Marienburg*. 2. *Strasburg*, is seated on the River *Debrentz*, E. from *Culm*, which in the last Age was frequently taken and retaken by the *Swedes* and *Poles*. 3. *Gbortza*, one League from *Culm*, on the opposite Bank of the *Weissel*, has now nothing remarkable but a fine Church; tho' during the Government of the *Teutonic Knights*, 'twas the most flourishing Town of *Prussia*, as is evident from some of its stately Ruins. 4. *Novi*, two Leagues below *Graudenz*, is built on a Hill, the Foot of which is wash'd by the *Weissel*. 5. *Glnief*, a small Town, with a strong Castle, where *John Sobieski* kept his Treasures.

The Territory of *Michalovia* in this Country is a strait Neck of Land between the Rivers *Brodna* and *Drebentz*, and was the Occasion of bloody Wars betwixt the *Poles* and *Teutonic Knights*.

The Senators of this Palatinate are, the Bishops of *Culm* and *Warmia*, and the Palatine and Castellan of *Culm*.

The Palatinate of MARIENBURGH.

IT lies betwixt the *Weissel*, the *Baltick*, and *Ducal Prussia*, and has its Name from *Marienburg*, the chief City, in Lat. 54, Long. 38. It lies upon the *Nogat*, a Branch of the *Weissel*, which loses it self in *Frische Haff*. The Natives call it *Margenburgh*. It derives its Name from an Image of the Virgin *Mary*, found there when the Fortifications were built. It lies 24 English Miles S. E. from *Dantzick*, 16 S. W. from *Elbing*, and 44 N. from *Thorn*. In 1281, the Castle was built by the *Teutonic Knights*, to stop the Inroads of the *Prussians*, and was the

Capi-

Capital of their Dominions, and reckon'd impregnable. *Casimir IV.* King of Poland, took it in 1460. The *Swedes* took it in 1626, after 5 Months Siege. In 1640, it was burnt down by the *Germans*. In 1655, the *Swedes* took it; but it was restor'd again to the *Poles* in 1660, by the Peace of *Oliva*. The Town is but meanly built; most of its Houses are of Wood, and the Inhabitants poor; for thò the Island of *Marienburg*, which is made by the *Weissel*, be rich, its Revenues are spent in casting up great Banks to preserve it from the Inundations of the River. The best Mead in *Prussia* is made here. The fruitful Island of *Zulna* lies near this City. *Elbing*, lies in Lat. 54 $\frac{1}{2}$, Lon. 40, on a small River of the same Name, which falls into the *Frisch-Haff*. *Protolomy* seems to place his *Elveones*, and *Tacitus* his *Helvecones*, near this Town. *Fredericus Zamalius* calls this City *Augusta Elveonum*, and *Elveopolis*, not doubting but it had its Name from those ancient People. *Hemshergus* more probably derives that Name from *Oehlsing*, *Oelfany*, or *Oelfang*, i. e. a Place where Eels are caught. *Comringius* says, it is from *Elff*, a Name given to Rivers by the *Goths*. It was built in 1239, by the Burghers of *Lubeck*, who obtain'd from the Knights, that it should enjoy the same Privileges and the same Laws that the Emperor *Frederick II.* had granted to *Lubeck*. The Master of the Order gave them for their Arms two Crosses and a Net, from the Arms of *Lubeck*. Their great Trade made it in a small time one of the most considerable Cities on the *Baltick*. In 1454, they put themselves under the Protection of the King of Poland, and levelled their Castle, because the *Teutonic Knights* invaded their Privileges: It continued faithful to the *Poles* till 1525. *Albert Marquis of Brandenburg*, and first Duke of *Prussia*, built an University here in 1542. In 1626, it was taken by the *Swedes*, who restor'd it in 1636. After this, they open'd their Gates to *Charles Gustavus*, King of Sweden; but it was restor'd again to the *Poles* by the Peace of *Oliva*: It now

belongs to the King of *Prussia*; thò they never own'd that Prince till 1698, that General *Brant* laid Siege to it, and oblig'd them to surrender, having then but a small Garrison. It is the chief Town of *Hockerland*, and lies near the *Baltick*. When *Stephen* King of Poland belieg'd *Dantzick* in 1577, he made *Elbing* the Staple of Trade. At that Time the *English* set up there, and brought their Cloths to it; and *Gustavus Adolphus* design'd also to make it the Staple during his *Prussian* Wars. This City is well built, and very clean. Many *English* trade here, thò their Number is abated since the Staple of our Cloth was fix'd at *Dantzick*. The Boors in the Neighbourhood of *Elbing* have as good Clothes and Houses almost as the Noblemen in *Curland*; and one cannot distinguish a Boor from a Burgher by their Apparel. The Country is Champagne and Level, like *Holland*, and as fruitful and well Peopled as any Part of that Province; *Amsterdam* excepted.

WARMIA, by some reckon'd the 4th Palatinate of *Polish Prussia*, is a Bishoprick, where the Gentry are exempt from the Regal Jurisdiction, and govern'd by the Laws of *Prussia*, under their Bishop, who is a Prince of the Empire. His Seat is *Heilsberg*, on the River *Alle*, 32 *English* Miles S. from *Koningsberg*. 'Twas built in 1240. *Frauenburgh*, or *Frauburg*, lies upon the Bay called *Frisch-Haff*, where the River *Schöna* falls into it: It has a convenient Harbour, is 11 *English* Miles N. E. from *Elbing*, and as many from *Pillau*. The Cathedral Church of *Warmia* is here, of which the famous *Copernicus* was a Canon. *Braunsberg*, lies betwixt *Marienburg* and *Koningsberg*, upon the *Baltick* Sea, near the Bay of *Frisch-Haff*, 30 Miles E. of *Dantzick*, and 25 E. of *Elbing*. It has been mortgaged to the King of *Prussia* for many Years, is populous, and has a famous University.

The Senators of the Palatinate of *Marienburg* are, the Palatine and Castellan of that City.

CHAP. XV.

The Great Dutchy of LITHUANIA.

IT has *Muscovy* on the E. some Parts of it on the N. E. *Livonia* on the N. *Samogitia* on the N. W. *Ducal Prussia* and *Masovia* on the W. *Little Poland* on the S. W. *Red Russia* on the S. and the *Ukrain* on the S. E. This is the greatest Province belonging to *Poland*. *Stararvolsci*, whose Opinion in this is most to be trusted, says, the Length of *Lithuania*, from the Borders of *Ducal Prussia*, which joins the Palatinate of *Truki*, in Long. 43, to the Frontiers of *Muscovy*, or the Borders of the Dutchy of *Novogorod*, in Long. 54, is 660 *English Miles*; and the Breadth, from the Borders of *Red Russia*, in Lat. 50, to the Borders of *Muscovy* in 56, is 360 *English Miles*. In the Time of its Great Duke *Vitoldus*, it reach'd from the *Euxine Sea* to the *Baltick*. *Cluverius* says, the Length of it is, from the Fountains of the River *Polot*, in the Confines of *Livonia* and *Muscovy*, to the Town of *Dassow* near the *Black Sea*, 260 *German Leagues*; and the Breadth, between the *Memel* and the *Nieper*, 80; which makes *Lithuania* much larger than really it is; for it does not come near the *Black Sea* by many Miles. The Natives call it *Litwa*; the *German*, *Die Littawen*; the *French*, *La Lituanie*; the *Italians*, *Lituania*; and the *Poles*, *Litewsky*.

Whence the Name is deriv'd, is not certain; some will have it from *Litum*, a Hunting-Horn, because the Natives were given to Hunting; but this is too general. *Erasmus Stella*, a good Historian, says, That a Colony of *Prussians* settled here, under the Command of *Lituo*, their King's Son, in 573, whence the Country was called *Lithuania*; but this is also rejected, for the *Prussians* obtain'd this Place by Conquest since that Time. The *Polish* Historians generally agree, That *Palemon* flying from the Fury of *Attila* the *Hun*, left *Rome*, and

came hither with a Colony of *Italians*, who call'd it *La Italia*, which was afterwards corrupted into *Lituania*. The *Lithuanians* are fond of this Origine, and think it confirm'd by the *Roman* Names of their Nobles, *Ursin*, *Column*, *Julian*, &c. But *Hartnack* says, it had its Name from *Littwa*, one of the *Alani*, who was one of their Dukes long before *Palemon*'s Time; and thinks this the more probable, because the *Lithuanians* still retain some Footsteps of the Name of those People in their *Lithalini* and *Roxalani*; but the Account that *Amianus Marcellinus* gives of the *Alani*, differing so much from that given of the *Lithuanians* by their best Authors, shows that they are not of one Nation; and their Language proves them to be of the same Origine with the *Prussians*.

We have no Accounts of this Country that can be depended on earlier than the 12th Century, when that People began to come out of their Woods, and to make a Figure in the World. In 1252, *Mendog*, a brave Man, headed his Countrymen, who, under his Conduct, recover'd their Liberty, and revolted from the *Russians*. He afterwards became their Prince, civiliz'd them by good Laws, and in the beginning of his Reign defeated the *Tautonick* Knights, and over-run all *Prussia*. He was succeeded by others that made Wars on the *Poles*, *Prussians*, &c. who invaded their Country. In 1304, their famous Prince *Godimin* refus'd to pay Tribute to the *Russians*, and entering the Country of *Novogorod* with an Army, took *Volodomir*, and made all *Polhinia* swear Fealty to the Magistracy of *Lithuania*. He conquer'd all the *Ukrain*, *Prussia*, and a great Part of *Muscovy*. In 1305, he built *Vilna*. In 1331, he invaded the *Tartars*, and recover'd *Podolia*. About this Time *Demetrius* Duke of *Muscovy* sent an Ambassador into
Lithu

Lithuania, to demand a Restitution of all those Places and Provinces that belong'd to the Great Dukedom of *Russia*. *Godimir* imprison'd the Ambassador, march'd a great Army to *Muscovy*, surpris'd the Czar in his Palace, and forc'd him to accept a Peace upon disadvantageous Terms, viz. That the Bounds of *Lithuania* should reach as far as *Moscow*, and the River *Ugra*. In 1386, *Uladislaw Jagello*, Great Duke of *Lithuania*, was chosen King of *Poland*, on Promise that *Lithuania* should be annex'd to *Poland*: But it was provided by the Articles of the Union, That *Lithuania* should have their ancient Laws, Privileges, Senators, and Great Officers, continued. At this Time the *Lithuanian* and *Polish* Nobility swore Allegiance to the King and Queen of *Poland*, which was renewed in 1401, and 1414, but still the *Poles* were oblig'd to send *Lithuanian* Princes to govern them. Afterwards, when the *Poles* design'd to join *Volhynia*, *Podolia*, and some other Provinces of *Russia*, to the Crown *Poland*, the *Lithuanians* oppos'd it with such Vigour and Bravery, that it occasion'd a long War betwixt the two Nations: At last, in 1566, the Differences were a little compos'd, and finally ended in 1569. The Articles were sign'd by both People, in Presence of Foreign Ambassadors; viz. That the *Lithuanians* should for ever disclaim all Right or Pretensions to the Provinces of *Polachia* and *Volhynia*, and *Palatinates* of *Kiow*, and never elect a separate Duke or Governor; but upon a Vacancy, should repair to the Place whither they should be summon'd by the Archbishop of *Gnesna*, the Inter-Rex of *Poland*: That in every Election, the *Lithuanians* and *Polish* Nobility should have equal Freedom in Voting: That whoever, by a Majority of Votes of both Nations, should be elected King of *Poland*, should at the same time be pronounc'd Great Duke of *Lithuania*: That the Election should always be held in some Place near the Confines of both Countries: And that the Diet should sit in *Poland* and *Lithuania* by Turns, &c. In 1654, and 1665, the Czar invaded *Lithuania*; upon which the King of *Poland* made Peace with *Sweden*, and drove the *Muscovites* out of *Poland*. In 1667, 13 Years Truce was concluded betwixt the *Muscovites* and *Poles*, on Condition, That *Blackz*, *Vitepski*, and the Higher *Livonia*, should be restor'd to *Poland*; That *Novel*, *Velise*, and *Sibisch*, should be excepted from

the *Palatinates* of *Polockz* and *Vitepski*; That the *Muscovites* should keep *Smolensko*, *Sevir*, and all the *Ukrain* beyond the *Nieper*; and that *Kiow*, after two Years, should be restor'd to the Crown of *Poland*.

Of the CLIMATE and SOIL of Lithuania.

THE Air is extream thick and foggy, because the Country is full of Woods and Lakes, there being one Forrest of 100 Miles in Length. They have store of Venison and Fish, and the Land is tolerably fruitful; but the extream Cold frequently spoils their Harvest. *Lithuania* was overgrown with Woods till the Reign of *Sigismundus I.* who burnt down many of them. His Example was follow'd by succeeding Kings, who us'd all Endeavours to cultivate this Country. Their Beasts of all kinds are little, because of the Cold. Besides those they have in common with *Germany*, they have Elks, Wild-Horses, Wild-Oxes, or Buffalo's, Wild-Asses, and the Beasts called *Uri*.

Of their COMMODITIES.

THE greatest Trade of *Lithuania* is in Pitch, Tar, and Timber, which are transported to *Holland* and other Nations, for which they receive Salt and Wines. They are sufficiently provided with all other Necessaries, have great Herds of Black Cattle, and considerable Flocks of Sheep; with Ermins, Sables; and all manner of Furs. They have great Plenty of Wax, Honey, and Pitch.

Of their TEMPER.

THEir Nobles are insolent, proud, and domineering, and the Boors slavish, mean and cowardly, as has been mention'd already in the General Description of *Poland*. In their Wars with *Poland*, they discover'd their barbarous and cruel Temper, deny'd Quarter to all Captives, ripp'd up Women with Child, and murder'd Infants. They are treacherous to their Prince, regard-

gardless of Oaths and Promises, and to this Day have an inveterate Hatred to the Poles. Dr. Connor says, he was assur'd at the Court of Poland, That Children, when expos'd or lost, are frequently nurs'd by Bears, who are very numerous in those Woods; and that one who had been nurs'd was kept in a Convent; his Countenance was frightful, and he had neither the Use of Reason nor Speech; he went upon all four, and often endeavour'd an Escape to the Woods: He was taught to stand, as we do Dogs, by placing his Body straight against a Wall. Monsieur Cleverickirk, Ambassador from Holland to K. W. III. confirms this in a Letter to Dr. Connor, and says, That in 1661, he saw a Boy in a Nunnery of 12 Years of Age who had been so nurs'd: He catch'd at one of his Silver Buttons, smell'd to it, and then leap'd to a Corner and howl'd. When he got any Bread, he leap'd upon a Bench, and walk'd on all four; then putting the Bread to his Nose, he leap'd down to the Ground, and howl'd as before. He was not then brought to speak, and had some Scars on his Face, occasion'd by the Scratches of the Bear.

Of their APPAREL.

THE old Lithuanians wore raw Hides of Beasts, Linen, and the inner Barks of Linden Trees, for Clothes. *Uladislaus Jagello* brought many of them to Poland, where he clad them with Woollen, and gave 'em Shoes. Their Nobles bought their Clothes ready made from other Nations. The Boors in many Places still wear their ancient Habit. They eat Bread made of the Ears of Wheat unwinnow'd. Their Drink has already been accounted for in the Description of Poland.

Of their LANGUAGE.

THE Lithuanians generally speak the *Sclavonick* and all their Pleadings in Courts of Judicature are in that Tongue. They have a great Mixture of *Polish*, and much Latin, which seems to confirm the Story of *Polemon*, formerly mention'd; some Instances of which are as follow:

Duonus, *Donum*, a Gift; *Ugnis*, *Ignis*, Fire; *Oras*, *Air*, *Air*; *Saule*, *Sol*, the Sun; *Mensus*, a Month; *Diena*, *Dies*, a Day; *Rajsa*, *Ros*, Dew; *Diewas*, *Dew*, God; *Viras*, *Vir*, a Man, &c. The Latin Tongue is as common here as in Poland, and spoke by People of all Ranks.

Of their RELIGION.

NO Nation in Europe has been more bewitch'd with Idolatry: They worship'd Serpents, and many of them continued to do so till within these few Years; of which *Sigismund Baroh* of *Herbestein* (in *Comment Rer. Muscov. P. 84.*) gives us this memorable Story, "Returning (says he) lately from *Masovia*, at *Troki*, a small Town 8 English Miles from *Vilna*, my Host acquainted me, That the same Year he had chanc'd to buy a Hive of Bees of one of those Serpent-Worshippers, whom with much ado he perswaded to worship the true God, and kill his Serpent. Within a while after, coming that Way, he found the poor Fellow miserably tortur'd and deform'd, his Face wrinkled and turn'd awry; and demanding the Cause, he receiv'd this Answer, *That this Judgment was inflicted on him for killing his God; and that he was like to endure heavier Torments, if he did not return to his former Worship.*" There are still some Remains of this Idolatry in the Country; for in many Villages both in *Lithuania* and *Prussia*, the poor Boors keep Adders in their Houses, to which they pay a Superstitious Respect, tho' they profess Christianity, and fancy some great Disaster will certainly befall them, if those Household-Goods be hurt or injur'd. The ancient Lithuanians had also an Idol called *Percune*, to whom they kept a Fire continually burning, with as much Caution and Diligence, as the Vestal Fire was kept at Rome; and if the *Waidelot*, or Priest, suffer'd the Fire to go out, he was sure to die for it. The like Ceremonies were perform'd in Remembrance of *Kirm*, one of their Princes, on the Top of a high Hill near *Dziemalston*. Some think these Ceremonies were deriv'd from the Roman Colony that settled there under *Polemon*. They also buried their Dead, as *Cypelwick* informs us in his History

story of *Lith. Lib. 5. Cap. 140.* and expected a Resurrection from the Ashes, upon the coming of a strange God to judge the whole Earth, from the Top of one of their Mountains. In 1386, *Uladislaus Jagello*, their Great Duke, converted them from their Idolatry; for upon his marrying of *Hedwig*, Queen of *Poland*, he turn'd Christian, and was baptiz'd at *Cracow* by *John* Bishop of that See. When he first undertook the Conversion of the Pagans, he met with great Opposition; but when he cut down their tall Trees, the Temples of their Heathenish Gods, and the People saw that no Mischief or Punishment befel him, they began to reason thus; Our Gods would never have put up this Affront, if they had been able to revenge it, and shew'd themselves inclinable to listen to *Jagello's* Advice: Upon which the King built a Cathedral, and founded a Bishoprick at *Vilna*, and the Queen gave Chalices, Vestments, and other Ornaments, to 7 Churches in the Neighbourhood. At this Time many *Lithuanians* are of the Greek Church, tho' more of the *Roman*. In *Vilna*, and several other great Towns, vast Numbers of the Inhabitants are *Lutherans*. They marry'd and unmarried as oft as they thought fit; and tho' they thought it a Fault to lie with a Harlot, yet it was very ordinary and modish for their Wives to have Gallants, to whom their Husbands thought themselves obliged, look'd upon them as their Assistants and Partners, and valued them more than their other Acquaintance. *Narimundus*, their Great Duke, is said to have invented the Arms of *Lithuania*, which are, *Party per Pale, Gules and Azure*: In the former a Warrior arm'd Cap-a-pee, brandishing a Sword over his Head, and riding a Horse *Argent* in full Career; and in the second the *Virgin Mary*, with our Saviour in her Arms, surrounded by a *Glory*.

The Division of LITHUANIA.

Lithuania is divided by *Starovolscius*, whom most Geographers follow, into *Lithuania Proper*, which contains the Palatinates of *Vilna* and *Troki*. The 2d Division is, according to *Hartknock*, *Little White Russia*, which contains 8 Palatinates.

The Palatinate of VILNA.

IT is a little Palatinate, has that of *Breslaw* on the E. *Troki* on the W. *Samogitia* on the N. and the Palatinate of *Minskue* on the S. It has its Name from the chief Town, which was built in 1305 by *Godimin*, the Great Duke of *Lithuania*. In 1655, it was taken and plunder'd by the *Muscovites*; but was after retaken by *Casimir* King of *Poland*. It is seated upon the *Vilia*, a navigable River, where the *Wila* falls into it, and lies 130 Polish Miles N.E. from *Cracow*, 48 N. from *Riga*, 70 N.E. from *Warsaw*, and 100 E. from *Smolensko*. This City is large, and indifferently populous; but the Streets are badly pav'd, and nasty: All their Houses are of Wood, except the Palace of the Great Dukes of *Lithuania*; and some Merchants Houses, which are of Stone. It has two Castles; that on a Hill is ancient, and almost ruin'd; but the other is a Pile of beautiful modern Architecture. The Churches are all of Stone, and are possess'd by those of the *Roman* and *Russian* Faith. The Cathedral stands in the lower Castle, where the Body of *St. Casimir*, Canoniz'd by *Pope Leo X.* lies in a large Silver Tomb of great Value. Here is also a very large Bell, that requires 24 strong Men to ring it. King *Stephen* founded the Academy in 1579, which was erected then into an University by *Gregory XIII.* There are 6 Professors of Divinity, 5 of Philosophy, 4 of Laws, and 7 of Philology. The *Muscovite* Company there have a neat Warehouse for their Ermins, Sables, and other Merchandize from *Moscow*. Guns, and other Warlike Instruments, of excellent Workmanship, are made here. *Vilna* has the Honour of having the Tribunal for all *Lithuania*. *Alexander* King of *Poland* died here in 1506. The Citizens are exceeding poor and idle, Slaves to their Noblemen, and their Bellies. They are great Lovers of Garlick and Onions, which, with their smoaky Houses, make half of them blind before they arrive to any considerable Age. They are great Drinkers, and quarrelsome; and if a Stranger be kill'd in any such Riot, the Murderer is only to pay 16 Dollars as a Mulct. When a *Lithuanian* is slain, his Corps is preserv'd till they can find the

gaily

guilty Person, whom they cannot condemn without shewing him the Corps of the deceased. They have no Hospital in that City, tho' they need one more than any Place in Europe. The Streets are crowded with Swarms of Beggars. Other Towns are, 1. *Osmian*, a Wooden Town, Capital of its District, about 28 English Miles S.E. from *Vilna*, to which belongs a large Jurisdiction, with several eminent Towns. 2. *Braslaw*, built of Timber, on a large Lake, with a Castle on a Rock: It has a considerable Jurisdiction, and lies 80 English Miles N. E. from *Vilna*. *Sanson* and others make *Braslaw* a particular Palatinate; but *Hartnack*, the most learned of all the Polish Writers, says otherwise. 3. *Wilkomitz*, upon the River *Swienta*: It is fortified, and has an ancient Castle, which the *Muscovites* took in 1655. It lies N. W. from *Vilna*, on the Borders of *Samogitia*. The Causes of the Gentry are tried here. It has a very large Jurisdiction, in which are several considerable Towns, belonging to the King, Bishops and Gentry. 4. *Ikaznia*, near a River of the same Name, about 12 English Miles S. E. from *Braslaw*. 5. *Drizwicz*, on a Lake near a River of that Name, 20 English Miles S. W. from *Braslaw*.

The Arms of this Palatinate are *Argent* and *Gules*; in the former the Arms of *Lithuania*, and in the latter 2 Pillars of the first.

The Senators of this Palatinate are, the Palatine and Castellan of *Vilna*.

The Palatinate of TROKI.

IT has *Samogitia* on the N. *Ducal Prussia* on the W. the Palatinate of *Vilna* on the N. E. and that of *Novogrodec* on the S. The Senators are, the Palatine and Castellan. The chief Town is *Troki*. It was founded in 1321, by *Godimin*, who made it his Seat. In 1655, it was taken by the *Muscovites*, who plunder'd and burnt it, and massacred the Inhabitants with so great Cruelty, that the River on which the City stands was dy'd with Blood. It has a strong Castle, and is seated on a Point of Land that shoots out into a Lake, and lies 16 English Miles W. from *Vilna*. It had formerly a strong Wall, which was destroyed by the Knights of the

Teutonic Order. It has a Castle in a Lake, fortified both by Nature and Art. Other Towns are, 1. *Grodno*, upon the *Memel*, S. from *Troki*. *Sigismund III.* built a Bridge over that River of Timber, so artfully contriv'd, that there is nothing in *Poland* comparable to it. The Castle was built by *Stephen Battori*, and is strong. The Jesuits have a College in this City. The General Diets of the Kingdom every third Year are kept here. The *Muscovites* took it in 1655, and destroy'd it entirely; but now it is rebuilt, and has a good Trade. 2. *Lida*, the Capital of its District, built with Wood, has a tolerable Castle, and a Court of Justice for the Gentry. 3. *Couna*, a small Town, on the Confines of *Samogitia*, upon the Conflux of the *Memel* and *Welia*, with a strong Castle, founded on a Rock. Its Situation would make it impregnable if it were fortified. 4. *Upita*, is Capital of a large District, where there are several Towns. 5. *Mereczis*, built at the Confluence of the *Merecz* and the *Memel*, N. from *Grodno*.

The Senators are, the Palatine and Castellan of *Troki*.

The Arms are, in a Field *Azure* those of *Lithuania*.

The 3d. Palatinate is LITTLE WHITE RUSSIA:

IN Length about 200 Miles, and in Breadth 120. It is divided into six Parts, the first of which is,

NOVOGRODEC.

WHICH is divided into the two Districts of *Novogrodec* and *Slonim*. *Novogrodec* is the chief City, is built of Timber, and was the Appenage of the second Sons of the Dukes of *Lithuania*. The Diet for the Great Dutchy of *Lithuania* is held by turns in this Place and *Minski*. It is built on a Plain, has no Fortifications, and lies 12 English Miles S. from the *Memel*. Other Towns are, 1. *Slonim*, which has a Castle, and some other regular Fortifications lately built. The District of this City was formerly a Dutchy: It lies 32 English Miles S. from *Novogrod*. 2. *Wolkowisko*, is a large Town,

on the Borders of *Podlachia*, S. from *Grodno*, and has a Court of Justice for the Gentry.

3. *Lacowicz*, famous for a very fair Palace, built by a Grand General of *Lithuania*, is well fortified after the modern Way.

4. *Myſza*, a Town with a Castle, seated on a Lake.

5. *Zlucz*, one of the largest Cities in this Country, on a River of that Name,

80 *English* Miles S. E. from *Novogrodeck*. The Cathedral and Ducal Palace are of Stone.

This City had not long ago a Prince of its own, with large Territories; but he was always Tributary to *Poland*, and is at present in Possession of the Family of *Radziwil*.

The three pitch'd Battles which *Constantine* Duke of *Ostrog* gain'd over the *Tartars* near this Place, make it famous.

6. *Rozan*, a well built Town, with very fair Streets.

7. *Nezwitz*, 60 *English* Miles E. from *Novogrodeck*.

Nicholas Radziwil, surnam'd the *Pilgrim*, founded some noble publick Edifices here.

The River *Ofza* falls into the *Memel* near this Place.

The Senators are, the Palatine and Castellan of *Novogrodeck*.

The Arms are, in a *Field-Azure* those of the Great Dutchy.

The Palatinate of BRIESCIA, or POLESIA.

IT lies betwixt *Red Russia* on the S. E. *Volkonia* on the S. *Mazovia* on the W. and the Palatinate of *Novogrodeck* on the N. It is overgrown with Woods, and has many Lakes and Pools. It has its Name from the chief Town *Briescia*, which is a large Wooden City, near the Confines of the Palatinate of *Lublin*, on the *Bug*, where the *Muhavetz* falls into it, which makes it strong. The Castle is of Timber, but founded on a Rock. It lies 80 *English* Miles N. E. from *Lublin*, and 120 E. from *Warsaw*. The Jews have their chief Academy here, to which they resort from *Italy*, *Germany*, *Moravia*, *Silesia*, &c. not only to study, but also to take Degrees in that Religion. There's a Palace of modern Architecture here, with Variety of pleasant Gardens. 2. *Prinsko*, indifferent large, on the River *Pina*, which falls into the *Przpiec*, that joins the *Nieper* on the Borders of the

Dutchy of *Czernichow*. It lies 90 *English* Miles E. from *Briescia*. The *Cossacks* took,

plunder'd and burnt it; so that little but the Ruins are now to be seen.

The Inhabitants are industrious, and make frequent Journeys into *Muscovy* and *Germany* on Account of Trade.

They are generally of the *Greek Church*, and have a Bishop, who resides here.

3. *Biala*, S. W. from *Bressici*, famous for a Palace built by the Dukes of the Family of *Radziwil*, which is now a College for instructing of Youth.

4. *Prepetus*, a Town with an old Castle, built on the River of the same Name.

The Senators of this Palatinate are, the Palatine and Castellan of *Briescia*.

The Arms are the same with the former, differing only by a B in the middle.

The Palatinate of MINSKO.

IS in the middle of *Lithuania*, has the Palatinate of *Mscislaw* on the E. that of *Witepsk* on the N. *Vilna* on the N. W. *Novogrodeck* on the S. W. and *Robaczow* on the S. E.

The Capital is *Minsko*, a large Town, on the River *Swisloetz*, in the middle of a Morass, with a double Wall, a strong Castle,

a very deep Ditch, and other Fortifications. Formerly the Diet was kept here alternately with *Vilna* and *Novogrodeck*.

2. *Borissow*, on the River *Berezina*, whose Course is S. E. After it has run through this Palatinate, and the Territory of *Robaczow*, in

Lat. 52 $\frac{1}{2}$, it falls into the *Nieper*. The Castle is well fortified, and the Garison is very strong, to prevent the Incursions of the *Muscovites*.

It lies about 150 *English* Miles S. E. from *Vilna*. It was ruin'd in 1655 by the *Muscovites*, and nothing rebuilt since but the Castle.

3. *Kordanow*, with a Castle, about 100 Miles from *Vilna*.

4. *Radoskowiz*, which has also a Castle. *Sigismundus Augustus* muster'd above 100000 Men here at once in 1568.

5. *Robaczow*, the chief City of a Territory of that Name, lies near the *Nieper*, where the River *Odniecz* falls into it,

80 *English* Miles S. from *Mohilow*, and 160 from *Kiow*.

6. *Loboisko*, about 30 Miles from *Borissow*.

7. *Bobroisko*, on the River *Berezina*.

8. *Odruczko*, with a Castle: It formerly gave Name to a Dutchy, whereof several

Noble *Russians* had the Title. 9. *Mozyr*, on the River *Przypiecz*, where the *Tur* falls into it.

The Palatinate of WITEPSK, or VITEBSKO.

The Palatinate of MSCISLAW.

HAS that of *Minski* on the W. *Witepsk* on the N. and the Duchy of *Smolensko* on the E. It is divided by the *Nieper*, is a very Woody Country, and the Frontiers towards *Muscovy* are overflowed with Water: The Champagne Ground is generally fruitful; it abounds with Cattle of all sorts, and has great Numbers of excellent Fowl: 'Tis divided into the 2 large Districts of *Mscislaw* and *Modziria*. *Jagello* erected it into a Duchy for his Brother *Simon*. The Capital is *Mscislaw*, which is a small Town, on the River *Sofz*, near the Frontiers of *Muscovy*, and therefore strongly garison'd. It lies 64 English Miles S. from *Smolensko*, and 72 E. from *Mohilow*. This District was formerly a Sovereignty, but now reduc'd. It is famous for a great Victory obtain'd in 1514 over the *Muscovites*, by *Constantine* Duke of *Ostrog*; but in 1660, the *Muscovites*, to revenge this Loss, took the City, and massacred all the Inhabitants. 2. *Modzir*, is Capital of its District, and built among Marshes. 3. *Dambrow*, 14 Miles W. from *Smolensko*, on the Confines of *Muscovy*: It has a strong Castle. 4. *Bychow*, 48 English Miles from *Mohilow*, upon the *Nieper*, has also a Castle. 5. *Kopysc*, with a Castle. 6. *Sklow*, both on the same River. 7. *Raczycza*, with a Castle. 8. *Wischchorod*, about 12 English Miles from *Kiow*. 9. *Striffin*, with a Castle, all on the *Nieper*. 10. *Mohilow*, is built on a Hill, the Foot of which is water'd by the *Nieper*: 'Tis large and well built, and one of the strongest Towns of *Lithuania*. The *Muscovites* took it in 1654, and kept it till 1656, when it was retaken by the *Poles*. It is noted for its Trade, and a fine College, built by the *Jesuits*. The *Muscovites* transport their Furs this Way into *Germany* and *Poland*.

The Senators of this Palatinate are, the Castellans and Palatine of *Mscislaw*.

The Arms are the same with those of *Lithuania*, with an *M* in the middle.

IT has *Muscovy* on the E. the Palatinate of *Poloczko* on the N. W. and W. and those of *Minsko* and *Mscislaw* to the S. It had Dukes of its own till the Heirefs married *Olgor*, the Father of *Jagello*, in 1359. It has its Name from *Witebsko*, its Capital, which is very strong, because it lies on the Confluence of the *Dwina* and *Wiezba*; by which Goods are transported to *Riga* in *Livonia*: It is about 48 English Miles from the Borders of *Muscovy*, 64 E. from *Poloczko*, 100 N. W. from *Smolensko*, and 300 N. E. from *Vilna*. It was often taken and retaken in the late *Muscovite* Wars. It has two large Castles, well defended by Nature and Art, against the Incurfions of the *Muscovites*, who have often been repuls'd here with great Loss. It has always a Garison of 2000 Men. 2. *Orska*, a large City, defended on the one Side with Palisadoes, and on the other by the *Nieper*: It has a strong Stone Castle, wash'd by the River *Orsca*, lies 72 English Miles W. from *Smolensko*, and 48 N. from *Mohilow*. 3. *Czarniki*, on the River *Ula*. 4. *Siewco*, with a Castle, about 24 Miles from *Czarniki*. 5. *Leplo*, with a Castle, on a Lake, 28 English Miles from *Czarniki*. 6. *Woroniec*, with a Castle, on the River *Usacza*, about 12 Miles from *Poloczko*. 7. *Wielicz*, which was taken in 1573 by the *Muscovites*, and retaken in 1579.

The Senators of this Palatinate are, the Palatine and Castellans of *Witebsko*.

The Arms are in a Field-Vert, those of *Lithuania*.

The Palatinate of POLOCZKO.

IT lies in the N. E. Part of *Lithuania*, has *Muscovy* on the N. and E. and the Palatinate of *Vitebsko* on the S. E. It is so call'd from the chief Town, on the Confluence of the *Dwina* and *Polesa*, in Lat. 55 $\frac{1}{2}$, Long. 48; according to Mr. *Moll*; but *Jaillet* places it in 53 $\frac{1}{2}$. It was formerly very considerable;

ble; but in 1562, *John Basflowitz*, Great Duke of *Muscovy*, took it, and carry'd away most of the Inhabitants. *Stephen Bastori* recover'd it in 1579, together with the whole Territory. It was formerly a Dutchy, and subject only to its own Princes. A *Russian* Prelate resides here. The *Jesuits* have a fair College here, built and endow'd by *Stephen Bastori*: It has two Castles, upon the *Dwina*, where the *Polesa* falls into it. It is the Bulwark of *Lithuania* against the *Muscovites*, who belieg'd it in vain in the

last Wars. 2. *Usacz*, 12 *English* Miles from *Polocz*, on a River of its own Name. 3. *Dishna*, on the *Dwina*, tolerably fortified: It lies 24 *English* Miles from *Polocz*. 4. *Drissa*, upon the *Dwina*, 45 *English* Miles N. W. from *Polocz*.

The Senators of this Palatinate are, the Palatine and Castellán of *Polocz*.

The Arms are the same with those of *Lithuania*, with a P side-ways in the middle of the Coat.

C H A P. XVI.

S A M O G I T I A.

IT is divided into 3 Governments or Captainships: It has *Lithuania*, the Palatinates of *Vilna* and *Troki*, on the S. E. *Courland* and *Semigallia* on the N. the *Baltick* on the W. and *Ducal Prussia* on the S. W. The *Estions* were the ancient Inhabitants. This Province takes its Name from its Situation, which is low and marshy; for the Word *Samogitz* signifies so much. It abounds with Lakes and inaccessible Mountains, and is much over-run with Woods, which afford great Quantities of Honey, purer than that of *Lithuania* or *Livonia*. Their Ploughs are wholly of Wood; and tho' their Soil be fat and stiff, they are fond of those Wooden Ploughs to a Superstition. One of their *Starosta's* design'd to introduce Iron Plough-shears; but the Season not proving so warm as formerly, they imputed it to the Change of their Ploughs; so that he was forc'd to allow them their former Ploughs, to prevent an Insurrection. Their Horses are very swift, but generally so small, that one would wonder they endure so much Fatigue. *Vitoldus*, Duke of *Lithuania*, in 1404, gave this Country to the *Teutonic* Knights; but in 1408, it was taken from them. After *Jagello's* Death, in 1446, by a Treaty with *Poland*, they were possess'd again of this Dutchy; but in 1525, when *Albert* of *Brandenburgh* was made Hereditary Duke of *Prussia*, it fell to the Crown of *Poland*. In 1655, when the *Muscovites* had over-run the Palatinate of *Troki* with Fire and Sword, they durst not enter the vast Forrests of *Samogitia*. In the late Wars with *Sweden*, it was almost entirely ruin'd.

denburgh was made Hereditary Duke of *Prussia*, it fell to the Crown of *Poland*. In 1655, when the *Muscovites* had over-run the Palatinate of *Troki* with Fire and Sword, they durst not enter the vast Forrests of *Samogitia*. In the late Wars with *Sweden*, it was almost entirely ruin'd.

Of their MANNERS, RELIGION, &c.

MOST of the Inhabitants differ little in Manners, Habit or Language, from the *Lithuanians*; yet some of them still retain Part of their old Pagan Idolatry, which was the most ridiculous of any in *Europe*, especially in the Desarts, where they pay Devotion to a Four-footed Serpent, under the Name of *Girvoft*. Few Families here are without Serpents for their Household-Gods, to whom they pay more than ordinary Veneration, tho' they profess Christianity. The Manner of the Pagan Sacrifices here about the End of *October* was as follows; Men, Women, Children, and Servants, met at the Place appointed, where a Cloth was spread upon Straw, with Loaves set in due Order, and between each Loaf a large Pot of Beer; then Beasts of divers kinds, and of both Sexes, were sacrific'd

fic'd after the ancient Custom thus; First the *Angur*, or Priest, after having mumbled over some Words, strikes them on the Back, Belly, &c. with a Rod; then all that are present follow his Example, crying out, O *Zimiennick!* (for so they call their God) *These Offerings we make to thee for protecting us so mercifully hitherto, and we most humbly implore thee to have the like Compassion on us for the future, and to preserve us from Fire, Sword, Pestilence, and our Enemies.* Which being said, they immediately fall to eat, but first cut off a Bit from every Plate, and throw the Pieces about the Room, crying, O *Zimiennick! Graciously partake of our Sacrifices, and favour thy Adorers.* After which they eat and drink heartily, and so the Ceremony concludes. These Sacrifices are still observ'd by the Country People in several Places of *Lithuania* and *Russia*. Christianity was first preach'd here by *Meinardus* in 1200.

The Houses of the Boors are low, and built long-ways, and for the most part of Wood, near Lakes or Rivers: They have an Hearth in the middle, and but one Room, which serves themselves and their Cattle. The better Sort drink out of Horn Cups, and eat out of Wooden Platters. They have Plenty of extraordinary White Honey in their Woods, but little Wax; and they have also abundance of Elks.

The Length of *Samogitia* from E. to W. is 140 *English* Miles; but it is not so broad: It has no Palatinate, but 3 Captainships. The Senators are, the Bishop, the Great Captain, or *Starost*, and the Castellan of *Samogitia*.

The 1st Government or Captainship is
R O Z I E N E:

Whose chief Town is *Rosenia*, in Lat. 55 $\frac{3}{4}$, Long. 41 $\frac{1}{4}$. 'Tis small, and ill built, and lies on the River *Dubisz*, 48 *English* Miles N. from *Kowna*, 120 S. from *Riga*, and 108 W. from *Vilna*. The Assemblies of the Province are kept here.

2. The Captainship of MIDNICK.

The chief Town is of the same Name, and is the Seat of the Bishop of *Samogitia*, who is Suffragan to the Archbishop of *Gnesna*. It is better built than the former, and seated near the Fountains of the River *Wirwitz*, 25 Miles N. W. from *Roziena*, 2. *Kowna*, on the River *Memel*, famous for a College of Jesuits, and several considerable Monasteries. This Town was formerly much frequented by German Merchants, who built many splendid Houses of Stone and Brick, which the Inhabitants have imitated, and in some Things excelled.

3. The Government of PONIEWISS.

The chief Towns are, *Poniewiesz* and *Birza*.

The Senators of the Province of *Samogitia* are, the Bishop, *Starosta*, and Castellan.

Of LIVONIA.

SEeing a very inconsiderable Part of this Country belongs to *Poland*, we refer the Description of it till we come to *Sweden*. *Dunaburg*, a strong Town on the *Dwina*, is the only considerable Place in *Polish Livonia*; yet it has 3 Senators, viz. the Bishop, Palatine, and Castellan of *Livonia*.

C H A P. XVII.

C O U R L A N D.

THE Dutchy of *Courland*, which comprehends the Provinces of *Courland* and *Semigallia*, is bounded on the N. and W. by the *Baltick*, on the S. E. by the Great Dutchy of *Lithuania*, on the N. E. by *Livonia*, and on the S. by the Dutchy and Province of *Samogitia*. Its Length is, from *Memel* in *Prussia*, to *Riga* in *Livonia*, about 200 *English* Miles. The Breadth is different; from the *Baltick* to *Lithuania* and *Samogitia* being in some Places 30, and in others but 24 Leagues.

Of the S O I L.

THIS Duchy is a plain champagne fruitful Country, and has always been well inhabited: It has many Woods. The Corn of *Courland* and *Livonia* is more valued by the *Dutch* than that of *Poland*, because it is better prepar'd here than in other Countries; for they dry their Corn in the Straw, as we do Malt, and afterwards thrash both together: But this consumes a great deal of Wood; therefore the King of *Sweden* has forbid it to be practis'd in his Dominions. According to some, *Courland*, *Semigallia*, and the District of *Pilten*, lie from Long. 45, to 50. and from Lat. 56 Deg. 5 Min. to 57 Deg. 5 Min. But Mr. Moll makes it from Long. 40, to 46.

The Commodities of *Courland* are much the same with those of *Poland*, as Flax, Hemp, Honey, and Linseed, of which many Ship-loads are sent abroad; Tar, Masts, Timber of all sorts, Pot-Ashes, Goat-Skins, &c. They have Plenty of Black Cattle and Horses. They carry their Goods down the *Dwina* to *Riga*, and export them by the *Baltick*. Many Authors say, That Herring-fishing, was on these Coasts till

1313; after which they went to the *Danish* Coasts, then to those of *Norway*, and at last to the Coasts of *Great Britain*.

The RELIGION of Courland.

THE first Efforts to convert *Livonia* and *Courland* to the Christian Faith were made by *Ausgarius*, the *Danish* and *Swedish* Apostle, as *Adam* of *Bremen* informs us. Afterwards, about the End of the 11th Century, by the *Danish* King's Order, a certain Merchant built a Church there, but with little Effect; till *Waldemar II.* a succeeding King of that Nation, founded a Bishoprick in that Country: But Christianity gain'd little Ground here till about 1180, when *Meinhard de Segeberg* of *Lubeck* made further Advances in it, and was ordain'd Bishop of *Livonia* (which then comprehended *Courland*.) by the Archbishop of *Bremen*.

To him succeeded *Berthold*, a *French* *Cistercian* Abbot, who in 1194 began to build *Riga*, and was Archbishop of it; but was kill'd the same Year in a Battle against the Infidels. Next one *Albert* was chosen in 1194, in whose Time the Order of *Livonian* Knights was instituted by the Pope, to further the Progress of Christianity here. The Provincial Master of the Order was chosen by the Great Chapter of *Prussia*. The Knights were call'd the Order of *Sword-Bearers*, and their Habits and Arms were, a White Mantle, with a Sword on the Breast in *Pale*, and a Star *Gules* in Chief: But after their joining with the *Teutonic* Order, they took also their Habit and Cross.

Religion continued on the same Foot here till 1561, that *Gothorred Ketler*, then Master of the *Livonian* Order, turn'd Protestant.

The

The People are generally Lutherans; but there are a few Papists and Calvinists.

The late Duke, at the King of Poland's Request, gave Leave to build two Churches for the Papists, one at *Mittaw*, the other at *Goldingen*. The Jesuits pretended to have bought the Curacy of *Mittaw*, and settled there; but their College was lately demolished; yet they still continue in the Country.

The Dutcheffes of *Courland* have since 1645 been always Calvinists, and had a Church at *Mittaw*, where the Calvinists of *Livonia*, and the English Merchants of *Riga*, come to worship, there being no Liberty allow'd the Calvinists in the King of Sweden's Dominions except at *Stockholm*, where the French Protestants have a Church.

Since the Reformation, there has been no Schism among them: The Greeks are tolerated, and also the *Uniti*, who own the Pope; but the *Socinians* are not tolerated. Some Jews from *Poland* and *Lithuania* have crept in here. The Clergy have no Tythes, but Land, and they have Money from the People when they confess. In some Places the Duke, and in others the Nobility, are Patrons of Churches.

The Families of the Gentry are very ancient, have great Privileges, and are exceeding jealous of suffering any upstart Nobleman to come among them; for they esteem nothing so much as ancient Families and Creations. There is scarce a Gentleman of Note who has not been a considerable Officer abroad or at home. The best Officers in *Poland* are generally *Courlanders*. Some of them are Princes and Counts of the Empire, and there's scarce a Family but may be Knights of *Malta*, because of their Antiquity. They enjoy the Privileges of Nobles in *Poland*, of which many Foreigners of great Quality have been ambitious, as the Duke of *Saxony*, who was in 1652 created a Polish Nobleman. In 1568, the Marquis of *Huntly*, in *Scotland*, was made a Marquis of *Poland*, and is the only one there.

Of the ancient State of this Country.

ABOUT the 9th Century, *Courland* was subject to *Sweden*, and paid them a small Tribute; but was not possess'd by 'em.

Baron *Blenberg*, the late Duke of *Courland*'s Minister, says, That *Courland* was not totally subdued till 1488, when it was conquer'd by the *Tatonic* Knights, who some Time before were sent thither by *Volquinius*, the 2d Great Master, tho' it had been attempted frequently; for in 1248, their 5th Master, *Detericus a Groninghen*, took several Towns from them; upon which the *Courlanders*, fearing they might be forc'd to embrace Christianity, submitted.

In 1250, the 6th Master of the Order, *Andrew a Stuckland*, attack'd them so vigorously, that the *Semigallian* Pagans submitted to pay Tribute, and afterwards, by his Perswasion, *Mindog*, Duke of *Lithuania* and *Courland*, turn'd Christian, and was Crown'd King of *Lithuania* by *Henry* Bishop of *Culm*, and *Albert* Archbishop of *Riga*, by Order from Pope *Innocent IV.* and among other Provinces, he restor'd *Courland* to the *Livonian* Order, in 1252.

But notwithstanding this Concession, the *Courlanders* were not easily subjected or converted; for the following Masters of the Order had constant Wars with them about their Religion: But in 1488, the 17th Provincial Master, *Conrade Herzogenstein*, subdued the sturdy *Semigallians*; yet they gave frequent Disturbance to the Order afterwards.

After him they had 4 Absolute, instead of Provincial Masters. In 1513, *Walter Plettenburg*, Absolute Master, upon *Albert* Marquis of *Brandenburg*'s resigning his Order to *Sigismundus Augustus*, King of *Poland*, obtain'd Leave from *Albert* to be free from his Subjection.

In the Time of *William Plettenburg*, Absolute Master, *Luther's* Doctrine prevail'd in *Courland* and *Livonia*, particularly at *Riga*, *Revel*, *Dorpt*, &c.

The last Absolute Master was *Gothofred Ketler*, in whose Time, those Provinces not being able to resist the *Muscovites* under *Iohn Basflowitz*, they divided into two Parts, of which *Revel* and *Esthonia* put themselves under the Protection of *Sweden*, and the rest united to *Poland*, under *Ketler*, who was thereupon made Hereditary Duke of *Courland* and *Semigallia* in 1558, by *Sigismundus Augustus*, King of *Poland*, on Condition that they should be held in Fee of the Republic. He was accordingly invested with them

them in 1561; and upon renouncing his Pretensions to *Livonia*, had the same Privileges that were granted to *Albert Marquis of Brandenburg*.

He was succeeded by his eldest Son *Fredrick* in 1587, who dying without Issue, the Dukedom came to his Brother *William*, in 1602, who returning from Banishment, was receiv'd by the *Courlanders* with great Joy. This Duke had but one Son, who was Godson to our King *James I.* After his Death, his Son Duke *James* inherited the two Duchies of *Courland* and *Semigallia* in 1639. This Prince was much given to building of Ships, and had 30 or 40 well Rigg'd, half of them being Men of War. from 80, 50, 40, to 30 Guns. So that *Charles Gustavus* of *Sweden* us'd to say, *My Cousin the Duke of Courland has too much for a Duke, and too little for a King.* *Gustavus* afterwards broke the Neutrality agreed on, without any Ground, surpris'd and seiz'd the Duke and his Family, rifled his Treasury, ruin'd his Country, and dispers'd his Ships; by which the Duke said, he lost Six Millions and a half of *Rix-Dollars*. His Ships discover'd the River *Semigal* in *Guinea*, and the Island of *Tobago*, one of the *Caribbees*, then uninhabited, where he built a Fort, and call'd it *Fort James*, after his own Name. He was at a vast Charge to cultivate and fortify this Island, which he enjoy'd without any Interruption for many Years.

But at length one *Lambson*, a *Zeelander*, a very rich Man, one of the States of *Holland*, getting Possession of a Corner of it, was, after much Dispute, suffer'd to plant there, on paying a Yearly Tribute to the Duke; but taking Advantage of the Wars betwixt the *Swedes* and *Poles*, and of the Duke's Imprisonment, he at last dispossest'd him of the whole.

The *Dutch* being thus in Possession, kept it, and the Duke, after many fruitless Endeavours with the *Lambsons* and the States, finding neither of them inclinable to a Restoration, applied himself to King *Charles II.* of *Great Britain*, for Assistance, submitted the Island to his Protection, and held it by Way of Grant from the Crown of *England*. Whereupon a Treaty was formally concluded; upon which The King granted the Duke, and his Successors, full Liberty of Trade and

Commerce for such Ships as properly belong'd to him and his Heirs, (but not to those of his Subjects) in any Rivers or Havens within the Dominions of his Majesty on the Coast of *Guinea*; as also to trade for Goods not exceeding the Value of 12000 l. Sterling per Annum, according to the Price they were first bought for on those Coasts from whence they were exported, with full Liberty to build one or more Store-houses to lay up Goods, under the Castles and Forts belonging to his said Majesty or Subjects on those Coasts; to hold and enjoy the said Liberties as long as Friendship, Amity, and a good Understanding, continued between the said King and the Duke, and their Successors. And in Consideration of this Concession and Grant, the Duke made over to his Majesty, his Heirs and Successors, the Fort of *St. Andrew* in *Guinea*, and all other Forts, Fortifications and Sconces there, belonging to the said Duke, together with all Guns, Bullets and Powder, and other Instruments of War belonging to the same.

And the Duke agreed, That he and his Heirs should pay 3 per Cent. for all Goods imported or exported from any of his Majesty's Ports in *Guinea*.

Moreover, his Majesty granted to the said Duke, and his Heirs, &c. that Island of *Tobago*, together with all Lands, Havens, Creeks, Rivers, and Profits to the same belonging, to be held and enjoy'd under the King's Protection.

Provided always, That the said Duke, &c. should not suffer any other beside his Subjects, and the Subjects of the King, to abide in the Island, to settle Plantations, or build Houses; but the King's Subjects should have all the Privileges of the Duke's Subjects. Moreover, the Duke agreed and promis'd, That neither he nor his Heirs, &c. nor his Subjects, nor any for their Use, should export any Merchandize or Product of the said Island of *Tobago*, or import, otherwise than out of, or into some Ports belonging to *England* and *Courland*, or the Ports of the City of *Dantzick*.

Moreover, for acknowledging that the Duke of *Courland* did hold and enjoy the said Island from his Majesty, it was further provided and agreed, That when, and as often as the King of *Great Britain*, his Heirs, &c. should so require it; or when he or they were engaged in a War against any other King, Prince or State, except the King of *Poland*, the Dukes of *Courland*, at their own proper Charge, from Time to Time, should bring, or cause to be brought, one good Man

of War, furnish'd with 40 great Iron Guns, to such Ports, Station or Place, which his said Majesty, &c. should name; into which Ship his Majesty should put Commanders and Seamen, and supply them with Food and Wages, under the Conduct and at the Expence of the said King, so long as the said Ship should abide in his or their Service, which at one Time should never exceed the Limits of a Year. For the Testimony and undoubted Confirmation of this Treaty, Charles II. King of Great Britain, and the Duke of Courland, sign'd and seal'd the above-nam'd Treaty, Nov. 17. 1664.

Upon this, the King wrote a Letter to the States, but without Success, for they favour'd *Lambson's* Pretensions. Afterwards the Count d'Étrec, the French Admiral, took the Island, where he made a miserable Slaughter of the Dutch, and oblig'd them to quit the Possession of the Island.

Several Merchants and others solicited the King of France to grant them the conquer'd Island; but he refus'd it, declaring that it belong'd to a Neutral Prince, who did no body any Harm.

In 1680, King Charles II. of Great Britain, sent a Letter to the Governor of Barbadoes, commanding him to assist the Subjects of the said Duke to regain and repossess the Island; but the Duke's Ship which carried the Letter was betray'd to the Privateers of Algiers by the Commander. The Duke however sent a Governor afterwards to Tobago, till, by the Assistance of the English, he might be able to establish a Colony there.

In 1681, the Duke entred into a Contract with Captain Pointz, and granted him and his Company very advantageous Terms, viz. That the English under his Command should possess 120000 Acres of Ground in that Island.

Duke James was succeeded by his eldest Son Frederic Casimir, who died in February, 1698. and was succeeded by his eldest Son Frederic Casimir II. the present Duke, who was then not above 6 Years of Age.

The Dukes of Courland are Vassals to the Crown of Poland, and when any new King is elected, the Duke is oblig'd to send his Envoy to receive Investiture, by having a Standard-deliver'd him, with the Arms of Poland on one Side, and those of Courland

on the other. After which the Envoy is permitted to sit down on the Throne, on the King's Left Hand, to cover his Head, and has great Civilities paid him.

This Duke has all the Regalia that the German Sovereign Princes have, and has Place in the Diet of Germany, above the Dukes of Mecklenburg. He coins Money in his own Name, and has Supreme Jurisdiction over the Noblemen of his Country; only in some extraordinary Cases, they may appeal to the Court of Poland.

He has a great Demefne, of which his Revenue chiefly consists, and keeps a very pretty Court, having all his Officers of State as other Princes; and he and his Nobility are able to raise 18000 Men.

This Dutchy, in case the Duke want Heirs-Male, is to revert to the Crown of Poland.

The Nobility and People are much inclin'd to Hospitality, which was the old Character Tacitus gave the Germans in his Book *De Moribus Germanorum*.

The Diet of the States is conven'd by the Duke as often as Affairs of State require it. He sends his Letters of Summons to all his Starosta's, with a Schedule of the Points to be debated, and requires them to cause Deputies or Representatives of the Gentry to be forthwith elected in their respective Jurisdictions; upon which they are chosen, and furnish'd with Instructions from their Electors, how they shall behave themselves, in like Manner as the Deputies of Poland.

Courland is divided into Two Governments.

1. The Government of GOLDINGEN.

Goldingen is the chief Town of this District, and of all Courland: It was formerly one of the Hans-Towns. It is seated on the River Metaw, 28 English Miles W. from Windaw, 60 S. W. from Mittaw, and 75 from Riga, in Lat. 56½, Long. 41. This City has a large Jurisdiction. 2. Windaw, call'd by the Poles Kiełsz, is a City and Palatinate: It has a Castle on the Sea, which was formerly the Residence of the Livonian Knights, and the Place where they conven'd their Assemblies: It has usually a Garison of Poles, under Command of the Duke of

Cour.

Courland. It is one of the Sea-Ports of *Courland*, and trades in Pitch, Tar, Wax, &c. 3. *Libau*, where the Duke's Ships are built, and has the greatest Trade of any of his Towns. 4. *Angernund*, in a Bay of the *Baltick*, between *Riga* and *Windaw*. 5. *Pildyn*, 22 English Miles N. W. from *Goldingen*, is a Palatinate, whose Gentry being Protestants, and offering to submit to the King of *Poland's* Protection, he endeavour'd to re-establish a Popish Bishop over them; upon which they alter'd their Resolution, and forthwith submitted to the Duke of *Courland*. They are the richest Gentry in all *Courland*: The Principal Families are those of *Maydel*, *Behr*, *Sacken*, *Mandevill*, &c. 6. *Durben*, S. from *Goldingen*. Their other Towns are, *Erdwallen*, *Grubin*, *Tuckow*, *Frawenburgh*, *Ufchwend*, *Talsen*, *Candaw*, *Hesepot*, *Oendange*; and *Tuccum*, which belongs to the Government of *Tuccum*.

2. *SEMIGALLIA*, which has 2 Captainships.

1. The Captainship of *Mittaw*, the chief Town, which is situated on the *Mutza*, 22 En-

glish Miles S. from *Riga*, 16 N. from the Borders of *Samogitia*, and 60 Miles E. from *Goldingen*. It lies in Lat. 56½, Long. 43. It is the usual Residence of the Dukes of *Courland*, and their Burial-place. They have a very fine Castle on the River *All*, which might be made navigable, if those of *Riga* did not choak up its Mouth. It is well fortified, with two Bastions, surrounded by Marshes, and defended by a strong Garison. The City is large, and contains about 12000 Inhabitants. The Streets are not pav'd, because they wanted Stone, till of late that they have found Quarries; so that it is now fortified with many Bulwarks. It was twice taken by the *Swedes*; but has been since regain'd, and is at present subject to its Duke. 2. *Bauke*, another strong City, with a Castle, which was taken by Storm by *Gustavus Adolphus*. They have a numerous Garison here. 3. *Selburg*, the chief Town of a Government. Other Towns are, *Egypten*, on the Borders of *Lithuania*, *Dubro*, *Dalen*, *Schudding*, *Pilkal*, *Behr*, *Nerfsten*, *Salatt*, *Pozwole*, *Radziwiliuski* and *Lunka*.

CHAP. XVIII.

Of S W E D E N.

O *Laus Rudbeck* is very positive, that this is the most ancient Kingdom of *Europe*, and that other *European* Nations are Colonies from thence; but few will believe either his Account, or that of *Joannes Magnus*, who fancies the *Swedes* have their Name and Descent from *Suemo*, the Son of *Magog*, the Grandchild of *Noah*, by his Son *Japhet*; but this Folly of tracing the Original of Kingdoms higher than is consistent with History, is not peculiar to the *Swedish* Historians; Those of most other Nations have their Share of it. *Puffendorf*, in his History of

Sweden, mentions the same Opinion of the Antiquity of his Native Country; and that after the Deluge, it was inhabited before any other on this side the *Mediterranean*. He thinks, their Curiosity to know the Reasons of the Obliquity of the Sun's Course, and of the Length of the Days in Summer, might induce them to travel so far North: But at last tells us, he would not oblige any Man to take up with his Conjectures, and indeed they seem to be but ill founded; for it is certain, that all ancient Colonies were from the E. and S. to the W. and N. and that when the more Southerly and fruitful Places were stock'd

M m

with

with People, some were oblig'd to seek their Fortune in the Northern Countries.

The most probable Account is, That the Swedes had their Name from the *Suiones*, mention'd by *Tacitus* in *Lib. de Moribus Germ.* Cap. 44. & 45. whom he places beyond the *Suevi*, who dwelt in the N. of Germany, betwixt the *Elb* and the *Weissel*. He says, the Seat of the *Suiones* was in the Ocean, and beyond them, he says, there was a still Sea, which he thought furrounded the Earth. This Account agrees best to the *Peninsula of Scandinavia*.

Lozenius Antiq. Lib. 1. Cap. 1. says, The Swedes were so call'd from their Military Bravery; for *Suen* in their Language signifies a sprightly Youth. *Schefferus*, and others of their Antiquaries, are of this Opinion.

Sweden is bounded on the N. by *Norwegian Lapland*, on the N. E. by *Muscovite Lapland*, on the E. and S. E. by *Muscovy*, on the S. by *Beland* and the *Baltick*, on the S. W. by the *Sound* and the *Gulph of Schaggar Raakt*, and on the W. by *Norway*, from which it is separated by unpassable Mountains.

The Latitude is from the most Southerly Part of *Schonen* in 56 Deg. to the Borders of *Norwegian Lapland* in 69. The Longitude from the most Westerly Place of the Government of *Bahus* in 32, to the East Side of the Lake *Onega* in 55, according to *Mr. Moll*; but in 62 according to *Taillet's* Maps, with whom *Ozanam* agrees; for he makes *Archangel* in the same Longitude that *Taillet's* Maps do.

The Extent of this Kingdom in Length, according to *Taillet*, is 900 English Miles. *Mr. Moll* makes it 660. *Du Plessis* reckons its Breadth, from the S. Parts of *Schonen* to the N. Sea, 340 Leagues, or 1020 English Miles; and its Length, from the Westerly Parts of the Government of *Bahus*, to the Easterly Places of *Ingria*, 780. *Brietius* makes the Breadth, from *Christianopol* in Lat. 56, to the Mouth of the River *Pas*, that runs into the Northern Ocean in Lat. 70, 840 English Miles: But *Brietius* is mistaken, when he makes *Christianopol* the most Southerly Place of Sweden, and likewise in making its Latitude 56 Deg. when it is more than 57; and by extending its Breadth to the Mouth of the River *Pas*; he makes a great Part of *Norwegian Lapland* belong to Sweden. He

makes the Length of it 750 Miles. The true Breadth is, from Deg. 56 to 69, 780. But many Abatements are to be allow'd for several Seas, many great Lakes, some of 'em above 80. English Miles long, and 20 broad, which, together with the Rocks, Woods, Heaths and Morasses, make the habitable Part of this large Kingdom not very great.

Of the ancient INHABITANTS.

THE Ancients made *Scandinavia* an Island of unknown Extent; and all other Places N. of the *Baltick*, which *Tacitus* calls *Mare Suevicum*, they make Islands: But *Mela* and *Pliny* call the *Baltick*, *Sinus Codanus*; and *Ptolomy* calls that Part of it into which the *Weissel* falls, *Sinus Venedicus*. *Pliny* quotes *Xenophon Lampsaenus*, who says, That *Scandinavia*, which he call'd *Baltia*, was an Island of vast Extent. *Jornandes de Reb. Get. Lib. 37. Cap. 2.* names it *Scanzia*, and says, it was a Nursery of People, and Seminary of Nations; and that the *Goths*, who overran the *Roman Empire*, came from thence.

The *Hilleroiness* inhabited the E. and S. Parts of the *Defrine* Mountains, which separate *Norway* from Sweden. *Pliny* calls those Mountains *Seris*, or *Sulvis*, and says, they are as large as the *Riphean* Mountains. Their Seat probably was in *Schonen*, *Blekinge*, *Halland*, and the neighbouring Places; for he says, they possess'd 500 Villages.

We have spoken already of the *Suiones*. The *Scritofuni* of *Paulus Diaconus*, the same with the *Scratofenna* of *Jornandes*, and the *Scritifinni* of *Procopius*, probably dwelt in *Finmark* and *Norwegian Lapland*. *Pliny, Lib. 14. Cap. 13.* speaks of a large Island, which he calls *Emingia*, but should be read *Finningia*. He calls the Inhabitants *Fenni*, which is the modern *Finland*. *Brietius* and *Gluerius* make the *Gulph of Riga* *Pliny's* *Sinus Clitipenus*, and others make it that of *Livonia*. The *Carbantes* were planted in *Cavellia*, and the Country betwixt the Lakes *Ladoga* and *Onega*. The *Seyrii* resided on the E. Side of the *Gulph of Bothnia*; and the *Pharona* lay N. from them, on the W. of the *White-Sea*, anciently called *Sinus Grandicus*.

Pliny speaks of many Islands in the *Baltick* that were visited by the *Roman Arms*, and

and says, the most remarkable was *Fabaria*, or *Burchania*, which probably is that now call'd *Borcum*.

The *Goths* are by all the Swedish Historians plac'd in *Scandia*, and reckon'd the Posterity of *Magog*, the Father of all the European *Scythians*, who in *Ezek. 28. 2.* is call'd the Chief Prince of *Mesech* and *Tubal*, or the Prince of *Rhos*, *Mesech* and *Thubal*. *Bochart* says, the Hebrew will allow this Reading, and that the 70 Interpreters, *Symmachus*, *Theodotion*, and *Proclus*, read it so; and approves of *St. Ambrose's* Conjecture, who from this Place infers, that the *Goths* had the same Original with other *Scythians*.

Cluverius makes the *Gothini*, who dwelt near the Fountains of the *Weissel*, to be those that over-run the Roman-Empire, and to be the same with the *Goths*, and calls *Jornander's* Account fabulous, who places the *Goths* in *Scandia*: But *Cluverius* is thought to have done this out of Emulation and Respect to his own Country; for his Opinion seems not probable, for Reasons which shall be mention'd anon. The Account of the *Goths*, that bids fairest for Truth, is, That they were call'd by Strangers *Got*, or *Guten*, for their Humanity or Hospitality, which is observ'd in the Northern People by *Tacitus*: And *Howell* observes, That others were nam'd *Zuandi*, and *Thaifal*, for the contrary. Whether the *Goths* were planted here before the Arrival of *Woden*, is not certain, tho' some will have it so, and that they sent Colonies to *Asiatick Scythia*, and built a City call'd *Asgard*, near the Lake *Motis*, where *Woden* was King; but came from thence, and settled in *Scandia*. Whatever may be in this, it is certain that both *Scandia*, *Pontus* and *Thrace*, &c. had People of the same Name; and that on the Sea-Coasts of the *Baltick*, they speak at this Day the Language which was spoken by the ancient *Getae*, who liv'd about *Pontus*, and the Northerly Parts of *Asia*, as the Account which *Ovid* gives of the Language of that People proves, and the Humours and Manners of the *Scandian Gths* did agree with those of the *Asiatick*; but the Question is, Whether the *Scandian Goths* were Colonies of those about *Pontus*, and the *Palus Meotis*, &c.? Or if the *Asiatick Goths* derive their Origine from *Scandia*? The last is most probable, because the vast Countries

in *Scandia*, in the Northerly Parts of *Germany*, and the Islands speaking that Language, seem to prove, that those of *Asia* being few in Number, compar'd to the *Goths* in *Scandia*, and the neighbouring Places, were Colonies from thence. Besides, the People that liv'd near the *Asiatick Goths* spoke a quite different Language, and were more numerous by much than they. *Andreas Bureus*, a Swede, says to this Purpose, That the Laws of the *Westgoths*, which were made about the Time when Colonies of those People went to *Asia*, *Thrace*, &c. ordain, That no *Goth*, who shall leave his Native Country *Scandia*, and plant in *Greece*, *Thrace*, *Pontus*, and other Places abroad, shall have any Right or Pretension to the Lands or Goods they left in *Scandia*, unless they return and settle in their own Country. He says, those Laws are much the same with *Isidore's* Laws of the *Visigoths* in *Spain*; and concludes, that they were borrow'd from those Laws of the *Goths*, their Countrymen, in *Scandia*; and that the Swedish History, and those of other Nations, shew, that many went from *Scandia* to visit their Friends and Relations in *Thrace*, &c. *Jornander*, in his History of the *Goths*, writes, That *Rudolphus*, the 25th King of Sweden, left his own Kingdom, and visited *Theodoric*, King of the *Goths* in *Italy*; and *Volfgangus Lazius* tells us, That it was ordinary for many from Sweden to travel to *Illyricum*, *Italy*, and other Places, to visit the *Goths*, their Countrymen. To prove this Point further, *Bureus* says, 'tis evident from History, That after the *Goths* settled in *Spain*, they entertain'd a Correspondence with the *Goths* in *Scandzia*, as Sweden was called in those barbarous Times; and that several Noblemen from thence subscrib'd the 8th Council of *Toledo*. Another great Proof of this is, That the Name of *Goths* continues in no Place except Sweden, where we have *Gothland* in the Peninsula, and an Island of that Name.

Grotius, in *Prolegomenis ad Histor. Gothorum Vandalorum*, &c. conjectures, That about 300 Years before our Saviour, the *Goths* went out of *Scandia*, or *Gothland*, into the Continent of *Germany*, where they left a Colony, which *Tacitus* calls *Gottones*. Before that Time, they had Peopled the Islands of the *Baltick*, and the Sea-Coasts,

from whence they made Inroads into *Dania*, and the *Palus Meotis*, before the Time of the *Antonini*. *Spartianus* says, the *Gothi* and *Getae* were the same People. *Jornandes* thinks, that in the Reign of *Philip*, they came into *Masia* and *Thrace*; and those who resided in *Masia*, were called *Gothi Minores*. *Grotius* is positive, they had the Name of *Ostrogoths* and *Westrogoths* in their own Country, which is probable from *Jornandes's* Description of *Scandi*. The *Jutes*, *Getae*, or *Gothi*, who with the *Saxons* and *Angli* conquer'd *England*, were of *Scandian* Original; and *Ptolomy* says, in *Scythia*, or *Cymmeria*, there were People call'd *Jota*, the same with the *Getae* or *Gothi*.

Procopius affirms, That the *Gepida* were of *Gothick* Extract. *Jornandes* does the like, and gives this Account of their Original, That *Berick*, a King of the *Gothi*, with three Vessels, sail'd from *Scanzia*; and one of 'em sailing slower than the rest, the Crew was on that Account call'd *Gepida*; for that Word signifies so much. They landed in an Island of the *Vistula*, and afterwards proceeded further.

Procopius is also of Opinion, That the *Vandali* were *Gothick* Nations, and spoke that Language; the Truth of which he had good Occasion to know. for he was acquainted with *Gelimir* their King, and many of his Nobles, that were brought Prisoners to *Constantinople*.

The HISTORY of Sweden.

Grotius gives an Account of *Swedish* Kings 3000 Years before Christ; which Form of Government is pretended to have continued till the 100th Year after the Foundation of *Rome*; then it became a Republick, which lasted 250 Years. Monarchy was re-establish'd by *Erick II.* German's Wife, who is said to have had 21 Successors, till *Anno Christi* 455. *John Magnus* continues this List till the Time of *Bjorn*, who was contemporary with *Charlemagne*; but it is certain, their first Kings were rather Judges or Captains, and each Canton of *Sweden* had one of them. It is most reasonable, says the Author of the *Revolutions of Sweden*, to think that their Historians, in order to make a long Catalogue of Kings, made those Princes that at the

same time liv'd in different Provinces to succeed one another. In those fabulous Times, their Historians make their Kings all Giants, Magicians or Robbers, who had no Idea of Honesty or Virtue: Cruelty and Valour were the same thing among them. They thought it unworthy of their Character to marry any Princess, except they had first ravish'd her; and none of them could pretend to Courage till they kill'd a Savage Beast in View of the People, or surpris'd and assassinated their Enemy in his own House. Such Actions entituled them to the Name of Heroes during Life, and to Deification after Death.

Puffendorf owns those Antiquities of *Sweden* to be fabulous; and that the ancient *Swedes* had no *Epocha* from whence they date their History; so that the Catalogue of their Kings is not Authentick. Their ancient Historians were Poets, and that Part of their History is form'd from old Ballads and fabulous Legends. Those Poets embellish'd their Stories with Allegorical and Figurative Expressions, which Posterity mistook for Fact; and *Joannes Magnus* strives to outdo *Saxo Grammaticus* in Fiction and Romance. *M. Jensenius* says, That all their History, before the Nativity of Christ, is fabulous.

They alledge, That 60 Years before Christ, the famous *Woden*, or *Odin*, was driven out of *Asia* by *Pompey the Great*. After which *Woden* and his Followers conquer'd *Russia*, the *Saxons* and *Danes*, and last of all *Norway* and *Sweden*, 24 Years before our Saviour. He kept *Sweden* for himself, and all the other *Scandinavian* Princes were to do him Homage. Thus for many Years after, the King of *Denmark* us'd to hold the King of *Sweden's* Bridle, and the King of *Norway* his Stirrup. Many Northern Nations are ambitious to derive their Extraction from this *Odin*. He introduc'd the Heathen Worship, Witchcraft and Magic, and the Custom of raising great Heaps of Earth on the Graves of Persons of Note, and of engraving Funeral Inscriptions on Rocks and Stones, which yet remain in many Places of the Country. *Frotho Jorgo* succeeded, who is said to have cover'd the Temple at *Upsal* with Gold, and surrounded its Pinnacle with a Golden Chain. After him succeeded *Njord*, *Sigtrug*, *Asmund*, *Uffe*, *Hindings*.

Hindings, Regner, Halvard, Helgo, Attilur, Hother, Roderick, Arnam'd Singabond, Hognor, Hogrin, Erick, Haldan, Sivand, Erick, Haldan, Ungrin, Regnald. About 588, *Rodolph* was King of the *Goths* in *Scandinavia*, and defeated by the *Angles*, who possessing themselves of that Kingdom, he fled to *Italy*, to *Theodoric* King of the *Goths*. *Frotho* succeeded him, and was follow'd by *Fiolmus, Snercher, Valander, and Vistur*, who was burnt by his own Sons. *Damalder*, another King, was sacrific'd by his Subjects to their Idol at *Upsal*. Those who succeeded, were *Damar, Digner, Duger, and Aginus*, whom his Wife hang'd. After him came *Airick, Erick, Ingo, Hugler, Haco, Ibrunder, Hacquin; Ring*. In his Time the Battle of *Broualla* was fought, where 30000 *Danes* and 12000 *Swedes* were kill'd. He sacrific'd 9 of his Sons to the Idol at *Upsal*. Next to him came *Egilus, Othor, Odel, Ostan, Ingward, Amund, Sivard, and Herot*, who was cruel to his Nobility: And for his Male-Administration, *Regner* King of *Denmark* made War upon him. When he was reduc'd to Extremity, by the Advice of his cruel Daughter, who had murder'd her Husband and his Brother, he burnt himself, with her and his whole Family, except his Son *Olaus*, in his own Palace; and *Regner* King of *Denmark* made his own Son *Bero*, or *Biron*, by *Herot's* Daughter, King of *Sweden*.

The first Piece of probable History we meet with is, the Preaching of the Gospel in *Sweden* in this *Bero's* Reign, by *Ansgarius*, a Monk of *Corbey*, in 829, who was sent by the Emperor *Ludovicus Probus*. The *Swedes* banish'd *Bero*, because he would not turn Christian. *Armund*, another of their Kings, persecuted the Christians, and was also banish'd: Then they invited *Olaus* from *Wermeland*, who, to secure his Title to the Crown, marry'd his Son *Ingo* to *Regner's* Daughter. He was converted by *Ansgarius*, and quietly possess'd the Kingdoms of the *Goths* and *Swedes*; till some of his Heathen Subjects sacrific'd him to their Idol at *Upsal*. *Ingo* was kill'd in his War against the *Russians*. After him succeeded *Erick Weatherhal*, who was skill'd in Witchcraft; then *Erick Sege-sel*, who conquer'd *Finland, Courland, Livonia, Esthen, Halland, and Schonen*, and drove King *Sueno* out of *Denmark*. *Erick's* Son *Stenchil* turn'd Christian, burnt

down the Idol at *Upsal*, and forbid Idolatry on Pain of Death, which so enrag'd his Subjects, that they burnt him and two Priests near *Upsal*. His Brother *Olaus*, and many of his Subjects, were converted by some Ministers from *England*, who perswaded him to grant a Yearly Tribute, call'd *Roms-skot*, to the Pope, to maintain the War against the *Saracens*. He dethron'd the King of *Norway*, and made an Union betwixt the *Goths* and *Swedes*, who formerly had been great Enemies.

After him came his Son *Amund*, in whose Reign Christianity flourish'd. His Brother *Amund Slemme*, a careless Prince, succeeded, and, with the greatest Part of his Army, was slain by *Cnut*, King of *Denmark*. After his Death, the *Goths* and *Swedes* disagreed about a Successor: At length it was concluded that *Hacquin*, who was then old, should be King during his Life, and that *Stenchil* should succeed. *Hacquin* defeated the *Danes* in three Battles. After *Stenchil*, came *Ingo the Pious*, who destroy'd all Monuments of Idolatry at *Upsal*, for which his Pagan Subjects banish'd him, and then murder'd him in *Schonen*. After him were *Halstan, Philip, and Ingo*, who had no Sons, but two Daughters, viz. *Christina*, who was married to *St. Erick*, and *Mar arct* to *Magnus* King of *Norway*. This *Ingo* was poison'd by the *East-Goths*.

After this the *East-Goths* chose a King for themselves, call'd *Ragwald Knappofde*: He was very strong, but foolish, and was slain by the *West-Goths*. The *East-Goths* elected *Su rcher II.* a good King, who was murder'd by one of his Servants; then they chose his Son *Charles*; and *Erick* was King of the *Swedes*: But they and the *Goths*, being sensible of the Necessity of an Union among them, they agreed, that *Erick* should rule both Kingdoms; that *Charles* should succeed him; and that their Heirs should reign by Turns. This *Erick* reduc'd the *Fins*, and oblig'd them to be Christians. He collected a Body of Laws from the ancient Constitutions of the Kingdom, which was call'd *St. Erick's Law*. *Magnus*, the King of *Denmark's* Son, slew him, and defeated his Forces; but the *Swedes* and *Goths*, headed by *Charles*, the Son of *Su rcher*, rallied and kill'd all the *Danes*, with their King, and his Son; and thus *Charles* became also King of

Denmark, and reign'd with general Applause, till *Cnut*, the Son of *Erick*, surpris'd and killed him. He also rout'd the Forces commanded by *Koll*, the Brother of *Charles*, and kill'd himself upon the Spot. *Cnut* reign'd successfully 23 Years. After his Death, *Suercher*, the Son of *Charles*, was made King; but *Erick*, the Son of the last deceased King, being his Rival, the Difference was compos'd thus; *Suercher* was to be King during Life, and *Erick* to succeed; but *Suercher*, contrary to the Agreement, murder'd all the Sons of *Cnut* except *Erick*, who fled to Norway, from whence returning with some Forces, and being join'd by the Swedes, he oblig'd *Suercher* to flee to West-Gothland, *Waldemar* King of Denmark sent him 12000 Men, with which he endeavour'd to recover his Kingdom, but was routed. He afterwards invaded West-Gothland, where he was defeated and slain. *John*, the Son of *Suercher*, succeeded *Erick*, who reign'd but three Years.

After his Death, *Erick the Lisper*, Son to the former *Erick*, was King. To bring the potent Family of the *Tolkungers* over to his Interest, he married his three Sisters to three of the Chief of them, and married one of their Daughters himself; but the *Tolkungers* being now more potent by this Alliance, they rebell'd, and defeated the King, who fled to Denmark; and being re-inforc'd there, he return'd, and routed *Cnut Tolkunger*, and caus'd him and his Son *Hallinger* to be slain, which restor'd Peace to the Kingdom. In his Reign *Gulielmus Sabienensis*, the Pope's Legate, first introduc'd the Celibacy of the Clergy here. *Erick* forc'd the *Finns* to return to their Obedience, and to profess Christianity, in 1250. *Waldemar*, this King's Sister's Son, was made King during his Minority, and the Administration was in the Hands of *Birger Yerle*, his Father. He augmented the Laws, and govern'd with much Wisdom and Goodness. This *Birger* was made a Duke, being only an *Yrle*, or Earl, before. He ruin'd the factious Family of the *Tolkungers*: He married his Son *Waldemar* to *Sophia Erick*, the King of Denmark's Daughter, and founded *Stockholm*. He died in 1266, after he had been Regent 15 Years, and left 4 Sons, *viz.* *Waldemar* King of Sweden, *Magnus* Duke of *Sundermanland*, *Erick* of *Smaland*, and *Bo-*

nedict of Finland. *Waldemar* went in Pilgrimage to Rome and Jerusalem, and left the Government to his Brother *Magnus*. Upon his Return, he accus'd him of a Design to set up for himself; and the Assembly of the States not being able to compose those Differences, *Magnus* and *Erick* retir'd to Denmark, return'd with a great Army, routed *Waldemar*, and made him Prisoner. Upon this the States declar'd *Magnus* King of East and West-Gothland, and *Dahr* fell to *Waldemar*'s Share. The *Danes* sided with *Waldemar*, because *Magnus* did not pay the Subsidies promis'd, and so the War was renew'd, till the *Danes* having receiv'd Satisfaction, they left *Waldemar* in the lurch, who was thereby oblig'd to resign the Kingdom to *Magnus*.

Magnus was Crown'd at *Upsal* in 1279, and assum'd the Title of King of the Swedes and Goths, which had not been us'd since the Time of *Olafus Skotkonung*. The *Tolkungers* began anew to make Disturbances, killed *Ingemar Danskehpe*, the King's Favourite, took *Gerhard* Earl of *Holstein*, the King's Father in-Law, Prisoner, and besieg'd the Castle of *Jenkoping*. The King dissembled his Displeasure, and made them fair Promises; but he afterwards accus'd them to the States of High-Treason, for which they were all hang'd at *Stockholm*. He died in 1288, and left the Care of the Kingdom to *Torchel Cnutson*, who was Regent 13 Years, during his Son *Birger*'s Minority. He subdued *Carelia*, forc'd them to profess Christianity, and built the Fortreiss of *Wibourg* to curb them, and took *Kekholm* from the Russians. *Birger*, when he was of Age, married *Mareta*, Daughter to *Erick* King of Denmark. He built the Fortreiss of *Norburgh* on the Frontiers of Russia, which the Russians afterwards took and demolish'd. He declar'd his Son *Magnus*, then but 3 Years old, his Successor. His Brothers fell into Animosities amongst themselves, and the King having seiz'd their Inheritance, they made Inroads into West-Gothland, and dispers'd the King's Troops; but at last a Peace was made, which cost old *Torchel*, one of his Counsellors, his Head, on Pretence that he had inflam'd the Differences betwixt them. After this the two younger Brothers aspir'd to the Crown, surpriz'd the King, oblig'd him to surrender, and made him

him Prisoner in the Castle of *Nicoping*. The King's Son escap'd to *Denmark*: The King of which, by three Expeditions, attempted to relieve the King his Brother-in-Law; but to no purpose; so that at last it was agreed the States should determine those Differences. They concluded, That King *Birger* should pardon all past Injuries, be content with what Part of the Kingdom should be assign'd, and have his Liberty; upon which the Senate and his Brothers swore Fealty to him. After this, *Erick* of *Denmark*, and *Haquin* of *Norway*, came with 60000 Men into *Sweden* to assist *Birger* against his Brothers: They took *Jencoping*, and oblig'd their Forces to fly; but the *Danes* wanting Provisions, return'd home, and by a new Agreement Duke *Erick* had *West-Gothland*, *Dahls*, *Halland*, *Wermeland*, and *Smaland*; and Duke *Waldemar* had *Upland*, *Oeland*, and Part of *Finland*, which they were to hold of the King in Fief: And thus Peace was restor'd to the whole Kingdom. *Waldemar* and his Brother *Erick* were afterwards perswaded by the King to come and visit him; and when they were in Bed, and their Servants dispers'd, they were made Prisoners, beaten, and laid in Irons, and their Servants all kill'd or taken. The King design'd to besiege *Stockholm*; but the Citizens being apprisd of his Barbarity, repuls'd him, and pursued him to *Nicoping*. He retir'd to *Steckeburgh*; and before his Departure, threw the Keys of the Prison into the River, and caus'd the Doors to be barricado'd; so that before *Nicoping* could be taken by Storm, both the Princes died of Famine. The whole Kingdom was enrag'd at this barbarous Action, so that *Birger* was forc'd to fly to *Denmark*, where gathering some Forces, he shifted from Place to Place, till most of them were surpris'd at *Sudercoping*; then he fled to *Gothland*. The Swedes besieg'd *Steckeburgh*; where his Son *Magnus* commanded; forc'd him to surrender, sent him Prisoner to *Stockholm*, and made *Matthieu Kuthmundson* Regent of *Sweden*, who drove the King's Party out of the Country about 1319.

Upon this the States elected *Magnus Smek*, Duke *Erick's* Son, then but 3 Years of Age. Next Year *Magnus*, King *Birger's* Son, was wickedly sentenc'd to Death and beheaded; notwithstanding the States of the Kingdom

had sworn Fealty to him as their future King; upon which *Birger* and his Queen died of Grief. *Kathmundson* manag'd Affairs with great Equity and Wisdom, till *Magnus Smek* came of Age, who disappointed their great Expectations of him; for he slighted the Advice of the Great Council, hated the Senate, and design'd entirely to abolish it, because it was a Check to his Arbitrary Designs. He married *Blanche*, Daughter to the Earl of *Namure*, and was managed entirely by his Favourite *Benedict* of *Gothland*. At this Time those of *Schonen* being oppress'd by the *Holfsteiners*, put themselves under his Protection, which was afterwards confirmed by *Waldemar* King of *Denmark*, and the *Sound* was made the Boundary of the two Kingdoms. After he had rul'd 12 Years, he made War upon the *Russians*, but with bad Success; for he was oblig'd to quit Part of *Carrelia* to purchase a Peace. His Treasury being exhausted, he laid heavy Taxes upon the People without Consent of the States, and mortgaged many of the Crown-Lands. The Pope excommunicated him, because he applied the *Peter-Pence* to defray the Charge of the *Russian* War. The People of *Norway* offer'd their Crown to his Son *Haquin*, who married *Margaret*, Daughter to *Waldemar* King of *Denmark*. *Erick*, Son to *Magnus*, being declar'd King of *Sweden*, the States of the Kingdom revolted from *Magnus Smek*, and slew his Favourite *Benedict*: Then *Magnus* sought Assistance from *Denmark*, which enrag'd his Subjects so, that they oblig'd *Erick* to take Arms against his Father. The End of this Controversy was the Division of the Kingdom, of which *Upland*, *Gothland*, *Wermeland*, *Dahls*, *North-Halland*, *West-Gothland*; and *Oeland*, fell to *Magnus*; and *Schonen*, *Blekingen*, *South-Halland*, *East-Gothland*, *Smaland*, and *Finland*, to his Son *Erick*; in 1363.

After this *Magnus* sent for his Son *Erick*, and perswaded his Mother to poison him; by which he re obtain'd Possession of the whole Kingdom, and reveng'd himself upon the Nobility, who were the Barriers of the People's Liberty: And to accomplish his Tyrannical Designs, he made *Waldemar* King of *Denmark* his Friend, by restoring *Schonen*: Upon this *Waldemar*, with *Magnus's* Connivance, fell into *Gothland* and *Oeland*, kill'd many Boors, plunder'd the

Conna-

Country, and demolish'd *Borgholm*. This oblig'd the *Swedes* to submit to *Haquin* of *Norway*, who imprison'd his Father *Magnus*; and by the Advice of the States, married the Earl of *Holfstein's* Daughter, who in her Voyage to *Sweden* was drove on the Coasts of *Denmark*, and detain'd by King *Waldemar*, who design'd his Daughter *Margaret* for *Haquin*; but *Albert* Duke of *Mecklenburgh*, and the Earl of *Holfstein*, declaring War against *Denmark*, the Earl of *Holfstein's* Daughter was set at Liberty, and coming to *Sweden*, was slighted by *Magnus Smiek*, which made her retire to a Nunnery; and *Haquin*, notwithstanding his Contract with her, married *Margaret* of *Denmark*.

The banish'd Lords, Senators, and others of the *Swedes*, took up Arms against *Magnus*, as one who had forfeited his Title to the Crown; and consulting about chusing another, they agreed upon *Henry* Earl of *Holfstein*, who declin'd it, because of his Age, and recommended *Albert* Duke of *Mecklenburgh*, *Magnus's* Sister's Son; but they chose his own second Son, also call'd *Albert*, and proclaim'd him King at *Stockholm*. Upon this, *Magnus* and his Son *Haquin* march'd against *Albert*, and fought him near *Encoping*; but were defeated, *Magnus* taken, and *Haquin* wounded. After this, *Sweden* continued to be a Theatre of War for many Years; for *Waldemar* King of *Denmark*, and *Haquin*, constantly sent Forces into *Sweden* to reinforce *Magnus's* Party; and *Haquin* once defeated *Albert* in Battle, and besieg'd *Stockholm*. At last it was agreed, That *Magnus* should have his Liberty, on paying 12000 Marks of fine Silver, and resigning the Crown and *Schonen* to *Albert*. After this *Magnus* retir'd to *Norway*, where he was drown'd by Accident, and *Haquin* and his young Son *Olavs* died soon after, by which the ancient Royal Line of *Sweden*, which had ruled 200 Years, since *St. Erick's* Time, was extinguished. Not long after, *Waldemar* of *Denmark* died without Heirs Male; and the *Danes*, in order to unite *Norway* to *Denmark*, declared *Margaret* Queen of *Norway*, his Daughter, their Queen, to which the *Norwegians* were induc'd to agree by Intrigues and Bribes.

Albert's Enemies being thus all taken out of the Way, he began to hate the Nobility, to be jealous of the Senate, and to follow

the Arbitrary Methods of his Predecessors; but gradually and slyly, because of the Fate of *Manus*, which was still fresh in his Memory. However, to effect his Designs, he invited in Foreign Noblemen, especially those of his own Family, and *German* Officers, and put the Administration into their Hands, under various Pretexts. He also brought in Foreign Troops, so that his Subjects began to suspect him, since all this was contrary to the Fundamental Laws of the Kingdom. He likewise oblig'd them to pay excessive Taxes. The Treasury being exhausted by the Wars against *Denmark*, he propos'd the annexing the Revenues of the Clergy, and some of the Lands of the Nobility, to the Crown, which they refused: And he continuing to extend his Prerogative, it occasion'd a Civil War; upon this the States applied to *Margaret* of *Denmark* for Assistance, which she granted, on Condition that she should be their Queen when they had humbled *Albert*. On his Part, he mortgaged the Isle of *Gothland* to the *Teutonic* Knights for 20000 Nobles, and challenged Queen *Margaret* to a Battle, which was fought at *Talkoping* in *West-Gothland*, where she obtained the Victory, and took King *Albert* and his Son. After this the Dukes of *Mecklenburgh*, the Earls of *Holfstein*, and the *Hans-Towns*, sided with *Albert*, and sent him Supplies; so that by this War, which lasted 7 Years, *Sweden* was laid under Contribution by Foreigners, and their Trade ruin'd.

At length a Peace was concluded at *Stockholm*, by which King *Albert*, his Son, and the rest of the Prisoners of Note, were set at Liberty on Condition that within three Years he should resign all his Pretensions to the Crown in favour of Queen *Margaret*. The *Hans-Towns* were Guarantees of the Treaty, and in case of failure, were to pay her 60000 Marks of fine Silver. *Albert's* Son died within two Years, which made him lay aside all Thoughts of recovering the Crown, and he soon after died in *Mecklenburgh*; so that *Margaret* was left Queen over the three Northern Nations, and call'd the *Semiramis* of the North.

The *Swedes* before this seeing she had no Heirs, and fearing that after her Death *Albert's* Son, who was then alive, might pretend to the Succession, they desir'd her to marry, which

which she would not listen to, being jealous that a Husband would claim a Share of the Sovereignty: But to give some Satisfaction to the Swedes, she told them, She would name for Successor *Henry of Mecklenburgh*, her Nephew, then very young; for she thought if he had been of Age, he might have disturb'd her ambitious Projects, out of his Impatience to mount the Throne. By her Intrigues, she perswaded the Estates of the three Crowns to go into this Succession. At the same Time she told them, how profitable an Union of the three Northern Nations would be; how likely to terminate all Quarrels for the future; that thereby they would soon become Masters of all the Trade of the *Baltick*; and that their Disunion was the only thing that could effectually gratify the *Hans-Towns*. The Estates being gain'd thus, partly by her Presence and Eloquence, but more by the secret Practices and Bribes of her Courtiers, they consented to this Union, and made it a Fundamental Law, which was call'd, the *Union of Calmar*, and laid the Foundation of bloody Wars for more than one Age betwixt *Denmark* and *Sweden*. The Articles of this Union were, 1. That these 3 Kingdoms, for all Time coming, should have one and the same King or Queen; and that he or she that was to succeed to the Throne of those 3 Realms, must be elected by all the 3 Kingdoms; and that the Election should be in each Kingdom by Turns. 2. That the Sovereign should be oblig'd by these Articles to reside by Turns in each of the 3 United Nations, and so spend in each of them the Revenues arising from that Kingdom; That the Revenues, Money, &c. of each Kingdom might not be exported, nor employed any other Way, than for the Advantage of that Kingdom from whence they were collected. 3. That each of the 3 United Kingdoms should for ever have their own Senate, Laws, Customs, Money, and Privileges; and that the Governors, Magistrates, Generals, Bishops, Troops, Garisons, should be Natives of the Kingdom where they were employ'd; and that none born in one of the 3 Kingdoms should bear Office in any of the Kingdoms but in that where he was born.

The Swedes thought that those wise Limitations would secure their Peace; but tho' their Senate and Laws protected them for a while, they soon found, that *Denmark* being the Center of the Union, and then

the more powerful Nation, *Margaret* and all her Successors favour'd the *Danes* more than them, whom they endeavour'd by all Ways and Means to keep under, and make miserable.

During *Henry's* Minority, (whose Name she chang'd to *Erick*, to please the Swedes, who had 12 Kings of that Name) in 1410, she endeavour'd to regain the Isle of *Gotthland* from the *Prussian* Knights; but failing in it, was oblig'd to pay the Mortgage, which was 10000 Nobles. In 1412, *Erick* married *Philipa*, the Daughter of *Henry IV.* King of *England*; and his Aunt Queen *Margaret* died much about this Time. He was soon engaged in a War with the Earl of *Holstein*, the *Hans-Towns*, and the Dukes of *Mecklenburgh* and *Saxony*, about *Sleswick*. Tho' this was only the Quarrel of *Denmark*, the other Kingdoms were more oppress'd than they, and their Trade with the *Hans-Towns* was broke off. Besides, the King's Officers us'd the Swedes very Tyrannically, and he himself broke many Articles of the Union, especially when he sent away the most ancient Swedish Records into *Denmark*. This at last oblig'd the Swedes to take desperate Counsels. *Engelbrecht Engelbrechtsen*, a *Dalecarlian*, headed his Countrymen, who besieg'd *Jesse Erickson*, one of the King's Officers, and a great Oppressor, who, to prevent an Insurrection, was turned out; yet the Boors, with *Engelbrecht* at their Head, over-ran the neighbouring Country with Fire and Sword, and destroyed those who would not join them. At last one *Erick Puke* came over to them with the *North-Hallanders*, took many Places of Strength, killed all the *Danes* they met, and forc'd the Senate of the Kingdom to renounce their Allegiance to *Erick*. This oblig'd him to make Peace with the *Holsteiners*, and to turn his whole Force against *Sweden*; but a great Part of his Fleet was destroy'd by Storm: He came with the rest to *Stockholm*, and was forc'd to make a Truce for 10 Months with the Swedes. *Olof*, the Archbishop of *Upsal*, perswaded them to own him as King, provided he would stand to the Union, which the King at that Time consented to, and reserv'd only to himself the Castles of *Stockholm*, *Calmar*, and *Mycoping*, leaving the Swedes to command the rest. No sooner had the King done this, but he

left *Sweden*, contrary to the Union; and the Estates being afraid he might return with a greater Force, they assembled at *Arboka*. In the mean time *Engelbrecht* took *Stockholm*, and besieged the Castle. At this Time the Marshal *Charles Cnutson* was declared Governor and General of the Kingdom, and *Engelbrecht* was kill'd by one *Benedict Suenfson*, his old Enemy. Some were jealous of the Marshal's too great Power, which occasion'd a new Treaty, wherein the King promis'd to put the Natives of *Sweden* only in Places of Trust in that Kingdom; and *Benedict Suenfson*, as a Reward for murdering *Engelbrecht*, was made Governor of *Calmar*. The King soon after, in his Voyage from *Gothland* to *Sudercoping*, was overtaken by a Storm, wherein most of his Ships were lost, and he narrowly escap'd. When the *Swedes* heard of the Tempest, and not knowing whether the King was alive or dead, they resolv'd that both the first and second Treaties at *Calmar* should stand. By this Means the Marshal got most of the Castles of the Kingdom into his Hands; at which *Erick Puke* being disgusted, he rais'd a great Number of Boors, and defeated the Marshal and his Troops. Upon this, the Marshal desired an Interview with *Puke*, and, contrary to Promise, sent him Prisoner to *Stockholm*, where he was beheaded. When the Senators heard the King was alive, they sent to him to know if he would confirm their former Treaty at *Calmar*, which he refused. Upon this they made a secret League with some Leading-Men in *Denmark* against him. The Marshal prevailed with the Senators to appoint a Day for the King to appear in *Sweden*, to renew their Privileges; and in case of failure, they were to renounce his Authority: But the Archbishop perswaded them to forbear bringing Matters to Extremity, till a General Meeting of the Estates of the 3 Kingdoms might redress their Grievances; and when they met, the King's Commissioners would not confirm the Treaty of *Calmar*; upon which they broke up. The King retir'd with all his Treasure out of *Denmark* to *Gothland*; and those of the Danish and Swedish Senators, who were dissatisfied with the King's Government, agreed to dethrone him, and chose another, who would observe the Articles of the Union. The *Danes* sent to

Christopher Duke of Bavaria, desiring him to accept of their Crown, and acquainted the Marshal with it; upon which he was own'd as King by the Senators and the Marshal, and Crown'd at *Upsal* about 1439. He afterwards married *Dorothy*, Daughter of *John Marquis of Brandenburg*. *Erick*, who was still in Possession of *Gothland*, took many of the Swedish Ships, for which the Senate desired *Christopher* to make War upon him, which he did; but suddenly clapp'd up a Peace, by which *Erick* was left in Possession of *Gothland*. *Christopher* died at *Helsingburgh* in 1448, and left great Legacies to the Churches of *Sweden*; but the *Danes* being possess'd of his Ships, Ammunition, rich Furniture, and ready Money, would not pay them.

The Marshal *Charles Cnutson*, upon *Christopher's* Death, got himself elected King: But the *Danes* offer'd their Crown to *Christian Earl of Oldenburg*. *Charles* in the beginning of his Reign besieged *Erick* in the Castle of *Wisby*; but *Christian*, the new King of *Denmark*, rais'd the Siege. *Erick* retired to *Pomerania*, without making any further Pretensions to the Crown, and died at *Rugen*.

The greatest Part of the *Norwegians* elected *Cnutson* also for their King, which occasion'd constant Wars betwixt him and *Christian of Denmark*. *Cnutson* was successful at first; but after the Death of his brave General *Thord Bonde*, *Christian* was too hard for him. The Archbishop of *Sweden* declared also for *Christian*, surpris'd *Cnutson's* Forces at *Strengness*, and besieged himself in *Stockholm*; upon which he embarked with all his Treasure for *Dantzick*. The Archbishop having got all the Strong-holds into his Hands, sent for *Christian* to *Sweden*, where he was declared King. His Government was tolerable at first; but afterwards his Cruelty and heavy Taxes made him odious to the *Swedes*: He tortur'd to Death many of their Great Men, on Pretence of corresponding with *Cnutson*: He was also cruel to the Boors, who took Arms against him, and imprison'd the Archbishop of *Sweden* in *Copenhagen*. *Katil*, Bishop of *Lyncoping*, being provok'd at this, made an Insurrection, and obliged the King to fly to *Denmark*, whence he returned next Year with a considerable Force; but the Bishop's

Army

Army defeated him, and forc'd him to leave *Sweden* a second time. The Bishop also besieg'd *Christian's* Garrison in *Stockholm*, and sent to *Cnutfone* for Help, who came to *Sweden* with Forces that he had levied in *Prussia* and *Poland*; and *Stockholm* surrendering to him, he was again made King: But some Differences happening betwixt him and Bishop *Katil* about exchanging the Archbishop, the Bishop made Peace with *Christian*, who came with a powerful Army to *Sweden*: He defeated *Cnutfone's* Forces upon the Ice near *Stockholm*, and set the Archbishop at Liberty; and getting all the Places of Strength into his Hands, *Cnutfone* was obliged to give up all his Pretensions, and leave the Kingdom: But *Nils Sture*, and *Erick Axelstone*, *Cnutfone's* Friends, did for some Time oppose the Archbishop's Designs; and *Axelstone* being declared Regent of the Kingdom, the Archbishop was obliged to surrender *Stockholm* and other Strong-holds to him: But *Nils Sture* and *Erick Nilstone* going over to the Archbishop's Faction, they involved the Kingdom in Blood and Confusion: Yet the Archbishop's Party was worsted at last; upon which he died of Grief, and the Commons of *Sweden* once more restored *Cnutfone*: But *Erick Nilstone*, *Erick Carlstone*, *Trolle*, and some others, surpris'd *Cnutfone's* Army during a Truce, and forc'd his Men to fly; but pursuing them too far, they were entirely routed by *Cnutfone*, and their Leaders fled to *Denmark*; upon which *Cnutfone* returned to *Stockholm*, and recommending the Kingdom to his Nephew *Steen Sture*, he died there about 1470.

After his Death, there was nothing but Confusion and Anarchy in *Sweden* for one Year. But at last *Steen Sture* was declared Regent, vanquish'd *Christian* of *Denmark* in a Battle near *Stockholm*, and drove him out of the Kingdom, to which he never return'd, but died in *Denmark* in 1481.

After his Death, the *Danes* made *John, Christian's* Son, their King. The *Swedes* agreed to this Choice, provided that he would observe the *Pacta Conventa* which King *John* swore to and seal'd; but the Articles not being duly perform'd, *Steen Sture* continued Regent 14 Years after. The Kingdom was at this Time miserably afflicted with intestine Divisions, and had also a War with *Russia* and *Denmark*. The

Senators advis'd *Sture* to lay down his Regency; but he refusing it, they invited King *John*, who defeated *Sture's* Party; upon which the Senate, and *Sture* himself, acknowledged *John* as King, and the Succession was settled upon his Son *Christian*. *John* Reign'd for some Time peaceably; but at last, falling into the Arbitrary Measures of his Predecessors, he oblig'd *Sture*, and others of the Nobles, to surrender the Fiefs of the Crown which they possess'd, and gave them to *Danes* and *Germans*. His Officers followed his Example, and committed all manner of Insolencies in their Provinces: But when *John* was defeated at *Ditmarsen*, the *Swedes*, headed by *Steen Sture*, assembled at *Wadstana*, and renounc'd their Allegiance to *John*, because he had broke the Articles of *Calmar*.

Upon this *John* sail'd to *Denmark*, and his Queen was left in *Stockholm*, which *Sture* besieg'd, forc'd it to surrender, and was constituted Regent of the Kingdom. In the mean Time the *Danes* burnt *Elfsburg* and *Oresteen*, and committed great Cruelties in *West-Gothland*, under the Command of *Christian*, *John's* Son, who had also destroy'd most of the Noble Families of *Norway*; but their Fury was a little allay'd, because the Queen was in the Hands of their Enemies. At last the *Lubeckers* and Cardinal *Raimond* procur'd her Liberty to return to *Denmark*. The Regent conducted her to the Borders, but in his Return died suddenly. Upon this the States, at their Meeting in 1503, made *Suante Nilstone Sture* Regent. Then the War began afresh with King *John*, with various Success. At first, the Emperor, the *Russians*, and Pope, join'd with the *Danes*: But the Regent made Peace with the *Muscovites*, and set the *Lubeckers* against the *Danes*, from whom they retook *Calmar* and *Bornholm*. In the midst of this Success *Suante* died, in 1511, in the 8th Year of his Regency. After his Death, *Steen Sture*, the Regent's Son, was chosen Regent with great Difficulty; the ancient Senators inclining more to *Gustavus Trolle*, a Man of greater Experience. King *John* died at *Alburg* in *Jutland* in 1513, and the *Danes* and *Norwegians* declar'd his Son *Christian* King. The *Swedes* hated him for his Father's Cruelty, and desired Time to consider of the Matter; and *Christian*, after 4

Years, perceiving the *Swedes* were not resolv'd to elect him, and that the Regent would not part with his Power, he instigated Pope *Leo X.* against him, strengthened his Party, by bringing over *Gustave Trolle*, the new Archbishop, and perswaded the *Russians* to invade *Enland*. When the Regent found out the Archbishop's Treachery, he tender'd the Oath to him, and upon his refusing it, he besieg'd him in the Castle of *Steeka*. *Christian* of *Denmark* took some Ships with Ammunition belonging to the Regent, but could not raise the Siege; so that the Archbishop was forc'd both to surrender the Castle and his Office, for which the Pope excommunicated the Regent, fined the *Swedes* in 100000 Ducats, and order'd it to be levied by *Christian*, who fell into *Sweden* with a great Army. The Regent met and gave him Battle; but being killed, his Army was soon dispersed. Upon this the Archbishop assum'd his former Dignity, and being assisted by two other Bishops, declared *Christian* King of *Sweden*, who at first treated the *Swedes* with a great deal of Humanity; but afterwards, on Pretence of the Pope's Fine and Excommunication, he committed all manner of Cruelties and Barbarities; and the Archbishop, in the Pope's Name, demanded a Million of Pounds for Reparation of Damage done to the Church at *Upsal*, and his Castle of *Steeka*, and on Pretence that Gunpowder was convey'd under the King's Palace to blow him up. The Regent's Widow, his Mother-in-Law, and 15 others, besides the Senate and Common-Council of *Stockholm*, were accused for it, and all condemned as Hereticks; upon which 94 of them were beheaded at *Stockholm*, and their Servants hang'd. The Regent's Body was also hung up among the rest, and their Quarters affix'd in many Places of the Country. His Widow and his Mother-in-Law gave all they had for their Lives, but were committed to close Prison. In *Finland*, *Hemming Gudde*, notwithstanding his former Services to *Christian*, was executed, with 10 more: The Abbot of *Nydala*, and 10 Monks, were drown'd: Two Gentlemen's Sons, one of 9, the other of 7 Years, were beheaded at *Jenscoping*; and after *Christian* had murder'd 600 of his *Swedish* Subjects, he returned well-satisfied to *Denmark*.

At this Time *Gustavus Erickson*, whose Father had been beheaded, and his Mother thrown into Prison by the Tyrant, having escaped from Prison, he shelter'd himself among the *Dalekarlians*, who chose him for their Captain; and the States of the Kingdom following their Example, declar'd him Regent: But the Clergy, ever since the Union, continued firm to the Enemies and Murderers of their Countrymen; and *Christian*, to be reveng'd on *Gustavus* the Regent, kill'd his Mother and Sister in Prison at *Copenhagen*, order'd no Quarter to be given to any *Swedish* Nobleman, and committed great Barbarities wherever he came. The Regent made Reprisals upon the *Danes*, and being assisted by the *Lubeckers*, he besieg'd *Stockholm*, and during the Siege receiv'd the glad News, That the *Futlanders* had renounc'd their Allegiance to *Christian*. This so encouraged the Regent's Party, that they drove the *Danes* out of the whole Kingdom, retook *Osland* and *Borkholm*, and the Castle of *Calmar*, and the Regent was made King; upon which *Stockholm* surrendred to the *Lubeckers*; and *Christian* and his Queen retiring to the *Netherlands*, the *Futlanders* made *Frederick I.* King *Christian's* Uncle, King, and were very desirous to bring the *Swedes* to own him; but they having already smarted sufficiently by the Union, and the *Danish* Kings, who did them more Mischief under the Title of Kings of *Sweden*, than they could have done if the Kingdoms had been separated, and at War as formerly, they would not agree to it. The Reformation began at this Time; of which more in its Place.

Soren Norby still adher'd to *Christian's* Party, and had *Gothland* in Possession, which enabled him to annoy the *Swedes* in their Trade: Upon this *Gustavus* sent *Bernard Van Melen* to reduce the Island, and *Norby* put himself under the Protection of *Denmark*, which occasion'd some Differences betwixt those two Northern Kings.

Gustavus having surmounted those Difficulties, was Crown'd at *Upsal* in 1528; and the rebellious *Dalekarlians*, who were discontented at the Change of Religion, were also obliged to come hither. They were headed by *Thure Johanson*, the Rix-Marshal, who made them revolt, endeavour'd to do the same by the *West* and *East Goths*, and per-

persuaded them to elect *Magnus Brynjeson*, a popular Man among them, for King: But King *Gustavus* appeas'd those Comotions, by granting an Indemnity to most of them, and beheading only some of their Leaders. The King having dispos'd of some super-numerary Bells, the *Dalcarlians* began a new Rebellion, and design'd to depose him; but he terrified them so by his Forces, that they crav'd Pardon, and promis'd Obedience for the future. The King married *Katherine*, Daughter to *Magnus Duke of Saxe-Lauenburg*. *Christian* after this landed in Norway with a considerable Force, and the King sent some Troops to the Frontiers, under the Command of *Lars Sigefson*, Rix Marshal, who being join'd by the *Danes*, forc'd *Christian* to raise the Siege of *Babus*, and obliged him to surrender himself to the *Danes*. He was thereupon committed to Prison by *Frederick King of Denmark*, where he died 27 Years after, being justly called the Nero of the North. The *Lubeckers* began another War against Sweden; because *Gustavus* would not grant them the Monopoly of Trade on his Coasts, demanded the Money due to them for assisting him with their Ships, and join'd the remainder of *Christian's* Party. They made *John Earl of Hoya*, *Gustavus's* Brother-in-Law, their Head, design'd the Conquest of the Northern Kingdoms, and brought over some of the Citizens of *Stockholm* to their Party, by promising it should be a Hans-Town. After *Frederick* the King of *Denmark's* Death, they persuaded the Senate of *Copenhagen* to enter into their League, and their Party was numerous, till the *Danes* chose *Christian III.* for King; and being assisted with Money and Forces by *Gustavus*, they defeated the *Lubeckers* near *Elfborg*; and in a Sea-fight, destroyed their Fleet, and carried many of their Ships to *Denmark*. *Gustavus* married for second Wife *Margaret*, the Daughter of *Abraham Erickson*, Governor of *West-Gothland*; and apprehending the Designs of *Charles V.* the Emperor, he sent into *France*, and made an Alliance with that Crown.

In 1544, a Diet of the States met at *Westeras*, where, in Gratitude to him for being the Instrument of delivering them from the Danish Slavery, and freeing them from an Union with that Nation, declared the Succession Hereditary in his Family, and settled it upon his Son *Erick Gustavusson*, then

11 Years of Age. By his Will, he gave to *John*, his second Son, the Dukedom of *Finland*; to his third Son, *Magnus*, the Dukedom of *East-Gothland*; and to *Charles*, the youngest, the Dukedom of *Sudermania*, *Nerick* and *Wermeland*, to be held in Fief of the Crown of Sweden. *Erick*, the eldest, was persuaded by his Tutor *Dionisius Burræus*, a Frenchman, to make his Addresses to Queen *Elizabeth* of England. This *Dionisius*, and after him *Erick's* Brother *John*, and *Steen Sture*, went to England to propose the Match, who mistaking Compliments for Realities, wrote that it was advisable for *Erick* himself to come over and complete the Marriage; but when he was ready to go, his Father died at *Stockholm*, in 1559; so that he durst not leave his Dominions with his Brethren.

Erick was 27 Years of Age when he succeeded: He obliged his Brothers to subscribe new Articles at *Arboga*, and first introduc'd Hereditary Titles of Honour, as Earls, Barons, &c. alledging, That in an Hereditary Kingdom, it was reasonable there should be Hereditary Dignities among the Nobility. Some of the *Lieflanders* had formerly put themselves under the Protection of *Denmark*, and others of them under *Poland*. Those of *Revel* and *Esthonia*, being nearest to Sweden, sought Protection from *Erick*, which he granted, together with all their former Privileges. When the *Poles* heard that the Swedes had garison'd *Revel*, they sent an Ambassador to demand it; but the Swedes answer'd, That they had as good Right to it as the *Poles*: Upon which the latter besieg'd the Town; but the Garison fallying upon them, oblig'd 'em to raise the Siege. When *Erick* design'd to come to England about his Match with Qu. *Elizabeth*, he was blown back by a great Storm: He was inconstant in his Temper, and superstitiously fond of Judiciary Astrology. He laid aside his Design of courting Qu. *Elizabeth*, and made his Addresses to *Mary* Qu. of *Scotland*, and the Princess of *Lorrain*, at one and the same Time, and not long after to *Catherine*, Daughter to the Landgrave of *Hesse*; but succeeded in neither. His Brother *John* married *Catherine*, Daughter of *Sigismund*, King of *Poland*, without *Erick's* Consent, for which he besieg'd him in the Castle of *Arboga*, took him, and sentenc'd him to Death, which was chang'd to perpetual Imprisonment.

ment. To revenge this Affront, the Poles instigated the *Lubeckers* and *Danes* to make War upon *Sweden*, and the *Danes* affronted the *Swedish* Ambassador. The *Suedes* routed the *Danes* and *Lubeckers* at Sea, but lost their Admiral, which carried 200 Brass Guns. They had not the like Success by Land, except in *Livonia*, where their Affairs went well. King *Erick* had the Misfortune to fall into Broils with his Subjects, on the Account of his bad Administration and Amours: He fell deeply in Love with one *Katherine*, a Peasant's Daughter, who manag'd him as she pleas'd. In her younger Days, she sold Nuts on the Streets of *Stockholm*: But notwithstanding this, and the Remonstrances of his best Subjects, he debas'd himself so far as to marry her. In Matters of Government, he was rul'd by two Favourites; one was *Dionisius Burræus*, his Tutor, who enrag'd him to that degree against the Family of the *Stures*, that *Erick* suborn'd Knights of the Post against the Chief of them; upon which they were put in Prison, and there murder'd by the King's Command, who with his own Hand stabb'd *Nils Sture*. He afterwards laid the Blame of this Cruelty on *Burræus*, and, to pacify the People, caus'd him to be slain by his Guards; and fearing that his Subjects would resent those impious Practices, he releas'd his Brother *John*, and declar'd, that *Joran Pearson*, his other Favourite, advis'd him to these illegal Methods, and *Joran* was committed to Prison; but upon his Success against the *Danes*, he relaps'd to his former Arbitrary Ways, justified all his Acts of Injustice, and would have taken away the Lands left his Brothers by his Father's Will; but they refused to accept the Equivalent he offer'd them in *Livonia*. Upon this, he design'd to have had his Brother *John* murder'd, at the Nuptials betwixt himself and his Mistress *Katherine*: But his Brother being appriz'd of his Plot, did not come to the Marriage, but associat'd with some Noblemen, who were displeas'd with *Erick's* Government, and resolv'd to dethrone him. By the Mediation of the King of *Poland*, they procur'd a Truce with *Denmark*; and having strengthened their Party by some *German* Forces in *Erick's* Service, who revolted to them, they seiz'd his Castles. In that of

Wadstena, they found a great Treasure; then they besieg'd *Stockholm*, with *Erick* in it, and the Senate open'd the Gates to them whilst he was at Church; but he escap'd into the Castle, which the Duke's Forces besieg'd, and press'd it so hard, that he was oblig'd to surrender, and resign the Crown. Then the Estates assembled at *Stockholm*, renounc'd their Allegiance, made him close Prisoner, and committed him to the Custody of the Friends of the murder'd Lords, who us'd him barbarously.

In 1566, *John*, his Brother, was proclaim'd King of *Sweden*, who in the first Place did Justice on some of the bad Counsellors of the former Reign, and sent an Ambassador to *Denmark* to get the Truce prolong'd, or to make a Peace, which they accepted on disadvantageous Terms, for which the whole Transaction was declared void at the next Diet. *John*, to please his Brother *Charles*, to whom he had promis'd a Share in the Government, put him in Possession of *Sudermania*, *Naricke* and *Wermland*, which his Father had left him. Then he was Crown'd at *Upsal*. He sent Ambassadors to *Muscovy* to prolong the Truce; but the *Muscovites* put them in Prison, and made *Magnus*, Duke of *Holstein*, King of *Livonia*, on Condition that he should hold it of the Czar. The *Lieflanders*, loving to be under the Government of a *German* Prince, consented to the Proposal; and to bring this Project to bear, the *Muscovites* advanced with a great Army; so that the King was obliged to make Peace with the *Danes* on their own Terms. While the *Muscovites* were in *Livonia*, the *Tartars* invaded *Muscovy*, took and burnt the City of *Moscow*, and cut above 30000 of the Inhabitants in pieces. After the *Muscovites* had made a Truce with the *Poles* and *Tartars*, they fell again into *Livonia* with 80000 Men, and committed inhumane Barbarities: But a *Swedish* Party of 600 Horse and 1000 Foot routed 16000 *Muscovites*, and killed 7000 of them on the Spot: Upon which the Czar offer'd a Treaty to be set on foot at *Newgarten*; but King *John* disliking the Place, the War began again, in which the *Suedes* had but indifferent Success, and were repuls'd before *Wesenburg* and *Telsburg*. The *Russians* also surpris'd the *Suedes* and *Germans* when drunk in their Camp, and killed a great many

many of them. The *Swedes* however made several Inroads into the Territories of the *Muscovites*, which brought on a Truce for two Years. It was thought this War might have been more successful, had not *John* been engaged in a Design of changing the Established Religion in *Sweden* for Popery. For, tho' educated a Protestant, he was misled by his Wife, and resolved to restore Popery by degrees. To effect this, he designed to follow the Scheme of *Cassander*, who was set on work by the Emperors *Ferdinand I.* and *Maximilian II.* to compose the Differences about Religion in *Germany*. *John* invited some Jesuits, who in Lay-Habits were to assist his Secretary Mr. *Peter Frensius*, the chief Manager of this Affair; and at the Convocation of the Clergy, proposed a new Liturgy, with a great many Popish Ceremonies, to be used in the Administration of the Sacraments, and Consecration of Bishops and Priests. He likewise introduced the Mass. Some of his new consecrated Bishops complied with all this; so that Popery was openly professed all over the Kingdom, except in the Provinces belonging to his Brother *Charles*, whom he endeavoured to persuade to approve of this Change, but in vain. At last the King got the Liturgy approved by a General Synod of the Clergy, and also by the Estates of the Kingdom, who made it Treason to oppose it. After this the King banish'd and imprison'd all who would not conform: But notwithstanding those severe Methods, many of the Clergy preach'd against the Wickedness and Impiety of those Principles and Practices, and sent their Remonstrances to the *German Universities* of *Wittenberg*, *Leipsick*, *Helmstadt*, *Frankfort*, and others, who all approved of their Zeal for the *Augsburg* Confession, and condemn'd the Liturgy as dangerous to the Protestant Religion. King *John* at this Time sent and poison'd his Brother King *Erick* in Prison; and having gain'd this Point, he more openly own'd his Affection to Popery. The Invocation of Saints was publicly preach'd, and whoever oppos'd it were imprison'd. He sent afterwards an Ambassador to *Rome*, and the Pope sent a Nuncio to *Stockholm*; and King *John* sent a great many young Gentlemen abroad, to be educated by the Jesuits.

The *Russian War* in the mean time was carried on with various Success. The *Poles* and *Swedes* agreed, That whatever Towns either of them took from the *Muscovites*, should remain to those who took them. The *Swedes*, under the Command of *Pontus de la Gardie*, took from the *Muscovites* the strong Fortress of *Kekholm*, the Castle of *Padus*, *Wesenburg*, *Telsburg*, and *Narva*, where they killed 7000 of them. They also took *Juanogrod*, and other Places of Note; but the *Poles* growing jealous of those Advantages, the *Swedes* were obliged to make a Truce with the *Muscovites*, which continued 4 Years. The Misunderstanding betwixt King *John* and his Brother *Charles* increas'd, so that he summon'd him to appear before the Diet at *Wadstena*; but by the Mediation of some of the Senators, they were made Friends. The King did all he could to persuade the Clergy of his Brother's Territories to approve the Liturgy, but without Effect. King *John* died at *Stockholm* in 1592.

His Son Prince *Sigismund*, who before this was elected King of *Poland*, succeeded. In the *Interregnum*, Duke *Charles* took upon him the Administration, by Consent of the Senate, which was approved afterwards by *Sigismund*. *Charles* call'd together the *Swedish* and *Gothick* Clergy at *Upsal*, where the *Augsburg* Confession was confirmed, and the new Liturgy and other Popish Ceremonies abolished. The States approved of this, and of another Decree, forbidding any Appeal out of *Sweden*, and order'd that *Sigismund* should sign those Decrees before his Coronation; but *Sigismund* declar'd, That being an Hereditary Prince, he ought not to oblige himself to any thing before his Coronation. He came to *Sweden*, accompanied with the Pope's Nuncio, and demanded a Popish Church in every City; that the new Archbishop should be deposed; and that he might be Crown'd by the Nuncio. *Charles* and the States endeavour'd to persuade him from those unpopular Courses, but in vain: Upon which they enter'd into an Association for the Defence of the Protestant Religion, and muster'd their Troops near *Upsal*. *Sigismund* fearing the Consequences, pretended to repent of his former Conduct, sign'd the Proposals of the States, and was Crown'd.

by the Bishop of *Strengnes* in 1594. When the Coronation was over, he attempted by Force what he could not gain by Persuasion, and sent for Troops from *Poland*; but Duke *Charles* was provided to receive them. The King finding himself baulk'd, resolv'd to leave the Kingdom. When the States knew it, and that he was sail'd for *Dantzick*, with the Consent of *Charles* they took upon them the Administration, deposed the King's Governor at *Stockholm*, because a Papist, and forb'd Popery in *Sweden*. After this, a Peace was concluded with the *Muscovites*, and in a Diet at *Suderköping*, the States justified their Proceedings in a Letter to *Sigismund*, confirmed the *Augsburg* Confession, abolish'd Popery, and made Duke *Charles* Regent, but accountable to the Senate. *Sigismund* wrote to dissuade *Charles* from it, and also to the States, to whom he committed the Government in his Absence, and deprived *Charles* of his Regency: But another Diet was call'd at *Arvoga*, where *Charles* was again declared Regent. About this Time *Nicolas Flemming*, the King's General, killed a great many *Swedish* Boors, for which *Charles* made War upon him, possess'd himself first of *Gothland*, and then of the whole Kingdom, which oblig'd the Governors for the King to fly into *Poland*. King *Sigismund* perceiving his Affairs in *Sweden* requir'd his Presence, he resolv'd to go thither with 6000 Men, and the States resolv'd to meet him with an Army. The *West-Goths* and *Finlanders* declared for *Sigismund*: The *Finlanders* equipped some Ships for his Service; and while *Charles* sail'd with his Fleet to reduce them, the King landed at *Calmar*. All Overtures of Accommodation being rejected, the War began, wherein *Charles* was worsted at first, and his Men laying down their Arms, obtained Pardon; but afterwards at *Stangbroo* he surpris'd the King's Army, and killed 2000 of them on the Spot, with the Loss only of 40 of his own Men. The King after this Defeat promised to content his Subjects, but he fail'd to *Dantzick*; and the States convening again, once more constituted *Charles* Regent, renounc'd their Allegiance to the K. and offer'd the Crown to his Son *Uladislaus*, provided he would come to *Sweden*, and be bred a Protestant; but in case of failure, he and his Heirs

were to be excluded for ever from the Succession. *Charles* march'd against the *Finlanders*, whom he defeated, and made an Alliance with the *Muscovites*. In 1600, the States met at *Sincoping*, where some of the Lords who assist'd *Sigismund* to invade their Country were declared guilty of High-Treason, and executed; and *Sigismund* was declared to have forfeited his Right to the Crown, and his Son *Uladislaus* the like; because he did not appear within the limited Time. The Duke knowing that those of *Esthonia* and *Revel* were his Friends, he march'd thither with a great Army, where he was joyfully receiv'd; upon which the *Polish* Governors retir'd to *Poland*. At first he had good Success in *Livonia*, and took several Places; but the *Poles* rais'd the Siege of *Riga*, and retok *Kokenhausen*, and other Places near it. In 1604, *Charles* was declared King; and the Succession entail'd on his Heirs Male or Female: After which he was routed by the *Poles* in *Livonia*; but the confused State of *Sigismund's* Affairs hinder'd him from making his Advantage of it. *Charles* assist'd the *Muscovites* against the *Poles* with good Success; but the *Swedish* Affairs were not so prosperous in *Livonia*; and the *Danes* perceiving the *Swedes* so deeply engag'd in War, they thought it the best Time to attack them. By this means the *Swedes* were brought to an Extremity; but Prince *Gustavus Adolphus*, tho' under Age, retriev'd them by his extraordinary Conduct and Valour; for with 1500 Horse, he surpris'd the chief Magazine of the *Danes* at *Christianstadt*, and took from them the Isle of *Oeland*, and the Castle of *Borkholm*. Soon after his Father *Charles IX.* died in 1611, in the 61st Year of his Age.

The States considering they were embroil'd in War with the *Poles*, *Russians*, and *Danes*, thought it most advisable, that *Gustavus*, though not 18 Years of Age, should take upon him the Administration. The *Danes* had the Advantage by Sea, because *Gustavus's* Fleet was in a bad Condition, and took *Calmar*, *Rysbyfort*, and *Elfsburg*. At this Time *Gustavus* rais'd 2300 Men in *Scotland*, and hired 5 *Scotch* Ships, which did him great Service, for they took and plunder'd the City of *Dronheim*, and its Territory, and afterwards sail'd to *Sweden* by Way of *Finl.* The *Muscovites* were wil-

ling

ling to have given their Crown to *Charles Philip*; *Gustavus's* Brother, but it came to nothing, because *Gustavus*, designing that Crown for himself, delay'd sending his Brother; and the *Muscovites*, when they perceived this, elected *Michael Pheodorowitz*; yet *Charles* arriv'd in *Muscovy* at last: But *Michael's* Party was by this Time so strong, that *Charles's* Friends thought it not safe to declare for him. The *Swedes* however took many Places in *Muscovy*; till at last a Peace was concluded in 1617. by which the Town of *Kexholm*, and the Province of *Ingermania*, fell to Sweden. Thus the *Swedes* on that Side had a Barrier betwixt them and *Muscovy*, and the *Muscovites* were entirely separated from the *Baltick*.

This same Year *Gustavus* was crown'd at *Upsal*, and married *Eleonora*, Daughter to the Elector of *Brandenburg*. The Truce with *Poland* being expir'd, *Riga* surrender'd to the *Swedes*, after Six Weeks Siege; and *Sigismund* of *Poland* rejecting the Proposals of Peace, *Gustavus* enter'd *Livonia*, and defeated 3000 *Lithuanians*; so that the *Poles* lost all *Livonia*, except *Dunaburg*. He also routed the *Lithuanians* again in *Semigallia*: Yet *Sigismund* would not make Peace, being encourag'd by the Emperor's fair Promises. Upon this, *Gustavus* sail'd with 80 Ships and 26000 Land-Forces to *Pillaw*, where he was receiv'd by the Elector of *Brandenburg's* Orders; and landing his Men, took *Raunsberg* and *Frauenburg*, and most other Places of *Polish Prussia*. The *Poles* were forced to raise the Siege of *Marienburg*, with the Loss of 4000 Men; and also to raise that of *Dirschau*. But *Gustavus* designing to attack *Dantzick*, he was wounded in the Belly, which oblig'd him to delay the Siege. Soon after this he defeated *Konierzpoliski* near *Darssaw*; and some Days after he received another Wound in his Left Shoulder. A Treaty of Peace betwixt *Poland* and Sweden was almost concluded: But the Emperor promising to assist *Sigismund* with 24 Men of War and 12000 Men to continue the War, the Treaty was broke off, and the *Swedes* and *Danes* join'd in ruining the *Polish* Fleet; for none of them were willing they should encrease their Naval Strength in the *Baltick*. *Gustavus* took 3 *Dantzick* Ships, and sunk one, near that Town; but was repulsed before the Fort of *Dantzick*: To revenge

which, he threw himself into the Harbour, cut in Pieces 200 of the Enemy, and took 14 Pieces of Cannon. *Alexander Lesly*, a *Scotts* General, being detach'd by *Gustavus* with two Companies of Foot and a Troop of Dragoons, to take a View of the Enemy's Army; this small Detachment was surrounded by 17 Troops of *Polish* Cavalry, but broke through them twice, killed above 100 Horse, and carried off 4 Standards. This brought on a general Engagement of both Armies, in which the *Poles* lost 3000 Men, 4 Field-Pieces, and 14 Standards; but the Victory did also cost the *Swedes* much Blood. *Gustavus* block'd up the Harbour of *Dantzick* with 8 Ships; and the *Poles* encounter'd them with 10 Men of War, who kill'd the *Swedish* Admiral, took his Ship, and oblig'd the Vice-Admiral to blow up his; but the *Poles* also lost their Admiral and 400 Men. *Gustavus* after this detached 1000 Foot, who pass'd the *Weissel*, and surpriz'd *Nauenburg*, a *Polish* Magazine, where they took most of their Baggage, and 600000 Crowns in Money. The *Swedish* General *Wrangel* did also raise the Blockade of *Brodaintz*, where he killed 3000 *Poles*, took 1000 Men, 5 Pieces of Cannon, and 2000 Waggons with Provisions. This Defeat oblig'd the *Poles* to accept the *German* Auxiliary Troops, consisting of 5000 Foot and 2000 Horse, under the Command of General *Arnheim*, who having joined the *Poles*, offer'd *Gustavus* Battle, which he accepted, tho' he had only 5000 Horse and 8000 Foot. At first the *Swedish* Horse were repuls'd; but the King charging in Person, soon made the *Poles* retire; and as they design'd to pass the *Nogatx*, *Gustavus* posted Forces to dispute their Passage: Upon which the Battle was renewed; and *Gustavus* venturing too far, a *Pole* took hold of him by the Shoulder-Belt; but the King, by slipping it over his Head, got free of him. After this, another catch'd him by the Arm, and design'd to have carried him off; but *Erick Soop* shot the *Polander*, and rescu'd his Majesty. In the Action, which was near *Strum*, the *Swedes* took 7 Colours and 5 Standards. The *Poles* imputed those Losses to *Arnheim*, whom they suspected of a Correspondence with the Elector of *Brandenburg*; and being weary of their Foreign Auxiliaries, and afflicted with Famine and Plague, they con-

cluded a Truce with the *Swedes* for 6 Years; by which, *Gustavus* was to restore to *Poland*, *Brednitz*, *Wormdit*, *Melsack*, *Stum*, and *Dirschaw*, all in *Prussia*. *Marienbourg* was left to the Elector of *Brandenburg*; and *Gustavus* was to keep the Castle and Harbour of *Pillaw*, *Memel*, *Elbing*, and *Brounsburg*, besides all his Conquests in *Livonia*: So that this War concluded to his Honour and Advantage.

The Protestants in *Germany* being jealous of the Designs of the Papists, and sensible of the Oppressions of the Emperor, who aim'd at being absolute, during the War betwixt the *Poles* and *Swedes*, desir'd the Assistance of *Gustavus*; but he being then so entangled that he could nor disengage himself, *Christian IV.* of *Denmark* declared for the Protestants; but was defeated by the Imperialists, who afterwards made themselves Masters of *Lower Saxony*, and of many Places upon the *Baltick*. *Gustavus* fearing the Consequences, press'd the harder upon the *Poles*, to oblige them to a Peace. He represented also to the States of *Sweden* the Danger of the Neighbourhood of the Emperor's Forces, who had made themselves Masters of Part of *Denmark*: Upon which they unanimously agreed, That War with the Emperor was necessary, since he was the declar'd Enemy of *Sweden*, as appear'd by his interesting himself so much in the *Polish* Quarrel; and by his refusing the Title of King to *Gustavus*. In the Beginning of this War, Count *Wallenstein* laid Siege to *Stralsund*; and *Gustavus* offer'd 'em Assistance, and sent Ammunition to the Town. Upon this, the Citizens made an Alliance with him, and he sent an Army, which oblig'd *Wallenstein* to raise the Siege. The next Year he made War upon the Emperor; and, in the first place, sent General *Lesly* with some Troops, to drive the Imperialists out of the Isle of *Rugen*, which he effected. Then *Gustavus* embarked with 92 Companies of Foot and 16 of Horse. Some Regiments were rais'd for him in *Prussia* before-hand, which were join'd by several Regiments of *Finnlanders*, and commanded by *Gustavus Horn*. The King landed at *Stetin*, and oblig'd the Duke of *Pomerania* to make an Alliance with him. The Administrator of *Magdeburg*, who had been depos'd by the Emperor, declar'd for him, having before his Arrival recover'd

the Town and Territories of that Name. *Gustavus* with these Forces beat the Imperialists out of the furthestmost Parts of *Pomerania* and *New-Mark*; and the Success encourag'd the Duke of *Lunenbourg* and the Landgrave of *Hesse* to enter also into an Alliance with him.

In 1631. *Gustavus* concluded an Alliance with *France*, by which he was to have yearly from that Crown 400000 Crowns; and, notwithstanding the Winter Season, he took the Cities of *Lokenitz*, *Prentzlow*, *New-Brandenburg*, *Clempenow*, *Tremptow*; and *Loitz-Demmin* surrender'd to him, after a Siege of 3 Days; and *Colberg* did the like, after a Blockade of 5 Months; by which the Imperialists were drove quite out of *Lower Pomerania*. The Emperor finding his Generals not able to make head against *Gustavus*, gave the Command of the Army to Count *Tilly*, the experienc'd and successful *Bavarian* General. He fell upon *New-Brandenburg*, a Place of no Strength; in which, *Kniphausen* commanded with two Regiments of *Swedes*, storm'd it, after a brave Defence, and kill'd most of the Common Soldiers. *Gustavus* in the mean time march'd to *Frankfort* upon the *Oder*, commanded by the Earl of *Shaumberg*, took it by Storm, after a Siege of 3 Days, slew 1700 of the Enemy, and took 800. He afterwards sent some Troops to *Landsburg*, who oblig'd the Town to surrender.

About this Time the Protestant Princes met at *Leipsick*, to concert Measures about opposing the Emperor's Edict for the Restoration of the Church-Lands. *Gustavus* sent to them, exhorting them to Union among themselves, and to demand Assistance of Men and Money from them. But the Elector of *Saxony* hinder'd the Princes from entering into the propos'd Alliance, because he design'd to head them himself, though he had not Courage to make an open Breach with the Emperor; and he was also jealous of the *Swedish* Power, and thought it his Interest not to engage so far against the Emperor, as to leave no room for a Retreat when he found it needful; and for the same Reason he refused Protection to the City of *Magdeburg*. *Gustavus* perceiving the Protestant Princes to be mistrustful of him, thought it not fit to attempt the Relief of that City; especially since the Elector of

Saxony

Saxony refused either to join him, or to supply him with Provisions and Ammunition. By this Means *Tilly* took the City by Storm, sack'd it in a barbarous Manner, burnt it to the Ground, and cut off all the Inhabitants but 400. This Cruelty drove the Protestants to Despair; and *Gustavus* issued a Manifesto, declaring, That the Irresolution of the other Protestant Princes was the only Cause of those Calamities. He sent Part of his Forces to assist the Duke of *Mecklenburg*; and with the rest he march'd into *Mark*. With the Assistance of those *Swedish* Troops, the Dukes of *Mecklenburg* drove the Imperialists out of all their Territories, except *Donitz*, *Wismar*, and *Rostock*, which they block'd up. About this Time 6000 *English* and *Scots*, under the Command of the Marquis of *Hamilton*, arriv'd in *Pomerania*, to serve under *Gustavus*, for Relief of the *German* Protestants. The very Fame of his Arrival, and of the *Scots* Valour, says *Dr. Burnet* in his Memoirs of the House of *Hamilton*, struck a Terror into the Imperialists, made the Elector of *Saxony* agree with the *Swedes*, encouraged the Protestant Party, and oblig'd Count *Tilly* so to weaken his Army by reinforcing the Garrisons which lay in the Marquis's Way, that the Marquis's Arrival was confess'd through *Germany* to have been a great Occasion of *Gustavus*'s Victory at *Leipsick*; of which anon. The Marquis had an extraordinary Reception from the King of *Sweden*; who order'd him to guard the Passes upon the *Oder*, to secure a Retreat in case he should be beat. The Marquis after this reliev'd *Crossen*, and made the Imperialists retire, leaving Part of their Baggage and Cannon behind them. He also took *Guben*; and was order'd to reduce *Silesia*, but afterwards countermanded to the Siege of *Magdeburg*, where he offer'd to fight the Imperialists that came to relieve it; but the *Swedish* General declin'd it. The Marquis lost many of his Men by Plague and Famine; and in short was very ill used by the King of *Sweden*, who did not agree with his Master King *Charles* I. though he had a very high Esteem of the Marquis: So that his Army dwindled at last to two Regiments; and the Marquis return'd home a little before *Gustavus* was killed at the Battle of *Lutzen*, in order to have renewed a Treaty betwixt King *Charles* and *Gustavus*,

and to have remov'd the Misunderstanding betwixt them. But to return to *Gustavus*, he surpris'd *Tilly*'s Guards near *Wolmerstadt*, and cut off 3 Regiments; but *Tilly* march'd on with 40000 Men to *Leipsick*, and took it. This prompted the Elector of *Saxony* to declare for *Gustavus*, who would not join his Army except he deliver'd into his Hands the City of *Wittenberg*, to secure his Retreat, send his eldest Son into the *Swedish* Army, advance 3 Months Pay to his Troops; and deliver up those who counsell'd him to side with his Enemies: All which the Elector agreed to. Upon this, *Gustavus* pass'd the *Elb* near *Wittenberg*, with 13000 Foot and 9000 Horse, and joined the Elector near *Dieben*: And a Council of War being call'd, the Elector declared his Inclination for fighting. *Gustavus* thought it also adviseable to fight *Tilly* before he was joined by *Alringer* and *Tieffenbach*; the King being to command the Right, and the Elector the Left. *Tilly* hearing of this, fortified himself in his Camp; but *Pappenheim*, and others of the Imperial Generals, would fight; and talk'd contemptibly of the new-levied *Saxons*, and of the fatigued *Swedes*. The Armies being drawn up, *Tilly* had the rising Ground, and the Wind; but *Gustavus* putting some Squadrons of Foot among his Horse, and wheeling about, regain'd the Wind, and charging the Imperialists, forced them to open their Left Wing, when *Bannier* fell in, and put them into Confusion. *Gustavus* order'd his Men, when they attack'd the *German* Cuirassiers, to run their Swords into their Horses, which they did; but the *Saxon* Infantry, and some of their Militia-Horse, fled; which *Gustavus* perceiving, he fell upon the *German* Horse that pursued them, oblig'd them to give over the Chace, and gave the *Saxons* Time to rally. The Imperial Foot continued firm till *Gustavus* charg'd their Flank with his Right, and took their Cannon: So that they were entirely routed, 7600 kill'd on the Spot, and 5000 taken, who list'd themselves in *Gustavus*'s Service. *Tilly* was in Danger of being killed; but was rescued by the Duke of *Saxe-Lauenburg*. The *Swedes* took above 100 Standards and Colours; but lost 2000 Men, most of them Horse; and the *Saxons* had 3000 killed. After this, they retok *Leipsick*; and *Gustavus* at *Mersburg* cut off above 1000 Imperialists,

perialists, and took 500. He did not think fit to pursue *Tilly's* Army further; but agreed, That the Elector should march into the Emperor's Hereditary Countries; and that he himself should march towards *Franconia*, where he took *Königsbosen*, *Swinfurt*, and the Castle of *Wartzburg*. He was afterwards join'd by 12000 Men, under the Duke of *Holface*; and *Tilly* was also reinforced by the Imperialists: But the *Swedes* fell on his Rear, and cut off 4 Regiments. The Marquis of *Ansbach* made also an Alliance with the King: So he marched towards the *Rhine*, surpris'd *Hanaw*, and *Frankfort* on the *Mayne*; and being possessed of all the *Ringau*, he marched into the *Palatinats*, of which the *Spaniards* were then Masters; and driving them out, he entred the *Bergstrate*, took *Gersheim*, pass'd the *Rhine* near *Stockstadt*, defeated the *Spaniards* that disputed his Passage at *Oppenheim*, where he killed 5000 of them, and made himself Master of many Places. At this Time the Coast of the *Baltick* was cleared of all the Imperialists, by the Surrender of *Rostock* and *Wismar*. The States of the Circle of *Lower Saxony* agreed to levy 6000 Foot and 500 Horse for their own Defence against the Imperialists; and the Elector's Forces under General *Arnheim* took *Prague*: But this General being a secret Enemy to *Gustavus*, and corresponding with the Imperial Generals, he would march no further into the Hereditary Countries, otherwise he might have subdued all *Moravia* and *Austria*. The Emperor finding that *Tilly* was not able to cope with *Gustavus*, he gave the Command of his Army to Count *Wallenstein*, an old and experienc'd Soldier, and so rich, that he was able at his own Charge to raise an Army, and soon levied 40000 Men. In the Winter *Gustavus's* Forces took many Places on the *Moselle*, and defeated the *Spaniards*. In the Spring he marched into *Franconia*, and possessed himself of all the Places on the *Danube* as far as *Ulm*. Then he marched to the River *Leck*, where *Tilly* being intrenched on the other Side, was wounded by a Cannon Bullet, of which he died soon after. This did so much affright his Army, that the *Swedes* attacked and killed 1000 of them, and marched into the Circle of *Bavaria*, where they took *Ruin*, *Newburg* on the *Danube*, and *Augsburg*; but their Designs on *Ingolstadt* and *Ratisbon* mis-

carried. Before the first, the Marquis of *Baden* was killed by the King's Side, who had also his Horse shot under him. But *Gustavus* laid *Bavaria* under Contribution, and their Capital, *Munich*, surrender'd to him, where he found 140 Cannon, and in one of them 30000 Ducats. He would not suffer the Elector's noble Palace to be plundered. The *Swedes* routed 10000 *Bavarians*, who designed to surprize them: But the *Bavarians* afterwards took *Nortgau*, and broke the Articles with the Citizens. After this the *Swedes* made themselves Masters of most of the Places in *Upper Suabia*. *Wallenstein* would not then assist the Elector of *Bavaria*, but marched into *Bohemia*; from whence, by *Arnheim's* Treachery, he soon drove the *Saxons*. Then he directed his Course to *Bavaria*, where the Elector joined him. *Gustavus* encamped near *Nuremberg*; and the Imperialists cut off many of his Convoys: But he was reinforced from several Places by 15000 Foot and 10000 Horse. He attacked *Wallenstein* in his Camp; but was repulsed with the Loss of 2000 Men. In the mean time *Pappenheim* defeated the *Hessians*, forced the Duke of *Lunenburg* to raise the Siege of *Callenberg*, and obliged General *Baudist* to rise from before *Paderbon* and *Hexter*, relieved *Wolfenbittel*, took *Hildersheim*, and was marching to join *Wallenstein*. On the other Hand, the *Saxons* entered *Silesia* with 16000 Men, and might have possessed all the Country, had it not been for the Treachery of *Arnheim*, who was allowed by the Elector of *Saxony* to correspond with *Wallenstein*. *Gustavus* designed to have sent Part of his Forces to *Franconia*, and with the main Body to have marched into *Bavaria*; but pressing Letters from the Elector of *Saxony* obliged him to march to his Assistance; for *Wallenstein* had entred *Misnia* with all his Forces: Upon which, *Gustavus* fearing lest the Elector might make a separate Peace with the Emperor, he marched to join him, and concluded it was best to fight *Wallenstein* before he was joined by *Pappenheim*; and led his Army to *Lutzen*, where a Battle followed, in which the *Swedish* Infantry fell with such Bravery upon the Imperial Foot, that they routed them, and took their Cannon; but a broad Ditch hinder'd the *Swedish* Cavalry to advance. The King put himself at the Head of the *Smaland* Regiment of Horse;

and

and advancing bravely before the rest, accompanied only by the Duke of *Saxe-Lauenburg* and two Grooms, he lost his Life there. 'Tis most probable, says *Puffendorf*, he was shot or stabb'd behind his Back by the said Duke, who was brib'd by the Imperialists. The *Swedes*, enraged by *Gustavus's* Death, fell upon the Enemy with greater Fury than before, and routed them on all sides; but the Death of their Heroick King made this Victory too dear a Purchase. This Great Prince was justly called the *Cæsar* of the North, and would probably have dethroned the Emperor, and abolished Popery in the Empire, had he lived. He discovered his Military Bravery very early in his Father's Time, and was also remarkable for his Piety. He had abundance of *Scots* in his Army. In 1623, two Regiments of that Nation were appointed to guard his Person and the King of *Bohemia* at *Munich*, tho he had both *Swedes* and *Dutch* at that Time in his Service. He ascribed the Victory at *Leipsick* to a *Scots* Brigade. They performed great Service for him at other Times, as the noble Defence of *Stralsund*, the taking of *Frankfort* on the *Oder*, *Mentz*, *Donawert*, *Augsburg*, *Ingolstadt*, &c. for he had no less than three *Scots* Generals, one Velt-Marshal, one Lieutenant-General, two Major-Generals, 23 Colonels, 20 of which came afterwards to be Major-Generals, 55 Lieutenant-Colonels, 14 Majors, with an unknown Number of Captains and Subalterns, besides 7 Regiments of *Scots* that lay in *Sweden*, *Livonia*, &c. and the *Dutch* in *Gustavus's* Service were glad many times to beat the *Scots* March when they design'd to frighten and alarm the Enemy. 'Tis observed, That Colonel Sir *John Hamilton* abandoned the Army, tho earnestly pressed by *Gustavus* to stay, only because the *Swedes* and the *Dutch* were ordered to storm the Enemy's Works before him at *Wurzburg*, after he himself and his Men had boldly hewn out the Way for them.

The News of *Gustavus's* Death was joyfully received by the Emperor, who thought the *Swedes* would be obliged to abandon all their former Conquests in *Germany*. The Protestants there were also divided into Factions, being only united by the great Authority of *Gustavus*. The *Swedes* pro-

claimed *Christina*, his Daughter, Queen, being then but 6 Years of Age, and committed the Care of the War in *Germany* to Chancellor *Oxenstiern*, who first sent some Regiments back to *Sweden* to secure the Peace there. He went to *Dresden*, to persuade the Elector of *Saxony* to enter sincerely into the Alliance, and to concert Measures with him about the ensuing Campaign. The Elector of *Brandenburg*, the Landgrave of *Hesse*, and an Ambassador from *France*, went thither also to the same purpose, but with no Success, for he answer'd them coldly, and in general Terms; so that the Confederates could not expect much Constancy or Assistance from him. *Oxenstiern* sent 14000 Men, under the Command of the Duke of *Lunenburg*, into *Lower Saxony* and *Westphalia*: Other Troops were ordered to *Pranconia*; and the rest were detached to *Silesia*. The Duke of *Lunenburg* took several Places in *Westphalia*, and defeated Count *Mansfeld*. *Gustavus Horn* was also successful in *Alsatia*; but the Treachery of *Arnheim*, who still discovered all the Confederates Secrets to *Wallenstein*, and acted in concert with him, stop'd his Victories there. The Duke of *Lunenburg* took *Hamelun*, and defeated 15000 Imperialists who came to raise the Siege, kill'd 2000, and took as many Prisoners.

At this Time 4 Circles of *Upper Germany* assembled at *Hailbron*, and committed the Management of the War to *Oxenstiern*, who reinstated the Children of *Frederick Count Palatine* in his Territories and Electoral Dignity, in order to engage *England*, *Holland*, and the whole *Palatine* Family, in his Interest. *Arnheim* marched out of the Way; to give an Opportunity to *Wallenstein* to fall upon the *Swedes* in *Silesia*, and drive them from thence; but in other Places the *Swedish* Affairs were in a tolerable Posture. *Gustavus Horn* did so harraßs the Duke de *Ferris* in his March from *Italy*, that of 30000 Men, he had only 12000 Men left; which broke his Heart. *Horn* also took *Ratisbon*, and ravaged *Bavaria*.

The Emperor was at this Time suspicious of the Designs of *Wallenstein*, who was grown too great for a Subject; for he had bargain'd with the *French* to join 'em, and made some Proposals to *Oxenstiern*, who would never trust him. The Emperor resolved

solved to take him off; but in this dangerous Juncture, had none he could trust with the Conduct of this Affair but 3 Scots Colonels, *Gordon, Lesly*, and *Butler*, who boldly seiz'd this perfidious General, and struck off his Head in the View of his Army. The King of *Hungary* was made General in his stead, who retook *Ratisbon*. After this happened the fatal Battle of *Nordlingen*, where 6000 Swedish Foot were killed, and a great many taken, with their General Count *Horn*, and 130 Colours. Upon this the Elector of *Saxony* made a separate Peace with the Emperor. The Elector of *Brandenburg* sided with the Saxons, and all *Upper Germany* was over-run by the *Imperialists*; and the Truce with *Poland* being expired, the *Swedes*, to procure a new one, were obliged to quit *Prussia* to the *Poles*. *France* also refused to engage further with the *Swedes*, unless *Philipsburg* was surrender'd to them, which was complied with. Then a War began betwixt the *Swedes* and the Elector of *Saxony*, who demanded the Restitution of the Archbishoprick of *Magdeburg*, and offer'd 2500000 *Misnia Livres* as an Equivalent; but *Oxenstiern* refused it. Upon which, the Saxons marched to the *Elb* to give the *Swedes* Battle: *Banier* defeated their advanced Guards at *Altenburg*; but 7000 of them having passed the *Elb* near *Domitz*, General *Ruthven*, a Scots-man, was detached with most of the Swedish Horse, and 1000 Foot, to secure that City. The Swedish Horse fell upon the Saxons, cut most of them off, and took 2500, whom they forced to serve in the Swedish Army. Most of the Allies, who prefer'd their private Interest to the Common Cause, had now deserted the *Swedes*, who, tho' they were less numerous than formerly, acted more unanimously, and resolv'd that *Wrangel* should command a Detachment on the *Oder*; That *Lesly* should act in *Westphalia* upon the *Weser*; and that *Banier* should command the Body of the Army upon the *Elb*, where he routed 12 Saxon Regiments. *Kniphausen* also routed a Body of *Imperialists*, and killed 1000 on the Spot, but lost his Life in this Engagement; upon which his Forces were obliged to retire; but General *Lesly* recruited them, and gathering up the dispers'd Regiments, made himself Master of *Minden*; the Garrison of which was subject

to the Duke of *Lunenbourg*, who had declared against the *Swedes*: And *Lesly* having joined the Swedish Troops who had been in the Service of that Prince to his own, he brought Affairs in *Westphalia* to a good Posture, and the Landgrave of *Hesse* join'd him to relieve the City of *Hanaw*, blocked up by *Lamboy*, which they did, and obliged *Lamboy* to retire with much Loss. After this, *Lesly* retired towards the *Weser*: For the Swedish Affairs in *Saxony* being in an ill Posture, *Banier* ordered *Lesly* to join him; and *Wrangel* having also brought him Recruits from *Pomerania*, *Banier* gave the Saxon Battle near *Perleburg*, where he attacked them in their fortified Camp, and killed 5000 in the Field of Battle, besides those slain in the Pursuit. He also defeated 8 Saxon Regiments near *Edenbourg*, and 2000 of their Men near *Pegau*. The next Year, being 1639, he drove the Imperial General *Gallas* into the Hereditary Countries. *Bernard* Duke of *Saxe-Weimar* had the same Success on the *Rhine*, where he twice routed the *Imperialists*, and afterwards killed 9000 of them, when they came to raise the Siege of *Brisack*. He likewise defeated the Duke of *Lorraine*, and killed 3500 of his Men; so that the Place was obliged to surrender. After this, the *Swedes* resolv'd to make the Emperor's Hereditary Countries the Seat of the War; but the Death of Duke *Bernard*, who was poison'd by the *French*, because he refused to surrender *Brisack* into their Hands, hinder'd it, and his Army was brib'd to submit to a *French* General. In 1641, *Banier* had well near surpris'd *Ratisbon*, where the Emperor and the Estates of the Empire were assembled; but a sudden Thaw hinder'd it. He design'd to carry the War into *Moravia*, *Silesia*, and *Bohemia*; but Duke *Bernard's* Forces, then under the Command of a *French* General, left him, and the *Imperialists* so closely beset him, that he had no Way to retreat but thro' the Forrest of *Bohemia*, which he did with great Expedition, and saved the Swedish Army, but died soon after, on May 10, 1642. After his Death, the *Swedes*, under the Command of *Wrangel* and *Coningsmark*, beat the *Imperialists* twice near *Wolfenbuttle*. *Leonard Torstenson* succeeded *Banier* in the Command of the Army, and march'd to *Silesia*, where he took *Glogaw* and other Places.

ces. He also defeated the Imperialists that came to relieve *Swinitz*, killed 3000 of their Horse, and their General the Duke of *Saxe-Lauenburg*: But not thinking fit to march into *Bohemia*, because the *Imperialists* were superior there in Number, he besieged *Leipsick*. The *Imperialists*, under *Piccolomini*, came to its Relief, which occasioned a Battle, wherein the *Swedes* killed 5000, and took 4500, with the Loss of 2000 of their own Men. After this, *Leipsick* surrender'd to *Torsten*, but *Piccolomini* obliged him to raise the Siege of *Friburg*; and the *Weimarian* Army, under the Command of the French General *Gustrian*, was routed by the *Barbarians*. 'Twas observ'd the French carried on a separate Interest from the *Swedes*, and were unwilling that they should be so powerful in *Germany* as to be able to carry on the War without their Help, and therefore endeavour'd to ballance the War in the Empire. In 1644, *Torsten* had private Orders to march into *Holstein*, where the *Danes* had done the *Swedes* a great many Injuries. Accordingly he surpris'd them, took a great many Places from them, beat their Troops in *Jutland* and *Sebonen*, ruin'd their Fleet, and made himself Master of the Bishoprick of *Bremen*, and the Isle of *Bornholm*. This obliged the *Danes* to agree to a disadvantageous Peace at *Bromesbroo*, by the Mediation of *France* and *Holland*; by which the King of *Denmark* gave up to *Sweden* for ever *Jemtland*, and *Harndal*, which borders on *Jemtland*, and was Part of the Government of *Drontheim*, with the Isle of *Gothland* and *Osel*, and gave the Province of *Bleking* for 26 Years as a Security. *Sweden* might have expected better Terms, had there not been a *Dutch* Fleet in the Sound of 48 Men of War, of whose Friendship they were not certain. *Torsten* made a Truce with the Elector of *Saxony*, march'd into *Bohemia*, and at *Jencowitz* killed and took 8000 *Imperialists*, with the Loss of 2000 of his own Men. After this he march'd into *Moravia* and *Austria*, took many Places on the *Danube*, and join'd *Ragotzki's* Army consisting of 25000 Men, but undisciplin'd, who ravag'd the Country. But *Ragotzki* afterwards made Peace with the Emperor, and march'd home. The French under the Command of *Turenne* were defeated by the *Barbarians*; and *Torsten*

march'd back to *Bohemia*, his Men being sick by eating too many green Grapes; and he himself being disabled by the Gout, he quitted the Command of the Army, which then consisted of 15000 Horse, and 8000 Foot, all Veterans. *Wrangel*, who succeeded him, made a Truce with the Elector of *Bavaria*; but the Emperor some Months after perswaded the Elector to break it. Upon which *Wrangel* belieg'd *Eger*, and after routing 3 Regiments of the Enemy that came to relieve it, it surrender'd in 1648. *Turenne* join'd *Wrangel*, and ravaged *Bavaria* and *Saxia*. They passed the *Danube* near *Lawingen*, overtook the Enemy's Rear-Guard, and killed 2000 of them, among whom was General *Haltzappel*. *Koningsmark* surpris'd the Suburbs of *Prague*, where the *Swedes* found an inestimable Booty in the Emperor's Palace, and Noblemen's Houses, and took many Prisoners of Note. He also took *Taber* by Storm. *Wittenburg*, another *Swedish* General, took Count *Bueheim*, and several Officers of Note, who fled from *Prague* with their Convoy, and a great many Lords, 350 ordinary Persons, and a considerable Booty. *Charles Gustavus*, Count *Palatine*, was by Queen *Christina* made Generalissimo of all her Forces. He learn'd the Art of War under *Torsten*, and brought with him 7000 Men from *Sweden*.

About this Time the Peace at *Munster* and *Osnabrug* was concluded, to the Honour of the *Swedes*, who had made *Germany* the Seat of War for 18 Years. Seven Years were spent in adjusting the Preliminaries: But the Emperor seeing that the *Swedes* were still victorious, and at that Time had an Army of 70000 Veterans, commanded by the bravest Generals of the Age: He granted the *Swedes* the Dutchies of *Bremen* and *Verden*, *Upper Pomerania*, and Part of the *Lower*, the Isle of *Rugen*, and the City of *Wismar*, which has a Vote in the Circles and Diets of the Empire, and 5000000 Crowns towards the Payment of their Army. It must be own'd, to the Honour of the *Swedes*, that they had frequently more advantageous Terms offer'd them, if they would have yielded to a separate Peace; which they refused, and would not lay down their Arms till they compos'd most of the Differences, which had till then divided

vided the Empire, reinstated many German Princes in their Territories, and settled both Peace and the Protestant Religion in Germany. If their Allies had not forsaken them at this Time, and that other States of Europe grew jealous of their Greatness, they might have laid under Contribution all the Countries from the *Baltick* to the Lake of *Constance*; for they had in Germany above 100 strong Places well garison'd. In 1654, Queen *Christina* surrender'd the Crown at *Upsal* to *Charles Gustavus*, her Nephew, on Condition that he should allow her an Yearly Pension, sufficient to support her Rank and Dignity. Then the Troops were disbanded at *Upsal*, to the great Grief of the People, because till then the like had not been seen or read of in their Histories. When the Queen had surrendered the Sovereignty to *Charles Gustavus*, she departed the Kingdom, publicly embrac'd Popery at *Innsbruck*, and passed most of her Time afterwards at *Rome*. *Charles* was Crown'd at *Upsal*, and obtain'd from the Diet, That the 4th Part of such Crown-Lands as had been given away since *Gustavus Adolphus's* Reign, should be reunited to the Crown. They likewise added something new, and made it unalienable. He settled his Military Affairs that were in Disorder since the Peace, and designed to make War upon *Poland*, because *Casimir*, their King, would not acknowledge his Title, and sent an Ambassador to Queen *Christina*, to persuade her to protest against the Resignation she had made, but in vain. The same Ambassador was also sent to the States of *Sweden* upon that Design, but with equal Success. Upon this *Charles* march'd into *Poland*, defeated those that oppos'd his Passage; and all the Forces of the Republick being dispers'd, the Waywodes and Castellans of *Poland* submitted, and swore Fealty to the Crown of *Sweden*. *Casimir*, after this, met him near *Cracow* with 10000 Men, who were defeated, 1000 of them slain, and all their Baggage taken: Upon which, *Cracow* surrendred; and *Casimir* being forced to fly into *Silesia*, did some Years after abdicate the Government; so that not only Great and Little *Poland*, but also the Provinces of *Masovia*, *Podolia*, *Red Russia*, and *Volhinia*, sent their Deputies to *Charles* at *Warsaw*, and, in the Name of their

Principals, submitted to him. Thus he conquer'd this Kingdom in 3 Months time, and *Dantzick* only held out against him. This amazing Progress alarmed most of the States of Europe, and afterwards the *Poles* revolted from him, because they fear'd a Change in Religion; and the Noblemen being jealous their Privileges should be abridged, in many Places they cut off the Swedish Garisons, especially in *Lithuania*. *Charles* having ended his Differences with the Elector of *Brandenburg* about *Prussia*, march'd back to *Warsaw*. In his Way he met *Czarniecki*, who commanded 12000 Men, whom he defeated, and took many Prisoners: And near *Warsaw* the Swedes also routed the *Poles* and *Tartars*, in a bloody Battle that lasted three Days, when many Thousands of 'em were kill'd and drown'd in a Morass. The Elector of *Brandenburg*, after this Victory, withdrew his Troops to *Prussia*, and was wavering. The Muscovites invaded *Carelia*, *Ingria*, and *Livonia*. In the latter, they took *Dunaburg* and *Kokenhusen*. They also laid Siege to *Riga*, but were forced to raise it. *Ragotzki*, Prince of *Transylvania*, with 30000 Men, joined King *Charles* near *Opotow* where they took the City of *Brassaw* in *Lithuania*. At this Time the *Danes* declared War against *Sweden*, being instigated by the Emperor, *Holland* and *Muscovy*. They demanded back all the Countries the Swedes had taken from them, and invaded the Dutchy of *Bremen*, which obliged King *Charles* to march directly to *Stetin*, and he advis'd *Ragotzki* to return to *Transylvania* in the mean time; but he refused it, and directing his Course to *Volhinia*, where he had neither Friends nor Places of Strength, the *Poles* and *Tartars* surpris'd him, and cut off most of his Army. After this the *Turks* declared War against him, and in a Battle with those Infidels he lost his Life. *Charles* recover'd in 14 Days time all the Places the *Danes* had taken in *Bremen*. He also invaded *Holstein*, where he carried all before him; and *Wrangel* took *Fredericks-Udde*; but the Swedes were worsted in *Holland*. At this Time the *Austrians* enter'd *Poland*, to drive the Swedes from thence, and took *Cracow*. The Polish General *Czarniecki* invaded *Pomerania*, and ravaged it cruelly. In 1658, *Charles* march'd over the Ice to the Island of *Fuinen*, or *Huen*, where he killed

killed 4400 Soldiers, and 1500 Boors, and from thence he went to other Islands, and at last into *Zeeland*, where he carried all before him. This distressed the King of *Denmark* to that degree, that he was obliged to clap up a Peace at *Roschild*, by which he resign'd to King *Charles* the Provinces of *Schonen*, *Holland*, and *Bleking*, with the Isles of *Huen*, *Falster*, *Bornholm*, and the Governments of *Babus* and *Drontheim* in *Norway*. *Charles* seeing this Peace with the *Danes* was not to be depended upon, and knowing his War with *Poland* was far enough from being ended, thought it most advisable to humble *Denmark* in the first place, as his weakest Enemy: Upon which he landed Forces in *Zeeland*, and besieged *Copenhagen*, while *Wrangel* reduc'd *Cronenburg*. The *Danes* in *Copenhagen* defended themselves bravely, till they were deliver'd by the Dutch Fleet, who after defeated the Swedish Navy, in which they lost their Admiral, and his Ship. They failed through the Fire of the Swedish Ships that lay before the Town, and reliev'd it; upon which the Siege was changed into a Blockade; and in the Island of *Huen*, the Swedish Infantry were cut off. At this Time *Charles* gave Orders to *Douglas*, one of his Generals, to make himself Master of *Mittaw*, and secure the Duke of *Cowland*'s Person, because he had broken the Neutrality; which *Douglas* performed, and brought the Duke Prisoner to *Riga*, from whence he was sent to *Ivanogorod*, where he continued till the End of the War. The King of *Sweden* was still Master of the Isles of *Langland*, *Huen*, *Falster*, and *Laland*; but the *English* and *Dutch* both declared against him, and threaten'd him if he would not make Peace with *Denmark*. After the Departure of the *English* Fleet, the Confederate *Dutch*, *Danes*, *Brandenburgers*, and *Poles*, transported their Troops into the Island of *Fuhnen*, or *Huen*, defeated the *Swedes* at *Nyborg*, and killed 4000 of their best Men. This Loss touched *Charles* in a sensible manner; and having assembled the States at *Gothenburg*, to consult about Affairs, he was taken with a Fever, and died in 1666, at a Time when he had 6 powerful Enemies combined against him.

Charles XI. was but 5 Years of Age when his Father died. The States were desirous of an honourable Peace, which was conclu-

ded at *Oliva* near *Dantzick*, with the Emperor, the Elector of *Brandenburg*, and the King of *Poland*, who resign'd his Pretensions to the Crown of *Sweden*, as the *Poles* did their Claim to *Livonia*. That same Month a Peace was concluded near *Copenhagen* with *Denmark*, upon the same Terms with that at *Roschild*; but that the *Danes* kept the Isle of *Bornholm*, and *Drontheim* in *Norway*. The *Swedes* however got *Bornholm*, in Consideration of an Equivalent in *Schonen*. The *Swedes* also concluded a Peace with the *Muscovites* about that Time; and in 1674, entred into the Triple Alliance with *England* and *Holland*, to preserve the *United Netherlands*. At length they broke this Alliance, and sided with *France* against the Elector of *Brandenburg*, to draw him from the Interests of the Empire; but the Elector routed the Swedish Army, and took all that the *Swedes* were possessed of in *Pomerania*. The *Lunenburgers* got the Dutchy of *Bremen* and *Verden* into their Possession, the King of *Denmark* took the City of *Wismar*, and also several considerable Places in *Schonen*; but the *Swedes* on the other side routed 5000 *Brandenburgers* in the Isle of *Usedom*; and *Koningsmark* defeated the Confederates in the Isle of *Rugen*, where he killed and took all their Men. The Swedish Fleet was about this Time shipwreck'd on the Isle of *Bornholm*, most of the Men were drown'd, and the rest stripp'd and imprison'd by the *Danes*, tho' they had Passports from the K. of *Denmark*. The *Danes* made an Inroad into *Schonen*, and took *Helsingburg* and *Christianstadt* by Storm; but the K. of *Sweden* marched against them, and entirely routed them. He also defeated them in another Battle at *Lunden*. Next Year the *Danes* were routed again at *Landskroon*, and *Christianstadt* surrender'd to *Charles*. By the Peace of *Nimeguen*, the *Swedes* were repossess'd of all the Countries they had in *Germany*, and all Places taken by the *Danes* were restor'd to them. The King of *Sweden* married *Ulrica Eleonora*, the King of *Denmark*'s Sister, in 1678.

After the Peace, he applied himself to repair the Damage his Dominions had sustain'd during the late War, to fortify his Garisons, which were in a bad Condition, and to re-establish his Authority in the Territories that were restor'd him at the Treaty

of *Nimeguen*. His Officers and chief Ministers about him, as Baron *Guildenshiern* and Baron *Flemming*, possessed him with an ill Opinion of the Faithfulness of the Senators. In 1680. the King called together the States, and proposed, That they should enquire into the great Losses during the last War, for they had lost above 40 Sail of good Ships, and above 100000 Men, and pass Sentence upon such as should be found guilty of Maladministration; so that the Odium of all this fell upon such as were in the Ministry during the King's Minority, and their Estates were confiscated to make Satisfaction. The States also voted, That the too great Power of the Senators contributed much to the former Miscarriages; and that they needed no such Mediators betwixt the King and them; therefore they absolv'd his Majesty from that Article of his Coronation-Oath, which obliged him to rule the Kingdom with the Advice of the Senators. They further declared, That the King might deny them their former Salaries, and only employ such of them as he pleased; and they were afterwards to be called the King's Senators, instead of the Senators of the Kingdom. To oblige the King yet more, they voted, That his Majesty, who had received his Crown only from God, was accountable to him alone for his Actions. They granted at the same time a very great Sum to the King, towards which every Servant was to pay the Tenth Part of their Wages, and each Farm Five Crowns, which was as much as the usual Rent of those Farms before that Time. Cities were to pay proportionably; and this was to last 4 Years. They established a new Court of Resumptions, to reunite all Crown-Lands formerly alienated, or sold at Under-Rates, and that the Proprietors should pay for the Loss the Crown had suffered from the Date of the Alienation. Thus those Lands were reunited, though greatly improved by the Owners. The same was done as to Noblemen's Possessions in *Livonia*. The Nobility were obliged to comply with all this, because many of them needed Court-Employments to support their Grandeur.

By those Methods the King got a vast Revenue; but it impoverished most Families in *Sweden*: For when the Crown ow'd Money to great Families, whose Lands

were to be reunited, they were left to state their Accounts in the Court of Liquidation; but what they owed the King was to be paid immediately.

At the Assembly of the Estates in 1683, a Sum was granted equal to the former, and they explained that Article of the Coronation Oath, whereby the King was obliged to Rule according to Law; and declared he was not thereby tied to the Laws then in Being, but might alter the same, and add what other Constitutions he thought fit. These and the like Concessions have made the King of *Sweden* as absolute as any in *Europe*. The Clergy, Burghers and Peasants, complied the more willingly with this Change, because they thought it would be the only Way to humble the Nobility, who were always Imperious and Tyrannical.

He resented the Affront put upon him by the *French*; in seizing the Dutchy of *Deux-Ponts*, and their entering into an Alliance with the Elector of *Brandenburg*, and therefore resolved to remain Neuter in the succeeding War. In 1696. he offer'd his Mediation to compose the Differences betwixt the contending Princes and States of *Europe*, which was accepted by the Confederates and *France* at the Treaty of *Ryswick*. He died April 17. 1697.

Upon the 16th of *November* following the States declared *Charles XII.* of Age, though but Fifteen Years old. In 1699. he sided with the Duke of *Holstein* against *Denmark*, with a Design to put a Stop to the late Alliance concluded betwixt *Muscovy*, *Poland*, and *Denmark*, against him. Upon this he ordered his Forces in *Pomerania* and *Bremen* to join those of *Lunenburgh*; and obliged the King of *Denmark* to rise from before *Tuenningen*. In 1700, the *English* and *Dutch* Fleet came into the *Sound*, declared against *Denmark*, joined the *Swedish* Fleet, and made a Descent on the Coasts of *Zeeland*. The King of *Sweden* landed 800 Foot; and a Storm having obliged the rest of the Transports to stand off to Sea for two Days, the *Danes* might easily have cut them all off; but at last the *Swedes* landed about 8000 more, who obliged the King of *Denmark* to put an End to those Differences, by the Treaty of *Truvendahl*; at which the Duke of *Holstein* obtained advantageous Conditions.

In the mean time, *Augustus* King of *Poland*, contrary to the Peace at *Oliva*, invaded *Livonia*, and besieged *Riga*; but afterwards quitted it. The Czar of *Muscovy* also invaded *Livonia*, without proclaiming War, and invested *Narva*. The Czar sent two Detachments, one of 5000, and another of 15000, to secure a Pass; but the King of *Sweden* routed those Detachments, and advanced directly to the Czar's Camp. The Dispute lasted 3 or 4 Hours, before the *Swedes* could enter the Enemy's Lines; many of the *Muscovites* were drowned by the breaking of a Bridge, and the rest laid down their Arms upon Quarter: So that about 30000 of them were killed and taken. The *Swedes* got all their Artillery and Baggage, with a considerable Sum of Money. This Victory encouraged the *Swedes* to attack the *Muscovites* in their fortified Camp, which the King enter'd Sword in Hand, and totally routed them, and about 30000 of them were said to be slain, with the Loss only of 3000 *Swedes*, who got all their Baggage, 70 Brass Cannon, 30 Mortars, and 164000 Rix-Dollars. The brave young Prince gain'd this remarkable Victory over his perfidious Enemies in the 17th Year of his Age; and thus *Narva* was relieved. After this he marched against the *Saxons*, made them abandon all their Conquests in *Livonia*, entered *Poland*, joined *Sapieha*, routed *Oginski*, drove King *Augustus* out of the Country, pursued him to *Saxony*, dethron'd him, and got *Stanislaus*, Palatin of *Posen*, elected in his room. The Particulars of this young Prince's War in *Poland* and *Muscovy* are of so late a Date, that 'tis needless further to insist upon them.

Of the AIR, SOIL, &c.

THE Air of *Sweden* is generally clear, dry, and cold, which contributes much to the Health and great Age of the Inhabitants, some of whom live 120, and others 130 Years; but ordinarily 'tis extream cold in Winter, which lasts 9 Months, and is immediately succeeded by the Summer; so that they have no Seasons like our Spring and Autumn.

Mr. *John Schefferus*, Professor of History and Antiquity in the University at *Upsal*,

writes, That the Frost pierces into the Earth two Swedish Ells; and what Moisture is found there, is white like Ice: That standing Water freezes 3 Ells deep, which kills the Fishes if the Ice be not broke; but where the Ice is thin, or the Bottom slimy, they die not so soon. When the Ice in great Lakes and Bays is broke either by the Force of the Water, or of the imprisoned Vapours, the Clefts reach the whole Length of such Lakes; and the Noise is as terrible as that of Peals of great Guns: The Air which comes in at those Clefts does for most part preserve the Fish in great Lakes. He observes, That a strong Brine made of Bay-Salt is never thoroughly frozen in those Parts: That they have Foxes and Hares, which about the Beginning of Winter are half white, and in the middle of it all white; and the Colour of the Squirrels is then of a mix'd white and grey, as we find it in *Philosoph. Transact. N. 19. P. 350*. The Frosts there come from the N. E. Winds, which blow from the Northerly Places of *Muscovy*, *Tartary*, and the Frozen Ocean near the Pole.

The Mathematicians of *Charles XI.* in their Travels through the Northerly Places of that Kingdom to *Torneo* in *Bothnia*, say, That though they delayed their setting out from *Upsal* till the 2d of May, O. S. they were detained in many Places by Snow and Mountains of Ice 20 Cubits high on both Sides of the Rivers; so that they had a Winter Journey in the End of May, and the Beginning of June.

The Heat of their Summer is almost as intolerable as the Cold of their Winter. It comes all of a sudden, and is so intense, that it sets Woods on fire, which spreads sometimes for many Leagues, and is scarce to be stop'd till it come at some Lake or very large Plain.

The Soil in the middle of the Country is indifferent fertile, and they have some fruitful Vallies; but the Mold is seldom above half a Foot deep; and where 'tis shallowest they have most Corn: And for this Reason the Ground is easily plough'd by one Ox. Their barren Land they enrich by Ashes of Trees, which they burn on the Place, and rake the Seed among the Ashes, which next Year, without further Pains, yields a plentiful Crop. This is an old Practice

Practice in this Country ; but the Danger of destroying all the Woods, has of late Years occasion'd some Laws to limit this Custom.

Were the Inhabitants industrious, they might have Corn enough of their own : but they are obliged to have much of it from *Livonia*, which is called the Granary of Sweden ; besides what they have from Parts of *Germany* near the *Baltick*. The poorer Sort in the Northern Places grind the Bark of Birch-Trees, which they mix with a little Corn, and make into Bread.

The Corn and other Fruits of the Earth ripen very soon here, as in other Northern Countries ; so that ordinarily they have but 6 Weeks between Seed-time and Harvest. The Reason seems to be, That the Oil and Sulphur which abound in their Soil, as appears by the Trees and Minerals produc'd there, being pent up all Winter by Frost and Snow, are all of a sudden actuated by the great Heat of the Sun, who scarce ever goes below their Horizon during those Weeks, which makes 'em amends for its short stay. Yet the Corn is liable to Danger from the Cold even in this Season ; for if there happen a Dew or a Frost while it ripens, it very much hurts the Grain, and sometimes destroys it, which is to be prevented no other way but by cutting it down immediately in that Case.

In Summer, the Fields are cover'd with Flowers, and they have Plenty of Currans, Strawberries, and Raspberries ; but Apricocks and other Wall-Fruit are very rare : Their Cherries are tolerably good ; but their Apples, Pears, and Plumbs, are scarce, and of no good Relish. They have abundance of Roots, which is a great Part of the Food of their Poor. In the Northerly Places, where the Ground is always cover'd with Snow and Ice, the People live by Hunting and Fishing.

Woods, Mountains, Heaths, Lakes, Mosses, and vast Forrests, cover a great Part of this Country. Oaks, Pines, Beech, Elder, Birch, and Fir, grow here in great Plenty ; and the Trees grow so close, that where they fall and rot, the Woods are scarce passable.

This Country abounds with Mines of Copper and Iron, and supplies most other Places with those Metals, because they are

better here than in other Countries. There are Silver Mines in *Salberg* in *Westmania*. *Finland* affords Pitch and Tar, and *Dahl* and *Wermeland* Masts, &c.

Of their BEASTS.

THE Cattle are of a small Size ; nor can the Breed be better'd by bringing in larger from other Places, for they soon degenerate, because in Summer the Grass is not very nourishing, and in Winter they are almost starv'd. Their Sheep bear a very coarse Wool. Their Horse, especially the *Finnish*, are small, but vigorous, strong, sure Footed, and swift.

Wild-Beasts are very plentiful, especially in the Northern Provinces, as Bears, Elks, Deer, and Hares, which are hunted for their Fleth ; but their Wolves, Foxes, Wild-Cats, and Ermins, for their Furs. They have no Rabbits, but what are brought in for Curiosity.

Of their FOWLS.

THEY have both Wild and Tame in great Plenty, and good of their kind, as *Orrus*, as big as a Hen ; *Kedlers*, as large as a Turkey. They have Partridges, and another Bird somewhat like them, called *Terpers*, Fieldfares, and Woodcocks. They have Plenty of small Birds, as Thrushes, Black-Birds ; and *Syden-Swans*, of the Size of a Fieldfare, but better Meat, and are supposed to come from *Lapland*. They have few Pigeons, because they are destroy'd by Hawks. They have many Eagles, Falcons, and other Birds of Prey.

The TRADE of Sweden,

IS in Copper, Iron, Steel, Pitch, Tar, Rosin, Masts, Planks, Oak, Deal-Boards, Wooden-Ware, and Furs, beside the Commodities exported from *Liesland*, which are valued at 700000 *l.* per Annum.

Tho' Sweden always had Materials of Trade, yet by the Idleness or Ignorance of the Inhabitants, Strangers had formerly all the Management of it. The Hans-Towns

on the *Baltick* engrossed all their Trade, till the *Dutch*, after their Revolt from *Spain*, got a Share of it. Before that Time, no Iron was made in *Sweden*, but the Oar was carried to *Dantzick*, and other Parts of *Prussia*, and there forged into Bars. Most of their Manufacturies are owing to some Mechanicks that were driven from the *Netherlands* by the Cruelty of the Duke of *Alva*. They erected Forges and other Conveniences for making of Iron Guns, Wire, and other Manufactures of Copper, Brass, &c. They know now how to take the Latens from the Copper, and make all sorts of Utensils of it.

In 1644, they obtained a Freedom from paying Customs to *Denmark*, when their Ships passed the *Sound*. In Time of War, the *English* used formerly to transport most of their Commodities; but in Peace, they transported them in their own Bottoms. The *Swedes* are not able to keep their Iron-Works a going without Credit from abroad. Hence it is, the *English* and other Foreigners pay them *per Advance* in Winter for the Iron they are to receive in Summer. If it were not for this, Foreigners could scarce live among them, for they envy the Thriving of Strangers, and treat them uncivilly. In 1687, an Act was made, That no Foreign Merchant should have Liberty of Trading in *Sweden* above two Months in a Year, except they would be Burghers; and now and then they put this in Execution. The third Part of the Goods and Estate of every Foreign Merchant that dies in *Sweden*, must be pay'd to the King, which hinders most of them from marrying and settling there; and sometimes the Government has demanded a 6th Part of the Estate Foreigners had got there, when they were going to leave that Country, and have arrested their Effects on that Account.

Their Trade of IMPORT.

From *Portugal* they import Salt, without great Quantities of which they cannot subsist. From *Scotland* they have store of Herrings, and had formerly Wool. From *France* they have strong Liquors, and *Pine-rice*, which supply their Vanity and Luxury, but occasion little or no Vent for their

own Commodities. From *England* they have Cloth, Stuffs, and other Woollen Manufacturies, that amounted sometimes to 50000 *l. per Annum*; Tobacco, *Newcastle* Coals, Pewter, Lead, Fruits, and Sugar, with other Commodities. Their Trade with *England* is very beneficial to them; for the *English* pay them but one Third, or at most one Half, in Goods, and the rest in Money. Of late they have set up Manufacturies of Cloth to supply their Army, and have clogg'd the Importation of coarse *English* Cloth with such excessive Duties, that it is almost equal to a Prohibition.

Of the MINES.

THE Silver Mine at *Salberg* is 145 Fathom deep. They have no Records so ancient as to give an Account of the first Discovery of this or the Copper-Mine there. The Oar seldom yields above 4 *per Cent*. The Yearly Revenue of it is about 20000 Crowns of fine Silver, of which the King has the Pre-emption, paying one Fourth less than the *Intrinsick* Value.

The Copper-Mine is 80 Fathom deep, and the Roof sometimes falls in. The Copper made here amounts Annually to 200000 *l.* the Fourth of which belongs to the King; and upon the Remainder, he has a Duty of 25 *per Cent*. when it is exported unwrought; so that the Proprietors have but small Profit.

Towards the Mountainous Parts, there are many Iron Mines and Forges, from whence they export Iron to the Value of 300000 *l. per Annum*. The great Woods and Forests supply those Forges with Charcoal, which is 6 times cheaper than in *England*; but not so good. Magnets are found in those Iron Mines; but the Mathematicians sent by *Charles XI.* to *Torneo*, say, The Loadstones they have from the Mines in *Lapland*; excel all they ever saw in attractive Force.

In *Nerick*, or *Nericia*, there is Plenty of Minerals of Vitriol, Allom, and Sulphur. *Westmania* abounds also with Mines.

Sir *Gilbert Talbot* says, There is a heavy Stone in *Sweden*, of a yellow Colour, intermix'd with Streaks of White, which makes it look as if 'twere compos'd of Gold and Silver.

Silver. It is found in firm Rocks, and runs in Veins, upon which they lay Wood, and set it on Fire. When the Stone is thus heated, they cast Water upon it to make it rend, and then dig it up, break it into smaller Pieces, and put it into an Iron Pot, the Mouth of which they put into another, and put both into an Oven, where the Stone being melted, runs into the lower Pot. The first running of this Stone is Sulphur. What remains of the Stone, is carried out, and exposed upon a high Hill to the Sun and Air for two Years, when it takes Fire of it self, and sends forth a thin blue Flame, scarce discernable in the Day-time. This being consum'd, there remains a blue Dust behind, which the Workmen put into great Tubs of Water, where it infuses 24 Hours, or longer; then they boil the Water in Kettles, as we do Salt-petre, and put it into cooling Tubs, where they place Cross-Sticks; upon which the Vitriol fastens like Sugar-Candy.

The Water that remains after the Extraction of the Vitriol, they mix with an 8th Part of Urine and the Lees of Wood-Alhes, which is again boil'd very strong, and being set to cool in Tubs, with Cross-Sticks in them, the Allom hangs upon 'em.

In the remaining Water after the Allom is extracted, there's a Sediment, which being separated from the Water, is put into an Oven, where Wood is burnt upon it till it become Red, from whence comes *Minium*, or Red-Lead. *Philosoph. Transact.* N. 21. P. 375.

Of the Inhabitants, their Dispositions, Manners, Customs, &c.

THAT Sweden was formerly very populous, is evident from the ancient Expeditions of the *Goths*, *Vandals*, *Normans*, and other People, who from *Scandinavia* over-ran most Countries of *Europe*, and erected Kingdoms in *France*, *Italy*, *Spain*, and other Places. The Polygamy then in use among those Pagans is commonly thought to have been one Cause why *Sweden*, *Norway* and *Denmark*, were thus over-stock'd with People.

The Nature of the Climate, which occasions a very healthful, dry and sharp Air, makes the Natives of a strong and vigorous

Constitution; which being confirmed by a hardy Education, coarse Fare, and indifferent Lodgings, qualifies them for all the Fatigues and Hardships of War. *Puffendorf* gives this Character of his Countrymen in general: That they are very grave and reserved, which if not qualified by Conversation with other Nations, often degenerates into Mistrustfulness. They over-value themselves, and despise others. They have Capacity sufficient to learn the Principles of Arts and Sciences, but commonly want Patience to attain to the Perfection of any; for many of them imagine themselves to be Masters, before they have got half way. They have but very little Inclination, and a less Esteem, for Mechanick Trades. They are but meanly qualified for such Manufactures as require Industry and Ingenuity; are observ'd to be invidious, and never love to see Strangers, nor one another, thrive. They are well vers'd in Dissimulation, have a great Inclination to make a Figure, and live beyond their Income, which ruins their Families.

Other Authors give this further Account of them; That the Peasants are very obedient and respectful to their Superiors; That most of them are very poor, and are taught by Necessity to make, after a rude Fashion, Shoes, Clothes, Instruments for Husbandry, and other Necessaries that they are not able to purchase: And to keep them to this Frugality, not above one Taylor or other Mechanick is allow'd to dwell in a Parish, tho' some of them are above 20 Miles in Extent. They are generally well made, handsome and strong, and Lovers of good Cheer, especially at other People's Charge. Their History already quoted, shews that they are not inferior to any Nation in *Europe* for Valour. The Peasants wear Clothes of Sheep-Skins in Winter, and their other Raiment is generally of coarse Cloth.

Their Houses are for most part of Wood, but low, because they are less obnoxious to Storms and Winds, very frequent in those Parts. The Houses of the Gentry are of Stone or Brick, and all of them make use of Stoves in the Winter.

Their Women are fair and handsome, and value themselves for being more witty and polite than other Women of the North.

Of their NOBILITY.

BEfore *Erick XIV.* there was no Hereditary or Feudal Titles of Honour, as Dukes, Counts, Barons, &c. the Titles then were only *Officiary*; so that *Charles VII.* and *Erick X.* though the Sons of Kings, had no other Title but that of *Juncker*, which signifies a young Nobleman; but when any Person signalized himself by his Bravery, the Government gave him some publick Post. *Selden*, in his Titles of Honour, Pag. 458. says, in the old Laws of *Sweden* there's no mention of any Secular Dignity that was not merely *Officiary*, besides *Miles* and *Militaris*, the first signifying a Knight, and the second a Gentleman.

In this Kingdom there are several noble Families, most of which signalized themselves in the long *German Wars*. The Original of their Hereditary Titles was in 1561. when *Erick XIV.* gave *Peter Brahe*, *Suanto Sture*, and *Gustavus Rose*, the Title of Earls, and at the same Time gave the Title of Barons to Two of the Family of *Steinbocks*, Two of the *Guldenstierns*, and to the Families of *Lewenhaupt*, *Gripp*, *Flemming*, and *Horn*. It is customary in *Sweden* to call the Sons of their Nobles by Three Names, the first his own Christian Name, the second that of his Father in the Genitive Case, and the third the Surname of his Family; for Instance, *Gustavus Suantonis Bannier*, i. e. *Gustavus* the Son of *Suanto*, *Bannier* being the Name of the Family.

The chief Families are those of *Aschenberg*, *Bannier*, *Bielks*, *Brahe*, *Axel*, *Horn*, *Coringmark*, *Lewenhaupt*, *Oxenstiern*, and *Steinbock*.

The making of Knights in *Sweden* was formerly performed with greater Ceremony and Solemnity than merely by the Stroke of a Sword. The Belt, Sword and Shield, were given them, together with Fiefs, and the Oath they swore obliged them to defend Christianity, their King, and Country; and to protect Orphans, Virgins, Widows, and the Poor, &c. Their Order of Knighthood is that of the *Sword*. The Nobility and Gentry are brave, and of a Warlike Temper, Civil, and of a stately Deportment, but over-value themselves, love Parade, are

magnificent in their Equipage, are loyal to their Prince, much enclined to travel, and more expensive in their Buildings, Apparel, and Number of Servants, than in Housekeeping. Though they endure the Fatigue of War patiently, yet they are not reputed to know much of Stratagem. When employed in State Affairs, they give great Application; but their Abilities come more from Experience, than from Study or Greatness of Genius.

They never allow their Children to study Law, Physick, or to learn any Trade, because they think it wouldully their great Birth, and this occasions their Trade to make so little Progress. Though to gain Experience in War, they submit to the lowest Offices abroad, yet at home there is but one Instance known of a Gentleman who accepted the Command of a Merchant-Ship. They imitate the *French* in the Fashion of their Clothes.

Of their RELIGION.

THE Historians of this Country say, The Rites and Ceremonies of Paganism were introduced by their famous *Woden*, who mix'd Witchcraft and Magick with it, as was hinted before. They had a Temple at *Upsal* lin'd with Gold, and 3 Idols in it; that in the middle was call'd *Thor*, from whence our *Thursday*: He presided over the Air and Storms. *Voda*, or *Woden*, was their *Mars*, from whence our *Wednesday*. *Fricco*, or *Friga*, was their *Venus*, from whence our *Friday*. Every Ninth Year they had a publick Sacrifice at *Upsal*, where all were obliged to be present. They offer'd Nine Heads of each Sort of Male Beast they could catch, and hang'd their Bodies on Trees. We meet also with some Footsteps of humane Sacrifice in their History. *Pomponius Mela* says, the *Getae* were remarkable for their Belief of a future State: That they weep'd at the Birth of a Child, and rejoyc'd at the Death of their Friends: That the Wives frequently kill'd themselves, to accompany their Husbands to the other World: And Polygamy being in Use among them, the Wives contended who should have that Honour, which was given to her that was found to be of the greatest Virtue.

Virtue. There are many Inscriptions on Rocks in Runick Characters still to be seen in Sweden, which prove that the Immortality of the Soul was an Article of Faith among the Pagan Goths.

Christianity was first preach'd in Sweden, by Order of *Charles the Great*, about the Year 800, after he had prevailed with the Pagan Saxons to turn Christians. He sent one *Herbertus* into Sweden, but with small Success. After his Death, his Son *Ludovicus Pius*, in 814, sent *Angarius*, a Monk of *Corbej*, and afterwards Archbishop of *Bremen*; but Christianity made no considerable Advancement till the Reign of *Olauus Skotkonung*, about 980, who sent Ambassadors to *Eldred*, a Saxon King in *England*, to desire Preachers from him: Upon which *Eldred* is said to have sent *Sigisfrid* Archbishop of *York*, who willingly left his Archbishoprick, and became the Apostle of the Goths. The Swedish Historians blame him for persuading this begottd easie Prince to subject his Kingdom to the See of *Rome*, and pay it an yearly Tribute. *Olauus's* Successors protested against this, which embroil'd them with the Court of *Rome*.

About 1150. *S. Erick* King of Sweden march'd into *Finland* with an Army, carried with him *St. Henry*, an English Bishop, and obliged a great Number of the *Finns* to profess Christianity; but at last this Bishop was murdered by the Infidels, and was buried at *Abo*, the chief City of that Country.

After Christianity was settled in Sweden, the Bishops minded their own Riches and Grandeur more than the Care of Souls; so that the Archbishops of *Upsal* frequently made a greater Figure than their King, and deposed them by their Interest and Power. The Clergy then possessed above half the Kingdom, were Temporal Lords in their Diocesess, and by Legacies, Mortifications, and other pious Frauds, annexed great Possessions to their Domains. At every new Election they had their Privileges encreased, for then Princes were obliged to comply with their Demands, because of the great Power they had in the Kingdom. Thus by Degrees they became almost independent on the Crown; so that they fortified their Castles, garison'd their Towns, kept Troops in Pay, and frequently made War upon those that disobliged them or their Vassals.

In 1395. when *Margaret* had united the Three Crowns, she foresaw that the only Way to entail Slavery upon the Swedes was to gain the Clergy, and bring them to a Dependence on *Denmark*; and for that End enlarged their Privileges, gave more Lands to the Church, and made them sensible, that they could not make such a Figure if the Kingdoms were disunited, since the Archbishop of *Upsal* was always to be Administrator of Sweden. This engaged them in an Interest contrary to that of their Country, and to join with the *Danes*, who oppressed it.

Thus in 1515. thô Archbishop *Trolle* ow'd his Advancement to the Administrator *Steno*; yet he would not acknowledge him, but corresponded with the *Danes*, and persuaded them to invade his Native Country; for which the States of Sweden cited *Trolle* to appear before them; but he refused, and retired to his strong Castle of *Steeka*, which his Predecessors had made impregnable. Upon this he was declared a Traitor, deposed from his Dignity, besieged in his Castle, and obliged to surrender: After which the Castle was demolished, because it had been a Receptacle to the *Danes*, and a skulking Place for Rebels, who were protected there by the Archbishops.

When the Pope was informed of the Proceedings of the States against the Archbishop, he excommunicated the Administrator, and the Senate fin'd him in 5000000 Ducats, to be paid to the Archbishop, put the Kingdom under an Interdict, and left the Execution of this Sentence to *Christian* King of *Denmark*, the sworn Enemy of the Swedes. The King of *Denmark*, glad to have any colourable Pretence against the Swedes, marched into Sweden, and besieged *Stockholm*; but was obliged to rise from before it, as has been hinted before; and his Fleet being becalm'd, it occasion'd a great Famine among his Men, which obliged him to propose a Peace, and to desire an Interview with the Administrator; and that *Gustavus Erickson* might be deliver'd for an Hostage: To which *Steno* consented. But as soon as *Gustavus* went on board, he was made Prisoner, contrary to the publick Faith, and Law of Nations, and carried to the Castle of *Calo* in *Jutland*.

The

The Administrator was unluckily killed afterwards in an Engagement with the *Danes*; upon which his Army was routed and dispersed, and all the Kingdom submitted to them except *Calmar* and *Stockholm*. The Archbishop forbade Christian Burial to those who took Arms against the *Danes*, and Christian return'd to Sweden, was Crown'd there, and committed the Massacres and Barbarities formerly mention'd.

Gustavus Erickson making his Escape from Prison, came to *Lubeck*, in order to engage that City in the Swedish Quarrel; but failing, he sail'd to Sweden, and in Disguise travelled through the most Desert Mountains and Forests, till at length he came to *Dalecarlia*, where he was forc'd to work in the Copper-Mines for Subsistence; but being discovered, went to another Place, and meeting with a Curate, who befriended him; by his Advice, he went to a Fair, which was the Yearly Rendezvous of the *Dalecarlians*, and perswaded them to take Arms. They were successful in their first Enterprize, which encouraged more of the Swedes to join him; so that at length he drove the *Danes* out of the Country, and established the Government.

About this Time Lutheranism began to enter Sweden, by means of two Brothers, *Lourentius* and *Olaus Petri*, of the Province of *Nerike*. They study'd at *Wittenberg* under *Martin Luther*, return'd to Sweden, and publicly preach'd against Popery. They represented, how inconsistent the Pride, Riches, Ambition, Cruelty, and other Vices of the Swedish Clergy, were with the Designs of Christianity. They shew'd, That the Clergy had been the Cause of all the Civil Wars; That without their Assistance, the *Danes* had never been able to compass their Designs. They expos'd the Covetousness of the Court of Rome, and how that the Legate *Arcambold*, by his Indulgences, laid the whole Kingdom under Contribution. *Olaus* went to *Upsal*, affix'd Theses there, and had publick Conferences with the Popish Clergy; the Issue of which gain'd him a great many Profelites among the Professors and Students of the University, and the great Families of the Kingdom; for he demonstrated plainly how Popery had viciated Christianity.

Gustavus lov'd those Principles, but thought not fit to declare for them till his Affairs were better establish'd. The Chancellor *Larz And:son* had demonstrated to him the Reasonableness of the Protestant Religion, and the Corruptions and Innoations of the Romish Church. Under the Chancellor's Protection, *Olaus* and other Lutheran Ministers had Liberty to preach the Gospel in Sweden; and the Popish Clergy being much inferior to them in Learning, they were baffled in all Disputes.

Gustavus delay'd his Coronation, because the Oath at that Time oblig'd the King to maintain the Establish'd Religion and Clergy in all their Privileges and Pretensions. His Scheme was gradually to humble the Clergy; in order to which, he first abolished the Impositions the Clergy levied for Dispensations to eat Flesh on prohibited Days; their meddling in Divorces, and other Processes about Marriage; then he disarm'd them of their Spiritual Artillery of Excommunication. He forbade them to annex to the Church the Estates of Ecclesiasticks, to the Prejudice of their Heirs; and discharg'd them to confiscate the Goods of any Subject. After this he made an Enquiry into the Rights of Monasteries, and reunited many of the Lands possess'd by Churchmen to the Crown. About this Time *Olaus* publish'd a Swedish Translation of the New Testament, against which all the Clergy remonstrated. *Olaus* confuted the Errors of Popery in a publick Conference before the King and Senate, in which the Bishops were worsted; and *Olaus* insisting upon the Authority of the Scripture in this Debate, the only Subterfuge the Papists had, was to alledge that his Translation of the Scripture was false. Upon this *Gustavus* desired the Bishops to make another, because few of the Clergy understood Latin; and *Olaus* printed the Conference, which brought over many to his Party.

Gustavus after this called together the Estates, and represented the bad Condition of the Kingdom by the long Wars, the Lowness of the Revenues of the Crown, and the Greatness of the Publick Debts, especially that they ow'd to *Lubeck*, who, for Security of their Money, had the Mo-

monopoly of their Trade, which would end in the Ruine of their Country; adding, That the other Subjects were not able to pay any suitable Taxes towards the clearing these Debts, while the Clergy were possess'd of all the Riches of the Kingdom. He shew'd further, what Share they had in bringing on these Troubles that had ruin'd the Country; and that it was reasonable they should contribute towards the paying of the Debts, since they made a bad Use of their Riches, to support their Pride and Ambition, and to enable them to embroil the Nation. He told them further, That he was willing to quit the Government, if they would reimburse the Expences he had been at in this War for the Honour and Independency of the Country. The Clergy, headed by *Tureiohanfon*, oppos'd his Proposals, and accus'd *Gustavus* of Heresy, who being enrag'd at it, accus'd them of Ingratitude, considering his great Undertakings to recover the Country from *Danish* Tyranny, and went out of the Assembly. The Chancellor represented to the States the bad Consequences of their Conduct, in which he was seconded by the Bishop of *Stregnez*, which prevailed on the States to make an Act, That the Bishops should surrender their Castles and Places of Strength into the Hands of the King's Officers; and that all Lands which had been alienated and granted to the Clergy, should be re-united to the Crown; That the Nobility might recover their Lands that were mortgaged to the Clergy, upon Payment of the Money; That the Clergy should pay Two Thirds of their Tythes to maintain the War against *Christian* of *Denmark*, and found Publick Schools and Hospitals; That the Clergy should be punish'd if they excommunicated any Man upon a civil Account; And that Men of good Lives and Learning should be preferr'd to Charges in the Church. This Act was sign'd by all the Senators, and *Gustavus*, who went with some Troops of Horse to put it in Execution, and carried along with him *Olaus Petri*, and many other Lutheran Doctors of Divinity. This Expedition of *Gustavus* completed the Ruine of Popery; so that most of the Inferior Clergy profess'd the Protestant Religion, some of the Bishops left

the Kingdom, and others complied with this new Regulation.

The Bishop of *Scara* join'd the Malecontents, and engag'd *Tureiohanfon* in their Party. They marched to *Dalescarlia*, where the Inhabitants, who were little better than Savages, declared against any Change in Religion; but *Gustavus* surpris'd them, and oblig'd them to lay down their Arms; and when *Gustavus* found most Part of the *Swedes* had chang'd their Religion, he declared himself a Protestant, and conven'd an Assembly of the Clergy at *Orrebro*, the chief City of *Nericke*, in 1529, who renounc'd their Dependence on the Pope, abolish'd Popery, and sign'd the *Augsburg* Confession.

The Archbishops and Bishops of this Kingdom retain now little more than the Name, and a bare Shew of Superiority over other Superintendants; for the Reformation depriv'd them of their former Ecclesiastical Jurisdiction. They have moderate Stipends; the Archbishop of *Upsal* has only 400 *l. per Annum*, and the rest of the Bishops proportionably. They have 10 Bishops, who are confined to their own Employments, are never call'd to Council, but come to the Assembly of the States: Neither are they troubled with the Administration of any Secular Affairs. Under the Bishops, there are 7 or 8 Superintendants, who differ only from the Bishops in Name. Each 10 Churches has a Rural Dean over them. The Number of Churches in *Sweden* and *Finland* amount to 2000. The Clergy have One Third of the Tythes: The other Two Thirds are annex'd to the Crown. The King is Patron of most Churches, and has the Nomination of the Archbishop. Their Churches are generally neat, and adorn'd with Sculpture, Painting and Gilding. Their Altar-Cloths, Copes, and other Vestments, are rich.

Of their MARRIAGES and BURIALS.

MATCHES are made here by the Will of Parents, and entirely for Interest. This Country is not much troubled with the Extravagancies of Lovers: None can marry

h
175

marry without Publication of the Banns. Persons of Quality don't marry till they are 30 Years of Age, or above, because they are not able to live suitably to their Birth till the Death of their Relations, or that Advancement to Offices afford them the Means of Subsistence.

The Women are generally fair, and well shap'd, and are said to be more chaste before Marriage than after. They are prolific, but great Drudges, the meaner Sort being put to Plough, Thrash, row in Boats, and bear Burthens: Yet Conjugal Broils are not frequent here, because the Wives never dispute their Husbands Authority. Divorces seldom happen in this Country. Cousin-Germans may not marry without the King's Consent, which is more frequently granted than refused.

They affect Pomp and Superfluity beyond their Abilities at their Weddings; so that many times, by the Excess of one Day, they involve themselves in Debt for many Years after.

Their Funerals have more of Jollity and Feasting, than suits the Occasion; and that they may have more Time for their Preparations, they transport their Dead to Vaults near the Church, where they remain unburied some Months, and frequently several Years: But of late, this and other unnecessary Expences begin by degrees to be laid aside, partly to conform with the Frugality of the Court, and partly because they are not so rich as formerly.

Of their LEARNING.

POLITE Learning can plead no great Antiquity in this Country; for the University of *Upsal* was not founded till 1476, when *Sixtus Quartus* gave it all the Privileges of that of *Bononia*. Among the ancient Western *Goths*, the *Runick* Poetry seems to have been as old as their Letters; and their Laws, their Precepts of Wisdom, their Records, Religious Rites, Charms and Incantations, were all in Verse or Rhimes, so called from the *Gothick* Word *Runes*, signifying the Verses which were invented or introduced by *Oden*; and because all their Writings for many Ages were in Verse, it came to be the common Name of all sorts

of Poetry among the *Goths*; and the Composers of them were called *Runers*, or *Rhimers*, and also *Vuises*, or *Wises*, because their best Performances in what Learning was among them were in Verse. The *Goths* had above 100 several sorts of those *Runes*, some in longer, some in shorter Lines, some equal, others unequal; with different Cadences and Quantities; some were fram'd with a Consonancy of Syllables, which made a sort of Gingle that pleas'd the People; and because their Language was compos'd for most part of Monosyllables, 'twas easy to make many of them end in the same Sound. Another sort of *Runes* were made so as two Lines, or the second of each four, should end with Words of the same Sound; which being easie, and needing less Spirit, because the Chime in the Sound supplied the Want of that, this in Time became general among all the *Gothick* Colonies in *Europe*, and made Rhimes or *Runes* pass for good Poetry: But because they did really want the true Spirit of it, to supply this Defect, their Bards possessed the People with a Belief, That Charms and other great Wonders were perform'd by the Force of their *Runick* Verses. Hence it came to pass, That this sort of Poems came to be decry'd, and the ancient Characters in which they were written to be abolished, first by the Zeal of the Bishops, and then by Orders of the State, which proved an unrecoverable Loss to the History of those Northern Kingdoms. Most are of Opinion, That this happened in the Time of *Olau Skothomung*, upon the Desire of Pope *Silvester II.* and *Wormius* says, They were also forbid by the Council of *Toledo*, because the Christians of those Times thought Paganism could not be abolished without such a Prohibition; as *Sir William Temple* informs us in his *Essay upon Poetry*.

The most curious Piece of Learning in this Country is a *Gothick* Translation of the Evangelists, of 12 or 1300 Years standing, by *Uphila*, a Bishop of the *Goths* in *Thrace*.

Gustavus Adolphus was a great Patron of Learning, and endow'd the Universities with tolerable Salaries for Professors in most Sciences. His Daughter *Christina* augmented them, and invited many Learned Men to Sweden, as *Grotius*, *Cartesius*, &c.

The *Swedes* are more given to transcribe, collect, and translate, than to write Original Pieces. The Clergy are but indifferent for Learning, and little acquainted with Ecclesiastick Antiquities, or the Controversies of Religion, because they have no Adversaries to oppose. The Country People have Kalendars on their Clubs, in *Runic* Characters, which show them the Seasons of the Year, the Full Moon and Change, Leap-Year, the Golden Number, and Dominical Letter.

The Chancellor of the University of Antiquities at *Upsal* is always a Minister of State, and the Archbishop is Vice-Chancellor. Here they profess the Northern Antiquities; and pretend to clear the Obscurities of *Gothick* Antiquity. The best Performances of the *Swedes* are in this sort of Learning; a Specimen of which may be seen in what *Olans*, *Varelius*, *Loccenius*, *Schifferus*, and *Rudbeck*, have published. There is another University for the Study of Antiquity at *Stockholm*; and there's one also at *Abo* in *Finland*; which has fewer Professors and Students.

There was a 4th at *Lunden* in *Schonen*; which during the Wars with *Denmark* was prohibited, because its Neighbourhood to that Kingdom was supposed to create in the Students an Affection for that Crown, to which that Province formerly belong'd; but now it is restor'd. The *Swedes* use the Old or *Julian* Style in all their Letters and Affairs.

Of their LANGUAGE.

It is a Dialect of the *Teutonic*, but rougher, and less capable of Improvement than either the *Danish* or *High-Dutch*. Hence it is, That the *Swedes* seldom write any thing in their own Language. The Gentry and Citizens speak *High-Dutch* and *French* to Perfection. The College of Antiquaries at *Upsal* have publish'd a new Edition of the *Codex Argenteus* with the modern *Swedish*, to demonstrate that their Language is a Dialect of the ancient *Gothick*.

The *Finlanders* have a sort of Gibberish of their own, altogether different from the *Swedish*. They send their Children when young to learn Foreign Languages, before

they learn their own; for a *Finlander*, if he pass 14 Years of Age, is utterly incapable of speaking or learning any other Tongue but his own. They don't use the Letter *F*, and have no Word that begins with *B*, *D*, *G*, or a double Consonant.

Of their GOVERNMENT.

THE Power of their ancient Kings was much limited; they could do nothing that concern'd the Government of the Kingdom without the Consent of the States; for the *Swedes* were jealous of their Liberties. In former Times, they had a Magistrate call'd *Drotzer*, design'd as a Curb to their Sovereign, who had a Power by their Constitution to reprove their King, when he acted contrary to the Laws of the Land, and to put him in mind of his Duty; but now the King of *Sweden* is Absolute, as we have heard before.

His TITLES are,

King of *Sweden*, of the *Goths* and *Vandals*, Great Prince of *Finland*, Duke of *Schonen*, *Esthen*, *Liesland*, *Carelia*, *Ingria*, *Bremen*, *Verden*, *Stetin*, *Pomeran*, *Cassuben*, and *Sclavonia*, Prince of *Rugen*, Lord of *Ingermanland* and *Wismar*, Prince Palatine of the *Rhine*, Duke of *Bavaria*, *Cleves* and *Bergen*, &c.

The present King is of the Family of *Deux-Ponts* in *Germany*, a Branch of the *Palatine* Family, which came to the Crown in the Person of *Charles Gustavus*, who was Son to a Sister of *Gustavus Adolphus*.

His REVENUES.

THE Revenues of the Crown consist'd formerly in some Lands of a small Extent near *Upsal*, and in a Tribute, which the Peasants paid by Poll. In the Reign of *Magnus Ladassas*, the Senate annex'd to the Crown the Mines of Copper, made him Proprietor of the Lakes *Meler*, *Vener*, and *Peter*, with a Right to fish on the Coasts of the *Baltick*; and they order'd, That those who had Fiefs from the Crown, or Licence to hunt or feed their Cattle in the King's Forests, should pay a certain Rent to the Crown.

Crown. In those Days, few were punish'd by Death for Murther, or other Crimes, but the Criminals were fin'd in certain Sums, payable to the King, which was then a considerable Branch of the Revenue.

Gustavus Erickson reunit'd 30000 Estates that had been alienated from the Crown, and possess'd by the Clergy. *Charles XI.* resumed all the Lands that the Nobles had purchas'd from the Crown; and some say, That the Revenues in 1578 amounted to 700000 Dollars.

The present Revenues are from the Crown-Lands, the Customs, Poll-Money, Tythes, Copper and Silver Mines, Law-Suits, &c. Each Peasant above 16, and under 60 Years of Age, pays Twelve-pence *per Annum*; and such of them as plough a certain quantity of Ground, must pay Annually one Shirt, one Lamb-Skin Coat, one Pair of Mittens, one Pair of Woollen Stockings, and one Pair of Shoes, towards the Maintenance of the Soldiers. In short, the whole Revenue is reckon'd to be near 1000000 of Pounds Sterling *per Annum*.

Of the STATES of the Kingdom.

THEY have nothing left them now of their ancient Power; the End of their Meeting is only to ratify the King's Proposals. The Nobility and Gentry are represented by one of each Family, of which there are about 1000. The Colonels, Lieutenant-Colonels, the Majors, and a Captain of each Regiment, sit and vote in this Meeting.

The Bishops and Superintendents are Members of this Diet: The Body of the Clergy send about 200 to represent them; 150 are sent from the Boroughs, and 250 from the Peasants.

Of their MILITARY AFFAIRS.

THE Scots first introduced Military Discipline into this Country: Their Armies consist'd formerly of Peasants, who were remarkable only for their Courage and Numbers. The Feudal Laws first made in this Country oblig'd the Gentry, who held their Estates by Knights Service, to

bring a certain Number of Horse to the Army. The last King made great Regulations in his Military Affairs, and settl'd the Number of Horsemen that the Nobles and Gentry are to provide, and order'd each Farm of 60 *l. per Annum* to maintain one Foot-Soldier, who, if he marry, has a House built at the Charge of the Peasants, who also must furnish him with Hay, to keep a Cow in Winter, and Pasture in Summer, and plough, sow, and reap for him; and when this Soldier dies, they must provide one in his room.

The Officers of Horse and Foot are maintain'd by the King, who appoints Lands for that End; so that every Officer has a House and Lands, and the Rent of as many Farms as make up his Pay.

Of the ARMS of the Kingdom.

THE King of Sweden bears for that Country Quarterly; in the 1st and 2d and 4th *Azure*, 3 Crowns Or, two in Chief, and one in Base. For Finland; in the 2d and 3d *Barry-Argent and Azure*, a Lion Or, Crown'd *Gules*. For the Palatinate of the Rhine; over all Quarterly, in the 1st and 4th *Sables*, a Lion Or, Crown'd, Arm'd, and Langued, *Gules*. For *Bavaria*; in the 2d and 3d *Lozenges bend-wise*, of 21 Pieces, *Argent and Azure*. For the Crest, they have a Crown Royal, adorn'd with 8 Flowers, and clos'd by as many Demi-Circles, terminating in a *Monde Or*. The Supporters are two Lions Or, Crown'd of the same; and the Motto is, *Dominus Protektor meus*; i. e. The Lord is my Protector.

Of the LAKES, RIVERS, BAYS, &c.

THE chief Lakes are, 1. The *Veter*, in *Gothland*. The Natives say, it is remarkable for a Noise like Thunder, in that Quarter from whence a Storm is to happen the Day after, and for the sudden thawing of its Ice, so that it sometimes surprises Travellers, and in half an Hour becomes navigable. In some Places it is above 300 Fathom deep. 2. *Mälär*, in *Upland*, which falls into the Sea at *Stockholm*, and furnishes

one Half of that City with fresh Water. 3. The *Vener*, in *Weg-Gothland*, said to be 130 English Miles in Length, and 40 in Breadth. Twenty four Rivers from the Mountains of *Norway* fall into it. The *River Elve*, or, as some call it, *Trolbetta*, has its Source from hence, and falls over a Rock 60 Foot high, near *Gothenburg*, with such a Noise, that 'tis heard at the distance of 200 Furlongs. 4. *Huelmer*, in *Nericke*. 5. *Silian*, in *Dalecarlia*. 6. *Aava*. 7. *Lulatrek*. 8. *Enaratresk*, in *Lapland*. 9. *Ulatresk*, in *Cajania*. 10. *Pejenda*, in *Tawaasia*. There are many other Lakes; but these are the most remarkable, and are all stor'd with variety of Fish; as Salmon, Pikes, Perch, Tench, Trouts, Eels, and many other Sorts, unknown elsewhere, particularly a Fish call'd a Streamling, less than a Pilchard, which are taken in great quantities, salted in Barrels, and sent over all the Country. In the Lakes of *Finland*, they have vast quantities of Pikes, which, when salted and dried, are sold at cheap Rates.

From those Lakes most of the Rivers in this Country rise, but none of them are Navigable; the chief are, 1. The *Dalecarl*, which rises in the *Dofrine* Mountains, runs thro' *Dalecarlia*, and divides the Provinces of *Gestrucia* from *Upland*, and falls into the Gulph of *Bothnia*. 2. *Saga*, which divides *Upland* from *Westmania*. 3. *Angerman*, which waters *Angermania*, and falls into the Gulph of *Bothnia*, most of them are noted for Plenty of Salmon. Other Rivers of lesser Note are, *Ula*, *Tidalda*, *Nor*, *Eda*, *Usk*, *Nissa*, *Laga*, *Helga*, *Marbon*, *Aam*, *Cumoulf*, *Holff*, *Ulaeff*, *Perventz*, *Nieva*.

In the Lakes and on the Sea-Coasts they have vast numbers of small Islands, of which above 6000 are inhabited, and the rest are either bare Rocks, or cover'd with Wood.

Their chief Bays or Gulphs are, the Gulph of *Bothnia*, which separates *Sweden* from *Finland*, and reaches from Lat. 60 to 66. It abounds with Seals, which yield a considerable quantity of Train-Oil. The Gulph of *Finland* separates *Finland* from *Livonia* and *Ingria*: It runs from West to East, from Longitude 45 to 55, and the Gulph of *Riga* lies on the West of *Livonia*.

Of the Division of SWEDEN.

SWEDEN is divided into 8 Parts, viz. *Sweden-Propor*, *Gothland*, *Schonen*, the Government of *Bahus*, the *Nordelles* or *Northlands*, *Finland*, *Ingria*, and *Swedish-Livonia*.

I. SWEDEN PROPER,

IS Fruitful in Corn, and lies betwixt the *Nordelles* to the North, *Ostrogothland* to the South, the *Baltick* to the East, and the Governments of *Bahus*, *Aggerhus* and *Drontheim*, to the West; and is subdivided into 5 Provinces, viz. *Upland*, *Sudermania*, *Nericia* or *Nericke*, *Westmania*, and *Dalecarlia*.

U P L A N D,

HAS *Gestrucia* on the North, *Sudermania* on the South, the *Baltick* on the East, *Westmania* and *Nericia* on the West. The chief City is *Stockholm*, in Latitude 59 Deg. and 40 Min. according to the Observations of the King of *Sweden's* Mathematicians. Most Maps make *Dantzick* one half of a Degree more Eastward than *Stockholm*; and by the Observations of *Hevelius* and *Mr. Flamstead*, the difference of Meridians betwixt *London* and *Dantzick* is 1 Hour, 15 Min. 30 Sec. which is $18\frac{1}{2}$ Deg. so that *Stockholm* is about Longitude 37. It lies 28 English Miles West from the *Baltick*, 36 South from *Upsal*, 300 North from *Dantzick*, 180 North-East from *Gottenburg*, 150 North from *Calmar*, and 240 North-East from *Copenhagen*. The time when it was first built is not certain; some say, King *Birger* built it in 1261. About 300 Years ago it was only an Island, with two or three Cottages for Fishers; but upon building a Castle there, to stop the Inroads of the *Moscovites*, and by the Removal of the Court from *Upsal* to this Place, it became more Populous than the antient Cities, and is now the Metropolis of the Kingdom. It is naturally fortified with Rocks; which, towards the Sea, over-top the Houses, and make the Prospect not so pleasant. In 1552, a great part of it was burnt down, the Houses being then of Wood, which occasion'd an Act to rebuild it with Brick and Stone. Some say, the Houses at first were founded on Piles of Timber drove into the Ground,

Ground, because it was Marshy. It is built upon 6 Islands, join'd together by Bridges, and has two large Suburbs, one on the N. and the other on the S. The Port is one of the safest in *Europe*; for 1000 Ships of great Burden may lie without Anchor or Cable, and the Mountains round it defend them from Storms, as the Citadel and two Forts guard the Canal from the Insults of Enemies; but it has this Inconvenience, that it is far distant from the Sea; and the Lake *Meler*, that falls from it into the *Baltick*, is full of Windings, and has no Tides, which makes it the more difficult for Ships to get out. This City has almost all the Trade of *Sweden*. The King for most part resides here: 'Tis one of the finest Cities of the North, and supposed to be as populous as *Bristol*. The Castle is a large Building, cover'd with Copper, and serves for an Arsenal. The Officers of the Court lodge in it, and most of the Offices for Publick Affairs are kept there; but it has neither Strength nor Beauty. There are 9 large Churches, built with Brick, and cover'd with Copper, in the City. *St. Nicholas Church* is the most remarkable: It was founded by King *John*, on Marble Pillars. In the King's Chapel, at the Altar, there's a Silver Statue of our Saviour on the Cross at full Length. There's a Citadel, commanded by a neighbouring Hill, and the King's Palace, which is strong and high, lies within it. The Streets are very large, and there are many Gardens and Walks in and about the City, which make it pleasant.

Jacobdal, a Village within half a League of it, has a Castle, where the Kings of *Sweden* reside in Summer.

Enköping, W. from *Stockholm*, on the Lake *Leven*, is a pleasant Town, and of good Trade.

Upsal, lies in Lat. 59 Deg. 54 Min. according to the Observations of *Charles XIth's* Mathematicians, and the Meridian is near that of *Stockholm*, only a little more Westward. They observ'd also, That the Variation of the Compass there was 8 Degrees. *Joannes Magnus* is so vain as to say, it was founded 240 Years after the Flood, by *Ubbin*, one of their Kings. It lies on the River *Sala*, which falls into the Lake *Enkopen*, and is about 30 Miles N. W. from *Stockholm*. It is the most ancient City in the Kingdom,

formerly the Residence of their Kings, and from thence called *Upsala Konung*. Before the Reformation, all their Kings were Crown'd and bury'd in this City; and in 1654, Queen *Christina* resign'd the Crown here. It has a Castle built after the *Gothick* Manner, on a Hill, and commands the whole City. This Town was also the chief Seat of Paganism, where they had the rich Temple, of which *Joannes Magnus* tells so many Stories, and makes that at *Cuzco* to be mean, when compar'd with it. About 1148, *Eugenius III.* made it an Archbishop's See, who always keeps his Court here. The Cathedral has a Clock of admirable Workmanship. We have mention'd its University already. Most Part of the Books in the Library were given by *Gustavus Adolphus*, who took them from many Libraries in *Germany*, and especially from that of *Wurtzburg*.

Oregrund, is an ancient Town on the *Baltick*; N. E. from *Upsal*: It has a good Port, which occasions a Trade there.

Other Towns here are, 1. *Öst-Hammar*. 2. *Forsmark*. 3. *Elksarby*. 4. *Skopman*. 5. *Wadö*.

SUDERMANIA,

HAS Upland on the N. E. *Westmania* on the N. *Nivicia* on the W. the *Baltick* on the E. and S. and *Östrogöthland* on the S. W. It is fruitful in Corn, and has abundance of Mines. The chief Town is *Nyköping*: It lies on the *Baltick*, in Lat. 58 1/2, and Long. 36. has a good Port, and is tolerably rich. The Castle is strong, and formerly was the Residence of the Dukes of *Sudermania*. It has a good Dock for building Ships; lies 52 English Miles S. W. from *Stockholm*, and 28 N. E. from *Norwep* &c.

Trosa, is a small Trading Town betwixt *Nyköping* and *Telga*; on the *Baltick*.

Telga, a small Town, N. E. from *Trosa*, on the S. Side of the Canal, by which the Lake *Meler* communicates with the *Baltick*: It lies 16 Miles S. from *Stockholm*.

Stregner, lies in Lat. 59, on the S. Side of the Lake *Meler*, 32 English Miles S. W. from *Stockholm*, N. from *Norwep*, and W. from *Telga*. It is an ancient Town, and a Bishop's See. *Charles IX.* is buried here.

Kongser,

Kongfor, is situated on a pleasant River, where it falls into the Lake *Meler*. King *Charles XIth's* Mathematicians say, it lies in Lat. 59 Deg. 34 Min.

Other Towns are, 1. *Dunker*. 2. *Sirmada*. 3. *Osma*. 4. *Wetti*. 5. *Ostre*. 6. *Coredingen*. 7. *Garla*. 8. *Bierlanda*.

NERICIA,

IS fruitful in Corn and Mines, has *Westmania* on the N. *Ostrogotland* on the S. *Sudermania* on the S. E. and *Wermeland* on the W.

Orebro is the chief Town: It lies on the River *Trosa*, which *De la Forest* calls *Orebro*, near the Lake *Meler*, 16 English Miles S. W. from *Arboga*.

Other Towns are, 1. *Askeland*, S. from *Orebro*. 2. *Kunda*. 3. *Masjo*. 4. *Segersloo*.

WESTMANIA,

HAS *Nericia* on the N. *Upland* on the E. *Gestrucia* on the N. *Sudermania* on the S. E. and *Wermeland* on the W.

Arosia, or *Westera*, is the chief Town: It lies near the N. Side of the Lake *Meler*, in Lat. 59½, and Long. 35. 16 English Miles N. E. from *Arboga*, and 40 W. from *Stockholm*. In 1521, *Gustavus Erickson* defeated the Army of *Christian II.* of Denmark here, where, in 1544, the States made the Crown Hereditary to the Family of *Gustavus I.* It is a Bishop's See, and has a small Castle.

Arboga, is a small Town on a River of the same Name, near the Lake *Meler*, 20 English Miles S. W. from *Westera*, and 18 N. E. from *Orebro*. It was ruin'd by the *Danes* in the 16th Century.

Sala, or *Saalberg*, is N. from *Westera*, and remarkable for a Silver Mine discovered about the End of the last Age.

Other Towns are, 1. *Koping*, W. from *Westera*. 2. *Nobra*. 3. *Lindesaas*. 4. *Rittern*, 5. *Obomkolm*. 6. *Wela*.

DALECARLIA.

IT has *Gestrucia*, *Helsingia*, and *Medelpadia*, on the E. the Government of *Aggerhus* on the W. *Wermeland* and *Westmania* on

the S. It is divided into 3 Parts, viz. *Ostrodalia*, *Vesterdalia*, and *Sudalia*. This Country is Mountainous, and all over Woody. The ancientest Peasants are their Judges. The Kings of Sweden always took Care not to disoblige this People, and were not allow'd to send Troops or have Garisons there, and never enter'd this Country without giving Hostages for Security of their Privileges; nor did they exact any Tribute of them, but a small Number of Furs. Their Customs are quite different from those of the other Provinces. The Inhabitants of this Country were famous under the Conduct of *Gustavus I.* when they retrieved their Country from the Danish Yoke, as has been already mentioned. There are no Towns in this Province, but only Villages.

II. GOTHLAND,

HAS *Dalecarlia* on the N. *Norway* on the N. W. *Westmania*, *Nericia*, and *Sudermania*, on the E. the *Baltick* on the S. E. *Schenen* on the S. and the *Baltick* on the S. W. It is divided into *Westrogotland* and *Ostrogotland*.

Westrogotland is sub-divided into *Westrogotland Proper*, *Dahl* or *Dalia*, and *Wermeland*.

Westrogotland Proper has the Lake *Wener* on the N. *Dalia* on the N. W. the *Baltick* on the S. W. *Schenen* on the S. *Smaland* on the S. E. *Ostrogotland* on the E. and *Nericia* on the N. E.

Gothenburg, lies on the *Categat*, in Lat. 58½, Long. 30 Deg. 40 Min. has the best and most frequented Port on the *Baltick*: It is seated on the Mouth of the River *Trolhetta*, where it falls into the *Sinus Codanus*, 12 English Miles S. from *Bahus*, 264 W. from *Stockholm*, 200 N. W. from *Calmar*, and 120 N. from *Copenhagen*. It is a new built Town. In 1644, the Danish Fleet besieged it in vain. The Castle of *Elburg* lies near it.

Falkoping, S. from the Lake *Wener*, is a small Town, that has been frequently harassed in the Danish Wars. *Hio* is another Town on the W. of the Lake *Wener*.

Scara, is 10 English Miles S. from the Lake *Wener*: It was anciently the Seat of the *Gothick* Kings; but there remains little now except Ruins. It is a Bishop's See.

Lidokoping,

Lidokoping, a small Town on the S. of the Lake *Wener*. *Mariefbad*, another, lies betwixt the Lakes *Wener* and *Wener*.

Other Towns are, 1. *Bogestund*. 2. *Hallingfaas*. 3. *Brete*. 4. *Nylala*. 5. *Naranga*. 6. *Skofide*.

DALIA, or DAHL,

HAS the Government of *Bahus* on the W. *Werneland* on the N. and *Westrogothland Proper* on the E. 'Tis less fruitful than any other Part of *Gothland*.

The Towns are, 1. *Dalebourg*, on the W. of the Lake *Wener*, 44 Miles N. E. from *Bahus*. 2. *Bretten*, which some call *Menorbourg*, on the W. of that Lake. 'Twas sack'd in 1644 by the *Danes*, but is now rebuilt.

WERMELAND,

HAS *Dalecarlia* on the N. *Nericia* and *Westmania* on the E. the Lake *Wener* on the S. and *Dalia* and *Norway* on the W. It is said to have been the last planted of all the *Gothick* Provinces. 'Tis Mountainous and Woody, and has some Mines of Iron, and one of Copper.

The Towns are, 1. *Philippstadt*, the Approaches to which are difficult, because it lies in the middle of Morasses. 2. *Carlstadt*, built by *Charles IX.* on the N. E. of the Lake *Wener*: It was the Capital of *Werneland*, before the *Danes* ruin'd it in 1644. Other Towns here are, 1. *Grilberga*. 2. *Ruskyg*. 3. *Kolen*. 4. *Frixende*. 5. *Arwycka*.

OSTROGOTHLAND,

IS divided into *Ostrogotthland Proper* and *Smaland*. *Ostrogotthland Proper* has on the E. the *Baltick*, on the W. the Lake *Wener*, on the N. *Sudermania*, and on the S. *Smaland*. It is the best Place in Sweden for Pasture.

Norkoping, the Capital of all *Ostrogotthland*, lies in a Morass, on the River *Motala*, betwixt the *Baltick* and the Lake *Wener*, 20 English Miles from the *Baltick*.

Stegaborg, is a small Town, S. from *Norkoping*, and is remarkable for its good Port on the *Baltick*.

Linkoping, is S. W. from *Norkoping*, and has a Bishop, Suffragan to the Archbishop of

Upsal. It has a stately Church, which was built by *Herbertus*, the first Apostle of Sweden.

Suderkoping, lies on the *Baltick*, in the Bottom of a Bay, 20 English Miles E. from *Linkoping*.

Wadstena, famous in the Swedish History, had anciently a Fort and Monastery dedicated to St. *Bridget*, which is now an Hospital for Invalids.

Schening, anciently a famous City, but now inconsiderable. In 1248, Pope Innocent IV. order'd a Council to meet here, which prohibited Matrimony to the Clergy.

Other Towns are, 1. *Kelmo*. 2. *Nylochen*. 3. *Skensta*. 4. *Lindeny*. 5. *Rifinge*.

SMALAND.

THIS Province abounds with Black Cattle, which are transported to *Denmark*, and from thence to *Germany*, *Holland*, &c. It has the *Baltick* on the E. *Schonen* on the S. and is divided from *Ostrogotthland* by the Wood *Holawedh*. This Province is 380 English Miles in Compass. It has Mines of Copper and Lead; and there's Iron found, as some say, at the bottom of their Lakes and Rivers.

Calmar, is the Capital, was burnt down in 1647, but now handsomely rebuilt. It lies 180 English Miles S. W. from *Stockholm*, and as many N. E. from *Copenhagen*. It is one of the most considerable Places in Sweden. Its Fortifications are regular; the Citadel is of a great Extent. It has an excellent Port on a Creek of the *Baltick*, and is famous for the Union of the 3 Northern Crowns, that was concluded here.

Jonskoping, a small Town, but ancient, on the S. Point of the Lake *Peter*. It was plunder'd by the *Danes* in 1644.

Wexio, a Bishoprick, lies in the middle of the Province. St. *Sigisfrid* was buried here.

Other Towns are, 1. *Westerwick*. 2. *Eksio*. 3. *Erlanda*. 4. *Torsar*. 5. *Alafsa*. 6. *Hallors*. 7. *Kerna*. 8. *Moufcor*.

III. SCHONEN,

WAS purchas'd by the Swedes from *John*, Duke of *Holstein*, about 1330, was conquer'd by the *Danes* in 1341, and recover'd by the Swedes in 1658, by the Treaty

Treaty of Roschild. In 1676, and 1677, the *Danes* took many Places in it; but were obliged to restore them by the Treaty of *Fountainbleau* in 1679. It has *Smaland* on the N. the *Baltick* on the E. and S. and the Frith or Streight called the *Sound*, or *Orsundt*, which separates it from *Zeeland*, on the W. It is divided into *Schonen*, *Bleking*, and *Halland*.

Schonen has a high Coast; but the low Lands of it has charming fine Meadows, and fruitful Fields. The Beer of this Country is very good, and much better than that of *Zeeland*.

Lunden, the Capital, lies in Lat. $55\frac{1}{2}$, Long. $31\frac{1}{2}$, was formerly a considerable City, and had 22 Churches, but has little of its ancient Splendour now. The Cathedral of St. *Lawrence* is a stately Building. The famous Clock there is said to be the Contrivance of *Gasper Bartholinus*: It shews the Year, the Month, the Day of the Month, all the Festivals, fix'd and moveable, the Hour and Minute. At each Hour, two Horsemens come out and strike the Hours in a Fighting Posture; then a Door opens, which discovers the Virgin *Mary* on a Throne, with our Saviour in her Arms, and the *Magi* worshipping him. Two Trumpets sound all the while. There is also a magnificent Altar in this Church. The Town has no Walls, and but few Inhabitants.

Malmoe, is a small Town, but neat, and tolerably rich, because of its Port on the *Sound*, S. from *Lunden*, which is much frequented. In the War before the Treaty of *Fountainbleau*, the *Danes* besieg'd it twice in vain.

Trellebourg, lies also on the *Baltick*, S. from *Malmoe*.

Landscroon, over against the little Isle of *Huen*, was formerly only a little Castle, which *Erick*, who succeeded Queen *Margaret*, enlarg'd; but since that Time, the Kings of *Sweden* have fortified the Citadel with regular Fortifications. The *Danes* took it in 1670. 'Tis now a considerable Town, and has a well frequented Harbour.

Helsingburg, lies over against the Castle of *Ononenburg* in *Zeeland*. When it belong'd to the *Danes*, it was very rich, because of its Trade with *Elsinger*; but now the *Danes* impose so great Customs, that their Trade

is sunk. It was formerly well fortified; but by the Treaty of *Fountainbleau*, all the Fortifications were demolish'd, which has reduc'd this Place to a Village of 80 or 100 Houses, and one Church.

Other Towns are, 1. *Udsted*. 2. *Engelholm*. 3. *Ria*. 4. *Sandhamer*. 5. *Semmersbawen*. 6. *Julebo*.

B L E K I N G,

BELONG'd formerly to *Denmark*; but by the Treaty of *Roschild* in 1658, was annex'd to *Sweden*. It lies N. E. from *Schonen*, S. from *Smaland*, and has the *Baltick* on the E. and S. Their Pasture is good for Black Cattle, which they export in great Numbers.

Christianople, so call'd from *Christian IV.* King of *Denmark*, who built and fortified it, is the Capital of the Province. It lies on the Borders of *Ostrogotland*, 20 English Miles S. from *Calmar*, and 15 from the Island *Oeland*. It has a good Port, and a pretty Trade.

Carelskroon, so called from *Charles II.* who built it on a little Isle of the same Name, which is join'd to the Continent by a very long Bridge. The Town covers almost the whole Island, and has an excellent Harbour well fortified, where ordinarily 50 of the King's Ships lie secure from Storms, and the Insults of Enemies.

Rattenby, lies S. W. from *Christianople*, on the *Baltick*, and has a good Port.

Christiansstad, on the Borders of *Schonen*, was built in 1600, by *Christian IV.* of *Denmark*, near the Mouth of the *Heller*. It lies half Way betwixt *Copenhagen* on the W. and *Christianople* on the E. in the middle of a Morass, which makes it strong. The *Danes* took it in 1676; but two Years after were obliged to restore it.

Abus, two Miles S. from *Christiansstad*, is small, but an ancient Town.

Other Towns here are, 1. *Elleholm*, N. E. from *Christiansstad*. 2. *Selsburg*. 3. *Luskeburg*. 4. *Konsbro*.

H A L L A N D,

HAS *Schonen* on the S. E. *Westrogotland* on the N. E. and N. and the *Sound* on the W. It belong'd formerly to the *Danes*; but

but by the Treaty of Roschild, it was annex'd to Sweden. This Country abounds in Woods and Lakes, and is not so fruitful as *Schonen* or *Bleking*. It is 60 English Miles in Extent from N. to S. and 15 from E. to W.

Helmstadt is the chief Town, on the Mouth of a River that falls into the Sound, or Gulph of *Categat*.

Labolm, lies S. E. from *Helmstadt*, on the Mouth of a River that falls into the same Gulph, and is not considerable now, since its Fortifications were demolished.

Falkenbourg, lies also on the *Categat*.

Warborg, N. N. W. from *Falkenbourg*, is a small Town, in the Bottom of a little Gulph, with a Port defended by a strong Castle.

IV. The Government of BAHUS,

Belong'd to Denmark before the Peace of Roschild. It has the Sound on the S. W. *Dahl* or *Dalia* on the N. E. and the Government of *Aggerhus* on the N. W. is but thinly inhabited: It is 100 Miles long from N. to S. and in some Places about 15 broad. It is divided into 2 Parts.

1. *Inland*, of which *Bahus*, the Capital, lies 10 English Miles N. from *Gottenburg*: It was built in 1309 by *Haquin*, the 4th King of Norway, on an Island made by the River *Trollhetta*. It is well fortified, and has a strong Castle. The Danes besieg'd it in 1678, but in vain.

2. *Vyksheden*, of which *Maelfstrand* is the Capital: It is a strong Town, and has a Castle on a steep Rock, almost surrounded by the Sea. In 1678, *Christian V.* King of Denmark, made himself Master of it; but it was restored by the Treaty of *Fountainbleau*.

V. The NORDELLES, or NORTHLANDS.

These Northerly Provinces are 8, viz. *Gestricia*, *Helsingia*, *Medelpadia*, *Angermania*, *West-Gothland*, *Jempterland*, *Harndal*, and *Swedish Lapland*.

GESTRICIA,

HAS *Helsingia* on the N. Upland on the S. the Gulph of *Bothnia* on the E. and *Dalecarlia* on the W. It has Mines of Copper and Iron.

Geval is the chief Town. The King of Sweden's Mathematicians found the Lat. here 60 Deg. 31 Min. whereas most Maps make it 61. It is 50 English Miles N. from *Upsal*, and remarkable for being the Residence of the Governor of the Country, and having a Royal School. It lies on the Gulph of *Bothnia*, at the Mouth of a River of the same Name.

Fahlun, by the Observations of the Swedish Mathematicians, is in Lat. 60 Deg. 32 Min. and a pretty large Town.

Coperberg, a large Town, lies near a Mountain of the same Name, famous for the best Copper-Mines of the World. It is 50 English Miles W. from *Geval*.

HELSINGIA,

HAS the Gulph of *Bothnia* on the E. *Norway* on the N. W. *Dalecarlia* on the W. *Gestricia* on the S. and *Medelpadia* on the N. It is overgrown with Woods, has many Lakes and Mountains, and few Inhabitants, who don't cultivate much of the Country, but live by Fishing and Hunting.

Hudwicksvald, near the Gulph of *Bothnia*, is a neat City, and conveniently situated for Trade.

Spoderhamn, in Lat. 61 Deg. 12 Min. is another Town of this District.

MEDELPADIA,

IS N. from *Helsingia*, has many Lakes and thick Forrests, where grow excellent Masts. There are few Towns here, but many Castles in this Province.

Indal, near the Gulph of *Bothnia*, is the chief Town.

Tuna, another Town, lies S. from *Indal*, near the Gulph of *Bothnia*, and has a Castle.

ANGERMANIA,

IS N. E. from *Medelpadia*, and has its Name from the River *Angerman*, which rises from the Mountains of Norway.

Hernösand, on the *Baltick*, is the only Town of that District, which has a convenient Port. The Superintendent resides here.

WEST BOTHNIA,

HAS the Gulph of that same Name on the E. *Swedish Lapland* on the W. and *Angermania* on the S. W. It is water'd by many small Rivers, which make their Pastures good.

Torneo, or *Torneo*, is the chief Town of this Country, on a River of the same Name, which rises in *Lapland*, runs S. E. and falls at *Torneo* into the Gulph of *Bothnia*. They have a good Trade in Furs with the *Lapländers* and *Finlanders*, whose Language they understand. They have also a good Trade in Furs with the *Muscovites*. King *Charles XIth's* Mathematicians, after their most accurate Observations, found the Lat. there to be 65 Deg. 43 Min. The Difference of Meridians betwixt *Stockholm* and *Torneo* 19 Min. 20 Sec. which make 40 Deg. 50 Min. and that *Torneo* is more E. than *Stockholm*, and the Variation of the Compass from N. to W. 7 Deg.

Lubla, in Lat. 65 Deg. 25 Min. was built in 1622; and the new Town in 1642; but has been twice burnt down since.

Pithe, or *Bithe*, was built in 1621, has a convenient Port, and good Privileges to encourage Trade.

Uma, a considerable Town in those Parts, on the said Gulph, is the Seat of the Governor of that Province. The Lat. is 63 Deg. 48 Min. and the Variation of the Compass 7 Deg. There are many small Islands along that Coast.

JEMPTERLAND,

HAS *Angermania* or *Angermanland* on the E. *Medelpadia* and *Helsingia* on the S. E. and the Government of *Drontheim* in Norway on the W.

Refant, a small Town with a Castle, is the only considerable Place in this Province.

Of the ISLES on the Coasts of Sweden.

ALAND, lies over against *Upland*, to which Province it belongs. The most Southerly Places of it have the same Lat. with *Upland*.

GOTHLAND,

Is 70 English Miles from the Coasts of *Ostrogotland*. Its Length from N. to S. is 50 English Miles, and the Breadth from E. to W. 18. The *Prussian* Knights quitted this Island to the *Danes* in 1408 for 9000 Crowns. The *Swedes* got it in 1645, by the Peace of *Bromsebro*, and it was confirm'd to them by the Peace at *Fountainbleau*. It has good Pasture for Cattle, which they transport.

Wibby is the chief Place of the Island, and lies on the W. Side of it. 'Twas famous in Antiquity for its excellent Sea-Laws, which were observ'd by most Sea-Towns on the *Baltick*. It had formerly a great Trade, but 'tis now decay'd. Sea-Charter were first made here.

OELAND,

Lies near the Province of *Smaland*, from which it is divided by a Frith called *Calmar-Sound*. Its Length from N. to S. is 69 Miles, and the Breadth 18: It has 18 Parishes, and is one of the most pleasant Places of Sweden: The Air there is more calm, and the Soil is more fruitful, than in any other Place of that Kingdom. It has good Hunting, and the Kings of Sweden come hither in Summer for that purpose. The Coasts are well defended by Deep Rocks and strong Castles.

Berkholm, the Capital, lies on the E. Side of it, and has good Fortifications.

Ösenby, on the S. Side, is also well fortified.

HÜEN or WEEEN,

Was possess'd by the *Danes* till 1658. It lies in the middle of the Sound, betwixt *Landscron*

Handfiron and *Copenhagen*. All Strangers and Seafaring People call it the *Scarles* Island. It is not above 7 English Miles in Circumference, but one of the best Spots of Ground that can be seen, there being no barren Place in it: It produces great Plenty of Wheat, Rye, and other Grain, and good Fruit. They have all sorts of Cattle, and pay the King Yearly 800 Crowns. In 1776, *Frederick II.* King of Denmark, gave this Island to *Tycho Brahe* for his Life, that he might build an Observatory there for his Astronomical Observations. He allow'd him also a Sum of Money, and a Pension of 2000 Crowns per Annum. In 4 Years time, he finished the Castle of *Uraniburg* in the middle of the Island, which was a magnificent Building, with commodious Apartments: His Machines and Instruments were numerous and fine; and he had a Printing-House, a Mill for making Paper, and Laboratories for Chymical Operations, with Gardens, Fish-Ponds, and other Ornaments, which made it a charming Place. He also built *Stellenburg*, on the W. of *Uraniburg*, with all Conveniencies for Astronomical Observations. King *James I.* in his Voyage to Denmark to marry his Queen, honour'd him with a Visit; but the Court of Denmark turning his Enemies, he was oblig'd to leave his ungrateful Country. Whence he came to *Rosbeck*, but was invited to settle in *Prague* by the Emperor *Rodolph II.* who gave him a Pension of 3000 Gold Ducats, where he died in 1601. *Christian IV.* of Denmark, gave those fine Buildings to a Mistress of his, who destroy'd them; so that the Place of them now is scarcely to be known.

The Isles *Hanno* and *Malgormen* on the Coasts of *Bleking* are not very considerable.

VI. FINLAND,

Is call'd by Authors *Finnonia*, *Finnia*, and *Finnigia*, is extended from the Gulph of *Bothnia* on the W. to *Misewy* on the E. from which it is separated by the Lakes *Onega* and *Ladoga*. On the N. it has *Lapland*, and on the S. the *Baltick* and the Gulph of *Finland*. They had Kings of their own,

till they were conquer'd by *St. Erick*, King of Sweden, as has been said already. About the Time of the Death of *John King of Sweden*, 100000 *Misewites* invaded this Country in Winter; but were so warmly ply'd by 600 *Finlanders* only, who came with their Pattens upon the Snow, in which the *Misewites* could not move, that very few of this great Number return'd. This vast Country is barren every where, except on the Sea-Coast. It is divided into 6 Provinces, viz. *Finland Proper*, *Eastern Bothnia*, *Nyland*, *Tawasthus*, *Garelia*, and *Savolax*.

FINLAND PROPER,

HAS the Gulph of *Bothnia* on the W. *Eastern Bothnia* on the N. *Tawasthus* on the E. *Nyland* on the S. E. and the Gulph of *Finland* on the S. This Province is fruitful in Grain, and has some Mines of Copper and Iron.

Abo, the Capital, lies on the Mouth of the River *Åvaxjoki*. It has been a Bishop's See since 1198. Its University was founded in 1640, by Queen *Christina*. It has a good Port, which occasions some Trade there, and lies 100 English Miles N. from *Ravel*, and 144 E. from *Stockholm*.

Björnburg, 80 English Miles N. from *Abo*, on the Mouth of the River *Cumo*, where it falls into the Gulph of *Bothnia*, is a small Town of some Trade.

Other Towns are, 1. *Rawo*. 2. *Musko*. 3. *Nykyrsky*. 4. *Wirmo*. 5. *Haliko*. 6. *Biermo*.

EASTERN BOTHNIA, or CAJANIA,

LIES over against *West Bothnia*, from which it is separated by the Gulph of that Name; has on the N. *Kimi-Lapmark*, on the E. *Savolax* and *Garelia*, *Finland* and *Tawasthus* on the S. It is 300 English Miles in Length, and has many Rivers, that fall into the Gulph of *Bothnia*.

Cajenburg is the chief Town, and lies on the E. Side of a great Lake called *Uasanki*, in Lat. 65, and Long. 45.

Other Towns are, 1. *Ula* or *Ulaburg*. 2. *Curleby*. 3. *Nycarleby*. 4. *Wasa*.

NYLAND, or NEWLAND.

IT was so call'd, because its ancient Inhabitants being driven out, new Colonies were sent to plant here. It has good Pasture, and breeds large Oxen, Horses, and other Cattle. It has *Tavasthus* to the N. the Gulph of *Finland* on the S. and *Carelia* on the E.

The Towns here are, 1. *Borg* or *Borgo*, 60 English Miles N. from *Revel*, and 100 W. from *Wibourg* in *Carelia*, on the Gulph of *Finland*. 2. *Helsingfort*, W. from *Borgo*, with a large Port. 3. *Rasibourg*, W. from *Helsingfort*, on the same Gulph.

TAVASTHUS,

IS an Inland Province, has *East Bothnia* on the N. *Nyland* on the S. *Finland* on the W. and *Savolax* on the E. It has nothing remarkable but Mines of Iron.

Tavasthus, anciently call'd *Gronenburg*, 90 Miles N. E. from *Abo*, is the chief Town: It is situated in the middle of unpassable Morasses. In 1250, *Binger Jerl* built a Fort here, to bridle the *Tavastians*. This Town lies near the great Lake *Pejende*, that has much Iron at the bottom, which the Inhabitants take out for their Use.

CARELIA,

HAS the Gulph of *Finland* on the S. the Lake *Onega* on the E. *Savolax* on the N. and *Nyland* on the W. The Possession of this Province has been the Cause of great Wars betwixt *Muscovy* and *Sweden*. In 1292, *Birger King* of *Sweden* made himself Master of it. In 1338, another King gave back *Kexholm*, in the E. Part of this Country, to the Czar; but in 1617, *Gustavus Adolphus* retook it all again.

Wibourg is the chief Town of the Province, and has a Bishop, Suffragan to the Archbishop of *Upsal*. It is 45 Miles S. from *Kexholm*, as many W. from the Lake *Ladoga*, and 106 N. from *Narva*. It has a very strong Citadel, which the *Muscovites* have frequently besieg'd in vain with an Army of 100000 Men. It has a good Port, and a tolerable Trade.

Kexholm, which the *Muscovites* call *Careli-gorod*, or the Fort of *Carelia*, lies on the W. of the Lake *Ladoga*, where the River *Vonen* falls into it. This Lake overflows the Country for 20 Miles Northward; so that the Corn grows only on the Tops of Mountains or Hills; but the Inhabitants of this City and the adjoining Country live more by Fishing and Hunting than by Husbandry. The Lat. of this Town is 62. Long. 50. It has a strong Citadel. In 1558, the Constable *La Gardie* took it from the *Muscovites*. Near this Place some Rubies are found.

SAVOLAX,

IS a Desert Country, full of Lakes and Woods, has *Carelia* on the S. *Kexholm* on the E. *Tavastia* on the W.

Nyflot, N. from *Kexholm*, on a Lake, is the principal Place of this Province.

VII. INGRIA,

LIES on the bottom of the Gulph of *Finland*: It belong'd formerly to *Muscovy*. In 1609, *Iwan Basilowitz* being in Danger of losing his whole Empire in a War with *Sigismund* of *Poland*, was obliged to seek the Assistance of *Charles IX.* King of *Sweden*, and promis'd him the Province of *Carelia*; but after he was delivered from his Danger, he broke his Promise. To revenge this Affront, *Gustavus Adolphus* made War upon the *Muscovites*, and obliged *Michael Fedorowitz* to yield to *Sweden* for ever, by the Treaty at *Stockholm* in 1618, *Carelia*, *Kexholm*, and the greatest Part of *Ingria*; which was confirm'd in 1661, by a Treaty betwixt *Charles XI.* and *Alexis Michaelowitz*. This Province is barren, but considerable for being a good Frontier against the *Muscovites*, and for the hunting of *Elks* twice a Year, who pass the River *Nierva* for *Carelia* in the Spring, and in Autumn they return from *Carelia* to *Muscovy* thro' this Province. It has *Novogorod Weliki*, a *Russian* Province, on the E. the Lake *Ladoga* on the N. E. *Carelia* on the N. the Gulph of *Finland* on the W. and *Livonia* on the S. W.

Nottaburg,

Notteburg, which the *Muscovites* call *Oresca*, lies on the rapid and broad River *Niewa*, in Lat. 60, Long. 50, which contributes much to make this City impregnable. The Fortifications are strong, and of a large Extent. In 1614, *Gustavus Adolphus* sat down before it, and could not take it by Force; but the Garrison was obliged to capitulate, because they were plagued with a Disease of Boils or Warts in their Mouths, which hinder'd their eating. Since the *Swedes* became Masters of it, they have improv'd the Fortifications.

Capria, lies on the Gulph of *Finland*, and is a very strong, tho' a small Town.

Juanogorod, lies near the Confines of *Swedish Livonia*, not far from *Narva*, from which it is parted by a rapid River that runs out of the Lake *Peipus*, and falls into the *Finnish Gulph*: It is surrounded so with Rocks, that the Tops of the Houses are only to be seen. In 1700, the *Muscovites* besieg'd it, but could not take it.

Jamogorod, lies on the River *Laga* S. S. E. from *Juanogorod*, and is naturally strong.

Other Towns here are, 1. *Orlin*. 2. *Sanniz*. 3. *Derp*.

VIII. SWEDISH LIVONIA,

HAS *Courland* on the S. W. the Gulph of *Riga* on the W. that of *Finland* on the N. *Lithuania* on the S. *Muscovy* on the E. and *Ingria* on the N. E. and formerly comprehended *Courland*. It is 240 English Miles from N. to S. and 180 from W. to E. *Cluverius* makes it too large, by joining *Courland* to it, which belongs to its own Duke. Some make the *Levones* of *Ptolomy* the first Inhabitants of this Country; but it is more probable, that the *Estii* possessed it. *Hartknock* says, That the Provinces of *Letten*, *Courland*, and *Semigallia*, were inhabited by the *Venedi*. He thinks the *Sinns Venedicus*, and the Towns of *Wenden* in *Letten*, and *Windau* in *Courland*, prove this.

The Soil is very fruitful, and in some Places produces 30 for one. The Country is plain. They have a particular Way of Husbandry, which is, That wherever there is a Valley, they ditch it up, make the Water overflow it to a considerable Depth, and let it stand for 3 or more Years: Du-

ring this Time, they stock it with Fish, and then drein it. By this means the Ground becomes soft and fat, and requires but one easie Ploughing. The first and second Year they sow Barley, and the third Year Oats. Thus they never fail of having great Crops. They also improve their Ground by burning great Forrests, the Ashes of which are much better than Dung. They have great Plenty of Cattle and Fowl.

The Product is Plenty of Wheat, Barley, Rye, Oats, and Linseed, of which they export many Ship-loads, and 'tis reckon'd the best of any in *Europe*. They have also Flax, Hemp, Honey, Wax, Tallow, Cattle, Horses, Butter, Tar, Masts, Planks, Deals, all sorts of Timber, Pot-Ashes, Yarn, Hops, Goat-Skins, &c.

The Air is clear and healthy, tho' the Winter be long. The Natives dry their Corn in the Straw by hot Stoves, which makes it very hard, and not so liable to Corruption as other Corn; so that it will keep more than 20 Years: For this Reason the *Hollanders* prefer it to all other, and export it to the *East-Indies*. The Natives sow the Fields with this hard Grain, which yields a great Product. The Sea, Rivers, and Lakes, abound with Fish, of which they reckon above 50 Sorts.

Of the Religion, Ancient State, &c. of this Country.

THE Inhabitants are Pagans, and almost Savages; and till the Knights of the Sword settled here, and taught them better, they threw away the Wax after they had got the Honey.

About 1158, when *Frederick Barbarossa* was Emperor, several Ships belonging to *Bremen*, bound for *Wibye* in the Isle of *Gothland*, then a Town of great Trade, were driven by Stress of Weather into the Gulph of *Riga*; and finding this Country very fit for Trade, they sent Colonies hither, with Monks, and resolv'd to settle Religion here, either by Perswasion or Force; for the Natives then worship'd divers sorts of Beasts; but those dragooning Methods had not the Success propos'd; for after they had been constrain'd to be baptiz'd, they immediately ran to Rivers to wash away their Baptism.

Meinhard

Meinhard was their first Bishop, and was succeeded by *Berold*, who endeavouring to make Profelytes by Force of Arms, was killed, and many Christians with him, in 1186, and was succeeded by *Albert*, a Canon of *Bremen*, who built *Riga*. He held *Livonia* as a Fief of the Empire; upon which he got Liberty to coin Money, and Authority to institute, in 1204, an Order of German Knights, who were call'd the *Livonian Order*, or *Knights of the Short Sword*, according to the Rules of the *Knights Templars*. *Innocent III.* confirmed this Order. Their Habit was a white Cloak, with two *Swords Gules* in *Sautoir*, and a Star of the same Colour. They had a 3d Part allow'd them of what they should conquer from the Infidels. Tho' those Knights behav'd themselves bravely enough, yet the Pagans were too hard for them, and killed *Koburg Sobank*, their second and last Great Master, in a Battle in 1288. So that after this Order had continued 35 Years, they were forc'd to unite with the Order of *St. Mary of Jerusalem*, or the *Prussian Knights*. This Union was solemniz'd at *Rome* the same Year in the Pope's Presence. After this they fought against the *Courlanders*, because they would not be baptiz'd, and defeated them; and thus *Courland* and *Semigallia* were oblig'd to yield to the Order. Their Heer Master *Hans Duke of Brunswick* fought many Battles against the *Courlanders*, *Lithuanians*, and *Samogitians*, who had revolted from Christianity, in which many on both sides were slain. Those Engagements weaken'd the Order to that degree, that they were forc'd to be recruited by many new Croisades, till at last, in 1287, they brought those People to submit.

After the Order had Peace abroad, they began to make War upon the Bishop of *Livonia*, and abandon'd themselves to all manner of Vice. This War lasted from 1291 to 1341; in which both of them us'd the Assistance of Pagans. In one Year they had 9 pitch'd Battels. One Reason of this War was, because the Archbishop and Chapter would not wear Habits like those of the Order; who at last got the better, and dispossest the Archbishop of all his Towns except *Riga*. In 1350, they slew 10000 *Muscovites* in a Battle. In 1351, they kill'd

8000 *Lithuanians*, and had a War of 84 Years with them; during which there were left on the Side of the Order, 28 Knights of the highest Nobility, 49 of the lesser Nobility, 11000 Gentlemen, 4000 Citizens, 15000 Strangers, and 16000 Peasants. In 1394, the Archbishop join'd the Pagans of *Lithuania*, *Russia*, and *Samogitia*, and in a bloody Battle, both Armies were almost destroy'd.

The Order, when in the Height of their Prosperity, were encourag'd to break the Peace with the *Muscovites*. Upon which *Uladiasson Jagello* march'd against them with an Army of 150000 Men, and the Order had only 83000. They fought at *Tannenberg*, where the *Poles* slew 40000 belonging to the Knights, with all their Generals, and the Master of the Order himself, with the loss of 60000 of their own Men; but *Jagello* was so weaken'd with this dear-bought Victory, that he was oblig'd to seek Peace. After which, the Order became scandalously vitious. In 1498, the *Muscovites* invaded *Livonia*. To revenge this, *Walter Plettenberg*, their Great Master, march'd against their Army of 100000, and with 12000 Men only, kill'd 40000, with the loss of 400 of his Men. *Leunclavius* mentions this Victory. *Plettenberg*, in 1521, for a Sum of Money, was made Independent of the *Turonick Order*. The Emperor *Charles V.* made him a Prince of the Empire; he favour'd the Reformation, and died in 1535. About this Time, the People of *Livonia* declar'd for the Protestant Religion, and despis'd the Threats of *Charles V.*

In 1558 and 1559, *Ivan Bazilowitz* invaded *Livonia*, and haras'd the Country after a very barbarous Manner; and the *Lithuanians* not being able to make head against him, some of them, as *Courland*, &c. sought the Protection of *Poland*; and the Town of *Revel*, with Part of *Esthonia*, put themselves under the Protection of *Erick the 14th of Sweden* in 1560, as has been formerly mention'd. This was the Ground of long Wars betwixt *Poland* and *Sweden*, till *Gustavus Adolphus* conquer'd almost all *Livonia*; in which the *Swedes* were left in Possession by the Peace of *Oliva*.

The Manners, Customs, &c. of the Inhabitants.

THE Inhabitants are Lutherans, but tolerate the *Russians* and Papists. The Bible is lately translated into the *Lettish* Tongue among them. The Earl of *Carlsruhe* and the Duke of *Holstein's* Ambassadors say, They have little more than the Name of Christianity, and are intirely ignorant of the Principles of it. They have little or no Notion of a future Life, have still a Hanking after their old Paganism and Idolatry, and offer Sacrifice on the Top of some Hill, or in some Forrest. Sorcery is hereditary there. When they kill a Beast, they cast a Piece of it away; and when they brew, they cast some of it on the Ground, which is a remainder of the old Pagan Sacrifices. If their Children be sick within 6 Weeks of their Baptism, they re-baptize them, and attribute it to the Child's having got an improper Name: But they conceal this Custom, for fear of the Magistrate.

The Peasants are Slaves, and are not allow'd to purchase any Lands. When they venture to cut down Trees, or sow Wheat, and sell it underhand, if they be caught, they are sure to be lash'd with a Whip or Holly-Rod till the Blood follows. They are allow'd no Money, and if it be known they have any, Officers are appointed to take it from them. The late Kings of *Sweden* have order'd them to be treated with more Humanity, and the last King of *Sweden* humbled their Nobility. The Natives are of a strong Constitution, and fit for Hardships, but as brutish as the *Muscovites*.

Their Ceremonies of Marriage are peculiar to themselves. When a Peasant marries a Maid of another Town, he makes her ride behind him, and before him rides a Bag-piper, and two of his Friends with naked Swords, who give two Strokes cross the Door of the Bridegroom's House, and put one of the Swords in a Beam over the Bridegroom's Head, to prevent Charms. For the same Reason the Bride scatters many Pieces of red Stuff on the High-Ways, and on the Graves of unbaptiz'd Children. The Bride sits at Table with a Veil over her Face, and when the Guests are seated,

the Bridegroom and the rise and go to Bed and return in two Hours; and the Feast is concluded with Dancing and Drinking till they all drop down upon the Floor.

Livonia is divided into *Esthonia* and *Letten*.

LET TEN, or LETTONIA,

Is on the S. of *Livonia*; the chief Town is *Riga*, on the River *Dwina*, which, for about 500 *English* Miles, brings the best Products of *Muscovy*, *Poland*, *Lithuania*, and *Semigallia*, to this Place. The River here is three times broader than the *Thames* at *London*, but not very deep. On the Side towards *Poland*, the River is Defence enough to the Town, because the *Poles* have seldom Foot-Soldiers and Artillery sufficient for a Siege. On the Side towards *Moscow*, 'tis fortified according to the modern Way, has a fine new built Citadel, and is one of the greatest, best built, and most populous Towns on the *Baltick*, and has a great Traffick with the *Hans-Towns*, *English* and *Dutch*. In 1611, *Gustavus Adolphus* took this City from the *Poles*. It is 36 *English* Miles N. from *Mittaw*, 120 S. from *Revel*, 100 N. W. from *Dunemburg*, 160 N. E. from *Koningsberg*, and 200 N. from *Vilna*, in Lat. 57. Long 42.

Dunemond, is a strong Fortrefs at the Mouth of the *Dwina*, where it falls into the Gulph of *Riga* or *Livonia*, and commands the Entrance of it. In 1700, the *Saxons* took and ruin'd it; but the *Swedes* retook and rebuilt it. It is surrounded with unpassable Morasses.

Kockenhausen, is another Fortrefs on the *Dwina*, S. from *Riga*. In 1700, the *Saxons* took and destroy'd it; but it was also rebuilt by the *Swedes* a little Time after.

Wenden, is a little Town N. E. from *Riga*, and suffered much in the late *Swedish* and *Muscovite* Wars.

The Isle *Oesel*, which some think is the *Oserissa* of *Pliny*, lies in the Gulph of *Riga*. The *Danes* yielded it to *Sweden* in 1645, by the Peace of *Brombro*. *Arnsbourg* is the chief Town, has a strong Fortrefs, and lies on the N. Side of the Island.

Sonneberg, another Fortrefs, lies on the W. Side of the Island.

The Isle of *Dagbo*, lies N. from *Oesel*, and is separated from it by a Canal, which joins the *Baltick* and the Gulph of *Riga*. It was given to the *Swedes* by the Peace of *Bromsbro*. *Dageroot* and *Paden* are good Castles on the S. Side of that Isle.

ESTHONIA,

Is on the N. of *Livonia*, and divided into 7 Circles or Parts, viz. *Harnland*, *Wikesland*, *Esthonia Proper*, *Havenland*, *Wirland*, *Alentaken*, and *Oldempo*.

Harnland is the most Northern Part of *Livonia*, and *Revel* is the Capital, in Lat. 59. Long. 42. It was built in 1228, by *Waldemar II.* King of *Denmark*, on the Gulph of *Finland*. It has an excellent Port, and a large and commodious Station for Ships. It was one of the *Hans-Towns* above 300 Years, and has a good Trade, which makes it very rich. The Fortifications are strong. The Citadel is built on a Rock, steep on all Sides except on that next the Town. A Superintendent under the Suffragan of *Riga* resides here. In 1557, the *Muscovites*, with an Army of 100000 Men, besieged it for 6 Months, but in vain.

Wikesland is extended along the Coast of the Gulph of *Riga*. *Hopfel* is the Capital, and lies S. W. from *Revel*. *Lehal*, S. from *Hopfel*, on the same Gulph, is a little Town, but fortified with a good Castle.

Pernau has sorry Fortifications; but the Citadel is strong. This City has a great Trade in Corn with the *Dutch*, and has a good Port. Other Towns are, *Fellin*, on the River *Pernau*, E. from *Pernau*; *Witsenfein*, N. from *Fellin*; *Wesenburg*, E. from *Revel*. In 1700, the King of *Sweden* laid up Magazines here for his Expedition into *Livonia*.

Nerva, or *Narva*, a Place of great Importance, on a River of the same Name, is famous for the Victory that *Charles XII.* of *Sweden* obtained over the *Muscovites* near it on the 19th of *November*, 1700. and has a considerable Trade.

Dorpt, or *Juriegorod*, is on the River *Embeck*, on the S. Side of the Lake *Peipus*. This Town is small, but very ancient. It has a strong Castle, famous for the Sieges it has suffer'd by the *Teutonic Knights*, the *Muscovites*, *Poles* and *Swedes*. The last took it

in 1625. In 1632, *Gustavus Adolphus* founded an University here.

Of LAPLAND.

Swedish Lapland has *East Bothnia* and *Cajania* on the S. *Muscovite Lapland* on the E. *Norwegian Lapland* on the N. and *Norway* on the W.

Both the Name and Country is unknown to the ancient Geographers, who involv'd all those Northern Places in Darkness and Barrenness, and planted 'em with Monsters, as *Cyclopes*, *Cyncephales*, &c. *Saxo Grammaticus*, who liv'd about 1190, is the first that speaks of *Lappia*. The Inhabitants are from *Finland*, and it is probable had been banish'd thence, for the Word *Lapp* signifies so much; upon which the modern *Laplanders* take it as an Affront to be called *Lapps*. The ancient Northern Historians call'd this Place *Biarmia*. No Man can be positive as to the Extent of *Lapland*, because most of the Maps contradict each other; and that in *Scheffer's History of Lapland* is erroneous, because it makes *Torneo* in *Bothnia* in Lat. 67. whereas it is but in 65. 43 Min.

Of the AIR, SOIL, &c.

THE most Southerly Parts of *Lapland* are without the Polar Circle; so that the Sun, when in the Tropick of *Capricorn*, is above 90 Degrees from their Zenith, and about that Time never appears above the Horizon. The most Northerly Places have a Day of one Month long in Summer, and a Night of the same Length in Winter; and because the Sun is then long above their Horizon in Summer, its Heat is great, which speedily ripens the Product of the Country. The Air is pure and healthful; but they have frequently great Winds, which blow up the Trees that grow on the Tops of Mountains by the Roots; and Travellers are oblig'd, if surpris'd by those Tempests, to lie flat on the Ground till it be over, or to shelter themselves in the Cavities of Rocks. It is needless to speak of the cold Snow and Frost in this Country in Winter, for it must necessarily be conceiv'd to be excessive.

The

The Soil produces abundance of Pot-
Herbs, Flowers, and Shrubs. They have
Plenty of Berries of an excellent Taste, as
a kind of Bramble with Leaves like those
of Strawberries; another with yellow Ber-
ries, the thorny red and white Raspberries,
a kind of wild red Currans, as also white
and black Currans, Strawberries of many
sorts, a kind of Oxberry, a sort of Water
Calthorp, a white Gooseberry, a kind of
Sweet-briar; another sort with Fruits, large
like Pears; a kind of thorny wild Medlar
Tree, the common Juniper, another of the
same kind, with thick and broad Leaves;
a sort of wild Pear Tree, two kinds of Sar-
vice Trees, a wild Cherry Tree, a sort of
wild Apple Tree, Angelica, Sorrel, and se-
veral sorts of Moss, as *Rudbeck* informs us.

Their BEASTS,

ARE Stags, Bears, Wolves, Lynxes,
Foxes of several Colours, Squirrels,
Ermins, Martens, Haws, Glittens, Beavers,
Otters, Elks that come from *Lithuania*, and
therefore are challeng'd to belong to the
K. of *Sweden*; Rain-Deer: This Creature is
less than a Stag; his Colour inclines to an
Ash; but his Haunches, and under his Bel-
ly and Shoulders, are white: They have
long and rough Hair under their Necks:
Their Feet are thick, short, and cleft, re-
sembling those of Bulls. When they walk,
their Joints make a Noise like that of the
clashing of Flints: They have two Horns,
with two Branches each; the larger Branch
bends backward, and the lesser forward:
They feed on Moss. There is both a
wild and tame kind of them. Those be-
got betwixt a tame Doe and a wild Buck,
are the strongest and best siz'd: Their Milk
is nourishing and fat, and makes good
Cheese. This Creature is peculiar to the
Laplanders, and not known elsewhere, as
Schefferus says, which must be meant as to
that sort only. They have good Hunting-
Dogs, about a Foot high, of a bright ruddy
Colour: Their Tails turn up like our
Figs, and their Ears stand upright like those
of Wolves.

Their BIRDS.

THEY have Swans, Geese, Ducks, Lap-
wings, Snipes, all sorts of Water-Fowl,
Heath-Cocks, Stock-Doves, Wood-Cocks,
and Partridges. They have also Fowls not
to be seen elsewhere; as, 1. The Kniper, a
kind of Snipe, black on the Head, Back, and
Wings, but the Breast and Belly are white:
It has a red long Bill set with Teeth, red
short Feet, resembling those of Water-
Fowl. 2. The Loom: It is never seen on
the Ground, but either in the Water or
flying. Their Partridges are as white as
Snow in Winter. Their Feet are rough
like a Hare's; and instead of Feathers, they
have a sort of Wool.

Of their MOUNTAINS.

ON the W. they have the *Serco* of *Pliny*,
now the *Defrine* Mountains, which for
Extent are not inferior to the *Riphaean*
Mountains, and in some Places very high:
The Tops of them are cover'd either with
Snow, Sand, or Stone. All the Mountains
in *Lapland* are only Branches of them. The
Swedes call all Mountains *Fial*, as the Nor-
thern *English* and the *Scots* call them *Fells*.
These Mountains begin about *Jemtland*,
and from thence reach 400 *English* Miles
N. till they come to a Bay of the Frozen
Sea, call'd *Tisul*.

Of their MINES.

IN 1635, during Queen *Christina's* Reign,
a Silver Mine was discovered in *Nasafiel*,
in the Lapmark of *Pitha*, not far from the
Mountains of *Damfiel*, that separate *Lap-
land* from *Norway*. This Mine was spoil'd
in 1658, during the *Danish* Wars, by one
Van Anan, Governor of *Norway*. The se-
cond Silver Mine was discovered in 1660,
in the Lapmark of *Lulah*, above 120 *English*
Miles from *Lulah*, and 30 from *Raedstad*, a
Village of *Norway*. The chief Inconve-
nience attending it is the want of Wood;

so that they carry the Oar 5 Leagues. This Mine is still in being. There are many other Mines here; but some of them in unaccessible Places. The *Laplanders* know where there are many rich ones; but are unwilling to discover them, lest they should be forced to work in them, which does not suit with their lazy Temper. In 1655, a rich Copper Mine was discover'd in the Lapmark of *Torna*, where 100 lb. of Oar yields 40. In 1668, another was found 3 Leagues N. from the former. One of Iron was discover'd in 1640, near *Kengis*, where there is vast Quantities of it, and extream fine. *Charles XIth's* Mathematicians saw both those Mines in their Travels to *Lapland*, and say, That the Metal is carried with great Charge and Danger by rapid Rivers, and dangerous Cataracts, to the Gulph of *Bothnia*. Another Mine was lately discover'd in the same Lapmark, 100 lb. of the Oar of which yields 150 lb. of Copper.

Of their STONES, JEWELS, and PEARLS.

They have no Free-stone, but have others that bear the Impression of Animals, Trees, &c. and some that are shap'd like Counters. The *Laplanders* make Gods of 'em. They have abundance of Chrystal, which, if well polish'd and set, resembles Diamonds. *Beurais* speaks of Amethysts there; but they are flat and full of Clouds; and they have Topazes of a pale yellow. All their Precious Stones are much worse than those found elsewhere; and their Pearls are of a bad Water, and not comparable to the Oriental.

Of their RIVERS, LAKES, &c.

Most of them rise from the Mountains of *Norway*, and fall into the Gulph of *Bothnia*. The River *Uma* is increas'd by the Rivers *Vindilor*, *Pitha*, and *Skiofsre*. *Lahla* and *Kima* are considerable for their Bigness, and are augmented in their Course by vast Numbers of lesser ones. *Torna* receives 29 Rivers, one of which is a Swedish Mile

broad, as *Charles XIth's* Mathematicians inform us. When the Snow melts, those Rivers overflow their Banks, and all of 'em have frightful Cataracts. *Lapland* has also many Lakes, which, as also the Rivers, abound with Fish.

Of the Inhabitants, their Manners and Customs.

They are generally of a low Stature, of about 4 Foot and a half high: They stoop for most part, which some think is occasion'd by the Lowness of their Cottages: Their Complexion is swarthy, which is thought to be partly from the Coldness of the Air, and the constant Smoak of their low Huts. They are flat Fac'd, have broad and low Noses, hollow and bear'd Eyes, wide Mouths, black, straight and thin Hair, broad Breasts, slender Waists, and small Legs, but are swift, nimble, and so strong, that a *Norwegian* is not able to bend their Bows above one half. They are good Divers. 'Tis observ'd of them, That when they are transported to more moderate Climates, they seldom live long; tho' in their own Country they live to a good Age. They are great Cowards; therefore the *Swedes* never employ them in their Wars. Since their Converse with Foreigners, they have learn'd to cheat; but they are charitable to the Poor, and hospitable to Strangers.

The *Laplanders* on the Mountains live on the Flesh and Milk of their Rain-Deer: They also buy Cows and Sheep from *Norway*, and kill them against Winter. They hang their Rain-Deer's Flesh to dry in the Cold, as others do by Fire and Heat; and they have Plenty of Cheese.

Those who dwell in Woods and low Grounds feed on Venison and Fish. They have no Bread nor Salt; but instead of the latter, use the inner Rind of Pine-Tree dry'd: They sometimes pound their Fish to a Powder, which is their Flower. Their Confections are of Bramble-Berries, that they think good against the Scurvy, and Angelica, which they broil after the outer Rind is peel'd off. Their Drink is Water, of which in Winter they have always a Kettle

Kettle over the Fire; and they also drink the Broth of Fish and Flesh boil'd together. In Summer, they wear a close Garment, reaching to the middle of their Leg, and gird them with Belts. They have no Linen, and their Clothes are made of coarse Wool, of a light grey Colour, without dying. The richer Sort have their Clothes of different Colours, and delight most in red. They hang at their Girdle a *Norway Knife*, and a Pouch, which keeps their Flint and Matches, Tobacco, and other odd Things. They wear Brass Rings and Chains on their Girdle. Their Night-Caps are of the Skins of the Bird Loom, with the Feathers on. Their Shoes are of the Skin of Rain-Deer, with the Hair outwards; sow'd at bottom, so as the Hair of one Part of the Sole lies forward, and the other backward; for if it should run all one way, it would be too slippery. In Winter, their Clothes are of the Skins of Rain-Deer, with the Hair inward. Their Caps, Boors and Gloves, are of the same. The Women's Apparel is not much different from that of the Men. They hang to their Girdles many Chains, Toys, Rings, Knives, with a Needle-Case, and other Things, sometimes weighing 20 Pound Weight. Their Thread is made of the Nerves of Rain-Deer, and they lie in Winter on their Skins. In Summer, they cover themselves at Nights, Face and all, with Blankets of coarse Wool, to defend them from the Gnats.

Formerly they wander'd about, and had no fix'd Habitation; but in 1602, *Charles IX.* of Sweden assign'd them their respective Abodes; but they still remove from Place to Place, as they find most fit for Pasture and Fishing within their own Bounds.

Their Huts are made of Pieces of Timber or Rafter's join'd together, and cover'd with Turf, or the Branches and Bark of Pine-Trees, and coarse Cloth. Some of their Houses are built upon Trees, to prevent their being overwhelm'd by Snow, or devour'd by Wild-Beasts. Their Huts have two Doors, at the lesser of which no Women must enter, because from thence the Men go to hunt, and look upon it as an ill Omen to meet a Woman. Their Store-houses are built on Trees, to secure their Provisions from Bears and other Wild-Beasts.

They have Days which they call Lucky and Unlucky in their Kalendar, and in the latter never go a hunting. In Summer, they pursue the Wild-Beasts with Dogs, and on Winter they follow their Tracks in the Snow with their Pattens or Scates. They kill the small Beasts with their Bows and Arrows, and the larger with Spears and Fire-Arms. They catch Ermins in Traps, as we do Mice, and sometimes they catch them with Dogs. They kill Squirrels, Martens and Sables, with blunt Darts, for fear of spoiling their Skins. They also kill Foxes, Beavers, &c. with Darts; but are careful to hit them, so as not to spoil their Skins. The Baron *Herberstein* says, they are the best Marks-men in the World. They sometimes use poisonous Baits; and they catch the wild Rain-Deer by letting out a tame Female, behind which the Huntsman hides himself, and shoots the wild ones. They dig Pits for larger sorts of Wild-Beasts, and have their own Fore-*rest Laws*; for if any catch a Wild-Beast in a Trap laid by another, he must give it to the Owner of the Snare or Trap; and he that first traces a Bear's-Den, has the Management of hunting him. They account the Flesh of this Beast the greatest Rarity imaginable. When they have caught a Bear, and return home, they are welcom'd by the Women, who spit chew'd Elder-Bark on their Faces, and there they are feasted for three Days. He that kills the Bear, is distinguish'd from the rest by Laces round his Cap, wrought with Tin Wire. When they kill any Fowl with a Gun, they pull two Feathers out of the left Wing, to appease the Anger of the God of the Fore-*rest*. One of their Skates is ordinarily as long as themselves, and the other is about a Foot shorter. They are fasten'd to their Feet by Withs, for which they have Holes on the upper Part. They put their Feet into the middle of the Skates, and use a long Pole, at the end of which there's a round Piece of Wood to hinder it from piercing too deep in the Snow, and run with great Swift-*ness* over it, as others do over Ice, without Weariness, and travel 60 Miles a Day with great Ease. Their Skates are cover'd with the rough Skins of Rain-Deer. The Hair is laid so as turn against the Snow, which

which prevents their falling backward; so that in this manner they can climb steep Mountains, and slide down again with all the Ease imaginable.

They make all their own Moveables and Boats, and fasten the Boards with Twigs, the Nerves of Rain-Deer, or the Roots of Trees twisted together like Ropes, and caulk 'em with Moss to keep out the Water. They are 6 Yards long, and $1\frac{1}{2}$ broad, and have sometimes 4 Oars. All of them make their own Sledges, which are shap'd like Boats, only they are flat behind, and not pointed as before: The Bottom is convex, that it may slide with the more Ease over the Snow. When they travel, they cover their Feet with Sea Calf-Skin, and lay Moss beneath them. They make Boxes of thin Birch Planks, and inlay them with Rain-Deer's Horns. They are dexterous at making Baskets of the Roots of Trees, slit in long thin Pieces, and twisted together, so as to hold Water on Occasion. The Swedes are very fond of those Baskets. The Laplanders make handsome Spoons of the Horns of Rain-Deer, and Moulds, in which they engrave Flowers and Birds, and cast Tin in them, with which they adorn their Girdles. The Men dress all the Meat. The Women are employ'd in making Clothes and Shoes, Harness for the Rain-Deer, spinning Thread, and in knitting the Fur of Hairs into Caps and Gloves, which are very soft and warm. They also draw Tin into Wire through a Horn with their Teeth, sometimes round, and sometimes half flat; and they cover their Thread with it for embroidering the Shapes of Beasts, Flowers, Stars, &c.

The Traces which tie the Rain-Deer to the Sledge are fasten'd about their Necks, go down by their Breasts through their fore and hind Legs, and are join'd to the Prow of the Sledge. The Reins are ty'd to their Horns, and held by the Traveller, who is tied in the Sledge as a Child in a Cradle, and has a Stick in his Hand to remove any Stone or Wood in his Way. He must balance the Sledge wsth his Body; for the Bottom being Semicircular, 'tis in Danger of being overfet. They hang Bells to the Trappings of the Rain-Deer, which please those Beasts very much. Before they set off, their Master, or those acquainted with

them, never fail to whisper something in their Ears. They travel frequently 48 English Miles in 10 Hours. The Laplanders are generally idle, never work but when forc'd by Necessity, and disdain all Foreigners.

Of their RELIGION.

BECAUSE this Nation has no ancient History, 'tis difficult to give an Account of their ancient Paganism, or to know if it was the same with what is now. Zeigler, who liv'd about the Time of the Reformation, thinks that Christianity was known among 'em before that Time. Others think, St. Erick, who liv'd above 500 Years ago, might introduce Christianity among them, Zeigler says, That in his Time, tho they had then heard of it, they hated it; but to please the Kings of Sweden, they did not openly declare against it.

Gustavus Erickson was the first who was any way successful in his Endeavours to establish Christianity among them; for bringing 'em immediately to depend on the Crown, he order'd them to meet at a certain Time of the Year to pay their Tribute to his Collectors, with whom he sent Ministers to teach them, and to baptize their Children; for till then they had no Churches nor Preachers. Gustavus Adolphus and Queen Christina founded Schools and Churches among them, and appointed Salaries for that End. Gustavus Adolphus order'd likewise some of the most useful Books to be translated out of the Swedish into the Lapland Tongue, which were the first that ever appear'd in that Language. In Queen Christina's Time, the Psalms of David, the Proverbs of Solomon, Ecclesiastes, Luther's Catechism, Sacred Hymns, and other Books of Devotion, were translated. More Books were also translated afterwards. And that they might be encouraged to send their Children to School, an Annual Revenue was allotted to maintain the Scholars both in Viſuals and Clothes. By this means some of the Laplanders became Preachers, which contributed much to the Improvement of Christian Knowledge there; for before that Time, all their Sermons were in the Swedish Tongue, of which the Laplanders knew little.

*Of the Reminders of Paganism
among them.*

There are still such considerable Remains of Paganism, as encline many Authors to believe that they never heartily embrac'd Christianity. The *Laplenders* plead the Authority of their Ancestors as a sufficient Reason to justify their Practices. The great Distance of Churches is us'd by them as an Excuse for their not coming to Worship; and they make heavy Complaints against the Covetousness of their Clergy. They think many Days of the Year unlucky, and will undertake no manner of Business upon them. If they meet in a Morning with such a Beast or Bird as they reckon a bad Omen, they return to their Huts, and don't stir abroad that Day. They don't believe the Resurrection, and worship their Idols and Christ promiscuously, and with the same manner of Worship, in which they are uniform, tho' they give their Idols various Names in different Places. They believe there are Fairies that wander about among Rocks, Mountains, Rivers and Lakes, and give them also a share of their Devotion. They own one Supreme God, whom they call with Thunder-bolts: They make the Rainbow his Bow, and have the same Notion of him that the old Pagans had of their *Jupiter*. They have another Subordinate God, to whom they acknowledge they owe all the Blessings of Life, and never fail to worship him. The Sun, whom they call *Baiver*, is another of their Divinities, because of his Influence on the Bodies of Men and Beasts. They have Temples and Images consecrated to each of their Gods. Their Idols are either the Trunks of Trees rudely carv'd, or of Stone. One of those is preserv'd in the Royal Cabinet of Antiquities at *Upsal*. All their Women are excluded from Worship; and they consult their Drum, whether the Sacrifice they intend to offer be acceptable; and they anoint the Idol with the Heart-blood of the Sacrifice: And when they cannot reach the Top of a Mountain consecrated to *Storjunker*, one of their Deities, they dip a Stone in the Blood of the Sacrifice, throw it up to the

Mountain, and so conclude their Devotion; and sometimes they strow Branches of Birch and Pine about their Images.

Of their MAGICK.

This Country has always been remarkable for that Diabolical Art: They excuse themselves, alledging it necessary for them to use Enchantments, to prevent their being hurt by others. Parents and Masters here teach young Children those Devilish Arts, and bequeath to them, as Part of their Inheritance, such Spirits as they suppose they have found serviceable to themselves. Each Family has their own Demons, and some of them foresee Things to come against their Will. Sometimes Demons appear to them in the Woods, and teach 'em a certain Song, that they must never forget, and they always appear to them for their Service when that Song is sung.

Their Drum is the most usual Instrument for Magick, and is made of the hollow Trunk of a large Pine, Fir, or Birch Tree, that grow in particular Places, or the Skin that covers it. They paint with the Juice of an Alder-Tree several red Figures with the Names of their Gods, the Beasts they hunt in the Woods, Birds, Fishes, Rivers, Lakes, &c. and with their Pagan Gods they paint also the Persons of the Trinity, and such other Figures as they think suit their Occasions.

When they use this Drum, they have an Index and a Hammer: The first is a Bunch of Rings made of Metal, and they beat the Drum with the Hammer, which puts the Rings in motion; and when they touch such and such Figures, they take it as a Determination of the Event of the Things they enquire about, and of the Expediency and good Success of their Undertakings. He that beats the Drum, and all that are present, must then kneel, and no Woman must touch the Drum. When the Drummer beats, he mutters some Charms, falls into a Trance, and continues in it answerable to the Distance of the Place he is to bring an Account from. During this Trance, all that are present must sing, and when he recovers, he gives them an Account of all their Questions as to the Health of their
absent

absent Friends, &c. and to convince them of the Truth of what he says, he sometimes brings a Ring, Knife or Shoe, &c. from the Place. When the Rings go about according to the Course of the Sun, they promise themselves Success in their Hunting, Fishing, &c. and if otherwise, they look for bad Luck.

They also tie Knots, by which they pretend to make the Winds favourable or cross to Seafaring Men. From the Voyage undertaken by the Company erected at *Copenhagen* in 1647, by *Frederick III.* of *Denmark*, we have this Account of these Wind-Merchants: They sent a Boat ashore to fetch the most noted Necromancer of the Place, who told them that he could not afford them Wind to the North-Cape, because his Command reached no further than the Cape of *Roucella*; and for 10 Crowns he sold them a Wind to that Cape, in a Piece of Linnen-Cloth tied with three Knots. When the Master of the Ship untied the first Knot, they had a fine Gale from E. S. E. which carried them 30 Leagues beyond the *Maelstrom*, and dangerous Rocks and Whirlpools on the Coasts of *Norway*: Then they were becalm'd, which oblig'd them to untie the second Knot; upon which they had a favourable Wind to the Cape *Roucella*; and the Wind then failing them, the Master untied the third Knot; after which they had a terrible Tempest: But we must leave the Reader to his own Judgment, whether this Account be fabulous, or that such Things are really performed by Evil Spirits.

They send abroad Flies of a bluish Colour, which they pretend to be their Familiars, to hurt their Enemies, their Cattle, or their Children; and sometimes they pretend that they cleave Rocks asunder, and try which of their Familiars are most powerful, and those are reckon'd so that kill the other Person's Rain-Deer, Wives or Children. They likewise use Balls made of Moss, or of the Hair of Beasts, for that purpose, and pretend by this means to convey Serpents into their Enemies Bodies, and so destroy them.

Their Language has greater Affinity with the *Finnish* than with any other, tho' it has a Mixture of other Tongues, as the *Swedish*, *Norwegian*, and *Tartar*.

Of their MARRIAGES.

THE young Men court young Women whose Parents or Friends can give 'em most Rain-Deer, and must bribe all her Relations for their Consent. When he comes first, he stands at the Door, and must not come in till her Father allow him; and if the Father break his Promise of giving him his Daughter, the Suitor recovers all his Expence and Gifts. When the Bride goes to Church, she is dragg'd along by her Relations, and pretends the greatest Reluctancy to Matrimony. The Bridegroom must serve his Father-in-Law a Year before he can take away his Wife, and her Patrimony of Rain-Deer: When all the Friends give Presents to the new married Couple. The *Laplanders* are observ'd to be very jealous.

The Women of this Country are frequently barren, and few of them have above 7 or 8 Children. After they are deliver'd, they take a good Draught of Whale's Fat, which they have from *Norway*: They walk the Child with Snow or cold Water, but don't suffer the Water to touch its Head till it be baptiz'd; then they wrap it in a Hare's-Skin. The Women lie in only 4 or 5 Days, and then go about their Business as before. They all of 'em suckle their own Children, and their Cradles are made of a Piece of hollow Timber, like a small Boat. The Child has no Bed-Clothes, but a kind of soft and fine Moss, and they cover it over with the tender Skin of a young Rain-Deer. When the *Lapland* Women travel, they tie this Cradle, with the Child in it, to their Back. When they rock the Child, they fasten the Cradle with a Rope to the Roof of the Hut, and tossing it from one side to the other, lull the Child asleep. The Boys are taught from their Infancy to handle their Bows, and shoot at a Mark, and are not allow'd to eat in a Morning till they have hit it. The Mothers train the Girls to Women's Business.

Of their GOVERNMENT.

They had Kings of their own till 1277, about which Time *Paulus Jovius* says, *Magnus Laduslax* undertook the Conquest of this

this Country, and employ'd their Neighbours of the District of *Bikarti* on this Design, who surpris'd the chief *Laplanders*, kill'd many of them, and obliged the rest to submit, which encouraged the *Muscovites* and *Norwegians* to conquer the *Laplanders* in their Neighbourhood. In 1518, *Gustavus Erickson* depriv'd those of *Bikarti* of the Tribute they had receiv'd from the *Laplanders* since the Time of *Magnus Laduslase*. They have now 3 Governors, who keep each a Court for the Administration of Justice.

In 1602, it was ordain'd, That instead of Skins, they should pay to the Crown of *Sweden* every Tenth Rain-Deer, and the Tenth of all their dry'd Fish. In 1606, instead of the former Tribute, each Native of *Lapland*, above the Age of 17, was to pay 2 Buck Rain-Deer, or 3 Does, 8 Pound of dry'd Fish, every Tenth Fawn of their tame Rain-Deer, and the Tenth of all the Fish they catch'd. Now they pay their Tribute in Rain-Deer, Money, or Skins. Each of them that possess such an Allotment of Land, pays two Rix-Dollars *per Annum*. Every Head of a Family must pay one white Fox-Skin, or two Pair of *Lapland* Shoes; or instead of them, half a *Lapland* Pound of dry'd Pikes. They pay also a certain Tribute to the Czar and the King of *Denmark*, for Liberty to hunt and fish in their Territories.

The Time of paying their Tribute to the *Swedish* Governors is at the Fairs, where most of their Trade is by Barter. Their Commodities are, Ermins, the Skins of Black, Red, Blue and White, Foxes, the Skins of Otters, Gluttons or Badgers, of Martens, Beavers, Squirrels, Wolves, Bears, Rain-Deer, and their Skins, *Lapland* Garments, Boots, Shoes, Gloves, dry'd Pike, Cheeses of Rain-Deer's Milk, &c. Those Commodities they exchange for Woollen and Linen Cloth, Copper, Brass, Salt, Meal, Ox's Hides, Brimstone, Needles, Knives, *Aqua-Vita*, and Tobacco, of which last they are extream fond. They buy Black Cattle and Sheep from *Norway*. Their Fairs are kept on the Ice.

Of their DISEASES and BU- RIALS.

NO Pestilential Disease is known here; but they are frequently troubled with sore Eyes, which is owing to their smoaky Huts. They are also subject to the Pleurisy, Inflammation of the Lungs, and Giddiness of the Head. They have no Physicians, and their universal Medicine is Angelica, boil'd in Whey of Rain-Deer's Milk. When they have a Pain in their Back, they anoint it with the Grease of Serpents. When they have Pains in their Limbs, they apply burning Chips, which occasion a Blister, and they think that draws off the Viscous Humour. To Wounds, they apply the Resin of Trees. When their Limbs are benumb'd with Cold, they thrust a red-hot Iron into a Rain-Deer's Cheese, and with the Oil that distils from thence, they anoint the affected Part with incredible Success. They boil this Cheese in Milk against a Cough, and all other Distempers of the Breast and Lungs. Most of them die rather of Age than by Distempers. When any of them die, a Brass Ring is ty'd to their Right Arm, which they think preserves them from having any Harm done them by the Ghosts of the Deceas'd. They put into the Coffin a Flint and Steel, that they may not want Light in the other World; and they lay a Hatchet by them, that they may cut out their Way to Heaven through Woods, &c. and never fail to lay Bows, Arrows, and Victuals, in the Coffin. If the Person was rich, they sacrifice to his Memory some Rain-Deer every Year; but some of them are buried after a Christian Manner.

Swedish Lapland is divided into 6 Marks or Countries, as *Uma-Lapmark*, *Anguerman-Lapmark*, *Pitha-Lapmark*, *Lula-Lapmark*, *Torna-Lapmark*, and *Kiemi Lapmark*. There's no considerable Town in all this Country, but only a few Villages, needless to be insisted on.

C H A P. XIX.

Of D E N M A R K.

SOME say, this Kingdom has its Name from *Danus*, a Prince of the *Goths* or *Jutes*. *Saxo-Grammaticus* and King *Erick* of Denmark think that it was so called from *Dan*, the Son of *Humble*, who was cotemporary with *David* King of *Israel*; but we cannot trust their ancient Historians, they are so fabulous. *Cluverius* derives it from the *Simus Codanus*; but *Gerardus Vossius*, *Lib. 1. De Idolatria*, *Cap. 7.* thinks that both the *Simus* and the Country were so called from *Woden*, afterwards called *Guodan*, and *Codan*. *Wormius* approves of this Conjecture.

Denmark is bounded on all Sides by the Sea, except where it is join'd to *Holstein*. This Peninsula was the *Chersonesus Cimbrica* of the Ancients. On the W. and N. W. it is wash'd by the German Ocean: On the N. and N. E. it has the Entrance into the *Baltick*, called *Categat*: On the E. the *Baltick*; and on the S. the River *Eider*, which separates it from the Dutchy of *Holstein*.

It lies betwixt $54\frac{1}{2}$ and 58 Deg. of Lat. and 26 and 34 Deg. of Long. *De la Ferrest* says, From the Borders of *Holstein*, to the most Northerly Parts of that Peninsula, 'tis 270 English Miles; and its greatest Breadth from W. to E. comprehending the Islands, 180 . *Burro* says, *Jutland* is 212 Miles from N. to S.

The HISTORY of Denmark.

THOUGH *Puffendorff* owns, That Denmark is one of the most ancient Kingdoms of Europe; yet *Buratus a Swede* says, That *Dan*, the Son of *Humble*, was only cotemporary with their 16th King. Most of the Danish Historians make one *Danus* or *Dan*

the first of their Kings, who headed the *Cimbri* and *Goths*, or *Jutes*, that marched into Germany, which they ravaged. Then they pretended that they worsted the Roman Army in several Engagements; but at last were defeated by *Marius* at *Verceil* 100 Years before the Birth of Christ, and returning homeward, settled in *Jutland*, which was so call'd from the *Jutes*. *Olav Wormius* owns, That the ancient History of Denmark is obscure and fabulous; and that most of the ancient Inscriptions that might have given Light to it are much defac'd, and many of them at this great distance of Time not legible. *Saxo Grammaticus's* Reputation is not much to be relied on; for every one is satisfied that he carries the Antiquity of his Country too high, and advances Fables for true History: So we cannot pretend to give an exact List of their ancient Kings; but shall only take Notice of such of them as were most remarkable.

Frothe III. is one of the most famous among them. *Wormius* thinks he Reign'd about the Birth of Christ, and says he was very rich, and so clear'd Denmark of Thieves and Robbers, that if Gold or Silver had been left in the Streets, it would have been safe.

Gotrick assisted *Wittekind*, King of the Saxons, against *Charles the Great*, by whom he was defeated: After which, to secure his Territories from the Inroads of *Charles's* Army, he built the Wall called *Danewerk*, which cross'd the Isthmus, and reach'd from the Mouth of the River *Eider* to *Sleswick* or *Gottorp*.

Erick began to Reign about A. Ch. 846, and is reckon'd the first Christian King; yet others say, his Brother *Harald*, who reign'd before him, did profess Christianity, being

being converted by Means of *Ludovicus Pius*. About this Time the *Danes*, under the Command of *Rollo*, are said to have settled in *Normandy*.

Erick, call'd the *Bairn*, or the *Child*, succeeded: His Government at first was very just; but at last he became cruel, persecuted the Christians, kill'd more Bishops, and demolish'd more Churches, both in *England*, *Germany*, and *Denmark*, than all his Predecessors. He died about 902.

Canutus the Hairy came after: In his Time every third Man in *Denmark* was obliged by Lot to go and seek his Fortune, and thereupon they over-ran *Prussia*, *Courland*, and *Semigallia*, and settled there. He died a Heathen in 912.

Frotho came next, who, according to their Historians, was 29 Years King of *Denmark* and *England*, and died a Christian.

His Son *Gormo* succeeded, who was born in *England*, and baptiz'd at *Aldre* in *Somersetshire*. King *Alfred* was his Godfather, and gave him the Name of *Athelstane*. From him, a Village near *Huntingdon* is called *Gorman-Chester*, as *Cambden* informs us.

Harald Blaataud, his Son, succeeded: He was worsted in many Encounters by *Otto I.* Emperor of *Germany*; from whom the Sea betwixt *Jutland* and *Fuhnen* was called *Ostensundt*, because that Emperor threw his Lance into it, as the utmost Limits of his Expedition.

His Son *Sueno Otto* succeeded in 980. At first he persecuted the Christians; but at last was converted, and founded three Bishopricks, at *Sleswick*, *Ripe*, and *Arhus*. The *Jutes* took him Prisoner, and he was ransomed by the Women, who on this Account had afterwards an equal Share of their Father's Inheritance with the Males. He conquer'd a Part of *England*, and died in 1012.

His Son *Canute*, or *Knute II.* surnam'd the Great, came after him, and was at the same Time King of *England*, *Denmark*, *Sweden*, *Norway*, *Slavonia*, and *Sambland*. He was buried at *Winchester* in 1036.

Hardiknut, his Son, succeeded in the Kingdom of *England*, where he died in 1041.

Magnus King of *Norway* seiz'd the Kingdom of *Denmark* upon the Death of *Hardiknut*, died in 1048. and was succeeded by *Sueno Esfret*, who was a Religious Prince.

• He died in 1076, and left behind him five Sons, who came all successively to the Throne.

Harald the Eldest Reign'd two Years: He was a soft, effeminate, and bigotted Prince, which encouraged the *English* to throw off the *Danish* Yoak without any considerable Difficulty, after they had been subject to them 120 Years.

St. Canute, his second Brother, succeeded, and commanded his Subjects to pay Tythes to the Clergy. His Brother *Olaf* misrepresented this pious Design of *Canute*, and instigated the People to a Rebellion; upon which they took Arms, drove him out of *Jutland*, pursued him to *Fuhnen*, and barbarously murder'd him in the Cathedral of *Odense*, the Capital of that Island, in 1088.

Olaf Sueno, 3d Son, was declared King by his Party; in whose Reign a great Famine happen'd, which they reckon'd a Judgment for the Murther of their former King. Many of the People died for want of Bread, and *Olaf* himself had a Share in that Want. He died a Penitent in 1095.

Erick the Good Sueno, 4th Son, succeeded, died in his Pilgrimage to *Jerusalem*, and was buried in the Isle of *Cyprus* in 1106. In his Time, *Lunden* in *Schonen* was made an Archbishop's See. Before this Time, all the *Danish* Bishops were subject to the Archbishop of *Bremen*.

After his Death, the Kingdom was in great Confusion, because *Sueno III.* *Canute VI.* and *Waldemar I.* were all Competitors for the Crown; and after much Bloodshed, they agreed to divide the Kingdom into 3 Parts.

Nicolas, *Sueno's* youngest Son, was slain in 1135, by the *Jutes*, in Revenge of *Canute* Duke of *Flanders*, whom *Nicolas* had caus'd to be killed.

Erick Edmund, a good King, succeeded: He abdicated the Government, and put himself into a Monastery at *Odense* in *Fuhnen*, where he died in 1147.

Sueno Gratenbede, *Erick Edmund's* Son, got the Crown upon the Death of his Kinsman *Erick Lamb*. At this Time there were three Kings in *Denmark*. After 10 Years Civil Wars, in which both *Sueno* and *Canute* were slain, the whole Kingdom was govern'd by *Waldemar*, surnam'd the Great: He repair'd the Ruins of *Gotrick's* Wall, built a stronger one of Brick, and enlarged the Ditch. He

subdued the Inhabitants of the Isle of *Rugen*, who had been troublesome to *Denmark*, was Lord of all the Countries on the North of the *Elbe*, and died in 1182.

Canute, his Son, succeeded, and fought with great Success against the Emperor of *Germany*, who pretended a Superiority over *Denmark*. After he had Reign'd 22 Years, he died at *Ringsted* in 1202.

Waldemar II. his Brother, came next. At first he was very fortunate, and Reign'd over *Denmark*, *Livonia*, *Courland*, *Prussia*, *Pomerania*, *Rugen*, *Mecklenburg*, *Holstein*, *Stormar*, *Dithmarsen*, and *Wageren*, and the Cities of *Lubeck* and *Lunenburg*. The Emperor of *Germany* design'd to have invaded *Denmark*; but when he heard of the Preparations *Waldemar* made against him, he refus'd. *Wormius* says, he was a great Lover of Antiquities, and gave considerable Sums to those that were skilful in reading old Inscriptions. He abolish'd the Use of the fiery Ordeal, and died in 1242.

His Son *Erick* succeeded. *Waldemar* had given other Parts of the Kingdom to his other Sons, viz. to *Abel*, *Sleswick*; to *Canute*, *Bleking*; and to *Christopher*, *Lalana* and *Falster*, which occasion'd great Broils among the Brothers. At last *Erick* was murder'd by *Abel*, and he himself was slain by his Subjects in 1252.

He was succeeded by his Brother *Christopher I.* to whom the Archbishop of *Landen* occasion'd many Troubles, for which *Christopher* imprison'd him. Upon this the Clergy excommunicated the King, and at last he was poison'd by *Arnefast* Bishop of *Ahus* with the Eucharist.

Erick, his Son, abandon'd himself to all manner of Vice: He debauch'd the Wife of *Andrew Stigot*, Marshal of *Denmark*, who in Revenge murder'd him at *Endelorp*, a small Village in the Bishoprick of *Wiberg*, in 1286.

His Son *Menved* succeeded, was a pious Prince, and died in 1319.

Christopher II. *Menved*'s Brother, succeeded, and being vicious like his Father, his Subjects banish'd him, and made *Waldemar Duke of Sleswick* their King; but growing weary also of him, they recalled *Christopher*, in whose Reign *Schonen* surrender'd it self to *Sweden*, and *John Duke of Holstein* sold all his Pretensions to it for 70000 Marks of

fine Silver; most Parts of *Denmark* having afterwards revolted from him. He died at *Nicoping* in the Isle of *Falster* in 1333.

After his Death, the *Danes* had an Interregnum of 7 Years; during which Time the *Holsteiners* brought a great Part of *Denmark* under their Subjection; and the *Danes*, in order to drive them out of *Denmark*, invited *Waldemar III.* the Son of *Christopher II.* into the Kingdom.

He had the Character of a bold, subtle, and covetous Prince. When Pope *Gregory XI.* threaten'd to excommunicate him for slighting the Orders of the Apostolical See, he wrote a Letter to the Pope, telling him, That he held his Life from God, his Kingdom from his Subjects, his Riches from his Parents, and his Faith from the Pope's Predecessors, which if the Pope envied him, he was willing to quit it to him. He sold *Esthonia* and *Revel* to the Knights of the Cross for 28000 Marks of fine Silver, which was employed to defray the Charge of his Journey to the Holy Land. He got *Schonen* back again from *Magnus Smek* by fair Promises, and *Gothland* was also surrender'd to him. He had frequent Wars with the *Hans-Towns*, and died in 1375.

After him Reign'd his Grandson *Olav VI.* by his Daughter *Margaret*, and *Haukin* King of *Norway*. During his Minority, his Mother *Margaret* had the Administration of Affairs. After his Father's Death, he was King of *Norway*, and also claim'd the Crown of *Sweden*, because his Father was Son of *Magnus Smek*, King of that Country; but he died young.

In his stead the *Danes* and *Norwegians* made *Margaret* their Queen: She declar'd *Erick* of *Pomerania*, Son to her Sister's Daughter by the Duke of *Pomerania*, King. She made War against *Albert* King of *Sweden*, and in one Campaign she took him, *Rodolph Duke of Mecklenburg*, and the Earls of *Holstein* and *Reppin*, Prisoners. The *Swedes* being dissatisfied with their King, deserted him, and acknowledg'd her for Queen. In 1396, she made the Union of *Calmar*, which has been discours'd of at large in the History of *Sweden*. She died in 1412.

Erick succeeded: He surrender'd to his Cousins the Dukes of *Pomerania* the Island of *Rugen*, that had been long subject to the *Danes*. The *Swedes* were displeas'd with

Erick,

Erick, because he did not govern according to his Coronation-Oath, and oppressed them by Foreigners. The *Danes* thought him careless of their Affairs, and alledging he endeavour'd to settle the Succession on *Bogslaw* Duke of *Pomerania*, they chose *Christopher* of *Bavaria*; upon which *Erick* retir'd into *Pomerania*, where he died in 1438.

Christopher Duke of *Bavaria's* Reign was but short: He was successful against the Rebels of *Jutland*, and the *Hans-Towns*. He died Childless in 1448. The *Danes* call him a good Prince; but the *Swedes* had no Reason to be pleas'd with his Government.

Christian Earl of *Oldenburg*, his Sister's Son, succeeded, was declared King both by the *Danes* and *Norwegians*; and in this Family those two Crowns have remained ever since by a constant Succession. He made War upon the *Swedes*, because they had made *Charles* *Cnutsons* King; of which, see more in the *Swedish-History*. In 1471, the Emperor *Frederick* III. gave him *Dithmarsen* in Fief. He married his Daughter *Margaret* to *James* III. of *Scotland*, quitted to him the *Orkney* Islands and *Schetland* for a Dowry, and died in 1481.

His Son *John* succeeded. In 1501, he was miserably routed by the *Dithmarsians*, and died of the Plague at *Alburg* in 1513.

Christian II. his Son, succeeded. The *Danes* hated him, because he was entirely managed by *Sigiberta*, a Dutch Woman of mean Birth; as also because he had caused *Drilareven* *Ous*, the Governor of the Castle of *Copenhagen*, to be unjustly executed. We have spoke already of his Cruelties in the History of *Sweden*. The *Danes* revolted from him, and chose his Uncle *Frederick* Duke of *Holstein* for their King.

Frederick I. was Crown'd in 1524. The Reformation began here in his Time. *Christian* gather'd some Forces, with a Design to regain the Crown; but they were soon dispers'd. The Emperor *Charles* V. tho' he promis'd it, could give no Help to *Christian*, because he was entangled in War with *France*. And when *Christian* came with a Fleet to *Norway*, he was routed and taken by Count *Guldenstern*, and imprison'd in the Castle of *Cullenberg* in *Zealand*, where he died in 1559. *Frederick* died at *Sleswick* in 1533.

Christian III. his Son, succeeded, who met with great Troubles from the Earl of *Oldenburg* and the *Lubeckers*, that design'd to restore *Christian* II. but he happily disengag'd himself, establish'd the Protestant Religion in *Denmark* and *Norway*, and died in 1558.

His Son and Successor *Frederick* II. subdued the *Dithmarsians*. He made War upon *Erick* King of *Sweden* with various Success; but at last concluded a Peace at *Stetin* in 1570, and died in 1588.

Christian IV. his Son, succeeded, and Reign'd peaceably till 1611, when he made War upon *Charles* IX. of *Sweden*, and took *Calmar* and *Elfsburg*; but restor'd those Places to *Gustavus Adolphus*. In his Reign, *Ferdinand* II. Emperor of *Germany*, over-ran most Part of *Jutland*, and defeated him near *King Lutter*. He lost many Places, which were restor'd by the Peace at *Lubeck* in 1629. In the War betwixt *Sweden* and *Germany*, he was troublesome to the *Swedes*, did all he could to stop their Victories, and spoil their Trade, by detaining and confiscating their Ships in the *Sound*. To revenge this, the *Swedes* fell with an Army into *Holstein*, *Jutland*, and *Schonen*, and did the *Danes* much Damage both by Sea and Land, till the War was ended by the Peace of *Brombro*. The Dutch made use of this Opportunity to regulate the Toll of the *Sound*, which the *Danes* had hitherto exacted at Pleasure, and made it very burdensome to them. *Christian* died in 1648.

Frederick III. his Son, succeeded, who by the Persuasion of the Dutch broke the Peace with the *Swedes*. Upon which *Charles* *Gustavus* came suddenly with an Army into *Holstein* and *Jutland*, and took *Frederick* *Ude* by Storm. And in 1658, there being a great Frost, he march'd over the Ice to *Rubnen*, where he surpris'd the *Danish* Troops. From thence he came to the Islands *Langland*, *Falster*, and *Laland*, and at last to *Zealand*, and laid close Siege to *Copenhagen*, which City, and consequently the whole Kingdom, would have fallen into his Hands, had not the Emperor of *Germany*, the Kings of *Poland* and *England*, and the Dutch, concern'd themselves in the *Danish* Quarrel: Upon which a Peace was made near *Copenhagen*, as has been already said in the History of *Sweden*.

After

After this Peace, the King, at a Diet held at *Copenhagen*, was declared an absolute Monarch, and the Crown made Hereditary, whereby the Privileges of the Nobility were abolished, of which they had made a bad Use, in oppressing the Peasants. Thus a new Form of Government was introduced there, by Vertue of which the whole Management of Affairs depends absolutely on the King's Pleasure. This great Change was made on the 23d of October, 1660; of which more hereafter, when we come to their Government. He died of a Fever, Febr. 16. 1670.

His Son *Christian V.* succeeded, and made an Alliance with the Emperor, *Holland*, and their Confederates. He made War upon the Duke of *Holstein*, took him by Surprise at *Rensburg*, forced him to quit all the Advantages he had got by the Peace at *Roschild*, and obliged him to surrender *Tonningen*, which he demolished, and afterwards took *Wismar* from the *Swedes*. Next Year he enter'd *Schonen*, and took *Helsingberg*, *Lanscrons*, and *Christianstadt*, and the Isle of *Gothland*: But his Troops that went to invest *Helmstadt*, were routed by the King of *Sweden*. In 1677, the *Danes* were beat in a Battle near *Lunden* by the *Swedes*. *Christian* besieg'd *Malmoe*, but was obliged to rise from before it. He was afterwards routed again by the *Swedes* in a Battle near *Landskrona*. In the following Year, the *Danes* were obliged to raise the Siege of *Babuss*, and to surrender *Christianstadt*, which was reduced to Extremity by Famine; but at Sea they had better Success; yet by the following Peace with *Sweden* were obliged to restore all the Places they had taken.

After the Peace at *Antainbleau* betwixt those Crowns in 1679, new Troubles began betwixt the *Danes* and the Duke of *Holstein*, who alledg'd, That by the Peace, he was not only to have the Restitution of all his Dominions, but was also freed from the ancient Union betwixt the two Houses of *Denmark* and *Holstein*. The Duke began to fortify himself by new Alliances, of which the King of *Denmark* having Notice, he sequestred the Duke's Share of the Duchy of *Sleswick* a second time. The King of *Denmark* being encourag'd by the intestine Divisions of the City of *Hamburg*, made

use of that Opportunity to renew his ancient Pretensions on that City, which he besieged; but the *Hamburgers* being reinforced by the Elector of *Brandenburg* and Duke of *Lunenbourg*, sallied upon the *Danes*, chas'd them from their Works, and cut off 1500 of them. This Disaster obliged the King of *Denmark* to make Peace, by which the *Hamburgers* were left in their former Condition. In 1689, the King of *Sweden* declared for the Duke of *Holstein*, because of the above-mention'd Sequestration of the Duke's Part of *Sleswick*; so that a Rupture was likely to have followed betwixt the two Northern Crowns; but by the Mediation of *England* and *Holland*, and the Electors of *Brandenburg* and *Saxony*, a Peace was made at *Altena*, by which the Duke of *Holstein* was restored to all his Possessions and Rights. The *Jus Armorum* was the only Thing not decided by this Treaty, tho the chief Pretension of the Duke; yet the King of *Denmark* consented that the Mediators of the former Treaty should examine and determine it: But the Duke not trusting to this, rais'd some new Fortifications, and took Foreign Troops into his Service, which the *Danes* demolished; but the Duke rebuilt them, and added other additional Works. Upon this the young King of *Denmark*, *Frederick IV.* marched his Troops into the Duke's Territories, beat the *Swedish* and *Holstein* Troops from their Posts and Forts, and once more demolished all the Fortifications built on the Frontiers. After this he besieged *Tonningen*, a considerable Place belonging to the Duke; but the *Swedes*, with the Dukes of *Hanover* and *Zell*, marched to its Relief, and were joined by 3000 *Dutch* Auxiliaries. This obliged the *Danes* to raise the Siege, and retire to their own Territories, whither they were pursued by the *Swedes*. In the mean time the *English* and *Dutch* Fleet join'd the *Swedish* Navy, and dispers'd the *Danish* Fleet, who retir'd to the Harbour of *Copenhagen*, where they were cannonaded for 3 Hours; but the *Danes* were secure in that Harbour, so that only one Seaman was kill'd. The Confederate Fleet not thinking fit to pursue that Design any further, 'twas resolv'd that the King of *Sweden* should land in the Isle of *Zeeland*, which he did with 8000 Men; and

and this brought on the Peace at *Travendahl*, by which the Duke had his *Jus Armorum* granted him, and 260000 Crowns for his Damages by the late Irruption of the *Danes*. This Treaty was in 1700: And nothing remarkable having happen'd in that Kingdom since, 'tis needless to bring their History any lower.

The AIR, SOIL, &c.

THE Air in *Jutland* is not generally so cold as in some more Southerly Places of *Germany*, which proceeds from the nearness of the Sea. In *Zeeland*, the Air is gross and foggy, especially near *Copenhagen*; yet Colds of the Lungs are very rare there, which is attributed to the Pureness of their Firing, which is Beech Wood. Through all *Denmark*, they have but two Seasons, Summer and Winter; so that Extremity of Heat succeeds Extremity of Cold. During the Months of *June*, *July*, and *August*, the Heat is much more intense than in *England*: The Nights then are very sultry; and during all the Summer, they are plagu'd with vast Swarms of Flies, which they are obliged to kill with poison'd Water.

Denmark in general has Plenty of Corn, much of which is exported to *Holland*, *Norway*, *Island*, and other Places. They have Plenty of Black Cattle, great Numbers of which the *Dutch* transport to their more fertile Soil, where they grow prodigiously fat in a little time. They abound with Hogs, and have good Breed of Coach-Horses. The Gentry are much inclin'd to Gardening, and have Melons, Peaches, Grapes, and all sorts of Sallads, very early.

Their Cattle are for most part lean and small, and must be kept within Doors 7 or 8 Months in the Year. The Forrests abound with Game, as Harts, Wild-Boars, Elks, Stags, Roebucks. They have also Plenty of Hares, Conies, &c. and abundance of Fowl, Wild and Tame, and particularly of Partridges.

The *Baltick* affords them Plenty of Fish. Formerly they had Shoals of Herrings on their Coasts; but that Trade is now greatly decayed. They still abound with Cod, Whittings, Place, &c. Their River-

Fish are reckon'd as good as any in the World.

Their Trade of EXPORT

IS in Barley, Wheat, Rye, and Black Cattle, of which they have formerly exported 100000 *per Annum*. They have also Horses, Butter, and Tallow. The *Norwegians* export Timber of all kinds, especially Fir; but the Exportation of Oak is forbidden. They likewise export Masts, Tar, Pitch, Stock-Fish, Oil, and Iron. They have Copper and Silver Mines, but of small Value. Most Authors observe, That Trade is decaying in *Denmark*, for which they blame their Arbitrary Government, the great Taxes upon the Inhabitants, and the great Expence they are at in Keeping up so many standing Forces: All which diverts the Money that ought to be employed in Trade, which is also discouraged, because the Inhabitants know that the Government may seize at Pleasure what they have earn'd by their Industry.

Some Manufactories were lately set up by Courtiers and great Men, particularly those of Silks and Drinking-Glasses; but in a little time they came to nothing, because Trade is not to be forced where real Advantages and Encouragements are not to be found, and where Property is not secured.

Their Trade of IMPORT

IS Salt from *Portugal* and *France*: From the latter they have Wine, Brandy, Silks, and other Vanities, to which the rich People there are much addicted. *England* and *Holland* import many Commodities, both of their own Manufacture, and from their Plantations. Some reckon that 300 Vessels from *England* pass the *Sound* Yearly, and 1000 from *Holland*: Both those Nations pay for the most part ready Money for the Goods they export from *Norway*: The *Danes* have begun lately to bring Spices in their own Bottoms from the *East-Indies*, where they have a small Fort on the Coast of *Coremandel*: They have also an *East-India* Company, of which most of their Men of Quality are Members.

The Ancient INHABITANTS

WERE the *Cimbri*, of whom *Tacitus* gives this Account, *Cap. 37. De Mor. Germanorum*, That there were not many of them then remaining; but there were still some Monuments to be seen of their ancient Bravery, Power, and Numbers. They gave Name to *Jutland*, anciently called the *Chersonesus Cimbrica*, and had many People subject to them, whom *Ptolemy* names. *Wormius* is positive that the *Cimmerii* and *Cimbri* are one People, and quotes for it the Authority of *Procopius*, who was a General in *Belisarius's* Army against the *Goths* and *Vandals*. *Procopius* says also, That the *Goths* or *Geta* were the same with the *Cimmerii*. *Wormius* says further to this purpose, That *Wibourg* in *Jutland* was 600 Years ago called *Cimmerberg*. *Jonas Koldingensis* says, there is a Town on the Coast of *Schonen* called *Cimbershaven*. These People made many Expeditions into the East, and some of them settled in that Peninsula now called *Little Tartary*, where was the ancient *Bosphorus Cimmerius*. It is most probable that the Northern Places, from whence the *Cimbri* came, gave the first Rise to the Poets to speak so much of the *Cimmerian* Darkness, because, as has been mention'd already, they alledg'd all those Countries had perpetual Night.

Sabellicus and *Saxo Grammaticus* say, That the *Longobardi* were Inhabitants of *Jutland*, and alledge, That they left their Country about *A. C. 414*, there being then such a Famine in *Denmark*, that they were obliged to make a Law, That all the old People and Infants should be killed, because they were useless to their Country, that those who remained, and could manure the Ground, might have Food. Others propos'd, That it were more fit that some of the Inhabitants, for whom there was no Food at home, should go abroad and seek their Fortunes, which prevailed; so that they left their Country, and settled in the North of *Italy*, which from them was called *Lombardy*; but *Paulus Diaconus* says, they were called *Longobardi*, from their long Beards.

The *Dani* or *Daci* were the Posterity of the *Cimbri*. The Romans called the Eastern

Places of the Empire, where the *Goths* settled, *Dacia*. *Procopius* says, That the *Goths* and *Daci* were the same People, whom the Greeks call *Cimmerii* and *Geta*.

It is probable that the *Jutes* were the *Jute* of *Ptolemy*. *Wormius* says, *Jutland* was anciently called *Jotunland*. *Adamus Bremenensis*, *Beda*, and *Saxo Grammaticus*, speak of the *Jute*. *Lambard*, in his *Archeologia*, shews, That the Latin Translation of *Bede* is false, when it has *Vita* instead of *Jute*; for the Saxon Copy has it *Geatum*, i. e. *Jutes* or *Goths*; and in many other Places he calls them *Jut*. Archbishop *Usher* also says, That in all the Manuscript Copies of *Bede* he ever saw, he calls that People *Jute*, and not *Vita*. *Florence of Worcester*, *William of Mahmsbury*, *Henry of Huntingdon*, and other English Historians, are of the same Opinion. *Robins Ethelward*, a Saxon Writer, calls them *Gietæ*; and the Saxon Annals of *Peterburg* call them *Geatum*. *Spelman* says, That they were so called from the Gothic Word *Ju*, signifying a Giant.

The *Angli* and *Saxons* came also from this Country, of whom we shall discourse when we come to *England*. *Cellarius* places the *Teutones* in the Islands of *Fubnen*, *Zeland*, and the Southerly Places of *Schonen*. *Ptolemy* speaks of the *Holsati*, who were the Inhabitants of the modern *Holslein*; the *Vagri* of *Wagria*; of the *Storermarfi*, that dwelt in the modern *Stormar*; of the *Tintormarfi* in the modern *Ditmarsh*; and of the *Crempemarfi* and *Villemarfi*, who dwelt in the Southerly Parts of *Jutland*. *Nordalbingia* was the Name of *Jutland*, and other Places of that Peninsula, in the barbarous Times.

The Danish Historians boast that *Ireland* was 8 times conquer'd by the *Danes*, viz. in the Reigns of the Danish Kings *Fridleve I.* *Protho I.* *Hiaren*, *Fridleve II.* *Protho IV.* *Regner Lodbrog*, *Siward III.* and *Protho III.* who died *A. C. 912*.

They also say, That *Saxony* was made Tributary to *Denmark* 15 times, viz. in the Reigns of *Helgo*, *Robus*, *Hosher*, *Roderick*, *Uffon*, *Dan II.* and *III.* *Fridleve I.* *Protho III.* *Hiaren*, *Fridleve II.* *Protho IV.* *Regner Lodbrog*, *Siward III.* and *Protho VI.*

The *Livonians* were subject to the Danish Kings, *Canute IV.* *Waldemar II.* *Erik VI.* *Christopher* Son of *Waldemar II.* *Erik VII.* and *Christopher II.* *Courland*, *Esthonia*, and *Prussia*,

Prussia, were also frequently conquer'd by them. They say, the *Swedes* were defeated by them in 22 Battles, and swore Allegiance to 24 of their Kings, and the *Norwegians* in 32 Battles, and paid Homage to 12 of their Kings, before *Queen Margaret* united it to *Denmark*; and that the *Russians* have been Tributaries to 8 of their Kings. *England* was also conquer'd 10 times by 'em.

Of the present Inhabitants, their Dispositions, Manners, Customs, &c.

THE *Danes* are tall, handsome, and straight. Most of them have white or yellow Hair. *Lucan* observ'd, That they who dwelt on the N. of the *Elb* had yellow Hair in his Time. Formerly this Country was over-stock'd with Inhabitants, and upon that Account obliged to send abroad its supernumerary People; but now the Case is alter'd; for *Mr. Moldsworth* observes, that it is but indifferently Peopled, which he imputes to their hard Usage, Poverty, and bad Diet, which he says is general over all *Denmark*. The Burghers and Citizens eat Rye Bread, lean salt Flesh, Stock-Fish, Bacon, and very bad Cheese. The Peasants live on Roots, White Meats, and Rye Bread, seldom tast fresh Fish, and scarce ever any Flesh, except on some extraordinary Festivals. He further observes, That the common People are now mean Spirited, have lost their former Bravery, are inclin'd to gross cheating, and mistrust other People. Apoplexies and the Falling-Sickness are Epidemical Distempers there, which probably comes from their bad Diet. Their Peasants are as absolute Slaves as any in *Barbadoes*, but their Food not so good. Neither they nor their Posterity can leave the Land to which they belong; and when it is purchas'd, they are sold with the Freehold, as Timber-Trees are with us. They don't reckon Riches there by Numbers of Acres, but by Numbers of Boors, who, with all that belong to 'em, appertain to the Proprietor of the Land. When any of them get a little Money, they lay it out in Brandy, lest their Landlord should hear of it, and take it from them. They are also lia-

ble to the quartering and paying of Soldiers, and must furnish the King's Family, and all their Attendants, with Horses and Travelling-Waggons for their Baggage and Furniture, whenever the King makes a Progress, tho' but to his own Country-Houses; and all this at their own Charges for themselves and Horses for 2 or 3 Days together; and what makes it worse, is, that the Harvest is the usual Travelling-time of the Court. The King does also frequently give a Warrant to any Person of Quality or Officer that has a Journey to make; upon which the Peasants are obliged to serve and attend them.

Mr. Moldsworth says, it is difficult for a Stranger to find Conveniencies of Lodging and Eating in *Denmark*, even in *Copenhagen*, where there are few or no Lodgings to be lett in private Houses; and in the Taverns, one must be content to eat and drink in a publick Room, into which all Company may enter and do the like.

Their Divertisements in Winter are riding in Sleds, well wrapp'd up in Wool or Fur. None presume to use this Pastime till the King and Court has begun; as all the Clocks of *Copenhagen* must strike after the Court-Clock.

Of their NOBILITY.

FORMERLY ancient Estates and Valour were the only Title to Nobility in this Country: None took either Patent or Degree of Honour from the King; but of late, to supply the Want of Riches and Merit, some have got the Titles of *Baron* or *Earl*. No higher Title has yet been given to Favourites. They have some ancient Families, as that of *Wren*, and others, who were said to have been at the signing of a Treaty of Peace betwixt *Charles the Great* and their King at *Hemming* on the *Eider*.

The Chief Families in *Denmark* and *Norway* are, 1. The Earls of *Rantzau*, who are also Counts of the Empire, and have their Seats in the *Westphalian* Class, from which Country they came Originally. 2. The Earls *Ahlefeld*. 3. The Earls of *Brockdorff*. 4. The Earls of *Reventlau*. 5. The Earls of *Schack*. 6. The Earls of *Wedeln*. 7. The Earls of *Oldenburg*.

Their Nobility and Gentry have a single Coat of Arms, which they never alter nor quarter with any other. The Nobility don't enjoy the same Privileges by those Titles as our Peers do in *England*, but content themselves with a few airy insignificant ones, that distinguish them from the common People.

Before the Crown was Hereditary, the Nobility and Gentry liv'd in great Affluence and Prosperity; their Tenants respected them as so many Petty Princes. In the Time of the Convention of Estates, which was once *per Annum*, they met the King with great Retinues; and in publick Affairs, their Suffrages were of greatest Weight, and usually carried the Point, the Commons being in a great measure directed by them, because they depended much on them; but now the Case is alter'd, and they diminish daily both in Number and Credit; their Estates scarce being able to pay the Taxes impos'd on them, which makes them oppress their Tenants for their own Subsistence. Most of their Palaces are ruinous, and they are obliged to cringe to the Court for a Military or Civil Employment.

The Nobility love to go fine, after the *French* Mode; but the Ladies Winter-Dress is *Danish*, and very becoming and convenient. The People of Quality are much addicted to drinking strong Liquors, which occasions frequent Apoplexies among them.

Their Marriages are usually preceded by Contracts; which continue sometimes 3, 4, or more Years, before they proceed to a publick Wedding by the Minister; though the young Couple grow frequently better acquainted before these Formalities are over.

Sumptuous Burials and Monuments are much in Request with the Nobility, and it is usual to keep the Corps of a Person of Quality in a Vault or in the Chancel of the Church for several Years, till they have a fit Opportunity to celebrate the Funeral.

Their Orders of KNIGHTHOOD.

SOME say, the Order of the *Elephant* was instituted in 1190, by *Canute VI.* but this is not certain. It is more probable that it was instituted by *Christian I.* which is supported

by a Bull of Pope *Pius II.* dated at *Viterbi*, June 8, 1463. After his Death, this Order was much neglected, till *Frederick II.* reviv'd it in 1580. The Collar of the Order was then a Gold Chain, at the End of which hung an Elephant of the same Metal, enrich'd with some Diamonds, bearing a Tower on his Back full of arm'd Men, having the King's Cypher on the Side, and round it this Motto in *High-Dutch*, *My Help is in God alone.* Under the Elephant's Feet are those Symbolical Letters, *T. I. W. B.* the most likely Interpretation of which is, That the King having found the Unfaithfulness of most of his Friends, and having a Dog call'd *Wildbrat*, that lov'd him, and constantly attended him, he would hint the same by the Initial Letters of those Words, *Trew Is Wild Bratt.* *Christian V.* gave it a new Lustre, and caus'd the ancient Statutes of the Order to be review'd, and added new ones.

The Order of *Dannebrog* was founded by *Waldemar II.* King of *Denmark*, on *St. Lawrence's* Day, on Occasion of a long and doubtful, but at last a victorious Battle, with the Pagan *Lieslanders*; during which there appear'd in the Air a red Standard, with a white Cross in the middle, which he took as a Prefage of Victory, and appointed this Standard to be the *Palladium* of the *Danes*, who call'd it *Dannebrog*; but it was taken and cut in pieces by the *Ditmarshians* 200 Years after. Few believe this Account, but rather think the Standard called *Dannebrog* was sent to *Waldemar* from the Pope, to encourage him in the Holy War against the Pagans in *Livonia.* In 1671, *Christian V.* restor'd it. The Collar of the Order is Wove-work, intermix'd with a Cross of Gold enamell'd. At the End of the Collar hangs a Cross set with Diamonds, and in the middle of the Reverse appears a white Cross edg'd with red, surrounded with Rays, with these Letters at the 4 Out-Parts, *Ref. Ti. Tu. Tor.* The Knights have this embroidered on their Coats. Above the Hand, which holds the Collar of the Order, there are Rays coming down from on high, and round the Reverse these Words, *Tessera Fidelium.* Tho' this Order is not so honourable as that of the Elephant, yet it is conferr'd on none but Persons of Quality and Distinction.

Of their GOVERNMENT.

THE King's Titles are, King of Denmark, Norway, of the Goths and Vandals; Duke of Sleswick, Holstein, Stormar, and Ditmarsch; Earl of Oldenburg and Delmenhorst.

Before 1660, this Kingdom was Elective, as Waldemar III's Letter to the Pope shows: The King was chosen by his Subjects of all Ranks, for even the Boors had their Voices. They ordinarily had most Respect to the Merit and Valour of the Candidate, yet with a due Regard to the Family of the preceding Kings, if any of that Line were found qualified; but if their Kings deceiv'd their Expectation, they frequently depos'd and banish'd them. The King could do nothing without his Parliament; which Form of Government the Goths had introduc'd into most Parts of Europe.

The Manner how the Kingdom became Hereditary and Absolute.

THE King had gained great Reputation by his brave Defence of Copenhagen in 1659, which obliged the Swedes to raise the Siege: Upon this a Peace was concluded; but the Army was not disbanded, nor could they be for want of Money to pay their Arrears. The Peasants and Burghers were extremely impoverish'd by the last War, which had put a Stop to all Business and Trade; so that a Meeting of the 3 Estates was appointed at Copenhagen, in which the Nobility declared, That the Money necessary on that Occasion ought to be levied on the Commons, without designing to bear any proportionable Share themselves, but only a voluntary Contribution, tho' most of the remaining Riches of the Kingdom were in their Hands. The Burghers thought some Consideration should be had of their valiant Defence of Copenhagen, and of their Poverty; and that it was reasonable that the Nobility, who were Proprietors of the Kingdom, should at least pay their Share of the Taxes. This disoblig'd the Nobility: Upon which one Otto Craeg stood up and told the Commons, That they were only Slaves, and had no Liberty to disobey the Orders of the Nobility their Masters: To

which Nansen, Speaker of the Commons reply'd, *That the Commons were not Slaves, nor would from thenceforth be called so by the Nobility, which they should soon prove to their Cost.* Upon this the Commons and Clergy broke up, and met in *Brewers-Hall*, where, after many Debates, the Commons concluded, That it was most fit, without Delay, to wait upon the King, and offer him their Votes and Assistance to be an absolute Monarch, and that the Crown should be Hereditary to his Family. They expected by this to oblige the King to them, who in Gratitude could not but confirm and enlarge their Privileges; and they thought they should only change many Masters for one; and above all, they were prompted to this by a Desire of Revenge on the Nobility. The Clergy propos'd by this to be also freed from the Tyranny of the Nobles, and to have no other Superior but the King, whose Interest they thought it would be to favour them, because of the Influence they had on the Consciences of the People. The King was not to very fond of this Change at first, and said, *That tho' he knew it was not his own Inclination to abuse this Excess of Power which was offer'd him, yet some of his Successors might do so, to the Ruine of themselves and Subjects; but the Queen, who was a Woman of Intrigue and high Spirit, overpersuaded him.* The Nobles knew little of this Design against them; yet some of their own Number were also gain'd by the Court. Some of the Commons however declar'd, That it was reasonable they should have their Privileges drawn up and sign'd by the King for their Security; but the Clergy said, It was a Thing unbefitting and dishonourable to require any other Security than the King's bare Word.

Next Morning the Commons and Clergy came to the Council-House, where the Nobility were met, and Nansen told them, That the only Remedy for the Disorders of the Kingdom, was to make the Crown Hereditary, and the King Absolute; if the Nobility would concur, they were content; if not, they were going to the King themselves, and the Matter should be done without them. The Nobility were Thunder-struck with this; but seeing they were no longer Masters; that the Commons

were arm'd; and that the Clergy and Army were against them; that they were in a fortified City, remote from their several Countries and Interests, where formerly they had govern'd like Princes; they durst not oppose the Resolution of the Commons, but only told them, That a Business of this Importance requir'd Time and Consideration. *Nansen* deny'd them the least Delay: So the Commons and Clergy march'd in a Body to the Palace; and in their Name the Bishop of *Zeeland* offer'd the King an Absolute and Hereditary Dominion, which his Majesty accepted, and thank'd them; but told them, That the Concurrence of the Nobility was necessary: To procure which, Orders were given, That the City-Gates should be shut; and that none of the Nobility should depart till this great Change was finished with all possible Formality. This frighted the Nobility so, that they dispatch'd Letters to the Court, to signify their Willingness to comply with what the Commons had propos'd. Three Days were spent in making Preparations for this Solemnity: Scaffolds were rais'd before the Castle, and adorn'd with Tapestry; the Soldiers and Burghers were order'd to be in Arms; and on the 27th of *October* the King, on a Theatre erected for that purpose, receiv'd the Homage of all the Senators, Nobility, Clergy, and Commons, which was perform'd kneeling; and the Oath they took oblig'd 'em to obey him without Reserve as their Hereditary Monarch, which they also sign'd. Some say, That if the Nobility had made any Struggle for their Liberty, the King would not have push'd the Point so far as to desire an Arbitrary Dominion: But thus he was made above the Law, which the Commons have repented frequently since; and all that the Citizens of *Copenhagen* have by it, is, the Privilege to wear Swords. The Clergy are the only Gainers by it, whom the Court favours as subservient to their Designs of keeping the People in Slavery, by the Authority they have over them.

Of the King's REVENUES.

They arise, 1. From the Customs of Import and Export, which amount to 165000 Rix-Dollars per Annum. 2. From

the Land-Tax, House-Tax, and Fortification-Money, by which the Crown raises considerable Sums; for every House must pay 4 per Cent. of the Value that the Ground on which it is built is rated at. For every 100 Rix-Dollars Stock, the Inhabitants must quarter one Soldier, besides others in Proportion to their Trade; and when the Government is in great Want of Money, this Tax is doubled. The Yearly Sum rais'd from this Fund is reckon'd to be One Million of Rix-Dollars.

When the King has a Daughter to be married, her Portion is levied on the Subjects; 3. From the Tenths of Timber, Oil, Tar, Pitch, and Fish, and from the Copper, Silver, and Iron Mines, in *Norway*, which is reckon'd at 700000 Rix-Dollars per Annum. 4. From the Crown-Lands and confiscated Estates, valued Yearly at 200000 Rix-Dollars: But *Mr. Moldworth* observes, That this Branch of the Revenue does not enrich the Crown; for when any Man's Lands fall into the King's Hands, no Care is taken to improve 'em; so that they are turn'd to Forrest, and the Houses fall to Decay. 5. From the Excise of *Copenhagen* upon Provisions brought to the Market, and upon Tobacco, Wine, Salt, Corn, &c. which is farm'd at 140000 Rix-Dollars per Annum. 6. From the Excise of the rest of the Kingdom, which amounts to the like Sum. 7. From smaller Taxes, as upon Marriages, and Stamp'd Paper, some of which amount to several Rix-Dollars a Sheet; and upon Brewing, Grinding, &c. all which together make about 100000 Rix-Dollars per Annum. 8. From the Revenue of *Iseland*, which is 27000 Rix-Dollars per Annum. 9. From *Oldenburg* and *Delmenhorst*, 80000 Rix-Dollars per Annum. 10. From the Toll upon the *Weser*, which is 50000 Rix-Dollars per Annum; all which amount to about 639250 l. Sterling per Annum.

Of the SOUND.

THIS Passage or Streight call'd the Sound, or Ore-Sound, lies between the Island of *Zeeland* and the firm Land of *Schonen*, is guarded on the Danish Side by the Castle of *Cronenburg*, over against which lies the Town and Castle of *Helsingburg* in *Schonen*, now demo-

demolish'd. Betwixt these, all Vessels that trade into the *Baltick* pass and repass; so that next to that of *Gibraltar*, we may justly reckon this Strait the most important and best frequented of any in *Europe*. Since the *Danes* lost *Schonen*, their Title to the Toll on Ships that pass the *Sound* is not so secure, because they are not Masters of the Land on both Sides; and upon this Account the Windows of *Cronenburg* Castle, whose Prospect lies towards *Schonen*, were walled up, that so hateful an Object might not cause continual Heart-burnings and Grief in the *Danes*.

The Origine of the Toll that the King of *Denmark* obliges Ships which pass the *Sound* to pay, was on Account of the Buoys which he kept there, that Ships might avoid the Shelves and Banks. *Cambden* informs us, in the Life of Queen *Elizabeth*, That in 1582, the *English* Ambassador represented to the King of *Denmark*, That *England* paid that Toll only on Account of those Buoys, and for defraying the Charge of Lights, which the *Danish* King put up in the Night for a Guide to Ships; and on the same Account all Trading Nations agreed, That their Ships which passed that Way should pay their Share. Before 1582, the *English* paid only one Rose-Noble for each Ship that passed the *Sound*; But there being no fix'd Treaty, the *Danes* began in Time to be Arbitrary, and to impose what they pleas'd, according to the Strength or Weakness of those they had to deal with, or according to their Friendships or Enmity with those Princes and States to whom the Ships belong'd. Therefore to ascertain this Toll, the Emperor *Charles V.* concluded a Treaty with the King of *Denmark* at *Spires*, in Behalf of his Subjects of the 17 Provinces, who then had a great Traffick in the *Baltick*; by which Treaty every Ship of 200 Tuns, and under, that enter'd the *Sound*, was to pay two Rose-Nobles at her Entrance or Return; and every Ship above 200 Tuns, was to pay three.

This Agreement remained in Force till the Revolt of the 7 United Provinces, when the *Danes*, taking the Advantage of those Wars, rais'd the Toll to an extravagant Height, because the State of Affairs would not allow the *Dutch* to redress them-

selves; and King *James I.* conniv'd at those Oppressions of the *Danes*, on Account of his Marriage to a Daughter of that Crown. However, about 1600, the *Dutch* join'd with the City of *Lubeck* against this exorbitant Toll; and from that Time the *Danes* exacted more or less, according as Fortune was favourable or adverse, but generally little: But in 1647, the *Danes* made a Treaty with *Holland* as a Sovereign State, that was to last 40 Years. After the Expiration of which, if no new Treaty was made, that of *Spires* was to be in Force. The *Danes* exacted once 519 Rix-Dollars on each Ship of 200 Tuns; and many are of Opinion, That the unreasonable heightening of this Toll occasion'd the K. of *Denmark's* losing so many Territories to the *Suedes*, who in 1645 got themselves free from paying any to the *Danes*.

This Strait is not above an *English* Mile and a half over. When the *Dutch* had War with *Denmark*, their Ships passed through the *Greater Belt*, which is 16 *English* Miles broad; and the *Danes* cannot hinder it, except they have a Squadron of Men of War constantly there; whereas they have only a small Frigate of 24 Guns, whose Station is at the Entrance of the Gulph of *Nibourg* on the Coast of *Fuhnen*.

In 1644, *Lewis de Geer*, Admiral of the *Dutch* Fleet, passed the *Sound*, and enter'd the *Baltick*, keeping to the Coast of *Schonen*, without receiving any Harm from the Castle of *Cronenburg*, that continually fir'd on him. In 1645, the *Dutch* Fleet of 50 Men of War, and 32 Merchant-men, commanded by *Witte Wittens*, passed the *Sound*: And *M. Terlon*, in his Memoirs, informs us, That he was with *Charles Gustavus* King of *Sweden* in the Castle of *Cronenburg*, when Admiral *Okdam*, who commanded the *Dutch* Fleet that was sent for the Relief of *Copenhagen*, passed the *Sound* in a Line of Battle, tho' the *Suedes* were Masters of both Sides, viz. of *Elfsnor* and *Helsingburg*, and fir'd all the Cannon of both Fortresses upon the *Dutch* Fleet; yet *Terlon* observ'd, That the Cannon from the Castle could not reach the Fleet that sail'd through the middle of the Strait; yet a Cannon Ball from the Fleet reach'd one of the Castle Windows with Violence enough.

About

About 1640, the Customs of the *Sound* yielded 240000 Rix-Dollars *per Annum*; but since 1645, they have not yielded above 150000; some Years not above 80000; and in 1691, they did not extend to full 70000.

Their W E I G H T S

ARE the great and small Hundred, the first of 120, and the other of 112 lb. The former is divided into 12 Parts or Stones, at 10 lb. *per Stone*.

They have also a Skip-Pound, which makes 32 Stone, at 10 lb. *per Stone*, which is 320 lb. Or 20 Lis-Pounds of 16 Pound Mark is a Skip-Pound. And the 100 lb. *English* is found to be 92 at *Copenhagen*.

Their Measures are not so certain; the best Account is, That 100 Yards *English* make about 163 *Danish* Ells.

Their L A W S.

MR. *Moldsworth* says, their Laws exceed all that he knows in the World for Justice, Brevity, and Perspicuity: They are contain'd in One Quarto Volume in the *Danish* Language, with so much Plainness, that no Man, who can write and read, is so ignorant but he may presently understand his own Case, and plead it too if he pleases, without the Assistance of Council or Attorney. They have none of that *Chicanery*, which destroys and raises so many Estates in other Places: A very few Advocates do the Business of all that have Law.

Suits there; nor are their Fees exorbitant. No Suit, tho' of the greatest Importance, hangs in Suspence longer than one Year and a Month; for a Man may go through all the Courts, and have Execution done within that Time, unless he be wanting to himself. They have 3 Courts in *Denmark*, viz. the City or Town Court, from which there lies an Appeal to the County, and from that to the highest Court in *Copenhagen*, where the King himself sometimes sits in Person, and it is always compos'd of the prime Nobility. This resembles our Court of *Chancery*; and if any Thing happen to fall in Debate, for the Decision of which there is not a positive Law, it is determin'd there by the King, or by the other Judges that are present, who are Keepers of the King's Conscience.

When the Estates made the King Absolute and Hereditary, they presented him with the Book of Laws called *Handfæstning*, which contain'd all that had ever been made against an Absolute Sovereignty. The *Lex Regia*, which contains the People's Surrender of their Rights, is contain'd in the *Codex Christianus*, made by *Christian V.* by which their Kings are declared to be the only Legislators, accountable to none; That no former Laws are binding upon them; That they may put in and out what Officers they please; do in Ecclesiastical Matters what they think fit; and make Peace and War, and Treaties with Foreign States, without Advice of their Council.

Before *Waldemar II.* who liv'd in the 12th Century, the *Danes* had no written Laws. *Christian V.* made the Collection now in use: They are very severe against Duels, so that few are heard of there. Their Laws are very just in respect of Shipwrecks, because of the Relief they give to those in Distress, and the Exactness with which they preserve the Goods they can save for the Use of the Owners, if they be claim'd before a Year and a Day; but if not, they belong to the King; and if the Goods be such as cannot be well kept, the Law orders them to be sold to the best Advantage, and the Money to be secur'd for the Owner. They observe the same Method in Goods found on the Roads.

Their

Their MILITARY AFFAIRS.

THIS needless to speak of their ancient Military Bravery, which is so well known in History; but as to the present State of their Soldiery, it is certain the King of *Denmark* levies more Men than his Country can maintain. Soldiers are thought here to be the Riches of the Kingdom; for when the King has no occasion for his Men at home, they are hir'd out to others; so that Mr. *Moldsworth* says, Soldiers are as Saleable here as Sheep or Oxen. Their King has found a Way to maintain 18000 Men at home for less than 100000 Crowns *per Annum* thus: The Country is divided into so many Ploughs, three of which are to find a Man; and when he is order'd to march, his Owners are obliged to give him so much a Day. The King finds them nothing but Arms. They are all handsomely cloath'd, and when any of them die or are sent abroad, the Masters are obliged to find others in their room, which dispeoples the Country. The Foot, both Officers and Soldiers, are for most part Strangers; the Natives being now so much dispirited, that they are not thought proper for Military Service.

There is kept in *Copenhagen* 3000 able Seamen in constant Pay. He has also some Thousands of Seamen at *Hamburg*, *Lubeck*, and other Cities; and tho' he does not make use of them, he now and then gives them a Month's Pay or two, for which he is sure of them on Occasion; so that in 12 Days, he can fit out a Squadron of 15 Men of War. He has also a great Number of Ship-Carpenters in Pay at *Copenhagen*, all well clad and disciplin'd.

The King has in the *Bacon* of *Copenhagen* 36 Ships of the Line of Battle, 15 or 16 Frigats, 8 or 10 Fire-Ships, and some Bomb-Vessels, besides Yachts, from 16 to 36 Guns, that may serve for Frigats.

The best Seamen he has are the *Norwegians*; but most of them are in the Service of the *Dutch*, and have their Families in *Holland*, from whence it is not likely they will ever return, except the *Dutch* use them worse, or the *Danes* better than hitherto they have done; for the *Danish* Provision by Sea is generally bad.

Some of the biggest of their Ships draw more Water by 5 or 6 Foot at the Stern than at the Head, which shows them to be broken Back'd. They are generally lower Masted than ours, and seem more unweildy, which makes them more proper for the *Baltick* than the Ocean, except a few of their Cruizers, and other Ships that convoy their Merchant-men to *France*, *Spain*, and *Portugal*.

The ARMS of Denmark.

THE King of *Denmark* bears Party of 3, and Coupe of 2, which make 12 Quarters. In the first for *Denmark*, Or, *Seme* of Hearts *Gules*, 3 Lions Passant-Gardant *Azure*, Crown'd, Langued, and Arm'd of the first. 2. For *Norway*, *Gules*, a Lion Rampant Or, Crown'd and Arm'd of the first: In his Paws a Battle-Ax *Argent*, hilted of the second. 3. For *Gothland*, *Gules*, a Lion Passant-Guardant Or, on 9 Hearts of the same in Fesse. 4. For *Schonen*, *Gules*, a Dragon Crown'd Or. 5. For *Jutland*, *Gules*, a Paschal-Lamb *Argent*, supporting a Flag of the same, marked with a Cross *Gules*. 6. For *Sweden*, *Azure*, 3 Crowns Or. 7. For *Sleswick*, Or, two Lions Passant-Gardant *Azure*. 8. For *Island*, *Gules*, a Fish Crown'd *Argent*: Over those 8 Quarters, a great Cross *Argent*, which is the ancient Devise of the Kingdom; on the Center of which are placed the Arms of *Ditmarsh*, viz. *Gules*, a Cavalier Arm'd *Argent*. 9. For *Holstein*, *Gules*, a Nettle-Leaf open, and charg'd in the Middle with a little Escutcheon; the whole *Argent*. 10. For *Stormar*, *Gules*, a Cygnet *Argent*, gorg'd with a Crown Or. 11. For *Delmenhorst*, *Gules*, two Fesses Or. 12. For *Oldenburg*, a Cross Pattee *Argent*: The Shield is surrounded with the Collar of the Order of the Elephant: The Helmet Or, embroider'd and damask'd; the Sights cover'd, and wanting Bars; above which a Crown Or, encircled with 4 Circles, and adorn'd with Precious Stones: On the Top, a Globe Or; and above all, a Cross Pattee *Argent*.

The Crest is a Leopard Passant over the Crown Or, 8 Streamers *Azure*; a plain Cross *Argent*, 4 Spears bending to the Dexter Side, and as many to the Sinister Side Or.

The

The Supporters are two Savages Crown'd and Girt with Ivy Proper, Arm'd with two pointed Clubs.

The Mantle Or, fown with Hearts Gules, and Lions Azure, doubled Ermin. The Motto is, *Pietas & Justitia coronant.*

The ancient RELIGION of the Inhabitants, from Olaus Wormius.

Othin or Woden first introduc'd Paganism here, as well as in other Northerly Countries. They had their Worship in Denmark in those ancient Times, either in Temples built with great Cost, or in the open Air. At first they plac'd their Idols in small Huts, open on all Sides, because they thought it unbecoming the Majesty of their Gods to be shut up in Houses. Afterwards they built splendid Temples. The most magnificent in the North was that at Upsal, which was the Center of Paganism. There are none of the Ruins of those Temples to be seen now in Denmark, partly because when Christianity obtain'd, they either demolish'd them, that the Remains of them might not appear, or built Christian Churches in their Place.

The Pagan Altars were a Heap of Earth, on the Top of which 3 great Stones supported a greater; below which the Blood of their Sacrifices was pour'd. They always made use of Flint-Stones to strike Fire, because they thought it unlawful to use any other Way of kindling Fire for their Sacrifices.

Of their GODS.

THeir most ancient Idols were Oden and Thor. The Norwegian History informs us, That Olaus Trugge, their King, took away the Statue of the latter, which was of solid Gold. Frigo or Friggo was another, and said to be the Wife of Othin. Solemn Oaths were ordinarily sworn by the Name of Thor, who had a Hammer in his Hand for a Scepter. These three were their chief Gods. They had other Inferior ones, viz. Difa or Thisa, the Wife of

Thor, from whom Tuesday was named. The Sun was another of their Gods, from whom came Sunday. He was represented by a naked young Man, his Face resplendent with Rays, and holding a Wheel in his Hand, which denoted his Course. They also worship'd the Moon in the Shape of a Man with Asses-Ears, holding a Moon in his Hand. Voden was their Mars, and was carv'd with a Crown on his Head, a Sword in his Right Hand, and a Buckler in the Left. From him the 4th Day of the Week was called *Badensdag*. Thor, their chief God, was represented lying on a Bed, with a Crown of Gold on his Head, adorn'd with 12 Stars, and a Scepter in his Right Hand. They represented Friga by the Statue of a Hermaphrodite, with a Sword in the Right, and a Bow in the Left Hand; and from her Friday was called *Fragedag*. Saeter was plac'd upon a Column, which had a Fish at the Top, and this Idol stood on its Back, bare Headed, with a long Beard, and long Hair; in his Right Hand a Vessel full of Water and Flowers, and his Feet bare. They had many other Gods; and their Kings, who had made themselves famous while alive, were deified after their Death.

Their SACRIFICES

WERE of two Sorts; the first was Solemn and Pompous, and celebrated each 9th Year, when they sacrificed 89 Men, and the like Number of Horses, Dogs, and Cocks. This Sacrifice was perform'd in Zealand. The second was offer'd each 9th Month, and continued 9 Days, in each of which, 9 different Sorts of Beasts were offer'd; and they also sacrific'd Men at this Time, whom they threw into a Fountain, and if they died soon, they expected all Happiness and Success. After they were drown'd, the Priests drew them out, and hung them on a Tree in a consecrated Wood, and afterwards reckon'd 'em among the Gods.

They sacrificed to Woden, their Mars, in Token of Gratitude, several of the Captives they had taken in Battle. Once, in Time of a great Famine, the Norwegians sacrific'd their King Olaus Tretelge. Fro, who succeeded Othin or Woden, instituted those Human

man Sacrifices, and told 'em, That after his Death, he would accept of no other. This barbarous Worship gain'd Ground to that degree, that *Haquin* King of *Norway*, before he engag'd *Harald* King of *Denmark*, sacrific'd his own Sons. They anointed the Temples and Seats with the Blood of the Sacrifices, drank to the Memory of all their Gods, and had sometimes Turnaments for their Honour.

Of the Fire-Ordeal of the ancient Danes.

WHEN any Person was accused of a Crime, and could not clear himself, he was commanded to offer himself to this Trial thus: A Piece of red-hot Iron was laid upon the Palm of his Hand, till he walked to a Place 9 Foot distant; then he threw down the Iron, and his Hand was seal'd up; and if after 9 Days there was no Appearance of the Burning, he was declared innocent. *Wormius* thinks this Custom had its Rise in *Denmark* on this Occasion: *Pope*, who was the Apostle of the *Danes*, and preach'd the Gospel for some Time with no Success among them, at a Meeting of the Nobles took up a red-hot Iron in his Hand, carried it about a long Time without Hurt, and told them, This Miracle was a Proof of his Mission, which gain'd many to Christianity. Upon this, the old Way of trying the Guilty by Combats was laid aside, and the Ordeal was appointed to be the only Way to purge the Accused. This was about A. C. 986. They had also a Water-Ordeal thus: The accus'd Person was thrown into cold Water, and if he sunk to the Ground, they reckon'd him innocent; but if guilty, they said the Water would not suffer him to be cover'd with it, but threw him out. They had also an Ordeal by hot Water, which was thus: The accused Person thrust his Arm up to the Elbow into boiling Water, and if his Arm was burnt, they reckon'd him guilty; but if not, they account'd him innocent. The Priests us'd many Prayers and Ceremonies on this Occasion, that God might make this Trial answer the End of it. They had afterwards another kind of Fire-Ordeal, by which the Accus'd was oblig'd

to walk over 9 red-hot Plough-Shears blind-fold, and bare-footed, and if they escap'd burnings, they were held to be innocent. *Waldemar* abolish'd this Custom A. C. 1242; and *Innocent* III. at the Council of *Lateran*, prohibited the Clergy to be present at such Trials, to Bless the Iron, or to use the other accustomed Rites. In 1248, *Haquin*, the 19th King *Norway*, did likewise abrogate this Fire-Ordeal.

Of their D U E L S.

MORE Controversies were decided this Way, and us'd by all Sorts of Persons, Churchmen not excepted. This Custom was observ'd in *Denmark* till the Time of *Christian* III. They had inclos'd Places for this Purpose with great Stones or Timber; and such of the Combatants as got the first Wound, was cast, and oblig'd to pay to the Conqueror 3 Marks of fine Silver, as the Ransom of his Life; but if the vanquish'd Person happen'd to be kill'd, the Conqueror fell Heir to all his Estate; and if any Person refus'd to meet his Adversary when challeng'd, he was declar'd to have lost the Business in Debate. Their Arms were a Sword, Spear, Helmet and Buckler. This Custom continued in *Norway* till A. C. 1006.

Of the B U R I A L S of the ancient Danes.

THEIR Kings were buried near their Palaces; and many of their Sepulchres are still to be seen, as that of *Sigar* in *Zee-land*, near a Village, from thence called *Segerstede*, which was formerly a great City. Most of the rest were buried near the High-Way, which was also the Custom of the ancient *Romans*; and if any *Dane* of Note died by the Hand of his Enemies, they made a Funeral suitable to his Birth. They us'd to build up Heaps of Earth and Stone to a considerable Height, as Monuments. *Cambden* tells us, That the *English* call those *Danish* Graves *Barrows*. Such of them as had a Lay of Stones at the Foundation, were for Generals, or considerable Persons; but those for the Vulgar were only of Earth.

These Tombs were afterwards more artfully contriv'd; for they not only fix'd great Stones upon them, with the Names and Titles of the Deceased, but surrounded those Heaps with great Stones at the Bottom, plac'd other Stones on the Top, and made an Inclosure of Stone round them. *Wormius* says, there are two of them still to be seen near *Roschild*. They buried also in Woods and Groves.

Some of those Monuments were extraordinary expensive. 'Tis observ'd, That *Harald Blaaland* employ'd his whole Army, and a vast Number of Horse and Oxen, to remove a very great Rock, which he design'd as a Monument for his Parents, and boasted, that none after him would ever attempt the like.

The ancient *Danes* burnt the Bodies of the Deceased, and many of the Sepulchral Urns, in which they put their Ashes, have been found. Those who were kill'd in Battle, were buried all together in one Heap, and every one of the surviving Soldiers were obliged to bring a certain Quantity of Earth and Stones towards making it. Sometimes they built it like a Mountain, Vault-wise, in which they inclos'd the Bodies of the Deceased.

After Christianity was establish'd, their Bodies were burnt with Juniper, and they put many precious Things in the Graves of their Kings. *Olav Trugge*, King of *Norway*, rifled the Graves of his Predecessors, and found great Riches in them. Many old Coins have been found in their Graves, and some of them very weighty, with old Weapons, and Spurs of a great Size. They us'd to put a Piece of Money in the Mouth of the Deceased. This Custom of burning their Bodies was instituted by *Othin*, who told them, the more valuable Things were put with them into the Grave, the more acceptable they would be to the Gods.

Of the CONVERSION of the Danes.

Christianity was first preach'd here in the Reign of *Harald Blaaland*, about A. C. 948, by *Poppo*, as we heard before; and about the middle of the 12th Century, it was establish'd by Pope *Adrian IV.* an

Englishman, whose true Name was *Nicholas Breakpear*. *Wormius* observes, That worshipping of Saints was not us'd in *Denmark* till a long Time after.

When the Corruptions of the *Roman Church* grew so intollerable to many Nations in *Europe*, that they found a Reformation necessary, *Denmark*, which had been more abus'd by the Priests than many Places more Southerly, embrac'd the Doctrine of *Luther*. This happened in the Reign of *Frederick I.* about the middle of the 16th Century, who establish'd that Doctrine so firmly and universally in his Dominions, that to this Day they allow no other Religion; only the Calvinists have a Church in *Copenhagen*, set up by the Queen; and there is a Popish Chapel allow'd at *Gluckstadt* to a few Popish Families in those Parts. There are no Factions or Disputes here about Religion. The Clergy depend entirely on the Crown; and tho' they flatter the Court, and preach up the Power of the Prince, they are not allow'd any Power in Civil Affairs, or Share in the Government; nor are they encouraged to come to Court, or to appear on any Publick Occasions; so that the Pulpit is their only Province. Their chief Subsistence is the voluntary Benevolence of the People, which makes them take Care to get their good Opinion; yet they keep 'em in Awe by the Practice of Confession before they administer the Sacrament, which every one that receives is obliged to. This, with Crucifixes, and some other Ceremonies, is all that they retain of the *Romish Church*.

There are 10 Superintendants, who take it kindly to be called *Bishops*, and *My Lords*; viz. one in *Zeeland*; one in *Fuhnen*, four in *Jutland*; and four in *Norway*. They all depend on the Superior Consistory or Meeting of the Clergy. They have no Temporalities, keep no Ecclesiastical Courts, and have no Cathedrals, with Prebends, Canons, Deans, Sub-Deans, &c. but have only the Rank above the Inferior Clergy of their Diocese, and a Power to inspect into their Doctrine and Manners. The Revenue of the Bishop of *Zeeland* is about 2000 Rix-Dollars per Annum. The other Bishops of *Denmark* have about 1500 Rix-Dollars; and the Bishops of *Norway* have 1000 per Annum. The King has a great Share of the Tythes, and the Bishops are allow'd to have two or three

three Parishes each. Their Habit is common with that of the other Ministers, viz. a plaited black Gown with short Sleeves, and a large stiff Ruff about the Neck; and on their Heads they wear a Cap with Edges, like our Masters of Arts; only theirs is round. Most of them understand *English*, and have the best of their Divinity out of the Writings of our Divines. Some of them, that have studied at *Oxford*, are more valued than the rest. The Commonalty are great Frequenters of the Church, which are kept much more decent, clean, and better adorn'd, than with us; so that they look almost as gaudy as the Popish Churches.

Of the ancient LEARNING of Denmark, from Olaus Wormius.

HE informs us, That anciently there were few Scholars in *Denmark*, and the *Gothick* Kings were very ignorant; so that any who could but read and write, was in great Esteem in that Country. The *Danish* History tells us, That one *Hjarn* was chosen King merely for making an Epitaph on King *Frotho*. *Saxo Grammaticus* saw it, and translated it into Latin. History tells us, That their Kings gave peculiar Marks of their Favour to Poets, as Gold Chains, Gold Rings, costly Garments, &c. entertain'd them in their Courts, and made them their Favourites. Their Rhimes or Runes were said to have had such Force, as they were able to appease the Kings when in Wrath. They instance in *Egillius Skalligrimus*, who tho' he had killed a Son and other Friends of *Erick Blodock* King of *Norway*, yet obtain'd his Pardon, for an excellent Copy of Verses he made. Those Poets were called *Scalders*: And *Wormius*, in his *Literatura Runicæ*, has a List of the most eminent. Their Subject was the History of former Times, and the Lives and great Actions of their Kings, and other brave Men.

Some will have *Uphilas*, the Bishop of the *Goths*, to be the Inventor of the Runick Letters; but this is not probable, only he was the first that acquainted the *Romans* with those Characters. *Wormius* thinks they were more ancient than the Greek Letters; but gives no Reason for it. He says, they were taken from the Hebrew Alphabet, and

have a great Affinity to the *Greeks*. *Selden*, in his *Janus Anglicus*, p. 19. and *Salmasius*, are also of this Opinion. The Use of those Letters seems to be very ancient in *Denmark* and *Sweden*; and *Wormius* tells us, they have Inscriptions 600 Years older than *Charles the Great*, and instances in a Rock in *Bleking*, call'd *Harald's Rock*, because the Deeds of *Harald Hyldeland*, who liv'd about A. C. 270, and was contemporary with the Emperor *Galienus*, are engraven upon it. He says further, That *Hjarn*, who was chosen King for his Poetry, liv'd a few Years after the Birth of Christ. He concludes, That the true Inventor of their Letters and Poetry cannot be known at this Distance, because of the Want of Books, and because most of the Rocks, which were the Books of the ancient *Goths*, are demolished. He thinks it most probable, that Learning came thither with *Woden* from *Asia*; but that the Runick Letters are of a later Date. Their Pointed Letter were introduced by *Waldemar II.* King of *Denmark*, and are therefore called the *Waldemarian Runes*.

Spelman thinks the Word *Runes*, or *Rune*, comes from the *Saxon* Word *Ryne*, that signifies a Mystery, because the Poets of those Times conceal'd the Knowledge of them from the People, as the *Egyptian* Priests did their Hieroglyphicks, and because their Mysteries of Magick and Witchcraft were wrote in those Letters. *Hadrianus Junius*, and *Stephanus* the *Danish* King's Historiographer, are of the same Opinion; but *Wormius* thinks they are called *Runes* from *Run*, which signifies a Furrow, because the one Line began where the former ended.

He likewise says, They had 28 kinds of Runick Alphabets, and that the *Swedes* had the same Letters with the *Danes*, as appears from the Observations of *John* and *Olaus Magnus*, and *John Bureus*. He informs us, That the *Scythian*, *Massagetick* and *Getick* Characters, have a great Affinity with the Runick ones, which he proves from a Table, containing 72 kinds of different Characters, wrote by *James Bonaventura Hepburn*, a *Scots-man*. It was printed at *Rome* in 1617.

Saxo Grammaticus gives us many of those Inscriptions on Rocks, as does *Wormius* in his Learned Book, called *Monumenta Danica*. *Saxo* tells us also of an Epistle engraven on Wood, from *Fengo* King of *Denmark*, to the

King of Great Britain; and Wormius says, he had several Epistles of that sort of Love and Business in his *Museum*, with many Runick Kalendars, as he tells us in his *Fasti Danici*.

They engrav'd likewise on Bones, and on Horns, especially on those of the Elks and Rain-Deers, and sometimes they engrav'd their Kalendars on the Bones of Fishes. Wormius says, That *Christianus Frisius*, Chancellor of Denmark, has a Book consisting of 13 Leaves, made of thin Plates of Rain-Deer's Horn, about four Inches long, and one broad: The Festivals, Changes of the Moon, &c. are artfully engraven on it. Some of their old Bells have likewise Inscriptions on them. In the middle Times, they made use of Parchment; but all their ancient Books are lost, except that curious Book of Antiquity, call'd, *The Laws of Schonau*, which contains the Succession of the Danish Kings, their Marriages and Actions, and the Boundaries betwixt Denmark and Sweden. It is writ in Runick Characters: Every Word is separated from another by a Colon, and every new Law begins with a Red Letter.

Wormius tells us, That after they had engraven their Letters on Rocks, Wood, Horn, &c. they colour'd the Draughts with Ink made of Pitch, the Blood of Seals, and other Ingredients, which are not now known; and that this Ink was so durable, that neither Storms nor Time could efface the Characters.

They had 136 kinds of Rhimes; and Wormius says, the old Danish Poems were fram'd with great Art and Care, and that they exceeded those of all other Nations in the wonderful Effects they had upon the Hearers. He speaks of a certain Inspiration that those Poets were sometimes possessed with, and says, their Poetry never succeeded with any but such as were naturally endued with that Poetical Fire.

Those employed in converting the Danes abolish'd the Runick Inscriptions, because they did not understand them themselves, and would not take Pains to learn them. Upon this Account all their Prayers and Worship were performed in Latin, and they had Instructions to propagate the Roman Characters as more holy than the Runick, which they said were polluted with

Paganism and Magical Spells, and contrary to Christianity. The Runick Characters fell partly into Contempt on that Account, and also because the Roman Characters were more easily writ, and had more Books of Learning in 'em. The Runick Characters were not quite abolish'd however in 1319; for the Laws of *Schonau* were writ about that Time, tho' very few had then any Skill in them. *Alphonso* King of *Castile* and *Navarre* abolish'd them in Spain A. C. 1086. *Roderick of Toledo* tells us, That the Council of *Toledo* condemn'd them A. C. 1116. *Aventinus* in his *Annals*, Lib. 1, says, That after the Death of *Frederick II.* Emperor of Germany, the Germans diffus'd the Runick Letters, and instead of them brought in the Latin Characters.

Jornandes tells us, That *Zalmoxis*, *Zante*, and *Dicemus*, who were great Philosophers, instructed the Goths, their Countrymen, in Knowledge. Wormius speaks of two Books, call'd *Edda* and *Sagda*, which contain great Variety of Enigma's, Allegories, and Hieroglyphicks, that were Part of the ancient Learning of the Goths. Many Horns are still to be seen with Inscriptions and Figures of Animals, which give us some Taste of the Religion and Natural Philosophy of the ancient Danes. That found in the Diocese of *Rigen* is of this Sort.

Of the present State of Learning there.

THE late King *Christian V.* erected a Royal Academy for the Polite Education of young Gentlemen in 1690 at *Copenhagen*, committed the Government of it to *Mr. Van Schindel*, a Person of a Noble Family in *Sleswick*, settled Professors of most sorts of Learning under him, with Masters for all genteel Exercises, and gave them the House of the Counts of *Bijse*.

Mr. Madsforth says, That Learning runs low there at present; only Latin is more spoken by their Clergy than by ours in England. There are few Books printed there, and those only some dull Treatises against the Papists and Calvinists. The Belles Lettres are very much Strangers here, and can hardly be introduc'd, till a greater Affluence among the Gentry makes Way for them; for Necessity dulls and destroys

Men's

Men's Spirits. The Revenues and Buildings of the University at Copenhagen are mean. The Students wear black Cloaks, and live scattered about the Town. On the King's Birth-day, the Rector *Magnificus* harangues his Majesty in the University with a Latin Speech, full of gross Flattery.

In this King's Grandfather's Time, there was an University at *Sora*, where the Lodgings and Conveniencies for Study exceeded those of Copenhagen; but the King had Occasion for the Revenues, so that now it is desolate, and there's only a small Grammar-School in its stead. Mr. *Mildsworth* observes, That there's a certain Equality of Judgment among them, and that every one keeps the ordinary beaten Road of Sense, which in this Country is neither the fairest nor the foulest. They are not good at imitating the Inventions of other Countries; and for inventing themselves, he says none have ever pretended to it since the famous *Tycho Brahe*.

This Country has produc'd many Learned Men; as,

1. *Saxo Grammaticus*, who liv'd in the 12th Century, and wrote the History of Denmark in elegant Latin. *Erasmus* was amaz'd to find so much Eloquence and good Language in such a barbarous Age. He was the King of Denmark's Historiographer, died in 1500, and is buried at *Roskilde*, where his Latin Epitaph is still to be read.

2. *Erasmus Letus*, who was Professor of Divinity in the University of Copenhagen. He published many Learned Works, of which *Gesner* has given us the Catalogue.

3. *Nicolaus Hemingius*, remarkable for his judicious Commentaries on the Scripture. He died at *Roskilde* in 1600.

4. *Tycho Brahe*, born in *Schonen*: He was a rich Nobleman, and Baron of *Tettrup*. All Europe is oblig'd to him for the Improvements he made in Astronomy.

5. *Christianus Severinus Montanus*, who was *Tycho Brahe's* Scholar, and Professor of Astronomy at Copenhagen, where he wrote his *Astronomia Danica*. He lost much of his former Reputation by his Book *De Vera Circuli Mensura*, Printed at Amsterdam in 1644. This Work cost him 30 Years Study; but was confuted in one Page by Dr. *Pell*, then Professor of Mathematicks at Amsterdam.

6. *Arild Wisfield*, Lord of *Odersberch*, and Chancellor of Denmark. He reduced *Saxo's* History to a Chronological Method, and wrote in Danish a History of the Kings of Denmark and Norway. *Pontanus* gives a great Character of that Work.

7. *Stephanus Stephanus*, *Regius* Professor of History in the University of *Sora*. He wrote Accurate and Learned Notes on *Saxo Grammaticus*. He also wrote the History of Denmark, from 1550, to 1559, which was Printed at *Sora* in 1650.

8. *Olav Wormius*, *Regius* Professor of Physick at Copenhagen, a great Antiquary, who with incredible Diligence, and great Success, made wonderful Discoveries relating to the *Runic* Inscriptions, Learning, Poetry, &c. and has given an Exact and Learned Account of the Antiquities of his Country, which lay unregarded before his Time. He wrote upon those Parts of abstruse Learning, his *Literatura Runica*, *Monumenta Danica*, *Fasti Danici*, and *Museum Wormianum*. The last is the Catalogue of his Natural Curiosities and Rarities, of which he had a great Collection.

9. *Petrus Joannes Resenius*, Professor of Moral Philosophy, and Counsellor to the late King, has improv'd the Antiquities observ'd by *Wormius*, and made a greater Collection of *Runic* Monuments. He has also publish'd the *Edda Islandorum*, which shews his great Abilities in that Part of Learning.

We might also add *Petrus Severinus*, the two *Bansholms*, famous for Physick and Anatomy, and *Borrichius*, who left a great Legacy to the University of Copenhagen.

Their LANGUAGE.

Roderick of Toledo tells us, That the Teutonic, Danish, Norwegian, Swedish, Low-Dutch, and English, have the same Origin, tho' they differ in Dialects. *Justus Lipsius* says, That the Old Celtick was also an Idiom of the Teutonic. The *Edda Islandorum*, an ancient Piece, gives an Account of the Language of that Country, and calls it Danish: It informs us, That *Woden* brought that Language from Asia, and that the Colonies he planted in Denmark, Sweden, Norway and Saxony, left their Language there.

Wor-

Wormius observes, That the *Danish* is mightily chang'd within these last 400 Years, which is evident from their ancient Monuments. Of late they borrow many Words from the *High Dutch*, which the Court, Gentry, and Burghers, use in common Discourse, and the *French* when they talk to Strangers, to whom the *Danish* is disagreeable, because of its bad and languishing Tone.

The Division of Denmark:

Denmark is divided into the Peninsula of *Jutland*, and the *Isles*. We shall begin at the latter.

Z E E L A N D,

WAS anciently call'd *Codonania* by *Pomponius Mela*, and had its Name from its Situation in the Sea; and some say, this Island is the largest in the *Baltick*, is almost of a Circular Figure, and about 180 *English Miles* in Circumference. It has the *Sound* and *Schonen* on the E. the *Baltick* on the S. the *Great Belt* and the *Isle of Fuhnen* on the W. and the Entrance into the *Sound* on the N. It is tolerably fruitful in Corn, and has a great Trade by exporting Black Cattle. The Woods are full of Game. The Face of the Land is pleasant, and abounds with little Hills, Woods and Lakes. *Mr. Moldsworth* says, there are few Meadows here, yet they have Plenty of good Hay, from the Grass that grows by the Sides of Corn-Fields, and in some scatter'd Spots of Marshy Grounds. It has no Rivers, nor above half a Score Brooks, that are able to turn a Mill; but has a great Number of fine Lakes, well stor'd with Fish. In this Island there are 340 Parishes, and the principal City of *Denmark*.

Copenhagen, which lies 20 *English Miles* E. from *Roschild*, 16 S. from *Cronenburg*, 150 S. from *Gothenburg*, 225 S. W. from *Calmar*, and 350 from *Stockholm*. Its ancient Name was *Segelburg*. In the 12th Century, *Abso-lon* Archbishop of *Denmark*, as *Saxo Grammaticus* informs us, built a Citadel here to stop the Incursions of the Pirates, and cal-

led it *Axel-huis*. This encouraged several Fishermen and other Traders to settle here, from whence it was call'd *Kiopmans-Haven*, i. e. Merchants-Haven. *Christian IV.* King of *Denmark*, enlarged and beautified this City, and join'd it to the *Isle Amack* by a Bridge, in which he built a new Town of 4 or 500 Houses, and an Exchange, which is a large Building, with a great Vault below, where Merchants have their Ware-houses. He also built an Arsenal, which is now well provided with Artillery, and particularly with Cannon for Ships, many of which are 48 Pounds. Brass Guns are as plentiful here as Iron Guns elsewhere. Each Ship of the King's Navy has a distinct Chamber, with all manner of Rigging for it. In other Rooms they keep small Arms for Ships: And for the more convenient Embarkment of all of them, the Arsenal is built on the Brink of the Water. They have Plenty of Brass Mortars 100 and 200 Pounds, and a green Brass Culverine 22 Foot long. For Land Artillery, they have 30 Battering-Pieces from 12 to 48 Pounds, 20 Mortars from 100 to 200 Pounds, and 70 Field-Pieces, all of Brass. They have also 20000 Muskets, and 600 compleat Sets of Armour. The celebrated Globe of *Tycho Brahe*, 6 Foot Diameter, and the only Remains of all the Instruments that belong'd to him, is kept here. By the Observations of *Mr. Picard* and *Mr. Flamsted*, the Difference of Meridians betwixt *London* and *Copenhagen* is 51 Min. 40 Sec. so that the Long. is 32 Deg. and the Lat. 56½ Deg.

This City stands very low; but there is a Rising Ground within half a League of it, and two or three little Hills that cover it on the W. Side, from whence the City may easily be bombarded. This Town is large, and has a very regular Citadel on the N. and N. W. built on the Shore, with several fine Bastions, and Ravelins of Earth, well stor'd with Cannon; and palliado'd. They have a Battalion of Foot in Garrison. The other Sides are of more difficult Access, by reason of Marshes. There are several Royal Bastions with Ravelins before the Curtains, which reach from the Citadel to the S. Part, and continue beyond the Arm of the Sea, which separates Zealand from

from *Amack*. A Circuit of Fortifications, consisting of 8 Royal Bastions, and a Ravelin, incloses the New City and Port, with the Fleet, and faces the *Tollbooth* or Custom-House Battery, which secures the Entry into the Haven. Those Fortifications make the City of a round Form. The Houses, which are above 7000 in Number, don't take up above half the Ground inclos'd.

The Harbour is excellent, and would be the Staple of all the Trade in the *Baltick*, if it were a Free City. The Entrance into it is so narrow, that one Ship only can pass at a time; and this Entrance is shut up every Night with a strong Boom. The Citadel on one Side, and the Custom-House or Block-House, well stor'd with Cannon, on the other, command the Mouth of the Port; within which lies the Navy Royal. It is capacious enough to hold 500 Sail, where neither Wind nor Enemies can annoy them. The Road without is very good and safe, being fenced from the Sea by a large Sand-Bank, on the Point of which there's a couple of Buoys to direct all Ships that come in or go out. There are no Tides here, but always a sufficient Depth of Water; so that this Port may in all Respects be reckon'd one of the best in the World.

They have 10 Churches: *St. Mary's* is the Cathedral, wherein the greatest Solemnities, such as the Coronation of their Kings, &c. are celebrated. The Dome is fine, and the Steeple magnificent. The Church of the *Holy Ghost* is fine, and very ancient. That of *St. Nicholas* is not inferior to the other two in beautiful Structure: It has a stately Steeple, and was built after the Reformation. *St. Peter's* is also an ancient Church, where Worship is perform'd in *High Dutch* since 1574, by the Command of *Frederick II.* who then caus'd it to be new built. *Trinity Church* is also a fine Building, and was finished in 1656. The Publick Library is kept over this Church; a great Part of the Books were given by *Christian IV.* This Church joins to the Round Tower, built by Order of the same King, who laid the first Stone himself in 1637. It was finished in 1642, and called *Uraniburg*, being built instead of that of the same Name belonging to *Tycho Brahe* in the Isle of *Huen*, which was demolished in

his Reign. The Stairs are 15 Foot broad, and so easy, that a Coach may go up them. The *Danes* call it *Stelleburg*, because 'twas designed for Astronomical Observations: It is flat at Top, and has a Balcony with Iron Balisters round it. The Chamber of Curiosities here contains a great Number of Rarities of Nature and Art. *Jacobaeus*, a Physician at *Copenhagen*, has published a Catalogue of them in Folio.

The Academy here was founded by *Christian I.* about 1475; and *Sixtus Quartus* granted it all the Privileges of that of *Bologna*. King *John* enlarged and beautified it, and settled Salaries for the Professors. *Christian III.* built a Ward for the Maintenance of 20 poor Students. *Frederick II.* added 80 more to them, and increas'd the Pensions of the Professors. *Gaspar Thomae*, and *Erasmus Bartholomaei*, were Professors here.

The Streets are light enough in the Night by *Lanthorns*. They make use of no *Flambeaus* here, for fear of Fire, to which this City is liable, by reason of the many Timber Buildings. To prevent this, every Master of a House must have a large Tub full of Water at his Door. Coaches are much us'd here, because of the Dirtiness of the Streets in Winter. *Mr. Moldsworth* thinks this City is near as large as *Bristol*. In 1659, the *Swedes* besieged this Place, and were obliged to raise the Siege, after they had spent a whole Year in it.

Amagar or *Amack*, lies E. from the City, on the other Side of the Haven, and is called the Garden of *Copenhagen*. It is almost of an Oval Form, and about 6 Miles in Length. This Island was planted by *Hollanders*, sent thither by the Arch-Duchess of *Savoy*, and Governess of the *Low Countries*, at the Desire of *Christian II.* that his Queen, who was Sister to *Charles V.* Emperor of *Germany*, might have Pulse, and other Things planted there, that pleas'd her Taste. They still retain the *Dutch* Fashions, and supply *Copenhagen* with Milk, Butter and Cheese, of which they sell above the Value of 1000 Rix-Dollars every Week. Besides the Pulse and other Fruits which the Island produces, here is Plenty of Wheat, Barley, and Oats, and abundance of Hares. The Inhabitants are industrious, and their Houses neat and cleanly. That

Part

Part of *Copenhagen* called *Christians-Haven*, because built by *Christian IV.* lies in this Island. It was in this Isle that *Frederick III.* began to defeat the *Swedes*, who made a Descent here *October 9, 1658.* but the next Day they were so warmly attacked by the *Danes*, that *Charles Gustavus King of Sweden*, and *Wrangel* his General, were obliged to leave their Army engaged, and to make their Escape in a Fisher-Boat.

Roschild lies in Lat. $56^{\circ} \frac{1}{2}$, and Long. $31^{\circ} \frac{1}{2}$, at the Bottom of the Bay of *Isene*. It was anciently the most considerable Place of the Isle of *Zeland*; but since *Copenhagen* became the Residence of the Kings of *Denmark*, it has gone to Decay. It is most noted for being the Burying-Place of the Royal Family. *Harald*, the Father of *Sueno Otho*, is buried here, and his Epitaph still to be seen, as also that of *Sueno the Great*, and of *Margaret*, who united the 3 Northern Crowns; those of *Christian III.* *Frederick II.* *Christian IV.* *Christian V.* and *Frederick III.* *Sueno Otho* made this Place a Bishop's See in 1012. *Sueno Gratenbede* fortified it; and *Lysander* tells us, there was once 27 Churches in this Town. In the Old Cathedral, there's a fair Marble Pillar, that Queen *Margaret* erected to hang the Whetstone upon, which *Albert King of Sweden* sent her to sharpen her Needles, in Derision of her Sex. This Jest cost him dear, for she took and detain'd him Prisoner 7 Years, and obliged him to renounce his Right to the Crown of *Sweden*. There is a Convent of Lutheran Nuns here, who are all of good Families. They have no distinct Habit, are under no Vows, but may if they please leave the Cloyster and marry. The Situation of this Town brings it some small Trade. A Treaty was concluded here in 1658 betwixt the two Northern Crowns.

Elsinour lies in the Streight called the *Sound* or *Oresunds*, over against *Helsingburg* in *Schenen*, N. from *Copenhagen*. When the Court resided in the Castle of *Cronenburg*, the Town was larger than now, and had Walls. The Castle of *Cronenburg* is 4 or 500 Paces distant from it on the Shore. It makes a large square Court, and was adorn'd with fine Statues. The Pipes of the Cistern that supplied the Garrison with Water, and the Locks of the Doors, were all of fine Sil-

ver, before it was plunder'd by the *Swedes*. It was built in 1582, is all of Free-Stone, and has 4 little Towers at each Corner, cover'd with Copper; but this Castle, with the Chapel, Steeple, and Ornaments of it, are all going to Decay. It has a Ditch round it, and 4 Bastions, two of which are to the Seaward, surrounded with another Ditch, and the Land-side is secured by 5 more Bastions, and an half Bastion. They have fine Cannon upon them; but the Bastion that commands the Passage of the *Sound* has but two Cannon 36 Pounders each, and 11 more of a smaller Size. The Rampart is vaulted with Free-Stone. The *Danes* believe this Castle is able to defend the Passage of the *Sound*; upon which the King struck a Medal in 1691, on one Side of which there's a two-handed Key, with this Motto, *Clandit & Resludit*. In 1658, the *Swedes* made themselves Masters of this Castle, but were obliged to surrender it by the Treaty of *Copenhagen* in 1660.

Fredericksburg is a Royal Castle, 10 English Miles S. W. from *Cronenburg*: It belong'd to a private Gentleman; but *Frederick II.* purchas'd it, and began to enlarge it. His Son *Christian IV.* finish'd it. This is the *Versailles of Denmark*. The House is built on Piles in a Lake. The Body of the Castle consists of a very fair Front, with two great Wings. The Chapel is well adorn'd, and cover'd with gilt Copper. It had 12 Silver Statues of the Apostles, and all the Locks, Bolts, &c. were Silver, till it was plunder'd by the *Swedes*. The Hall is adorn'd with Painting, and has the Pictures of several of the Kings of *Denmark*; and of the Royal Family, as large as the Life, and a Frame of Paintings which represents the Sea and Land Battles of the Kings of *Denmark*. It is hung with rich Tapestry of Silk-Mohair, representing the Actions and Battles of *Christian IV.* There's a Gallery that leads from the Castle to the Hall of Audience, adorn'd with Pictures, most of which were bought in *Italy*. There's a Park here 19 Miles long, of a proportionable Breadth, and interspers'd with Pools and Fish-Ponds, with a Mixture of Green Plats, Hillocks, and small Vallies. It was stock'd with Fallow Deer from *England*. There's a pretty Flower-Garden behind the Castle on the other Side the Lake, in which, tho

tho deep, they have built a kind of Terras on Piles, which cost 100000 Crowns.

Sora stands near a Lake, which on one Side forms a kind of Morass, is pleasantly situated near a charming Wood of vast Extent, which is reserv'd for the King's Diversion and Game. *Absalom Vildus*, Archbishop of *Lunden*, founded a Church and Monastery, and settled a Seminary of Monks here, who were to write the History of *Denmark*. We owe *Saxo Grammaticus's* History to this Foundation. Many of this Bishop's Ornaments, with his Sword, were found in his Tomb here; for he went frequently to War, where he acquired great Reputation. He died in 1201. Many Historians call him *Absalom Hvide*. *Fredrick II.* erected an University here, which was called *Academia Equestris*, because design'd for the Education of young Gentlemen in Chivalry; and the Revenues of the Nunnery of *Mariæbo* in *Laland* were given to it in 1621. It became famous by the able Professors *Christian IV.* invited to come hither, among whom was the Learned *Murfsus*, Professor of History and Politicks here, from 1625 to 1639, when he died, and is buried in this Place. *Charles Gustavus* King of *Sweden* being educated here, when he invaded *Zeeland* he would not suffer his Soldiers to enter it: But the Revenues of this University were annexed to the Crown since, as we said before. The Ruins shew this to have been formerly a Place of great Note; but now the Town is very inconsiderable, having but one short Street, which consists of not above 50 Houses. It lies near the middle of the Isle, 30 Miles S. W. from *Copenhagen*, and 18 S. from *Roschild*.

Ringstede, N. E. from *Sora*, is a Town of great Antiquity, where many of the Danish Kings are buried in an old Church dedicated to *St. Canute*, particularly King *Waldemar*, and *Erick the Pious*. It decays daily, because of the Want of Trade. The Houses are low, because the Town is built on a high Ground; and the high Winds in Winter are very troublesome and dangerous here.

Korsør, was formerly a considerable Town, and had a great Trade, but is now poor: It stands on a Neck of Land, where the Sea forms a Gulph, the Entrance into

which is about a Musket-shot over; but the Bason is very deep, and Ships of great Burden may lie in it. At the Entrance of the Port, there's a square Fort with 9 Demi-Bastions, and some Iron Guns. The Foot of the Rampart is pallisado'd, and has a Ditch full of Water round it. There is also a Castle; but the Gates of it are ruinous. This Town lies over against *Nibourg* in *Fulnen*, from which 'tis separated by the Greater Belt, which is here about 30 English Miles over. When *Charles Gustavus* invaded *Zeeland* in 1658, he landed his Men here.

Holbeck is a considerable Town, 15 English Miles N. W. from *Roschild*, at the Bottom of a narrow Bay.

Kallenburg. *Saxo Grammaticus* calls it *Kallunden*, lies N. W. from *Holbeck*, at the Bottom of the most Westerly Bay of the Island. It was only a Fisher-Town till 1158, when *Absalom Hvides's* Brother made it a City, and beautified it with a Castle, Church, and other Publick Buildings. It has now a good Trade, by reason of its safe and convenient Harbour.

Other Towns are, 1. *Koge*, which is a little, but populous Town, on a small Bay of the Sound on the E. Side of the Island, 18 Miles S. from *Copenhagen*. It has a good Trade in Corn and Fish. 2. *Prestø*, S. W. from *Koge*, on the Bottom of a Bay of the *Baltick*, which has some Trade. 3. *Waringborg*, S. from *Prestø*, the most Southerly Town in the Island. It has also a Port, and a moderate Trade.

F U H N E N,

H A S the Great Belt on the E. the *Baltick* on the S. the Lesser Belt, which separates it from *Jutland*, on the W. and the Isle *Samsøe* on the N. It is about 48 Miles long from S. to N. and 40 Miles broad from W. to E. *Saxo Grammaticus*, *Lyfscander*, and all Travellers, make this the fruitfulest Place of the King of *Denmark's* Dominions; for the Soil is good and well manur'd. The Country consists of small, but very fruitful Hills, some of them covered with Woods: It is better Peopled than *Zeeland*. They export much Corn, and great Herds of Black Cattle, and have a good Breed

of Horfe, and Plenty of Hogs. It contains 4 Garifon Towns, 264 Villages, and 348 Parishes, 88 Fish-Ponds, 39 Rivulets, and is the Appanage of the King's eldest Son.

Odense, the chief Town of the Island, is called *Ottomia* by most Geographers. Some will have it called so from *Woden*; but it is more probable that its Name came from *Otho I.* for whose Honour it was built in 948, by *Harald King of Denmark*. It stands almost in the middle of the Island, 85 Miles W. S. W. from *Copenhagen*, 16 Miles W. from *Nybourg*, and as many E. from *Middlefor*. Before the Crown was made Hereditary in 1660, the General Assemblies of the States met here, and their Kings had their Residence in this Place. The Buildings are good, and the Streets regular. They have two fine Churches, one dedicated to *St. Canute*, in which his Body was found in 1582, in a Copper Coffin, gilt and adorn'd with Precious Stones; the other to *St. Francis*. The Town-House is a stately Building. It has been a Bishop's See since 950. *Harald Blastand* was killed here; and many of the Danish Kings, and particularly *Christian II.* are buried in this Town. Their Beer is extraordinary good, and their Linen not inferior to any in *Holland*.

Nybourg lies on the narrowest Passage of the Great Belt, betwixt *Fulmen* and *Zealand*. *Christian III.* first fortified it in 1546, and inclos'd the Castle within its Works. It was a strong Place; but the Breaches made in the Curtain and in the Castle during the last War with *Sweden*, are not yet repair'd. The Fortifications are better towards the Sea. It stands in a very fine Country, and has an excellent Port, which occasions some Trade. It was formerly the Residence of the Danish Kings, and is famous for a Victory the Danes gained near it over the *Swedes* in 1659.

Schwinnburg lies on the S. Side of the Island, over against the Isle of *Langeland*. It is a pleasant Town, and famous for the Passage of the Swedish Forces over the Ice to *Zealand* in 1658.

Afens lies S. W. from *Odense*, on the Streight of the Little Belt, near this Town. In 1535, King *Christian III.*'s Army, commanded by *John Rantzau*, routed that commanded by *Christopher Earl of Oldenburg*, and killed *Gustavus Troll* Archbishop of *Upsal*.

Rantzau afterwards levelled this Town to the Ground.

Middlefor or *Midlefor*, is a small but neat Town, in a Country abounding with all Necessaries: It lies on the Lesser Belt, which is frequently called the Streight of *Middlefor*, 24 English Miles W. from *Odense*. This is the narrowest Passage of the Belt, being no broader than the *Thames* at *Gravesend*. In 1658, *Charles Gustavus* led his Army over the Ice to this Place, routed the Danish Forces that oppos'd him, and made himself Master of the Island of *Fulmen*.

Geographers have plac'd an imaginary Town, called *Sophianode*, 7 Miles N. E. from *Middlefor*, on the Belt, over against *Friderichs odde*; but the Travels into *Denmark* in 1701, assure us, there never was any such Town.

Rohorg or *Wohorg*, on the S. Part of the Island, N. W. from *Schwinnburg*, at the Bottom of a Bay, was formerly burnt by the Army of *Christian III.*

Other ISLES are,

ARROE, which lies S. from *Fulmen*, is fertile in Corn, and abounds with Anise-Seed, with which they season their Meat and Bread. It produces Plenty of Black Cattle and Horses. It has 3 Parishes, and depended formerly on the Duchy of *Sleswick*; but was united to the Crown in the last Age. The only Town is *Koping*, on the S. of the Island, at the bottom of a Bay, and is a Place of some Trade, because of its Port.

LANGELAND, so called from its Length, which is about 30 English Miles. Its greatest Breadth is not above 12: It contains 16 Parishes, and abounds with Wheat, Rye, and Barley, of which it exports great Quantities Yearly. The most considerable Towns are, 1. *Rudkoping*, a large Town on the W. Side of the Isle, over against *Schwinnburg* in *Fulmen*. 2. *Thanneker*, N. from *Rudkoping*, is a good Fortrefs, where the King of *Denmark* keeps a strong Garifon.

LALAND, lies S. E. from *Langland*, S. from *Zealand*, and S. W. from *Fulster*: It is all low Ground, and from thence has its Name. 'Tis about 20 English Miles long, and 12 broad. It produces all sorts of Corn in abundance, and particularly Wheat, with which

which it supplies *Copenhagen*, and other Places of the Kingdom. The Dutch ship off great Quantities of Corn from hence every Year. It is a Principal Government, called a *Stifts-ampt*, and has several of the lesser Isles under its Jurisdiction. It consists of 4 Heriots or Lordships, and has the following Towns, viz. 1. *Naschow*, on the Bottom of a Bay on the W. Side of the Island, a large and well fortified Place. It was storm'd, burnt and taken by the *Lubeckers*, in 1510. 2. *Maribo*, in the middle of the Isle, on a Lake, and had formerly a famous Nunnery. 3. *Nysted*, on the S. of the Island, a large Town, once famous for a Noble Monastery built here in 1286. This Island is noted for being the Birth-place of *Nicholas Hemmingius*.

FALSTER, lies E. from *Laland*, from which it is separated by a narrow Streight called *Gulber-Sound*, and S. from *Zeeland*, from which 'tis separated by the *Grono-Sound*. It abounds with Barley, Wheat, &c. which Strangers export; is 16 English Miles in Length, and 8 in Breadth: The chief Towns are, 1. *Nykoping*, which has a strong Castle, and a well frequented Harbour, a pleasant Situation, and uniform Buildings. 2. *Stolecoping*, on the N. of the Isle, a Place of some Trade, being a Thorowfare betwixt *Zeeland* and *Germany*.

MONA, lies N. E. from *Falster*, from which it is separated by the *Grono-Sound*, and S. S. E. from *Zeeland*. It produces little Corn, but has good Pasture, The Soil is chalky and high, and a good Land-Mark to the German Vessels that trade in those Seas. It was formerly Part of the Danish Admirals Allowance, as being a Place the fittest of any in the King's Dominions for him to reside in. *Steg* or *Steka* is the only Town of Note here: It lies on the N. of the Island, on a little Rivulet, that falls a Mile below it into the Streight called *Grono-Sound*, which separates it from *Zeeland*. It made a brave Defence against the *Lubeckers* in 1510, and forc'd them to retreat. In 1659, they made a better Defence against the Swedes than greater Places had done.

SALTHOLM, lies E. from *Amack*, near the Coasts of *Schonen*, over against *Malmo*. The Author of the Travels into *Denmark* in 1702, observes, That *De Witt's* Maps and others make this Isle larger than

Huen; tho' the Inhabitants told him, it was but a sixth Part so big.

ALSEN, is a small Isle over against the Bay of *Hensburg*, in the Dutchy of *Sleswick*, of which it is a Part, and lies S. W. from *Fuhnen*. It has 13 Parishes, is exceeding fruitful, and so populous, that many Thousands of Fighting Men have been levied in a short Time here. *Rantzow*, a Danish Antiquary, is positive that the *Elisii*, *Arii*, and *Manimi* of *Tacitus*, were the Inhabitants of those 3 Islands, viz. *Alsen*, *Aaroe*, and *Moen* or *Meun*. The chief Town is *Sunderbourg*, a large City, with a strong Castle, on the Canal that separates *Alsen* from the Continent of *Jutland*. The Bailiwick of this Name is an Appanage of the Duke of *Holstein-Sunderbourg*. *Nordburg* lies on the N. of the Island, and belongs to the Duke of *Holstein-Nordburg*.

FEMEREN, is a small Island on the Coast of *Wagria*, N. from *Oldenburg*, and S. from *Laland*. It has always been looked upon as one of the Keys of *Denmark* with respect to the Empire: Therefore *Christian IV.* was more afraid of the Germans becoming Masters of this Island, than of their overrunning *Jutland*, which made him fortify all the old Castles, and put strong Garisons into every Place of Importance here. There are several Isles of less Note betwixt the most Northerly Promontory of *Jutland*, called *Cape Scagen*, and *Fuhnen*, viz. *Anholt* in the *Categate*, *Lessow*, E. of the Diocese of *Aalborg*; *Neding*, *Hertzholm*, *Katholm*, *Jordholm*, *Tune*, and *Samsoe*. The last lies N. of *Fuhnen*, has *Zeeland* on the S. and the Coasts of *Jutland* on the W. *Christian V.* made *Mote*, his Concubine, a Citizen's Daughter of *Copenhagen*, who bore him two natural Sons, Countess of this Island. It abounds with Cattle and Corn, and is so pleasant, that it is called the *Somos* of the North. *Wero* lies N. E. from *Samsoe*, and *Spro* lies in the Streight of the *Great Belt*, N. from *Laland*.

BORNHOLM, the most Easterly of all the Islands belonging to the King of *Denmark*, lies 20 English Miles E. S. E. of the Province of *Schonen*. It belong'd formerly to the Archbishops of *Lunden*; but in the beginning of the 16th Century, *Christian II.* took it from them, on Pretence that it was necessary for his Naval Preparations against

Sweden. The Swedes have frequently laid it waste; and in the War with *Frederick II.* they made themselves Masters of it, and design'd to keep it; but were obliged to restore it by the Treaty of *Copenhagen*, May 27, 1660. *Nex* is a large Town, on the S. W. of the Island, well fortified, and has a strong Castle. *Rattenby* lies N. N. E. from *Nex*, and has a good Fortrefs or Citadel, fortified after the modern Way, which commands the best Road in the Island. It was finished in 1689, and has good Bastions and Outworks. This Island is 28 *English* Miles long, and 8 broad.

CHRISTIAN'S-ØYE, are a Number of little Islands, which lie about 7 *English* Miles N. W. from *Bornholm*. They enclose a safe Harbour for 30 Sail. The largest Isle is in Form of a Crescent, and is well fortified. There are 90 Islands belonging to the Diocese of *Fuhnen*, most of which are habitable and fertile; but those we have describ'd are the most remarkable.

JUTLAND,

IS Part of the ancient *Cimbrica Chersonesus*, so called from the *Cimbri*, who settled here after their Defeat by *Mariss*, formerly mentioned; is the biggest and most considerable Part of the King of *Denmark's* Dominions, and amounts to about Two Thirds of the Whole. It is bounded on the W. and N. by the *German* Ocean, on the N. E. by the *Categat* or *Schager-Raak*, on the E. by the *Lesser Belt*, or *Middlest-Sound* and the *Baltick*, and on the S. by the River *Eyder*, which separates it from *Holslein*. *Beno* says, the Length of it from N. to S. is 212 *English* Miles, and the broadest Place is not above 90. Most Authors agree, That *Jutland* has about 950 Parishes, and the Duchy of *Sleswick* 280. This is a plentiful Country, and abounds with Cattle, but wants good Ports. The *Dutch* transport Yearly great Quantities of their lean Black Cattle to their own more fertile Soil, where they fatten in a short Time. The Horses and Hogs of this Country are good, and numerous. It affords enough of Corn for the Natives. The Land is most fertile near the Coasts; for the Inland is full of Heaths, Lakes and Woods.

This great Province is divided into *North* and *South Jutland*. The last is otherwise called the Duchy of *Sleswick*, and is separated from *North Jutland* by the River *Rips*.

NORTH JUTLAND is divided into 4 Dioceses, which are those of *Aalborg* or *Albourg*, *Wibourg*, *Arhusen*, and *Rypen*. This Country is larger and better Peopled than the Duchy of *Sleswick*.

AALBOURG, is so called from the Multitude of Eels taken in the Gulph of *Lymford*, which bounds this Diocese on the S. and S. W. It is otherwise called the Diocese of *Burglaw*. It ends in a small Point on the N. N. E. Its Length from N. W. to N. E. is about 100 *English* Miles. The N. Part of it is called *Wenfissel*, and by Latin Authors *Pandalia*, which makes some think that 'twas the Seat of the *Vandali*. The Inhabitants are the hardiest of the King of *Denmark's* Subjects. This Diocese has 13 High Courts of Judicature, 180 Parishes, 6 Cities, and 18 Noblemen's Houses. The chief Town is *Scagen*, which lies on the Promontory betwixt the *Norwegian* and *Baltick* Sea. It is more frequented by Merchants from all Parts of *Europe* than any other Town in *Jutland*, because they touch here in their Way thro' the *Sound*. Its Trade would be far greater, were it not for the dangerous Coast it lies on.

Wenfissel is 12 *English* Miles N. W. from *Alborg*, on a River, which some Miles below falls into the Bay or Gulph of *Limford*.

Albourg, called also *Elburgum*. The Bishoprick was founded here in 1065 by *Sueno Esthrith*, and the Bishops have resided in this Place since 1540. It stands 15 *English* Miles from the *Baltick*, on the Gulph of *Limford*, which runs more than 100 Miles W. from the *Baltick* towards the *German* Ocean, from which it is separated by a narrow Isthmus made by Sand-Hills on the W. Shore of *Jutland*, over against the great Shoal call'd *Jutsche Riff*.

Nikioping is situated in the Isle of *Mors*, which is made by the Gulph of *Limford*, and is a considerable Town.

Tysted lies on the S. W. Part of this Diocese, 45 *English* Miles W. from *Alborg*, in the middle of the Peninsula, made by the *German* Ocean, and the Gulph of *Limford*, which is the most fruitful Place of this District.

strict. It has a sort of an University, which was formerly a Free-School, founded by *Christian III.*

The Diocese of WIBOURG,

Has that of *Alborg* on the N. from which it is separated by the Gulph of *Limford*, the Diocese of *Ripen* on the W. S. W. and S. and that of *Arhusen* on the E. and S. E. Woods, Mountains and Lakes, abound here, so that it is not so fertile as the other two Dioceses. Its Length from W. to E. is 48 *English Miles*. It has 218 Parishes, 3 Castles, and as many Cities. It has 10 Rivulets, of which the most noted is *Guddem*. It has many Lakes, which communicate with the Gulph of *Limford*. This occasions some Trade in this Country. The chief City is

Wibourg, anciently the Capital of the *Gimbri*, and then called *Gimmersberg*, as was said before. It is not so certain why it changed its Name: Some think it was the Seat of Pyrates, who were then called *Wigju* in the old *Danish* Tongue. It stands in the middle of *Jutland*, near a Branch of the Gulph of *Limford*, 130 *English Miles* N. from *Sleswick*, 35 N. W. from *Aarhus*, and 35 S. from *Aalborg*. It is a Place of great Resort, being the Seat of a High Court of Judicature, to which Appeals are made from Inferior Courts; but none from it, except to the King. It has been the Seat of a Bishop for above 600 Years, and their Bishop debates Precedency with him of *Aalborg*.

Scheve or *Schiffhus*, on the same Gulph, W. from *Wibourg*, has the Reputation of breeding the best Horses in the North. The Peninsula of *Saling* is furrounded on all Sides by the same Gulph, except towards the S. and is the most noted Place in *Denmark* for fine Horses, which are exported by Foreigners. The Old *Salingi* of *Ptolomy* had their Seat here.

Nybe lies on the same Gulph, 8 *English Miles* W. from *Aalborg*, and is also noted for a good Breed of Horses.

The Diocese of RYPEN,

Contains 30 Bailiwicks, 282 Parishes, 10 Castles belonging to the King, 100 Noblemen's Seats, and 7 Cities. It has, accord-

ding to *Jonas Coldingensis*, a Part of the Diocese of *Alborg* on the N. that of *Wibourg* on the N. E. that of *Arhusen* on the E. the Dutchy of *Sleswick* on the S. and the German Ocean on the W. Its Length from the N. W. to S. E. is about 95 *English Miles*; the greatest Breadth not above 60, and in some Places towards the N. W. not 20. In this Diocese was found the famous Golden Vessel in Shape of a Horn, formerly mentioned. *Wormius* says, it was found on the 20th of July, 1639. by a poor Girl passing by *Osterby*, a Village near *Tunderap*, for which the King rewarded her. He says, it is 2 *Roman Feet* and 5 Inches long; The Diameter of the larger End is 4 Inches, and that of the lesser 1½. It contains 2 Quarts and a half, and weighs 99 Ounces and 2 Drams. The Gold of it is incomparably fine. There are many Hieroglyphical Figures engraven upon it, which *Wormius* undertook to explain at the Desire of the King, and thinks they are all significant, and contain Lessons of Morality. The Age of this precious Horn cannot be well determin'd; but he concludes, that it was made before Christianity was received in *Denmark*, and conjectures that it may be as old as the Reign of *Rothe the Great*, who Reign'd about the Time of our Saviour's Birth, because this King was vastly rich, and a great Enemy to Robbers, of whom he freed the Country, and us'd to lay valuable Things in the High-way, which if stole, the Governor of that District was obliged to make good. He thinks this Horn might be laid down on that Design, and in Time cover'd with Mud and Earth. *Fortunius Licetus* is of the same Opinion: But the Probability of this we leave to the Reader. *Wormius* says, this Province is not inferior to any other of *Jutland* for Corn and Pasture.

Rypen, the chief City, lies on the River *Nipsau*, which divides it into 3 Parts, and gives Occasion to the City's Arms, which are 3 Lions. The River falls into the German Ocean 3 *English Miles* below it, where it makes a good Port, more frequented than any in *Jutland*. This City is in the S. W. Part of the Diocese, 20 *English Miles* W. from *Häusersteden* in *Sleswick*, 40 N. W. from *Flensborg*, and 30 S. W. from *Colding*. The Bishoprick was founded in 980 by *Haraki* King of *Dinmark*; but the Church, which

is of hewn Stone, and an admirable Structure, was built in 848, by *Erick II.* whom *St. Ansgar* converted. The Steeple is of a great Height, and serves for a Land-mark to Ships that sail along this dangerous Coast. It has a sort of University, and a good Castle. The *Swedes* took it in 1645; but it was retaken by the *Danes*.

Colding is an old City, mentioned by *Protony*: It lies on a River that falls into the Gulph of *Colding*, which *De Ville*, Author of the Travels into *Denmark* in 1702, observes to be wrong laid down in Maps, for they make it too round at Bottom. *Erick Glipping* is said to have been the Founder of this City in 1268, and fortified it with strong Walls and good Ditches, because it was a Frontier Town; for the *Danish* Dominions reach'd no further S. at that Time. *Christian III.* was so taken with its pleasant Situation and healthful Air, that he usually resided here. He rebuilt the Castle of *Arnsburg*, which commands the Town, and died here Jan. 1. 1559. The Castle is a large Brick Building, consisting of 4 main Parts, plaister'd over without, and forms a Court, which is not very square. This Town has only 100 or 120 Houses, and is more considerable on the Account of its Bridge, called *Broherrit*, than any thing else, because a great Part of the King of *Denmark's* Revenue comes from the Toll paid for the Black Cattle and Horses that come from *Jutland*, and must pass this Bridge; each of which pays a Crown. The King has Stables for fine Horses on the other Side of the Bridge, and an Academy for riding the great Horse. Tho' this Town lies commodiously for Trade on the *Little Belt*, over against *Middlefor* in *Fuhnen*, yet they have none but in Cattle. They have good Fish, and excellent Eels, in that River, which runs by the Town, and separates *North-Jutland* from *Sleswick*. It is 15 *English* Miles S. W. from *Fredericks-Odde* or *Fredericia*, 30 N. E. from *Rygen*, and 60 N. from *Sleswick*.

Fredericks-Odde has been a well fortified Town, being a Pass over the *Little Belt* or *Middlefor-Sound*. It was built by *Frederick III.* of *Denmark*, and is well seated, on a Point of Land with an easie Descent to the Seaward. The Works are very high on the Land-side. On the other Side of the Point there are 8 Bastions. It has two Gates, and

before each a Ravelin, but ruinous. Towards the Sea the Fortifications are lower, and of a greater Extent, where there are Bastions, Platforms, and some Batteries on the Shore. Those Fortifications inclose a great deal of Ground; but the 5th Part of it is not inhabited, for there are many Corn-Fields and Orchards within the Walls. All the Fortifications are now going to Decay. This Place was formerly a Refuge to Bankrupts, Jews, and such People; but the present King has recall'd those Privileges. Here are two Churches; one *Danish*, and the other *German*; but they have no Steeple. In 1658, it was taken by *Charles Gustavus's* Troops, commanded by *Wrangel*; and the Garrison of 2000 Men were all kill'd or taken. This open'd a Way for the King of *Sweden* to undertake his Expedition over the Ice from this Place to *Fuhnen*, where the Passage over the *Belt* is about 3 *English* Miles. In 1659, the *Swedes* burnt and demolish'd this Town.

Well is 15 *English* Miles N. W. from *Fredericks-Odde*, as many N. from *Colding*, and is seated on a River which falls into a great Bay, that communicates with the *Little Belt*. It has a good Harbour, and the City is neat and well built, tho' not large.

Warde lies on a River that falls into the *German Ocean* 10 *English* Miles below the Town. It is commodiously seated for Trade, is 32 *English* Miles W. from *Well*, and 18 N. from *Rygen*.

Ringkoping, 32 *English* Miles N. from *Warde*, lies on a Bay of the *German Ocean*, made by a Tongue of Land 30 Miles in Length from N. to S. so that Ships ride safe in the Port from all Winds.

Lemwick lies on the Gulph of *Limsford*, from whence it is named, on the N. W. Borders of this Diocese, 10 *English* Miles E. from the *German Ocean*. *Hodsfelbro*, 15 *English* Miles S. E. from *Lemwick*, lies on a River which communicates with the *German Ocean* by a Lake, into which the River falls.

The Diocese of ARHUSEN.

The *Germans* call it *Das Stift Arhusen*: It has *Otto's-Sound*, or the *Little Belt*, on the S. E. and E. the *Categate* on the N. E. the Diocese of *Albourg* on the N. that of *Wiburg* on the W. and that of *Rygen* on the S. and

and S. W. *Jonas Coldingensis* says, it has 3 Bailiwicks, 304 Parishes, and 5 Castles. Its Length from S. to N. is 60 Miles; but 'tis not above 32 where broadest. It is fruitful in Corn, and has abundance of Game.

Arhusen, the chief Town, lies on the Mouth of the River *Gude*, which a little below falls into the Sea. *Jonas Coldingensis* says, it has been a Bishop's See since 1014. The Cathedral is a neat Building; but the Bishop's Palace is ruinous. In 1644, it was burnt by the Swedes. It has a good Trade, and lies over against the Isle *Samsø*, 45 English Miles N. E. from *Colding*, 34 S. E. from *Wiborg*, 50 S. from *Alborg*, and 25 N. from *Fubnen*.

Saundersborg is a good Fortress, near the Spring of the *Gudden*.

Horsens lies 20 Miles S. from *Arhusen*, on a River that falls into the *Lesser Belt*.

Randers, on the *Gudden* or *Gude*, 15 Miles N. from *Arhusen*, near a Bay that communicates with the *Categate*, is a Place of good Trade, and famous for the best Salmon in *Jutland*. Other Towns are, 1. *Hobø*, also on a Bay that communicates with the *Categate*, and N. from *Randers*. 2. *Maryøger*, on the S. Side of the same Bay. 3. *Grims*, a Castle on the *Categate*. 4. *Ebilstoft*, S. from it, on the Bottom of another Bay that also communicates with the *Categate*.

SOUTH JUTLAND, or the Dutchy of SLESWICK,

HAS on the N. E. the *Little Belt*, on the E. and S. E. the *Baltick*, on the S. the Dutchy of *Holstein*; from which it is separated by the *Eider*; on the W. the *German Ocean*, and on the N. the Diocese of *Rygen*. Its Length, from *Christiansburg* on the S. E. Part, to *Rygen* on the N. W. Borders, is about 70 English Miles; and its greatest Breadth not above 40.

This Dutchy is an ancient Dependence of the Crown of *Denmark*; for in 1128, *Nicolaus I.* gave it to his Nephew *Canute*, the Son of *Erick*; surnamed *Ejagade*. In 1338, *Margaret* Queen of *Denmark* gave it to the Counts of *Holstein*, and their Successors, together with the Islands of *Rømø*, *Alsø*,

and *Arøe*; but their Posterity failing in 1459, *Christian I.* united it to the Crown of *Denmark*, and now it is divided betwixt the King of *Denmark* and the Dukes of *Holstein-Gottorp*, *Holstein-Glücksbourg*, *Holstein-Sunderbourg*, and *Holstein-Nordbourg*. The Interests and Jurisdictions of the King of *Denmark* and the Duke of *Holstein-Gottorp* are so intermix'd, that in Time of War, the People know not which to obey. In some Towns and Bailiwicks, they divide the Revenues, and jointly elect the Magistrates. In others, the King and Duke elect by Turns every Year. This Province is divided into 12 Parts, viz. the Bailiwicks or Prefectures of *Gottorp*, *Christianspreis*, *Eiderside*, *Husum*, *Flensbourg*, *Glücksbourg*, *Sunderbourg*, *Nordbourg*, *Apnrade*, *Tonderen*, *Lohm*, and *Haderslebe*.

The Bailiwick of GOTTORP.

Sleswick, the chief Town, lies on the River *Sley*, which falls into the *Baltick* 6 Miles lower. *Adamus Bremenensis*, who liv'd about 1100, tells us, it was anciently called *Heirhobn*, and in his Time was a populous and rich City. The modern Name comes from the River upon which it lies. In the Infancy of Navigation, Goods were brought up the *Eider* by Boats to *Holmsted*, and from thence by Land to *Sleswick*; where they were ship'd and exported to *Zeland*, *Fubnen*, and other Places on the *Baltick*. This City was converted by means of *Erick* the *Bairn* about 800. In 1064, the *Slavonians* invaded this Country, re-establish'd Paganism, and built a Temple to their Idols, the Ruins of which are to be seen near this Place; but the *Danes* soon drove them out. The *Angles*, a powerful and trading People in those Bounds, built the Church of the *Holy Ghost*, with a Hospital near the Market-Place. *Orho I.* made this Place a Bishop's Sec. It belongs to the Duke of *Holstein-Gottorp*, lies 60 English Miles N. from *Lubeck*, and as many from *Hamburg*.

Geltingen is the principal Town of a small Country, anciently the Seat of the *Angles*, who came from the Dutchy of *Mecklenburg*. It lies 20 English Miles N. E. from *Sleswick*, near the *Baltick*. *Gottorp* lies also on the River *Sley*; and is the Residence of the Duke of that Name.

The

The Castle stands to the W. of the Gulph of *Sleswick*, in the middle of a little Lake; is built in a long Square Form, fortified with 4 Bastions of Earth; and the Bottom is pav'd with Free-stone; the Curtains are long, and the Sides stand N. and S. We approach the Castle by a Bridge which joins it to the S. Shore. The First is commanded by a Mountain that stands N. E. of it; from whence the *Danes* annoyed the Castle in 1675, when the Duke was treacherously surpris'd by the K. of *Denmark* at *Rensburg*. As we enter the Court, there's a Tennis-Court on the Left, and Stables on the Right. The Duke before his Death had design'd to rebuild the Castle; the Front is finish'd, and if the whole had been compleated, it had been one of the finest Palaces in the *Europe*. A Rampart encompasses the First Court; and the Castle-Gate is of very fine blue Stone as hard as Marble, with a Lanthorn over it that has 27 Lights. On the N. Side of the Castle there is a Bridge of 200 Paces over the Lake, and at the End of the Bridge there is a Walk between Rows of Trees that lead to the Garden, in which there are many fine Water-works and Cascades. On the Left there is a Basin or Fish-Pond 200 Paces square, with Rows of Trees on all Sides, except on the N. They have also fine Arbours on the Sides of the Pond, and in the middle a *Hercules* of a Monstrous Size, represented with his Club going to kill the *Lernean Hydra*, out of every Part of which the Water plays. In every Corner of the Pond there are Statues, which form Cascades. On the N. there's a Parterre in Form of a Crescent, divided into several Compartiments, with Niches round, containing the Busts of many Kings and modern Princes. There are also the Representations of many fabulous Animals that throw Water. At the End of the Walk there's a small Room, where there's a Globe made by the famous *Tycho Brahe*, so contriv'd, that by Mechanism it represents his System of the World. There is another admirable Globe of Copper, 10½ Foot in Diameter, so contriv'd, that by Wheels mov'd by Water, it represents the Motions of the Heavenly Bodies. Before this House, there is a Level Ground 50 Paces long, and three times as broad, divided into 3 Parts:

Those on the two Sides have fine Parterres; and that in the middle has a great Basin in the Center with Water-Works: The next Terras is higher; the whole is enclos'd with green Pales as high as each Terras, with Busts all round. On the highest Terras there is the finest Prospect in the World, viz. the Castle in the Front, in the middle of a Lake surrounded with a charming Country, and a fine Plain before it. On the Left there is a great Orangery, where they have also *Indian Trees*, Mirtles, Pomegranates, and others in Boxes. The Park is very fine, about 4 *English Miles* in Circumference, and full of Fallow Deer and Stags. *Gottorp* is well fortified, and a Toll is paid here for great Numbers of Black Cattle that pass from *Jutland* to *Germany*. It lies very near *Sleswick*, and 25 *English Miles* N. W. from *Kiel*.

Eiklenford, 14 Miles S. E. from *Sleswick*, is so nam'd from the abundance of Squirrels there, has a good Port in the bottom of a Bay on the *Baltick*, and a considerable Trade.

Christianpreiss is the Capital of a Bailiwick of that Name, which borders on the Dutchy of *Holstein*, and is divided betwixt the King of *Denmark* and the Duke of *Holstein*. This City is situated on a Gulph of the *Baltick*, at the Entrance of the Haven of *Kiel*, which belongs to the Duke of *Holstein*, and is commanded by a Castle, that was built in 1637 by *Christian IV.* of *Denmark*. It has about 500 Houses, and two Gates, defended with strong Works. The *Eider* serves for a Ditch, and makes it unaccessibile; and where the River grows narrower, they have built a fine Half-Moon in the Water; with Port-holes for 16 Pieces of Cannon; but *Jaillet's* Map makes the *Eider* two Miles distant from it. *Christiansborg* is a Village belonging to the King, as also *Gottorp*.

The Bailiwick of *Eiderstete* lies on the *German Ocean*, and is so nam'd from the *Eider*. *Tonningen*, the chief Town, is small, lies on the *Eider*, and is 16 *English Miles* from the Ocean. The *Dutch* frequent it to buy Black Cattle. It is the strongest Town belonging to the Duke. The Fortifications consist of 5 Bastions, with Ravellins before the Curtains, a very large and deep

deep Ditch, and a fine Glacis. The *Eider* strengthens it much on one Side, and fills a large Canal, which makes a Port capable of receiving great Ships. The Ramparts of the Town are good. The Garison consists of 2000 Foot. The Houses are built with Brick, and very neat. The Inhabitants have one Church, and the Garison another. The Country about is fertile and populous.

The Bailiwick of *Husum* lies N. from that of *Eiderstette*, and belongs to the Duke. The chief Town, of the same Name, lies on a Gulph, at the Mouth of a small River that falls into the Ocean, where pretty large Vessels come up to the Bridge that joins the Town to the Bailiwick of *Eiderstette*. The Duke has a Palace here of Freestone. This Town is well Peopled, and has a good Trade, is 20 *English* Miles S. W. from *Flensburg*, and 10 N. E. from *Towningen*.

Frederickstadt was built by Duke *Frederick*. It lies on a small River call'd the *Tremm*, that falls near it into the *Eider*. The *Tremm*, at high Water, carries Barks of 50 Tuns. That Duke Peopled it with *Hollanders*, and granted them great Privileges. The Houses are built after the *Dutch* Way. All Sorts of Religions are tolerated here. The Town is square, surrounded with a large Canal, and planted with Rows of Trees. It is divided into two Parts by another Canal, with Trees on the Sides. The *Lutheran* Church is built of Brick, and neat. The Duke keeps 3 Companies of Foot in *Garison*. It lies 6 *English* Miles N. E. from *Towningen*.

The Bailiwick of *Flensburg* belongs to the King, and lies on the *Baltick* N. from that of *Gottorp*. The chief Town, of the same Name, is on the Bottom of a Bay of the *Baltick*, that makes a very fine Haven, where the greatest Ships may ride safe, and come up to their Houses. On the Land-side it is encompassed with Mountains, that shelter it from Winds, and supply it with Water.

There is a Mountain adjoining to one Part of the Suburbs, on which there is a Castle, which commands the Gulph on that Side. The *Danes* think this Town, next to *Copenhagen*, the biggest in the Kingdom; but *De Ville* says, that *Elfsingor* is larger. It is 36 *English* Miles S. from *Colding*, and 15 N. from *Sleswick*. The Country about *Flensburg* is called the District of *Angelen* or *Engeland*, which was the Country of the *English Saxons*, that conquer'd the S. Parts of *Britain*.

The Bailiwick of *Glucksburg* joins to the former, lies also on the *Baltick*, and belongs to the Duke of *Holstein-Glucksburg*. The chief Town is on the same Gulph with *Flensburg*, but not considerable.

The Bailiwick of *Apennade* lies W. from the Isle of *Alsen*, and belongs to the Duke of *Holstein-Gottorp*. The chief Town is of the same Name, has a Port on the Bottom of a Bay in the *Baltick*, and a great Trade with the *Danish* Isles.

The Bailiwick of *Tunder* is W. from *Apennade*, on the Ocean, and is compos'd of firm Land and Isles. *Tunder*, the chief Town, lies on the River *Bre*, belongs to the Duke of *Holstein*, is large, stands well for Trade, and has a fine Church, full of Pictures and Ornaments.

The Isle *Amrum*, on the Coast of that Bailiwick, belongs to the King. *Sylt*, another Isle N. from it, belongs to the Duke. *För*, a 3d Island; the E. Part of it belongs to the Duke, and the W. Part to the King.

The Bailiwick or Abbacy of *Lohm*, which is N. from *Tunderen*, belongs to the Duke, and has a small Town of the same Name N. N. E. from *Tunder*.

The Bailiwick of *Hardestebe*, the most Northerly of any in the Duchy of *Sleswick*, belongs to the King. *Hastersebe* is a small Town, but has a good Port on the *Little Belt*. The Isles of *Maroe* and *Rom* are N. W. from *Ripen*, and belong to the King. We refer the Description of the King of *Denmark's* Dominions in *Holstein*, *Stormar*, *Ditmarsh*, and *Oldenburg*, to *Germany*.

C H A P. XX.

O f N O R W A Y.

MOST of the *Danish* Antiquaries think this Country had its Name from *Norus*, the Founder of the Kingdom; but they are not agreed who he was, or when he liv'd. *Adamus Bremensis* calls it *Nordmannia*, thinks it to be the utmost Part of the World on that Side, and tells us, that it is bounded on the E. by the *Riphaean Mountains*. *Tandem in Riphaeis Montibus Limitem fecit ubi & lassus deficit Orbis*. Most think it is called *Norway*, *Northwege*, or *Norwege*, from its Northerly Situation.

It is bounded on the S. by the Entrance into the *Baltick*, call'd *Schagger-Raak*, and on the W. and N. by the Northern Ocean. It is separated from *Sweden* by a Ridge of unpassable Mountains, call'd by *Pliny*, *Serue*, now the Mountains of *Daarfjel*.

It lies between Lat. 57 and 72, and Long. 22 and 50. Their longest Day is two whole Months. The Length of this Country is computed at about 1600 Miles, and its greatest Breadth about 300.

O f the A I R, S O I L, &c.

THE Cold is very intense here. Those Mountains that divide it from *Sweden* are always cover'd with Snow, and violent cold Winds blow from 'em towards the Vallies, which makes 'em barren; but Southerly, and along the Western Coast, the Air is more temperate, yet corrupted by the Putrifaction of a kind of Rats they call *Lemmer*, by which the People are infested with the Jaundice, and a Giddiness in the Head that is dangerous to Strangers. Most of the Country is nothing but Rocks, Woods, and Mountains. In the Vallies they have a good Breed of Black Cattle,

and of little Horses, very swift, and capable of Fatigue.

Their Trade lies in Masts, Deal-Boards, Pitch, Tar, Copper, Furs, Dry'd Fish, Train-Oil, Filberds, Butter, Tallow, Hides, and Cheese.

Their only remarkable Rivers are, the *Teno* towards the N. and the *Glawe* in the S. of the Country, which carries Boats. The chief Mountains are those of *Daarfjel*, or the *Dofrine*, which the Natives divide into 4 Parts, viz. the *Filla-Fiel*, *Dofr-Fiel*, *Rumi-Fiel*, and *Skors-Fiel*.

T h e i r H I S T O R Y.

Jonas Ramus, their latest Historian, says, That the *Sitones* liv'd here without any Laws or Government, and were a kind of Giants, but civiliz'd by *Norus*, who liv'd, according to some, in the Year of the World 2910; but according to others, was contemporary with *David* King of *Israel*. They say, That about A. M. 2960, *Woden* came from *Asia*, and settled here. They alledge he was of *Trojan* Race, and succeeded by *Suibdager*, *Haquin*, and *Ole*, who was contemporary with *Helgo* K. of *Denmark*. *Godegnesius*, *Hognerus*, and *Hagnerus*, Reign'd at the same Time in other Parts of *Norway*; and *Gever*, *Helgo*, *Balder*, *Herlet*, and *Gerritus*, were afterwards King of *Norway* at one and the same Time. In the Time of *Rorick Stengebaand* King of *Denmark*, *Collerus* was King of *Norway*. In A. M. 3775, *Frogerus* Reign'd, and was succeeded by *Frotho*. A. M. 3911, *Gothorus* Reign'd. In 3960, *Frotho* was King, and succeeded by the following Kings one after another, viz. *Amundus*, *Alfus*, *Harldus*, *Agdensis*, *Vikarius*, *Haquinus*, *Helgo*, *Hagboitus*, *Hetherus*, *Olaus*, *Vegetus*, *Ormundus*.

Omundus, Sigwardus Ring, Sigwardus Ring Junior, Regnerus, and Lodbrog, who was contemporary with *Charlemagne*. *Sigwardus* Reign'd about A.C. 798, and, together with *Godefrid*, invaded *Holland*, the Sea-Coasts of *France*, and over-ran *Flanders*.

In 868, *Harold Harfager* was their sole King. *Ramus* owns, That the *Norwegian* History before this Epoch is fabulous, and not much to be relied upon. He thinks, that till then they were rul'd by many petty Princes, and that the Government was interrupted by frequent Anarchies, which makes the Chronology of those Times so dark. *Harfager's* Race continued Kings of *Norway* 500 Years, during which there was only one Interregnum of 4 Years betwixt the Reigns of *Gibbus* and *Magnus IV.* *Harfager* died in 931, and was succeeded by his Son *Erick Blodock*, who was banished because of his Cruelty in 933, and kill'd in a Battle in *England*.

Haquin Adolstone succeeded in 933, after the Expulsion of his Brother: He was educated by *Athelstan* the Dane, King of *England*, where he was converted, and essayed the Conversion of his Subjects, but in vain. He was killed by the Sons of *Erick Blodock*.

Harald Granfield, the Son of *Erick Blodock*, succeeded in 960. He kill'd *Sigward*, called *Lade Jarl*, whose Son *Haquin* kill'd him in 975, and succeeded to the Throne. In his Time the Emperor *Otho* sent 30 Ships, commanded by Counts, to *Norway*, by whose Means a considerable Part of the Southerly Provinces were converted. He was a bad King, and was kill'd in 995 by his own Servant, when he fled from *Olau Tryggonis*.

This *Tryggonis* was *Harfager's* Nephew, and began his Reign in 996. He undertook the Conversion of *Island* and *Norway*, and was killed in a Sea-Fight in the *Baltick* in 1000.

St. Olau succeeded him, and freed *Norway* from all Dependence on other Kingdoms. He propagated Christianity more generally than 'twas before; but by being too severe, he disobligh'd his Subjects, who being perswaded to rebel by *Canute* King of *Denmark*, he was forced to retire to *Sweden* in 1029. Next Year he levied Forces to regain his Kingdom; but was killed at *Stikbestad*.

Canute made his Son *Sueno* King, who upon the Return of *Magnus*, *St. Olau's*

Son, fled to *Denmark*, and died there in 1035.

St. Olau's Son, called *Magnus the Good*, was declared King in 1034, and in 1044 was also made King of *Denmark*, according to an Agreement betwixt him and *Canute*, and gave the Administration to *Sueno Ulfsonis*, who set up for himself; but was defeated in 3 Battles by *Magnus*, who died in 1047.

Harald Haardraude succeeded in 1049. He built the City *Anso*, had War with *Sueno* King of *Denmark*, and was killed in Battle in *England* in 1066.

His Son *Magnus* succeeded in 1067. His Brother *Harald Kyrrd* govern'd one half of the Kingdom during *Magnus's* Reign, and succeeded him in the whole when he died in 1069. *Harald* built the City of *Bergen*, finish'd the Church of *Dronthim*, which *Magnus the Good* and his Father had begun, and died in 1093.

Haquin, the Son of *Magnus*, succeeded to one Half of *Norway*, died the following Year, and was succeeded by

Magnus Barford, the Son of *Olau*, who upon the Death of his Father, and his Predecessor *Haquin*, was King of all *Norway*. He invaded the Western Isles of *Scotland*, and appointed a Governor over them. He had War with the King of *Sweden* about the Boundaries of his Kingdom, and conquer'd a Part of *Ireland*, where he died in 1103.

After his Death, his 3 Sons, *Olau*, *Sigwardus*, and *Ostenius*, Reign'd together. *Olau* died in 1116, and *Ostenius* in 1123. *Sigwardus* had many Wars abroad, and particularly in the Holy Land, from whence he returned, died in 1130, and was buried in *St. Halward's* Church in *Anso*.

Magnus Blinde and *Harald Gille* succeeded him. After they had Reign'd peaceably a long Time, a Civil War happen'd betwixt them, wherein *Harald* was put to flight; but recruiting his Army, he defeated and took *Magnus* near *Bergen*, gelded him, put out one of his Eyes, and cut off one of his Legs; after which *Harald* died in 1136.

His 3 Sons, *Sigward*, *Ingo*, and *Ostenus*, succeeded; at first they liv'd peaceably together, and made War upon their Enemies, whom having subdued, they began a Civil War among themselves, in which *Sigward* was killed.

killed at Bergen in 1155, and *Osfeus* in 1157. *Ingo* was killed at *Auslo* in 1161 by *Haquin*, *Sigward's* Son, who was also killed by *Ingo's* Party in a Sea-Fight in 1162.

Magnus, the Son of *Erling*, was made King, tho he was not of the Royal Family. During his Minority, his Father had the Administration. In his Time there arose a strong Faction, called the *Birkmærs*, whom *Magnus* defeated, with their Leader; but at length was routed twice, expelled the Kingdom by them, and at last killed in 1183.

Suerus, the Son of *Sigward*, was first made King of the *Birkmærs*, and after many Battles with *Erling* and *Magnus*, was at last made King of the whole, and died at Bergen in 1202.

His Son *Haquin* succeeded, and Reign'd only two Years, when *Guthormus*, the Nephew of *Suerus*, was made King, tho but 4 Years of Age, and died in 1205.

Hugo Baarsen succeeded him, had great Troubles from a Faction called the *Bagli*, was obliged to allow a Part of the Kingdom to *Philip* their Leader, to prevent a Civil War, and died in 1217.

Haquin succeeded when but 13 Years of Age, and quitted the 4th Part of the Kingdom to *Skulon*, his Father-in-Law, who rebelled, but was routed, which procured Quiet to the Kingdom. *Haquin* made War upon the Western Isles of *Scotland*, but died in the Expedition, and was buried at *Drontheim* in 1263.

His Son *Magnus* was declared King before his Father's Death: He was a peaceable and just Prince, and made good Laws, from whence he was call'd *Lagebetter*, or the Lawmender, and died in 1289.

Erick, his Son, succeeded: He had long Wars with the *Danes*, and died in 1299. His Brother *Haquin* continued the Danish War, and died in 1319. *Magnus*, *Erick's* Son, was declared King of *Norway* and *Sweden*, tho but 3 Years of Age. He added *Schonen* to his Dominions, and left the Administration of *Norway* to his Son *Haquin*. The *Swedes* rebelled, and imprison'd him. His Son *Haquin* ransom'd him in 1371, and he was drown'd in 1374.

Haquin, his Son, had a long War with the *Swedes*, married *Margaret*, Daughter to *Waldemar K.* of *Denmark*, and died in 1380.

His Son *Olaus* was declared King of *Denmark* in 1376, and after his Father's Death proclaimed also King of *Norway*. He died without Children in 1387. His Mother *Margaret*, by his Death, was left in Possession of *Denmark* and *Norway*, and upon her Victory over *Albert* King of *Sweden*, was made Queen of that Kingdom; and from that Time *Norway* has been united to *Denmark*.

Of the Inhabitants, their Manners, Customs, &c.

WE refer the Account of the *Normans* to *France*, and of the *Lombards* to *Italy*. The old Inhabitants were the *Sitons*. *Pliny* calls their Country *Nerignon*, which *Æthicus* mistakes for *Noricum*. The *Bergi*, who according to *Pliny* dwelt over against *Thule*, seem to have given Name to the Town *Bergen*. The *Markofimis* dwelt near the North Cape. *Paulus Diaconus* says, they liv'd on raw Fleish, and were cloath'd with Skins undress'd.

The present Inhabitants are a hardy, laborious, and honest sort of People, think themselves better than the *Danes*, whom they despise, and in Derision call *Juts*. They are strong and courageous, and endure Hardships better than the *Danes*, being more accustomed to them, by reason of their barren Soil and cold Climate. The *Danes* think it politick to keep them under, and give them no Opportunities to exert their Strength, or to learn the Art of War: For that Reason they have gradually removed all their ancient Nobility. They are said to be of a plain Temper, just in their Dealings, and civil to Strangers. They were anciently accounted great Pyrates, but not so now. They are good Seamen.

The Women are handsome, not so fat as their Men, and are reckon'd more witty.

The E. and N.E. Parts of this Country are but thinly Peopled, because of the inaccessible Rocks and craggy Mountains. They have no Towns, but generally live in Tents, and remove in Companies from one Place to another for hunting and fishing.

Their

Their Diet is Stock-Fish, with coarse Butter and Cheese. Most of their Corn is imported. They have some Barley of their own.

Their GOVERNMENT.

They had Kings of their own till 1387, as was said before; but now one of the King of Denmark's natural Sons is usually their Viceroy, to whom Appeals are made from their Courts of Justice.

Their RELIGION.

ST. Olav, in the 11th Century, introduced Christianity here, and drove out all the obstinate Pagans. In 1486, Pope Innocent VIII. gave Leave to the Priests of Norway, and others under the same Parallel, to celebrate the Communion in other Liquor than Wine, because they could not well have it. In 1523, this Country was reform'd from Popery, and Lutheranism introduc'd.

Their LANGUAGE

IS in most Places the same with that of *Island*, which proves them to be of the same Original; but the Language in the civiliz'd Parts of the Country differs little from that of Denmark.

The DIVISION of Norway.

IT is divided into the Governments of *Aggerhus*, *Bergen*, *Drontheim*, and *Wardhus*.

The Government of AGGERHUS,

HAS that of *Bergen* on the W. from which it is separated by vast Mountains, *Dalecarlia* on the E. the *Gategate* on the S. and that of *Drontheim* on the N. Its Length from N. to S. is 360 Miles, and its Breadth 180. *Aggerhus* is more fertile than

any of the other Governments. The chief Town is

Onslo, *Opsto*, or *Christiana*, so called from *Christian IV.* who rebuilt it in 1614. It lies on the Mouth of a River, that falls into a Bay which communicates with the *Baltick*, and is called the Bay of *Onslo*. It has a Castle, is a Bishop's See, and the Cathedral was dedicated to St. *Alward*. Here is kept the Sword of *Haquin*, one of their Kings: The Hilt is of Chrystal, finely polish'd, and the Sword is very large, and of great Antiquity. The Vice-Roy resides here. In 1589, King *James VI.* of Scotland, and I. of England, was married at this Place with *Anne*, Daughter to *Fredrick II.* of Denmark. It has a good Trade for Fir, Pitch, &c. Many Mackrels are caught here, and also much Pearl, of which *Henricus Arnoldi*, a Dane, gives the following Account: Their Shells are like those of Muscles, but larger, and the Fish like an Oyster, which produces a great Cluster of Eggs, like those of Craw-Fish, some white, and some black. These Eggs, when ripe, are cast out, and grow like the Shell from whence they came; but sometimes it happens that one or two of those Eggs stick fast to the Side of the Matrix, and is not voided with the rest; which being fed by the Fish, in Time they grow into Pearls of different Sizes, and imprint a Mark, both in the Fish and the Shell, of the same Figure with themselves. *Philosoph. Transact. N. 101. P. 11.* *Onslo* lies 120 English Miles E. from *Bergen*, and 150 N. from *Cape Scagen* in *Jutland*, in Lat. 60 $\frac{3}{4}$.

Aggerhus lies near *Onslo* to the W. on the Bottom of the same Bay, and gives Name to the whole Province. It has a strong Castle, and is memorable for the brave Defence it made against the Swedes in 1567, who were forced to retire from before it, after a Siege of 18 Months. It lies 60 English Miles N. W. from *Frederickstadt*.

Torsberg is a small Town, with a large Harbour, on the Bay of *Christiana*, 30 English Miles S. from *Onslo*. It has a good Trade, because of its Situation, and the neighbouring Mines of Copper and Iron. A Silver Mine was discovered here in the Reign of *Christian IV.* but turns to no great Account. Mr. *Moldsworth* observes, That the

the Ports of this Country are so deep, that there is no Anchorage for Ships, and therefore its Coasts are reckoned the most dangerous of any in *Europe* to fall in with by Night, or in a Storm; so that if a Ship be driven on them, there is no escaping, the Shore being all along high Rocks, at the very Foot of which there is 200 Fathom Water.

Frederickstadt, has its Name from *Frederick II.* who built it in the last Century. It lies on the *Categate*, where the River *Glammen* falls into it. This River has its Rise in the *Daarfel* Mountains, and takes its Course Southward through this Government.

Vleckeren is a small Town, but has a good Port.

Skeen lies in the *Categate*, on the Mouth of the Bay of *Christiana*, is famous for its Mines of Copper and Iron, and for one of Silver, discover'd in the Reign of *Christian IV.* but it lasted not long.

Salzberg lies on the River *Drammen*, which falls into the Bay of *Christiana*, 18 Miles N. W. from the Town of that Name. 'Tis also noted for Mines of Iron, Copper, and some of Silver, whence the Mountains in the Neighbourhood are called *Silverbergen*.

Hastmar lies in the N. of this Government, 130 English Miles N. from *Frederickstadt*, on the River *Glammen*. It gives Name to a District of this Government, was formerly a Bishop's See, but is now under the Jurisdiction of the Bishop of *Christiana*.

Hollen, seated on the Lake *Nordsee*, which communicates with the River *Categate*, is 20 Miles N. W. from *Tonsberg*, and has a Church cut out of a Rock, with a Burying-place on the Top of it. *Wormius* thinks it was a Pagan Temple.

The Government of BERGEN,

HAS the Great Ocean on the W. and S. W. the Government of *Aggerhus* on the E. and that of *Drontheim* on the N. E. 'Tis 240 English Miles long from N. to S. and where broadest not above 90. It is divided into the Districts of *Bergen* in the North Part, and that of *Stavanger* in the South Part. The Chief Town is

Bergen, which the Natives call *Baern*. It lies on a Crooked Bay called *Feltra Fiord*, 12 Miles from the Ocean, 1330 English Miles S. W. from *Drontheim*, 200 from *Cape Seagen* in *Jutland*, and 300 E. from the nearest Place of *Scotland*. It is probably the *Berges* of *Pliny*. *Jornandes* calls it *Bergium*. The Name comes from its Situation among Hills. The Houses are mostly of Timber, and but forrily built. It has been five times burnt down; viz. twice in the 15th, and three times in the 16th Century. Its Port is large, and the most frequented of any in that Ocean. In the Dutch War, their Fleet was protected here from the English Navy. This City is the principal Mart of all Norway, to which the Product of the Country is brought and exported. The Particular Trade of this Town is in a Sort of Stock-fish called *Bergen-Visch*, which are caught ordinarily in January, and dried by the Cold Air. The Inhabitants, fearing too great a Concourse of Strangers who settled here might be prejudicial to them, order'd, That no Foreigner should have the Freedom of this Town, unless he consented either to be Whipt, roul'd in Mud, or hung in a Basket over some intolerable Smoak; but now this Custom is laid aside. The Foreign Merchants who resort here, as the Dutch, Hamburgers, Lubeckers, English, &c. have built a Stately Exchange. The Town has a strong Castle, which serves for a Citadel, and is the Bishop's Residence.

Stavanger, lies in Lat. 60, in a Peninsula, in a great Bay of the Ocean, full of small Islands. This Bay is guarded by the strong Castle of *Doeswick*, 2 English Miles from the Town, which is a Bishop's See, under the Bishop of *Drontheim*; and the Governor is Subject to him of *Bergen*. It has a good Port, and would have a greater Trade were it not for the Neighbourhood of *Bergen*, which is 70 English Miles N. from it on the same Coast, and about 60 N. from the *Categate*.

To the Bishoprick of *Stavanger* belongs *Tyle Marchia*, whose Name gave Rise to the Opinion of *Procopius*, that *Scandinavia* was the Ancient *Thule*.

The Bailiwicks of *Sudhornleen*, *Nordborn*, *Leensogne*, *Ludford*, *Norford*, and *Sundmerlen*, are subject to the Governor of *Bergen*.

The Government of DRONTHEIM,

IS of a vast Extent, and reaches beyond the Polar Circle. Some reckon, that along the Coasts from the S. W. Parts, to its Borders on the N. E. where it joins to that of *Wardhuis*, 'tis about 540 *English* Miles long; but its Breadth is not considerable. It is barren and ill Peopled, and subdivided into 21 Districts. It has the Government of *Aggerhus* and *Dalecarlia* on the S. *Muscovite Lapland* on the E. and the Government of *Wardhuis* on the N. E. It was given to the *Swedes* in 1658 by the Treaty of *Reschild*; but was restored to the *Danes* in 1660 by that of *Copenhagen*. *Harndal* and *Jempterland* belong'd to this Province; but were yielded to the *Swedes* by the Peace at *Bromsbroe* in 1645. This Country is Mountainous and Woody. The chief Town is

Drontheim, in Lat. 65½. It was built in 999 by *Olaus Trygen*, was the Seat of the old *Norwegian* Kings, and Capital of the Realm. It was made an Archbishoprick by *Eugen. III.* Its Latin Name is *Nidrosia*, from the River *Nidar*, on which it lies, where it falls into the Northern Ocean. This Town has no Walls, nor Fortifications. The Houses are mean; for it has not recover'd its Splendour since 1512, when it was burnt down, with its Cathedral, dedicated to *St. Olaus*, which was the most beautiful and stately of any in the N. The Ruins still shew its admirable Architecture. The Port would be more frequented, if the Entrance were not dangerous by Rocks. Near this Town there's a Lake, whose Waters never freeze in the coldest Winter. They have no Wood in the Neighbourhood, so that they are obliged to build their Houses of Fish-Bones, which they likewise use for Fuel. The Islands of *Iseland*, *Greenland*, and the *Orcades*, were subject formerly to the Archbishop of *Drontheim*.

Romsdal, or *Romsdalen*, a large Town, 160 *English* Miles S. S. W. from *Drontheim*, lies on the Bottom of a Bay on the Ocean, and has a tolerable Trade. Other Towns are, 1. *Leerstand*, 10 *English* Miles S. from *Drontheim*. 2. *Stronden*, 40 S. E. from *Drontheim*, on the River *Nidar*. 3. *Scoerdale*, on the

other Side of the same Bay, 28 Miles N. W. from *Drontheim*. 4. *Opdael*, at the Bottom of a Bay, 40 Miles from the Ocean, and 100 S. from *Drontheim*.

Lofoten, an Island, lies N. N. W. from *Drontheim*. *Samien*, a little Isle, lies N. E. of *Lofoten*. *Sallere*, another, is near *Samien*; and the Island *Trommes* lies N. N. E. from *Sallere*.

Maelfrom is a famous Gulph or Whirlpool, about Lat. 68. of 40000 Geometrical Paces in Circumference. Seamen call it the Navel of the Sea: It is fatal to Ships that approach too nigh in the Time of Flood, when the Sea for two Leagues round forms such a terrible Vortex, that it swallows up everything that comes near it; and during the 6 Hours of Ebb, it throws out the Water with such Violence, that the heaviest Bodies cannot then sink if thrown into it, but are cast back again by the impetuous Stream. During the Ebb, the Fishermen catch abundance of Fish on it, which being forced up to the Surface of the Water, cannot dive again.

Halgoland belongs to this Government, and lies N. of the Polar Circle. It is the Country of *Ohther*, King *Alfred's* Geographer, who told that King, That no inhabited Country lay further N. than this; but his Ignorance is sufficiently discover'd since. *Melanger* is a Town in Lat. 69½, upon a Bay of the Northern Ocean.

The Government of WARDHUIS.

THIS Country has *Muscovite Lapland* on the S. E. *Swedish Lapland* on the S. the Government of *Drontheim* on the S. W. and the Frozen Ocean on the W. and N. It is otherwise called *Finmark*, or *Norwegian Lapland*. The Cold here in Winter is extreme, so that it has very few Inhabitants, and no Trees except Pines and Firs. They have Plenty of Rain-Deer, Bears, White Hares, Squirrels, Black Foxes, Beavers, Otters, and other Furs, which is the greatest Part of their Trade. The Rivers abound with Fish. *Pitt's* Atlas makes the *Finni* of *Tasitus* the old Inhabitants; but 'tis more probable that those *Finni* inhabited the modern *Finland*, from whence *Lapland* was Peopled.

Their

Their Manners, Religion, &c. are much the same with those of the *Swedish Laplanders*, of which we gave an Account in the Description of that Kingdom; but they are of worse Dispositions, and said to be ugly, savage, revengeful, jealous, inclin'd to cheating, idle, and industrious in nothing save Fishing and Hunting. They are more addicted to Sorcery than the other *Laplanders*, make a Trade of selling favourable Winds to Sailors, and are said to raise Tempests, if they be not rewarded to their Content. Their Women have the same bad Qualities, and are of a low Size.

This Country extends about 240 Miles from W. to E. and 150 from S. to N. There is no Property or distinct Possessions here; but whoever settles in any Part first, it belongs to them while they stay.

The chief Place is *Wardhu*, which is the Seat of a Governor. *Moll* says, 'tis in Lat. $70\frac{1}{2}$, and Long. 49. It lies in an Isle called *Warda*, 8 English Miles from the main Land of *Finmark*, and about 15 in Compass. The Governor resides in the Castle, which is a Fort of 6 Bastions. The King of *Denmark* has always a good Garison here, to oblige the Ships bound for *Muscovy* to pay their Toll. The Town consists only of a few Cottages, inhabited by Seamen. The People of this and the neighbouring Islands live upon dry'd Stock-Fish, and have no

Bread or Beer, but what is brought from other Places. They have some small Black Cattle, which are also fed with dry'd Fish.

The other Places of this Province are Hamlets, of 10 or 12 Huts. All the Coast of *Norway*, but especially this Government, is cover'd with small Islands, which we don't name, because they are of little Consequence. In the Island *Maggers* lies the North Cape, well known to those who sail for *Russia*. It is the most Northerly Place in *Norway*. *Moll* places it in Lat. $71\frac{1}{2}$, and Long. $44\frac{1}{2}$.

Our English Writers give an Account of a very ancient Commerce betwixt our Ancestors and *Norway*, some of which are fabulous, especially what relates to King *Arthur's* Time; but since that called the *Norman* Conquest, our Histories are positive that we seldom wanted a considerable Fleet of *Norway* Merchantmen in this Kingdom, particularly in the Reign of King *Hen. IV.* as appears by his Agreement with the Merchants from the *Hans-Towns*, set down at large by *Haccluis*. In the 25th of King *Ch. II.* an Act was made for encouraging the *Greenland* and *Eastland* Trades, which took off a great Part of the Imposts on *Eastland* Commodities, and order'd, That any Subject should be admitted into the Company trading thither, for 40 s.

CHAP. XXI.

The ISLANDS of F E R O.

They are 17 in Number, and lie in Latitude 62 Deg. 10 Min. and in Longitude about 16 Deg. 20 Min. They stretch in Length about 60 Miles, and in Breadth about 40; have *Norway* on the East, *Schotland* and *Orkney* on the South-East, *Ireland* on the South, *Greenland* on the West, and *Iseland* on the North-West. Mr. *Jacobson Debes*, Provost of the Churches there, in his Book translated and printed in *London* in 1676, gives us the following Account of them: They are high Rocks in the Sea, cover'd with thin Earth, and divided from one another by deep and rapid Streams. In the Vallies, the Mould is about two Foot thick, and produces Plenty of Grass and Corn; but the People live most on the Shore, for the Conveniency of Fishing. They have many Creeks, Inlets and Havens, for their Vessels, and near their Habitations they inclose some Ground for Grass and Corn. Their Sheep feed in the Vallies and Hills all the Year; but their Black Cattle only in Summer. Part of those Islands is inhabited, and Part left for Pasturage. The most remarkable of them are as follow:

1. *Fugloe*, that is, Foul Island, lies furthest to the N. E. is pretty high, flattish on the Top, almost surrounded with Cliffs, is three *English* Miles long, and the greatest Breadth not above two. It has a Creek on the E. Side, but not fit for Anchorage.

2. *Swinoe*, two Miles S. of *Fugloe*, consists of two long high Hills, with a deep Valley betwixt them, which at a Distance makes it look like 2 Islands. The Mountain

on the S. is about a League in Length, and that on the N. about half a League. The Valley, by reason of the Inlets, is but a Mile long, and the Inhabitants have Boats on both Sides of it, that they make use of according as the Wind serves.

3. *Videroe*, or *Vidoe*, is 3 Miles W. of *Fugloe*, and a Mile from *Swinoe*, is 6 Miles long, and 3 broad, and has a Valley, where the People dwell; but is in general full of high Hills.

4. *Bordoe*, shap'd like a Crab, with many Points, resembling Claws, lies S. W. and W. of *Videroe* and *Swinoe*, about half a Mile in some Places, and in others not above a Musquet-shot. It in a manner encompasses *Videroe*; so that betwixt them there is a safe Harbour against all Weather and Tides, and 3 Entrances into it. There are Inlets in other Places, which are safe Harbours for Boats. This Island is about two *German* Leagues from S. to N. and about one and a half where 'tis broadest, from E. to W.

5. *Kunoe*, about six Miles long, and one broad, consists of a long sharp Hill, separated from *Bordoe* by a narrow Streight, in some Places half a Mile broad, and in others less. It lies S. and N. from *Mule* on *Bordoe* to the Harbour of *Klack*, on that same Island which it covers and makes safe.

6. *Kalsoe*, lies W. of *Kunoe*, from which 'tis divided by a Stream of two Miles broad, which opens from S. to N. and is a safe Passage for Ships, especially when the Stream is with them. This Island is somewhat longer and broader than *Kunoe*, runs S. and N. and has no Harbour or Creek.

7. *Ofteroe*, lies W. of *Kalsøe* and *Bordoe*, is 20 Miles long, in some Places two, and in others 6 Miles broad. It has many Inlets with good Harbours, one of them call'd the *King's-Haven*, because his Ships use to cruise there when in Search of Pyrates. The Stream betwixt this Island and *Kalsøe* is in some Places but a Mile and a half broad, and affords a safe Passage for Ships.

8. *Nelsøe*, lies two Miles S. from hence, is 4 Miles long, and a Mile and an half broad. It has a high Hill in the Middle, a Plain on the N. of it, and a Harbour on the S.

9. *Stromoe*, the largest of these Islands, is 24 Miles long, and where broadest 8 Miles. It lies W. of *Ofteroe* and *Nelsøe*, is full of high Hills; and there is one called *Skellingsfjels*, much higher than the rest, which is a good Direction for Sailors that are bound to the N. Entrance of *Thorshaven*, on the S. End of the Island, where their chief Commerce lies. This is a small, but a good Harbour, and has another Entrance from the S. There are several other Harbours and Creeks in this Island.

10. *Waagoe*, lies a Mile and an half W. from *Stromoe*, and the Passage is safe betwixt them. This Island is about 8 Miles in Diameter, and cut by two long Creeks, one of which, on the S. E. makes a good Summer Harbour. The Land abounds with Hills; and on the W. Side there are two little Islands, called *Tineholm* and *Gasholm*, with high Cliffs.

11. *Myggenefs*, lies two Miles W. from hence: 'Tis 3 Miles long, and one and a half broad. The Ground is high, surrounded with Promontories, and has but one Landing-place; and on the W. End there is a small Island, with a high Cliff round about, and sloping at Top like the Roof of a House.

12. *Kolter*, 3 Miles S. E. of *Waagoe*, and 2 W. of *Stromoe*, is a Mile and a half long, and half a Mile broad. It has a high Mountain on the N. End, which rises 200 Fathom above the Water. Yet 18 Years ago, in the middle of Summer, a great Quantity of Herrings was found spread on the Top of it, which our Author thinks were cast up there by a Whirlwind.

13. *Sandoe*, two Miles S. of *Stromoe*, is 8 Miles long, and 4 broad, with a Creek on the S. Side, and a little Isle on the N. W.

in which there are wild Black Cattle and Sheep.

14. *Skusoe*, two Miles further S. is three Miles long, one broad, a high Ground, and full of Cliffs.

15. *Store-Diemen*, or *Great Dam*, lies a Mile to the S. E. is round in Figure, a large Mile in Diameter, high and encompass'd with great Cliffs. It has no Passage to it but one, where 'tis difficult for a single Man to enter at a time; so that it might be fortified with little Expence, and made impregnable, since Ships cannot lie near it, because of the Strength of the Current; nor could they be famish'd, because there are Cows, Sheep, and Fowl, on it for 30 Men. Some Years ago, a Farmer's Wife of that Island having an Intrigue with her Servant-Man, they murder'd her Husband, and kept out the Island a long while, to avoid Punishment; but growing secure, at last they were surpris'd, and brought to Justice. Two Miles S. E. from this Place, is an Island called *Little Diemen*: It has some Inhabitants and wild Sheep upon it, and rises out of the Sea like a sharp and round Cliff.

Two Miles S. from hence lies *Suderoe*, almost 20 Miles long, and 8 broad where broadest: It is full of Hills, has many Cliffs on the W. Side, and but 4 Landing-places, which are difficult of Access. On the E. it has 4 Creeks, and one of them a good little Harbour; and on the S. Side there is one of the best Harbours in *Feroe*, called *Lebroe*.

These are the most remarkable Islands. There are others call'd *Holmes*, which are left for Pasturage; and there are several Rocks which rise out of the Sea near these Islands, two of which are necessary for Mariners to know; one N. of *Fugloa*, called the *Bishop*, is round and pretty high; the other S. E. of *Sumbøa*, on the S. of that Island is a round high Rock, called the *Monk*, near which there's a dangerous Whirlpool, which in calm Weather draws Ships towards it, and frequently sinks them; but sometimes they escape, by driving with the Stream. The Inhabitants talk of a floating Island, which has been frequently seen near this Place; but our Author takes it either to be a Fable, or an Illusion of the Devil.

When

When the Sun is in *Cancer*, there's no Night for a whole Month, and in the middle of Winter they have but little Day; but the Dawning and Twilight are longer than usual, especially when the Sun is in the S. or N. Signs. In the longest Day, the Sun rises at 2 a Clock 7 Min. and goes down at 9, 53. which makes the Day 19 Hours 46 Min. and from the Setting to the Rising of the Sun, 'tis but 4 Hours 14 Min. during which there's no Difference to be perceiv'd betwixt Day and Night, the Sun being then but 4 Deg. 29 Min. under the Horizon, and cannot make any Difference for a whole Month, there being then but little difference in the Sun's Declination; so that till the 17th of *August*, when the Sun first comes 18 Deg. under the Horizon, they have no considerable Night. In the middle of Winter, the Sun rises at 9 Hours 53 Minutes in the Morning, and sets at 2 Hours 7 Min. in the Afternoon; so that there is but 4 Hours 14 Min. Day; but the Dawning and Twilight add much to it; so that something of Day is to be perceiv'd at 8 in the Morning, and lasts till 4 at Night.

In these Islands Loadstones are found, on which, if a Compass be set, it will vary much in some Places to the E. and on others to the W. If a Compass be set on the Rocks near *Sumbœ-Monk*, formerly mention'd, it turns round, and is spoil'd for after-use, as happened to a Ship that was suck'd in by the Whirlpool there some Years ago. The ordinary Declination of the Loadstone on *Fero* is otherwise 13 Deg. 19 Min.

The Currents betwixt the Islands run very strong, and in several Manners, according to the Situation of the Land, or the Necks and Points of it. In the Winter, when the Wind blows against the Tide, it occasions a terrible and turbulent Sea, especially where there's any Ground near the Surface of the Water; for then the Sea beats so terribly against it, that scarce any Ship, tho' the Depth be sufficient, can get over those Breaks; and for ordinary Boats, they presently sink them. The Natives call those Grounds upon which the Waves break thus, *Boffvœt*, and observe, that in bad Weather they break 3 or 7 times suc-

cessively, and then rest; during which Time, the Inhabitants that must pass them row their Boats over as swift as they can. When they break, 'tis reckon'd to be a Sign of Frost and Snow, or else of warm Weather, and a N. Wind, according to the Season of the Year. The ignorant Inhabitants think they proceed from the Aversion of the Sea to the Iron in the Boats; and our Author is one of those Philosophers who ascribes them to occult Causes, which in plain *English* is, that he knows nothing of the Matter. He observes however, That when a warm Air raises Fog from the Sea, the Currents run swifter and stronger, and the Boffvœts break out; and the like happens in Winter before Frost and Snow. He observes also, That before Storms of Wind, every Nail in their Houses crack, tho' they be low built, and have thick Walls of Turf and Stone; yet they don't move when the Storm beats on them. All these Things he ascribes to Magnetical Sympathies and Antipathies.

He observes further of the Currents, That at New and Full Moon, they run very strong and swift; so that the poor Fishermen when at Sea, tho' surpris'd with a Storm, must stay till the Current turns towards the Land; so that they are many times lost. When the Current runs against the Wind, the Sea breaks almost every Winter with a Westerly Wind, over a Promontory in the Isle of *Kolter*, which is 30 Fathoms high, in such a Quantity as endangers the poor Inhabitants, tho' the Sea has 50 Fathoms to run without the Cliffs before it reach the Land; and some Years ago the Water broke over with such Force, as to tumble a great Stone of 6 Foot long, 4 Foot thick, and 4 Foot broad, that lay on the Top of the Promontory a considerable Way from the Place where it lay before. Tho' the Course of the ordinary Tides here be according to that of the Moon as elsewhere, yet their Course is different according as they beat against the Rocks and Points of Land, and according to the Situation of the Ground under Water, which occasions particular Streams to alter their Course, and run against the General Tides.

As to the General Currents, our Author gives us this Account: When the Streams run even betwixt the Land, there is a principal Current, but does not run with equal Rapidity during the 6 Hours; for the first 2 Hours, it runs pretty fast; the 2d 2 Hours, 'tis very rapid; and the 3d 2, it decreases by degrees. It is strongest in the New and Full of the Moon; but in Spring and Summer, when the Sun has most Force, 'tis stronger at every Change of the Moon, than in Autumn and Winter; from whence our Author infers, That the Sun and Moon, and inward Warmth of the Earth, occasion the Motion of the Tides. When Sailors cannot advance with their Ships in the middle of the Inlets, they take the Advantage of the Tides or contrary Streams, which sometimes reach a Mile from the Shore. He cannot exactly describe how high or low the Tides rise and fall, because there's a great Inequality in it, by the Changes of the Seasons of the Year and Moon; but they rise usually 7 Fathom at W. and but 3 at E. He says, an E. and W. Moon make the highest Water; but in particular Streams, 'tis High Water at different Hours; and sometimes in one Inlet, there are 5 different Currents that run against one another. There's a little Stream betwixt *Stromoe* and *Osteroe*, which, tho' it lie wholly still, and dead on both Sides, yet it runs forward and backward, according to the ordinary Changes of the Moon, so swiftly, that there's no rowing against it. The Cause he says is thus: There is no Ebb or Tide at the S. of the Stream; but at N. the Water rises and falls, tho' there be no Stream: Therefore when the Tide comes, the Water runs over to the S. Bay, and when it falls, it returns to the N. yet no Stream can be perceived, because the Inlet grows wider on both Sides, and is very deep. Before one comes to *Feroe*, there's no Stream discern'd; but when it comes to the Islands, it thrusts it self between Lands, as a River would do thro' a Sluice.

Besides those Streams, there are three others that turn round, and are called *Male-Stromme*, or Whirlpools, which are very dangerous, sink every thing that comes near them, and throw it up again at a certain Distance. Our Author thinks they pro-

ceed from round Grounds at Bottom, with Channels or Conduits in them. The most dangerous is that S. of *Suderoe*, about *Sumbue-Monk*, which has swallowed up several Ships, tho' others have escaped. The Sea round this Whirlpool is 80 or 90 Fathom deep, where the Stream runs quiet and still. A little further in, the Ground lies from 25 to 35 Fathom deep, where the Sea begins to rise and turn round. Further in, the Ground lies but from 8 to 10 and 12 Fathom deep, Snail-wise, in a Circle 4 times round. This high Ground has Points or Cliffs on the Top about 8 Fathom deep, and about 10 or 12 distant from one another; so that, when a Vessel comes upon this uneven Bank, 'tis turn'd round those Cliffs by the Stream with so much Swiftiness, that People who are not used to it lie down in the Boat, to avoid being giddy, and the Boat is turn'd round all the 4 Circles; between which there are three Channels or Conduits, where the Sea runs about slowly in small Turnings. On the E. Side there's a Gulph, where the Stream runs in as through a Sluice, and works but softly within. These Channels are from 25 to 35 Fathom deep. In the middle of the Pool, there's a deep Hole from 50 to 55 Fathom; and in the middle of all, 'tis 61 deep. The innermost Water runs about slowly; and on the S. Side of that Hole the Rock called *Sumbue-Monk* rises 10 Fathom above the Water, and the Depth about this Rock is 15; and N. of this there are 6 lesser Rocks, betwixt which and the *Monk*, the Water is from 3 to 4 Fathom deep. Our Author observes, That on the Top of those Rocks, the Compass runs round, as the Whirlpool does, and is thereby spoil'd. He takes Notice also, That on the Top of *Sumbue-Monk*, the Air is so extraordinary cold in the hottest Day of Summer, that the People who climb it for Fowl are scarce able to endure it; and the Fowl which haunt and breed there, have nothing almost but Feathers. And since the Saltness of the Water about *Feroe*, tho' in perpetual Motion, occasions for most part a temperate Winter, he thinks the Coldness of the Air upon this Rock does not proceed from the continual Motion of the Stream, but rather from a Magnetick Virtue in the Rocks;

Rocks; and this he takes also to be the Cause why Ships are so easily brought into that Danger: But for the better understanding of the Form and Nature of this Whirlpool, he annexes the Figure of it. One may justly wonder, after such a frightful Account of the Danger that Vessels run by coming near it, how so particular a Description of it could be taken; but our Author informs us, That when the Weather is calm, the Sea still, and the Stream in the Reflux, the Inhabitants venture to fish upon it, and to climb the Rock.

On this Occasion he enters into a Dissertation against several Authors as to the Cause of those Whirlpools, and explodes the Notion of such as ascribe them to Abysses or Bottomless Pits in the Sea, which they think to be also the Causes of Ebbs and Floods. He takes Notice of what *Athanasius Kircher* says, *Hydrog. Lib. 3.* of the famous Whirlpool under Norway, called *Moska-Stram*, viz. That it is a Gulph into which the Sea runs down under the Land of Norway, and comes out again in the *St. nu Bothnicus*, or Bay of *Bothen*; and *Herbinus*, in his publick Dissertation at Copenhagen, seems to be of the same Mind: But our Author says, they are misguided by uncertain and false Relations; for this Whirlpool lies under the Land, between two Islands, where the Bottom rises like that of the Whirlpool of *Feroe*, and does not descend in deep Cavities. He adds, That *Kircher*, in his *Tabula Geographica Hydrographica*, describes many such Gulphs or Whirlpools; all of which are found near the Continent, or between Islands, as those of *Seylla* and *Charybdis*, betwixt *Sicily* and the Point of *Calabria*, where there stands a high Rock in the middle of the Stream, like the *Monk of Sumbor*, which *Jacobson* says, are Beacons set up by God to warn Seamen of their Danger. He takes Notice also, That *Peter Clauson*, in his Description of this Whirlpool in Norway, says, the Water runs about in such a boisterous manner, that the Noise is heard at some Leagues distance, which he takes to be a Proof that there's no Abyss to swallow the Water, since the deepest Water makes the least Noise; therefore he takes the Noise, and turning round of the Water, to proceed

from its pressing through a streight Passage betwixt two Lands, and such a Ground at Bottom as that of *Feroe*, which he says is further prov'd by this, That when whole Trees come into that *Vorago*, they are thrown up again, with their Roots, Branches and Bark, tore, by being whirl'd about among such circular Rocks, and many such are thrown ashore on *Ferðe*, which could not be were there any pervious Gulph; for then the Hole would be large, the Water would still run round, and any Trees that were drawn in, would run hastily through without being tore. *Kircher*, to strengthen his Opinion, says, That in the middle of the Stream, near that high Rock, there's an Abyss by which the Water is swallowed, and comes out again in the Bay of *Bothnia*. *Jacobson* answers, That were it so, the 10th Part of what it swallows would not come out again; whereas the Whirlpool throws up whatever comes into it, and the Stream that drives it out, carries it into the Main, from whence it comes driving to *Feroe* and *Greenland*, as is very well known. In like manner, what comes up again in the Bay of *Bothen*, is drove by the Stream to one of those Sea-Coasts, or else out into the E. Sea; and if the latter, then many of those Wrecks would be seen in the E. Sea, where no such thing has yet been perceived. He is therefore of Opinion, That the *Vorago* in the Bay of *Bothen* is of the same Nature with that at *Feroe*, because *Olaus Magnus* mentions its making a boisterous Noise, which proceeds from such a Situation at Bottom, and the rapid Ebb and Flood thro' the long *Bothnick* or East Sea, which is not much perceiv'd, because of its Depth, and therefore it beats the harder upon the Circular Rocks at Bottom; and the like is perceiv'd in the Streight near the Isle of *Alland*, where the Ground lying shallow, it makes a terrible Noise, as is own'd by *Herbinus* in his Dissertation.

Their FOUNTAINS.

BUT to return to the Description of *Feroe*. Those Islands abound with Fountains of wholesome Water, of a good Taste; some of them on the Tops of the highest

highest Mountains, which run constantly in the greatest Drought; so that there's scarce a Cottage but what has the Convenience of a Spring or Brook, whose Water is generally cooler in Summer than Winter. They have one Medicinal Fountain in *Offeroe*, near *Gote*, but 'tis not much us'd, because hard to come at. Its Water is warmer in Winter than other Water, and keeps good a whole Year; from whence 'tis supposed to flow through a Vein of Brimstone.

On *Sadoroe*, near a Village called *Famioen*, there's a little Lake pretty high, on the Mountain that flows and ebbs with the Sea, and yet is fresh Water.

Their AIR.

IN Summer, 'tis temperately warm, not very hot at any time; yet the Heat is such sometimes, as to cleave their thin Mould to the very Rock. Their Winter is not excessive cold; and tho' the Land be under the 62^d Deg. N. Lat. it seldom freezes a Month together, nor does it produce any Ice in the open Inlets of the Sea; so that their Horse and Sheep go in the Fields all Winter. *Jacobson* thinks, this is occasion'd by the Saltness and constant Motion of the neighbouring Sea, which produces warm Vapours that temper the Air, and make it moist; so that melted Snow or melting Rain falls in the Vallies, when it freezes on the Mountains. Their moist Air and watery Clouds produce such stormy Winds, as sometimes tear up Stones from the Ground, and roll up the Earth on the Rocks like Sheets of Lead. Those Storms are variable, according to the Gaps between the Tops of the high Mountains, where the Winds gather and press themselves through with wonderful Force, when those in the Vallies underneath have so calm an Air, that they can carry lighted Candles from House to House. Sometimes the Blasts are so forcible, as if they would tear the Rocks, and contrary Winds meet betwixt them, being rebounded by the Rocks that jut out in the Passes, and occasion terrible Whirlwinds, which wheeling about among the Hills, come down

over the Inlets, and whirling round, run through them again a great way into the Sea, and endanger Mariners, who must presently furl their Sails, or be overturn'd, as they sometimes are tho' they do, especially if the Vessels be large; and they frequently bear down both Men and Horses in the Vallies: But the Inhabitants being forewarned by a terrible Noise betwixt the Rocks, alight from their Horses, lie down flat, and catch hold of Grass or Stones, till the Blast be over; but these Things happen seldom. *Jacobson* tells a strange Story of a Clergyman there, who, together with his Horse, was blown over the Edge of a Promontory near *Sumbae* by such a Whirlwind, but met by another stronger contrary Wind immediately, which blew him up again without any Hurt: Of this he is positive, tho' it seems incredible; but he ascribes it partly to the Nature of those Winds, and partly to a Miracle; yet he does not tell us what became of the Horse. The ordinary Winds here are for most part W. and S. W. especially in Spring and Harvest; and those Winds being very moist, 'tis usually Rain and bad Weather on the Side of the Land where the Wind blows, while on the other Side 'tis fair and clear, which he ascribes to the great Height of the Land.

The Summer not being hot, they have no Thunder then, but in Winter, when they have great Storms and Rain, which is the more terrible, because all of them are turbulent in that Season.

Their DISTEMPERS.

THEIR Air being thus purged in Autumn, Winter and Spring, by strong Winds and Thunder, they are seldom troubled with contagious Distempers, except they be brought in by Foreigners. They have no Agues, and such as could not be cur'd of 'em elsewhere, have been freed of 'em as soon as they came hither. They never have the Small-Pox but when brought by Strangers, and then it infects whole Families, who are thereby reduced to a miserable Condition, because not able to help one another, and every body else avoids them.

as if they had the Plague, refuse to bury the Dead, or to come near the infected Village. He gives an Instance of his own Knowledge in 1651. A young Man from Denmark, who had lately had the Small-Pox, arriving there, gave his Shirt to wash, which infected the Woman that wash'd it. Others, that did not know the Disease at first, were infected by her; so that notwithstanding all their Precautions, the whole Islands were infected.

The Diseases proper to the Country are, a strong Rheum in Spring and Autumn, attended with a violent Cough and Spitting; a Head-ach, and Pain in the Limbs, that keeps 'em a long time in Bed, and some die of it. Their Medicine sour is Whey, as hot as they can drink it; and this Distemper does generally purge 'em of all the Flegm, and other Impurities contracted by their cold and moist Air.

A 2d Distemper, proceeding from the same Cause, is what they call the Hot Sickness, much like that which affects Soldiers in cold and moist Camps during the Winter. The Patient is hot, with acute Pains in the Head, that occasion Distraction and a Flux of the Belly in Summer. It consumes the Marrow of the Bones of such as die of it; but the greatest Part escape by the Providence of God, for they know no Remedy against it, nor is it so frequent as the other.

The 3d is the Scurvy, which affects Flegmatick People that don't stir much; nor are others easily preserv'd from it, because of the Moistness of their Air, and living so near the Sea. Their Medicine is New Milk alone, or with Scurvy-Grass boil'd in it.

Their 4th Distemper is the Leprosy, which *Jacobson* reckons near a kin to the former.

The PRODUCT of their Land.

HE thinks some Mines of Copper and Iron might be found here, because the Rivulets which run down from the Hills in Summer are green in dry Weather, like Verdegrees. They have a small Quantity of Talk in the Northern Islands.

They have two Sorts of Salt-Petre Stones, but not enough to yield any great Quantity of that Commodity. On the Shore there are found transparent Stones, so hard, that one may write upon Glass with them: They are white, or of a white mix'd with blue, and some of them yellow, and so well polish'd, that they serve to put in Rings. They grow in the Cliffs, and are wash'd off by the Waves, but are not esteem'd by Jewellers. 'Tis thought they are a sort of Jasper. They lose their Colour when transported. Pearl Muscles, like those in Denmark, and Molucca Beans, are also found here. The ignorant People took them to be Stones, and thought the Kernel was another bred within them. They have also some Chrystal, but so brittle, that it cannot be wrought.

They have no Trees but some low Juniper Shrubs and Willows, and when they planted Fruit Trees, they did not succeed. Their Firing is Turf, some of which is so good, that it serves Smiths instead of Coal, of which they have some small Quantity, but in Places hard to come at. No Corn but Barly comes to Maturity here, but this yields 20 or 30 fold, so that they need none from abroad. They have abundance of fat Pastures, so that one of their small Oxen yields 100 Pounds of Tallow. Their best Pastures lie N. E. and N. and *Jacobson* thinks those Vallies are impregnated by the Nitre which the said Winds bring with the Rain and Snow, being also cover'd from the scorching Beams of the Sun by the neighbouring Hills. He observes, that in the two Months when there is almost no Night, the Corn and Grass grows but little here; but afterwards, when the Nights begin to lengthen, they grow more in a Night and Day than in 14 before, when so much expos'd to the Sun, tho' there be Rain at the same Time.

Their Herbs and Roots are such as are common to Gardens, viz Lettice, Cresses, Pennyroyal, Coleworts, Turnips, Carrots, &c. They have 4 wild Herbs, which they esteem much, viz 1. Plenty of Scurvy, besides Cresses, Beccabunge, and Sorrel, are all good against Scorbutick Distempers. 2. Great Quantities of Tormen-til which, having no Bark, serves 'em in-

stead

stead of it to tan their Skins. 3. *Angelica*, which grows wild every where; and the Inhabitants eat the hollow Stalks before they grow to Seed, after taking off the outward Rind, and the long Filaments, as other People do Fruit; and in Time of Dearth they eat the Roots. 4. *Radix Rhodii*, which they call Hielpe Rod, from whence they distil a Water in Smell and Taste like that of Roses, and serves for the same Use.

Their Cattle are Kine, Horses, and Sheep. He is thought a great Farmer that has 20 of the former. They go in the Fields all the Winter, except the Snow be very great. They are of a small Size, and fat in Proportion to their Pasture. Their Horses are little, but strong, swift, and sure Footed, tho' without Shoes; so that the People think themselves more secure upon the Rocks and Hills on Horseback, tho' they ride a good Pace, than on Foot. They breed them to hunt wild Sheep, which they sometimes grasp with their fore Feet when they come up with them, and run without Fear over Rocks, and Hills after them, with their Masters on their Backs. They keep their tame Sheep in separate Inclosures, divided by Ditches. Their Flocks are from 100 to 150, and some Farmers have from 200 to 500, divided into smaller Flocks, that feed always in the same Ground. They lose many of them in hard Winters, and have no other Fence but Earthen Dikes to shelter them from the N. Wind. Sometimes in a great Snow they gather themselves close in the open Fields, where they are cover'd quite over, and if not found out by a Damp which rises from the Snow above them, they are lost for a Month together sometimes, and eat the Earth about them, and the Wool off one another; but this seldom happens, for the Danger of it makes the Inhabitants look after them carefully, and when they find them under the Snow, they open a Passage for them, or have Weathers with every Flock, which being stronger than the rest, break a Passage for else; but they have no Hay, or any thing else to relieve them, than the Grass and Roots they dig from under the Snow. Their Pastures are not so good as formerly, which proceeds, says

our Author, from the Decay of Nature; but he ought rather to ascribe it to their being over-stock'd, and not cultivated. If they be not carefully look'd after, they fall many times in great Numbers from the Cliffs, cover'd with Snow, into the Sea, as they seek their Food.

They shear their Sheep in the Spring, take their Lambs from them in the Autumn, and inclose them in Fields near the Sea with Stone Fences. They breed their Dogs to hunt the Sheep and Lambs so dexterously, that they will catch any they point out to them without biting them, but keep them down till their Masters come. These Dogs are shaped much like Greyhounds, and when well trained, yield as much as a Cow. Most of their Sheep are white in the N. Parts, and black in the S. *Jacobson* ascribes this to the Vapours of the Sea, to which those Islands lie most exposed on the S. or rather to the Nature of the Soil, which he thinks is full of Brimstone or Salt-Petre. The chief Riches of the Inhabitants consist in their Sheep.

Their FOWL.

They have great Numbers both of Land and Sea Fowl, which serve them for Food. Some of them stay all the Year, and others fly away in the Winter. Those that stay are Doves, Hares, Grellings, and Snow-Fowls. They have also Owls, Sparrow-Hawks, Crows, and Ravens. The latter are so destructive to the young Lambs, that they have a Law, obliging every Man who does not bring one of their Beaks to the Session-House at a certain Season of the Year, to pay 2 $\frac{1}{2}$ d. They have White Ravens, and some half white, half black, which they teach to speak after cutting their Tongue-string. They have a Fowl called a *Teale*, that lives both by Land and Water, and being a great Enemy to the Ravens, is upon that Account cherish'd by the Natives.

The Water-Fowl which stay constantly here, are several sorts of Ducks, Plovers, Eiders, Maws, and Teisters. The latter is good Meat, changes its Colour in Winter, and affords good Down. They have another

ther called *Imbrim*, larger than a Goose: It is never found on Land, for its Wings are so small, that it cannot fly, and its Feet are only made for swimming. It has a Hole under each Wing, capable of holding an Egg, where they suppose it hatches its Young, which are easily allured to come near the Land, by waving a Piece of white Linen to them, and then the People shoot them. *Liomen*, another Water-Fowl, much like the *Imbrim*, comes hither in Summer, and is easily caught when on Shore, because they can neither run nor fly well: It builds on the Banks of Fresh-Water, so as its Bill may reach it without moving from its Nest, where it continues till it hatches its Eggs, tho' the Water sometimes overflows them. *Garfugell*, another Water-Fowl, has little Wings, so that it cannot fly, but walks upright: His Colour is a shining Black, except a little White under the Belly, and a white Circle round its Eyes, which look like Spectacles. They have also three sorts of Wild-Geese, one Reddish, and the other two Grey; but the one sort less than the other. They come hither in great Numbers in the Summer, and keep in Fresh-Water Lakes, where the Inhabitants hunt them in Boats, and take many. Swans come hither in the Spring, make no great stay, but proceed to other Countries. Great Numbers of other Birds come at the same time, of which the Inhabitants make much Profit. The chief of them is the *Sule*, or *Gentleman*: They come only to one little Island, and are very good Food. They have other eatable Sea-Fowls in great Quantities, such as the *Skrabe*, *Lunde*, *Lumwisse*, the *Sea-Dam*, &c. which come and go at certain Seasons; and tho' each of them breed but one *per Annum*, and are more sought for than any other, so that 100000 of them are taken in a Year, yet they are so numerous, that they darken the Sun like a Cloud, and make such a Noise with their Wings, that they resemble Thunder. The *Skrabe* digs its Nest with its Beak and Claws under Ground, with several Turnings, where it hatches its Young, stays with 'em all Night, goes out to Sea in the Morning, and returns with Food in the Evening. The Inhabitants pull out the young ones with Hooks made on purpose, salt them up for Winter-Provision, and use their Fat for Lamps.

They never kill the Dam, except she be in the Nest unknown to them, and she returns to the same Nest next Year, except they spoil it in seeking for the Young, which they avoid if possible. The *Lunde* are very numerous here: 'Tis something bigger than a Pigeon, and has a strong crooked Beak, and sharp Claws. When a Raven comes to take them or their Young, it catches him under the Throat with its Beak, and grasps him about the Breast with its Claws, which makes the Raven fly away crying, till they come to the Sea, where he drops and drowns him; but sometimes it is surpris'd in its Hole by the Raven, who devours it and its Young. This Bird builds its Nest under Ground like the *Skrabe*, or under Stones, where it may be secure. The Inhabitants hunt them with little Dogs, or pull them out with Hooks, and sometimes take them with Nets as they fly to or from their Nests. They have another large Bird called a *Lumwisse*, black on the Back, and white under the Belly: They lay their Eggs on the bare Cliffs by one at a time, and sit so close, that they touch one another. The Cocks bring them Meat till the young ones be hatch'd, and fit to be carried to Sea on the Dam's Back. The Inhabitants climb the Rocks where they build, with Ropes and Poles with Hooks on them, or are let down with Ropes by others; but frequently lose their Lives in the Attempt. Sometimes the Fowlers, when the Weather is fair, stay 7 or 8 Days in the Rocks, where they shelter themselves in Holes by Night, and have Meat let down to them by Ropes. They throw the Fowls into Boats, which lie beneath on purpose. Their Ropes are sometimes 80 or 100 Fathom long, and 3 Inches thick: The Fowler makes the End of it fast about his Waste, and between his Legs; and 6 Men holding the Rope with a Piece of Wood on the Brink of the Rock, to prevent its being cut as it slides, let him down. There is another Line fasten'd to his Body, which he pulls, so as to let them know when to stop, or to let him down faster or slower. He has a thick Seaman's Cap on his Head, to defend him from Stones that fall from the Rocks by the Motion of the Rope, which sometimes are so big, that they kill him; so that knowing the Danger, they always

recommend themselves to the Protection of God when they go about that Work. Their chief Danger is from those Stones, but otherwise they think it a Diversion; and those who are expert, can swing themselves from one Place of the Rock to another, where the Fowls sit, which he kills with his Fowling-Staff; and when he meets with Cavities or other Places that are easy to be climb'd, he unties himself, and fastens his Rope to the Rock till he have occasion for it again. Their Manner of climbing up the Rocks is more dangerous, and is perform'd thus; They come in a Boat to the Foot of the Rock, and tying a Rope round the middle of one of their Number, they take a Pole of 5 or 6 Ells long, with an Iron Hook at the End of it, and putting the Hook under his Girdle, lift him up to some Place of the Rock where he can get footing; then they help up another in the same Manner, with each a Fowling-Staff in his Hand, and with a long Rope fasten'd about their Middles, they climb up as high as they can; and where they find Difficulty, the one helps the other up, by thrusting the Pole under him, and when he has got footing, he hales the other up by the Rope. Thus they proceed till they come to the Birds-Nests, when one of them seeks a convenient Place where he can stand sure, and holds the Rope while the other climbs about after the Birds, who if he chance to slip, the other, if strong enough, hales him up again; but if otherwise, they fall together, and are killed. The Birds they catch they either throw into the Boat below, or tie them in a Bundle to the End of a Line, let down by some above, who hale them up; but fasten them to their own Girdles till they have a sufficient Number to convey either one Way or t'other. When the Fowls are brought home, they eat Part of them fresh, salt up the rest for Winter, and sell their Feathers. Sometimes a single Man will let himself down by a Rope fasten'd to a Stake, and climb up again in the same Manner, with the Fowls hanging at his Girdle; and in less difficult Places, they climb without Ropes, where one, not accustomed to it, would think they could find no manner of footing.

Besides the Birds of Prey formerly mention'd, they have others called the *Swarth-*

bagg, the *True*, and the *Skue*. The *Swarth-bagg* is as large as a Kite, black on the Back, and white every where else: He feeds upon other lesser Birds. The *True* is also called Thief, because he pursues other Birds, strikes them till they drop the Meat from their Beaks, and catches it dexterously ere it fall to the Ground. The *Skue* is of the same Species, but as large as a Raven: It is very fierce in Defence of its Eggs or Young, flies directly at the Head of such as pass by its Nest, and strikes their Faces severely; but the Inhabitants fasten a Knife upright on their Heads through their Caps, by which the *Skue* is killed when it falls down upon them with such Vehemence.

Their FISHERY.

THEIR Fishery was formerly so good, that the Inhabitants maintained themselves by it alone; but it is now so much decayed, because of the Peoples Wickedness, says *Jacobson*, that they have not enough to supply their Necessities; so that the poorer Sort, who have no Arable Land, are frequently reduced to great Want; yet sometimes they have abundance of Fish, especially when Corn and Cattle fail. Their Sorts of Fish are Whales, Seals, Codd, Whittings, large Flounders, Place, Trouts, Sand-Flounders, and a small Fish called Murt, resembling our Filchards, which sometimes in Autumn fill their Creeks, where the poor Children take as many as serve themselves and their Parents from Meal to Meal; for having no Salt to cure them, they provide no further. Their Codd are found in Places of the Sea call'd Meads, which lie off at certain Points of the Land, where the Fishermen suppose there are Fresh-Water Springs at Bottom. Their Seals haunt the Inlets, and are of different Sizes; some of them as big as Cows: They sleep on Out-Rocks, under Promontories, where Boats cannot reach them; and in *September*, when they bring forth their Young, they retire into Caves under the Rocks. The Natives sometimes shoot them, and at other Times catch them with Nets and Dogs, who being trained to it, swim to them against the Wind, that the Seals may not smell them, and catching

them fast by the Throat, hold them till their Masters come up and kill them. The other Way of taking them, is by going in with Boats to the Mouth of the Caves, where they bring forth their Young, and rowing in as far as they can, leap out, some carrying Candles to see where they lie, and others with Clubs kill Hundreds of old and young, but not without Danger from the old He-ones, and likewise from the Waves. When they kill them, they hale them out, eat their Flesh, melt Part of their Fat into Train-Oil, salt up Part of it for Food, and make Shoes, &c. of their Skins.

Their Whales are of several Sorts; one is called a *Grind-Whale*, because of Marks upon them resembling Grates. The biggest is not above 5 Ells long, and the young ones an Ell and a half: They come in great Numbers under the Land when the Weather is dark or foggy. When any Fishermen see them, they make Signs to all the other Boats, who come presently together, and drive them in towards the Land, by shouting and throwing Stones at them. They send a Man ashore at the same time, to give Notice to the People by making a Fire, who come with their Boats from all the Islands to the Place where they see the Fire or Smoak; and bringing their Whale-Spears with them, drive the Whales to an Inlet or Creek, where there are good Whale-Banks or Flat-Sands, and there kill them. The Boats divide themselves into two Companies, one of which attacks them, and the other draws up in Form of a Half-Moon, to prevent their Escape to Sea; and other People with Whale-Spears on the Shore wade in as far as they can, and help to kill them. Sometimes they break or overturn the Boats with their Tails, by which Men are now and then lost, and many of the Whales escape. When they have killed as many as they can, they hale them on Shore. The Tythe is first taken, then one is allow'd to him that first saw them, and the rest is divided into two Parts, one for those that took them, and the other for the Owner of the Land where they are taken. Sometimes they are brought in with the Tide, and run on the Sands in a dark Night, where the People find 'em in the Morning.

The Inhabitants melt Part of the Fat in, to Train-Oil, and salt up the rest for Bacon, with a black Salt made of the Ashes of burnt Sea-Weeds, which preserves it very well, so that it is scarce to be discerned from Bacon. Other Part of the Fat they use instead of Butter. The Flesh, when dry and fresh, resembles Beef; Part of it they cut into long Pieces, and dry in the Wind. Foreigners pickle part of the Tail, which tastes like Neats-Feet, and therefore the Inhabitants call those Whales *Sea-Knee*. *Jacobson* mentions a Creature called a *Sea-Dog*, which sometimes drives those Whales ashore. His upper Parts above Water resemble those of a large rough Spaniel. There is another Sort called *Doglines*, about 7 or 8 Ells long, and 2 Ells broad where thickest. A small Number of them come every Year into a Haven in *Suderoe*, where the Fishermen drive them into an Inlet if the Weather be boisterous; but if it be calm, they are so tame, that they suffer the Fishermen to come up to them, and fasten a Rope through the Fat of one of their Eye-lids, by which they hale them ashore, and kill them with Whale-Spears. They are not so good Meat as the other, and if one eat of their Fat, it not only pierces the Pores of their Body, but their Cloaths, makes 'em look yellow, and to smell strong. They have other Whales, called the *Roar* and *Witch* Whale, which being large and dangerous, the Inhabitants dare not meddle with them, for they play about the Boats, and sometimes rise under and overturn 'em: To prevent which, the Natives bore a Hole in the Head of their Boat, put *Castoreum* into it, and stop it up. Others inclose it in a Piece of Wood fasten'd to a Fish-Bone, and if they throw that Piece of Wood upon any of those Whales, or if they do but smell the *Castoreum*, they sink immediately. Our Author says, he knows by Experience, that Men, who could swim very well, have immediately sunk when they had *Castoreum* about them, and quotes *Bartolinus's Centuries of Anatomical History*, Cent. 2. *Hist.* 17. to confirm it. He adds, That the Inhabitants say Juniper Wood performs the same thing; and he is of Opinion, That *Assa-Fetida*, and other Things made use of to expel the dead *Fetus*, will have the same Effect. But the Truth of these

these Things, and of the Appearance of a Mermaid on those Coasts, in such a Form as we usually paint 'em, must be submitted to the Readers Judgment; for tho' our Author writes with an Air of Probity, he seems in many Things to be too credulous.

Of the Time of Peopling those Islands.

Jacobson says, from *Sturleson's Chronicle of Norway*, That they were first inhabited about 868, by People that fled from Norway in the Time of *Harald Pulchricomus*, who first reduced all the little Princes of Norway, and brought that Country under one Monarch. He thinks that *Jemteland*, *Island*, *Orkney*, and *Schetland*, were planted about that Time by others who fled on the same Account. These Islands were said to have been first discover'd by a Pirat of Norway, but there is no certain Account to be had of those Things, because their Publick Papers were carried away by Pirates above a hundred Years ago. Authors differ about the Etymology of the Name; but *Jacobson* thinks they were called *Feroese*, from the Word *Ferrier*, which, in their Language, signifies Ferries: This is not improbable, because of the many Streams betwixt the Islands, which they are constantly oblig'd to ferry over.

He says, That the chief Men from Norway divided the Islands betwixt themselves and their Followers, who became their Tenants. Their Government was at first a Sort of Aristocracy, under their Leaders and their Successors. Many of the People say their Fore-Fathers had great Estates, but there is no such Thing now; for some were afterwards divided among the Children of the Chief Men, others were forfeited when the Islands were reduc'd by the Kings of Norway, and Part were given to Churchmen, according to the Superstition of the Times, for Pardons and Dispensations to eat Flesh in Lent; from which the People could not well abstain, because their other Provisions were short; and all those at the Reformation were annex'd to the Crown, so that now the King of Denmark is Proprietor of most of the Country. And

the Lands reserv'd by the Owners are divided into such small Parcels by their Heirs, that the Freeholders are much poorer than the King's Farmers.

There's no History of the Succession of their first Chiefs; but 3 or 4 of them seem to have been the principal Rulers, and contending for the Superiority, were guilty of many Oppressions, which made it easy for the King of Norway to reduce them. The first was *Oluf Haraldson*, call'd the Holy, who by fair Promises procur'd their Submission; but taxing them high afterwards, they revolted. He brought the Chief of them again to Submission by Presents; yet they killed those who came to demand his Tribute. Thus they liv'd independent till about A. C. 1100, in the Time of King *Sigurd*, called the *Hierosolomite*, when they had Bishops and Governors planted amongst them. Since that Time, some of the chief Men of *Feroe* have been employed by the Kings of Norway, and called to their Assemblies of States. When Norway came under the Crown of Denmark, those Isles did the like. Their Records being lost, as before mention'd, there's no History of any remarkable Actions perform'd by the Inhabitants, except a few, of which *Jacobson* gives a Romantic Account. The chief, of whom there is any Certainty, is, *Magnus Heinsson*, a great Sea-Captain, who performed many brave Exploits in the Reigns of *Frederick II.* and *Christian IV.* of Denmark. In the Time of the latter he was executed, upon a false Accusation by some that envy'd him; but his Innocence appearing afterwards, he had Justice done to his Memory, and in 1590 his Corps was taken up, buried with great State, and a pompous Epitaph put on his Tomb.

These Islands are frequently invaded by Pirates of all Nations; but *Christian IV.* built a Fort at *Thorshaven* for the Defence of that, which is their chief Town.

Their Manners and Customs.

Jacobson says, They are humble, civil, courteous to Strangers, whom they entertain gratis, and allow 'em Carriages from Place to Place; but are troubled with few of them. They are charitable to the Poor, tho'

tho there is no great Inequality among 'em as to Riches, which consist chiefly in Cattle. They generally make no further Provision than for their present Necessities, and think that every Year will bring Provision for it self. There's scarcely any Theft among 'em, but when the poorer Sort steal now and then some Food, or a Pewter Spoon, which they melt down into Iller-Rings for Women's Bodice; but they will not meddle with Silver or Gold, because they know not how to alter the Form of it.

They are temperate in their Diet, and keep their Beer to treat their Guests and their Ministers; but at *Christmas* they are pretty jovial. None but the poorer Sort are given to Excess in Brandy. Their Diet is frugal, without Bread, Beer, or Salt, for most part; but according to the Season of the Year, they live upon Flesh, Milk, Fish, and Gruel. They dry their Flesh and Fish by hanging them in Wind-houses, made up of Half-Dales, 2 Inches from one another, that the Wind may go through 'em; and their Fish thus prepared are transported to other Countries. They salt some Flesh which they dry in the same manner, and eat when 'tis a Year old: 'Tis pretty savory, but hard of Digestion. They are not very nice in their Cookery, for they boil their dry'd Meat in Water, and put a little Barley-Meal in the Broth, with some of the Fat that drops from the Flesh as it dries, which makes it when cold like Pease-Pottage, in which they put a little Vinegar; or when they have not Flesh enough, a little preserv'd Tallow, which they boil in the Pottage.

They preserve their Tallow thus: When 'tis fresh, they roll it in little Pieces, and let it rot a little; then they cut it small, half melt it, and cast it out afterwards into great Pieces of 36 Pound each, which they put in Holes dug in the Ground, to keep it moist, where the longer 'tis kept, 'tis the better; and when 'tis old, it cuts and tastes like old Cheese. They prepare this every Year, and use it instead of Butter. The Quantities of it are according to their Number of Cattle. This they call their hidden Treasure, because the Pyrates do not know where to find it. The poorer sort use the Fat of Whales instead of it.

They are frugal in House-keeping, give certain Portions of Meat to their Servants. Their Men have twice as much as their Maids, and they prescribe them their Work accordingly. Every Morning they weigh out 2 Pound of Wool for them to spin and knit that same Day into a Pair of coarse Stockings, and weigh their Work against Night. This is Part of the Goods they export. Their Clothes are always of coarse Flannel, and of one Fashion; but they have a finer Sort for Church and Market. Their Coats are short and wide, and they seldom wear Linen. The Women's Clothes are all of one Fashion for Rich and Poor, being Bodice and Petticoats sewed together without Skirts; but their Petticoats are plaited. They have Cloth for Holidays, and chiefly affect a dark blue Colour, and some red. They have Fringes at the Ends of their Sleeves, and the richer Sort have black Velvet sew'd on red Cloth for their Trimming. They wear large Stomachers, adorn'd with Silk Fringes, Ribbons or Lace, on the upper Part, and under their Chin. Through the Stomacher they thrust a little Piece of Silver-gilt, of an oblong square Form, with Buckles and gilt thin glingling Plates hanging at it. The poorer Sort have 'em of Copper, and Girdles of the same. The Maids go bare-headed, with their Hair plaited, and the married Women wear red knit round Caps, much like the Scots Bonnets. The Women's Shoes are of Sheep's Skins, and the Men's of Neats-Leather tann'd. They have but one Sole, are a little sew'd together about the Toes and Heels, which they fasten with Strings behind, and tie them above the Ankle.

Their Bedding is Hay, with a little Flannel spread over it. They all make their own Clothes, are fit enough for such Handycrafts as they need, and make Boats much better than those of *Norway*. The Women, besides coarse Flannels, weave much fine Bed-Clothes of several Colours, fine Stockings, and Woollen Waistcoats, and dye all themselves. They have a sort of Red which they call a Cork Colour, that none else can imitate. They are not inclin'd to unprofitable Pastimes; but at their Weddings, and at *Christmas*, use plain Dances, holding one another by the Hand, and singing Ballads in Praise of their Champions.

pions. On Holidays they sing Psalms, and at vacant Hours play at Chels, where in both Sexes are expert. They are naturally inclin'd to observe the Stars, especially *Bootes*, by which they know the Hours in Winter Mornings to direct them in their Work. They know the Course of the Moon by the Increase and Decrease of the Sea, and by this compute their Fix'd and Moveable Feasts very exactly. Their Language is that of *Norway*, mix'd with *Danish*; but the S. and N. Isles differ in Dialect. They live long, viz. to 80, 90, and some of them to above 100 Years of Age. *Jacobson* instances in one *Erasmus Magnusen*, who at 90 married a young Woman, by whom he had 5 Children, and liv'd till 110. To obviate Suspicion of her being unchast, he tells us she had always a good Reputation, and that the Man was of a vigorous Constitution.

Of their GOVERNMENT.

IT relates chiefly to the Administration of Justice, Regulation of Trade, and Provision for the Poor. Their chief Governors were the King's Bayliffs; but now some Person of Honour from *Denmark* has usually that Trust, and appoints a Deputy, with Sheriffs under him, to take Care of Justice and Trade. The Islands are divided into 6 Districts, with a Sheriff in each, who determines small Causes; but great ones are referred to the Court called the *Session*, which is kept at *Thorshaven* in *Streymoe* once a Year, where the Governor's Deputy presides. They have also a Yearly Synod of the Clergy, who, with their Provost, meet at the same Place, and determine Church-Causes. The Deputy also presides in this Court. They have also a Spring Session in every District once a Year, where the Deputy also presides, assisted by the 6 Sheriffs, and a Sworn Recorder. Causes are determin'd here by the Provincial Judge, with 6 Sworn Men for every Division, and a Recorder, who registers what's done. The Clergy do also attend, for they preach and sing Psalms in the Forenoon, and keep the Court in the Afternoon. The first Day of the Session the Clergy are called in, because what relates to the Pub-

lick is then consider'd. Private Causes are determined the following Days, and at the End of the Session the Clergy is call'd again, to know if any publick Matter remain to be consider'd, and if not, the Court is dissolv'd; the Provincial Judge assuring the People of his Majesty's Protection, if they pay their Tribute, to which they give Consent by clapping their Hands; and in the Evening the Court and the Clergy make merry in the Sessions-House, by drinking the King's Health, &c. with a set Speech, sing a short Latin Hymn alternately, drink one anothers Health, and then break up.

They have a particular Law, called *The Sheep Ordinance*, consisting of 9 Articles, relating to the Management of their Sheep, and ascertaining their Property in them, and the Inclosures where they feed. 'Tis very ancient and equitable, and shews the Simplicity of those Times: It bears Date in 1040, was granted by *Hagen Duke of Norway*, Son to King *Magnus*, and renewed by *Christian IV. of Denmark*.

Their TRADE, and POOR.

THEY formerly had trading Vessels of their own; but being unskilful in Commerce, *K. Frederick II.* appointed a Company to furnish them with Necessaries, and the *Feroe Men* were only to trade with them. The *Hamburgers*, and those of *Bergen* in *Norway*, were formerly allow'd to trade thither. Their Commerce is by bartering one Commodity for another; theirs are Skins, Feathers, Tallow, Train-Oyl, Fish, and Stockings, of which they transport annually 60000 Pair. The King's Revenue is paid in Skins, Butter, and Tallow, and his Farmers have an Inventory of so many Sheep and Kine, which are called the King's, and they pay him a certain Rate besides for their own. The Lands of the other People are divided into such small Parcels, that they can hardly live on them. Their Poor and their Lepers are provided for by a 4th Part of the Tythes, and the Charity of the other Inhabitants; and their Lepers have a particular Place assigned 'em to live in, with Ground for their Cattle. This Distemper is occasion'd by the moist

Air,

Air, and ill Diet of the poorer Sort, which is Flesh or Fish half rotten in the Winter, and Milk and Fresh Fish, without any Salt, in the Summer. The Infection is long before it discovers it self; so that the Unclean frequently marry with those that are not, without knowing themselves to be so. *Jacobson* observes, That some of the Children of those who marry, so are infected, and others not; and they seldom separate, till the Magistrates oblige them to it. The sound Person frequently escapes; whereas others of the same Constitution are soon infected by them, after a little Conversation.

Their RELIGION.

Christianity was planted here by King *Oluf Trygeson* about the Year 1000, but made no great Progress for some time; so that they had no Bishops till about 1200, who had then too large Revenues for the Time and Place, and bought the Office of the King of *Norway*. But since the Reformation, they have only had a Provost. Their Congregations are divided into 7 Districts, from 4 to 7 Parishes each; under the Care of one Priest; some of them at 4 Leagues distance one from another. The Parishes are 39 in all. The Churches are small, built with Dales, and cover'd with Stones on the outside. Their largest Church is at *Thorshaven*, which is built of whole Beams, and has a Steeple. The great distance of the Churches makes it difficult and dangerous for the Priests to perform their Function in the Winter; and those on the remote and little Islands are but ill serv'd, because of the Danger of passing the Streams, and the Clergy's being frequently detained in them by stormy Weather. Their Benefices are from 15 to 30 Gilders each, with a Proportion of Corn, Wool, Butter, and Fish, and a Free House, and one for their Widows. Their best Benefice, with all their Perquisites, is scarce above 100 Gilders *per Annum*; but they make it out with their Glebe and Cattle, and by knitting of Hosiery, in which they assist their Wives and Servants; and sometimes they have Presents from their Parishioners. They

observe, besides the Sabbath, ordinary Holidays, and New Moons, 3 Days in *Ascension Week*, and 3 Days in *Michaelmas Week*. Since the Priests cannot always attend their Parishes, they appoint their Hearers to read Homilies, and sing Psalms on Holidays; and one that can read best, to do it in the Church on *Sundays*, for which they have a small Allowance. Tho' Popery prevail'd there as in other Places, yet they still kept the Fundamentals; as appears by a very ancient Hymn in their own Language, which treats of the Fall of Man, of the Corruption of Nature, of Redemption by Christ, of Regeneration, and of our Saviour's Birth, Life and Passion. They seem to have had it from *Island*, because there are many Words of that Language in it. By their Diligence in reading the Scriptures, and good Practical Books, they understand Religion better in general than the common People of *Denmark*; and have many of the Psalms and *Luther's* Catechism, with a short Explanation of it, by Heart. The Business of the Provost is to visit the Churches, and preach in 'em by Turns. They have but one School, which is at *Thorshaven*, where they learn to read and write; and those design'd for the Ministry, are taught Latin. The Priest of that Place is their Master, for which he has 70 Gilders *per Annum* from the King; and some of their Students are allow'd their Diet *gratis* in the University of *Copenhagen*, where they are bred up for Clergymen. *Jacobson* says, they were formerly much troubled with Spectres and Apparitions of several Sorts, from which they are not yet free. He gives an Account of several Persons who have been carried away for some Time by Evil Spirits to inaccessible Places, from whence they have come down again without any Hurt, and others of them have been killed. In such Cases their Relations have Recourse to Prayer, by which they are frequently recover'd. These Things he relates on his own Knowledge. He gives one remarkable Instance which happen'd in 1667, to one *Jacob Olufson*, in the 24th Year of his Age, who being sick a Bed, there appear'd one to him in shining Clothes, which filled the Room full of Light. He saluted the young Man, stroak'd him with his Hand, remov'd his Pains, and taught

taught him a certain Prayer, which he enjoined him to say 3 times a Day, and to teach the Country-People to do the like, in order to remove the Judgments which threaten'd them. He commanded him the first time he came to Church to kneel down on the Threshold, turn his Face from the Church, say that Prayer, and to teach the People to do the same with join'd Hands, and bow'd Knees, and to admonish them to forbear Curling, Swearing, &c. and then vanish'd through the Roof. Upon this the young Man recover'd; and in 5 Days after it appear'd to him again, as coming down from the Sky in a Priest's Habit, red and white, with a red Cross on his Back, bid him not doubt but he came from God, and vanish'd. He appear'd to him a 3d time as he was a Bed, ask'd him, If he had spread abroad what he commanded him, and if he had seen any Signs in the Heavens? The young Man answer'd, No: But that others had seen two Suns, which the Apparition told him was a Sign they should begin to keep the *Sabbath* from *Saturday* at 12 in the Afternoon; and that when they went to Sea, they should sing the 23d *Psalms*, and vanish'd again. He appear'd to him a 4th time, told him he was *St. John*, who lay on our Saviour's Bosom at the Lord's Supper, and then vanish'd. He appear'd to him a 5th time: And these Things becoming pub-

lick, and the young Man being of a good Conversation, many People were seduc'd, gave out that they had seen the like Visions, were disobedient to their Ministers, and not at all reform'd in their Lives. Upon this *Jacobson*, the Provost, examin'd the young Man, sent Copies of his Confession about the Country, and order'd the Clergy to read it from their Pulpits, with his Censure upon it, and to exhort the People to seek no other Way of Worship but what was contained in the Word of God, and according to the Direction of the Civil Magistrate. The Provost, in his Explanation of the Catechism, did likewise take Care to fortify the People against such Delusions; and the next Year, that young Man being tempted to Fornication by the unclean Spirit, the Provost gave Notice of it, and of the Disturbances he had rais'd, to the Archbishop of *Zeeland*, who, according to the King's Order, commanded the said Person to be admonish'd, from the Word of God, of his Errors, and to be absolved from Censure if penitent; which was accordingly done: And thus an End was put to those Delusions. We have been the more particular in this, because of the Resemblance it bears to what has lately happened to those called *Camisars*, or *French Prophets*, here in *England*.

CHAP. XXII.

ICELAND.

WE gave a brief Account of this Country before, among other Places that lie near the North Pole; but since 'tis Part of the *Danish* Dominions, we shall give a further Account of it here.

As to its Situation, the Masters of the Royal Fishery discovered *Fournier's* Mistake, who plac'd it from Lat. 64. to Lat. 68. and found by Observations, That its true Lat. is from 64 Deg. 25 Min. to 66 Deg. 5 Min. This they prove by Experience; for they found, that on the 11th of December, the Sun was above the Horizon in the most Northerly Places, which could not be, if the Lat. were 66 and $\frac{1}{2}$. for the Sun is then in the Tropic of *Capricorn*, 90 Deg. from the Zenith of those in that Lat. and must by Consequence be under their Horizon that Day.

In the N. Part of this Island, while the Sun is in *Gemini* and *Cancer*, it never goes entirely below the Horizon for two Months, and one half remains above the same during the longest Days, from 10 at Night till 2 in the Morning, when it rises quite above the Horizon; and about the Winter Solstice, while the Sun is in *Sagittary* and *Capricorn*, the Nights are as long as the Days are in Summer. M. *De la Mothe de Vayer*, in his Letter from *Copenhagen*, December 18, 1644. to M. *la Peyrere*, from the Authority of *Angrim Jonas*; Dr. *Wormius* and *Bleskenius* gives this following Account: That 'twas formerly reputed fertile in Wheat, but now has none: That 'twas said to be well stor'd with Wood for building Ships; whereas now there is nothing but low Shrubs; tho

Roots of a vast Bulk are still dug up in the Places where those Forrests are said to have been, and the Timber of 'em is as black as Ebony. Their Firing is Turf, and vast Trunks of Trees are frequently brought thither on Shoals of Ice from the North, which helps them both for Building and Fuel; and when that Season of the Year comes, the Inhabitants flock to the Shore in quest of those Shoals, which bring 'em not only Trees, but Stags, Foxes of several sorts, Bears, Wolves, and what they call Unicorns. The Country is strong and Mountainous, and their Grass of such an agreeable Scent; that Foreigners transport and dry it to lay among their Clothes; yet their Beef is not good, and their Mutton rank; but they dry them in the Sun and Wind, which takes off the ill Taste. They have abundance of clear and wholesome Springs, some of which are nourishing like Beer. They have also Ponds and Lakes full of Fish, many Brooks and navigable Rivers. *Bleskenius* mentions a Lake in the W. Part, which always smoaks, and yet is so cold, that it petrifies every thing put into it. What's stuck in the Ground, turns into Iron, so far as 'tis under Ground: That Part which is in the Water, turns into Stone; and the Part above Water, continues Wood. *Bleskenius* says, he saw this tried, and that the Part which seemed to be Iron, when put into the Fire, burnt like Charcoal. He adds, That there's a Lake in the middle of the Island, the Exhalations of which kill Birds that fly over it. They have Springs so hot, that the Water burns one's Skin, and when set to cool, has a Sulphur

on its Surface. Near some of those hot Fountains, there are very cold Springs, the Water of which being mix'd together in one Basin by means of Pipes, make excellent Baths. *Bleskenius* mentions another Spring, the Water of which tastes like Wheat, and is excellent against the Venereal Distemper. They have no Minerals but Brimstone, with which they abound, especially in Mount *Hecla*, which not only sends forth Flames, but also Torrents of Sulphureous Liquor that burn like Spirit of Wine, and those Eruptions are commonly followed by vast Quantities of black Ashes and Stones. The Islanders fancy they see Troops of Infernal Spirits carrying damn'd Souls thither, especially after a Battle any where; and they take the Noise of the Shoals of Ice dash'd against the Shore to be the Groans of Souls damn'd to excessive Cold, as those carried to Mount *Hecla* are condemn'd to excessive Heat.

Their TRADE

Consists in bartering one Commodity for another, viz. their own Product, which is Dry'd Fish, Butter, Tallow, Coarse Woollen Cloth, Brimstone, Foxes, Bears, Stags, and Wolves Skins, for Flower, Beer, Wine, Strong-Waters, Iron, Woollen and Linen Cloths. The *Germans*, when they arrive, set up their Tents, wherein they exchange Cloths and Toys for the *Island* Commodities. *Bleskenius* reflects upon their young Women, and says, they prostitute themselves to Strangers for Tribes; but *Angrim Jonas* contradicts him in this, and also in the Story of their Sorcery and selling of Wind, which, according to him, is only their fore-knowledge of the Weather from the Disposition of the Air, which if they find suitable to Strangers that are ready to sail, they pretend to sell to 'em, by tying Knots in their Handkerchiefs, and muttering certain Words; but they fail in their Conjectures that Way more frequently than they hit.

Their ancient Religion, Government, Learning, &c.

Every Division of the Country had three chief Temples for Administration of Justice and Devotion, and a Bayliff called *Godorp*, i. e. Divine, to take Care of the Poor, and hinder their going into other Districts, or being Licentious. They had Power to kill or geld them, to prevent their Multiplication, and to banish such as married, and had not wherewith to maintain them. It was formerly divided into 4 Provinces, and each Province into several Districts. They had once *per Annum* an Assembly of the Bailiwicks of each Province, which were summoned together by the Governor, who sent small Crosses of Wood to every Bailiff, which he distributed to the Judges, and they to the Masters of Families; or the President sent a Wooden Hatch to each of the Governors of the 4 Provinces, as a Sign to call a General Meeting of the States. Their Chief Gods, while Pagans, were *Thor* and *Odin*, their *Jupiter* and *Mercury*, to whom they erected Temples and Altars, and sacrific'd Men, by throwing them down from Rocks, or into deep Pits near their Temples, of which they had two chief ones at *Hole* and *Schalhold*, two Villages, where now they have their Bishopricks. They decided all Controversies by Duels, wherein the Vanquish'd, or he that refus'd the Challenge, lost his Claim, and the Heirs of the Conquer'd had no other Remedy but to bring a large Bull or Ox to the Conqueror, which he was to kill with one Stroke; and if he fail'd, he lost his Pretensions.

They were so careful in their Annals, that they not only preserv'd their own History, but that of other Nations, according to *Angrim Jonas* and Dr. *Wormius*. They wrote their Histories in Verse, and their Poets were accounted Inspired; or, in plain English, Sorcerers. Dr. *Wormius* gives us a strange Instance of it, thus; When he was Vice-

Vice-Chancellor of the University of Copenhagen, an Iceland Student complain'd to him against one of his Countrymen, for writing a Satyr upon him that would ruin him, who being examin'd by the Doctor, and threaten'd to be punish'd as a Sorcerer, confessed that there was Witchcraft in it, tore it, and was reconcil'd to his Fellow-Student.

This People was anciently much addicted to Fables, of which they have a Mythology, called *Edda Islandorum*, that gives an Account of their foolish Opinions about the Creation, their ancient History, &c.

They have no Towns, and indeed scarce Villages, for they build their Houses at a great Distance from one another, for fear of Fire; and having no Roads, they travel by the Compaſs. Their Houses are low built of Wood, and sometimes half under Ground, because of the high Winds. They have no Window, but a Hole at Top, and are cover'd with Turf or Bark. They generally dwell near the Shore or Rivers, for the Convenience of Fishing and Pasture; so that the Inland Country is almost desert.

They have a Grammar-School, and a Press at *Hole*, where they print the Bible; but Paper is very dear there. The Inhabitants are great Players at Cheſs, and make their Men very curiously of Fish-Bones. Their Language is the purest Dialect of the *Runic* now extant. In their Chronicles, they deduce their Origine from the *Asiatick* Prince *Odin*, formerly mentioned, and are as Romantick in the Accounts of their Antiquities as other Northern People. By some it has been accounted the *Thule* of the Ancients.

Dr. *Paul Biornimi*, who resided here, says, Their Air is healthful, but soon rusts Iron; That their Chronical Diseases are the Cholic and Leprosy; and that they have no Physicians, but some Chirurgeons.

Their Weather is uncertain, and not always according to the Season; for sometimes they have Hail and Snow in the middle of Summer, with furious Winds. The Frost does not penetrate above 4 Foot into the Earth in the Winter; so that Oil and Spirits of Wine don't freeze here.

The Doctor says, The Meteors he observ'd in this Country were the *Drain-Volans*, and two Mock-Suns, with three Rainbows passing through them, and the true Sun.

The Sea flows about the Rising and Setting of the Moon, and ebbs when she is S. or N. In Autumn, the Tides rise 20 Foot; but at other Times not above 16; and the greatest Depth about the Coasts is 80 Fathom. The Declination of the Compaſs here is to the N. W.

The Soil, as we find in our *Philosoph. Transactions*, N^o 3. is for most part Clay, and in some Places Sandy; but they have no Tillage. They have many sorts of Birds in Summer, and in Winter Ravens, Wild-Ducks, and Swans. Their Horse and Sheep live in Winter upon what Grass they can scrape from under the Snow, and the Coraline Moss, called *Muscus Marinus*.

The Bread of the Inhabitants is Cod-Fish ground into Powder, and bak'd. Of this Fish they have two Sorts, one called *Stock-Fish*, or *Haberdine*, which they dry in the Wind, and heap up in great Poles; the other is *Hocketile*, a very large Fish, that yields abundance of Livers, of which the Inhabitants make Oil for their Lamps.

The chief Employment of the Inhabitants is Fishing, and making a coarse sort of Cloth of their Sheeps-Wool, or rather Hair. They make their Breeches, Boots, and Stockings, of Sheep-Skins, and their Shoes of Seal-Skins. They are infested with Eagles, that sometimes carry off their Children; to prevent which, they put Collars of Bells about their Necks, the Noise of which frightens the Eagles, or gives them Notice when the Children are attack'd.

The King's Revenue is rais'd in Flesh, Oil, Fish, Coarse Cloth, and Brimstone, for which he sends about 8 Ships every Year, who carry them Necessaries in Exchange for their Commodities. They are not allow'd to trade with any other People; yet the Dutch fish in their Harbours for Grampusses and *Du Barta's*, a Bastard-kind of Whale.

What we have to add concerning Mount *Hecla*, is, That it sometimes throws out scalding Water, and Pumice-Stones so big, that 10 Men are not able to move them. *Angrim Jonas* says, That it throws out Ashes some Hundreds of Miles, and

that they are found sometimes in *Norway*. The Springs that rise in those Sulphureous Grounds are so hot, that (according to those Authors) the Stream of them will boil Beef hung over them in Kettles full of cold Water.

C H A P. XXIII.

G E R M A N Y.

C*laudian*, in the *Proemium* to his *Germania Antiqua*, gives us an Account how much of this Country was known to the ancient *Greeks* and *Romans*. He vindicates *Tacitus*, who is charg'd by some *Germans* to have writ many false Things concerning it, and owns, that they are obliged to him alone for the best Account of their Antiquity; without which, little of the ancient Writers could be understood. He takes Notice, That *Livy*, *Asinius Quadratus*, and *Caius Plinius*, wrote much of *Germany*; but their Books are lost, and tho' they were not, *Tacitus* being later, is much more exact.

He confutes those who in their Commentaries on *Tacitus* think that he serv'd in *Germany* under *Flavius Vespasian*, and that he had seen the East Sea; and shews, that what he speaks in the Places they quote, is meant of the *Romans* in general.

He afterwards shews from good Authorities, That the *Romans* might have a very exact Knowledge of all *Germany* in *Tacitus's* Time, for they had carried their Arms thro' all the Country betwixt the *Rhine*, the *Elb*, the *Sale*, and the *Danube*; and for what was beyond the *Elb*, they might easily know it from the Inhabitants, among whom they

had Garisons; and they had the like Opportunity to know the Country by their Garisons as far as the Confines of the *Daci* and *Sarmatae*; and for that Part betwixt the *Elb*, the *Danube*, and the *Weissel*, and the *Sinus Codanus*, now the East Sea, they might know it from *Maroboduus*, the King of those Parts in the Time of *Augustus* and *Tiberius*, who was 18 Years an Exile at *Ravenna* in *Italy*. He mentions other Opportunities that the *Romans* had to know those Countries, by the Ambassadors which came to *Augustus* from the *Chersonesus Cimbrica*, &c. In *Nero's* Reign, a German Knight was sent for *Amber* to the Mouth of the *Weissel*, and the Shores of the *Æstii*, now called the *Prussians*; the People of which Country, and the *Gothones*, not only used to bring *Amber* to *Pannonia*, and the Borders of *Italy*, in the Time of *Pliny* and *Tacitus*, but much more anciently, viz. in the Time of *Herodotus*. As to the Countries further N. in *Sweden*, *Norway*, *Einmark*, *Lapland*, and *Finland*, they were not only described by *Polybius*, *Xenophon*, *Lampiscenus*, and others of the oldest *Greek* Writers, but discovered by the *Romans* in the Time of their first Emperors, as appears by *Tacitus* and *Pliny*. From all which he infers, That *Tacitus* had a very exact Knowledge of *Germany*, and justifies

justifies the Description given of it in his Book. This he says is the peculiar Glory of the *Germans*, That they have an Account of their Antiquity and Progenitors by one who was a *Roman Knight*, had been honoured with many great Posts, and was a grave, learned, and careful Author, who wrote his Book in the beginning of *Trajan's* Reign, about 100 Years after our Saviour's Birth.

Cluverius divides his Work into 3 Parts. The first gives an Account of the Situation of ancient *Germany*, with the Origine and Manners of the People: The 2d treats of *Germany* on this Side the *Rhine*; and the 3d of that Part beyond it. He makes use of the *Roman Miles* for his Dimensions, and reduces the *Greek Stadia* into that Measure; upon which he has a Learned Dissertation.

For the better understanding of what he says, he tells us, that he follows the *Roman Custom*, who call'd that Part of the Country on our Left Hand as we come down the *Rhine*, *Cis-Rhenana*, and that on the Right *Trans-Rhenana*.

In his 2d Chapter, he informs us, That the Ancients called the *Germans*, *Gauls*, *Spaniards*, and *Britains*, by the Name of *Celts*, and some extended the Name as far as the River *Oby*, which separates *Asia* and *Europe*.

In his 3d Chapter, he confutes *Bodin*, who alleges, That the Name of *Celtica* was peculiar to *Gaul*; That the *Gauls* came from the *Greeks*, and the *Germans* from the *Gauls*. He takes Notice likewise of other false Opinions about the Origine of the *Germans*.

In his 4th Chapter, he alleges, That *Aschenaz*, *Noah's* Grandson, with his Posterity, Peopled *Celtica* after the Deluge, viz. *Ilyricum*, *Germany*, *Gaul*, *Spain*, and the *British Islands*; and this he endeavours to prove from *Genesis*, and the Authority of *Josephus*, and other *Jews*: But this is justly exploded by the Learned Dr. *Nicholson*, now Lord Bishop of *Carlisle*, in his Account of *Germany* in *Pitt's Atlas*; and he thinks this Mistake proceeded from the Misunderstanding of an ancient Tradition in the Northern Countries, That these Parts of the World were Peopled by *As* and his Posterity; by which the Doctor thinks the Ancients meant no more, but that their An-

cestors were brought into *Europe* by some great *Asian Captain*.

Cluverius, in his 5th Chapter, says, The *Ilyrians*, *Germans*, *Gauls*, *Spaniards*, and *Britains*, had all one Language, and differ'd only in Dialect, which he urges as an Argument that they were all of the same Origine! We refer the Curious to the Book it self for his Authorities.

In his 6th Chapter, he endeavours to prove the Identity of their Language by the Names of the People, and the proper Names of Persons.

In his 7th Chapter, he attempts the same from their Agreement in the Names of their Towns and Villages.

In the 8th Chapter, he urges it further from their Agreement in the Names of Things, which are still retained in the *German Tongue*; and on this Occasion he treats of the Antiquity of the *German* or *Celtick* Language, which he thinks to be one of those that had their Origine at the Confusion of *Babel*, and explodes the Opinion of such as would derive this and all other Languages from the *Hebrew*.

In his 9th Chapter, he treats of the Name of *Celta*, and of the Division of ancient *Celtica* into the Names of *Spaniards*, *Gauls*, *Britains*, *Ilyrians*, and *Thentisci*, and likewise of the true Origine of the Nation, and of the Name of the *Thentisci*, where he shews that *Germans* is a Foreign Word, and was not used by the ancient Natives, but invented by the *Gauls*, and given to such of the *Celta* as first passed the *Rhine* into their Country.

He next enquires into the Origine of the Name of *Deutschen*, or *Teutschen*, which some derive from their ancient God called *Twisto*, mentioned by *Tacitus*, whom the ancient *Germans* fancied to have sprung from the Ground, and with his Son *Man* to have founded their Nation. He confutes the Opinion of those who think that *Twisto* is derived from *Aschenaz*, and takes Notice, That most of his Countrymen derive the Name from *Teuto*, a King or great Man, who commanded their Ancestors; and after a long and learned Dissertation, he thinks that by *Teut* they meant GOD, the first Creator of all Things, because of the Affinity it has with the Word *ΘΕΟ*, which

was made use of by the *Egyptians*, and the ancient *Celte*, who derive their Origine from them, and call their God *Mercury* by this Name. Here he takes Notice, That ΘΕ'OC was the common Name which all Nations gave to the Creator, but was differently pronounc'd according to their several Idioms; some calling it ΘΕ'OC, others ΣΕ'OC, Ζεύς, and Δεός, from whence the Latin *Deus*; and the ancient *Germans* having some Knowledge of the Creation by Tradition, and of the Formation of *Adam* from the Earth, who in their Language, as well as in that of the *Egyptians*, was called *Man*. He takes him to be meant by the old *German* God *Mannus*, whom the Ignorance of Posterity confounded with the Creator. He is not without Suspicion however, that *Tacitus* may have misunderstood the old *German* Songs and Traditions about those Things. He is in doubt about the Origine of the Word *Celta*, and thinks it might signify the same Thing after the Dispersion at *Babylon*, as *Aschenaz* did before it; but Dr. *Nicholson* well observes, That *Vershegan* derives it from the Greek Word ΚΗΛΥΤΗΣ, Light Horsemen; and that *Celi* in *Welch*, a Dialect of the *Celtic*, signifies God, which he thinks as good a Derivation as that of *Cluverius*, who derives *Goth* from God, and *Teutisch* from *Teut* or *Theut*; so that nothing can be determined from those Etymologies.

In his 10th Chapter, he says, those People were by the *Gauls* first called *Germans*, when they passed the *Rhine* about the Year of the World 3624 into *Gaul*; that the *Romans* learned this Name from the *Gauls*, and the *Greeks* had it from the *Romans*. He confutes those, who say the *Germans* in general were anciently called *Gauls*, and the *Gauls* *Germans*; but owns, that those who inhabited that Side of the *Rhine* next to *France*, were promiscuously called *Germans* and *Gauls*.

In his 11th Chapter, he treats of the Extent of ancient *Germany*, and of its Boundaries; and asserts, that it was larger than all the other Parts of *Celtica* together. He confutes the Error of those, who, following *Ptolomy*, think the Name of *Germany* is much further extended now than 'twas anciently; and prefers the Authority of *Tacitus*, who knew it much better than the *Egyptian* Geographer; and says, *Germany* was separated

from the *Gauls*, *Rhetii*, and *Pannonii*, by the *Rhine* and *Danube*; from the *Sarmatae* and *Daci*, by mutual Fear or Mountains; and that the rest was encompassed by the Ocean with great Bays, and vast Islands: That is, says *Cluverius*, *Germany* was separated from the *Gauls* by the *Rhine*; from *Rhatia*, *Noricum*, and *Pannonia*, by the *Danube*; from the *Sarmatae*, who inhabited *Masovia*, *Lithuania*, and *Russia Minor*, by mutual Fear, because on that Side it had no certain Boundaries by Rivers or Mountains; but from the *Sarmatae* *Jazyges*, who dwelt betwixt the *Danube* and the *Theysse*, 'twas separated by those Mountains which *Ptolomy* calls *Sarmatici*, that reach from *Vacia*, a Town in *Hungary* on the Banks of the *Danube*, to the Heads of the Rivers *Granus* and *Vagus*; and from the *Daci*, who dwelt beyond the *Theysse*, on the Left Side of the *Danube* in *Transilvania*, Part of *Hungary*, and other Countries towards *Pontus*, by the Mountains of *Crapack*; yet *Cluverius* says, the *Germans* formerly dwelt beyond those Mountains to the N. and E. as far as the Mouths of the *Danube* and *Pontus*; and towards the N. the Boundary was the Ocean, which encompasses *Norway*, *Sweden*, *Finmark*, *Sveetofinnia*, *Biarmia*, *Lapland*, and *Finland*, which he undertakes to prove were all Part of ancient *Germany*, and by Consequence that modern *Germany* is not a third Part so large. He supports his Opinion by the Authority of *Solinus*, *Casar*, *Strabo*, and *Pliny*. He takes Notice, That tho' the *Rhine* was accounted the Western Boundary of *Germany* by most Authors, yet *Mela* extends it to the *Alps*, and *Agrippa* the like; but they fell into this Mistake because those Parts were inhabited by some of the *Celte*, who were of the same Language and Origine with the *Germans*. He takes Notice, That *Agrippa*, when he makes the Length of *Germany* from the Ocean to the *Alps*, including *Rhatia* and *Noricum*, to be only 686 Miles, he understands it only of the Continent from Cape *Scagen*; for the rest of the Country beyond the *Sinus Codanus*, he reckon'd among the Isles. He adds, That *Ptolomy* might very well call this vast Tract of Ground, *Great Germany*, since 'twas the largest of all the Countries in *Europe*, except *Sarmatia*; but he observes, That *Ptolomy* seems to have called it so, to distinguish it from

from *Lesser Germany*, on the Side of the Rhine next *Gaul*.

The CLIMATE and SOIL.

IN his 11th Chapter, he gives us an Account of their Climate and Soil; and in Answer to *Tacitus's* Character of it, That the Soil was rugged, the Air sharp, and the Country uncultivated, and of an unpleasant Aspect; he says, That 'twas so compar'd with *Greece*, *Italy*, *Spain*, and other Countries under a milder Climate; yet in the more Southerly Parts about the *Danube*, the Climate is as mild as that of *Italy* about the *Po*. He thinks that *Tacitus* meant it chiefly of those Parts about the Mouth of the *Rhine*, *Ems*, *Weser*, *Elb*, &c. where the *Romans* had long Wars.

For the Soil, *Tacitus* says, That tho' the Face of it differ now and then, yet in general 'tis either cover'd with Woods, or filled with Lakes and Marshes, is lower towards *Gaul*, and higher (*Verticoflor*, and not *Ventoſior*) towards *Noricum* and *Pannonia*. *Mela* gives much the same Account. The Country, says he, is full of Rivers, abounds with rugged Mountains, and is for most part unpassable, because of Woods and Marshes. *Cluverius* corrects *Tacitus* here, and says, according to Truth, That the Country towards *France*, from the Source of the *Danube*, or the Lake of *Constance*, to the River *Rora*, is Mountainous enough; and there are likewise high Mountains lower towards *Mentz* and *Bonn*, and the Country is more Mountainous where the *Trebochi*, *Sequani*, and *Rauraci*, formerly People of *Gaul*, inhabited, than it is towards *Noricum*. Therefore the Country may more properly be said to be low in *Cleves*, *Gelderland*, those Parts of *Holland* beyond the *Rhine*, *Freezland*, *Westphalia*, the Dutchies of *Brunswick* and *Lunenbourg*, the Bishoprick of *Bremen* and *Magdeburg*, *Holstein*, *Jutland*, *Meklenbourg*, *Pomerania*, *Brandenburg*, and the *Lesser Poland* on this Side the *Vistula*. From hence Southward it grows Hilly by degrees, and then rises into high Mountains. 'Tis not easie to find in what Countries the Lakes *Sueſia*, *Mefia*, and *Melfagus*, spoke of by *Mela*, are to be found; but *Cluverius* supposes it must be in *Freezland* and *Westphalia*,

where there are great Lakes and Marshes. He thinks at the same time, That *Tacitus* and *Mela* did not speak of all *Germany*, but only of that Part betwixt the *Danube*, the *Rhine* and the *Weissel*, the *German Sea*, and the *Sinus Codanus*, now the *Baltick*.

What *Tacitus* says as to its being *Satis ferax*, he takes his Meaning to be, That it was fruitful in Corn, or Things sow'd; *Satis*, not *Sat ferax*. He also corrects the reading in these Words, *Ut Pomaria conferant*, & *Prata ſepiant*, & *Hortos rigent*, thus; *Nec enim cum ubertate Soli Labore contendunt, ut Pomaria conferant Hortos ſepiant, & Prata rigent*. The Meaning of which he takes to be, That the Country was fruitful enough, had the People understood or taken Care to manure it; and when *Tacitus* says, it would bear no Fruit-Trees, because of the Coldness of the Climate; he proves from his own Words, that it was not meant of Apples, Pears, Nuts, or other Glandiferous Trees, with which the vast *Hercinian* Forest abounded, but of Olives, Almonds, Vines, Figs, Peaches, Prunes, &c. that were plentiful in *Italy*: And even as to Vines, the Industry of the modern *Germans* has fully proved the Mistake; for half that Part of the Country described by *Ptolomy*, towards the S. produces Wine of several sorts, particularly *Rhenish*, which is not only equal to, but preferable to some of the Wines of *Italy*; and the like Mistake is now plain as to other Fruit-Trees which abound in *Germany*. 'Tis evident, that *Tacitus* was in the same Mistake as to their Mines of Gold and Silver; for 'tis commonly known now, that they have many Silver Mines, and Gold was anciently found in the *Rhine*, of which the Pieces called *Rhenish*, *Rhenani*, are a sufficient Proof; and 'tis known, that there's Gold now found in *Bohemia*, with several sorts of Jewels: And whereas *Tacitus* says, their Cattle were small, and look'd ill; he owns it to be true as to those Northern Parts in *Westphalia*, &c. which were best known to the *Roman* Arms; but in the S. Parts it is otherwise. And whereas in *Cæſar's* Time, the *Germans* us'd to buy Horses from the *Gauls*, the *Germans* in many Countries do now make a great deal of Money by selling Horses to the *French*: And *Cluverius* takes Notice of the Wild-Beasts and Fowls in their Forests, of
their

their Lakes and Rivers full of Fish, and of their Medicinal Springs and Baths, omitted by *Tacitus*. From all which together, 'tis apparent, That *Germany* abounds with many Things for Luxury, wants nothing that is necessary; and for Towns and Buildings, may compare with any other Country in *Europe*, except *Italy*.

Their Habitations, and Way of Removing Annually.

C *Cluverius*, in his 13th Chapter, takes Notice of *Tacitus's* Mistake, in saying the *Germans* had no Towns, and did not love to dwell contiguous; for *Cæsar* in his Commentaries expressly mentions their Towns, and 'tis very improbable that they were all destroyed after his Death; but he owns, from the Authority of *Velleius Paterculus*, *Dio*, and others, that those Towns were nothing but Villages, and that the first great Towns were built there by the *Romans*. He confutes those who, from the Authority of *Ptolemy*, that wrote about 60 Years after *Tacitus*, and mentions 90 Places in *Germany* beyond the *Rhine*, which he calls *Plades*, or Towns, think they had great Cities in those Days, for *Ammianus Marcellinus* frequently mentions the Wars beyond the *Rhine*; but says nothing of any Town, Castle or Fort, built by the *Germans*. Upon the whole, he ridicules the Vanity of those who, from *Ptolemy's* Authority, would maintain the Antiquity of this or that City beyond the *Rhine*; and says, there can be nothing in it, except they will own that where were Villages of the same Name with those that are now Wall'd Towns. He proves next from *Tacitus* and *Seneca*, That the ancient *Germans* had at first no Houses, but liv'd upon Herbs, and by Hunting, were clad with Skins, lay on the Ground, and hunted with Darts or Spears pointed with Bone for want of Iron, and were accompanied with their Women and Children, who shar'd in their Prey. At that Time they had no other Houses, but under Thickets of Trees, or Boughs twisted together. Afterwards they form'd a sort of Villages by such Fountains, Fields and Woods, as they thought fit, where their Habitations were not contiguous, but each

House had a separate Space; and hence he observes, That the Names of most of the *German* Villages and Towns do still end with *Wald*, *Feld*, *Brun*: In *English*, *Wood*, *Field*, *Burn*, or *Brook*; and to the Names of their Habitations, either the Name of the Proprietor, or the *German* Termination *Haim*, *Haus* or *Hausen*, was added; in *English*, *Home* or *House*; and this was common to all the Nations of the *Celta*, as appears by the Names of many Towns in *Italy*, *France*, *Spain*, and *Great Britain*, tho' the Inflections be now varied according to the Custom of the Times, as *Bergamo* in *Italy*, *Bergusia* in *Spain*, &c.

Those Houses were not built with Stone, Mortar, or Brick, but made of Stakes twisted with Branches, cover'd with Bark or Leaves, and of a square Form: Of these, according to *Herodian*, were their Towns compos'd. The same Custom is still observ'd by such as live in the Woods of *Bohemia* and *Thuringia*. In *Cæsar's* Time, we find those Houses were cover'd with Straw.

Cluverius takes Notice afterwards from *Cæsar*, That they used suddenly to change their Habitations for want of Provision, because they did not till their Ground, nor lay up Corn, but liv'd mostly upon Cattle, and their Product of Milk and Cheese, and laying what Moveables they had in Carts, removed with them easily as they pleased. They had no Property or fix'd Portions of Land; but their Magistrates and Princes appointed every Year, in what Places and Proportions they thought fit, Lands for such Tribes as dwelt together, and made them remove to another Place next Year. Their Reasons were, That Part of the Ground should always be fallow, and that the People should be inur'd to Hardships, that they might be fit for War; whereas had they continued always in one Place, they would have built better Houses, and by degrees have fallen into Luxury: For *Tacitus* says, That in some Places they plaister'd their Cottages with fine shining Earth, so as it resembled Painting. *Cluverius* says, they did it with Clay of different Colours. Thus they liv'd in *Tacitus's* Time. But about 130 Years after, when *Alexander Mavroica* and *Maximinus* were Emperors, it appears from *Herodian*, That near the *Rhine* they began to build with Stone and Brick; and

Nar-

Marcellinus says, That in the Reign of the Emperor *Constantinus*, their Houses were built more nicely after the *Roman* Way. Besides those Cottages, *Tacitus* says, they had Caves or Dens under Ground, cover'd with Dung, where they liv'd, and laid up their Corn in Winter, and many times escap'd the Fury of their Enemies. They were so hardy, that most Part of 'em went naked, especially their Youth; and their Men and Women, in the coldest Winters, had nothing but short Mantles or Cassocks of the Skins of Beasts, or Rinds of Trees.

When they came to build Villages, we have heard already their Houses were not contiguous, but built at a great Distance from one another, either because they would avoid the Danger of Fire, or because they did not understand the Way of Building. Here *Cluverius* has a curious Dissertation upon the Word *Burgus*, the Name given to such Villages by *Orosius*, *Luithprandus*, &c. and he thinks it to be originally a *German* Word, signifying an Inclosure, because those Places were Hedg'd about with Gardens, which is expressed by another *German* Word, *Taun* or *Thyn*; from whence comes the *English* Word *Town*; but in Time this Word *Burg* came to be applied to such only as were inclos'd with Walls.

He comes next to the Description of their *Pagi*, which he says were not Villages, as appears by that Sentence of *Tacitus*, *Eliguntur Principes qui jura per Pagos Vicosque reddunt*; i. e. Princes were chosen to administer Justice in the Districts and Villages; and from *Plutarch*, in the Life of *Numa*, who says, He divided the Land among his People into Parts, called *Pagi*. It appears also by *Cæsar's* Commentaries, That large Countries or Districts were called *Pagi*; for *Helvetia* is said to be divided into 4 *Pagi*; but those ancient *Pagi* were not so large; for *Tacitus* in several Places mentions many of them as belonging to inconsiderable People, particularly that the *Semnones*, a People of *Suevia*, had 100. *Cluverius* observes, That what the Ancients call'd *Pagi*, the modern *Germans* call *Gaw*, *Gow*. Hence *Brisgaw*, *Rhingaw*, &c.

Those *Pagi* were subdivided, as *Tacitus* informs us, into what we now call Hundreds; *Eliguntur Principes qui jura per Pagos*

Vicosq; reddunt, Centeni singulis ex plebe Comites, Consilium scilicet & Auctoritas adjunt; i. e. Princes were chosen to administer Justice in the Districts and Villages, and had 100 of the People join'd with them to give them Advice, and to add to their Authority. And from the Latin Word *Centum*, the *Germans* derive their *Centem*, and *Centengerichte*, which is the same with the *English* Hundred. And it appears by *Tacitus*, That they were summoned to War according to those Hundreds.

Their STATURE and CONSTITUTION.

Cluverius, in his 14th Chapter, observes, That *Tacitus* thought the *Germans* to be an unmix'd People, because their Habits of Body was much alike, being of a large Stature, with blue Eyes, and red or fair colour'd Hair. Their Courage was equal to their Stature, and their Language fierce and harsh. *Cæsar* in his Commentaries takes Notice, That they were much taller, and more robust, than the *Gauls*, and looked so fierce, that the *Roman* Soldiers at first were seized with so much Fear, that they could scarce endure their Looks. Here *Cluverius* obviates a common Mistake, as if in those Times the *Germans* had all been Giants, which arose from their being of a much larger Size than the *Gauls* and *Italians*, and much the same with the *Britains*; of whom *Strabo* says, he saw some at *Rome* who were half a Foot higher than the tallest *Romans*; which by the Description that *Tacitus* gives of the *Caledonians* or ancient *Scots*, *Cluverius* thinks to have been some of that Nation. He takes likewise Notice, That 'tis the Opinion of Natural Philosophers, that the Northern People are so much larger and stronger than the Southern, because the Heat of the Sun dries up the Moisture of the latter; and this he takes also to be the Cause why the People of the North have a greater inward Heat than those of the South: And he observes, That such of the *Germans* as inhabit the moist Countries betwixt the *Scheld* and the *Elb*, are larger than the rest. And whereas *Hippocrates* says, the People of the North look ill, because they are

are pale and lean ; he says, 'tis true of Part of the *Swedes* and *Norwegians*, who are as much dry'd up by excessive Cold, as those of the South are by excessive Heat. The fair Complexion of the *Germans*, *Goths*, and *Britains*, mentioned by the Ancients, is ascribed to their Climate. But all this is only to be understood of the People in general ; for there are Exceptions in every Country, and the *Romans* spoke only of those Parts that were best known to them.

As to the Terribleness of their Voice and Countenance, taken Notice of by the Ancients, he says, 'tis still observable in those who live on the *Baltick*.

For their inward Disposition, he quotes many of the Ancients, who say, They could endure a great deal of Hunger and Cold, but could not bear Thirst or Heat, which made them not so good Soldiers when they came into warmer Climates.

To what *Tacitus* and other Authors say, That their huge Bodies were only fit for a short Attack, and that they could not endure Fatigue or Wounds ; *Cluverius* opposes *Cæsar*, *Mela*, and *Seneca*, who say, That from their Infancy they were accustomed to Fatigue and Hardship ; That the Men were very strong and swift, and spar'd neither Man or Beast that came in their Way ; That the young Men harden'd themselves by Hunting, and the more Horns of the Wild-Beasts they had killed they brought to the Publick, the more they were esteem'd ; says *Cæsar* in his Commentaries. *Mela* adds, That they exercised their Strength and Courage by War and Hunting ; That before they came to the Age of Puberty, they went naked in the greatest Cold : And *Seneca*, in his Book *De Ira*, says, There was nothing more courageous than the *Germans* ; no People more fierce in an Attack ; and no Nation delighted more in Arms, in which they were bred up, and neglected almost every thing else : That no People could better endure Fatigue, most of 'em being without Clothes or Houses ; so that the greatest Advantage other Nations had of them, was their too great Fury, and want of Discipline.

Their DEGREES, and different RANKS.

C *Ludewicus*, in his 15th Chapter, says, Ancient and Modern Authors agree, That they were divided into 4 Ranks, viz. Nobles, Freemen, *Liberti*, or those that had been manumitted, among whom were reckoned their Children, called *Libertini* ; and the 4th Sort was Servants : For this he quotes *Tacitus*, and *Adamus Bremenfis*, who adds, That 'twas Death for any of them to marry but with those of their own Rank. *Cluverius* owns, That this Custom was much observ'd in *Germany* in his own Time, not by Vertue of any such Law, but because the Nobility reckon'd 'twas a Disgrace for them to marry with those of a lower Rank. He is of Opinion, That the Nobility were first raised to that Dignity for their Valour in War, which he supports by the Saying of *Tacitus*, That they chose their Kings from among their Nobility, and their Captains from among their Valiant Men : Therefore he thinks, that when any of the common Sort signaliz'd their Valour, so as to be made Commanders, they were made Noble at the same time. He takes Notice, That in his Time, Princes conferr'd the Order of Nobility upon People for Money ; but they were so much despised by the ancient Families, that they scorn'd to converse with them. He says, The ancient *German* Nobility had their Seats generally apart from Villages and Towns, because they reckon'd it a Degradation to live in Towns, and be subject to their Laws. They were called by the general Name of *Adel*, and by modern Latin Authors *Adelingi*.

The next Order was the *Ingenui* or *Liberti*, in their Language *Friling*, i. e. Freemen, so called, because they were not subject to the Nobles, but liv'd according to their own Customs, as Citizens do now ; and because they liv'd in Burgs or Towns, they were called *Burgers* : Out of them those Councils were chosen from the several Hundreds, that assisted the Princes in administering Justice.

That

That we may the better understand what their *Liberti* or manumitted People were, he first gives us an Account of their Servants, from whence they had their Rise; and those he informs us, from *Tacitus*, were of two Sorts: The first were either taken in War, or such as were oblig'd to serve when they lost their Liberty at Game; for he observes, That the *Germans* were so much addicted to play at Dice, that when they had lost all, they would play away their own Liberty, and the Conqueror being asham'd of such a Victory, commonly sold that Sort of Servants to others. The 2d sort were not appointed to their several Stations in the Families of their Masters, as now; but every one had his own House, and his Proportion of Corn and Cattle assigned by his Master to manage for his Use, and the Household-Service was perform'd by their Wives and Children. *Seneca* takes Notice in his 47th Epistle, where he speaks of *Varus's* Defeat by the *Germans*, That they made many of the Noble *Romans* whom they took, Shepherds, or such kind of Servants as last mentioned, who in the *German* Language are called Boors or Husbandmen: And he observes, That the *German* Nobles, especially such as live on the *Baltick*, make an Estimate of their Wealth according to the Number of such Boors, whom they use like Slaves.

From these sorts of Servants came their *Liberti*, or manumitted People, whose Condition was not much better than that of Servants, because they were still obliged to serve their Masters, and look after their Household Affairs; so that 'twas only a Step towards Freedom, which their Children called *Libertini*, obtained as the Reward of the Valour, or some other remarkable Service of their Parents.

Their Way of Dressing, Apparel and Bedding.

Cluverius, in his 16th Chapter, gives an Account from *Tacitus*, That as soon as they awak'd, which was generally by Break of Day, they wash'd themselves all over, and in Winter-time in hot Water; after which they eat: But tho' this was their daily Practice, *Pliny* says, they were very nasty, because they anointed themselves

with Butter. It has been mentioned before, that their Hair was generally fair or red; and they made use of Art to make it more so, and particularly of a Lye of Lime and Soap, or with the Ashes of Beech and Goats-Dung, which sometimes they made up in a Liquor, and sometimes into Balls; to which *Martial* alludes when he mentions the *Spuma Batava*, the *Spuma Caustica*, and the *Mattiaca Pila*. He observes, That the Men practis'd this more than the Women, because they thought their red Hair made them terrible to their Enemies: For the same Reason they delighted in long Hair, which they sometimes ty'd backward in their Necks; and such as were Leaders in War, ty'd it in a Bundle on the Top of their Heads, that they might be the more conspicuous. By these Methods they made their Hair so thick, that it resembled the Manes of Horses; for sometimes they cover'd their Shoulders with it, curl'd up in Locks. *Diodorus* says, some of them shav'd their Beards, others let them grow; but the Nobles shav'd their Cheeks, and kept long Mustachoes, which mix'd with their Meat and Drink, and they comb'd them with a great deal of Care; but they did not tie up their Hair, or shave their Faces, till they had given Proofs of their Valour; so that those who wore it otherwise, were reckon'd mean and cowardly.

As to their Clothes, they went naked till they arrived at the Age of Puberty, which they reckon'd about 20; after this their Habit was a Cloak or Mantle, fasten'd with a Buckle, for which the poorer Sort made use of a Skewer; but in the House they went for most part naked. The better Sort wore Skins of Wild-Beasts, with the Hair outward, which cover'd only their Shoulders, and the Heads and Horns they wore upon their own Heads. The Men and Women wash'd promiscuously in the Rivers. They reckon'd Venery very disgraceful before the 20th Year of their Age; but after that they were not accounted very modest. Those who liv'd next the *Rhine*, were more nice in their Habits; but such as liv'd in remoter Parts, were more negligent. The richer Sort painted or dy'd those Skins of Wild-Beasts, and sometimes sew'd Pieces upon them of several Colours, resembling Spots. Their Women

had Mantles of Linnen, with Purple Stripes. *Cluverius* says, That in his Time those who liv'd on the *Baltick* had still some of those ancient sorts of Vestments of various Colours, compos'd of the Skins of wild Beasts and Sea-Monsters, being a sort of a Cloak that came as low as their Ankles, which they wore at Festivals. The Poor had a meaner sort, and the Rich a finer, with a kind of Silver Buttons down their Breasts, and some of them adorn'd with Pearl. Their Habit call'd *Rhenones*, *Cluverius* thinks to have been a sort of Coat without Sleeves, which cover'd them before and behind as low as their Navel and Buttocks. It was made of the Skins of Beasts, with the Hair outward, and could turn Rain.

Their *Saga*, *Cluverius* takes to have been a sort of Rugs or Plades of a square Form, much like those wore by the Highlanders and native *Irish*, but shorter; so that they came no lower than their Middle. These were also of different Colours, so as to resemble Skins of Lions, Tygers, Leopards, and other wild Beasts; and they wore the rough Side outward. He thinks they were of two sorts, one rough and heavy, and the other smooth and light: The latter was strip'd and flower'd, and made use of in Summer, or in War. He distinguishes betwixt those of the Freemen and Nobles; those of the former were only strip'd, or had Spots of divers Colours, as the Weaver pleas'd; but those of the latter had the Arms of the Nobles, such as they carried in their Shields, not such as are now in use, which frequently represent entire Beasts or Fowls, and sometimes Landscips, but only Colours distinguish'd by Squares; and those Coats which have nothing but plain Colours, are now reckon'd the most ancient. The Colours were generally of two sorts, plac'd alternately, and they chose them so as they thought suited best. *Herodian* says, That such of 'em as liv'd next the *Roman* Provinces had Gold and Silver interwoven in their Garments.

They had another sort made of the inner Rinds of Trees, which were most used by those who liv'd in Woods, Servants, and poor People. This Kind seems to be that we call *Bass*.

Tacitus says, the rich were distinguish'd by their Habit, which was not a loose Gar-

ment like that of the *Sarmatae* and *Parti*, but so close as to shew all the Lineaments of their Bodies, so that he thinks they resembled close Doublets and Breeches, and were made of Linnen or Skins, but not long enough to cover their Nakedness. He says, That in his Time the common People of *Franconia* wore their Garments so close, that they seem'd to be sew'd to their Skins. The Shoes of the ancient *Germans* were made of Hides, with the Hair outward, and tie about their Ankles, such as are still us'd by some of the Northern People. They were wore only by the richer Sort; but the poor went bare-foot, or made Shoes of Bark.

For Ornaments, they wore Chains about their Necks like the *Gauls*, Bracelets about their Arms, and Rings upon their Fingers; but their Rings were of Iron until they had kill'd an Enemy: So much for the Habits of their Men.

The Women's Apparel was much the same, but more loose, and most of Linnen, which *Cluverius* thinks to be what we call Smocks: They were very short, and had Purple Stripes: They were not so careful of their Hair as the Men, but wore it loose about their Shoulders, or sometimes ty'd behind. He adds, That the People in general were very nasty; and that there was no Difference, as to their Education, betwixt Master and Servant; and that they and their Cattle lodg'd under the same Roof, and lay upon the same Floor, till Age made a Distinction betwixt the Freemen and Slaves. They had no Seats, but sometimes Skins, Rugs, or Grass, under them; and their Bedding was Bear-Skins, Leaves of Trees, or Grass, and their Covering was what they wore by Day, which was very slovenly, because they anointed themselves with Butter, and in cold Weather sat frying all Day by the Fire.

Their Diet and Banquets.

Cluverius, in his 17th Chapter, says from *Cæsar*, That they had not much Corn; and the greatest Part of their Provision was Milk, Cheese, and Flesh. *Tacitus* adds, That they had Venison, wild Apples, and curdled Milk, which *Cluverius* thinks

thinks to have been Butter, their choicest Dainty. *Pliny* says, Their chief Corn was Barley and Oats, of which they made Bread and Portage. 'Tis observ'd of the *Fenni*, who liv'd in the most Easterly Parts of *Germany*, That they were a very barbarous People, miserably poor, had neither Arms, Horſes, nor Houſhold-Goods, but liv'd upon Herbs and Wild-Apples. They made their Butter of all ſorts of Milk; but the fatteſt was that of Sheeps-Milk; and when they took the Butter from it, they boil'd it, and that which ſwimm'd on the Top they call'd a Syllabub. They ſometimes eat their Fleſh raw, and preſs'd it in the Hide or Skin with their Hands and Feet when 'twas cold, in order to heat it again; and *Posidonius* ſays, they ſometimes roasted or boil'd it. *Cluverius* is of Opinion, That the ancient *Germans* made uſe of Hogs-Fleſh ſalted, as they do now in *Weſtphalia*, which is famous for Hams. *Tacitus* mentions a great Battle betwixt the *Catti* and *Hermunduri*, People of *Germany*, about a River in their Conſines, whoſe Water poured upon burning Wood produced Salt.

Their Drink was Milk; and a ſort of Ale or Beer made of Barley or Wheat, which *Tacitus* ſays had ſome Reſemblance of Wine: And *Posidonius* ſays, they had alſo Wine, which muſt be underſtood of thoſe Parts on the *Rhine*, and that border'd on *France*.

Their Way of Eating, according to *Tacitus*, was ſeparately, each in their own Place, ſitting on the Ground upon the Skins of Wolves or Dogs, Graſs or Hay, round the Fire, and every one had their Joint; which is no Wonder, ſays *Cluverius*, ſince, beſides Bread, they had nothing elſe for Dinner and Supper; and what remained, they eat cold afterwards. The Veſſels they drank out of were of Wood, or Earthen-Ware made like Pots; but their Princes, and ſuch as had been Ambaſſadors, had Veſſels of Plate, which had been preſented them; and ſome of them had Horns of Beaſts tipp'd with Silver, which they made uſe of at their Banquets. *Posidonius* ſays, When they were invited to a Feaſt, they ſat in a Circle, which *Cluverius* rather thinks was a Semi-Circle: The chief Perſon ſat in the middle, and next to him the Maſter of the Feaſt. Every one had his

Table, (which, according to *Cluverius*, was a Three-footed Stool) brought in cover'd with Viſuals; and if they were People of Note, thoſe who bore their Targets, ſtood behind and ſerv'd them; but ſuch as carried their Spears, ſat down at the ſame time over againſt them, for they always had their Arms with them: But in their own Families, the Children of both Sexes ſerv'd them naked: The beſt Meſſes they gave to the chief Gueſts. He thinks from thoſe Words of *Tacitus*, *Septa padicitia agunt*, &c. That the Women were alſo invited to thoſe Feaſts, and behav'd themſelves modeſtly. He obſerves in general, That they were very much addicted to Eating and Sleeping, and prodigal in their Entertainments.

Their Employments, Riches, Manufactures, and Navigation:

Tacitus ſays, That moſt of their Employment was in Hunting, and Military Affairs; and at other times their ſtoutest Men left the Management of their Buſineſs to Women, old Men, and the weakeſt of the Family, and ſpent their Time in Eating, Sleeping, and Gaming. They had little Trade in *Cæſar's* Time, except among thoſe who liv'd upon the *Rhine*, and that conſiſted rather in ſelling what had been given them in Preſents, as Horſes, Arms, Trappings, and Chains, or what they had taken from their Enemies, than in buying any thing. A few of them however traded in Wine. *Tacitus* ſays, They had no Silver or Gold Coin but what was *Roman*, and that was only in the bordering Countries; for the innermoſt Provinces dealt in the old Way of Bärter. They lov'd Money however, eſpecially thoſe Pièces call'd *Serrati* and *Bigati*, and would ſell Peace at any time to the *Romans*; but thoſe beyond the *Rhine* would ſuffer Merchants to bring no Wine or other Commodities among 'em, that might nourish Luxury, or make them effeminate.

All ſorts of 'em lov'd to ſwim, and they taught it their Horſes, ſo that they would croſs the *Rhine* in Troops together. This prov'd fatal to them when they invaded *Italy*, where the Rivers being more rapid than in *Germany*, Multitudes of them were drown'd

drown'd in attempting to swim them on Horseback. We have heard already, That they had but little Tillage, and this, with their other Domestick Labour, they follow'd by Turns; for those who stay'd at home one Year, went to War the next. *Tacitus* says of them in general, That they hated Peace abroad, and lov'd Sluggishness at home.

Cluverius is of Opinion, That they had such Trades among 'em as were necessary for building Houses, making Chariots and Cars for War, Clothes and Arms, and particularly Swords, Spears, Bucklers, and Helms; the latter of which they made very artfully, to resemble the Heads of Wild-Beasts.

As to Navigation, *Tacitus* says, the *Suiones*, now the *Swedes*, and such as liv'd on the *Baltick*, understood Sailing, and had many Ships, with which they sail'd in the Northern Ocean as far as *Iceland*. Those who liv'd about the Mouth of the *Rhine*, and *Elb* had likewise Vessels, with which they infested the Coasts of *France* and *Britain*. This *Cluverius* ascribes chiefly to the *Saxons*, who he says came first from *Holstein*, drove those People that were newly call'd *Franks* from the Countries betwixt the *Elb* and the *Rhine*, and with the Remains of 'em, that still liv'd about the Mouth of the latter, invaded the neighbouring Coasts of *France*, viz. the *Franks* by Land, and the *Saxons* by Sea, as he proves from *Marcellinus*, *Claudian*, the *Notitia Imperii*, &c.

Sidonius says, The *Saxons* were very expert Seamen, so that every one of 'em that rugg'd at the Oar, look'd like an Arch-Pyrate; for they commanded, obey'd, taught, and learn'd to play the Pyrate all together. He adds, That they were well acquainted with the Sea, despis'd the Dangers of it, and would venture among the Rocks and raging Waves. *Cluverius* says, The *English*, *Dutch*, *French* and *Spaniards*, learn'd Navigation from the *Saxons*: And hence it is, That most of the Sea-Terms are still *German*. He thinks their Vessels were made of Withs or Twigs cover'd with Skins. They us'd no Sails, but Oars; and the Ships of the *Suiones*, according to *Tacitus*, had Sterns at both Ends, and their Oars so dispos'd, that they could row either Way upon Occasion.

Their VIRTUES and VICES.

They had no Learning, yet administred Justice according to their own Customs, rewarded the Good, and punish'd the Bad, by the Light of Nature; so that *Tacitus* says, Good Manners were of more Force with them, than good Laws with others: But *Cesar* in his Commentaries says, That their Cities or Communities glory'd most in having large Wastes about 'em, and reckon'd it true Valour to drive out their Neighbours. Depredations without their own Boundaries were not accounted dishonourable, but valued as proper to improve their Youth, and to prevent Sluggishness; and all of the same Community were reckoned a-kin, and would be sure to have the same Friends and Enemies with their Kindred, and liv'd together in Tribes, which *Tacitus* reckons was a great Incitement to their Valour. They were so much esteem'd for their Fidelity, that *Cluverius* says, most of the *Roman* Emperors, from the Time of *Augustus*, prefer'd them for their Guards to all other People: And *Tacitus* gives this as an Instance of their Fidelity to their Promises and Trust, That when they had play'd away their own Liberty, they would willingly submit to Servitude; and those who were young and strong, would suffer themselves to be bound and sold by those who were old and weak. Here *Cluverius* answers an Objection from *Strabo*, That they betray'd and annoy'd those who trusted them, and broke their Contracts, by alledging, That they were very faithful in observing such Contracts as they made voluntarily with their Friends; but did not think themselves obliged to keep such Promises as were extorted from them by such as endeavour'd to subdue them. And whereas many Authors call 'em Cruel, Fierce, Unmerciful, and Proud, he proves from *Mela* and *Tacitus*, That they were civil to their Guests, merciful to such as submitted, or fled to them for Refuge, and reckon'd it the greatest of Crimes to betray them, or suffer them to be injur'd.

He comes next to their Bounty, Civility, and Hospitality, and says with *Diodorus* and

Taci-

Tacitus, That Strangers were liberally entertain'd by them, according to their Ability. They would invite them kindly to their Feasts, attend them from one Place to another, and reckon'd it a Crime to deny Lodging to any body. *Julianus Caesar*, in *Misopogone*, commends them much for their Friendship, and says, they know nothing of Flattery, but were free, just, and plain.

Their Gravity he ascribes to their Martial Temper, and being constantly in War; which is represented thus by *Diodorus*, That their Aspect was terrible, their Language harsh, their Words few, and their Way of Speaking obscure.

For their Temperance, it was not so much in Eating and Drinking, as in Venery. *Cluverius* owns, That in his Time their Excess of Drinking was still too much in use; and that Lasciviousness had also gain'd Ground upon them; Yet in the Inland Parts of the Country they were rather more chaste than neighbouring Nations, and hated obscene Discourse. He is at some Pains to vindicate them from being addicted to unnatural Lust, which he charges home upon the *Gauls* and *Romans*. And though he owns, That some of the ancient *Germans* might be infected with it, yet he shews from *Tacitus*, That they punish'd it as a capital Crime; and that as they hang'd Traitors and Deserters, they drown'd Cowards, and such as abus'd their Bodies, *Corpore infames*.

On this Occasion, *Cluverius* rejects *Lipsius's* putting *Torpora* instead of *Corpore*, because that Crime is charg'd upon the *Celtæ* in general, by many great Authors; but he imputes it chiefly to that Part of them call'd the *Gauls*, who learn'd it, together with the Use of Letters, from the *Greek* Colony that settled at *Marseilles*; and as a Proof that the *Germans* abhorred this Crime, he instances in the *Bastarnæ*, who rebell'd because the *Romans* abus'd their Youth in that Manner.

For the Vices of the ancient *Germans*, we have heard before, That they accounted Robbery without their own Bounds no Crime: And *Cluverius* owns, That they reckon Drunkenness to be no Reproach. *Pliny* says, they would drink two Days and two Nights together, without stammering in their Speech, vomiting, or easing Nature any other way; and that they drank

large Bumpers without Breathing: But *Cluverius* endeavours to extenuate this Fault, by charging it also upon other Nations.

We have heard already, That they were given to Idleness, when they were not at War; which *Cluverius* says was the Fault of most Warlike Nations, and instances in the *Thracians*, quoted by *Herodotus*, who looked upon idle Men to be the most honourable, and upon Husbandmen to be the most contemptible People of the World.

Tacitus and *Diodorus* charge the *Germans* with Pride, Boasting, Vanity, Passion, and being apt to quarrel. *Cluverius* ascribes those Things to their Valour and Stoutness; and says, that 'tis common to all Nations to over-value themselves: That most People of *Europe* have learn'd to outdo the *Germans* in Boasting; and that his Country-men don't keep Malice, but love to decide their Quarrels off hand.

Their Marriages and Conjugal Love.

Tacitus says, they were almost the only Barbarians who contented themselves with one Wife apiece, except a few, who had more; and those they had rather as a Mark of Nobility, than to satisfy their Lust. He also observes, That amongst some of them, Virgins were only allow'd to marry; and that no Woman married a second time. We have heard before, That they reckon'd it base to lie with Women till they were 20 Years of Age; and that this Abstinence contributed to the Strength and Tallness of themselves and their Children. *Cluverius* says, the same was observ'd in his Time; and that young Men generally liv'd unmarried till above 20. It was not their Custom for Women to bring Portions to their Husbands, but, on the contrary, the Husbands gave Portions or Gifts to their Wives, which were approv'd by the Parents and Kindred that were present at making the Match; and those Gifts were not accommodated to please the Women's Vanity, being Cattle, Horses, with their Furniture, Bucklers, Swords, and Spears; and on the other hand, the Women gave something of Arms to their Husbands. These were their Mar-

Marriage-Ties, their Sacred *Arcana*, and their Conjugal Gods, that the Women might also be inspired with Courage, and reckon themselves obliged to share with their Husbands in their Dangers and Labours, and be their Companions in War and Peace. This was the Meaning of the Yoke of Oxen, their Horses, and Arms, they presented to one another, as a Token that they must live and die together; and those Arms they accounted honourable to transmit to Posterity. This was a great Incitement to their Valour, for their Families accompanied them in War; so that their Troops were not form'd by Chance, but of their Tribes and Kindred; and their Wives and Children were so near when they fought, as they could hear their Cries. These they reckon'd the best Witnesses of their Valour, and Publishers of their Praise; and their Mothers and Wives number'd and suck'd their Wounds without Fear. Their Women did sometimes behave themselves gallantly in Sieges and Battles, and by their Intreaties and Tears, and representing to 'em the Shame and Misery of having them and their Children led Captive, did many times oblige them to renew the Battle, when they were ready to fly; for the Thoughts of that was more terrible to 'em than their own Danger; and the Courage of those Communities was generally greatest, among whom Noble young Women commanded. *Tacitus* gives an Instance of their Conjugal Love in *Arminius*, whose Wife being taken, he went about like a Madman, inciting the People to take Arms against *Cæsar*; for he could not endure to think of his Wife's Captivity. *Cluverius* takes Notice also from *Tacitus* of the Modesty of their Women; that they were not debauch'd by Feasting, Plays and Shews; the latter of which the ancient Germans valued so little, that when two Princes of the *Brissi* went on an Embassy to *Rome*, and were brought into *Pompey's* Theatre, they took no Delight in the Play or Shews, but enquir'd who were the Knights and Senators. *Cluverius* thinks, the Women's Ignorance of Letters contributed much to their Modesty, and gives this for his Reason, but how solid, let the Reader judge, That a Letter will not blush; and that by this Means young Women and Matrons

have been frequently debauch'd, by those who would otherwise scarce have had the Confidence to speak to them.

Their Child-bearing, Education, Kindred, and Way of Inheriting.

Cluverius thinks, what *Strabo* says of the other *Celtick* Nations was common to the Germans, viz. That the Women made no great Account of the Pains of Child-bearing, and that the common Sort went about their Business as soon almost as they brought forth; That they wash'd their Infants immediately in some Fountain or Stream, cover'd them but slightly, and inur'd them to Cold and Hardship from their very Birth, which they thought contributed to their Health and Strength. He gives several Instances of poor Women, who, being taken with their Pains while at Day-Labour, retir'd to a Bush, brought forth their Young, wrapped them up, and return'd to their Labour again, lest they should lose their Day's Wages. *Galen*, in his Book *De Tuenda Sanitate*, expressly mentions the Germans as treating their Infants, thus. *Julianus Cæsar*, in his Epistle to *Maximus*, says, The *Celts* threw their New-born Infants into the *Rhine*; That the Men could not be with-held from doing this by the Tears and Intreaties of their Wives, or their other Relations, who pretended the Danger of the Child, or were afraid for the Reputation of the Women, because they fancied, that if the Child were spurious, the River would carry it down; but if otherwise, it would swim, and then they delivered it again to the Mother. *Cluverius* thinks, that this, if true, was only practis'd by the *Gauls*, who liv'd on the *Rhine*, because *Tacitus* makes no Mention of it in his Description of the Germans; and he is not without Suspicion, that *Julian* may have been impos'd upon in this, because he says he had it only by Report; and that it proceeded from their Custom above-mention'd, of dipping their Children in cold Water as soon as born. When *Tacitus* says, That they thought it a Crime to limit the Number of their Children,

dren, or to kill any of them, he takes his Meaning to be, That they did not abstain from the Marriage-Bed, or destroy them, as was practis'd by some of the Eastern Nations, when they had more than they could maintain: And when he says, That they did not trust them to their Maids, or to Nurses, he takes it to be meant of those of Quality, for others had no Servants. As to their Education, they made no Distinction betwixt Servants and Children, till the latter came to the Age of Puberty, which *Cluverius* says was observed in his own Time in the Northern Parts of Germany, where 'twas reckon'd a Disgrace to carry their Children with them to Banquets, &c. till that Age; and this hard Way of Education, and breeding 'em to work in their Domestick Affairs, contributed to their Strength, Stature, and Virtue. They did not allow them to go to War till the Age of Manhood; but taught 'em the Use of Arms, to swim, and to ride, from their Youths.

Then as to their Kindred, and Way of Inheriting, *Tacitus* says, Uncles shew'd the same Respect to the Children of their Sisters, as if they had been their own; That some of them looked upon this as a more sacred and strict Tye of Blood, and therefore would rather have such for Hostages than others, because they looked upon 'em to be under a double Obligation to the Family. *Cluverius* thinks the Reason was, because they reckon'd the Kindred by the Mother's Side. As to their Way of Inheritance, every one was succeeded by his own Children, without a Will, which *Cluverius* says was needless among a People so ignorant of Fraud. They had a Regard however to Primogeniture in every thing but Horses and Arms, which fell not to the eldest, but to the bravest of the Sons. If they had no Children, the next of Kin succeeded, as Brothers and Uncles of both Sides. The ancient People valued themselves on the Number of their Posterity and Kindred; the Want of which was reckon'd a Disgrace. Their being thus link'd in Affinity, and living in Tribes and Kindreds together, was the Reason of their having the same Friends and Enemies, and their espousing one another's Quarrels, in which 'twas accounted a Crime to desert

their Friends; and the Chiefs of each Tribe or Rank of People were their Captains.

Their RELIGION and WORSHIP.

Cluverius contradicts *Caesar*, who says, they had no Druids to preside in their Worship, or offer Sacrifice; and thinks the contrary plain from what he himself says afterwards, viz. That they only reckon 'em to be Gods whom they see, and of whose Help they are sensible, viz. the Sun, *Pulcan*, and the Moon; and that they had not so much as heard of the rest. He supports his Opinion by the Authority of *Cicero* and *Dionysius Halicarnassensis*, who say, There was no Nation or People but what had some Knowledge of the Gods without being taught it; and since the *Celts* had their Religion from the *Egyptians*, and that the *Germans* were the far greater Part of the *Celts*; and since *Caesar* owns, that the *Gauls* worshipp'd *Mercury*, *Apollo*, the Moon, and *Minerva*; he doubts not but the *Germans* did the like. This he ascribes to *Caesar's* Ignorance of Germany, of which he knew very little; but that Part on the French Side the Rhine. *Tacitus* says plainly, That they chiefly worshipp'd *Mercury*, and on certain Days offered him Humane Sacrifices. They also sacrific'd to *Mars*, *Hercules*, and *Isis*; and the *Naharvals*, a German People, sacrific'd to *Castor* and *Pollux* in a Grove, where a Priest in Woman's Habit presided. *Cluverius* adds, That 'tis evident they did not learn this from the *Gauls* after *Julius Caesar's* Time, because they were in continual War with them: And *Tacitus* says, That after the Defeat of *Varus*, the *Germans* beyond the Rhine sacrific'd many of the Roman Officers to their Gods in the neighbouring Groves; and that the *Hermundur* sacrific'd the Captive *Gatti* to *Mars* and *Mercury*, the ancient Custom of the *Celts* and the *Gauls*, as *Caesar* himself observ'd; and he thinks the Antiquity of the German Worship; and that they had it from the Jews or other Eastern Nations, to be very well prov'd by that Saying of *Tacitus*, That they held it unlawful to draw the Images of any of their Gods upon their Walls, or to resemble 'em

to any thing of a Humane Shape; and if they did not name their Gods, it was common to them with others: And *Lucan* observes the same of the *Jews*, ---- *Dedita Sacris Inferis Judea Dei*; i. e. The *Jews* were addicted to the Worship of an uncertain or unknown God.

Their Priests, Orders of Wise Men, with their Discipline and Names.

Cluverius proves from *Tacitus*, That they had Priests, without whose Order it was not lawful to punish any Man; and that they had white Horses in their Woods, which they never put to any Labour, but when they were yok'd to the Sacred Chariot: The Kings, Princes and Priests, follow'd them, and observ'd their Neighing and other Noise as Omens. They thought the Priests to be the Servants of the Gods, and to know their Mind. Their Authority was great in making Peace or War, and they assisted in Publick Councils as Interpreters of the Law.

Besides those Priests who explained their Omens, they had Women whom they consulted as Oracles; tho' they did not flatter or worship 'em as Goddesses, says *Tacitus*; among whom *Velleda*, *Aucimia*, and *Ganna*, were famous, and had Presents made them both by the *Germans* and their Enemies, and therefore are mentioned by some *Roman* Authors to have commanded many People, which *Cluverius* understands to be meant only of their consulting them, because the Princes and People were at Liberty to make Decrees in Publick Councils without their Advice; yet the Priests and they both attended their Armies, and had greater Respect paid them than the Princes, because of the Opinion they had of their knowing the Mind of the Gods. *Cesar* likewise makes Mention of *German* Matrons who attended their Armies, and enquir'd by Lots and Divinations whether their Expeditions would be successful; but *Cluverius* thinks it to be meant only of those Prophetesses. He says, there's no Certainty by what Name the *Germans* call'd their Priests; but since *Dry* in the *Saxon* Tongue

signifies a Magician or Wise-Man, he fancies *Druids*, the Name of the *Gaulish* and *British* Priests may be derived from it; and that the *German* Priests had the same Freedom from Taxes and War: that they had, and Lands, &c. allow'd them for a Maintenance; That their Disciples were those of the first Rank; and that they taught 'em their Philosophy and Religion in Dens and Groves; viz. The Immortality of the Soul, and Transmigration, &c. with something of Astronomy, History, and Geography; and exhorted 'em to Virtue, and a Contempt of Death. Their Instructions were contained in Verse, and never committed to Writing; so that they were 20 Years or more in learning it. He adds, That there was one Chief Druid among them, who presided over the rest. When he died, they chose another in his Place, and sometimes fought for the Post. He thinks the Priest of the *Chatti*, mentioned by *Strabo* in *Germanicus's* Triumph, was of this Sort.

In the following Chapters, he endeavours to prove from the Authority of *Macrobius*, in his *Saturnal*; That all the several Names of the Heathen Gods referred to the Sun, and of their Goddesses to the Moon; That *Vulcan* was the same with *Mars* and *Hercules*; and that the ancient *Germans* worshipp'd one God, and three Persons, under the Names of *Sun*, *Moon*, and *Fire*: But his Arguments to prove it, seem to have more of Reading and Speculation, than Solidity. The like may be said of his Endeavours to prove, that they had some Knowledge of the Creation of the World, and of Angels, of their Fall, of the Creation and Fall of Man, of the Flood, and the End of the World; or if they had, it seems to have been nothing more but such dark Hints of those Things as we find in the Heathen Poets. He thinks, that till the Time of the *Romans*, they had no other Temples than Groves, with Fountains, which they accounted Sacred; but built some afterwards by their Perswasion and Example. *Tacitus* says, they worshipp'd a Goddess called *Hertha*, (which *Cluverius* takes to be the Earth, as their common Mother:) She had a Grove dedicated to her in an Island, with a Chariot drawn by two Cows, and cover'd with Cloth, which none but the Priest had Leave to touch. They fancied her to be

in this Chariot, followed her with great Veneration; and while she was carried about the Country, they abstain'd from War and Labour, and kept a Festival, till the Priest told them she was weary of Humane Converse, and return'd her to her Temple and Grove, when they fancied the Chariot and all sunk into a secret Lake.

Adamus Bremensis says, The *Saxons* and *Swedes* worshipp'd God by Trees, and great Trunks, which they call'd *Irmisul*; i. e. a Column, that supported all Things, which agrees with what *Cicero* says in his First Book *De Divinatione*, That Images were first made use of by the Advice of Wise Men, which, when the People worshipp'd, they thought the Gods themselves to be present; and this Superstition was afterwards augmented by Painters, Poets, and Carvers.

In his 35th Chapter, he treats of the Habit, Worship, and Rites made use of by their Priests. We have heard before, that they us'd to sacrifice their Captive Enemies, from whence those Sacrifices were call'd *Hostia* & *Vistima*, as *Ovid* tells us, *Est. Lib. 1.*

Vistima qua cecidit dextra victrice, vocatur:
Hostibus à dextra Hostia nomen habet:

Strabo says, their Habits were white, according to the Custom of other Heathen Priests, as we find in *Ovid*, *Virgil*, *Diogenes Laertius*, *Silius Italicus*, &c. *Cluverius* says, they also sacrific'd all sorts of Beasts, which, as well as the Priests, were crown'd with Garlands; and that they erected Altars of green Turf in the consecrated Places of their Woods, which were hedg'd about; and those were their *Sacra* *Penetralia*, and Temples. The Priests pour'd Wine, or some other Liqueur, betwixt the Horns of the Sacrifice, and taking hold of the Hair of its Head with his Left Hand, call'd upon their Gods while he pour'd out the Liqueur; and the People bowing down their Heads, begg'd Pardon for their Sins in the mean time. *Cluverius* says, The *Germani*, as well as *Gauls*, us'd to sacrifice Malefactors, which they thought was very grateful to the Gods; and those who were in Danger by grievous Distempers, or in Battle, us'd to offer such Sacrifices, or to make Vows that they would; and if Cri-

minals could not be found, they would offer up innocent Persons. The Priests told 'em, That nothing else would prevail with the Gods to save the Life of a Man. When they made such Sacrifices, they us'd to look into the Intrails of the Person sacrific'd, in order to know what was to come, or judg'd of it by the Convulsion of the Members, or the Flowing of the Blood of the Person sacrific'd. Those were the Sacrifices they offer'd when they consult'd their Gods; and they had others of the like Nature when they made Vows for obtaining what they desir'd, which they call'd *Sacrificia Votiva*, and in these they offer'd up whatever Animal they took in War, and us'd either to hang them upon such Trees as were next to their Altars, or throw them into Ditches, and among Brambles, adding broken Weapons, or the Limbs of Horses. Thus when *Varus* was defeated, they sacrific'd the *Roman* Tribunes and Centurions; and the *Saxon* Pyrates us'd to sacrifice the Tenth of their Captives in the same manner by Lot, and put them to Death by cruel Torments, which they prefer'd to Ransoms. *Cluverius* is of Opinion, That when they sacrific'd the Blood only, which they call'd the Soul, they eat the Bodies both of Men and Beasts. Wherever the *Romans* prevail'd, they abolish'd the Order of those bloody Priests, and their barbarous Sacrifices.

In his 36th Chapter, he gives an Account of their Divinations by Auspices, Lots, &c. from *Tacitus*: They us'd to break off Twigs of Fruit-Trees, cut them in small Pieces, and distinguishing them by Marks, throw them at random upon a white Cloth; and praying to their Gods, and looking up to Heaven, took them up three times, and made their Conjectures according to the Marks they had put upon them before. If they thought their Designs forbid, they consult'd no more that Day; but if allow'd, they consult'd again, and observ'd likewise the Chirping and Flying of Birds; and we have heard before, that they also observ'd the Neighing of Horses, which they kept in the Woods on purpose. They had also another Way of Divination, which was, to make the first Captive they took from their Enemies fight with his own Country-Weapons against one

of their own Men, whom they chose on purpose, and determin'd of the Event according as either of them happen'd to be Conqueror.

Their Forms of GOVERNMENT.

Cluverius, Cap. 38. gives us an Account of their Democratical Form, with a Prince at the Head of the Administration; and shews us from Tacitus and Caesar, That they chose their Kings on Account of their Nobility, and their Generals on Account of their Valour; That their Kings had no unlimited or absolute Power, and their Generals commanded rather by Example, than in a Despotical Manner; and if they were Expeditionary, Brave, and appear'd undauntedly at the Head of the Army, they admir'd 'em. The usual Time of their publick Assemblies was at New or Full-Moon; but they had so much Liberty, that sometimes they would be 3 Days in coming together. When they met, they sat down with their Arms, and Silence being enjoin'd by the Priests, who at that Time had a Power to force them to it, the King or Prince, and such as were most noted for their Age, Nobility, Valour, or Eloquence, were heard; but rather by Way of Argument and Persuasion, than by Way of Command. If what was propos'd displeas'd them, they reject'd it with a Noise; but if it pleas'd them, they clasp'd their Arms together.

Caesar says, That *Ambiorix*, one of the German Kings on this Side the Rhine, told the Romans, That he attack'd their Camp not of his own Accord or Judgment, but by the Order of the Community; and that the Nature of his Government was such, that they had as much Power over him, as he had over them: From whence Cluverius infers, That the principal Authority lay in the Democracy; and that the Power of the King consist'd rather in Persuading, than Commanding. Their Kingdoms or Principalities were generally confin'd to narrow Limits, and some of them had more Power than others, especially those of the *Suiones*, now the *Swedes*. In their Councils, tho' they had distinct Orders, yet they had all a like Authority in Things which concern'd the whole Community. In those Councils

they determin'd Matters of Life and Death, and chose the Princes who administr'd Justice in the Districts and Villages, and their Kings could do nothing of Moment without them in Peace or War. The Government of the *Belge*, or People of *Lower Germany*, was, according to *Strabo*, Aristocratical for most part; and 'tis to be observ'd, That he extends the Limits of this People as far as *Britany* in *France*. He says, the *Eburones*, a German People, chose a Prince and a General every Year. Cluverius observes, That Caesar calls those Princes, whom Tacitus calls Senators. Their Revenues consist in Corn and Cattle, given them by the People for supporting their Dignity, and entertaining those who attended them; for they had no Guards, but Volunteers, to whom they gave Part of the Spoil that they took in War. Cluverius says, the Name of King was very improperly given to those Princes by the Romans, since they were no other but the First or Chief of the Community, in the German Language call'd *Fursten*, to which the Latin Word *Princeps* answers better than *Rex*; and it appears from Tacitus, and other Authors, that they were Elective, and not Hereditary.

Cluverius, in his 39th Chapter, gives an Account of their Democracies, which were without Princes. These, he says, consist'd not of Nobles, but of the Common People, call'd Burgers or Freemen. This he supports by the Authority of Tacitus and Caesar, who say, That in Time of Peace they had no Common Magistrate; but the Princes or Senators, who were chosen in their Councils, administr'd Justice, and determin'd Controversies by the Consent and Authority of a Council chosen from the Hundreds; but were not attended by Volunteers instead of Guards, as the Princes formerly mention'd.

In his 40th Chapter, he gives an Account of the Monarchies and mix'd Governments among the Germans. The first Instance he gives is among the *Suiones*, formerly spoke of, who he said honour'd Riches, and were govern'd by one Person, not in a precarious Manner; nor did he trust the People promiscuously with Arms, like the rest of the German Princes, but kept them shut up in an Arsenal, under the Guard of a Servant, because the Sea defend'd his Coun-

try from sudden Incurſions by Enemies; and he did not think it his Intereſt, according to *Tacitus*, to truſt any of a higher Rank with the keeping of the Arms. *Cluverius* obſerves, That theſe People were neither ſo famous for Valour nor Probity as the reſt of the *Germans*, which he imputes to their Slavery, that was ſo much the more abominable, as 'twas voluntary; and that they made Riches the Qualification in the Perſon whom they choſe to be their Monarch. He informs us from *Adamus Bremenſis*, That they grew weary of this ſort of Government at laſt, reſum'd their Liberty, and choſe themſelves Kings, who govern'd by the Advice of the People, and were obliged to confirm what they agreed upon; but in Time of War, they were very obedient to their Kings, or to him whom he appointed General. The 2d Inſtance is that of *Maroboduus*, from *Velleius Paterculus*, who deſcribes his Power to have been much the ſame with that of the abſolute Kings of the *Swedes*; ſo that he ſubdu'd moſt of his Neighbours, and enlarg'd his Empire betwixt the *Danube*, the *Elb*, and the *Weiſſel*, and became not only terrible to his Neighbours, but formidable to the *Romans*; yet at laſt growing hateful to his own People for his Tyranny, they drove him from his Throne.

Cluverius's Inſtance of a mix'd Government is in the *Gothans*, who liv'd betwixt the *Oder*, the *Weiſſel*, and the Eaſt Sea. Their Kings had more Power than was common to thoſe of the other *Germans*, but were under Reſtrictions by Laws; ſo that their Government was a Mixture of Democracy and Monarchy, like that ſet up by the *Swedes*, when they grew weary of the abſolute Power of their Princes.

In his 41ſt Chapter, he treats of the Leagues of thoſe Democratical Governments among themſelves for mutual Defence, againſt powerful Factions at home, or Enemies from abroad. They generally choſe ſome Man of Eminency to whom they gave Authority to determine Controverſies, and to defend the Poor againſt the Rich, and their Enemies abroad; but if they ſuffer'd the People to be oppreſſed or circumvented by others, they loſt their Authority; *Cæſar* calls ſuch of thoſe leſſer

Governments as put themſelves under the Protection of the greater, *Clientela*, and *Cluverius* explains this by the Inſtance of *Hamburg*, which put it ſelf under the Protection of the King of *Denmark*, and of *Aix la Chapelle* under that of the Duke of *Juſliers*; which he ſays is the ſame with being in *Clientela*, in *Amicitia*, or in *Fide*, in the Latin Dialect.

Their Councils, Judicatures, and Punishments.

Cluverius obſerves from *Tacitus*, That their Councils were of two Sorts; one for greater, the other for leſſer Affairs. The latter were determin'd by the Princes, with the Councils of the Hundred; the greater by the General Council of the People, and Princes, the Method of which we have heard before. He obſerves from the ſame Author, That during thoſe great Councils they had large Entertainments, wherein they diſcourſ'd of reconciling Differences, of making Alliances, of chuſing Princes, and of making Peace and War, becauſe they thought People were apteſt then to tell their Minds freely, or to be animated to great Undertakings; and what was treated of then, they conſider'd again next Day. On this Occaſion, *Cluverius* corrects the Reading of that Place of *Tacitus* where he ſays, *Genua aſſuta, nec collida, aperte adhuc ſacraſta Poſterior, Libertas Loci. Ergo detecta & nuda omnium mens poſtero die retractatur*, &c. Thus for *aperis adhuc*, he puts *aperis tunc*; and the Word *Ergo* he explains by *Ceterum, Cæterò, or Porro*, and gives ſeveral Inſtances in the ſame Author where it muſt be underſtood in that Senſe. Then for their Punishments, they were diſtinguiſhed into Civil and Criminal; the former were puniſh'd by Fines, that were divided betwixt the Prince and the Community, and the latter by Death; Traitors and Deſerters they hang'd; Cowards, and ſuch as were guilty of unnatural Luſt, they drown'd in Lakes or Marſhes, and threw a Hurdle over them. Adultereſſes were puniſh'd at the Diſcretion of their Husbands, who cut off their Hair, ſtrip'd them naked, drove them

them out of the House before their Kindred, and whipp'd them through the Village. For this Crime there was no Remission; and how young, beautiful, or rich soever such Criminals might be, no body would ever marry them after.

Their Way of making War, and Military Discipline.

Tacitus says, if they had Peace at home, their Youth of Quality went to Armies abroad, and would rather spend their Blood in War, than their Sweat in Labour. They were bred to the Use of Arms from their Infancy, and never went about any publick or private Business without them. We have heard before, that their Communities reckon'd it honourable to have as much wast Ground about them as they could, and to drive their Neighbours at as great a Distance from them as possible; and the more any Man signaliz'd his Valour, the more Respect he had in their Councils and Publick Entertainments; so that all their Nobility ow'd their Rise to their Valour. When Enemies invaded their Country, they used to withdraw to Woods and Mountains, sally out upon them, and surprize them in Passes; but afterwards, as we find in *Velius Paterculus*, and *Tacitus*, they became almost equal to the *Romans* in Discipline, especially the *Catti*; but their chief Strength consisted in Foot, for their Horse were better at Attacks than a Standing-Battle.

Their Arms of Defence were few: Coats of Mail and Helmets were scarce to be found but among their Leaders; so that at first they fought either naked, or with a short light Garment, as formerly described; but their Horsemen in general had no Clothes. Such Coats of Mail as they had were made of raw Skins, and chiefly to cover their Breasts, which they afterwards fortified with Iron Rings. When they came to wear Helmets, they had them of Iron, resembling the Heads of Wild-Beasts with Horns, or of Birds, to which *Austasib* says they affix'd Crests of Feathers.

Their Arms of Offence were a Buckler, Sword, Spear, or Dart. *Tacitus* says, their

Bucklers were very long; and *Diodorus*, that they were as tall as themselves; so that when the *Romans* fought them, they endeavour'd to get their Bucklers from 'em, after which they were soon put to flight. *Tacitus* says, those Bucklers were made of Withs twisted together, or of thin painted Boards, and of no great Breadth; but the *Gothones* had round Bucklers finely painted, and some had them of Brass, in Form of Wild-Beasts; but *Cluverius* thinks these were only the Princes, who thereby represented the Arms of their Families, as sometimes they did by the Painting upon 'em; and when they were used with their Consent by Men of less Quality, they had only the Half, or some Part of a Beast, in Colours different from those of the Princes, that the latter might not be depriv'd of their Dignity; but Time has now made those Things common.

At first, few of them had Swords, except the Nobles, but made use of Spears and Darts; and when they came to use Swords, they had them very large, with two Edges, but without Points, and wore them by their Right Side: Some hang'd them upon their Shoulders, and others girded them to their Thighs in Scabbards of Leather. Their Girdles and Belts were of Leather, and very broad; the better Sort had them set with Iron Studs, and the Princes with Silver or Gold, after they made Incursions into *Italy* and *France*. Their other Arms were Lances of various Forms; the chief of which *Cluverius* thinks to have been like our Partisans, Spears or Pikes both short and long, Darts, Bows, and Arrows pointed with Horn or Bone, and some of them had great Clubs.

Their Way of fighting.

Cluverius thinks, they used Chariots in War, as well as the *Gauls* and *Britains*; tho' *Roman* Authors say nothing of it. *Caesar* says, they used to fight on Horseback, tho' their Horses were not good. They alighted very often to fight on Foot, and their Horses were so train'd, that they would stay where they left them, but were not manag'd for Battle like the *Roman* Horse;

Horse; yet sometimes they lin'd their Horse with Footmen, who were so nimble, that they would catch hold of the Horses Manes, and charge or retire as swift as they; and at other times they took the Foot behind them; for their greatest Confidence was in their Infantry, who would catch hold of their Enemies Spears, and pull them off their Horses, or get in with them, and wound them so, as to make them throw their Riders. They despis'd Saddles and Stirrups; but adorn'd their Horses with fine Trappings.

Their Way of Declaring War, Choosing their General and other Officers, and their Authority.

Those who had absolute Kings, War was made by their Authority, and they either led them themselves, or appointed a General. How Peace and War was made in mix'd Governments and Democracies, we have heard already. In the former their Prince was General, and in the latter they chose one; and when elected, he was set upon a Buckler, carried betwixt Men's Shoulders, and turn'd three Times round; and from the Nature of his Office, was call'd *Hierzog*, i. e. Leader of the Army, which answers the Latin Word *Dux*, and our Duke. The rest of the Commanders were the Princes of the Districts, who formed a Council of War, and assisted him in governing the Army. The General and each of them had their Companions, *Comites*, the chief Men of the Districts; and when they came to fight, it was reckon'd dishonourable for a Prince to be exceeded in Valour, and for them not to equal him; so that the Prince fought for Victory, and they for the Prince. *Tacitus* says, these Princes had Embassies and Presents sent them, and frequently put an end to the War merely by their Fame. This was their Way of making War; but when they went upon Depredations out of their own Boundaries, if any of the Princes in Council offer'd to be their Leader, the Multitude, if they lik'd him, follow'd him; and such as did not, were look'd upon as Traitors or Cowards.

Their Way of Levying Men, and their Pay.

Cæsar says, That all who were of Age were summoned to the Armed Council, which *Cluverius* thinks to be understood only of Democratical Governments; for the *Suevi*, or *Catti*, the most Warlike People in Germany, who had 100 Districts under them, sent every Year some Thousands of Men out of their own Country to War, and they return'd next Year to manure the Ground, when others went in their room; by which, 'tis plain there must have been a Levy.

We heard before, That none were reckon'd fit for Arms or publick Conversation till they were 20 Years of Age, and approved of by the Community in Council, when the Prince, some of the Leaders, the young Man's Father, or some Kinsman, gave him a Buckler and Spear: After which, they were not discharged from Military Service till Age made them incapable of it.

As to their Pay, *Cluverius* thinks, That in Democracies they had none, all being equally obliged to arm for the Defence of their Country; but such as serv'd under Princes, and attended them, had their Maintenance allow'd them.

Their Generals and Princes prefer'd such of their Companions, *Comites*, as were most noted for their Valour; and he that had the greatest Retinue of such was most valued, and had Embassies and Presents sent him by his Neighbours who had any War. Those *Comites* who deserted their Prince in Battle, or surviv'd him in it, except they obtain'd the Victory, were reckon'd infamous for ever; therefore their greatest Oath was to defend him, and to ascribe the Glory of their bravest Actions to him. *Mæcellinus* says, That when *Cleodonomarius*, one of the German Kings, surrendered himself to the Romans, 200 of those *Comites* who attended him did the like, and offer'd themselves to be bound, accounting it dishonourable to outlive their King, or not to die for him if Occasion required. *Cluverius* says, That those *Comites* were next in Dignity to the Generals or Princes, and were the same with

with those now call'd *Graves*, or *Greves*, and much the same with the *French Counts*, and our *Earls* or *Peers*: But he observes, That the Title of *Duke* is higher in *Germany* than that of *Prince*, contrary to the Custom of most other Countries. Those *Comites* were instead of *Guards* to *Princes*; and they themselves had Numbers of *Freemen* who attended them in *Battle*, serv'd them also instead of *Guards*, and were those whom the *Romans* call'd *Ambassi*. They were the Persons mention'd by *Possidennius*, who at publick Entertainments carried their *Lords Spears*, and sat down to *Dinner* at the same Time with their *Masters* in an opposite Circle.

Their Military Ensigns, and Musick.

Tacitus says, they brought their Military Ensigns out of the *Groves* when they came to fight; for at other Times they laid them up as sacred in those consecrated Places. They were the Images of *Wild Beasts*: And *Cluverius* thinks some of them did also represent *Birds*, like those on the Crests of their *Helmets*; and that they were not painted, but made of *Wood* or *Iron*, as those of the *Persians* and *Romans* were of solid *Gold* or *Silver*. He thinks they had also large *Standards* or *Banners*, which he takes to be meant of the *signa*, which *Thecius* distinguishes from the *Effigies*.

They had also *Trumpets* of *Brass*, which *Tacitus* says made a *Thrill* and warlike *Noise*. They were of a crooked Form; and they seem likewise to have had something like a *Bagpipe*: But *Cluverius* says, there's nothing certain concerning their Military Instruments of *Musick*.

Their Way of Encamping, Times of Fighting, and Order of Battle.

Cluverius thinks, from what *Nels* and *Pliny* say of the Encampments of

the *Cimbri* on the *Baltick*, That the ancient *Germans* used to fortify their Camps with *Intrenchments* and *Ditches*; but is certain, that they used to intrench themselves with their *Carts* and *Waggons*, in which they plac'd their *Women* and *Children*, behind their *Army* when they came to engage, and retir'd to them on occasion; when their *Women* would assist in defending them with as great *Bravery* as the *Men*, and would sometimes cut off those who fled too easily; and animate the *Meno* to renew the *Battle*, as has been mention'd already. The *Roman* Authors give Instances of the *Women's* defending those *Intrenchments*, after the *Army's* being defeated; and that, rather than expose their *Chastity*, they have kill'd themselves and their *Children* in those *Intrenchments*. *Cluverius* says, the *Germans* still use such *Intrenchments* on *Occasion*. And we find them mention'd in the *Rebellion* of the *Boors*, excited about the Time of the *Reformation*, by *John of Leyden*, *Thomas of Munster*, and other *Enthusiasts*.

We have formerly heard, That they chose the *Full* and *New Moon* as the most auspicious Time to fight in, which is mention'd by *Tacitus* and others; but in case of *Necessity*, or when they were invaded, they would fight at any Time, without consulting their *Soothsayers*.

They us'd to draw up their *Troops* in Form of a *Wedge*, their *Front* resembling the sharp Point of a *Greek Δ*, which they themselves call'd a *Swine's-Head*, by which they threw so many *Darts* at once upon their *Enemies*, as frequently put them into great *Disorder*.

The *Main* of their *Army* was drawn up in such *Bodies* at equal *Distances*; but their *Wings* were drawn out in *Length*, something of an oblong Form; and they us'd to fight *Back* to *Back*, that they might face their *Enemy* on all *Sides*, covering themselves with their *Targets*. These *Wedges* were generally composed of different *Tribes* or *Principalities*, which *Tacitus* says was a great *Incitement* to their *Courage*, because they strove to outy one another.

Camp & Manner of Battle.

*White and Arms of the Ancient Germans both Horse and Foot their Way of carrying their King about upon mens Shoulders when chosen. Their Entrenchments of Waggon and
of drawing up their Armies in Order of Battle according to Chæron, mention'd in our Account of Ancient Germany.*

It has been formerly observ'd, that they put more Confidence in their Foot than their Horse, and therefore interlin'd them, and posted the chosen Men of each Hundred before their Horse by Hundreds at a time, who, if they were worsted, retired to their Horse. These Hundreds generally led the Van; but in great Battles, such as that fought by *Ariovistus*, they were chosen out of all the Army, and their Troops of Horse were equal in Number to those Bodies of Foot. The first Ranks made use of Spears, and the others of short Darts. The first Lines consisted of the Nobles, and other Chief Men, who wore Chains and Bracelets of Gold; and to prevent the breaking the Ranks of their Foot, those on the Van were fasten'd to one another by their Belts; and every Body of Horse and Foot had their own Ensigns and Standards, as *Tacitus* mentions in the Battle with *Civilis*, and his *Batavi*, the Ancestors of the *Dutch*. The Battle being thus drawn up, their Rear was cover'd with their Carts and Waggon; that they might not think of flying; and the Women, as the Troops marched out, stood weeping upon those Waggon, with their Hair dishevell'd, exhorting the Soldiers to acquit themselves bravely, and not to suffer them and their Children to be Slaves to the *Romans*. The Women carried likewise Refreshments to the Army on Occasion, and never fail'd to renew their Exhortations, that they would fight it bravely; and being likewise arm'd, would fall upon those who fled, without sparing 'em, tho' their own nearest Relations.

When all was ready for an Engagement, the General and other Commanders rode about to the several Bodies, made Speeches to them suitable to the Occasion, put them in mind of the Bravery of their Ancestors, and of their own Victories against their Enemies, as Arguments to raise their Courage, and to make them despise their Adversaries. Some of their bravest Men used to march out of their Ranks, and provoke some of their Enemies to single Combats, and according to the Success of those Men, they looked for Victory or otherwise. *Cluverius* says, That before they engaged, they used to sing Songs in Praise of valiant

Men, and to dance; and when they fell on, they gave a great Shout, which was answered by their Women from the Carts, who continued shouting during the Battle to encourage the Men. The younger Sort, who had not been allowed to shave their Beards, were sure to acquit themselves bravely, that they might have that Privilege; and 'twas accounted a great Honour for them to return besmear'd with their Enemies Blood, or with any of their Arms.

Their Way of Besieging Towns, and their Behaviour to those they conquer'd.

Cluverius says, the ancient Germans knew nothing at first of besieging Towns, by casting up Intrenchments, or making use of Engines; but only surrounded them to starve them out, or made their Attacks upon those on the Walls, by throwing Stones and Darts, &c. They made their Approaches under that call'd a *Testudo*, a sort of an Arch, to cover their Heads when they design'd to scale the Walls, which they used to do with great Fierceness, after having filled up the Ditches with Timber and Branches of Trees.

When they had defeated their Enemies, they were very intent upon the Plunder; for that, next to their own Defence, was the chief Cause of their making War, which frequently gave their Enemies Opportunity to escape, and sometimes to rally. *Tacitus* says, they did not divide the Spoil equally, but every one catch'd what he could, and they feasted for a Day or two together in the Field of Battle. We have heard before, that they us'd to sacrifice their Captives and their Horses to *Mars* and *Mercury*, and made Servants or Slaves of such as they sav'd. The Chief of their Prisoners they sacrific'd on Altars of green Turf; but the rest they hang'd, or threw into Holes dug in the Ground. The Heads of such as were killed in Battle they fix'd upon Trees, and their Horses and Arms they used to burn on vast Piles of Wood. When they returned home after Victory, they marched

in great Pomp, carrying the Heads of some of their Enemies hung about their Horses Necks, and gave the Spoils, cover'd with Blood, to be carried in Triumph by their Servants. The Heads they hung up at their Doors; but those of Quality they anointed with the Rosin of Cedar, kept them in Chests, and would show them with great Ostentation to their Guests or Strangers, and boast that they had refused so much Money for them. Some of them were so fond of such Monuments of their own or their Ancestor Valour, that they refused their Weight in Gold for them; and this they accounted Greatness of Mind, as *Diodorus* informs us.

Their FUNERALS.

Tacitus and *Diodorus* say, they used to burn the Corps of the Deceased on Piles of Wood; but those of the Nobles, and of such as had distinguished themselves by their Valour, were burnt with an uncommon or choice sort of Wood. *Pliny* alleges the Cause of this to have been to prevent their Corps being taken up out of the Ground, as a Mark of Disgrace by their Enemies; as *Sylla*, the Roman Dictator, order'd his to be burnt, lest it should have been taken up by way of Reprisal for what was done to the Corps of *Marius*. *Diodorus* says, the Germans being of *Pythagoras's* Opinion, That their Souls were immortal, enser'd into other Bodies, and after some Time

came to Life again, they used to throw Letters to their deceased Relations into the Funeral-Pile, having a Fancy they would read them; but this, if true, must be after they learn'd the Use of Letters from the Romans or the Gauls, for anciently they had no Learning, as we have heard already. *Tacitus* adds, That their Arms, and sometimes the Horses they made use of in War, were burnt with them: And *Procopius Goth. Lib. 2.* says, the *Heruli*, a People of Germany, were so barbarous, that such of them as grew old or sickly, were compelled by their Relations to desire they might be sent out of the World; upon which they were placed on the Top of a Pile, where one that was no Relation to them was order'd to kill them; then their Relations set Fire to the Pile, and such of their Bones, &c. as remained unburnt, they buried; and if their Wives did not afterwards hang themselves near their Husbands Grave, they were held infamous, and hated by his Relations. *Tacitus* says, their Sepulchres were made of Turf, for they despised pompous Tombs of Stone, &c. and reckon'd them burdensome to the Deceased. *Cluverius* thinks, from what *Tacitus* says of *Arminius*, that the *Bards* compos'd Verses, which were sung at their Funerals, and afterwards in Remembrance of them; but the Mourning and Tears of the Men were soon over, says *Tacitus*, tho' their Sorrow continued long; it being reckon'd honourable in Women to mourn for their deceased Friends, and for Men only to remember them.

C H A P. XXIV.

Ancient GERMANY on this Side the Rhine.

CLuverius begins with this Part of the Country, because it was first possessed by the Romans, and therefore first described by their Historians. He informs us from *Cæsar*, *Tacitus*, and *Strabo*, That the *Tribocci*, *Nemetes*, and *Vangiones*, three German Nations, passed the *Rhine*, and expelled the *Mediomatrici*, who possessed the Country on this Side that River; but says, there's no Certainty as to the Time when this hap-

pen'd; but it appears they were in this Country before the Time that *Ariovistus* was defeated by *Cæsar*, and that they were not subject to *Ariovistus*, but either in League with him, or under his Protection.

In order to our better understanding what Parts of the Country they possessed, he gives us from the *Notitia Provinciarum* the following Account of the Disposition of the Roman Garisons in those Parts.

Under the Government of the Commander of *Mentz*.

The Garisons of the	{	<i>Pacensum.</i>	<i>Saletione,</i>	now <i>Seltz.</i>
		<i>Menapiorum.</i>	<i>Tabernis,</i>	now <i>Rhein-Zabern.</i>
		<i>Anderecianorum.</i>	<i>Vico Julio,</i>	now <i>Germerstheim.</i>
		<i>Vindicum.</i>	<i>Nemetes,</i>	now <i>Spires.</i>
		<i>Martensum.</i>	<i>Alta-Ripa,</i>	now <i>Altrip.</i>
		<i>Secunda Flavie.</i>	<i>Vangiones,</i>	now <i>Worms.</i>
		<i>Armigerorum.</i>	<i>Mogontiaco,</i>	now <i>Mentz.</i>
		<i>Bingenium.</i>	<i>Bringio,</i>	now <i>Bingen.</i>
		<i>Ballistiariorum.</i>	<i>Boadobriga,</i>	now <i>Bopart.</i>
		<i>Defensorum.</i>	<i>Confluentibus,</i>	now <i>Coblentz.</i>
		<i>Acincensum.</i>	<i>Antonaco,</i>	now <i>Andernach.</i>

By which it appears, that *Worms* was the chief Town of the *Vangiones*; therefore *Tacitus* is in the Right when he places them next to the *Truviri*. He adds, that *Spires* was the chief Town of the *Nemetes*, and *Straßburg* that of the *Tribocci*, and describes the Boundaries of all of them together thus: On the E. they had the *Rhine*, from the ancient Boundaries of the *Mediomatrici* and *Sequani*, which was from *Burchem*, on the

other Side the *Rhine*, to where the *Nava* falls into it at *Bingen*. On the S. they had the same Boundaries that divided the *Sequani* from the *Mediomatrici*; and from thence Westward the Ridge of Mountains, now called *Hondsruck*, which divide *Alsace* from *Lorraine*; and Northward, their Boundaries extended to *Keyserlauteren*, and from thence to the Place where the *Nava* falls into the *Rhine*. They were divided from one ano-

ther thus; the *Tribocci* were divided from the *Nemetes* by the River *Motra*, and the *Nemetes* from the *Vangiones* by the River *Lauter*.

The *TRIBOCCI*, he says, derived their Name from the Village of *Elface*, now called *Zun-Dregen-Buchen*; in the old *Celtick* Tongue, *Thri-Buche*; i. e. Three Beach-Trees. They possessed half of *Upper Alsace* towards the N. and that half of *Lower Alsace* which lies next to it. The first Place of this Country from the Borders of the *Sequani*, taken Notice of in the *Itinerary*, is *Helethum*, now the Village *Elle*, so called from the River *Al* or *Ell*; from whence comes the Name of *Elface*, because that River runs thro' the Country. The next Place is *Strasburg Argentoratum*. Here *Cluverius* takes Notice of *Mercator's* Mistake, in making *Spires Argentoratum*; and of *Scaliger's* Error, who says, that *Strasburg* was only a Village in the Emperor *Valentinian's* Time, since it was certainly a considerable Town long before *Ptolomy* wrote, who places the 8th Legion, called *Augusta*, here; and 'tis evident, that it was a Town of great Note, from *Antonin's Itinerary*, and the Author of the *Tabula Itinervaria*, who bound their Roads at it, and mark it as a great City.

The *NEMETES* lay N. from the *Tribocci*; and *Cluverius* proves by many Arguments, that *Nemetum*, by some called *Noviomagus*, now *Spires*, was their chief Town.

The *VANGIONES* were by the ancient Germans called *Thi-Wangen*, and their chief Town called *Borbetomagus* by *Ptolomy*; by others, *Borgetomagos*, *Bormitomagus*, and *Bromitomagus*; and by the Romans, *Vormitomagum*, was *Worms*.

The next Town of Note observed here is *Bouconia* or *Bonconia*, now *Oppenheim*, then *Magintiacum*, now *Mentz*, one of the ancientest on this Side the *Rhine*, built, as *Cluverius* thinks, many Years before our Saviour's Birth. He says, it was enlarged and made a Town by *C. Drusus Nero*, but was a Village long before. It was afterwards made the Head Quarter of the Roman Generals in those Parts, who was therefore called *Dux Magentiacensis*.

Next to them lay the *TREVERI*, by some called *Trioviri*, who, according to *Tacitus*, boasted of their being originally Germans, and not sluggish Gauls. Here *Cluverius*

takes Notice of the many gross Errors that Geographers and Historians have been led into by the Account *Caesar* gives in his Commentaries, of the Battle betwixt himself and the Germans at the Confluence of the *Mosa* and the *Rhine*, because they mistook *Mosa* for the *Maese*; whereas it is the *Mozelle* which falls into the *Rhine* at *Coblentz*; Therefore *Cluverius* says, it ought to be read *Mosella*. This he proves from *Florus*, who, speaking of the same Action, says, *Caesar* passed the *Rhine* beyond the *Mosella* on a Bridge of Boats, which he takes to have been writ for *Mosella* by the Mistake of the Transcriber. But however that is, it appears plain from the Thing it self, that it must have been the *Moselle*. The chief Town of those *Treviri* was that called by *Ptolomy* *Augusta Trevirorum*, now *Treves* or *Trier* on the *Moselle*. Some call it *Treveri*, others *Trioviri*. *Tacitus* calls it *Colonia Treverorum*; and *Vespasian's* Coin has it *Colonia Aug. Treveror*; by which 'tis probable, a Colony was settled there by *Augustus*. *Mela*, in the Reign of *Claudius*, calls it *Augusta*, and says, it was the richest Town of all *Belgica*. *Zosimus*, in the Reign of *Constantius*, informs us, 'twas the largest Town on this Side the Alps; and *Ammianus Marcellinus* says, it was the Seat of the Emperors. According to *Cluverius*, the *Treviri* possessed those Countries now called *Lower Wetteraw*, betwixt the *Nava* and the *Moselle*, all the Bishoprick of *Treves*, the Duchy of *Bullew*, the Jurisdiction of *Sedan*, the Land of *Masfere*, the greater Part of the Duchy of *Luxemburg*, and Part of the Bishoprick of *Cologne*. The next remarkable Town of this Country is that which the Romans called *Confluentes*, now *Coblentz*, because the *Moselle* falls into the *Rhine* there; and the last Town of the *Treviri* on the *Rhine* is *Antunnaco*, *Antonaco*, or *Antennacum*, now *Andernach*, where the Romans had a Camp. *Caesar* takes Notice, that the *Treviri* were a very powerful People; that they exceeded all the rest of Gaul in Horse, (for he reckon'd their Country Part of *Gallia Belgica*;) and that they were very strong in Foot. *Mela* says, they were the most famous of the Belgae.

Cluverius, German. Antiq. Lib. 2. Cap. 15. mentions the *Eburones*, *Condrusi*, *Segni*, *Ceraesi*, and *Paemani*, who were the first that

by

by one general Name were called *Germans*, according to *Cæsar*. The greatest Part of the *EBURONES* dwelt betwixt the *Mæse* and the *Rhine*. *Cluverius* fixes their Boundaries thus: They had the *Rhine* on the E. by which they were divided from the *Ubi* above *Cologne*, and from the *Sigambri* below *Cologne*. On the S. they had the *Condrusi*, *Segni*, *Cerafi*, and *Pamani*, from whom he divides them by a Line from *Bonne* to the Confluence of the Rivers *Mæse* and *Urt*; and then from the *Mæse* as far as *Namure*, they were bounded on the W. by the *Aduatici*, as appears by *Cæsar*; from whom *Cluverius* separates 'em by a Line from *Namure* to the Source of the River *Gete*, and then by that River till it fall into the *Demer* above *Diest*. On the N. they had the *Menapii*, from whom they were separated by a Line, that we must suppose to be drawn from the Confluence of the *Gete*, to the Confluence of the *Roer* at *Ordingen* on the *Rhine*: By all which it appears, that the *Eburones* possessed the greatest Part of the Country betwixt the *Rhine* and the *Mæse*, and that the rest of their Boundaries lay betwixt the *Mæse* and the *Gete*; so that their Country contained Part of the County of *Namure* betwixt that City and *Hannaw*; likewise Part of *Brabant*, in which are now the Towns of *Tunen*, *Hannuy*, *Landen*, *Leewe*, and *Hall*, and Part of the Diocese of *Liege*, which lie on the Right of the *Albia* and *Urt*, the greatest Part of the Dutchy of *Limburg* towards the N. the Territory of *Aix la Chapelle*, and the whole Dutchy of *Juliers*, except that Part where the Town of *Brug en* lies towards the N. and that where *Monjou* is towards the S. Here *Cluverius* corrects a Mistake of *Hubert* of *Liege*, who alledges, there was a Town called *Eburra* in the Neighbourhood of *Liege*, where *Ambiorix* had his Palace, and reign'd over all those 5 People; for 'tis plain by *Cæsar*, that he only reign'd over half the *Eburones*, betwixt the *Aduatici* and the *Mæse*; and that *Cativolus* govern'd the rest betwixt the *Mæse* and the *Rhine*. *Ortelius*, in *Theſaur. Geograph.* falls into as great a Mistake, who will have *Eburonia*, mentioned by *Dio*, to be their chief Town; whereas it was their Country. He also refutes the *Annals* of *Liege*, writ by some fabulous Monks, who will have *Ambiorix* to be King of the *Tungri*, since their

Name was not known in his Days. 'Tis plain from *Cæsar*, that the Castle *Atuatica* was the chief Place of the *Eburones*, which *Cluverius* says is that now called *Tongeren*. Upon the whole, *Cluverius* adds, That the *Condrusi*, *Segni*, *Cerafi*, and *Pamani*, who, with the *Eburones*, promis'd 40000 Men against the *Romans*, liv'd betwixt the *Eburones* and *Treviri*, in Part of the Diocese of *Cologne*, where are now the Towns of *Cronenburg*, *Blankenheim*, *Arenberg*, *Hilnen*, *Königsfeld*, *Brisich*, *Zinsich*, *Meckum*, *Rheinbach*, Part of the Dutchy of *Juliers* about *Manstereifel*, *Gemund*, and *Monjou*, Half the Dutchy of *Limburg*, where the Town so called lies, Part of the Dutchy of *Luxemburg* about *Durbuy*, *Marché Rochfort*, *Huy* and *Chinay* in the Diocese of *Liege*, the *Spaw*, famous for its Medicinal Waters, and Half the County of *Namure* on the Right of the *Mæse* about *Dinant*.

N. from the *Eburones* lay the *MENAPII*, who were likewise of *German* Origine, because they liv'd betwixt the *Rhine* and the *Scheld*: For *Pliny* says, the Counties betwixt the Promontory of the *Cimbri* and the *Scheld* were possessed by *Germans*. Their Boundary on the S. was *Diest*: They were separated from the *Auatici* by the *Demer* and *Rupelle* to the Confluence of the *Scheld*; so that they inhabited a great Part of *Brabant* betwixt the *Mæse*, the *Demer*, and the *Scheld* and *Zealand*, Part of the Borders of *Holland* about *Sevenbergen* and *Gertrudenberg*, Part of *Gelderland* and *Cleve* on this Side the *Rhine*, Part of the Diocese of *Cologne* about *Ordingen*, *Nuys*, and *Suns*; and Part of the Dutchy of *Juliers*: But a great deal of their Country being barren, we are not to wonder that, tho' it was large, they offer'd no more than 17000 Men against the *Romans*; whereas lesser Countries, that were better inhabited, offer'd greater Numbers.

Cluverius is of Opinion, That the *AMBI- VARITI*, mention'd by *Cæsar* and others, who by some are placed about *Antwerp*, from whence they would derive its Name, are the same with the *Aduatici*, but their Name mistaken by Copiers. 'Tis plain from *Cæsar's* Commentaries, that the Borders of the *Menapii* were full of Woods and Marshes. The Woods he takes to be Part of that called the Forrest of *Arduenna*, and the Marshes to be those on the Confines of *Gelderland*.

derland and Brabant, commonly called the *Peelo*. He corrects *Strabo's* Mistake, who thought they were near *Drusus's* Ditch on the River *Iffel*; for that Part of the Country was possessed by the *Batavi*. He likewise corrects the Error of a Dutch Geographer, who, by mistaking *Strabo*, places *Amsterdam* in the Country of the *Menapii*.

The U B I I.

IN *Cæsar's* Time, they liv'd beyond the *Rhine*; but in *Augustus's* Reign, they were brought to this Side, and inhabited that Country betwixt *Mentz* and *Cologne*. 'Tis not very clear for what Reasons they were transported; but *Cluverius* thinks, that being subdued by the *Romans*, they at last took them into their Friendship, because they were a mighty and a flourishing Nation, and transported them for the Defence of their Dominions on this Side, and to deliver them from the Incursions of the *Suevi*, the most powerful People of *Germany*, with whom they had constant War. Their Boundaries were the *Rhine* on the E. On the N. a Line from the Mouths of the *Roer* and *Maeſe* to the *Rhine*, and the Town of *Ordingen*. On the W. the *Roer*, from its Mouth to the Town called *Niderheimbach*; from thence a Line to the Town of *Kerpent*; and on the S. the River *Obrinwa*, by which they were separated from the *Treveri*, as by the Boundaries above-mentioned they were from the *Menapii* and *Eburones*, into Part of whose Dominions they were transported; so that they possessed most of the Bishoprick of *Cologne*, and of the Dutchy of *Juliers* on the Right Side of the *Roer*. Their chief Town was that called *Ubiurum Oppidum*, now *Co'ogne*, which *Cluverius* thinks was built in the Time of *Augustus*, 35 Years before our Saviour's Birth, and called *Colonia Agrippinensis*, from *Julia Agrippina*, Daughter to *Germanicus*, and Wife to *Claudius*, about 15 Years after our Saviour's Birth. She planted a Colony, and settled *Veterans* there; and though they were *Germans*, having put themselves under the Protection of the *Romans*, they chose the Name of *Agrippinensis*, according to *Tacitus*. Their next Town for Antiquity and Note was that called *Ara Ubiurum*, which *Cluverius*

proves to be *Bonn*. The Reason of the Name he knows not; but rejects their Opinion, who, from a Coin of *Augustus*, think it was called *Julia Bonna*; for he looks upon that Coin to be counterfeit. Their other Towns were, *Novesium*, now *Nuys*; *Durnomagus* and *Burnungum*, now *Darfmagen* and *Wuringen*; *Gelduba*, now *Gelder*; *Juliacum*, now *Juliers*; *Tiberiacum*, now *Berchem*.

The G U G E R N I,

BEFORE they came on this Side the *Rhine*, were called *Sicambri*; and when they were transported, possessed great Part of that now called the Dutchy of *Cleve*, Part of the Dutchy of *Gelder* beyond the *Maeſe*, and of the Dutchy of *Juliers* about *Brugge*. *Cluverius* thinks, they came hither in the Time of *Augustus*, because *Sueton* says, that he brought over the *Suevi* and *Sicambri*, who submitted to him, and planted them on the next Banks of the *Rhine* about the 35th Year of his Reign, and 8 before our Saviour's Birth. The oldest Place mentioned in their Country by *Tacitus*, is that called *Vetera Castra*, which, by *Antonin's Itinerary*, *Cluverius* takes to be *Santen* in the Dutchy of *Cleve*. The next Town is *Calonem*, now the Village of *Kalenhusen*, two Miles below *Ordingen*; so that *Simler* was mistaken, in saying it was *Gelder*; and *Lazius* yet more, who would have it to be *Cleve*, since the contrary appears from the *Itinerary*. *Ascburgium*, mention'd by *Tacitus*, is a small Village now called *Asburg*, betwixt *Nuys* and *Santen*. *Colonia Trajana* he takes to be *Kellen*, within a Mile of *Cleve*, and not *Keiſerſward*, as *Ortelius* would have it: And he thinks, from the Ruins of this Colony, the Town of *Cleve* in the Neighbourhood had its Original, which seems to be plain from the *Itinerary*.

The S U N I C I,

BEFORE they came over the *Rhine*, were called *Chatti*; and *Cluverius* thinks, they were transported much about the same time with the *Gugerni* into the Country betwixt the *Maeſe* and the *Roer*. The noted Places in their Country, mentioned by the An-

Ancients, are *Theudurum*, now *Tudder*, in the Dutchy of *Juliers*. *Coriovallum*, now *Falkenburg*, betwixt *Tongerren* and *Cologne*.

The TUNGRI

WERE at first divided into the *Eburones*, *Condrusi*, *Segni*, *Cerafi*, and *Pannani*, spoke of before; but afterwards call'd by the common Name of *Germani*. There's much Debate among the Learned about that Place of *Tacitus*, where he says, *That the Name of Germany was New, and given to those who first passed the Rhine, drove out the Gauls, and were sometimes called Tungri, and sometimes Germani*; but in the Copy printed at *Bamberg* and *Bononia* in 1472, 'tis said, *They are now called Tungri, but then Germani*; so that the Name of the Nation, but not of the People, began to gain Ground by degrees, and they were all called by the new Name at first by the Victor or Conqueror out of Fear, and then by themselves. *Cluverius*, after a Learned Dissertation upon this Period, which has so much puzzled Interpreters, rejects the Amendments and Commentaries of *Lipsius* and others, and says, it ought to be read thus; *Ut omnes primum Victores à victis ob metum; mox à seipsis invento nomine vocarentur*; i. e. That all the Conquerors, when they had expelled the *Gauls*, were out of Fear by those *Gauls* called *Germani*; but afterwards, by a new invented Name, they called themselves *Tungri*. Here he observes, That the Name of *Germanus* was older than that of the *Tungri*, and mentioned by *Cæsar*, who takes no Notice of the latter; and 'tis probable, that he learn'd this Name of *Germanus* from the *Gauls*; whereas the *Germani* called themselves in general *Teutisci*: So that *Tacitus's* Meaning is, That the Name *Germani* was neither the ancient nor the true Name of the People beyond the *Rhine*, but was given them by the *Gauls*, when that Part of them, afterwards called the *Tungri*, passed the *Rhine*. Therefore *Cluverius* rejects the Opinion of *Strabo*, who thinks, this Name was given them as if they had been *Germani* or Brothers to the *Gauls*, because they were like them in Fierceness, S stature and Complexion, and derives the Name from the ancient *German* Words

War and *Man*, importing that they were a Warlike People, as the *Gauls* found to their Cost; but because they could not pronounce the *W*, they chang'd it into a *G*, and so pronounc'd it *German*. He adds, That the *Tungri*, after they had this new Name, and were form'd into a new Community, possessed the same Countries as they did when called by the 5 distinct Names formerly mentioned, until they were mix'd with the other People that were afterwards brought over the *Rhine*, as we just now heard, and were obliged by the *Romans* to give Way to them. Their chief Town was *Tongerren*, as has been already said, which was second in Dignity to *Cologne*, as appears by *Marcellinus*.

The ADUATICI,

AFTERWARDS called *Bethasii*, border'd upon the *Menapii*, and are said by *Cæsar* to be of German Extract: They were the same with those called *Aduatici*; and *Cluverius* thinks, they derived their Name from the German Word *Afwack*, which signifies to take off or diminish, as they did the Dominions of their Neighbours when they seized them. He fixes their Boundaries thus; On the E. they had the *Eburones*, and extended in a Line from *Namure* to the Fountains of the *Gete*, and from thence along the River till it fall into the *Demer*. On the N. they had the *Menapii*, and the Rivers *Demer* and *Rupel*, till they fall into the *Scheld*. On the W. the *Scheld* to the Mouth of the *Dender*, from thence the *Dender* as far as *Aeth*; and from hence on the S. a Line to the *Sambre*, and the Town called *Fontaines*, which now contain a great Part of *Brabant* betwixt the *Gete*, *Demer*, and *Dender*, Part of *Flanders* as far as *Dendermond*, Part of *Hainault* about *Engghien*, *Hall*, *Soignies*, *Braine le Comte*, &c. and Part of the County of *Namure* on the Left of the *Sambre*. *Cæsar* says, they had many Towns and Castles, and mentions one Town he took from them which had 53000 People in it, and was very well fortified by Nature, being surrounded by high Rocks, and had but one Passage to it of about 200 Foot broad; but *Cluverius* owns, he cannot find where

where it stood, nor why these People were afterwards called *Bethasii*. He finds two Towns mentioned in their Country, *viz.* *Geminia-cum*, now *Gemblours*; and *Pervicia-cum*, now *Pervus*.

The NERVII

HAD the *Bethasii* on the N. and are called *Germans* by *Strabo*. *Cluverius* says, their Boundaries were from the *Maese* and the Monastery of *Dellain* to the Town of *Permins*, from the Fountains of the *Sambre* to *Crevencour* on the *Scheld*. On the W. they had the *Scheld* as far as *Cambray*, and from thence they extended as far as the Mouth of the *Scarp*; so that they possessed Part of the County of *Namure* betwixt the *Maese* and the *Sambre* with *Namure* it self; the Country called *Lower Burgundy* betwixt those Rivers, the greatest Part of *Hainault*, Part of *Picardy*, and the Town of *Cambray*, with Part of that Diocese. Their chief Town was *Bagacum*, now *Bavay* in *Hainault*.

The Centrones, Grudii, Levaci, Pleumosii, and Gorduni, all afterwards called Sueconi.

THEY were, according to *Cluverius*, of German Original, subject to the *Nervii*, and liv'd in that Part of *Flanders* where are now the Towns of *Armentiers*, *Lisle*, *Tournay*, *Andenard*, Part of the Towns of *Aelft* and *Ghent*, and Part of *Hainault* betwixt *Aeth* and the *Scheld*. They are mentioned by no Author after *Cesar*, nor are any of their Towns mentioned by *Antonin* and the *Notitia Imperii*, but *Twinnacum* or *Tornacum*, now *Tournay*.

The Toxandri, or Taxandri.

CLUVERIUS says, they were *Germans*, and inhabited the Country now called *Zealand*. He maintains this by many Arguments against *Ortelius*, and the other Dutch Geographer formerly mention'd; and thinks it plain, because *Pliny* says, the *Tox-*

andri inhabited the Places beyond the *Scheld*. *Cluverius* fixes their Boundaries thus: On the W. they had the Ocean; On the N. the old Channel of the *Maese*, by which they were separated from the *Bethasii*; And on the E. and S. the Rivers and Currents of the Sea, by which they were separated from the Continent. He thinks from *Cesar's* saying, That the People hid themselves in those Islands, *Quas Estus effigere consueverunt*; that *Zealand* was formerly join'd to the Continent, but separated from it by the Tides. He observes, That the Roman Authors mention no Towns in those Islands, because they had none in their Time; for *Middleburg* and *Flushing* were built long after.

The BATAVI

LA Y N. from the *Toxandri* and *Mena-pii*, in that Part of the Country towards the W. and E. where the Sea and the Rhine end the Boundary of *Gallia Belgica*. *Cluverius* says, the *Batavi* were the noblest and the stoutest of all the *Germans* on this Side the *Rhine*; and that the Learned are very much divided about the Place where they liv'd, wherein the *Netherlanders* and the *Hollanders* themselves have been much mistaken. As to their Origin, *Pliny* and *Tacitus* say, they were *Germans*, and the latter derives 'em from the *Catti*, being driven from home by a Domestick Sedition. When this happened, is not certain, no more than the Reason of their Name. *Dio* thinks, 'tis derived from the Island *Batava* or *Batavia* on the *Rhine*, now called the *Betuwe*. The Situation of this Island, according to *Zosimus*, was from the Division of the *Rhine* to the Sea. *Tacitus* says, the *Rhine* continues in one Channel, except that it makes some small Islands, till it come to the beginning of the Country of the *Batavi*, where 'tis divided into two; but keeps its Name and its rapid Course in that which is next to *Germany*, till it fall into the Ocean; but that which is next to *France* is broader, runs more slow, changes its Name into the *Vohalis*, and a little after into that of the *Maese*, and falls with it into the Sea by a vast Mouth. This makes it plain, that the Island of the *Batavi* begins not far from
Cleve,

Cluv. at the Port commonly called *Schem-
kistshans*; and that *Tacitus's* Description is
more exact than that of *Cæsar*. The Length
of this Island, to the Village called *Grave-
sande* at the Mouth of the *Maese*, is 83 Miles.
He takes Notice of *Strabo's* Mistake, who
said, That the Foreland of *Kent* might be
seen from the Mouth of the *Rhine*; and of
those who would support his Authority, by
alleging, That a great Part of the Coun-
try has been overflowed since that Time,
which must be no less than 40 Miles, if it
be allowed that *Cæsar* measured the Length
of the Island from the Confluence of the
Maese and the *Vahalis*; and yet even in that
Case, it had been impossible to see *Kent* from
the Mouth of the *Rhine*; so that *Strabo's*
Mistake proceeded from his apprehending
that *Itium* or *Gesoriacum*, from whence Ships
us'd to sail from *France* to *Britain*, was near
the Mouth of the *Rhine*. Besides, 'tis
plain, that the Islands on the Coast of
Friesland are the same as they were in *Aug-
ustus's* Age; so that 'tis no way probable
that so much of the Country has been over-
flowed at the Mouth of the *Rhine*. *Clu-
verius* in the next place takes Notice of both
Sides of the Island of the *Batavi*, of which
the one is bounded by the *Vahalis* and the
Mouth of the *Maese*, and the other by the
middle Channel of the *Rhine*; and on this
Occasion describes the old Channels of those
Rivers, and how they came to be chang'd
by Inundations, &c. He afterwards con-
futes the Mistake of those who extend the
Island of the *Batavi* to the River *Iffel*, and
the Lake *Flevis*; and then gives an Account
of the Land possessed by the *Batavi* be-
twixt the *Vahalis* and the *Maese*, and of the
People called *Caninefates*, who inhabited Part
of the Island of the *Batavi*. He thinks
them to be of the same Origine, and that
they came thither much about the same
Time. He afterwards proves against *Ju-
nius*, that the *Batavi*, tho' of German Ex-
tract, were reckon'd to belong to *Gallia Bel-
gica*; and that the middle Channel of the
Rhine was the Boundary between *Germany*
and *Gaul*. Their remarkable Places were,
that called *Bataworum Oppidum*, now *Baten-
burg*; according to *Cluverius*, *Noviomagum*,
now *Nimmeguen*, first mentioned by *Antonin*,
and the *Tabula Itineraria*; *Arenacum*, now

Arnhem; *Batawodurum*, now *Duerstede*; *Gri-
nes*, now *Rhinén*; *Vada*, now *Wageningen*.
But he thinks all of them, except *Batawo-
durum*, have chang'd their Situation to the
other Side of the River.

Cluverius having thus accounted for the
Germans who dwell on this Side the *Rhine*,
and their Boundaries; he tells us, that this
Country was divided into *Germania Superior*
and *Inferior*, afterwards called *Germania Pri-
ma* and *Secunda*; and the Inhabitants of both
are called sometimes *Germans*, and some-
times *Gauls*, by the *Roman* Authors, which
is plain both in *Cæsar* and *Tacitus*.

He comes next to treat of their Woods,
Mountains and Rivers. The Forrest of *Ar-
duenna* is frequently mentioned by *Cæsar*
and others. In the Sixth Book of his Com-
mentaries, he says, 'tis above 500 Miles in
Length; but this does not agree with the
Boundaries he assigns it betwixt the *Rhine*
and the *Maese*, from the middle Borders of
the *Treviri* to the Confines of the *Rhemi*,
which *Cluverius* says is not above 120
Miles. He takes Notice, that *Cæsar* after-
wards extends it further to the *Scheld*, and
the Borders of the *Morini*; from which to
Coblentz, and the utmost Boundaries of the
Treviri, is about 160 Miles. *Strabo* makes
it much longer and broader; for he says, it
reach'd in Length from the Borders of the
Treviri as far as the *Arrebatæ* and the *British*
Ocean, and in Breadth as far as *Zealand* and
the *German Ocean*; but *Cluverius* corrects
both their Mistakes, and says, that from E.
to W. from *Coblentz* to the *British Ocean*, it
was 240 Miles in Length; and the Breadth
from S. to N. from the Borders of the *Me-
diomatrici* to that Branch of the *Rhine* called
the *Vahalis*, is 150. He says, there were
many Remains of it in his own Time, espe-
cially in *Wetteravia*, the Bishopricks of
Treves and *Liege*, the Dutchy of *Luxemburg*,
and on this Side the *Maese*; and that in part
it retained its old Name, being called *L'Ar-
denne* by the *Picards* and *Walloons*; and he
observes, that among the old Geographers
and Historians, it pass'd by different Names,
according to the several Countries through
which it went.

He gives us an Account next of the For-
rest *Vosega* or *Vasaga*, and of the Mountain
Vosego, from whence it had its Name: It

lay S. from *Ardennum*, and reached from the Fountain of the *Maese* to beyond *Strasbourg*. He thinks the Country called *Wosgam* in Germany has its Name from it. Part of the Ridge of Mountains on which it lay, and separate *Burgundy* from *Lorraine*, are now called the Mountains of *Burgundy*. The remarkable Rivers taken Notice of by the Ancients, who treat of Germany on this Side the *Rhine*, are, the *Rhine* it self; *Hellanus*, now the *Ill*, which runs through *Alsace*;

Nemus, now the *Nube*; *Mosella*, now the *Moselle*; *Sura*, now the *Saar*; *Pruen*, now the *Pruin*; *Nomesa*, now the *Niems*; and *Alisonia*, now *Alstz*; *Gelbia*, now the *Kiel*; *Lesura*, now the *Lesur*; *Salmona*, now the *Salm*; *Drachonus*, now the *Train*; *Erubrus* or *Erubris*, now the *Rober*; *Savratius*, now the *Saar*; *Abrinca*, now the *Are*; *Mosa*, now the *Maese*, into which on the Left Side falls *Sabis*, now the *Sambre*. The last of them is *Scaldes* or *Scaldis*, now the *Scheld*.

CHAP. XXV.

Ancient GERMANY beyond the Rhine.

Cluverius, German. *Antiq. Lib. 3.* comes next to describe that which the Romans called *Germania Transiberana*, which he says was the Mother of all the German Nations. The ancient Authors which give any Light into this Matter, are, *Strabo*, *Pliny*, *Tacitus*, and *Ptolomy*. He observes, the two former are very confus'd; therefore he chuses rather to follow the latter, especially *Tacitus*, who divides Germany into 3 Principal Parts. The first is that which lies betwixt the Rivers *Rhine*, *Sale*, and *Elb*, the German Ocean, and the East Sea, which he calls *Mare Suevicum*. The 2d is betwixt the *Sale*, the *Elb*, the *Weissel*, the *Danube*, and the North Sea; all which he calls by the Name of *Suevia*. The 3d is beyond the *Weissel* and the *Baltick*, to the Borders of the *Sarmatae*. Cluverius follows his Order, for the better understanding of his Book, which, as was said before, is much the best Account that any of the Ancients gave of Germany.

The HELVETII.

TAcitus and Dio say, That the *Helvetii*, a People of *Gaul*, did formerly inhabit that Part of Germany betwixt the *Harcinian* Forrest, the *Rhine*, and the *Main*; and that the further Parts were possess'd by the *Boii*, who were likewise *Gauls*; so that Cluverius says, the *Helvetii* had the *Rhine* on the W. the *Main* on the N. the Mountains and Woods of *Bohemia* on the E. and the *Danube* on the S. *Ptolomy* mentions the Desert of the *Helvetii* about the Fountains of the *Neckar* and *Danube*. The Time when they came into Germany, *Livy* tells us was about the 150th Year of *Rome*, which is 600 before our Saviour's Birth. Cluverius observes, That the *Alpium Jugo*, mention'd by *Ptolomy*, near which the *Helvetian* Desert lay, is not the *Alps*, properly so call'd, but those Mountains which lie E of the Fountains of the said Rivers. 'Tis not certain how long the *Helvetians* kept that Country,

try, nor who expelled them; but he thinks it was the following People.

The Marcomanni, Sedusii, and Harudes.

Cluverius says, they first possessed the Banks of the Rhine, and afterwards, according to *Velleius Paterculus*, remov'd to Bohemia, under the Conduct of their Prince *Maroboduus*. He thinks, the Marcomanni inhabited first the Dutchy of Wirtemberg, that Part of the Palatinate betwixt the Neckar and the Rhine, Brissgaw, and that Part of the Dutchy of Swabia betwixt the Fountains of the Danube and the Town of Gundelfing: That the Sedusii liv'd betwixt the Cokar, and the Neckar on the S. the Rhine on the W. the Main on the N. as far as Bamberg, &c. and in Part of the Palatinate and Franconia; and the Harudes dwelt in the upper Parts of the Palatinate and Franconia; the Country of Nuremberg, and Part of Swabia. *Aridovistus* was King of all those People, and defeated by *Cæsar* before *Maroboduus's* Time.

The Gauls who possessed the Agri-Decumani, betwixt the Rhine and the Danube, and afterwards called Alemanni, and Alamanni.

Tacitus says, the poorest and boldest of the Gauls passed the Rhine, and possessed those Lands which *Cluverius* thinks to be the same where the Marcomanni, &c. dwelt, before they removed to Bohemia; but does not agree with *Lippius*, that those Lands were called Decumani, because they were obliged to pay the Tenth of the Profits; yet he gives no Reason why they were so call'd himself, tho' it be plain, that the Romans did lay such a Tribute upon their People, and perhaps might have demanded it of the Marcomanni, &c. before they removed under *Maroboduus*, who, as *Velleius Paterculus* says, carried off his People at a great Distance from the Romans, because they were more powerful in Arms. As to

the *Alamanni*, *Papiscus* and *Eustathius* distinguish them from the Germans; but make them their Neighbours; and *Cluverius* is of Opinion, that *Tacitus* gives a very good Reason for the Name, when he says, *Levis-simus quisque Gallorum, & inopia audax, dubia possessionis solum occupare*. By which it appears, they were not any one sort of the Gauls, but a Mixture of the poorest and boldest People of that Name, who seiz'd those Lands, and therefore were called *Alemanni* by the Germans, as if they would say they were a Mixture of all sorts of People: And since *Strabo* mentions the *Alemanni* from *Assinus Quadratus*, who liv'd much about the Time of this Transmigration, 'tis a strong Presumption, that these were the People who were first called by that Name. This happened about 15 Years before our Saviour's Birth, and in Process of Time they came to be accounted real Germans. This then, says *Cluverius*, is the ancient *Alemannia*, and these the old *Alemanni*, who being subject at first to the Romans, turn'd afterwards their fiercest Enemies, and join'd with the rest of the Germans to recover their Liberty.

The Catti, Chatti, Chasli, and Hassli, falsely called by Cæsar, and the Authors of that Time, Suevi.

Cluverius proves by many Arguments, that *Cæsar* mistook in calling those People by that Name. His chief Reasons are from their Situation, as being Neighbours to the *Ubi*; whereas *Tacitus* places the Suevi on the *Weissel*, the Danube, and the Borders of the *Sarmata*, as we heard before; and the Catti are placed afterwards in the Time of *Augustus*, *Tiberius*, &c. in the same Part of the Country where *Cæsar* places his Suevi. It likewise appears, that the Catti were one of the greatest and most Warlike People in Germany, from the Character that *Tacitus* gives of them. Upon the whole, *Cluverius* assigns the ancient Catti, the Country now called *Thuringia*, all *Hesse*, the whole Dutchy of *Grubbenhag*, half the Bishoprick of *Paderborn*, which lies upon the *Weisser*, the Abbey of *Fulda*,

and Part of the Dutchies of *Francia* and *Coburg*. He easily accounts for the Change of the Name of *Chatti* into *Hassi* and *Hassen*, by the several Dialects of the German Tongue. The chief Town of *Hesse*, now called *Hesse-Cassel*, he takes to be the ancient *Casselum Chattorum*, one of those built by *Drusus Germanicus*, on the Left Bank of the *Fulda*.

The UBI I

WERE Neighbours to the *Catti*, as appears from what is said above; and before they were drove over the *Rhine* by them, possessed the Countries now called *Wetteraw* and *Westerwald*, with that Part of *Hesse* where now lie the Towns of *Marpurg* and *Gießen*. They were allow'd to fix themselves in the Diocese of *Cologne* by *Augustus*, 37 Years before our Saviour's Birth.

The MATTIACI.

Cluverius takes Notice, That this People are said by some modern Geographers to have inhabited *Zaaland* and the neighbouring Isles, and others place them upon the River *Issel*; but he shows their Mistake from *Tacitus*, who says, the *Mattiaci* liv'd beyond the *Rhine*. He adds, That they were Part of the *Catti*; and that the *Mattium Cattorum*, mention'd by *Tacitus* and *Pliny* to be beyond the *Rhine*, is now *Marpurg* in *Hesse*, *quasi* *Matburg*; so that their Country was *Wetteravia*, and Part of *Hesse*. This appears yet more plain from the *Aque Mattiaca*, and Warm Baths, mention'd to be beyond the *Rhine* by *Tacitus*, now called *Wishaden*, in the Country of *Hesse*, not far from *Marpurg*: And *Cluverius* thinks, the *Eucinobantes*, mentioned by *Marcellinus* to lie over against *Mantz*, had their Name from *Wishaden*, it being usual for the Romans to change the German *W* into *B*, and to give Latin Inflections to German Words.

The JUHONES.

THEY are mentioned by *Tacitus* in his Annals on a remarkable Occasion, viz. That a Fire broke out from the Ground,

and destroyed great Part of their Country. *Cluverius* refutes those who would place them in *West-Friesland*, or about *Huy* on the *Maeſe*; for it appears, that they were Neighbours to the *Catti*, and probably Part of them, but had submitted to the Romans when *Tacitus* wrote. Their Country, he says, was half the S. Part of the Dutchy of *Bergen*, and that now called *Westerwald*.

The SIGAMBRI.

Cæsar says, they lay N. of the *Ubi*: They are sometimes called *Sicambri*, and *Sugambri*. *Cluverius* takes Notice of *Strabo's* Mistake, in extending their Country to the Ocean, and assigns their Boundaries thus; That they dwelt in a Line from the Division of the *Rhine* at *Schenken-shaus*, to the Fountain of the River *Bercola*, and in another from thence to the River *Luppia*, as far as the Town called *Lamen*, and from thence to the Head of that River; so that their Country was a great Part of *Westphalia* betwixt the River *Luppia* and the Borders of *Hesse*, half the Dutchy of *Bergen*, all the County of *Mark*, and that Part of *Globo* which lay beyond the *Rhine*. Their chief Places taken Notice of by Roman Authors, are, *Castellum Aliso*, which *Cluverius* says is the Village now called *Elſen*; and *Luppia*, now *Lippe*.

The Tencteri, Uſipites, or Uſipii.

Cluverius says, they succeeded the *Sigambri*, being expelled by the *Catti*, as *Cæsar* informs us, and were received by the *Sigambri*, who removed afterwards to the other Side the *Rhine*; but the *Tencteri*, &c. submitted to the Romans.

The Marſi and Marſaci, or Marſatii.

THEY had the *Sigambri* on the N. and *Cluverius* says, liv'd in that Part of *Westphalia* which lies betwixt the Towns of *Münſter* and *Paderborn*, in the Time of *Augustus* and *Tiberius*. They assisted in destroying

ing *Varus's* Legions, for which they were afterwards invaded by *Tiberius*, who laid waſt their Country, with the famous Temple of *Tanſana*, at that Time the moſt noted in thoſe Parts of *Germany*. *Cluverius* thinks, the *Marſci* were Part of the *Marſi*, but ſtaid in the Country when the reſt fled before the *Romans*. The *Marſi* were one of the moſt conſiderable and ancient of the *German* Nations; and upon their retiring before the *Romans*, extended their Limits from *Coeſfeld* Southward to the *Rhine*, where the *Vahalis* ſeparates from it, and along the *Rhine* to *Batavodurum*, now *Durſede*; then Weſtward to *Hattem*, and from thence Eaſtward to *Bercola*, where it falls into the *Iſſel*, and along *Bercola* to *Coeſfeld*.

The TUBANTES.

They were a ſmall People, and therefore ſeldom mentioned by the Ancients. *Cluverius* corrects their Miſtake who place them in that Part of *Over-Iſſel* called *Twente*, and rather thinks they liv'd in that Part of the Country now called *Benthem*.

The BRUCTERI

Were Neighbours to the *Marſi* and *Tencteri*, according to *Tacitus*. *Cluverius* thinks they inhabited the Countries of *Zutphen* and *Benthem*, *Saland* and *Twente*, Part of *Drent*, and of the Dutchy of *Clève*, and ſome Part of *Weſtphalia*. Moſt of 'em were deſtroyed by the *Romans* under *Trajan*; but the Remainders of 'em recover'd, and grew formidable to the *Romans*. *Cluverius* is not poſitive where they inhabited then, but thinks it was in the *Wetteram*.

The Chamavi and Angrivarii.

They are mentioned by *Tacitus* in the Reign of *Nero*, before *Cæſar's* Expedition into *Gaul*: They liv'd on the Bank of the *Rhine*, and in *Tacitus's* Time did, together with the *Angrivarii*, poſſeſs the Country of the *Bructeri*. The *Angrivarii* aſſiſted *Arminius* in his famous Battle againſt *Cæſar*, which *Cluverius* thinks was betwixt *Minden*

and *Oldendorp*, and that their Country was Part of the County *Schwemburg* on the Right of the *Weſer*, half the S. Part of the Biſhoprick of *Minden*, the greateſt Part of the Biſhoprick of *Oſnabrug*, the N. Part of the County of *Tekelburg*, and Part of the County of *Ravensberg* about the Caſtle of *Lemburg*. He likewiſe thinks, that Part of them reached into the old Dominions of the *Tubantes*, as far as the Town called *Engeren*, which he thinks keeps ſome Remembrance of their Name. He is of Opinion, that the *Chamavi* liv'd betwixt the Rivers *Loeda* and *Ems*, and Part of the County of *Lingen*, and the N. Part of the Biſhoprick of *Oſnabrug*.

The Dulgibini or Dulgumnii, and the Chaſvari or Caſſavarii, Chattuarii, and Cattuarii.

They are mentioned by *Tacitus*. *Cluverius* thinks, they liv'd in Part of the Country of *Lemgow*, and that the Limits of both theſe People were, on the S. the Confluence of the *Weſer* near *Remen*, and then a Line from the Town of *Abbe* to *Bentlage* and the *Ems*; on the W. the Confluence of the *Ems* and *Loeda*; on the E. the *Loeda* to the Head of that River, and a Line from thence to *Remen*. *Cluverius* thinks they were in the Battle againſt *Varus*, being then Subjects to the *Cheruſci*.

The Anſibarii, Ampſibarii, or Amſivarii.

They are mentioned by *Tacitus* to have been expelled by the *Chauci*, and to have removed near the *Rhine*; and that their ancient Country was half the N. Part of the Biſhoprick of *Minden*, the Country of *Deephole*, moſt of the County of *Hoy* on the Left of the *Weſer*, and the little Country called *Stading*. When they were drove out by the *Chauci*, they ſeized the Country formerly poſſeſſed by the *Wifſi*, and ſubmitted to the *Romans*; but demanding more Land from them to inhabit, it was deny'd them; upon which they rebell'd, and moſt of them were cut off. On this Occaſion,

Taci-

Tacitus mentions a noble Saying of their General *Bojocalus*, who had serv'd long under the *Romans*, and deserv'd better Treatment, That if they would not allow them a Place to live in, they could not refuse them a Place to die in; and joining Battle, was defeated. The Remainders of them are mentioned afterwards with great Fame. *Cluverius* thinks they succeeded the *Angri-varii* and *Dulgibini* in their Possessions.

The FRISI.

They are mentioned by *Tacitus* as a great People, divided into *Majores* and *Minores*. They were bounded by the *Batavi* on the S. by the *Marsi* on the N. E. by the *Ems* on the S. E. and by the Ocean on the W. and N. so that they possessed the greatest Part of *Holland*, and the Province of *Utrecht*. *Cluverius* says, half the Towns of *Leiden*, *Woerden*, and *Utrecht*, are in the ancient Country of the *Frissi*, as is Part of *Gelderland* about *Harderwick* and *Elburg*, Part of *Over-Isel* about *Campen*, &c. and all *West-Friesland* as far as the *Ems*: And hence it comes, that *North-Holland* goes still under the Name of *Friesland*, and the Towns there carry the Arms of that Country. *Cluverius* thinks, that the *Frissi Majores* liv'd in the E. Part of the Country, and the *Minores* in the W. and that the Boundary betwixt them was the River *Vesla*, which falls into the *Suyder Sea*. On this Occasion *Cluverius* takes Notice of the *Fossa Drusiana*, so famous in History, now call'd *Drusus's Ditch*. The Reason why he dug it, was, That he might thereby bring his Fleet with his Army from the upper Part of the *Rhine* into the Lake and Ocean, to attack the *Frissi* and *Cauchi*, as we are inform'd by *Tacitus*. *Cluverius* corrects *Suetonius* here, for calling this Ditch a new and vast Work in the Time of *Germanicus*, since it was begun by his Father *Drusus*, and reached only 8 Miles, viz. from the Village of *Iseloort* to the Town of *Doerburg*. For our Author's Learned Dissertation on this Ditch, the several Channels of the *Rhine*, and the Lake *Flevo*, &c. with the Corrections of Geographers on that Head, we refer to the Book it self.

The Chaufsi, Cauchi, and Cauci.

Tacitus says, they border'd on the *Frissi*, liv'd along the Coast, and were bounded by several other People. *Cluverius* says, they possessed the Bishoprick of *Bremen*, *East-Friesland*, the Counties of *Oudenburg*, *Delmenhorst*, *Diepholt*, and *Hoy*, on this Side the *Weisser*, with the North Part of the Bishoprick of *Minden*. They were divided into *Majores* and *Minores* by *Pliny*. *Ptolomy* says, the *Minores* liv'd betwixt the *Ems* and the *Weisser*, and the *Majores* betwixt that River and the *Elb*; and *Tacitus* the quite contrary, which *Cluverius* approves. *Tacitus* says, they were a very great and valiant People. Here *Cluverius* corrects *Paterculus's* Mistake in extolling *Tiberius's* Expedition too much, and alledging, that he carried his Fleet 400 Miles from the *Rhine* to the *Elb*, up almost to its Fountains, which, if it were true, is no more than 300 Miles, and the greatest Distance between the *Rhine* and the *Elb* is no more than 240; so that he thinks *Tiberius's* Fleet came no further than the Town of *Stade*: So that if *Tiberius* marched 400 Miles, he must have taken vast Circuits, which *Strabo* and others not observing, make Countries much larger than they are; for if one go the nearest Way by Land from the *Rhine* to the *Elb*, 'tis not above 180 Miles.

The Cherusci, and their Dependants, the Campsani, Cathulci, or Cathulcones.

Tacitus says, they lay N. E. from the *Chaufsi*, were a great and valiant People, and join'd with *Arminius* against the *Romans*. *Cluverius* says, they possessed all the Bishoprick of *Erden*, the Dutchies of *Lunenber*g and *Brunswick*, the two Bishopricks of *Hildesheim* and *Halberstat*, the County of *Schonenberg*, that Part of the Bishoprick of *Magdeburg* on this Side the *Elb*, the Old Mark, the County of *Daneberg*, and Part of the Duchy of *Lauenberg* on this Side the *Elb*.
The

The remarkable Places in this Country mentioned by Roman Authors, are, the *Teutoburgiensis Saltus*, and *Tentoburgium*, now *Dietmelle*, near which *Varus* and his Army were surpris'd and cut off; *Mons Melibocus*, now *Der Harz*; *Silva Herculi Sacra*, now the Wood betwixt *Minde-Strathagen* and *Bokenburg*. The *Compsani* particularly liv'd betwixt *Brunswick* and *Wernigeroe*; the *Cathulones* betwixt the Towns of *Lunenburg* and *Daneburg*.

The Franci, and Francia.

Cluverius, before he come to describe the German Nations beyond the *Elb*, thinks it proper to give an Account of the *Franci* and *Francia*, and produces very good Authorities to prove, that most of those People already mentioned to have liv'd betwixt the *Rhine* and the *Elb* towards the Ocean, were afterwards called by the general Name of *Franci*. 'Tis plain from *Gregory of Tours*, *Lib. 1. Cap. 9.* that the *Bructeri*, *Chamarvi*, *Ansvarii*, and *Chatti*, were by *Sulpitius Alexander* call'd *Franci*; and in the *Tabula Itineraria*, the *Chanci*, *Amptvarii*, *Cherusci*, and *Chamarvi*, are call'd *Franci*, and their Country *Francia*. It appears also by *Claudian*, that that Part of Germany betwixt the *Rhine* and the *Elb* was call'd *Francia*, and the People *Franci*. The Boundaries of this Country were, on the W. the *Rhine* and the Ocean; on the N. the Ocean; on the E. the *Elb* and *Sala*; but their Boundaries on the S. and how they were divided from the *Alemanni*, are not so plain. *Freherus* is of Opinion, that the Boundary betwixt *Francia* and *Suevia*, in the Emperor *Gratian's* Time, was the *Neckar*; but *Cluverius* corrects his Mistake, and proves it to have been the River *Lone*, and the Mountains call'd *Fogelsberg*.

He comes next to enquire into the Reason of the Name, and thinks it proceeded from their uniting together against the *Romans*, in order to recover their Liberty, according to the Example of *Alemanni*, formerly mentioned; and that the Word *Franci* signifies *Free*. The Remembrance of the Name is still continued in Germany beyond the *Main*, where the People are called *Franken*,

which signifies *Freemän*, and the Country *Frankenlant* or *Franconia*. They have still a Proverb in Germany, *As free as Franks*, or, *The Free Franks*, which *Cluverius* says had its Rise from this Confederacy to recover their Freedom. The Time he takes to have been soon after the *Alemanni* rebelled against the *Romans*; for the Emperor *Probus*, who liv'd about 58 Years after *Caracalla*, is said by several Writers to have made War against the *Franks*. This *Cluverius* says is the true and ancient *France*, and these the ancient *French*, who entering that Part of *Gaul* now called the *Isle of France*, at last gave the Name to the whole Country. Here *Cluverius* corrects the Mistakes of *Paulus Emilius*, *Sigibertus* and *Adrianus Junius*; the former, because he says the Emperor *Valentinian* first called them *Francs*, which in the *Attick* Dialect signifies *Fierce*; and the latter, because he alledges, that the *Franci* were the Inhabitants of *Batavia*, and peculiarly called by the Name of *Germani*, from a Place in *Strabo*, which he mistakes. He adds, that *Ausonius* and *Martial* make use of Poetical Licence, when the former distinguishes betwixt the *Franci* and other *Germani*; and the latter, when he distinguishes betwixt them and the *Catti*.

The Fosi, or Saxons, and Two Countries called Saxony.

Tacitus is the only Author who mentions the *Fosi*, and says, they were Neighbours to the *Cherusci* and *Cimbri*, and liv'd betwixt them. *Cluverius* is of Opinion, that instead of the *Fosi* mentioned by *Tacitus*, we should read *Saxoni*; but his Arguments for it seem not to be conclusive enough. *Gesippus* mentions *Saxonici*, and says it was inaccessible, by reason of Marshes, &c. but *Cluverius* has no great Opinion of that Author. He is positive however, that the *Fosi* were the same whom *Ptolemy* and other Authors did afterwards call *Saxones*, and says, they inhabited *Holstein*, and Part of the Dutchy of *Sleswick*. *Tacitus* says, most of them were destroyed in their War with the *Catti*; yet they recover'd again, and became a formidable People, which must be own'd to be true, if they were the same

same with the *Fassi*. They afterwards passed the *Elb*, and drove out the *Franks* who liv'd on this Side of it: After which the Country as far as the *Rhine* was, according to *Cluverius*, called *Saxony*.

The CIMBRI.

T *Acitius* says, the *Cimbri* lay next to the *Saxons*; and *Ptolemy* says, they possessed that called *Chersonesus Cimbrica*. *Cluverius* says, modern Geographers mistook this Peninsula for the Country betwixt *Lubeck* and *Hamburg*. *Strabo* mistook by placing the *Cimbri* on this Side the *Elb*, because the Roman Writers confounded the Accounts of their Actions with the People on this Side that River. *Cluverius* takes Notice, that some of the ancientest Writers related many fabulous Things of the *Cimbri*, as, that it was a Name the *Germans* gave to Robbers, as *Plutarch* says; and *Nicephorus*, *Gregoras*, and others, fancied they came from *Asia* into *Seythia*, and from thence into *Germany*, &c. and confounded them with the *Cimmerii* near *Pontus*, of whom the *Greeks* talk so much. In *Tacitus's* Time they were inconsiderable, tho' formerly he says they had been great and famous, and had War with the *Romans* when *Cecilius Metellus* and *Papirius* were *Consuls*. *Cluverius* rejects their Opinion who think the great Camp of the *Cimbri*, mentioned by *Tacitus*, was that in the Peninsula, now called *Danen-Werk*, and says it was either in *Italy* or *Gaul*. He thinks, the Country which *Ptolemy* places betwixt the *Saxons* and the *Cimbri*, is that now called *Jutland*. *Ptolemy's* Six People that he places in the Peninsula, *Cluverius* fixes thus; the *Sigulones* in that now called *Wansuffel*; and he says, they were the most Northerly of the Remainers of the *Cimbri*. The *Fundusi* had a Lake on the N. and the Isthmus between that Lake and the Sea, where the Village *Silkerk* now stands. On the W. they had the Sea as far as the Village of *Hemberg*, and from thence they reached in a Line Southward to the Village *Hald*. On the E. they had a River and a Lake. The *Chali* had the *Fundusi* on the N. on the E. the *Baltick*; on the W. the Ocean; on the S. the River which falls into the Sea

near *Holm*; and then lay on a Line from the Head of that River to the Town called *Horsens*, from whence a Bay of the *Baltick* was their Boundary. The *Cobanidi* had the *Chali* on the N. the Rivers *Nipisa* and *Tobesket* on the S. the two Seas above-mention'd on the W. and E. The *Sabalingii* had those two Rivers on the N. the same Seas on the W. and E. and the Isthmus on the N. and *Cluverius* says, that at this Day the Country lying on the Lake is called *Salling*, which he thinks comes from the *Sabalingii*.

The Islands on the Coasts of the Cimbri Saxons, Chaufi, and Frisii.

P *Linus* takes Notice of 23 Islands on those Coasts that were known to the *Roman Arms*; the chief of which mentioned by him are, *Burchana*, now *Borchum*, before the Mouth of the *Emis*; *Fakaria*, now *Boenhuy*; *Gleffaria*, by some thought to be *Ameren*; but *Cluverius* thinks 'tis that called the *Strand*, which he takes to be derived from *Austrania*, one of its Latin Names; *Atania*, now *Silt*. *Cluverius* supposes that those Islands were made by Irruptions of the Ocean, and that more of them were known to the *Romans*, because *Tacitus* says, the *Roman Fleet* suffered great Loss among 'em as they set Sail from the *Emis*, being overtaken by a Storm.

The Ancient Suevia.

C *Luverius* observes, that 'twas easy to find out the Boundaries of the other *German Nations* mentioned by *Tacitus*; but that it would be difficult to find out those of the *Suevi*. *Tacitus* says, they possessed the greater Part of *Germany*, and were divided into several Nations of different Names; but *Su-ve* was their general Name. *Ethicus* agrees with *Tacitus*, says they were possessed of the greatest Part of *Germany*, and divided into 54 several People. *Cluverius* says, they possessed the Countries following, viz. Part of modern *Suevia* or *Swabia*, where are the Towns of *Diink-l-Spittel*

Spittel and *Nordlingen*, the *Upper Palatinate*, *Mecklenburg*, *Upper Saxony*, *Bohemia*, Part of *Austria* beyond the *Danube*, Part of *Hungary* as far as the *Sarmatian Mountains*, *Moravia*, *Silesia*, *Lusatia*, *Poland* on this Side the *Weissel*, the *Marquissate of Brandenburg*, excepting that Part on this Side the *Elb*, *Pomerania*, *Pomerania*, the *Dutchy of Mecklenburg*, Part of *Denmark*, called now *Blasien*, *Skane* and *Holland*, *Sweden*, *Norway*, *Westerland*, *Finland*, *Scythia*, *Lapland*, and *Biscania*. *Cluverius* says, the Names of the different Nations that inhabited *Scania*, as he finds them in *Tacitus* and other Authors, are as follow: On this Side the *Baltick*, the *Sarmatians*, *Norici*, *Atacantini*, *Quadi*, *Misugi*, *Burii*, *Semnoni*, *Lygi*, *Burgundiones*, *Gothoni*, *Lemni* *fine* *Heruli*, *Rugii*, *Carii*, *Langobardi*, *Deuringi*, *Caviones*, *Angli*, *Varini*, *Eudofes*, *Suardones*, *Nuthones*, to whom were added the *Osii* and *Gothini*, that were Strangers. Beyond the *Baltick*, liv'd the *Sitones* and *Suiones*, a great People, all divided into several Nations. These were their Boundaries in the Time of *Tacitus*, as they were before in the Time of *Augustus Caesar*; so that *Strabo* is in the wrong to think that they called themselves by that Name when they came into *Bohemia*, for as plain they were call'd so long before. *Cluverius* thinks there's little Certainty as to the Reason of the Name, or why so many People should call themselves by it. He takes Notice, that the vast Mountains which separate *Sweden* from *Denmark*, are call'd so by *Latin* Authors, and that the ancientest of them mentioned the *Suiones* or *Suones*, a great People that dwelt about them; and *Pliny* mentions a River call'd *Suony*, which falls into the *Baltick*; but whether the People gave Name to them, or they to the People, is not certain. He takes Notice, that *Strabo* calls them *Ensbai*, and describes their particular Countries as follows.

The Semnonnes.

Tacitus says, they accounted themselves the noblest and most ancient of the *Scythi*. *Cluverius* refutes those who would have them call'd *Semnoni*, because they are since sound by that Name in *Elbe* *Pomerania*, which he thinks happen'd merely by

the Neglect of the Copies, who was better acquainted with the *Galli Semnoni*. *Tacitus* says, they had 100 *Pagi* or *Districts*; so that their Country was large, comprehending Part of *Lesser Poland* between the *Vistula* and the *Oder*, the *Dutchy of Gessia*, the Country of *Sternberg*, Part of *Silesia* about *Glagow*, *Lusatia*, Part of the *Marquissate of Brandenburg* about *Frankfurt* on the *Oder*, the *Principality of Anhalt*, and Part of *Upper Saxony* and *Misnia* beyond the *Elb*. He thinks, that *Semnoni* liv'd in the Country of *Sternberg*, and *Semnonberg* on the *Vistula*, were anciently call'd *Semnoni* and *Semnoni* from those People.

The Langobardi

Liv'd N. of the *Semnoni*, were desc. by *Cluverius* takes Notice, that *Proper*, *Sigebertus*, *Diapontus*, and other Writers of the middle Age, say many fabulous Things of them, particularly that they liv'd in *Norway* and *Sweden*, and were call'd *Wendli*; but coming into *Germany* in the Time of the Emperor *Maximilian*, were call'd *Langobardi*, from their long Beards; but *Strabo* mentions them long before that Time. Their Country was the old *Marquissate of Brandenburg*, which was the Country of *Danneberg*.

The Deuringi, Caviones, Angli, Varini, Eudofes, Suardones, and Nuthones, were join'd in one Body.

Separately they were not very significant; but altogether were very considerable, and went continually arm'd; except on *Holidays*, when they worship'd their Gods as *Hertha*. They all liv'd near the Sea.

The *Deuringi* are also call'd *Reudigni* and *Reudigni*, and by later Authors *Thuringi*, *Thuringi*, *Thuringi*, and *Thuringi*, and are now call'd *Deringer* and *Thuringi* by themselves. They came into *Thuringia* in the Time of *Procopius*; but their ancient Country was between the *Elb* and the *Baltick* and they were Neighbours to the *Angli* and *Varini*, in that Part of the *Marquissate of Brandenburg* where

are now the Towns of *Havelberg*, *Rappin*, and *Prutzwalk*.

o The *Cavines* or *Aviones*, and by some called *Chabones*, liv'd in Part of the Marquisate of *Brandenburg* about *Dalmin*, and Part of the County of *Daniberg*, and the Dutchy of *Mecklenburg*.

o The *Angli*, the Predecessors of the *Engliſh*, poſſeſſed half the Dutchy of *Lunenbury* on the right Side of the *Elb*, and the Weſtern Part of the Dutchy of *Mecklenburg*. *Ptolomy* miſtakes when he places them on this Side the *Elb*, and makes them Neighbours to the *Sannones*. *Cluverius* thinks, that *Ptolomy* wrote the Name wrong when he calls them *Αγγελοι*. The Germans call them the *Angelen*. Their Name is ſtill retained in the *Cherſoneſus Cimbrica* in that Country called *Angelen* or *Anglen*, betwixt *Sleſwick* and *Hemſberg*, whither they remov'd after *Tacitus's* Time by Force; as his ſuppoſ'd. *Cluverius* ſays, they were either Part of the *Saxons*, or under their Protection; from whence in latter Ages they were called *Anglo-Saxones*.

o The *Warini*, *Werini*, or *Varni*, and by ſome called *Varnini* and *Varinna*, liv'd in Part of the Dutchy of *Mecklenburg* about *Ruſſock* and *Gutſtrun*, and Part of *Pomerania*. *Cluverius* thinks, the River *Warna*, and the Town of *Warna*, ſtill retain their Name.

The *Eudofes* liv'd in Part of *Pomerania*, about *Baart*, *Straleſunde*, *Gripeſwalde*, &c. and the Iſle of *Uthman*.

o The *Silindones*, by *Strabo* commonly called *Saxones*, liv'd in Part of *Pomerania* about *Stertin*, and Part of the Dutchy of *Mecklenburg* betwixt the Lake *Tully* and the River *Havel*.

o The *Marithones* liv'd in Part of the Marquisate of *Brandenburg* about *Potzdam*, *Cunegund*, &c. Part of the Dutchy of *Mecklenburg* about *Faſſinſey*, and Part of *Pomerania* about *Gartze*. *Cluverius* thinks, the Iſle of *Rügen* in the *Baltick* contain'd the Sacred Wood, dedicated to *Hertha*. In that Part of the Iſland call'd *Jaschund*, near the Cape call'd *Strubbenkamen*, there is a very thick Wood, in which there is a mighty deep Lake of black Water, which abounds with Fiſh; but the Inhabitants ſay, 'twill neither bear Boats or Nets. *Cluverius* ſpeaks of an odd

Paſſage, that happen'd there in his own Time, viz. Some People carried a Boat to that Lake, and return'd next Day with Nets, in order to have fiſhed; but, to their great Amazement, miſſed their Boat, which at laſt they ſaw on the Top of a tall Beach-Tree; and asking which of all the Devils had hung it there, they heard a Voice, but ſaw no body, which ſaid, *It was not all the Devils, but only I and my Brother Nicholas*: Upon which *Cluverius* makes this Remark, That the unclean Spirit, being angry that his Worſhip ſhould be abolish'd where Idolatry was perform'd of old, does ſtill love to play his Tricks there: But this, with the Story at ſelf, we ſubmit to the Reader's Judgment. *Helmoldus* ſays, That long after Chriſtianity took Footing there, the People paid a Superſtitious Veneration to that Wood. The barbarous Inhabitants uſed to conſult the Devil in this Place, and to ſacrifice Chriſtians to him.

The Hermunduri, and later Suevia.

HAVING given an Account of the *Suevi* who dwelt beyond the *Elb*, *Tacitus* comes to deſcribe thoſe who liv'd on this Side as far as the *Danube*. *Cluverius* ſays, their Country was the Principality of *Anhalt*, Part of the Dutchy of *Saxony* betwixt the *Saale* and the *Elb*, all *Mifnia* on this Side the *Elb*, all *Voigtland*, Part of the Dutchy of *Coburg*, and about *Culmbach*, *Cronach*, &c. now ſubject to the Elektor of *Brandenburg*, Part of *Pranconia* on the Left Side of the *Main* about *Bamberg* and *Forchheim*, Part of the *Upper Palatinate* about *Nürnberg*, and Part of the Dutchy of *Swabia* about *Nordlingen*. He differs with *Tacitus* as to the Extent of the *Hermunduri*, and does not think their Country reach'd to the Head of the *Elb*, whoſe Riſe is from a Mountain in the Confines of *Sileſia*, in the furtheſt Part of *Bohemia*, to the South-Eaſt, near the Town of *Smidberg*, which is ſituated in a Valley commonly call'd the *Devil's Ground*. He infers from the Account *Tacitus* gives of the Retreat of *Maroboduſus*, after his Deſeat by *Arminius*, over the Hills into the Country of the *Marcomanni*, the Battle

Battle to have been fought on the Borders of the *Hermunduri* and *Marcomanni*, near the Towns of *Zuriche* and *Chemnitz* in *Misnia*. Therefore if the Borders of the *Marcomanni* were the Hills near the Towns of *Annsberg* and *Marienberg*, it cannot be that the Borders of the *Hermunduri* were extended beyond those to the true Fountain of the *Elb*: Nor is it to be supposed that the Battle was fought on the Right Side of the *Elb*, in the Borders of the *Semnones*, for they were Enemies to *Maroboduus*; and 'tis plain from *Tacitus*, that the War he managed was Defensive, and not Offensive: Therefore he thinks *Tacitus*'s Mistake proceeded from taking the Fountain of the *Moldau* to be that of the *Elb*; and *Ptolemy*'s Error seems to have proceeded from the same Cause. *Cluverius* takes Notice, that the Name of these People is also mistaken by *Strabo* and *Ptolemy*: the former calls them *Fugiorhesti*, instead of *Equiorhesti*, and *Ptolemy* calls them *Δαριδοι*; whereas the Situation shews 'em to be the *Hermunduri*: But an Age or two after *Tacitus*'s Time, when the *Alemanni*, *Franci*, *Saxons*, and the Nations of the *Suevi* beyond the *Saal* and the *Elb*, the *Gothi*, *Burgundiones*, *Vandali*, *Quadi*, and *Marcomanni*, began to be famous by their different Names, the *Hermunduri* alone were called *Suevi* by the *Romans*, and their Country *Suevia*; because, as *Cluverius* thinks, that, next to the *Alemanni* and *Franci*, who liv'd on the French Side the *Rhine*, they lay nearest to the *Romans*; and at last, when all the *Almanni* left *Germany*, the *Suevi* succeeded into their Dominions, which from them was called *Suevia*, and now *Swabia*, and by the *Germans* *Schwabenland*.

The *Narisci*, *Naristi*, or *Naristæ*, afterwards called *Armalaufti*.

Tacitus says, the *Narisci* liv'd on the Banks of the *Danube*, betwixt the *Hermunduri* and *Marcomanni*, in that Part of the Country, says *Cluverius*, now called the *Upper Palatinat*, and the *Landgraviate of Leuchtenberg*, and in the *Tabula Itineraria* were afterwards called *Armalaufti*; but why, is not said.

Boiohamum, and its Inhabitants the *Boii* and *Marcomanni*.

IT is not certain what *German* People first inhabited this Country; but *Tacitus* says, the *Boii*, a *Reneb* Nation, removed thither, which, according to *Livy*, was when *Tarquinius Priscus* reign'd at *Rome*, and from them the Country was called *Boiohamum*, now *Bohemia*. Here *Cluverius* takes Notice of *Cæsar*'s Mistake in placing the *Volca Tetsage* in the *Hercynian* Forrest, since *Livy* places them in *Gallia Braccata*, of the Province of *Narbon*; and says, 'twas the *Celtick Gauls* who sent a Colony to the *Hercynian* Forrest, which surrounds *Bohemia*; and the *Boii* were afterwards expelled by the *Marcomanni*, as *Tacitus* informs us, but came in Time to be called *Bohemi* from their new Country. *Cluverius* thinks, that *Ptolemy*'s *Marobudum* is what we now call *Prague*. The *Marcomanni* are much applauded for their Valour by *Tacitus*, and other *Roman* Authors.

The QUADI

Modern Geographers place them in *Silesia*; but *Cluverius* proves that it was *Moravia*, because the River *Marus*, said to be in that Country by *Pliny*, is what the *Germans* call *Maran*, and the Natives *Morawa*. Their Towns mentioned by *Ptolemy* are, *Eborodunum*, now *Brin* or *Brun* in *Moravia*; *Eburum*, now *Olomucz* or *Ulmitz*; *Médostanum*, now *Znaim*; *Cilemuntia*, now *Kalmintz*.

The *Gothini*, *Marsingi*, *Osi*, and *Burii*,

ARE mentioned by *Tacitus* to be bounded by the *Quadi* and *Marcomanni* on one Side, and by a Ridge of Mountains on the other. The *Gothini*, according to *Cluverius*, liv'd in Part of *Poland* about *Twardosyn*, *Jablakow*, &c. in Part of *Silesia* about *Teschin*, *Griffas*, *Frieditz*, &c. and Part of *Bohemia*.

They had the same People which were the same People which

the *Goths* passed, was the River *Oli* betwixt *Europe* and *Asia*, since 'tis plain *Jornandes* takes it to be the *Vistula* or *Weissel*, which he makes the Boundary betwixt *Scythia* and *Germany*; and owns, that Part of the *Goths* who stay'd on this Side that River made War upon their Neighbours the *Burgundiones*, &c. As for their Expedition to the *Palus Martis* and *Black Sea*, 'tis mentioned by *Ablabius* and *Stephanus*; but he takes Notice, that they no where say they were formerly called *Geta* or *Daci*; therefore he thinks it credible, that after *Tacitus's* Time they marched towards the S. E. to the Lake of *Mentis*, and that they returned towards the S. W. to the *Boristhenes* and *Pontus*, and the Borders of the *Geta*, where they settled; and being distinguished into two Nations, those who liv'd Eastward towards *Pontus* were call'd the *Eastern Goths*, *Osro-Goths* or *Osro-Gothi*; and those who liv'd towards *Germany* Westward, were called the *Western Goths*, *Wise-Goths*, *Wise-Gothi* or *Vise-Gothi*; and *Sidenius* only calls them *Vassi*. How they came afterwards to make their Irruptions into *Thracia*, *Illyricum*, *Italy*, *France* and *Spain*, and Part of them likewise into *Bithynia*, *Phrygia*, and other neighbouring Countries, is accounted for at large by *Jornandes* and others. We leave the Reader to his own Judgment, whether *Clovesius*, or the *Swedish* and *Danish* Historians, who pretend the *Goths* came from their Countries, be in the right. 'Tis certain, that if the Names of Places which have some Resemblance to that of the *Goths* be a good Argument, the *Danes* and *Swedes* have more to say for their Opinion than he has for his; nor is it any way improbable that the *Gothenus*, whom he places on the Coast of the *Baltick* about the Mouth of the *Weissel*, might first come from the *Geta* on the other Side the *Baltick*; but it must be own'd that the *Goths*, who afterwards made so great a Noise and Figure in the World, seem'd to be more immediately descended from the *Gothenus* on this Side the *Baltick*.

Jornandes says, the *Gepida* were originally *Goths*, which *Clovesius* does not contradict, tho' he looks upon his Original of the Name to be fabulous.

The Northern *Eridanus* mentioned by the Ancients, *Clovesius* takes to be the River

Radanum, which falls into the *Weissel* near *Dantzick*, and by Mistake was given to the *Weissel* it self; and he proves that *Dantzick* is the Place which was famous for the Trade of *Amber* in the Time of *Herodotus*, &c. He thinks the Latin Name *Gythunium* or *Gedanum* to be derived from the Word *Thaenium*, and says, 'tis mentioned by the Name of *Gedanum* in an ancient Charter granted in the Year 1209 by the Duke of *Cassubia*, and that it is more ancient than any other Town in the North; but this must be taken with some Grains of Allowance, because 'twas the Place of his Birth.

The *Lemovii*, call'd also *Heruli*, with the *Rugii*, *Sidini*, and *Carini*.

Tacitus says, the *Lemovii* dwelt W. from the *Gothenus*, and beyond them the *Rugii*. *Clovesius* says, the latter inhabited a great Part of *Pomerania* from *Steinward* to *Cashu*, and a small Part of the Marquisate from *Tramborg* to *Schoffelsberg*. The Isle of *Rugel* derives its Name from them. The Town *Rugium*, mentioned here by *Prohm*, is now call'd *Rogewald*. *Prohm* calls them by Mistake *Rutilli*, and later Writers *Rugii* and *Rogi*. They were divided into two People, and Part of them afterwards removed to the Banks of the *Danube*, from whom the Country call'd *Rugiland*, betwixt *Transylvania* and the *Danube*, had its Name.

The *Lemovii* were separated from them by the River *Vipet*, possessed a great Part of that Country now call'd *Cassubia*, in the middle of which stands the Town of *Lamberg*; from thence they reach'd to the Sea call'd *Puntcke* and *Hel*, and into Part of *Pomerania* about *Silpa*. Later Writers join the *Heruli* with them in their Wars; so that 'tis probable they were their Neighbours. Some call them *Eruli*. *Clovesius* thinks they might derive their Name from the Peninsula call'd *Hel*, at the Western Mouth of the *Weissel*, from whence, according to the German Dialect, they were call'd *Helr*, by the Greeks *Heluri*, and by Transposition of the Letters *Heruli*.

The *Sidini* liv'd S. of the *Rugii*, in Part of the Marquisate and *Pomerania*. *Ptolmy* mentions the Town *Viritium* here, betwixt the *Saeva* and the *Weissel*, now called *Perritz*.

The *Carini* had the *Rugii* on the N. and liv'd in Part of the Marquisate and *Poland*, betwixt the River *Tragus* and *Guda*.

The Burgundiones, Burgundii, or Burgundi.

Cluverius thinks they were not mentioned by *Tacitus*, because they were then inconsiderable; yet they were mentioned by *Pliny* before him, and became afterwards famous among Writers of the latter Ages. *Cluverius* says, their ancient Country was, in Part of *Poland*, from *Gniezno* to the Lake *Goplo*; but in the Time of the Emperor *Probus*, *Zosimus* mentions them to be seated on the *Rhine*. *Ptolomy* commits many Mistakes, says *Cluverius*, both as to their Name and Situation; for he places them in *Sarmatia*, and calls them sometimes *Frugundiones*, and at other times *Burguntai*, and *Buguntai*. *Marcellinus* says, they were an Offspring of the *Romans*, left in *Germany* by *Drusus* and *Tiberius*, and is followed in this by *Orosius* and *Isidorus*; but *Cluverius* rejects this, and thinks, that after they came to the *Rhine* in the Time of *Probus*, they enlarged their Habitations into that now called *Burgundy*. He informs us from *Marcellinus*, that they first came into the Country of the *Catti*; and *Procopius* says, they liv'd S. of the *Thuringi*. *Marcellinus* mentions the Boundaries of the *Alemanni* and *Burgundi* to have been distinguished from one another by Stones set up in the Country called *Capellatium* or *Palas*, which some will have to be the *Palatinate*; but *Cluverius* thinks it was about the Town of *Stras* in the Borders of the *Catti*; and when the *Alemanni* went into *Rhetia* and *Helvetia*, the *Burgundiones* succeeded them, and from thence removed into *Gaul* upon the Irruption of the *Goths*, who destroyed many of them, as *Emmenius* informs in his *Genethliacōn* of *Maximianus*.

The Northern Ocean, which bounds Germany on the North, and its great Bay called *Codanus* by *Mela* and *Pliny*, and *Mare Suevicum* by *Tacitus*, and that Part of it called *Venedicus Sinus* by *Ptolomy*.

Tacitus seems to have known but little of this Part of *Germany* beyond what he calls the *Mare Suevicum*, and mentions only two Sorts of People in it. *Pliny* calls that Part of the Ocean from the Mouth of the *Rhine* to the Promontory *Rubeis*, now *Norwiche*, the *German Ocean*. The large Bay of that Ocean mentioned by *Tacitus*, and other *Roman* Authors, is that now called the *Baltick* or *East Sea*. It was by some of those Authors called *Germania Sinus*, and by others *Mare Suevicum*, from the *Suevi*, who inhabited the Peninsula of this Sea, and Part of the Continent of *Germany*. In this Peninsula they plac'd the huge Mountain *Sevo*, the Ridge of Mountains that separate *Norway* from *Sweden*, and are now called by several Names, viz. the *Skars*, the *Sula*, and *Doffrafel*, which are 306 Miles in Length from the Mouth of the *White Sea* to the Promontory of the *Cimbri*. The Form of this Bay was not known to those ancient Writers, as it now appears to be; for they thought it had a Communication with the *White Sea*, and that *Scandinavia* was an Island; nor was it possible for them to know it better, since the *Roman Navy* fail'd no further N. than the Promontory *Cimbrium*, now called *Cape Scagen*. The *Sinus Venedicus*, *Cluverius* takes to be that Part of the Bay betwixt the Mouths of the *Weissel* and the *Narva*.

Of Scandinavia, Scandia, or Scanzia, called by the old Greek Authors *Baltia*, and *Basilia*, and likewise of *Finnia*.

Those vast Islands mentioned by *Tacitus* to be in this Part of the World, were the same which *Pliny* call'd *Scandinavia* and *Finnia*.

Finnigia; but he took *Baltia* or *Basilia* to have been a distinct Island from *Scandinavia*, by not adverting to the Greek Authors, and therefore is very confus'd in his Account of them. Upon the whole, *Cluverius* says, That by those Islands they meant that vast Tract of Ground which lies now betwixt the *White Sea* and the *Baltick*, that includes *Lapland*, *Biarma*, *Finnomarchia*, *Norway* and *Sweden*, with Part of *Bothnia* and *Denmark*; and the many Islands they mention without Names, are those which lie all along that Coast. He thinks the whole Country was called *Scandia* and *Scandinavia*, from that Part of *Denmark* which the Natives call *Scaane*, and the Latins *Scania*. He takes Notice of a great Error in *Ptolomy*, who reckon'd that nothing belong'd to *Germany* beyond the *Sinus Codanus* or the *Baltick*; and this led many others into the same Error, as *Pliny*, *Solinus*, and *Dionysius*.

Before the Names of *Scandia* and *Scandinavia* were known to the Romans, the Greeks called the Country *Baltia* and *Basilia*, as we find by *Pliny* and *Solinus*; and from hence the *Belt* and *Baltick* Sea derived their Names.

As to *Finnigia*, *Cluverius* takes it to be that now called *Finnia*, *East-Bothnia*, and *Corellia*, the Country of the *Fenni* and *Finni*, now the *Finlanders*.

Here *Cluverius* has a Dissertation concerning the *Thule* of the Ancients, and offers many Arguments to prove it to be what we now call *Island*. He confutes *Orelinus*, who will have it to be the Coast of *Norway* that lies over against *Scotland*, by very solid Arguments; but since *Pytheas* and *Pliny* reckon it to be one of the *British* Islands; and *Tacitus*, when speaking of the Romans sailing round *Britain*, and having first discovered the *Orkney* Islands, immediately adds, that they discovered *Thule*, which was hid from them before by the Winter and the Snow, it can scarce be possible that *Island* can be what the Romans called *Thule*, for it lies at too great a Distance from the *Orkneys*; and those Seas were too dangerous and too little known for the Romans, who, as appears by *Tacitus*, made more use of Oars than of Sails in this Expedition to have ventur'd into. But we refer the Reader to what *Cluverius* himself says, and to our former Dissertation on

Thule, and leave him to his own Judgment, with this one Caution, That as the Ancients called the utmost of their Discoveries in the Northern Seas *Thule* wherever it was, and removed it further N. according as their Discoveries extended that Way, 'tis probable that *Solinus* and others, upon whom *Cluverius* builds so much, might afterwards give the Name to *Island*, or other Isles which they then had an Account of to lie further N. But 'tis plain that by *Mela's* Description of it, as lying opposite to the Coast of the *Belga*, from the Length of the Days there in Summer, the Largeness of the Country, and the People's Way of living, that Dr. *Wallace* seems to have Reason for making it the N. E. Coast of *Scotland*, or that at least *Schetland* bids fairer for it than *Island*, since either of those Places might have been seen by the Roman Navy when they were in the Neighbourhood of the *Orcaades*; whereas 'twas impossible for them to see *Island*, or any Thing near it at that Distance.

The lesser Isles betwixt *Thule* and *Germany*, and those in the *Baltick*.

Cluverius supposes those called the Isles of *Fero* to be the *Glesaria* or the *Electrides Insulae* of the Ancients; but with how little Reason, will appear by our Description of those Islands, and by comparing it with his own Description of the Coast of the *Baltick*, and his positive Assertion, that *Dantzick* was the chief Place from whence the Ancients fetch'd their Amber: But he justly corrects *Mela's* Mistake in placing the *Amodea*, *Amodes* or *Hemodes*, in the *Baltick*, since 'tis very probable they are those now called the Islands of *Fero*. *Mela's* *Codanonia* he takes to be *Danish Zealand*, which was possessed by the *Teutoni*, and the most fruitful Island in those Parts. He thinks they were called promiscuously *Teutones* and *Dani*, from the Words *Θεοῦ* and *Δαν*, the Name by which he says those People called God: But we have observed before, that this seems to have more of Fancy than Solidity, and that they rather derived their Name from the *Sinus Codanus*, upon which they

they inhabited, from whence they were at first called *Codani*, and afterwards *Dani*; and since *Cluverius* owns that they call themselves *Danike*, 'tis not improbable that the Town of *Danzick*, which lies on this Side the same Bay, may also derive its Name from thence.

Of the Suiones, Helleviones, Scanii, Guta, Lappiones, Scritofinni, Marchiofinni, and Sitones or Nortmanni, who inhabited Scandinavia or Scandia.

Tacitus mentions the *Suiones* and the *Sitones* as the Inhabitants of *Scandinavia*. *Cluverius* assigns the Mountain *Sveo* as the Boundary betwixt them; so that the *Suiones* inhabited *Norway*, *Finmark*, and *Scritofinnia*; and the *Sitones*, *Lapland*, *Biermia*, *West-Bohemia*, *Swedeland*, *Gutia*, with *Bleking*, *Skane* and *Hollant*, and Part of *Danmark*. He is of Opinion, that the *Swedes* derive their Name from the *Suiones*. The *Helleviones* he thinks inhabited the Country now called *Holland*, from whence he supposes it derived its Name. The *Gute* or *Guti* liv'd in *Goethland*, which the *Latins* call *Gotbia*. The *Scanii* some take to have been Part of the *Helleviones*; but he rather thinks they liv'd S. of them, and were so great a People, that the whole Country was from them called *Scandia*. The *Lappiones* are those called the *Laplanders*, and the *Scritofinni* seem to be those now called the *Finns* or *Fislanders*, and that the *Marchiofinni* were of the same People. The *Nortmanni* inhabited that now called *Norway*. All of 'em comprehended by *Roman* Authors under the Names of *Suiones* and *Sitones*.

The East Side or Boundary of Ancient Germany.

Tacitus says, the *Germani* were separated from the *Sarmatae* and *Daci* by mutual Fear and high Mountains, and calls those

German Nations who dwell beyond the *Rai- rick*, the *Weissel*, and the Mountains of the *Daci* Eastwards, the *Fenni*, the *Esii*, and the *Peucini* or *Bastarna*.

Cluverius begins with the latter. He says, *Bastarna* was the Name of the People in general, *Peucini* only of a Part, from a Mountain called *Peuce* in *Sarmatia*, according to *Ptolemy*. *Cluverius* fixes the Boundaries of those People thus: On the N. they had the River *Aper*, now *Wipera*, that falls into the *Weissel*: From the Head of that River they reached in a Line to the Lake *Amudocce*, near *Kiew* in *Poland*; from thence they had the River which rises out of that Lake near the Town *Korwa*, till it falls into the *Dniester*; then that River: On the E. they had the *Mare Ponticum*, now the *Black Sea*, and the Mouth of the *Ister* or *Danube*. On the S. they had that River, till some of them, according to *Strabo*, liv'd beyond it to the Mouth of *Hicrasus*, now *Dnub*; and along that River to the *Carpathian* Mountains, as far as the Head of the *Weissel*. On the W. they had the Mountain *Alburgium*, now *Tarni* in *Poland*, as far as the Town *Ofwieczyn*; and from hence they were bounded by the *Weissel* till the *Wipera* falls into it.

The *Peucini*, properly so call'd, were those who inhabited the Isle of *Peuce*, now call'd the Isle of *Serpents*, and the neighbouring Borders of the *Traballi* and *Getae*. *Cluverius* takes Notice, that those two People were divided into others of different Names, as the *Siduri*, who liv'd near the *Weissel*; the *Burgiones* or *Viburgii*, who liv'd near them towards *Polonia*; and the *Carpiini*, who liv'd near the *Carpathian* Mountains. *Cluverius* thinks they were afterwards drove into *Transylvania* by the *Sarmatae*, because the *Transylvanians* do now speak *German*, and that the Remainder of them might accompany the *Goths* into *Italy* and *Gaul*. They are spoke of by all Authors as a Warlike People. The chief Towns mentioned by *Ptolemy* in their Dominions are, *Caradunum*, now *Lemberg* in *Russia* Minor; *Mesastum*, now *Caminia* in *Podolia*; *Vibantovarium*, now *Bar* in the same Country; *Brudum*, now *Rov* in *Moravia*.

The Venedi and Æstii.

Tacitus doubts whether the *Venedi* were Germans; but *Cluverius* thinks it plain from *Ptolomy* they were, and that they liv'd at first on the River *Weissel* in Part of *Courland*; but afterwards extended their Dominions further, because they are said to have had the *Finni* on the N. and the *Bastarna* on the S.

The *Æstii*, *Cluverius* places in *Livonia*, *Prussia*, and *Samogitia*, Part of *Lithuania* on the Left of the *Memel* as far as *Nur*, and Half of *Massovia* on the Right of the *Weissel*. They were divided into several People, *Seyri*, now the *Prussians*, and the *Hirri*, now the *Lieflanders*.

Having thus gone through the several Nations that inhabited ancient *Germany*, *Cluverius* in the next Place gives an Account of the Five People into which *Pliny* divides the *Germani* in general, viz. the *Vindali* or *Vandali*, by some called *Vandalii*, *Vindelici*, *Winili*, *Vindili*, *Vinduli*, *Vinuli*, *Winuli*, *Vanduli*, *Vindoli*. *Pliny* mentions only the *Burgundiones*, *Varini*, *Carini*, and *Guttones*, to be Part of the *Vandals*. *Cluverius* adds the *Lemovii*, *Heruli*, *Rugii*, *Sidini*, *Suardones*, *Eudoses*, the *Angli*, *Caviones*, *Theuringi*, *Nuithones*, and *Langobardi*, as belonging to them.

The 2d are the *Ingevones*, to whom *Pliny* reckons the *Cimbri*, *Teutoni*, and the Nations of the *Chauci*, to have belong'd. *Cluverius* adds from other Authors the *Fosi* or *Saxons*, and in *Scandinavia* the *Scandii*, *Hilleviones*, *Gute*, *Sueones*, *Sitones*, *Marchiofinni*, *Scritofinni*, and *Luppiones*.

The 3d are the *Istævones*, to whom belong'd the *Sicambri*, the *Hermiones*, who dwelt in the Inland Countries, of whom the *Suevi*, *Hermunduri*, *Chatti*, and *Cherusci*, were Part, according to *Pliny*; but *Cluverius* reckons the *Frisii*, *Bructeri*, *Angriuarii*, *Ansbarii*, *Chammarvi*, *Dulgibini*, *Marsi*, *Tubantes*, *Marsatii*, *Sicambri*, *Ubii*, and who succeeded them, the *Usipii*, *Tencteri*, *Jubones*, *Mattiaci*, besides in ancient Times the *Marcomanni*, *Harudes*, and *Sedusi*.

The 4th were the *Hermiones* or *Hermiones*, to whom *Pliny* says belong'd the *Suevi*, *Hermunduri*, *Chatti*, and *Cherusci*. *Cluverius* says,

That under the Name of *Suevi* must be comprehended the *Semnones*, *Marcomanni*, *Quadi*, *Marlingi*, *Burii*, and *Lugii*.

The 5th were the *Peucini*, called also *Bastarna*, whose several Divisions we mention'd before. *Cluverius* thinks, the *Æstii* are not to be reckon'd to any of these Five Sorts.

Of the Hercinian, and other Forests in Germany beyond the Rhine.

THE *Hercynia Sylva*, or *Hercynius Saltus*, is famous among the ancient *Roman* and other Authors. *Cæsar* says, it was 9 Day's Journey in Breadth, and 60 in Length, according to the then Computation of the Inhabitants; and that it began at the *Rhine*, in the Borders of *Helvetia*, went along the *Danube* to the Borders of the *Dezi*, and then by Turnings and Windings went thro' many Countries. *Cluverius* says, That in his Time there went one continued Forrest thro' most Part of the Marquisate of *Brandenburg*, *Cassubia*, *Prussia*, *Poland*, *Lithuania*, and *Moscow*; but whether it was called by that Name as far as the River *Oby*, the utmost Boundary of *Europe*, he doubts, any more than the Forrests *Ardenne* and *Falga*, which bounded upon the *Hercynian* Forrest, the *Rhine* coming between them; therefore he thinks the Name *Hercynia* was proper only to that Part of it in *Germany*.

It was branched out into several Forrests, as those called *Sylva Martiana*, now the *Black Forrest*. *Tacitus* and *Claudian* mention Woods near the *Rhine*, near the *Bructeri*, now *Speßard* and *Westerwald*; the *Cassia Sylva*, now *Heserwaldt* in the Dutchy of *Cleve*, near the Borders of *Münster*; the *Lucus Tanfane*, near *Bentheimberg* in *Westphalia*; the *Lucus Baduhenna* in *Westfriesland*; the *Lucus Herculis* about *Mindau* on the *Weisser*; the *Sylva Cambreta* in *Thuringia* and *Vostland*, now called the *Doringenwald*; the *Hercynius Saltus*, that which encompasses *Bohemia*, now called the *Bohmerwald*, and was properly the *Hercynia Sylva*; the *Luna Sylva*, upon the Mountains towards the Head of the River *Morava* in *Moravia*; the *Lucus Castoris & Pollucis* in *Silesia*; and the *Lucus Sacer*, formerly men-

tioned in the Country of the *Semnonēs* upon the *Oder*.

The Parts of this Forrest remaining in *Cluverius's* Time, were, that called the *Black Forrest*, betwixt the Fountains of the *Danube* and the Lake of *Constance*; the Forrest of *Anspach*, betwixt *Nuremberg* and the Head of the *Tauber*; *Steyger Forrest*, betwixt *Wirtsberg* and *Bamberg*; the *Othonia Sylva*, or *Odenwald*, betwixt *Heidelberg* and *Frankfort*; the Forrest of *Speffard*, betwixt the *Main* and the River *Bint*; that called the *Westerwald*, betwixt the *Lene* and the *Siga*; that called the *Harz*, in the Dutchy of *Brunswick*; that called the *Thuringer Forrest* in *Thuringia*; and that above-mentioned, which encompasses *Babernia*; besides abundance of large Forrests in *Westphalia*, the Dutchy of *Lunen- burg*, *Pomerania*, the Marquisate of *Brandenburg*, and *Cassubia*.

Vindelicia, and Noricum, Part of the ancient Illyricum.

Cluverius gives likewise a Description of those Countries, because the present Inhabitants are descended of the ancient *Germani*. On this Occasion he shews, that all the Inhabitants of the *Alps*, the greatest Part of whom are *Vindelici* and *Norici*, were once called *Taurisci*. He likewise observes, that tho' the *Vindelici* were a different People from the *Rhati*, yet all their Country, after the *Romans* had subdued the People, betwixt the *Danube* and *Italy*, was called *Rhatia*, from the *Rhine* or Lake of *Constance* to the River *Inn*, which was the Boundary betwixt the *Vindelici* and *Norici*, as the River *Lech* was that betwixt the *Vindelici* and *Rhati*, who came originally from *Italy*; and tho' the Country from thence to the Lake of *Constance* was called *Rhatia Prima*, yet the *Vindelici* inhabited the Country from the Head of the *Danube* all along the River, till the *Inn* falls into it, as appears by *Strabo*. The *Vindelici* then had the Lake of *Constance* on the W. the *Danube* on the N. the *Inn* on the E. but how they were divided from the *Rhati* on the S. is not so certain. They were divided into several People: Those called the *Licetes* or *Licatii* liv'd on the River *Lech*; the *Brigantii* reach'd

from the Town of *Bregenz*, from thence called *Brigantium*, to *Ratisbon* and *Pfullendorf*. The *Estiones* liv'd betwixt the *Lecatii* and the *Brigantii*, in the Vallies on the River *Il- lar*; so that their Boundary on the S. seems to have been the River *Bregenz*, and the Mountains which lie betwixt the *Lech* and the *Inn*, as far as the Head of the *Iser* and the Town of *Innsbruck*. The Towns mentioned by ancient Authors in this Country are, *Augusta Vindelicorum*, now *Augsburg*; *Brigantium*, now *Bregenz*; *Campodunum*, now *Kempten*; *Celivs Mons*, now *Kelmuntz*; *Guntia*, now *Guntisberg*; *Roftrum Nemovia*, now *Memmingen*; *Juvavum*, now *Salzburg*; *Is- nica*, now *Munichen*; *Reginum*, or *Castra Regina*, now *Ratisbon*; *Castra Batavorum*, now *Passau*.

NORICUM.

THE *Norici* were also divided into several People, viz. the *Alauni*, *Ambisuntii*, *Ambidrani*, and *Ambilici*; but nothing certain can be determined as to their Situation, nor indeed of the Boundaries of *Noricum*, any otherwise than from the noted Towns observ'd in it by the Ancients, from whence *Cluverius* fixes its Boundaries thus: The Rivers *Inn* and *Danube*, the Mountain *Cetius*, now *Calenberg*, as far as the Town of *Geleia*, now *Gilkey*, and the Confluence of the *Sava* and *Sana*; then the Mountains from the said Confluence, which run W. to the Head of the *Sana*; then betwixt the *Sava* and the *Drave* to the Head of the River *Natisson*; then N. towards the Head of the River *Fell*; from thence W. to the Valley *Inchiara*, and by a Line through the middle of that Valley Westward to Mount *Setiu*, and from thence to the Head of *Rient*; then by that River to the Village of *St. Lawrence*, and the Confluence of the River *Aich*; and from thence by another Tract of Mountains, Part of the *Alps*, as far as *Innsbruck*. The most remarkable Towns taken Notice of by the Ancients in this Country are, *Vindobona* in *Pannonia*, on the Frontiers of it, now *Vienna*; *Boiodurum*, now *Innsat*; *Juvavum*, now *Salzburg*; *Bradavum*, now *Bamberg*: So that upon the whole, *Noricum* comprehended a great Part of *Austria*, the W. Part of *Stiria*, *Crimbia*,
Upper

Upper Carinthia, the Archbishoprick of Salzburg, Part of Upper Bavaria, and Part of Tyrol.

We have insisted more at large upon Ancient Germany, than some perhaps may think consistent with our Design; but hope it will easily be pardon'd, when our Reasons are known, which are, 1. That the ancient Geography and History of this Country is done in Folio, with a great deal of Judgment and Care, by the famous *Claudian, Strabo, Ptolemy*, and other ancient and modern Historians and Geographers, have said on those Subjects by his own Reading, and curious Observations, wherein he has corrected the Mistakes of the *Romans* and others in History and Geography, and illustrated many difficult Passages, which have puzzled the ablest Critics. 2. Because 'twas a Country of vast Extent, and a Scene of many and great Actions. 3. Because 'twas the Seat of many People of dif-

ferent Denominations, and under various Forms of Government; therefore 'twas necessary to fix the Boundaries of each of those People, in order to understand the Roman History, and the Seat of their War from Time to Time with those many different Nations; without which, those valuable Pieces of ancient History were neither so pleasant nor intelligible as now they may be, not only to Youth who read them in Schools, but even to those of riper Years, whose Time and other Circumstances have not allowed them to attain a sufficient Knowledge of Geography for understanding those Authors. 4. Because most Nations in Europe, and particularly we in Great Britain, have either been Peopled from thence, or subdued by their Armies, and subjected to their Form of Government, as happened to this Island by the *Saxons*, to Gaul by the *Franks*, and to Spain, Italy, &c. by the *Goths* and *Vandals*; so that the Antiquities of Germany illustrate those of most Parts of Europe.

CHAP. XXVI.

Modern G E R M A N Y.

Their HUMOURS, MANNERS, &c.

DOCTOR *Nicholson*, in his Elaborate Account of this Country, in his Second Volume of *Pitt's Atlas*, takes Notice of *Seneca's* Observation, That Men of an extraordinary Size have commonly narrow Souls; and gives this as his Reason, *Because great Abilities of Body and Soul are too much for one Man*: Tho' every one may know from

his own Observation, that this Rule is false; yet 'tis very probable, as the Doctor says, that this Consideration prevailed with some old Historians to represent the *Germans* as a dull Phlegmatick People; and even some of the Moderns, particularly our own *Heylin*, *Joseph Scaliger*, and others, have been guilty of this Mistake, when they alledge, That in order to bring the *Germans* to a good Temperament, *their Lead must be mix'd with the Quicksilver of France*, without considering, that the *French* stand in as much need of German Lead, as the *Germans* do of French Quicksilver. But as

all those National Reflections are invidious, and generally founded on Prejudice, 'tis plain by the Writings and Inventions of the *Germans*, that their Genius is very good when duly cultivated.

Some Writers charge them in general with being given to Drink, from whence they have formed a Proverb, *Germanorum libens est vivere*; i. e. That the chief Delight of a *German* is to drink. This Fault is perhaps too common there, as well as in some other Countries: Nor does *Cluverius*, their Countryman and Advocate, altogether excuse them from it; yet this Charge admits of a Restriction, for there are many sober People in that Country; tho' the Sharpness of their Air, and the Largeness of their Size, which they commonly alledge in their Defence, makes more Liquor necessary for them than for other People, who differ in Climate and Stature. *Melanthius* us'd to complain of their Excess in Eating, and said, *We Germans eat our selves sick and to Hell*; tho' Gluttony be not so common there as Drunkenness. They are much given to drinking Healths, and 'tis usual for them to present Strangers at Table with a large Vessel of Drink, which they are oblig'd in Civility to take off at one or more Draughts to the Health of their Landlord; and they frequently spend some Hours at Dinner and Supper, but not so much in eating as drinking Healths. Those that have created an Intimacy by being drunk together, they call *Trinck-brüder*; but we wish there were no Pot-Companions elsewhere.

Their Diet is Beef, Mutton, Venison, Bacon, Fowls, Fish, &c. as with us; but not generally serv'd up in such large Quantities. From *Michaelmas* almost to *Easter*, they eat abundance of Snails boil'd in the Shells, and People of Quality have Snail-Banquets on purpose in their Orchards or Gardens. Their Drink is Beer of several Sorts, some very bitter, and some very sweet, according to the Customs of several Countries. They have also abundance of Wine of different Sorts, of which *Rhenish* is the chief.

They are still valued for their Integrity, for which *Tacitus* commended them of Old; inasmuch that a modern French Writer says,

A German's Word is as good as another Man's.

Bond; And when the *Germans* would express one among themselves that hates Flattery and Dissimulation, they say, *He is German-hearted*.

They likewise retain the Hospitality of their Ancestors, are very free in entertaining Strangers; and except in Time of War, their Roads are not much pester'd by Highwaymen.

Their Valour is unquestionable, which makes *Willichius* give them this Character, That they are only to be overcome by their own Countrymen. And 'tis observ'd, That *Gustavus Adolphus* could never have made such a Progress in *Germany*, had he not been join'd by the *Saxons* and *Brandenburgers*. The greatest Impressions the *French* have made upon them has been by the Conjunction of *German* Princes, who fell in with the Interest of *France*, or by *German* Soldiers who chose that Service, because the Pay was better than their own. Their common People are bred hard, which enables them to bear the Fatigues of War; but there have been frequent Instances of their being apt to mutiny for want of Pay, which makes some Authors charge them with being mercenary. *Frederick* Elector Palatine, King of *Bohemia*, and Father to the Electress *Sophia* of *Hanover*, had a fatal Instance of this, when the greatest Part of his Army at the Battle of *Prague* threw down their Arms, and cry'd out for Money, which lost him the Battle and his Crown. Dr. *Nicholson* urges as a very good Proof of their Valour, that none of their potent Neighbours have hitherto been able to wrest the Imperial Crown from them. They were about an Age or two ago reckoned to have fallen under a Decay as to Martial Discipline; but the many great Generals they have bred within these last Hundred Years, Princes, as well as others, have sufficiently taken off that Imputation.

The chief Recreation among those of Quality in Summer, is hunting the Deer and Wild-Boars, with which their Forests abound; and 'tis customary in the Courts of Princes to hang up the Pictures of such great Boats as they have killed. In Winter, when the Snow is thick, they have a Custom of riding round the Streets in Sledges, form'd much like the *Roman* Triumphant Chariots, drawn by a Horse with rich

rich Trappings, set off with great Numbers of little Bells, and Feathers of several Colours. At home they are much given to play at Chess, and are very expert at it. In their Language they call it *Schachspiel*, which Dr. Nicholson observes, signifies the same with the *Latuncularum Ludus* of the Latins. The Learned Prince *Augustus*, late Duke of *Brunswick Wolfembuttel*, who publish'd an accurate Explication of *Trithemius's* Cryptography, under the borrow'd Name of *Gustavus Selenus*, wrote an incomparable Treatise concerning this Game in *German*, with an Account of its Original, Progress and Laws.

The *Germans* are so much addicted to Travel, and their Nobility affect so much to appear at Foreign Courts with Retinues answerable to their Qualities, that their Writers complain it does very much impoverish their Nation, and carries out Annually more Money than is produced by their Silver Mines. On this Account the Author of a late Book, Entituled, *Itinerarium Germaniae Politicum*, advises his Countrymen not to travel out of their own Country except on Publick Occasions; and indeed, considering the many Princes Courts, the great Number of large Cities, their numerous Universities, and the many Rarities they have at home, there seems to be but little Occasion for their travelling, either to learn good Breeding, or to satisfy their Curiosity. Except in great Towns, and on the chief Rivers, their Accommodations for Travellers are not extraordinary, especially for Lodging; for in many Places they have nothing to lie on but Straw, and that in a common Room altogether; tho' in other Places they lie commonly betwixt two Feather-Beds, with the Sheets stitch'd to them. The Vulgar seldom have any Chimnies but in their Kitchen, and in Winter commonly live in their Stove-Rooms, which they heat to what Degree they please; but the Smell and the Heat of those Stoves is frequently very troublesome to Strangers, and apt to make their Heads ache. Their common Way of Travelling is in open Post Waggons, which are neither Expeditionous, nor a Fence against ill Weather. Their cover'd Waggons are better for that, but slow.

Their Women in general are of a tolerable Complexion, but more corpulent than most of their Neighbours, except the *Netherlanders*. They are very obsequious to their Husbands, have less Command in their Houses than *English* and *French* Women, and are not allow'd the upper End of the Table. They account it rude here to salute any Woman with a Kiss, except they have been bred in such Countries where 'tis practis'd; so that their Way of Greeting is by a mutual-Touch of the Hand.

Their Marriages and Funerals are very expensive, so that sometimes an ordinary Man is scarce able to recover the Charge of his Father's Funeral, or of his own Wedding, in 7 Years. The Entertainment frequently lasts a Month, during which they keep open House, and send the Bell-man about to invite all their Neighbours, who usually send in Wine, or some other Provisions.

Brietius gives this Character of the *Germans*, That they are generally believ'd to be too much addicted to Drunkenness and Gluttony, and that the latter was the Fault of those who liv'd in the Northerly Places of that Country; but he is far from *Heylin's* Satyr, who alleges, That during their Feasts, they think it no Disgrace to empty their over-charg'd Stomachs in one another's Laps, or to piss under the Table; and that even their greatest Princes, besides what Excess they are guilty of themselves, have Drinking-Champions to answer all Challenges, and to challenge all Comers; and that they look upon it as a Point of State to contend who shall have the largest Vessels in their Cellars. But we return to *Brietius*, who, tho' a *French* Jesuit, has so much Justice as to own their Hospitality and Civility to Strangers, and that their common Innkeepers are very faithful to their Guests; That their Women are very chaste, and Adultery severely punish'd among them; That they carefully observe keeping to their own Ranks when they marry, and will not readily stoop to a Match below their Quality. Dr. *Heylin* is more just in taxing their Vanity, than in other Parts of their Character; for 'tis certain, that by deriving the Father's Title to all the Children, so that if he be a Duke,

all the Sons are Dukes, and all the Daughters Dutcheſſes, together with dividing the Eſtate among the Males, does very much increaſe and impoveriſh their Nobility; ſo that at one time there were no leſs than 17 Princes of *Anhalt*, and 27 Counts of *Mansfield*, who had little elſe to live on but their Sword: Yet none of this poor Nobility will ſuffer their Children to match below their Degree; and if they do, think it a juſt Cauſe to diſinherit them: Yet it has this Conveniency, That it preſerves their Blood from baſe Alloys, and keeps up a Greatneſs of Mind and Spirit. *Brietiſius* obſerves, That they are much inclin'd to Muſick, and have a native Genius for it; That they are better in the Field, than in defending of Towns, being eaſily overcome in the latter by the Tears of their Wives and Children; whereas in the Field they frequently fight till one of the Armies be deſtroyed; but are impatient under want of Proviſions and Pay, which makes their Armies to moulder away very ſpeedily.

Their LANGUAGE.

Foreigners who are too lazy or too dull to learn it, eſpecially ſuch as are accuſtomed to a ſofter Pronunciation, do generally cenſure it as rough and barbarous; ſo that the *French* ſay, 'tis fitter for Mechanicks than Gentlemen; and a *Spaniſh* Miſtiſter once told a *German* Ambaſſador, That his Language reſembled Thunder, and he fancy'd that God forbid *Paradiſe* to our firſt Parents in that Dialeſt; to which the *German* reply'd, That was true; but the Devil tempt'd *Eve* in *Spaniſh*. *Pomponius Mela* obſerv'd long ago, That *German* Names were not fit for *Roman* Mouths; from whence 'tis that we meet with ſuch monſtrous Words in *Roman* Authors, when they attempt to give *German* Names Latin Inflexions; and the ſame is the Cauſe why 'tis ſo hard for *French*, *Italians*, or *Spaniards*, to learn *High Dutch*. It muſt be own'd however, that 'tis a noble and manly Language, but fitter for War than Courtſhip. *Dr. Nicholſon* thinks *Tacitus* was miſtaken in aſſerting, That the ancient *Germans* had not

the Uſe of Letters, becauſe *Runic* Inſcriptions have been lately found in the *Daniſh* Dominions upon Monuments erected there before *Tacitus's* Days. For this, we refer to our Account of *Denmark*, and ſhall only ſay, That tho' *Wormius* thinks the Uſe of Letters to be very ancient there, he is poſitive they were not common. *Dr. Nicholſon* thinks the *Latins* borrowed the Word *Litera*, as they did many others, from the ancient *Germans*; and that it was derived from the old *Teutonic* Word *Lett* or *List*, which ſignifies a Member or Part, as a Letter is of a Word. *Duret* thinks, the *Gothick* Alphabet is the oldeſt in the World, and a Copy of the firſt that ever was invented. He does not mean that made uſe of by *Wulphilaſ*, Biſhop of the *Goths*, in his Verſion of the Goſpels, but the *Runic* Character in Form of a Staff, which they made as the Foundation of whatever they were to write, and croſs'd and turn'd it as Occaſion requir'd; and hence the *Germans* uſually call a Letter a *Buchſtab*; i. e. a Staff, made uſe of in Books; but thoſe Characters were laid aſide, as has been formerly mentioned, by the *Germans*, when they turn'd Chriſtians, becauſe they had been abuſ'd in Sorceries and Inchantments; and *Mr. Scheerlingham* thinks with Reaſon, that the *Engliſh-Saxon* Character was invented on the like Occaſion.

Here *Dr. Nicholſon* takes Notice of the Queſtion among Philoſophers, Whether Words have their Signification from their natural Import, or from the Will of the firſt Author? *Plato* thought, That he that gave every Being its diſtinct Name, ſuited the Word to the Nature of the Thing; and *Bibliander* fancies, that *Adam* obſerv'd this Rule, when he gave every Thing its Name. The Learned have obſerv'd a great Analogy betwixt the *Greek* and *Latin* Words, which expreſs the Voices of Birds and Beaſts, and the Words themſelves, as *Morgiana*, *Oryzæus*, &c. in *Greek*; and *Boare*, *Mugire*, &c. in *Latin*; but no Language is more obſervable for this than the *German*, who ſay, the Ox, *Beelke*; the Bear, *Brummet*; the Sheep, *Bleeket*; the Swine, *Grunſet*; and this is alſo obſerv'd of the *Engliſh* by the famous *Dr. Wallis* in his Grammar.

Dr. Ni-

Dr. *Nicholson* says with Reason, That a multitude of Monosyllables is one of the greatest Arguments of the Antiquity of a Language, because we cannot imagine them to be derived from any Primitive further off, or to be a Corruption of so many Words in Foreign Languages. *Stevin*, an ingenious Dutchman, has reckon'd 2170 primitive Monosyllables in the Dutch, tho' the Number, says Dr. *Nicholson*, might be carried much higher; whereas he can find not above 163 in Latin, and 265 in Greek. The Dr. observes further, That many of the High-Dutch Primitives are turn'd into Dissyllables, that formerly were but one, as *Vater*, *Mutter*, &c. that were anciently writ *Kaer*, *Muel*, &c. and that there are 23 principal Terminations in the German, which, tho' they signify nothing of themselves, yet when added to another Word, do very much alter its Signification, of which the English has retained many, as *Er* in *Buyer*, *En* in *Golden*, &c. by which the German Tongue is made very copious, and, as Doctor *Nicholson* thinks, exceeds the Greek. Some of the Germans have of late much corrupted their Language, by giving French, Italian, and Latin Words, German Inflections; yet they pay so much Respect to their own Language, that they always write and print foreign Words in different Characters.

'Tis difficult to reckon up the several Dialects of the German Tongue, if it be consider'd that the old British, English, Danish, Swedish, Norwegian, Islandic, and Low-Dutch, with their inferior Dialects, as well as those of Upper Germany, are all derived from it. Besides the Remainders of it left in those Countries further E. where they formerly inhabited, *Busbequius* found a great deal of it in the *Chersonesus Taurica*, now *Crim Tary*; and others say, there are Fragments of it in *Persia*. Dr. *Nicholson* says, 'tis usually divided into two principal Dialects, called the *Saxon* and *Francic*. *Brietius* says, 'tis divided into three, viz. the *Teutonic*, *Saxon*, and *Danish*. The *Saxon* is subdivided into Upper and Lower, viz. that which is spoke on this Side and beyond the *Main*. The *Saxon* is reckon'd to come nearest the ancient *Celtick*, and the Inhabitants have always valued themselves on that Account, and say, 'tis better than what is spoke in

Misia and *Austria*. 'Tis generally agreed on, that the best German is now spoke at *Hall* in *Saxony*, and its Neighbourhood; and the Germans themselves always write in the High-Dutch Dialect, which is an Argument that they esteem it the best. *Aventinus* says, *Charles the Great* compos'd a High Dutch Grammar out of Rules he collected from old Genealogical Ballads; but *Trithemius* says, he found the Undertaking too great, and never finish'd it. In 1273, the Emperor *Rudolph I.* publish'd a Decree, ordering the Lawyers to draw up their Instruments and Pleadings in that Language; which being confirmed by *Maximilian I.* in 1512, brought this Tongue into Repute, not only in the Empire, but in the Northern Kingdoms; so that their best Scholars have since been at Pains to cultivate the Language. Several other Grammars were writ by Learned Germans, which are now all lost. *Sleidan* says, *Luther* was a great Master of the German, which makes his Translation of the Bible into that Language still highly valuable. *Schottelius*, formerly Counsellor to the late Duke of *Brunswick Wolfenbuttel*, has given the best Account of this Language in several Tracts writ on this Subject, which were printed at *Brunswick* in 4° in 1663. *Duesius*, in the Preface to his German Grammar, says, few of their Nobility are able to write it right, which is supposed to proceed from their want of a good Dictionary in their own Tongue, tho' several Attempts of this Nature have been made. Dr. *Nicholson* says, with very much Reason, That a competent Knowledge of this Language is very necessary for an English Antiquary.

Their LEARNING.

THO' *Tacitus* says, the Germans were utterly ignorant of Letters, the *Runic* Monuments and Inscriptions formerly mentioned prove the contrary; yet the Histories and Lives of their great Men were not then committed to Writing, but only repeated in *Dogrel-Verse* by their Bards. Their Priests, as was said before, conceal'd their Letters and Principles of Learning from the Commons. Thus Affairs continued till they were acquainted with the

Romans.

Romans, especially in the Time of the Emperor *Adrian*, when many Schools were erected in *Germany*, in which their young Gentlemen were taught to speak and write *Latin*; and even the *German* Soldiers ordinarily return'd from the *Roman* Camp Masters of their Language and Manners; but most of those Schools were about the *Rhine*, so that the Northerly Parts had not this Education. *Dagobert* and *Charles the Great* founded many Schools in this Country, where the *High-Dutch* Tongue was first reduc'd to Writing and Rules. It was long before they could effect this, so that for many Years they were obliged to write their Proceedings at Law, and even the Rudiments taught in Schools, in *Latin*. As soon as the *Germans* got their Language regulated, they applied themselves to study the Liberal Arts, so that in a short Time many Universities were founded there. *Charles the Great* built 24 *Gymnasias*, or great publick Schools, many of which afterwards became Universities. *Justus Lipsius* affirm'd, That in his Days, there were more Universities in *Germany* than in all *Europe* besides. There are above 30 Universities, besides *Gymnasias*, in this Country, most of which have great Numbers of Students. When the Emperor *Charles IV.* who was also King of *Bohemia*, had founded an University at *Prague*, and gave the same Privileges to Foreigners that he gave to the *Germans*, the City was so over-stock'd with Students, that it oblig'd him to retrench his Favours to Strangers by a Decree: So a Week after it was put in Execution, 24000 Scholars left *Prague*, and 16000 more soon followed them; so that this one University had then more Students than all *Europe* besides. In 1409, *John Huss* had 44000 Scholars under his Rectorship.

Before the Reformation, the Priests found that Ignorance was more their Interest than Learning; upon which they discouraged it by all possible Means; so that when Learning began to revive in *Europe*, those Monks and Priests did all the Mischief they could to those concern'd in it, and accus'd those of Heresy that were more Learned than themselves. On this Account the ignorant Monks pick'd a Quarrel with the Learned *John Reuchlin*, and brand'd him for a Heretick. When the Reforma-

tion began, those Monks made it their Business to bring the Learned into that Quarrel against *Luther*, which had the contrary Effect, and occasioned most of them to side with him.

They have many Learned Societies in *Germany*, as we are inform'd by the Book, called, *The Present State of that Country*. The first is that called the *Fruitful Society*, or Order of the *Palm*, instituted by *Ludovicus* Prince of *Anhalt*, and 3 Brothers of the *Saxe-Weimar* Family, in 1617, for the Advancement of the *High-Dutch* Language. The Prince himself was chosen President of the Society, and made an Order. That its Protector should always be a Prince. The Emblem of this Society is an *Indian Palm* or *Coco-Tree*, with this Motto, *All for Improvement*.

2. The *Collegium Naturæ Curiosum* was establish'd in 1670, in Imitation of the Royal Society of *England*. Dr. *Johannes Laurentius Bauschius*, a Learned Physician, engaged several Learned Men in it for the Improvement of Natural Philosophy and Physick. He was the first President; and his Successor Dr. *Johannes Michaelis Febr*, by a publick Epistle, invited the most Learned Physicians in *Europe* to be Members of it, and publish'd their Orders. The first Annual Volume of their Observations and Improvements was publish'd under the Title of *Annus Primus Ephemeridum Medico Physicarum Germanicarum Curiosarum*. This College was taken into the Emperor's particular Protection, had several Privileges granted 'em, and was permitted to take the Name of *Societas Leopoldina*. The *Præses* and Directors of those Ephemerides are generally some of the Emperor's Body-Physicians, Counts Palatine and Nobles of the Empire.

3. The Imperial Historical College was first projected by the Learned Physician Dr. *Christianus Franciscus Paulinus* at *Isenach*, his native City, after he had been long engag'd in Historical Studies by *Christophorus Bernardus*, Bishop of *Munster*, who oblig'd him to compleat the *Chronicon Corbejense* from Authentick Monastical Antiquities. He acquainted the Publick with his Design in a short Essay, call'd, *Delineatio Collegii Imperialis Historici*. The End of this Society is to form a compleat History of *Germany*,
from

from the scatter'd and obscure Monuments of Antiquity; in order to which, each Member is to collect and impart the History of his own Country. Many of the Learned have already enter'd themselves Members of this Society. The famous *Job Ludolphus*, Counsellor to the Emperor and Elector of *Saxony*, and Resident at *Frankfurt on the Main*, was chosen President, and *Mr. Von Nessel* or *Nisselius*, the Imperial Library-Keeper, who died in 1700, was Vice-President. *Ludolphus* began a *Prodrumus Animalium Germanicorum*. The Professor *Dr. Joannes Ubrius Pregitzer*, Counsellor to the Duke of *Wirtemberg*, and Judge of *Tubingen*, hath undertaken the First Century; and *Dr. Jacob Otto*, Counsellor of *Ulm*, and of several Free Cities, has promised the Second.

4. The College of Masters of Arts was first propos'd by *Erhardus Weigelius*, Imperial Counsellor and Professor at *Jena*, in order to adjust the Differences betwixt the Old and New Stile, and to find out speedy Remedies against all the Inconveniencies resulting from thence. *Weigelius* died in *March*, 1699.

5. Several Learned Men at *Leipsick* form'd a Society by the Encouragement of the Elector of *Saxony*. They observ'd, That the Transactions of the *Royal Society of England* were only about Mathematical Subjects, Natural Philosophy, Anatomy, and Medicine; and that the *Societas Naturæ Curiosorum* design'd only the Improvement of Natural Philosophy, and Physick. Upon this they agreed, That their *Acta* and Observations should be more general, and not confin'd to particular Parts of Learning. They also resolv'd, That their *Acta* should be writ in Latin. In *January*, 1682, they publish'd their first Essay, under the Title of, *Acta Eruditorum Lipsiæ Publicata*, and still continue to oblige the Publick with it.

The *Germans* study hard, and the Hebrew is no where so generally understood as in this Country; so that many of them attain to a great Perfection in that Language. The *Germans* are accus'd by Foreigners of Printing too much, and sometimes Trifles, as the State of a Question, or a few common Places collected out of the Writings of their Cotemporaries. They likewise publish Millions of Suppositions and Dis-

putations, which over-stock the Fairs at *Frankfurt* and *Leipsick*. One Reason why they publish those Philosophical Pamphlets, is, to hinder every poor Fellow from taking Degrees, since no Man can be a Graduate in *Germany*, who has not publish'd one such Disputation at least; and another Reason is, to maintain their numerous Presses.

The Inventions of the Germans, and their Skill in Mechanicks.

IT must be own'd, that the *Germans* are great Masters at Mechanicks, Chymistry, Natural Philosophy, Physick, and Mathematicks; and they claim the Honour of inventing Printing and Gunpowder.

The latter thus: *Albertus Magnus*, a *Dominican* Friar, having first practis'd Chymistry in *Germany*, many of the Religious Orders there addicted themselves to that Study; among the rest, one *Berthold Schwartz*, a *Franciscan* Friar, made great Advances in this Art; and having one time mix'd some dry'd Earth, Sulphur, Salt-Petre, with other Ingredients, in an Earthen Crucible, and plac'd it over a Fire, in order to some Preparation, the Crucible soon broke in Pieces with a great Noise. This surpris'd him at first; but having repeated it frequently after, he began to think that it might be improv'd to a greater Advantage; upon which he caus'd a long Iron Pipe to be made, with a Touch-hole, fill'd it with this Mixture, put small Stones above it, and setting Fire to the Touch-hole, the Stones were thrown out with a great Noise and Violence. This happened about 1330. Some Time after the *Germans* communicated this Secret to the *Venetians*, when they were besieged by the *Genoese*; and the *Venetians* afterwards, by the Help of Guns, took from the *Germans* the Cities of *Verona*, *Padua*, &c. which they still retain. Some Time after, the *Jews*, who were always numerous in *Germany*, out of Spight to Christianity, communicated this Secret to the *Turks*, for which the *Muscovites* hated the *Jews*, and prohibited them to trade in their Dominions. The Merchants on the *Baltick* were the first that us'd Guns at Sea. In 1347, the *English* took *Calais* from the *French* by the Help of Guns. Dr. *Plat*, in his *Natural*

stural History of Oxfordshire, thinks that Roger Bacon, a Franciscan Friar, sometime Fellow of Merton College in Oxford, invented Gunpowder before Schwartz, because of an Epistle directed by this Friar *ad Parisensem*, in which he speaks of a Mixture of Salt-Petre, Sulphur, and Coal-Dust, by which he could make a Fire that would burn at what Distance he pleas'd, and cause Thunder and Lightning in the Air, more terrible than that produc'd by Nature: That this kind of Fire could destroy a City or an Army; and that the Flame burst out with unspeakable Noise. Dr. Dee, in his Annotations on that Epistle, is of the same Opinion, and thinks that he conceal'd the Invention, because he knew how destructive it would prove to Mankind; and that his Skill in Mathematicks had made some of his ignorant Acquaintance take him for a Conjuror, and commit him to Prison; so that had he discover'd this Invention, their Jealousy had been heighten'd. This was 100 Years before Schwartz's Invention.

Dr. Nichelson thinks, the Germans have no good Claim to the Invention of Clock-work; tho' he acknowledges, that none have improv'd it more. Severinus Boetius, a famous Roman Philosopher, is the first mentioned by Latin Authors as the Contriver of an Engine of this kind. Theodorick, King of the Goths, wrote a Letter to this Boetius, to beg a Clock of him for his Brother-in-Law, Gundibald King of Burgundy; in which Letter he calls his Contrivance, *Machinam Munda gravidam, Calum Gestabile, Rerum Compendium*; i. e. a Machine that contain'd the Universe within it, a Portable Heaven, a Compendium of the whole World.

The Emperor Charles V. and King James I. had both Watches in the Jewels of their Rings, which were made in Germany. In the Town-Hall of Prague, there is a Clock that shows the Annual and Periodical Motions of the Sun and Moon, the Names and Numbers of the Months, Days, and Festivals of the whole Year, the Time of the Sun's Rising and Setting, the Rising and Setting of the Signs of the Zodiac, and the Moon's Age, with its several Aspects. In the Elector of Saxony's Stable at Dresden, there is a Saddle with a gilded Head in the Pommel, with Eyes continual-

ly moving, and in the hinder Part a Clock, that shows exactly the Hour of the Day; but the most famous in its kind is the great Clock of Strasburg, of which we shall speak when we come to the Description of that City. Tycho Brahe tells us, That William Landgrave of Hesse spent much Time to contrive a Way to regulate the Motions of Clocks and Watches; but we have no Account of his Success.

The Germans have far outdone the rest of Europe in ingenious Knacks of Art. A German not long ago presented the Landgrave of Hesse with a Bear and a Lion of pure Gold, hollow within, each of the Length of a Man's middle Finger; every Part of them was proportionable, and both together weigh'd no more than a French Crown. The most curious Man in this kind that ever Germany bred, was Johannes Regiomontanus, who made a Wooden Eagle, which flew an English Mile out of Town to meet the Emperor Maximilian when coming to the City of Nuremberg, and return'd back with him to his Lodgings. This is related by Kercherman, and Peter Ramus. The latter also tells us, That Regiomontanus having invited some Friends to an Entertainment, he threw an Iron Fly from his Hand to divert them, which flew round the Room, and return'd to him again. The High-Dutch are generally well skill'd in Engraving, Painting, Cutting of Seals, Iron-work, and Joiners-work.

The Germans challenge the Invention of Printing, and say, this Noble Art was invented at Strasburg in 1440, by John Gottenburg, an Alderman of that City, and afterwards perfected by him at Mentz. In the Publick Library at Basil, they show several Books printed with the first Characters, invented by Gottenburg, such as are now us'd, but not so exact. The strongest Argument the Germans have, is from the Character in which the first Latin Books were printed, which is much the same now us'd by the Germans in their ordinary Writing; for it is probable, say they, if any other People had invented Printing, that they would have us'd the Characters of their own Country. The Hollanders dispute this Invention with the Germans, and ascribe it to one Lawrence Coster, a Citizen of Haerlem, who walking one Night in an adjoining Wood,

cut

cut some Pieces of the Bark of a Tree into Letters, and printing some Characters upon Paper with 'em, taught his Grand-Children their Alphabet by this new Contrivance; but observing it to be capable of further Improvement, he advanc'd, and within a few Days printed off several Sentences from divers Authors. *Hadrian Junius* says, he saw the first Book that *Coster* printed, in which 'twas observable, that the Paper was not printed on both Sides, but two Leaves were glued together, to avoid the Deformity of vacant Pages; then he changed his Beechen Letters to Leaden ones, and those afterwards into Tin. This done, he contriv'd the glutinous Ink, now made use of in all Presses. The House where he liv'd is still to be seen near the Market-place in *Haërlem*. On the Front of his House there was formerly engraven his Picture, with some Verses in Commendation of him. The Magistrates have in their Custody a Specimen of his first Essay. *Angelus Rocha*, who publish'd an Account of the *Vatican* Library in the Days of *Sixtus Quintus*, tells us, That *Aldus Junior*, a Learned Antiquary, shew'd him a Copy of *Donatus's* Grammar printed on Vellum, in the first Page of which were these Words; *Johannes Faustus Civis Moguntinus, Avus Maternus Johannis Scheffer, primus excogitavit Artem imprimendi, Typis Aëreis quos deinde Plumbeos invenit, multaque ad poliendam Artem adjecit Filius ejus Petrus Scheffer, impressus autem est hic Donatus & confessionalia primo omnium, A. D. 1450. Admonitus certe fuit ex Donato, prius Hollandia impresso in Tabula Incisâ*: In which Words *Mariangelus Accursius* assures us, (for the same Author says 'twas his Hand) That the first Man who printed Books in *Germany* with Molten Types, had the first Hint of it from *Holland*. The old Chronicle of *Cologne*, writ in 1496, confirms this, That the first Hint was from *Holland*, where *Donatus* was printed before *Gottenburg* printed any at *Mentz*; and most of the *German* Historians grant, That the first Printing with Wooden Cuts was by this *Coster* of *Haërlem*; but alledge, that composing from different Letters was the Contrivance of *Gottenburg*.

The *Hollanders* say further, That after *Coster* had improv'd his new Art so far as to print with Tin Letters, he took more Servants into the House, and among them one

John, whom *Junius* thinks to be the *Johannes Faustus* before mentioned, who had the Mystery of this Art communicated to him, upon his taking an Oath of Secrecy. This *John* applied himself so much to the Business, that he understood it as well as *Coster* himself; and on *Christmas-Eve*, when most of the Family were at a Procession, he carried off, with the Assistance of another that he had suborn'd, as many Cases of Letter as they were able, and going to *Amsterdam*, printed small Books and Pamphlets privately; from thence they removed to *Strasburg*, and communicated their Art to *Gottenburg*, who carrying on the Work at his own Charge, had the Honour to be accounted the first Printer in the World: At last they settled at *Mentz*, where they kept open Shop, being out of Danger of being prosecuted by *Coster*. The first Book they printed in this City, was *Alexander Gallus's* Grammar, with *Peter Hispanus's* small Grammatical Tracts annexed. There is in the Library of *Oxford* a Copy of *Tully's Offices*, printed by this *Faustus* on Vellum, and at the End of it these Words in Red Letters, *Præsent Marci Tullii clarissimum Opus, Johannes Faust, Moguntinus Civis, non astrumento, non plumali canna, neque area, sed Arte quadam perpulchra. Petri manu Pueri feliciter effeci finitum* in 1465. *Janus* says, he has often heard his Master *Nicholas Gale* say, That an old Bookfeller, who had been Servant to *Coster*, and Chamber-fellow with this *Faustus* that cheated him, told him the Story often with such a Vehemency of Passion, as commonly brought Tears from his Eyes; and that he was resolv'd to undeceive the World, but did not live to perform his Promise. These are the Arguments on both Sides; the Reader may determine as he pleases.

The *French* likewise pretend to the Honour of this Invention; but upon no better Foundation, as *Wimpeling* informs us, than that this Art was first made publick at *Rome* by one *Uldaric Hahn*, a *German*, who by Latin Writers is called *Uldaricus Gallus*; *Hahn* being the *German* Name for a Cock, which gave the *French* Occasion to apply the Appellative *Gallus*, as if he had been one of their Country; tho' if it were so, it will imply no more, than that he was the first who publish'd that Art in *Italy*.

Boterus, who is followed by some modern Authors, alledges, the *Chinese* had this Art above 1000 Years before us in *Europe*, and communicated the same to one *Marcus Penitus*; but had it been so, that Gentleman would in all probability have brought it into *Italy*, that his own Country might have had the Honour of being the first Teachers of the Art in *Christendom*; but there is so little Foundation for this Story, that *Boterus* himself confesses, that this Invention, as well as that of Guns and Clocks, is owing to the *Germans*.

This Art was brought over to *England*, according to *Stow*, in 1471, by one *Caxton*, and Printing was first us'd in *Westminster-Abbey*; but it appears, that it was practis'd before that Time, by a Copy of *St. Jerome's Exposition of the Apostles Creed*, preserved among the Archives of the University of *Oxford*. It is printed on Paper, and ends thus; *Explicit Expositio Sancti Jeronimi in Symbolo Apostolorum ad Papam Laurentium. Impressa Oxonia & finita in 1468, 17 die Decemb.* *Mr. Wood*, in his *Antiquities of the University of Oxford*, informs us, That *Robert Tournayr* Master of the Wardrobe to King *Henry VI.* first brought over Printing to *England* from *Havrem*. The King furnish'd him with Money, by which he brib'd *Frederick Corfellus*, who wrought at the Press, to come over with him to *England*, which he did, and set up a Printing-Press at *Oxford*, where they guarded him, lest he should make his Escape before he had perform'd his Promise. Not long after, Presses were set up at *Worcester*, *Westminster*, and *St. Albans*. The oldest Book printed at *Westminster* is *Caxton's Chronicle*, publish'd in 1486.

The RELIGION of the Modern Germans.

THIS Country was converted at several Times; as *Dr. Nicholson* informs us; so that almost every Province had their different Apostle. *Theodoret* thinks our Saviour's Apostles preached here, and some name the Apostle *St. Thomas* in particular. *Irenaeus* and *Tertullian* mention the *German Church*; so that 'tis probable; that what Part of *Germany* was subject to the *Romans*, may have had Christianity in the Second

Century. The *Papists* are now ashamed of the Legend of *St. Ursula*, and her 11000 Virgins; therefore in their Kalendar they only mention *Ursula cum Sociis*. 'Tis said, there were two *German Bishops* present at a Council held by *Constantine the Great*, in 314.

Bleau, in his Volume of the *Atlas* which contains *Scotland* and *Ireland*, gives an Account, That several Men from *Scotland* converted many Parts of *Germany*: The first was *St. Rupert*, Son to a King of *Scots*, who in the 6th Century converted *Theode*, Duke of *Bavaria*, with his Nobles, and baptiz'd them at *Ratisbon*; after which he converted the neighbouring Countries, founded the City of *Salzburg*, and was the first Bishop there, as appears by the Records of that City, printed by *Hen. Canisius*, Tom. 4. *Antiq. Lession*. Much about the same Time *Columbanus* and *Gallus*, two *Scots*, converted *Swabia*; after which *Columbanus* went to *Italy*, and *Gallus* stay'd in *Switzerland*, and founded the Monastery of *St. Gall*, which gave Rise to the Town of that Name, as is mentioned by *Jonas*, in the Life of *Columbanus*, *Bede*, *Wallafridus Strabo*, and *Canisius*.

Soon after *Kilianus*, with two other *Scotsmen* sent by the Pope, converted *Gosbert* Duke of *Franconia*, with his Court and Country, and was the first Bishop of *Wurtzburg*; but afterwards martyr'd with his Companions, for reproving the Duke for his Incest, as appears by the Coin of the Bishop of *Wurtzburg*, which has still *St. Kilian's* Effigies stamp'd on it, as *Canisius* and *Surius* tell us.

Not long after this, in the Time of *Pipin* and *Charlemain*, *Bonifacius*, a *Scotsman*, as *Marianus* and *Trithemius* tell us, converted *Hesse*, *Thuringia*, *Westphalia*, and *Saxony*: After which he was made Archbishop of *Mentz*, and founded the Bishoprick of *Aichstadt*, and several others, with the Monastery of *Fulda*, of which *Scotsmen* and *Germans* were indifferently made Abbots till very lately. This *Boniface* is generally reckoned to be the chief Apostle of the *Germans*, as *Willibald* his Disciple says in his Life, which we have an Account in *Canisius*, *Surius*, *Serrarius*, and others.

In that same Century, *Pastor*, a *Scotsman*, planted Religion further in *Saxony*, was made Bishop of *Verden* in *Westphalia*, as

Kant-

Krantzius tells us, wherein he was succeeded by several of his Countrymen, being himself a Martyr: And that same Author informs us, That one *John Scot* was made Bishop of *Mecklenburg*, and afterwards a Martyr.

In the Year 1000, *Colomannus*, said to be Son to a King of *Scots*, converted *Austria*, where he was martyr'd. His Relicks were kept in the Monastery of *Melch*, about 12 Leagues from *Vienna*, as *Surius* tells us in his Life; and *Baronius* says the same in his Annals.

Argobastus, a *Scots-man*, converted *Straßburg*, where he was succeeded by *Florence*, one of his Countrymen, who was Bishop there, as *Surius* and others inform us. *William*, Brother to *Achaius* King of *Scots*, founded the Monastery of *St. James* at *Ratubon*, *St. Martin* at *Cologne*, *St. Giles* at *Norimberg*, another at *Aix la Chapelle*, and *St. Peter's* at *Ratubon*, which were mostly possessed by his own Countrymen, who were in great Esteem with *Charlemain*. The last of those they possessed was that of *St. James* at *Ratubon*, whose Abbot was Inspector of all the rest, till the Time of the late German Civil Wars. The *Scots* also founded the Monastery of *St. James* at *Wurtzburg*, and another at *Erfurd*. They had also a Monastery at *Vienna*, founded by *Henry* Duke of *Austria* in 1167, which continued in their Hands till the Time of the Emperor *Ferdinand H.* They had likewise one at *Constance*, one at *Memmingen* in *Bavaria*, another at *Eichstat*, one at *Kelham*, all in that Country; and another at *Paderborn*, which was founded about the Year 900, besides many others, as appears by a Letter from *Robert Strachan*, a Native of *Dundee*, and a Benedictine Monk, writ from *Vienna* the 10th of November, 1641. to the Lord *Scots Tarbat*, who publish'd the Account of *Scotland* in *Bleau's Atlas*, to whom he promis'd a larger Account in a Book, Entitled, *Germania Christiana*; but whether he liv'd to perform it, we know not.

Buchanan and *Leffy* say, *Charlemain* desired *Achaius* K. of *Scotland*, with whom he had a League, to send many Learned Men to instruct the French and Germans in Religion and Learning, their own Priests being then so ignorant, that they us'd these Words in Baptism, *Ego baptizo te in Nomina Patrua, &*

Filia, & Spiritus Sancta; and that in Gratitude to the *Scots*, who founded so many Monasteries in Germany, it was order'd, That none but *Scots-men* should be Abbots of those Monasteries. The same is confirmed by *Marianus*, *Scotus*, *Trithemius*, &c.

Dr. Nicholson informs us, That in the 8th Century, *Egbert* Archbishop of *York* sent English Missionaries to convert the Germans; but many of them are the same claimed by *Mr. Strachan*, as above, for *Scots-men*; so that it is very probable there was a Mixture of both. *Charles the Great* by this Means brought the Saxons at last to embrace Christianity, tho' not without much Bloodshed.

The Reformation began in 1517. Upon this Occasion, the Archbishop of *Mentz*, being to pay the Court of *Rome* a greater Sum than he could raise in his own Territories, got Leave from the Pope to make it up, by selling Indulgences thro' the Empire for a Pardon of Sins past, present, and to come, and employed one *Friar Tekelius* as his Agent. *Luther* protested against this, and afterwards publicly oppos'd 'em, tho' *Tekelius* threaten'd him with Excommunication; but those Threats were so far from making any Impression on *Luther*, that in *Wittenberg* and *Leipsick* he publicly impugned the Pope's Power to grant such Indulgences, and maintain'd many Disputes in the University of *Leipsick* against the Popish Party, who, when they could not answer his Arguments, call'd him a Heretick, and forbid any to hear him under Pain of Excommunication; but the Elector of *Saxony's* declaring for him, counterpois'd their Threats. The Elector's Example was followed by the Dukes of *Brunswick* and *Lunenbourg*, *Wurtemberg*, *Mecklenburg*, and *Pomerania*, the Marquis of *Brandenburg*, Landgrave of *Hesse*, and most of the Imperial Cities, who in 1529 gave in a joint Protestation to the Imperial Chamber at *Spire*, containing the Heads in which they dissented from the Church of *Rome*; from whence they had the Name of Protestants. In 1530, they gave in a Confession sign'd by them at *Augsburg*, which was from thence called the *Augsburg Confession*. After this, the Emperor *Charles V.* made War upon them; but after much Loss of Blood and Treasure, he was at last obliged to grant them a Toleration,

ration, and to authorize their Confession at *Passau* in 1552, and in 1555 confirm'd it at *Augsburg*. In the beginning of the Reformation, *Luther* translated the Bible into *High-Dutch*, and publish'd it all over *Germany*. He compiled also New Catechisms for the Children.

About 1519, *Zuinglius*, a Canon at *Zurich* in *Switzerland*, was the first who in those Parts dissented from the Errors of the Church of *Rome*; and his Success was such, that his Doctrine spread as wide as *Luther's*; and in 1526, the Mass was abolish'd at *Zurich* by Order of the Senate; and in 1528, Images were destroy'd at *Bern*. The Differences betwixt *Luther* and *Zuinglius* about Consubstantiation, much hinder'd the Progress of the Reformation; they met at *Marpurg* in *Hesse* to compose those Differences, but in vain: So *Zuinglius's* Party was call'd *Sacramentarians*, and that of *Luther*, *Ubiquitarians*, whose Party still maintain their Credit in *Saxony*, as *Zuinglius* did in *Switzerland*. *Calvin* succeeded the latter, and to the Doctrines preach'd by his Predecessor, he added those about Predestination, Free Will, Final Perseverance, &c. which widen'd the Breach betwixt the *Lutherans* and *Calvinists*. *Calvin's* Doctrine prevail'd in *France*, *England*, *Scotland*, the *Netherlands*, a great Part of *Poland*, and many Provinces of *Germany*; whereas the *Lutheran* never reach'd much further than it was spread by *Luther* himself. The *Lutherans* at *Leipsick*, where they are very rigid, hate the *Calvinists* as much as the *Turks*, in so much, that in the great Church there they have the Picture of the Devil, *Ignatius Loyola*, and *John Calvin*, in one Frame, with this Subscription, *The Three great Enemies of Christ and the Christian Religion*. In *Wittenberg*, *Abraham Calovius* was a great Supporter of *Luther's* Doctrine; but many of the University were for the Opinions of *Calixtus Junior*, a Professor of the University of *Helmstadt*, who was eager for a Comprehension.

In the Kingdom of *Bohemia*, Arch-Duke-doms of *Bavaria*, *Austria*, and the Dukedom of *Lorraine*, the Territories of the Three Spiritual Electors, and other Bishopricks which still remain in the Hands of the Clergy, the Popish Religion is profess'd. There are still some of the old *Hussites* in

Bohemia, but they are forc'd to conceal their Principles. *Lutheranism* abates daily in the Dominions of *Saxony* and *Brandenburg*, or *Prussia*, where *Calvinism* obtains in its stead.

Puffendorf gives us the following Account of the Reformation, and Affairs of Religion, in *Germany*. In 1517, the Pope caused Indulgences to be sold here in so scandalous a Manner, that the wiser Sort began to be ashamed of it. Wherefore *Martin Luther*, Doctor of Divinity, and Professor in the University of *Wittenbergh*, had held a publick Disputation against it, and being oppos'd by others, it alarm'd all the neighbouring Countries. *Luther* at first submitted to the Pope's Decision; but being condemned by him, he appeal'd to a free General Council: And entering further into an Examination of the Pope's Authority, and having laid open some Errors and Abuses which were crept in among them, his Doctrine was so much approved by some of the Princes and free Imperial Cities, that they began to banish the Priests and Monks out of several Places, and to reduce their Revenues. And though the Emperor declar'd *Luther* an Out-law at the Diet of *Worms*, and endeavour'd by several Proclamations to put a stop to those Proceedings; yet being engag'd in a War with *France*, and therefore not in a Capacity to apply himself in good earnest to the suppressing of those Things, *Luther's* Party grew daily stronger.

Perhaps he was afterwards not very sorry to see the Wound increase, that he might make the better Benefit of the Cure. A Proclamation being publish'd at the Diet of *Spier*, which was in no ways agreeable to the *Lutheran* Princes, they protested against the same; from whence they were called Protestants. Next Year they delivered a Confession of their Faith to the Emperor at *Augsburg*, and entred into a Defensive Alliance at *Smalkald*. *Luther* was against their taking Arms at first, as *Sleidan* informs us; but the Lawyers and Princes having satisfy'd him, that the Constitution of the Empire allow'd it in Case of Oppression, he agreed to it. This League was renewed in the Year 1535, when a great many Princes and free Imperial Cities were received into it. This League

League being a great Eye-sore to the Emperor, he us'd all Means to dissolve it: But the Protestants trusting to their own Strength, and standing by one another, the Hostilities began on both Sides, and the Protestants brought into the Field 100000 Men, under the Conduct of *John Frederick* Elector of *Saxony*, and *Philip* Landgrave of *Hesse*. Had they fallen immediately upon the Emperor, whose Forces were not then join'd, they might in all probability have worsted him; but having lost the first Opportunity, the Emperor so strengthen'd himself, that he forced the Protestants to quit the Field, and to disband their Forces. He also caused a Diversion to be given the Elector at home by his Kinsman *Maurice*; which had such Influence upon the free Imperial Cities, that they were oblig'd to submit, and pay considerable Fines. Next Year the Emperor fell into *Saxony*, and having defeated and taken the Elector near *Muhlberg*, he pronounc'd Sentence of Death upon him; which he chang'd to Imprisonment. *Philip*, Landgrave of *Hesse*, having submitted himself, was, contrary to Agreement with the Emperor, made Prisoner, whereby the Protestants in *Germany* were reduced to great Extremities. The Electorate of *Saxony* was given to *Maurice*, Duke of *Saxony*, who at last being resolv'd, not to permit any longer that both Religion and Liberty should be quite destroy'd, nor that his Wife's Father, the Landgrave of *Hesse*, who upon his Parole had surrender'd himself to the Emperor, should be detain'd a Prisoner; he fell so suddenly with his Forces upon the Emperor, that he was very near having surprized his Person at *Innsbruck*. *Henry II.* King of *France*, having also made an Inroad on the other side of *Germany*; surprized *Metz*, *Toul*, and *Verdun*. Upon which, King *Ferdinand*, the Emperor's Brother, interposing his Authority, a Peace was concluded at *Passau*, where the free Exercise of Religion was secured to the Protestants, till Matters could be better settled at the next Diet. The Landgrave was released, as likewise *John Frederick*, the Elector, who had been dismissed out of Prison a little before by the Emperor. At last the Religious Peace in *Germany* was established at the Diet at *Augsburg*, where it

was provided, That neither Party should annoy one another under the Pretext of Religion, and that such of the Church-Lands and Revenues, as the Protestants had been possess'd of before the Peace concluded at *Passau*, should remain in their Possession.

But under the Reign of *Matthias*, the Ferment did so increas by degrees in *Germany*, that towards his latter Days they caus'd violent Convulsions. The Origin of this War, which lasted 30 Years, was this: In the Religious Peace formerly concluded at *Passau*, two Parties were only included, viz. the *Roman* Catholics, and those who adhered to the *Augsburg* Confession, the free Exercise of Religion being forbidden to all others. But some of the States of the Empire, among whom the Chief were the Elector *Palatine* and the Landgrave of *Hesse-Cassel*, having since that time receiv'd the Reform'd Religion, commonly call'd the *Calvinist*, the *Roman* Catholics were against their enjoying the Benefit of the Religious Peace. These on the other hand alledg'd, That they, as well as the rest, did belong to the *Augsburg* Confession, and that the whole Difference did only consist in some few Heads: But the *Lutherans*, who strictly adher'd to the Words of the *Augsburg* Confession, were not for receiving them into the same Communion; though it was their Opinion, That they ought not to be prosecuted for the Differences that were betwixt them. But afterwards these controverted Articles were, by the Heat of some *Lutheran* Priests, explain'd in so different a manner, that the Name of a *Calvinist* became as Odious to some of the *Lutherans*, as that of a *Roman* Catholic. The Papists taking hold of this Opportunity, caressed the *Lutherans*, especially those in the Electorate of *Saxony*, unto whom they represented the *Calvinists* as a People equally destructive to both Parties; whereby they hop'd to disjoin the *Calvinists* from the rest, and after they had destroy'd them; to make the easier Work with the *Lutherans*. Those therefore of the Reform'd Religion, entered into a Confederacy for their Common Security; into which they receiv'd a great many other Protestant Princes, and so it was call'd the *Evangelical Union*. *Opposition*

Opposition to this Confederacy, the *Roman Catholicks* made an Alliance among themselves, which they called the *Catholick League*, whose Head was the Duke of *Bavaria*, a constant Rival of the *Electoꝛ Palatine*. There happen'd also some other Matters which had exasperated both Parties, *viz.* That the Protestants had reduc'd a great many Church-Revenues after the Peace at *Passau*; That the Cities of *Aix la Chapelle* and *Donawert*, had been very hardly dealt with; besides several other Things, which were manifest Proofs of the Animosities of both Parties against one another.

Both of 'em being thus exasperated and prepared for War, the Flame quickly after broke out in the Kingdom of *Bohemia*. The *Bohemians* pretended, that the Emperor *Matthias* had taken from them their Privileges, and having rais'd a Tumult, threw three Persons of Quality, who spoke in the Emperor's Behalf at *Prague*, out of the Castle Windows, and immediately after enter'd with an Army into *Austria*. In the mean while *Matthias* died, whose Nephew *Ferdinand* (who also succeeded him in the Empire) the *Bohemians* had before his Death received for their King; but now alledging that he had broken the Contract made betwixt him and the Estates, they renounc'd him, and offer'd the Crown to *Frederick Electoꝛ Palatine*. This young Prince was perswaded by some of his Friends, who were of an unsettled Spirit, and had not div'd deep enough into a Business of such Consequence to accept this Offer, before he had laid a Foundation sufficient for such an Undertaking: For the *Bohemians* themselves were fickle and unfaithful; *Bethlem Gabor*, Prince of *Transilvania*, was unconstant; *England* was not for meddling in the Matter; *Holland* was very backward in giving Assistance; and the Union which they chiefly rely'd upon, was a Body with a great many Heads, without Vigour, or any fix'd Resolution. Besides, *France* endeavour'd to dissolve that League, as being not willing that the *Electoꝛ Palatine*, and the rest of the Reform'd Religion, should grow too potent, for fear, that in Time they might afford their Assistance to the *Huguenots*, whose Destruction was then in Agitation at the *French Court*. In the beginning of this War, the Affairs of *Fer-*

dinand looked with an ill Aspect, because *Bethlem Gabor*, Prince of *Transilvania*, fell into *Hungary*, in Hopes to become Master of that Kingdom; and there were also great Discontents among his Subjects in *Austria*: But he having recover'd himself by his Alliance with the Duke of *Bavaria*, the *Electoꝛ Palatine*, in that unfortunate Battle fought on the *White-Hill* near *Prague*, lost at once all his former Advantages; for *Ferdinand* soon after reduc'd *Bohemia*, *Moravia*, and *Silesia*, to Obedience. *Spinola* made an Inroad into the *Lower Palatinate*, which was deserted by the Forces of the League, and the Duke of *Bavaria* obtain'd the *Upper Palatinate* and the *Electoꝛal Dignity*. The *Electoꝛ of Saxony*, who had been very instrumental in reducing *Silesia*, had for his Reward *Lusatia*, as a Fief of the Kingdom of *Bohemia*.

In the mean time the Marquis of *Durlach*, *Christian Duke of Brunswick*, Count *Mansfeld*, and some others, who were of the *Electoꝛ Palatine's* Party, marched with their Armies up and down the Country; and the Emperor, under Pretence of pursuing them, sent his Forces into all Parts of the Empire. Against these the Circle of *Lower Saxony* arm'd it self, having made *Christian IV. King of Denmark*, General of that Circle: But he having received a great Overthrow near *King's-Lutter* from *Tilly* the Imperial General, the Emperor over-run all *Lower Saxony*; and having obliged King *Christian* to make Peace with him at *Lubeck*, he began to get Footing near the Coast of the *Baltick*.

The Emperor was so elevated with Success, that he did not question but for the future to be absolute in *Germany*, and with that View publish'd a Proclamation, enjoining the Protestants to restore to the Catholicks all such Church-Lands or Revenues as were taken from them since the Peace made at *Passau*. Under this Pretence he hop'd quickly to subdue the rest of the Protestant Princes, not questioning but, after that, the Catholick Estates would easily be forced to submit themselves to his Pleasure.

The Protestants, 'tis true, enter'd into a Defensive Alliance at *Lipsick*, but without any great Prospect of Success, if *Gustavus Adolphus*, King of *Sweden*, had not come

come to their Assistance. This King was induced to enter Germany, partly because the Preservation of his own State seem'd to depend on the Emperor's not getting firm Footing on the *Baltick*; partly because several of the German Princes had craved his Assistance; partly also because the Emperor had assisted the *Poles* against him in *Prussia*; and he stood in a good Correspondence with *France* and *Holland*, who were very jealous of the Greatness of the House of *Austria*. This King came with an Army into Germany, and drove the Imperial Forces out of *Pomerania*, and the neighbouring Countries.

In the mean time the Imperial General *Tilly* had quite destroyed the City of *Magdeburg*, and was upon his March against the Elector of *Saxony*, whom he did not question but to rout quickly: But King *Gustavus* having join'd his Forces with those of the Elector of *Saxony*, defeated *Tilly* in that memorable Battle near *Leipzick*, where the Emperor, at one Stroke, lost all the Hopes he had conceiv'd from the happy Success of his Arms during the Space of 12 Years before. From thence he march'd on to the *Rhine*, where he made almost miraculous Progresses: But in Regard the Elector of *Saxony* had not so vigorously attacked the Hereditary Countries of the Emperor, the Emperor had thereby left him to raise another Army, under the Conduct of *Wallenstein*, against whom the King lay encamped for a considerable Time near *Nuremberg*; and afterwards in the Battle of *Lutzen*, tho his Army had gain'd the Victory, he himself lost his Life.

After his Death, his Generals and Confederates carried on the War, under the Conduct of *Axel Oxenstern*, Chancellor of *Sweden*, with indifferent good Success; but having received an entire Defeat in the Battle near *Norlingen*, which they rashly engaged in, they lost all the Fruit of so many Victories. The Elector of *Saxony* having also concluded a Peace with the Emperor at *Prague*, which was extremely dislike'd by the Protestant Party, the Emperor was now again in Hopes to drive the *Swedes* by Force out of Germany: But by the Valour and Conduct of their Generals, the Swedish Affairs began to look with a

better Face; for they carried the War again into the Hereditary Countries of the Emperor. At last all Parties began to incline to a Peace; for the Emperor and the Princes of Germany were tired out with the War; *France* began to be divided at home by Commotions; *Holland* had made a separate Peace with *Spain*; and the *Swedes* feared that the Germans, of whom was compos'd the greatest Part of their Army, might at last grow weary of being instrumental in the Ruin of their native Country, or that one unfortunate Blow might chance to rob them of the Fruits of their former Victories: A Peace was therefore concluded at *Osnabrug* with *Sweden*, and at *Munster* with *France*; by Vertue of which the *Swedes* got a Part of *Pomerania*, *Bremen*, and *Wismar*, and Five Millions of Crowns for the Payment of their Forces. *France* kept *Brissac*, *Suntgaw*, a Part of *Alsace*, and *Philipsburg*. By this Peace, the Authority of the States of Germany, and the Protestant Religion, were established at once, and the Emperor's Power confin'd within such Bounds, that he could not easily hereafter attempt any thing against either of them, especially since both *Sweden* and *France* had a free Passage left them, from whence they might easily oppose him, if he design'd to transgress those Limits.

The Religion of the Lutherans.

This is best to be understood, by their Confession of Faith, commonly called that of *Augsburg*, because it was presented in the Diet there to the Emperor *Charles V.* in 1530, by *John Duke of Saxony*, Elector; *George Marquis of Brandenburg*, *Ernest Duke of Lunenburg*, *Philip Landgrave of Hesse*, *John Frederick Duke of Saxony*, *Francis Duke of Lunenburg*, *Wolfgang Prince of Anhalt*, the Senate and Magistrates of *Nuremberg*, and the Senate of *Reutlingen*.

It was writ in haste by *Philip Melancthon*, as he himself confesses in his Apology; and therefore to explain it, there was added, 1. The Saxon Confession, writ in 1551, in the Synod of *Wittemberg*, where the Ministers of the Churches of *Saxony* and *Mis-*

nia, and the Doctors of the Academies met, and subscrib'd it, as the Confession of *Augsburg*, repeated to be proposed to the Council of *Trent*. It was approved by the most Illustrious Princes of the House of *Brandenburg*, by the most Noble Counts of *Mansfeldt*, the Ministers of *Strasburg*, and the Ministers and Doctors of the Churches of *Pomerania*, who all of 'em sign'd it. It was likewise approv'd by other Churches, and particularly commended by those of *Poland*, in that call'd their Consent or Reconciliation. 2. The Confession of *Wurtemberg*, which was proposed to the same Council of *Trent* in 1552, by the Ambassadors of the most Illustrious *Christopher Duke of Wurtemberg*, &c. Its excellent Preface gives an Account of the whole Matter. 3. The Confession of the most Illustrious Prince *Frederic*, Count *Palatine*, Elector of the Holy Empire. 4. The Confession of *Bohemia*, which is also call'd the Confession of the *Waldenses*, compos'd out of far more ancient Confessions, approv'd by *Luther* and *Melancthon* in 1532, and by the famous University of *Wittemberg*, and at last by the Free Barons and other Noblemen of the Kingdom of *Bohemia*, offer'd in 1535 to the most Serene King *Ferdinand V.* The Reconciliation of the Article of the Lord's Supper, between the Ministers, who in both *Poland*, *Lithuania*, and *Samogitia*, profess the Gospel, both according to the *Augsburg* Confession, and the Confession of the *Waldenses* and *Helvetian* Churches, made in the General Assembly of *Sandomir* in 1570.

In the Preface to the *Augsburg* Confession, directed to the Emperor *Charles V.* they declare to his Imperial Majesty, That according to his Command, they gave it as the Confession of their Preachers and themselves, according as it had been preached in their respective Dominions from the pure Word of God; and that if the rest of the Electors, Princes and States, would likewise, in Obedience to his Imperial Majesty's Command, lay before him in their Diet their Opinions in Matters of Religion; they were ready to confer with them amicably, in order to an Agreement without Contention, that all Things may be regulated according to the Word of God: But if Matters could not be adjust'd in the Diet, they were willing

to appear in a Free General Council, to be call'd by the just Suffrages of the Empire, according to Custom; to which General Council, and his Imperial Majesty, they solemnly appeal'd in due Form of Law; and did likewise solemnly and publicly protest, That they neither intended, nor could desert their Cause contained in the said Confession, except Matters could be amicably settled and reduced to Christian Concord, in such a General Council to be summoned by his Imperial Majesty: After which they exhibited their Confession, consisting of 21 Articles.

In the First, they agree to what the Council of *Nice* had declared concerning the Trinity, as to the Unity of the Divine Essence and the three Persons, viz. That it is one Divine Essence, which is call'd and is God, Eternal, Incorporeal, Indivisible, Infinite in Power, Wisdom and Goodness, the Creator and Preserver of all Things visible and invisible; and that nevertheless they were three Persons of the same Essence, Power, and Coeternal, the Father, the Son, and the Holy Ghost; and they declar'd, that they us'd the Word Person in the Sense it was made use of by Ecclesiastical Writers, not as signifying a Part or Quality in another, but which properly subsisted in it self. They condemn'd all the Heresies contrary to this Article, as the *Manichees*, who held two Beginnings, Good and Evil: Likewise the *Valentinians*, *Arrians*, *Eunomians*, *Mathemetians*, and all such. Likewise the New and Old *Samosatenians*, who holding but one Person, disputed fraudently and impiously concerning the Word and Spirit, as if they were not distinct Persons; but that the Word signified the Vocal Word, and that the Spirit signified the Motion created in Things.

In the 2d they held, That since *Adam's* Fall, all Men descending from him by natural Propagation, were born with Original Sin, which they understood with the Holy Fathers, and Orthodox and Learned Men of the Church, to be that Guilt by which all Men for *Adam's* Fall were made liable to the Wrath of God, and eternal Death; and that it was the very Corruption of Humane Nature propagated from *Adam*; which Corruption contains the Want of Original Right.

Righteousness or Obedience, and Concupiscence. And after a further Description of Original Sin, wherein they agree with other Protestants, they condemn the *Palestians* who deny Original Sin, and look upon the want of Original Righteousness or Concupiscence to be only indifferent Things, or at least not condemn'd in their own Nature, and think that Man can satisfy the Law of God, and be justifi'd for his own Obedience.

In the 3d, they treat of our Saviour's Incarnation, and assert his Two Natures, the Divine and Humane in One Person, That he is true God and Man, Born of the Virgin, and did really Suffer, was Crucifi'd, Dead and Buried; that he might reconcile the Father to us, and be a Sacrifice for the Original and Actual Sins of Men; and conclude with his Descent, Resurrection, &c. according to the Apostle's Creed.

In the 4th they assert, That in order to our obtaining these Benefits by Christ, viz. Remission of Sin, Justification and Eternal Life, he gave us the Gospel, which proposes those Benefits in the last Chapter of *Luke*, convinces us of Sin, and leads us to Christ as a Mediator, for whose Sake Pardon is given us freely; and Justification by Faith, by which we ought to believe and confess, that those Things are given us for Christ's Sake who was made a Sacrifice for us, and pacifi'd the Father. Therefore, though the Gospel requires Repentance, yet that forgiveness of Sin may be certain, it teaches, That 'tis given to us freely, and does not depend on the Condition of our Worthiness; nor is given for the Sake of any of our preceding or following Works, for by that Means it would be uncertain.

When our Conscience is under Terror, we can find no Work to pacify God's Wrath, but Christ is given to us, and propos'd as a Sacrifice of Propitiation; therefore this Honour must not be transferr'd to our own Works; for *Paul* says, *By Grace ye are saved*. Likewise, Therefore 'tis of Faith that it might be by Grace, to the end the Promise might be sure, i. e. so the Forgiveness will be sure when we know that it does not depend upon our

own Worthiness, but is given us for Christ's Sake, &c. Then they say, That Faith does not only signify the knowledge of the History of Christ, but also the believing and assenting to this Promise, &c.

In the 5th they say, That Christ for this End appointed the Preaching of the Gospel, because it teaches Repentance and Remission of Sins, &c. and condemn those who say nothing of this Faith by which Forgiveness is receiv'd, but command Men to doubt whether it can be obtain'd, and say that this Doubt is no Sin, and that Men may obtain Forgiveness for their own Worthiness: They likewise condemn those Enthusiasts who fancy, That the Holy Spirit may be given, and be effectual without the Word of God; for which Cause they despise the Ministry and Sacraments, and seek for Illumination without the Word of God, and betake themselves to their own Fancies, as the *Manichæans* did of old, and the *German Anabaptists* did then.

In the 6th they assert, That when we are reconcil'd by Faith, that Righteousness of good Works which God and Christ has commanded must necessarily follow. *If thou wilt enter into Life, keep the Commandments*; but since the Weakness of Humane Nature is such that no Man can satisfy the Law, 'tis necessary to teach Men, that they must not only obey the Law, but how this Obedience pleases, lest they fall into Despair when they understand that they cannot satisfy the same, viz. That this Obedience pleases not as it satisfies the Law, but because the Person is reconcil'd in Christ by Faith, and believes that the Remains of Sin are pardon'd to him; but we are always to conceive that we obtain Remission of Sins, and are pronounced Righteous, i. e. that we are freely accepted for Christ's Sake by Faith, and that afterwards, our Obedience to the Law is pleasing, and reputed a sort of Righteousness, and deserves Reward; but our Conscience cannot oppose our own Purity or Works to the Judgment of God, as the *Psalmist* testifies, *Do not enter into Judgment with thy Servant, for in thy sight shall no Man living be justified*. And Christ says, *When ye have done all, say that ye are unprofitable Servants*; yet after Faith, Obedience pleases, and is reckon'd

reckon'd a sort of Righteousness, as *John* says, *Whoever abideth in him, sineth not*, 2 Cor. 13. 12. *For our rejoicing is this, the Testimony of our Conscience.* But this Obedience ought to resist our wicked Desires, and to be made more Pure by Spiritual Exercises; and we are to beware, that we do nothing against our Consciences, for they who do so, and obey their corrupt Affections, St. Paul says, *Shall not inherit the Kingdom of God.*

In the 7th they teach, That there is one Holy Church to remain to the end of the World, and that this Church, properly speaking, is an Assembly of those who truly Believe and Obey him, although in this Life there will be mix'd with them many ill Men and Hypocrites till the Day of Judgment. The Signs of the Church are the pure and sound Doctrine of the Gospel, and the right Use of the Sacraments; and a Consent in the Doctrine of the Gospel, and the Administration of the Sacraments, is enough for the true Unity of the Church. Nor is it necessary that Humane Traditions or Rites should be every where the same, as Paul teaches us when he says, *One Lord, one Faith, one Baptism, and one God, the Father of all.*

In the 8th, they assert against the *Donatists* and such, That the Word and Sacraments may be effectual, by reason of God's Institution; and our Saviour's Command; though administer'd by ill Men.

In the 9th Article they say, That Baptism is necessary to Salvation, as a Ceremony instituted by Christ, that Grace is offer'd by it, that Infants are to be baptiz'd, by which they are receiv'd into the Favour of God, and become his Children, as our Saviour testifies, *Matth. 18. 14. 'Tis not the Will of your Father which is in Heaven, that one of these little ones should perish.* On this Head they condemn the *Anabaptists*, who do not allow Infant Baptism, and think that Infants may be sav'd without it, and out of the Church.

In the 10th they teach concerning the Lord's Supper, That with the Bread and Wine, the Body and Blood of Christ are truly exhibited to those who partake of the Lord's Supper; but the Edition of the Harmony of Confessions at Geneva in 1612,

which we make use of, says, that in another Edition of the *Augsburg Confession* 'tis express'd thus; That the Body and Blood of Christ are truly present, and distributed to those who partake of the Lord's Supper; and they disapprove those who teach other-
wise.

In the 11th, concerning Repentance, they hold, That Remission of Sins is given to those who fall after Baptism at whatever time they are converted, and that the Church ought to give Absolution to such Penitents. Repentance, they say, consists of Two Parts. The First is, Contrition or Terror of Conscience; Acknowledgment of the Sin, of the Wrath of God, Grief for Sin, with an Abhorrence of it, and flying from it, according to *Jos. 2. 13.* The Second is, Faith which is conceiv'd by the Gospel of Absolution; by which we believe that Sins are certainly remitted for Christ's Sake, which comforts our Conscience; and frees us from Terror; of which Paul speaks, when he says, *Being justified by Faith, we have Peace with God*, Rom. 5. 1. This ought to be follow'd by Obedience towards God, according to *Romans 8. 12, 13.* Therefore they condemn the *Negotians*, who would not absolve such as having fallen after Baptism, repented. They likewise condemn those who say, That Remission of Sins is not given freely for Christ's Sake, but for the Sake of our Contrition, Love, and other Works; and teach Men to doubt during Repentance, whether they may attain Remission, and say this Doubt is no Sin. They also condemn those who say, That Canonical Satisfactions are necessary to avoid Eternal Punishments, and those of Purgatory, though they own that present Calamities may be alleviated by good Works, according to *Isaiah 58. 7, 8, 9.* They also reject Indulgences, which are only Pardons of fictitious Satisfactions. They condemn the *Anabaptists*, who deny, That Men once justifi'd may again lose the Holy Spirit; and those who assert, That Men may attain such a Perfection in this Life, as not to sin any more.

In the 12th, they are for retaining private Absolution in the Church, though a particular Enumeration of our Faults be not necessary,

necessary, since that is impossible according to the *Psalmist*, *Who can understand his Errors.*

In the 13th they say, The Sacraments are instituted not meely to be Marks of Profession among Men; but rather to be Signs and Testimonies of the good Will of God towards us, and are propos'd to stir up and confirm our Faith; so that in the Use of the Sacraments 'tis necessary we should believe the Promises exhibited by them, by which we receive the promis'd Grace which the Sacraments signify; and on this Head they condemn that Pharisaical Opinion which overturns the Doctrine of Faith, and alledges, That Men are justify'd in the Use of the Sacraments, *ex opere operato*; and that without any good Motions or Inclinations of those that partake of them.

In the 14th, they teach concerning Men in Ecclesiastical Orders, That none ought publicly to Preach or Administer the Sacraments, except he be duly call'd, as *Paul* commanded *Titus* to appoint Elders in every City.

In the 15th they say, That such Ecclesiastical Rites as have been appointed by Humane Authority, and may be observ'd without Sin, ought to be kept if they conduce to the Peace and good Order of the Church, as some Holy-Days, pious Hymns, and the like; but they say, That in these Matters the Peoples Consciences are not to be burdened with superstitious Opinions; as if those Humane Ordinances made us Righteous before God, deserve Remission of Sin, or are necessary towards Gospel Righteousness; but they are to be look'd upon as Things indifferent, and may be omitted when it can be done without Scandal; but they are faulty, who violate them so as to give Scandal, and rashly disturb the Peace of their Churches; but they reject Traditions which cannot be observ'd without Sin, as the Celibacy of the Clergy, and that wicked Opinion concerning Traditions and Vows, and other Parts of Worship devis'd by Humane Authority, as if they were Satisfactory for Sin, and deserv'd Remission, as unlearn'd Men have said concerning Vows, and certain Fasts, &c.

In the 16th they say, concerning Civil Affairs, That lawful Civil Constitutions are good Works, and are the Ordinances of God, according to *Paul*, *Rom. 13. 1. The Powers that be, are ordain'd of God*; and therefore hold that Christians may lawfully be Magistrates, exercise Judgment, determine Controversies according to the Imperial and other Present Laws; punish Offenders according to Law, may make lawful War, legal Contracts, keep their Property, give Oath when required by the Magistrate, contract lawful Marriages, and follow lawful Trades: Therefore they condemn the *Anabaptists*, who forbid those Civil Offices to Christians, and such as maintain that Evangelical Perfection consists in abandoning Civil Offices, since that Perfection lies in the Motions of the Heart, the Fear of God, Faith, Love, and Obedience; for the Gospel does not abolish Policy or Oeconomy, but commands them to be preserv'd as the Ordinances of God, and that in such Ordinances we ought to use Charity; therefore Christians are necessarily oblig'd to obey present Laws, and Magistrates, except when they command what is sinful, in which Case they are to obey God rather than Man, *Acts 4.*

In the 17th, they assert their Belief of Christ's Coming to judge the World at the last Day, That he will raise all the Dead, give Eternal Life to the Godly, and condemn Devils and wicked Men to Eternal Punishment. On this Head they condemn the *Jewish* Opinion of the *Anabaptists*, who fancied that before the Resurrection the Godly shall possess the Kingdoms of the World, and the Ungodly be every where destroy'd or suppress'd: For we know, say they, we ought to obey the present Magistrates, and not violently deprive them of their Authority, or dissolve Governments by Sedition, because *Paul* commands every Soul to be subject to their own Magistrate; for we know, that in this Life the Church is to be subject to the Cross, and is not to be glorify'd in this World; as *Paul* says, *It becomes us in all Things to be conform to the Image of his Son*; therefore they condemn, and hold in Execration the diabolical Fury of the *Anabaptists*;

baptists, meaning *John of Leyden*, *Muncer*, and other *German* Enthusiasts at that time; they likewise condemn the *Originists*, who thought there would be an end of the Torments of Devils and damn'd Souls.

In the 18th they deliver their Opinion about Free Will, wherein they say, That Man's Will has some freedom as to Civil Justice, and loving Things subject to Reason, but has no Power without the Assistance of the Holy Spirit, as to Spiritual Righteousness, because *Paul* says, 1 Cor. 2. 14. *The natural Man receiveth not the things of the Spirit of God: And Christ says, Without me ye can do nothing.* But Spiritual Righteousness is effected by the Holy Spirit, and we receive that Spirit when we assent to the Word of God, to comfort our selves with it under Terror, as *Paul* says, *That ye may receive the Promise of the Spirit by Faith:* They own however, that Men who have the use of Reason, have the freedom of Will in Things relating to the present Life, whether Good or Evil, but still subject to the Divine Government; but in Spiritual Things there is a necessity of the Spirit's Assistance; as *Paul* says, *The Spirit helps our Infirmities.* Therefore they condemn the *Pelagians* and others, who teach, That without the Holy Spirit, and by the mere Strength of Nature, we are able to love God above all Things, and to fulfil the Law as to the substance of the Acts, because *Paul* says in the 8th of the *Romans*, *The carnal Mind is enmity against God, for 'tis not subject to the Law of God, neither indeed can be:* For tho' Humane Nature may in some Sense govern it self as to external Acts, as in abstaining from Theft, Murder, &c. yet it cannot govern the inward Motions of the Mind, as to the true Fear of God, Confidence in him, Patience, Chastity, &c. without the Assistance of the Holy Spirit; yet they own it to be the Command of God, that we ought to restrain our carnal Inclinations by Reason and the Law, because *Paul* says, *The Law is a School-Master to bring us unto Christ;* and also, *the Law was made for the Unjust.*

In the 19th, as to the Cause of Sin, they say, That tho' God creates and preserves Nature, yet the Cause of Sin is the Will of

the Devil and wicked Men, which turns it self away from God to other Things against his Commandment; therefore Christ says of the Devil, *When he speaks a Lie, he speaks of his own.*

In the 20th, they Appeal to their Books to convict their Enemies of Slander, when they charge them with the Neglect of the Doctrine of Good Works: But take notice, That whereas for a long time there had been a great Silence in the Church about the principal Works, viz. the Exercise of Faith, and the Commendation of Civil Actions; and that most of their Sermons were taken up in the Praise of Humane Traditions, Holy-Days, Fasts; the Monkish Life, Friaries or Fraternities, Pilgrimages, the Worship of Saints, Rosaries, and other useless Parts of Worship. Now, by the Goodness of God, the Church was call'd back to that true and useful Worship which he approv'd himself, and requir'd they quote several Places of Scripture, where the Prophets bewail the calamitous State of the Church, wherein true Worship should be extinguish'd, and that, in its stead, Humane Ceremonies and an Impious Confidence in them should obtain; from which Error they call upon the Church to return to true Worship, and such as are truly Good Works. They add, That it was very well known, that long before their Time, many good and learned Men did complain of the want of better Doctrine for the Comfort of People's Consciences, and to make a better Distinction betwixt Works; and hereupon they condemn the Papists for placing Evangelical Perfection in a Monastick Life and Superstition, and preferring Humane Traditions to the Commands of God; whereas they spoke so coldly of the Duties of Mens Vocation, Magistracy, Marriages, &c. that many grave Men began to doubt whether those Things were pleasing to God; therefore the Protestant Preachers did zealously teach both Faith and Good Works.

Of FAITH.

Concerning Faith and Justification, they teach, That our Saviour gave us the Sum of the Gospel in the last of *Luke*, where

where he commands Repentance and Forgiveness of Sins to be taught in his Name; and as the Command is universal, so is the Promise; for all Men are commanded to believe and come to Christ, and he will ease them of their Burdens: But thò Repentance be necessary, we are not to think that we are forgiven and justified for the Sake of that, or of any Works that go before or come after it, but freely for Christ's Sake; and this Benefit is to be receiv'd by Faith. This affords solid Comfort to our Minds under Terror, and has nothing of Sophism, Perplexity, or Absurdity; nor is there any need of Disputes in this Case about Predestination, or the like, for the Promise is universal; nor does it take away the Necessity of good Works, but excites us to them, as well as to Faith; for Remission of Sins is not ascrib'd to our good Works, but to Mercy; not that we should do nothing, but rather that we may know how our Obedience pleases God, thò attended with so much Weakness. For want of this Knowledge, which nothing but Pharisaical Ignorance can condemn, formerly People, to ease their Consciences, had Recourse to the Monastick Life, and other Works, for Remission of Sins; and Justification. To prove this Doctrine, they bring *Rom. 3. 20. Or. Rom. 4. throughout. Ephes. 2. 8. Or.*

When therefore we say, That we are justified by Faith, we do not understand that we are made Righteous for the Worth of the Act it self; but that we receive Forgiveness of Sins, and the Imputation of Righteousness by Mercy through Christ, by Faith; and this Faith is not only a Knowledge of the History, but a Belief of the Promise of the Mercy shew'd to us for Christ's Sake. They add, That by understanding Faith thus, *Paul* and *James* are reconciled; for when *James* says, *The Devils believe and tremble*; he means Historical Faith, which is common to them with wicked Men; but when *Paul* says, *Faith is imputed for Righteousness*, he speaks of our Confidence in the Mercy which is promised to us for Christ's Sake. They add, That this is no new Doctrine, but was taught by the Fathers, particularly by *Ambrose*, *Augustine*, and the *Millevitan Council*.

Of GOOD WORKS.

1. WE join, say they, with the Doctrine of Faith, that of Good Works, viz. That in such as are reconciled to God, Obedience to his Law is necessary; for the Gospel teaches a new Life and Repentance; nor can Faith exist but with Repentance, because it comforts us under our Sorrow and Terror for Sin; as *Paul* says, *Being justified by Faith, we have Peace with God*: And of Repentance, he says, *That our old Man is crucified with him, that the Body of Sin might be destroyed, that henceforth we should not serve Sin*.

2. Among Good Works, the chief and highest Worship of God is Faith, which brings forth many other good Works, that cannot exist without it; for *Paul* says, *How shall they call upon him in whom they have not believed. Rom. 10. 14.* While we are in doubt whether God will hear us, and think God will reject us, we do not truly call upon him; but when we believe in his Mercy, we fly to him, love him, call upon him, hope in him, expect Help from him, and obey him in Afflictions, because we know we are his Children, &c. These Things are produced by Faith; whereas our Adversaries would seem to magnify the Doctrine of Good Works, but say nothing of those Spiritual Works, of Faith, of the Exercise of Faith in calling upon God in all the Affairs of our Life, our Councils and Dangers.

3. By this Faith, which comforts us in Repentance, we receive the Holy Spirit to govern and help us to resist Sin and the Devil; and that we may more and more acknowledge our own Weakness; and that the Knowledge of God, his Fear and Faith, may grow in us, as *Paul* says, *That we are to be renewed in the Knowledge of God, after the Image of him that created us*.

4. This new Obedience pleases God, not by satisfying the Law, but because they are reconciled to him thro' Christ; for there's no Condemnation to them that are in Christ, and we are not now under the Law, but under Grace. Our own Works

cannot

cannot appeale the Wrath of God ; but the Terrors of Sin and Death are to be overcome by Faith in Christ, the Mediator. On this Occasion they reject the Preteritions of the Monks to Perfection and Supererogation ; their saying nothing of apprehending Christ by Faith, and reaching us to trust in our own Works. They add, That they themselves taught, that such as commit mortal Sins, are not just, because God requires that we should resist our corrupt Affections.

5. We teach how Men may do good Works, viz. by believing and calling upon God for the Assistance of his holy Spirit to comfort and govern us, and to help us to persevere in Truth and new Obedience ; for thō Men may do Things that are outwardly good by their own Strength, yet without Faith they are in the Power of the Devil, who tempts them to Uncleaness, and fills their Minds with impious and blasphemous Opinions. True Virtues are the Gift of God, Faith, Clearness of Judgment to discern Doctrines, such Greatness of Mind as is necessary for those who preach and profess the Gospel, true Diligence in Governing the Church, true Humility not to covet Power, or be byassed by popular Love or Hatred, true Chastity, &c. Those Heroical Virtues, *Paul* calls the Gifts of God, *Rom.* 12. To these Gifts, we must add our own Exercise of 'em for their Preservation, and to deserve an Increase. Thus, say they, it appears, that the Doctrine of Good Works is duly taught in our Churches ; but how much Darknness and Confusion there was formerly in this Doctrine, honest Men know well enough. People were not taught the Difference betwixt Humane Traditions and Divine Laws ; how good Works please, accompanied with so much Weakness ; and nothing was heard of that Faith which is necessary for Remission of Sins : But these Things being thus explain'd, the Consciences of good Men are comforted ; they have a certain Hope of Salvation ; they understand what true Worship is, how it pleases God, and in what Sense 'tis meritorious.

In the 21st Article they say, That Invocation is due only to the Father, the Son, and the Holy Spirit ; That God has pro-

pos'd his Son for our Mediator, and Priests to intercede for us ; for his Sake alone our Prayers are heard, according to that of our Saviour, *John* 16. 23. *Whatsoever you ask in my Name, he (the Father) will give it you.* Likewise, *There is but one Mediator betwixt God and Man.* 1 *Tim.* 2. 5. On this Head they condemn the Invocation of Saints, thō they approve the reading of their Lives, provided the Instances be prudently chosen.

This, they said, was the Sum of their Doctrine, which they judged to be according to the Prophets, Apostles, and the Catholick Church, and likewise to the *Roman* Church, as far as she was known to approved Writers. They hop'd, that all good and learned Men would concur with them ; for they did in no wise reject the Consent of the Catholick Church, nor innovate any thing : That they did not pertronize any Impious or Seditious Opinions, which had been condemned by the Catholick Church ; nor embraced this Doctrine out of any ill Design, but merely by the Authority of the Scripture, and the ancient Church : That it was evident a great many Abuses had crept into the Church, which needed Reformation. To this End they earnestly desir'd a General Council, that had long been wish'd for by good Men, and which the Emperor had put them in Hopes of ; and they intreated it might be made up of pious and good Men, who would consult the Glory of Christ, and the Safety of the whole Church ; for that was the customary and lawful Way of determining Ecclesiastical Differences, to refer them to Synods. This Custom the Church had observ'd from the Time of the Apostles ; and the excellent Emperors *Constantine* and *Theodosius* made use of it, not only in Things that were not very doubtful, but even in the Case of absurd Opinions ; so that they would determine nothing without a Synod, that the Liberty of the Church in determining Opinions might be preserved, which was an Example fit to be followed by the present Emperor, since they had changed nothing but according to the Pattern of the Primitive Church. They hop'd God had put such an Opportunity into the Emperor's Hands, for the Reformation and Safety of the Church ; and told him, That certainly

rainly God required it of him, that he should make use of his Power for the Glory of our Saviour, and the Peace of the Church, to put a Stop to the barbarous and most unjust Cruelty, that was exercis'd every where with a wonderful Rage against pious and innocent Men, the Members of Christ. God had charged Princes with this as their chief Care, and therefore rais'd up *Cyrus* to deliver the *Jews* from Captivity, and *Constantine* to put an End to that extream Cruelty which was then exercis'd against Christians; and they wish'd the Emperor would do the like.

For the Articles which they had exhibited were a manifest Evidence, that they taught nothing contrary to the Catholick Church, or that was Impious or Seditious: That they had indeed reform'd some Abuses in External Traditions, wherein tho there was a Difference, yet if the Doctrine and Faith continued pure, no Man ought to be accounted an Heretick, or Deserter of the Catholick Church, for a Difference in Humane Traditions; because the Unity of the Catholick Church consisted in an Agreement of Doctrine and Faith, and not in Humane Traditions, as to which there was always a great Difference among all the Churches in the World: Therefore they pray'd the Emperor not to listen to the Slanders of their Enemies, for they had only reform'd such Abuses as were contrary to the Scripture, the ancient Canons, and the Example of the ancient Church, and desir'd a fair Hearing. After which, they deliver'd in the Articles concerning the Abuses, which they had reform'd in External Rites, as follows.

Of the M A S S.

THEY say, they were falsly charged with having abolish'd it, since they still retain'd it with most of the usual Ceremonies, except that they had mix'd some *German* Songs with those in Latin, for the Instruction of the People; for Ceremonies were necessary to instruct the Unlearned, and that the handling of the Word of God might excite People to true Faith, Fear, and calling upon his Name; for *Pen*

not only commanded to make use of a Language known to the People, but it had likewise been so appointed by Humane Law. They also assembled such of their People, as were fit to receive the Sacrament, together, for that increas'd the Reverence and Religion of publick Ceremonies; and they admitted none till they were first examined. They also instructed their People in the Dignity and Use of the Sacrament, and what Comfort it propos'd to Penitents; that Men might learn both to fear and believe in God, to call upon his Name, and to expect good Things from him; which was the true Christian Worship, and pleasing to God, when they worship'd him thus in the Use of the Ceremonies. Hence they conclude, That the Mass, by which they understood the Lord's Supper, was duly observ'd among them, and with greater Reverence and Gravity than formerly.

On this Occasion they say, That for many Ages, good Men had complain'd of the Abuse and Prophanation of the Mass; for it could not be denied how much those Abuses had spread through all Churches, by what wicked Men it was celebrated, meerly for the Sake of their Belly, for it was too notorious to be dissimble: That never any thing had been so much prostituted for filthy Lucre, as the Mass had been; tho *Paul* had dreadfully threaten'd those who us'd the Sacrament unworthily, when he says, *He that eats this Bread, and drinks this Cup unworthily, is guilty of the Lord's Blood.* And 'tis writ in the Decalogue, That he who takes the Name of the Lord in vain, shall not pass unpunish'd. And as God had formerly punish'd the World for Idolatry, he would certainly revenge this horrid Abuse of the Mass with terrible Punishments: And perhaps it was for that Cause chiefly, that the Church in these latter Ages was so much punish'd with Blindness, Discords, Wars, and other Calamities; yet the Bishops not only had suffered those Abuses, which they knew well enough, but were pleas'd with them, and laugh'd at them: Whereas now they begin too late to complain of the Calamities of the Church, tho nothing else had occasion'd such Tumults but those Abuses, which were so open, that moderate Men

M m m

could

could no longer bear with them. Therefore they with the Bishops had before then, according to their Duty, restrain'd the Avarice and Impudence of the Monks and others, who having perverted the ancient Custom of the Church, said Masses only for Money.

They say, those Abuses proceeded from an Opinion, That the Lord's Supper was a Work, which being celebrated by a Priest, deserv'd Remission of Sins and Punishment, both to themselves, and to those who took it with them, and that merely by the Act it self, without any good Disposition of Mind; and likewise, that being said for the Dead, it deserv'd Deliverance from the Pains of Purgatory. Thus they explain a Sacrifice, when they call the Mass by that Name, viz. That it is a Work, which being done for others, deserv'd a Remission of Sin and Punishment; and thus they alledge an Oblation is made by the Priest for the Living and the Dead. This Opinion being receiv'd, they taught Men to seek thus for Remission of Sins, and all sorts of good Things; nor was it of any Importance by what sort of Men those Masses were said, because they taught that they were efficacious enough, without the good Disposition of those who us'd them. Then it came to be disputed, Whether one Mass said for many, was as profitable as if every one had a Mass said for him? This increas'd both the Number and Gain of the Masses.

Therefore their Churches taught, That this Opinion of the Application and Merit of the Mass was false and impious, by the following Arguments:

1. As they had shew'd above, because Men obtain'd Forgiveness freely by Faith for Christ's Sake, and therefore it could not be obtained by the Work of another.

2. That Christ's Passion was a Sacrifice and Satisfaction for Original and Actual Sin, as appears by *Heb. 10. 10. &c. We are sanctified by the Offering of Christ once for all*: A great Part of that Epistle is taken up in confirming this Doctrine, That it was only the Sacrifice of Christ which deserv'd Remission, and Reconciliation for others.

3. In the Institution of the Supper,

Christ does not command that the Priest should offer for other Men alive and dead; By what Authority then could the Church appoint this as a Sacrifice for Sin, without God's Command.

'Tis still more absurd to apply the Mass for delivering the Souls of the Dead, for 'twas appointed for a Remembrance; that is, that those who took the Lord's Supper in Remembrance of the Benefits purchased by Christ, may be comforted, and have their Faith confirmed; so that 'tis not a Satisfaction for Punishment, but was instituted for the Remission of Sins, viz. That by using it, we might be instructed in the Benefits we receive, and particularly of the Remission of Sins by the Death of Christ. Therefore they condemn the Application of the Lord's Supper for the Deliverance of the Dead as a new and impious Piece of Worship, contrary to the Scripture.

4. A Ceremony without Faith in the New Testament deserves nothing, neither to him that performs it, or to others; according to that of our Saviour: True Worshipers shall worship the Father in Spirit and Truth. This is likewise prov'd by the 11th Chapter of the Hebrews, *That by Faith, Abel offer'd a more excellent Sacrifice than Cain*: Likewise, without Faith 'tis impossible to please God; which at once destroys the Doctrine of Merit *ex opere operato*, or by the Act it self.

5. The Application of the Benefits of Christ is made by our own Faith, as appears by *Rom. 3. 24, 25. Being justified freely by his Grace, through the Redemption that is in Jesus Christ, whom God hath set forth to be a Propitiation through Faith in his Blood, to declare his Righteousness for the Remission of Sins that are past, through the Forbearance of God*; and *v. 28. Therefore we conclude, that a Man is justified by Faith, without the Deeds of the Law*. So that when we take the Sacraments, the Application is made by our own Faith and Deed, and not by the Work of another; for if we had no Remission but by the Mass, our Faith must be transferred from Christ to the Act of the Priest, and so we could be at no Certainty.

These Arguments, and many others, confute the Opinion of the Merit and Application of the Mass for the Living and Dead; there-

therefore they apply to the Emperor, to deliver the Church from such a dreadful Profanation and horrid Abuse of the Lord's Supper.

6. The Institution of the Sacrament is against this Abuse, for there is no command there to offer up Sacrifice for the Sins of the Living and Dead; but we are commanded to take this Body and Blood in Remembrance of Christ's Benefits: And this Remembrance does not imply a meer Historical Representation as on a Stage, as those Men fancy, who defend the Merit *ex opere operato*; but implies, That by Faith we remember the Promise and Benefit comfort our Consciences, and give thanks for it; for the principal End of the Institution is, that our Faith may be rais'd and exercis'd, when we receive that Pledge of Grace; besides the Institution orders, that the Ministers should give or stretch out the Body and Blood of the Lord to others: This was the Custom of the Primitive Church, 1 Cor. 11. 33. where the Apostle enjoins, that when they com together to eat, they should tarry for one another, that there may be a Participation of the Communion; therefore, they say, we have laid aside private Masses as contrary to Christ's Institution; but we Administer on Holy-Days, and others, to such as are found fit upon Examination, and the Ceremony is accompanied with Pious Sermons, as our Saviour appointed, wherein we instruct them of the Nature and Use of the Sacrament; whereas formerly nothing of that was done, nor any thing taught but the *Opus operatum*, nor was there any thing said of Faith, or of the Comfort that redounds from it, but the Peoples Consciences were tortur'd with extravagant Confessions. Thus our Administration appears to be agreeable to our Saviour's Institution; and the Custom of the Ancient Church, where the Sacrament was common, as *Chrysostome* informs us, when he says, That the Priest stood at the Altar, where he call'd some to the Communion, and kept off others; and by the Council of *Nice* 'tis evident, That one certain Person celebrated the Liturgy, as the *Greeks* call it, and stretch'd out to all the rest the Body and Blood of the Lord. The

Words of the Decree are thus, Let the Deacons receive according to order, after the Presbyters, the Holy Communion from a Bilhop or Presbyter, nor is there any mention of private Masses till *Gregory's* Time; but whenever the Ancients speak of a Mass, 'tis plain they speak of one that was Common: Therefore say they, we hope the Practice of our Churches cannot be condemned. As to the rest of the indifferent Rites we observe most of them, though we differ as to the frequency of the Mass; and we find by the Tripartite History, that in the most numerous Churches they had not Mass every Day.

Of taking the SACRAMENT in both Kinds.

THIS they justify by our Saviour's Command, in *Matth. 26*. That of the Apostle, 1 Cor. 11. by the Authority of *Cyprian* and *Jerome*, and the Decrees of Pope *Gelasius*, who condemn'd it as Superstition not to take the Cup, and order'd that they should either receive both or none, for it was a great Sacrilege to make a Division of one and the same Mystery. They make this Reflection upon withholding the Cup from the People, and not teaching them the true Use of the Sacrament; that the Mutilation of the Ceremony did perhaps signify, that the Gospel concerning the Blood of Christ, *viz.* that the Benefit of his Death was thereby obscur'd.

Of CONFESSION.

THEY Complain, That the Doctrine of Repentance was obscur'd by Divines and Canons, who tortur'd Peoples Consciences with their perplex'd Disputes, numberless Traditions and Injunctions, to tell all their Faults, and with their feign'd Satisfactions, which left them in perpetual Doubt, and obscur'd the Benefits of Christ's Death; most of what they enjoin'd not being Worship commanded by God, but vain Repetitions of Prayers, Invocations of Saints, Pilgrimages, and other Things of this Nature, by which they

overturn'd the true Doctrine of Repentance; as to which, good Men for many Ages have desir'd a Reformation; whereas without Sophistication we preach the Truth of the Gospel concerning Repentance, that Men may understand how they are to return to Christ; how they may obtain Forgiveness, and what Works and Worship are pleasing to God: Here they repeat what they had said before, as to the Nature of Repentance and Faith, and their retaining the true Use of Confession and Absolution, which their Enemies had obscur'd, and made dubious, by taking away from the Church the Ministry of the Gospel, or the Power of the Keys; whereas they taught, that an Enumeration of all our Sins to the Priest was impossible, and not commanded of God, as *Chrysostome* says on the *Hebrews*, "Let us not only be persuaded that we have sin'd, and confess with our Mouths, but from the bottom of our Heart; and let us not only say, That we are Sinners in general, but reckon up our special Faults, not to betray our selves to the Publick, or to accuse our selves to others; but according to the Prophet, to lay open our Lives before God, and to confess our Sins to him. They add, That the Gloss in the Decrees concerning Repentance, *Distin.* 5. owns, That Confession was appointed by the Church, but not by the Scripture; and that most of the Doctors were of that Opinion. Then, as to Canonical Satisfactions, they condemn them as what we are not oblig'd to, and as Things of no Efficacy for obtaining Forgiveness. In the Ancient Church they say, It was the Custom to impose a Mule't upon those who return'd to the Church after having fallen; from whence those Canonical Satisfactions took their Rise; not that the Ancients thought that Ceremony an Expiation of the Fault, but only made use of it to deter others from offending; but the Unlearn'd did afterwards alledge, That those Satisfactions absolv'd Men from the Sin, and deliver'd them from the Pains of Hell and Purgatory: But we teach, say they, That the necessary Fruits of Repentance, are Obedience, the Fear of God, Faith, Love, Chastity, and an intire Renovation of the Mind.

Likewise, that Sins are frequently punish'd in this Life with Temporal Judgments, as in *David*, *Manasseh*, &c. and that those Punishments are mitigated by Good Works, and an Universal Repentance, as *Paul* teaches us, *If we judge our selves, we shall not be judged*; and thus God chang'd his Sentence against *Nimrod*, because of their Repentance.

Of the Difference of Meats, and other such Popish Traditions.

They say, in this Life there is need of Traditions, *i. e.* a Distinction of Places and Times, that all Things may be done with Order and Decency in the Church: Therefore the Church appoints the Times and Places for the Peoples assembling, and in those Civil Things has a Power of Tradition; but to this, Ignorant Men added superstitious Opinions without number, as *Augustine* and *Gerſon* formerly complain'd; therefore they found it necessary to teach the People what they should think of Humane Traditions, for it was not in vain that our Saviour, and the Apostles, spoke so frequently of such Traditions, and admonish'd the Church to be prudent in their Determinations about 'em; whereas of late Ignorant Men had taught, that Ecclesiastical Traditions deserv'd Forgiveness of Sin, and were necessary for Gospel Righteousness, and like, the *Levitical* Ceremonies under the Law, could not be omitted without Sin, even when such Omission occasion'd no Scandal, by which they ascrib'd the Benefits of Christ's Death to Men's own Works, though *Paul* cautions us against it with so much Severity.

2. By those Traditions they obscur'd the Commands of God, to which they prefer'd them, and made Christianity wholly to consist in the Observation of certain Holy-Days, Rites, Fasts, Habits, &c. to which they ascribe Christian Perfection, without insisting upon the Relative Duties of People of all sorts, by which they brought Men to doubt whether their Civil Vocations, Marriage, Magistracy, &c. were pleasing to God, and occasion'd many to desert their Civil Duties with the Stations

tions that God had plac'd them in, and to retire into Monasteries, because they thought that was more pleasing to God, and deserv'd Remission of Sins. 3. They tortur'd Men's Consciences, by urging the Necessity of those Traditions, which were so innumerable, that the most diligent Man alive could not observe them; which *Gerson* says occasioned many Men to despair, and to kill themselves. Thus the Priests and Divines spent their Time in collecting those Traditions, and making Commentaries upon them, wherein they could not agree, which more and more perplex'd Men's Consciences; whereas at the same time they did not teach them one Word concerning Free Grace, Faith, Hope, of the Cross of Christ, and of Comfort of Conscience under Temptations; and totally laid aside the Scripture, and useful Doctrine, which have frequently been complain'd of by good Men, who found themselves hinder'd by such Brawls about Traditions, in seeking after a more useful Knowledge. Therefore, say they, we found it necessary to teach the People what they ought to think of Humane Traditions; not that they had any Design to destroy Ecclesiastical Authority, to detract from the Dignity of Bishops, or to dissolve the good Order of the Church, but to reprehend the Jewish Opinions; for our Opinion concerning Humane Ceremonies is, 1. That if they be such as contradict the Command of God, they are not to be observ'd, as that concerning Celibacy, &c. 2. For other Ceremonies which are in their own Nature indifferent, as Fasts, Holidays, Difference of Habits, and the like, that they do not deserve Forgiveness of Sins, nor constitute Righteousness or Christian Perfection, but may be omitted, except in Case of Scandal: For this, they quote *Rom. 14. 17. For the Kingdom of God is not Meat and Drink, but Righteousness and Peace, and Joy in the Holy Ghost: Col. 2. 16. Let no Man therefore judge you in Meat or Drink, or in respect of a Holy Day, or in the New Moon, or of the Sabbath Day: Mart. 15. 11. Not that which goeth into the Mouth defileth a Man; where our Saviour excuses the Apostles for breaking the usual Tradition, and adds this memorable Sentence, In Vain do they worship me, teaching for Doctrines the Com-*

mandments of Men. Acts 15. 10, 11. Why do ye tempt God, to put a Yoke upon the Neck of the Disciples, which neither our Fathers nor we were able to bear; but we believe, that through the Grace of the Lord Jesus Christ, we shall be saved, even as they. So that the Apostle sharply rebukes them who burden Men's Consciences with such Observations, and calls it a tempting of God; and *1 Tim. 4. 3.* the Apostle calls forbidding to marry, and commanding to abstain from Meats, the Doctrines of Devils, because the Benefit of Christ's Death was ascrib'd to them, and they were enjoin'd as necessary; so that they wonder that Men were not mov'd with those Scriptures, but would still defend Superstitious Traditions: And here they say, That even Traditions concerning Things in their own Nature indifferent, as Meat, Clothes, &c. become impious, when they are enjoin'd as deserving Remission of Sin, as Things necessary, and as Parts of Worship or Duties; the immediate End of which is, that by them God may be honour'd: Therefore they thought it necessary, that such pestilent Opinions should be condemned by the Church; and for this Reason, unnecessary Humane Rites, as Difference of Meats, Monastical Habits, and such Superstitious Customs, were to be thrown off, as *Hezekiah* burnt the Brazen Serpent, when he saw it was worshipped by the People. But because Humane Society stands in need of Order, to that Political End some useful Ceremonies may be retained without Superstitious Opinions; i. e. That they be not looked upon as Worship, or necessary Things; That the People may know when they are to assemble in the Church, to Sermon, and Sacrament; and we likewise observe the Lord's Day, and other Holidays, and the usual Difference of Histories in our singing on the Day of our Lord's Birth, Easter, Ascension, Pentecost, &c. And our People love those Ceremonies the better, since their Consciences are deliver'd from Danger, and those unjust Impositions with which they were burden'd by the Monks and Canonists; and we teach them, that the End of those Institutions is Political, which right Interpretation makes 'em more grateful to moderate Minds: Therefore we say, That those Men are faulty who proudly

proudly and scandalously violate those Ceremonies, *i. e.* who hinder the Ministry of the Gospel.

This Liberty, say they, was not unknown to the Fathers; for which they quote *Irenæus*, who says, That Difference in Fast-Days did not dissolve Agreement in Faith. The *Tripartite History* gives many Instances of Difference in Rites, and adds this excellent *Epiphonema*, *It was not the Mind of the Apostles to establish any thing about Holidays, but to preach Godliness and a good Life.*

As to the Charge upon them, That they reject good Works, and the Mortification of the Flesh; they complain of it as a Slander, for they taught the Necessity of good Works, as we have heard before: And as to true Mortification of the Flesh, that consists in bearing the Cross, Dangers, Calamities, and Afflictions; and that Christians are to mortify the Flesh by Labour, Temperance, Meditation on Divine Things, and other suitable Exercises, lest by Sloth or Fulness of Bread they be tempted to Sin, and that their Minds may be the more fit for Spiritual Exercise; but they are not to look upon those Things to deserve Remission of Sin, or to be Satisfactory for it; and this Discipline ought to be perpetual, and not to be enjoin'd on all Men at certain Times. Concerning this Discipline, our Saviour says, *Luke 21. 34. And take heed to your selves, lest at any time your Hearts be over-charged with Surfeiting and Drunkenness, and the Cares of this Life. Likewise, This kind of Devil goeth not out but by Prayer and Fasting, Mark 9. 29. And Paul says, 1 Cor. 9. 27. I keep under my Body, and bring it into Subjection.* Therefore we do not condemn Fasting, but only Superstitious Opinions and Impositions on Men's Consciences about it.

Of Priests Marriage.

They say, That the Pope's Law about the Celibacy of the Clergy, has been the Fountain of greater Villany, Wickedness and Impurity, than can be expressed by Man; and being contrary to the Law of God, Nature, and the Gospel, as also to the Constitutions of ancient Synods, there is no need of much Dispute about it; and

therefore they request the Emperor to abolish that Tyrannical Law, by which the Clergy are more severely and cruelly punished for marrying, than for the greatest Crime, tho' this Doctrine be censur'd by the Apostle as the Doctrine of Devils; and therefore neither the Pope's Laws, or the Vows of Celibacy, are to be pleaded against it, since it hath given Occasion to such lustful Impurities, and other Villanies, as are enough to bring Judgments on the World; and that 'tis a miserable Spectacle when Princes, who ought to be the Representatives of God upon Earth, do not serve him, but the Fury of the Devil, by confirming horrid Sins, Idolatry, Lust, and unjust Cruelty.

Of Monastical Vows.

THEIR Doctrine concerning this, they say, will be better understood if the State of the Monasteries be consider'd, and how many Things are every Day committed in them against the Canons. In *Augustine's* Time, the Monasteries were Free Colleges; but when the Discipline was corrupted, Vows were added, and many other Observations and Impositions, contrary to the Canons, as if Discipline could have been restored by a Prison, which proved a Snare to People's Consciences, especially to Nuns, who being the weaker Sex, ought to have been more gently dealt with; and even tho' the Canons would have allow'd them a Liberty, both Sexes were compelled to stay in the Monasteries, tho' they were sensible that they could not keep their Vows. This has been complain'd of many Ages ago by good Men, when they saw Youth of both Sexes thrust into Monasteries meerly for a Livelihood, which occasioned many Scandals. Unto this, contrary to the Opinion of the first Monks, they added a superstitious Conceit, That those Vows oblig'd them as much as the Vow of Baptism; That this sort of Life deserv'd Remission of Sins, and Justification before God, more than observing his Commands, or the Rules of the Gospel; and at last came to say, That the Monastick Profession was better than Baptism, and deserv'd

serv'd more than the Office of Magistrates, Pastors, and others, who follow their lawful Vocations, as appears by their Books. Monasteries were formerly Schools of Religion, where the Scriptures and good Discipline was taught, and from whence Pastors and Bishops were chosen; but now 'tis known to be so much otherwise, that there was no need to insist upon it: Nor can we be charg'd, say they, with aggravating any thing, but only say this, that our Doctrine may the better be understood; which is, 1. That 'tis lawful to all Men, who have not the Gift of Continence, to marry, because Vows cannot annul the Commands and Ordinances of God; which is, that to avoid Fornication every Man should have his own Wife. 'Tis in vain for them to object their Vows; for the Canons teach, That in every Vow the Right of the Superior is excepted; therefore much less can those Vows bind against the Law of God; and 'tis known that the Popes have several times dispens'd with Vows, which proves that they judg'd there was an Equity necessary to be us'd in this Case: And the Canons rescinded all Vows made before 15 Years of Age, and some of them forbid them before Eighteen: And *Augustine* says plainly, That Marriage cannot be dissolv'd for such Causes. We likewise teach, say they, That those Vows are void, because all sorts of Worship chosen and appointed by Men, without the Command of God to deserve Remission of Sins and Justification, is Impious; as our Saviour says, *In vain do they Worship me by the Commandments of Men*; and Paul says, *Gal 5. 4. Whosoever of you are justified by the Law, ye are fallen from Grace, and Christ is become of none Effect to you.* They add many other Things, and particularly, That the Opinions of the Monks obscure the Precepts and true Worship of God, by teaching, That they are only in a State of Perfection, since Christian Perfection is to fear God, to believe that he is reconcil'd to us through Christ, to beg his Assistance in all the Duties of our Vocation, and to do good; but does not consist in Celibacy, Begging, or a sordid Habit; the teaching of which by the Monks, has occasion'd many People to forsake their Wives and

Children, their lawful Vocations, Possessions, and Publick Employments, as if those Things did not become Christians. So that *Gerson*, long ago, reprehended the Error of the Monks, and upbraided them with introducing a new Opinion; when in his Days they asserted, That the Monastical Life was a State of Perfection.

Of the Power of the Church.

There have been great Disputes, say they, concerning the Power of Bishops, in which some have very improperly join'd the Ecclesiastical Power with that of the Sword. From this confounding of the Two Powers, have proceeded many Wars and Commotions; while the Pope's relying on the Powers of the Keys, not only appointed new sorts of Worship, and impos'd on Mens Consciences by reserving of Cases and violent Excommunications, but also took upon them to dispose of Kingdoms and Empires, which was complain'd of long ago by pious learned Men. We, say they, for the Ease of Mens Consciences, found our selves oblig'd to show the Difference betwixt Temporal and Ecclesiastical Power, and to teach, That both of them are by the Command of God to be reverenc'd and honour'd, as the greatest Benefits which God has given to Men on Earth. We believe, that the Power of the Keys, or the Power of Bishops, is according to the Gospel, the Command of God, to preach the Gospel, remit and retain Sins, and Administer the Sacraments; for Christ sent out his Apostles with this Command, *Mark 16. 15. and John 20. 21, 22, 23.* This Power is only exercis'd in preaching the Gospel, and administering the Sacraments; therefore since the Ecclesiastical Power gives only Spiritual Things, and is exercis'd by the Ministry of the Word, it no more hinders the Political Administration than it does the Art of Singing, or any other Art; for the Political Administration has another Object than the Gospel. Magistracy does not defend our Minds; but our Bodies and Estates against Injuries; and restrains Men by the Sword and bodily Punishments, so as they may observe Civil Justice;

Justice; therefore the Two Power are not to be confounded, Church-men have nothing to do with the Magistrate's Office, to dispose of Kingdoms, to abrogate Laws, to deprive the Magistrate of Obedience, to hinder their Judgments in Civil Matters, or to prescribe Laws to Magistrates, as to Forms of Civil Government; as our Saviour say, *My Kingdom is not of this World, who made me a Judge, or a Divider over you?* And Paul says, Phil. 3. 20. *Our Conversation is in Heaven: And 2 Cor. 10. 4. The Weapons of our Warfare are not Carnal, but Mighty through God, to the pulling down of strong Holds, &c.*

If Bishops have Power of the Sword, they have it not as Bishops by the Command of the Gospel, but by Humane Law from Emperors and Kings, for the Administration of the Temporal Estates, which is quite different from their Ministerial Function. For according to the Gospel, Bishops have no Jurisdiction as Bishops; that is, those to whom is committed the Ministry of the Word and Sacraments; but to remit Sins, to examine the Doctrine, to reject such as is contrary to the Gospel, and to exclude Persons, who are openly wicked, from the Communion of the Church, without any Humane Power, but by the Word: And in that Case the Churches are to give Obedience according to the Divine Command, according to that of our Saviour, *He that hears you, hears me*; but if they command any thing contrary to the Gospel, they are not to obey, as we find, *Matth. 7. Gal. 1. 2 Cor. 13.* If they have any other Power or Jurisdiction in determining Causes of Matrimony or Tithes, &c. 'tis only by Humane Law: 'Tis also controverted, whether Bishops have any Right to appoint any Ceremonies in the Church, and of making Laws about Meats, Holy-days, Degrees or Orders of Ministers: Those who ascribe that Power to them, alledge that Scripture, *I have still many things to say to you, which now you cannot bear; but when the Spirit shall come, he will guide you into all Truth, John 16. 12, 13.* They alledge also the Example of the Apostles, who commanded to abstain from Blood and Things strangled, and the change of Sabbath into the Lord's Day; and of this

they boast much, because it was the Change of One of the Ten Commandments. But, as to the Question, we teach, That Bishops have no Power to appoint any thing contrary to the Gospel, as has been said already, and the Canons, *Distinct. 9.* say the same. Moreover, 'tis contrary to the Scripture to appoint or command Traditions, by the Observation of which we may deserve Remission of Sins, or make Satisfaction for them, for that is Derogatory to the Merits of our Saviour; for by this Means such a multitude of Traditions were brought into the Church, as overwhelm'd the Doctrine of Faith, &c.

Many Writers do likewise urge now-a-days, That the Worship of the *New Testament* ought to be like the *Levitical Service*, and that God has committed the ordering of this to the Apostles and Bishops; but they are deceiv'd by thinking that the Righteousness of the *New Testament* consists in the Observation of certain Rites, as it was under the Law; and hence they will have it, that such and such Meats defile us; that the not observing Canonical Hours is a mortal Sin, &c. That Sins in reserv'd Cases cannot be remitted, but by the Authority of him that reserv'd them; whereas the Canons speak only of the Reservation of Canonical Punishment, but not of the Reservation of the Fault: But whence have Bishops that Right of imposing Traditions upon the Churches to burden Mens Consciences? For we have clear Scripture against such Traditions, as are appointed either to deserve Remission of Sins, or as necessary for *New Testament* Righteousness, or to Salvation; for this they quote *Cor. 2. 16. Let no Man judge you in Meat, or in Drink, &c. And V. 20, 21, 22, 23. If you be dead with Christ from the Rudiments of the World, why, as though living in the World, are you subject to Ordinances? Touch not, taste not, handle not. Which are all to perish with the using, after the Commandments and Doctrines of Men. Which things indeed have a shew of Worship in Will-Worship and Humility, and neglecting of the Body, not in any Honour to the satisfying of the Flesh.* Titus likewise plainly forbids Traditions, and our giving any heed to Jewish Fables, and Commandments of Men, that turn from the Truth: And Christ, in the 15th of

of *Matthew*, says of those who insist on Traditions, *Let them alone, they are blind Leaders of the Blind*: And he disapproves such kind of Worship, when he says, *Every Plant that my Heavenly Father hath not planted, shall be rooted up.*

As to the Lord's Day, and such Rites, they say, That 'tis lawful to Bishops or Pastors to make such Orders, that Things may be done orderly in the Church, as *Paul* ordered Women to be cover'd in the Church; and that the Prophets or Interpreters should be heard in Order. Such Orders are necessary in the Church for the Preservation of Love and Peace, that all Things may be done in Order, and without Tumult; but so as People's Consciences be not burden'd with an Opinion, That such Things are necessary to Salvation, and that they sin when they act contrary, without Offence to others; for no Man will say, That it was a Sin for a Woman to appear in Publick with her Head uncover'd, if it did not give Offence to others.

Such, say they, is the Observation of the Lord's Day, *Easter*, *Pentecost*, and such Holidays and Rites; for they who judge that, by the Authority of the Church, the Lord's Day was instituted for the Sabbath as necessary, are deceived. The Scripture grants, That the Observation of the Sabbath is now at Liberty; for it teaches, That the *Mosaic* Ceremonies, after the Gospel was revealed, were not necessary: And yet, because it was needful to appoint a certain Day, that the People might know when to meet, it appears that the Church appointed the Lord's Day for that purpose, which for this Cause seems, to have been the more pleasing, that Men might have an Example of Christian Liberty, and know, that neither the Observation of the Sabbath, nor of another Day, was necessary.

There are prodigious Disputes concerning the Change of the Law, the Ceremonies of the New Law, the Change of the Sabbath; all which arise from a false Perswasion, That the Gospel-Worship must be like the *Levitical*; and that Christ committed to the Apostles and Bishops a Power to invent new Ceremonies necessary to Salvation. These Errors crept into the Church when the Righteousness of Faith was not clearly enough taught. Some alledge, That the

Observation of the Lord's Day is not positively of Divine Right, but in a certain Manner; and they appoint Holidays, so as it may be lawful to work on them: But these Disputes, say they, are nothing else but Snares to People's Consciences; and the Equity or Moderation of those Traditions can never be maintained, so long as the Opinion of their Necessity is inculcated. The Apostles commanded to abstain from Blood; yet those who do not observe that Command now, are not guilty of Sin, because the Apostles themselves were not willing to burden Men's Consciences with such a Servitude, but only forbid it for a Time, for avoiding of Scandal.

They add, That the Bishops might easily retain the People in lawful Obedience, did they not press them to observe such Traditions as they cannot in Conscience do. They say, they do not require that the Bishops, for the Sake of Concord, should sacrifice their own Honour, which yet were the Duty of good Pastors to do: They only require them to forbear their unjust Impositions, which are new, and contrary to the Custom of the Catholick Church; for many Humane Traditions have been chang'd in Time, as is plain from the Canons, without endangering the Unity of the Church: But if those Things cannot be obtained, they must rather obey God than Man. *Peter* forbids Bishops to Lord it over the Church; but they do not desire to take away their Power, but only request them to suffer the Gospel to be duly preached, and to release a few Observations that cannot be follow'd without Sin; but if they will not do it, they must be answerable to God for the Schism, which they occasion by their Obstinacy.

In the Conclusion, they say, these were the chief controverted Articles; and they could have mentioned many other Abuses, which for Brevity's Sake they omitted, and only insisted upon what they thought necessary, that it might be seen there was nothing received as to Doctrine or Ceremonies among them, which was contrary to Scripture, or the Catholick Church: And if any thing was wanting, they were ready to give the Emperor and the Diet a larger Information, God willing, according to the Scriptures.

We have been the larger in this Extract of the *Augsburg* Confession, to satisfy the Desires of some Gentlemen, who wanted a true Account of the Religion of the *Lutherans*, than which there is none more Authentick than this Confession, to which they still profess an Adherence; tho' it be generally known, that many of 'em now are of another Opinion as to Free-will. 'Tis likewise valuable as being the first Confession exhibited to the Emperor and Diet, with a Protestation by those who were first called *Protestants* in the Empire, which afterwards became a general Name to all those who separated from the Church of *Rome*: And tho' since they have come under different Denominations, yet their Doctrine is the same in the main with what's laid down in this Confession. It may also be of Use to shew the Opinion of those Noble Reformers as to several Points of Ceremonies and Government, about which we in these Nations have been so long and unhappily divided; which, tho' it cannot be decisive, as being humane, yet has its own Use, and if duly weigh'd, might be conducive to Moderation: But since, as we observ'd in the beginning of this Extract, that *Melancthon*, who wrote it, confess'd he did it in haste; and that the Publisher of this Edition of the *Harmony of Confessions* thought fit to add, for explaining it, the *Saxon*, *Wittenberg*, *Palatine*, and *Schismatic* Confessions, with the Reconciliation of those in *Poland* about the Supper of the Lord, who adher'd both to this and the *Helvetic* Confession: We shall afterwards give a brief Account of those Confessions, when we come to the respective Countries to which they belong, especially as to such Points wherein they differ from this, or explain it.

THEIR HISTORY.

THE *Germans* having no ancient Records of their own, the earliest Accounts we have of them is from the *Romans*, who inform us, That when they were over-stock'd with Inhabitants, they sent away their supernumerary People. The Invasion the *Cimbri* and *Eutones* made upon the *Romans* in the Days of *Marius* is very remarkable: They were reckoned to

be 500000 armed Men, with a proportionable Number of Women and Children. This vast Multitude carried Desolation along with 'em, and the *Romans* were afraid they would put an End to their Republick, which probably they might have done, their Numbers and Valour consider'd; but by dividing their Army into two Bodies, *Marius* had a more easy Victory over them; so that they say, in one Battle he kill'd 100000, and took 60000.

We have little remarkable of them in the *Roman* History till *Julius Caesar*, who, after he had subdued *Gaul*, thought it would be impossible to preserve his Conquests, unless he also subdued *Germany*. He was the first *Roman* General that pass'd the *Rhine*, and his Pretext was, That they refus'd to deliver up some *German* Cavalry that had escap'd from him in one of his Victories over the *Gauls*. The *Germans* told him, The *Rhine* was the Boundary of the *Roman* Empire, and that he had no Business in *Germany*; upon which *Caesar* made a Bridge over the *Rhine* in 10 Days, but found them so well intrench'd, that he thought not fit to attack them, repass'd the *Rhine*, and broke his Bridge, lest the *Germans* should follow him. In another Expedition he defeated them, and oblig'd some of them to be his Subjects and Allies, tho' the Victory was dear bought.

Augustus continued the Design of conquering *Germany*, and *Tiberius* his General made some Progress in it; but the *Roman* Glory was considerably obscured by *Arminius*, a mortal Enemy to the *Romans*, and a zealous Defender of the Liberty of his Country, who surpris'd 3 *Roman* Legions under *Varus*, and cut them in Pieces; which Disgrace touch'd *Augustus* so sensibly, that he was often heard to cry out like a Mad-Man, *Varus, Restore me my Legions*. The famous *Germanicus* reveng'd this Loss by a complete Victory over the *Germans*, and made so great a Progress in *Germany*, that the Emperor *Tiberius*, who was suspicious, thought it not safe to continue him as General in this War, for the Governors of this Province always made a great Figure; so that *Lentulus* *Genulicus*, who commanded in *Germany* after *Germanicus*, when *Tiberius* recall'd him, because he was a Creature of *Sejanus*, then in Disgrace, wrote to the Emperor,

peror, That the *Roman Empire* might content him; but as for himself, he would subsist for no other General to come in his room.

After the Death of the brave *Arminius*, who was murder'd by his own Confidants for affecting a Monarchy, the *Romans* made greater Advances in *Germany*; but every Victory cost them dear; they were forc'd to dispute every Advantage they gain'd, and found it more difficult to keep their old Conquests, than to make new ones; for this Nation was so fond of Liberty, that they always revolted upon the least Opportunity. This made many of the Emperors take it for a Maxim, with Regard to *Germany*, Never to extend their Conquests beyond the *Danube*, and to hinder them from becoming too powerful on the S. of that River. The *Germans* were formerly very numerous, as appears by the vast Numbers of them cut off in Battles; for the Emperor *Probus* kill'd in several Encounters above 400000 of them, and oblig'd Nine of their Kings to come and beg Peace of him on very disadvantageous Terms. He was a great Enemy to the *Germans*, design'd to make that Country a Consular Province, and to build Forts every where to curb 'em, as he had already done upon the *Rhine*, the *Main*, and the *Neckar*; but Death prevented him.

The Emperor *Valentinian* resolv'd to subdue the *Quadi*, and to this End order'd a Citadel to be built in their Country. They complain'd of it; upon which the Work was discontinued for some time. Another Governor, who was entrusted with this Work, invited *Gabinus*, the Leading-Man of that Country, to an Entertainment, and kill'd him. The *Quadi*, enrag'd at this treacherous Action, made Reprisals upon the *Romans*, pass'd the *Danube*, and committed great Ravages in their Dominions. *Valentinian*, to revenge this, enter'd their Country, destroy'd all wherever he came with Fire and Sword, and swore he would exterminate them. After this, they sent Deputies to propose a Peace; but *Valentinian* was so enrag'd at the Sight of them, that by the Violence of his Passion he broke a Vein, which occasion'd such an Effusion of Blood, that it chok'd him.

After this, the *Romans* laid aside all Thoughts of conquering *Germany*; but the

Goths, with other *German Nations*, and Northern People, invaded *Italy* in their Turn, ruin'd the *Roman Empire*, settled themselves in the several Parts of it, (which we shall give an Account of, when we come to treat of the *Roman Emperors*) where they establish'd Limited Governments, with such Regulations as were proper to hinder Oppression and Arbitrary Power; for the *Roman Arms* had never prevailed so much among them, as to unsettle their former Methods of Government. Their being divided however into so many Governments, made it easier for the *Franks*, under the Kings of the *Merovingian Family*, to invade and reduce several of them; and at last *Charlemain* reduc'd all *Germany*.

This *Charles* was Son to *Pipin*, K. of *France*, and anointed and crown'd Emperor by Pope *Leo III.* on *Christmas-Day*, A. C. 800. He had before this rescued *Italy* from the Tyranny of the *Lombards*, took their King *Desiderius*, and annex'd his Dominions to the Kingdom of the *Franks*. Much about this Time ended his 30 Years War with the *Saxons*, then the most powerful People of *Germany*. His Pretence was, to oblige them to embrace Christianity; for wherever his Arms reach'd, he establish'd it, and erected Schools for that purpose. He had the Title of *Great*, both on Account of his Valour and Piety. He was at the same time Master of *Germany*, *France*, *Italy*, and Part of *Spain*. Most of the Provinces he committed to the Care of Governors, called *Marc-Graves*; but the *Saxons* were allow'd a greater Share of their ancient Liberty than the rest; and to keep them in Obedience, he founded many Episcopal Sees among 'em, that by their Influence they might be civiliz'd. *Charles* died in 814, in the 72d Year of his Age, and was buried at *Aix la Chapelle*, the chief Place of his Residence. He was succeeded by his Son

Lewis, surnam'd the *Godly*, who was crown'd by Pope *Stephen IV.* at *Rheims* in *France*. He order'd the Bible to be translated into the *Saxon*, and Copies of it to be distributed among the Commonalty. He drove the *Saracens* from *Italy*, and worsted his Nephew *Bernard*, who design'd to make himself King of that Country: put out his Eyes, with those of some of his Followers, and condemn'd

tcondemn'd 'em to a Monastery. *Lewis* had three Sons by his Wife *Irmengarde*, viz. *Lotharius*, *Lewis*, and *Charles*. They rebell'd against their Father, took him Prisoner, and shut him up in a Monastery; but most of his Subjects taking Arms to rescue him, *Lewis* submitted to his Father, and begg'd Pardon. When the Emperor had got his Liberty, he marched with his own and his Son *Lewis's* Forces against *Lotharius*, who had been deepest in the Rebellion, and died on his Way at *Mentz*, in the 27th Year of his Reign, and 64th of his Age, in 840.

He was succeeded by *Lotharius*, his eldest Son, in the whole Empire; for he turn'd his Brethren out of the Shares left them by their Father. *Lewis*, his Second Brother, had *Germany* for his Share, as far as it extends on this Side the *Rhine*; as also some Countries on the other Side, where the Vineyards were; so that he was the first that had *Germany* as an Independent Kingdom, says *Puffendorff*. *Lewis*, the youngest Brother, had *France*. *Lotharius* annex'd *Austrasia* to the German Empire, which from him was called in *High-Dutch*, *Loth-Reich*; and by the *French*, *Lot-Regne*, i. e. *Lotharius's* Kingdom, now *Lorraine*. After he reign'd 15 Years, he abdicated the Government, and retir'd to a Monastery at *Treves*. In his Reign was the Female Pope *Joan*, under the Name of *John VIII.* as is evident from the concurring Testimonies of the Historians of that Age.

Lewis II. succeeded in 855, upon his Father's Resignation: He was a Prince of wonderful Learning and Piety. He conquer'd and converted the *Slavonians*: He defended *Italy* from the Inroads of the *Saracens*, and made good Provision for poor Widows and Orphans. He had a great Quarrel with the Court of *Rome* for electing a Pope without his Consent. He reign'd 19 Years and 10 Months.

Charles the Bald, his Nephew, succeeded in 875. He was also King of *France*, but so mean Spirited, that he was cajol'd by the Promises and Money of Pope *John IX.* to come to *Rome* for his Coronation, and receive the Imperial Scepter from his Hand. He reign'd two Years, and was poison'd by one *Zedeckias*, a Jewish Physician.

In 878, *Ludovicus Balbus* succeeded his

Father *Charles*; but died in a Year and half after, and left the Crown to

Charles III. surnam'd the *Good*, from his Bulk and Fatness. By the Death of his two Brothers, all *Germany*, *France* and *Italy*, fell to him. He was the first that added the Year of our Lord to that of his Reign in publick Deeds. He became odious to his Subjects upon many Accounts, but chiefly because he made a dishonourable Peace with the *Normans*, and quitted to 'em that Part of *France* still called *Normandy*. His Nobles depos'd him, and he died miserably in a poor Village in *Swabia*.

In 888, *Arnulph*, natural Son to *Carloman* Duke of *Carinthia*, and King of *Bavaria*, was elected instead of *Charles*. In the beginning of his Reign, he had great Struggles for the Imperial Title with *Berengarius* Duke of *Friuli*, and *Guido* Duke of *Spoleto*, whom he defeated. He also stormed and took *Rome*; but was poison'd there by *Guido's* Wife, and died in great Misery, being eat up of Lice which the Poison bred in his Body.

In 900, his Son *Lewis IV.* a Child, was elected. He had constant War with the *Hungarians*, and was frequently defeated by 'em; so that a great Part of the German Nobility was cut off, which was chiefly owing to their own Divisions. He died unfortunate, and with him the Family of *Charles the Great* was extinguish'd. During his Reign, the Pope set up one *Lewis* for Emperor in *Italy*, whom *Berengarius* King of *Lombardy* took Prisoner, and put out his Eyes.

In 912, after the Death of *Lewis IV.* the Princes of *Germany* proffer'd the Imperial Crown to *Otto D.* of *Saxony*, the wisest Prince and best Soldier of his Time; but he declin'd it, because of his Age, and gave his Interest to *Conrad* Duke of *Franconia*, who was chosen. In his Time the *Hungarians* ravag'd *Saxony*, *Thuringia*, *Franconia*, *Lorraine*, and *Alsace*, and forc'd him to a dishonourable Peace. This Conduct having disoblig'd many of the Princes, they made War upon him, and the Heir of *Saxony*, Duke *Otto's* Son, was his greatest and most successful Enemy; yet by his Last Will he left the Empire to him for his Merit; and thus it was translated from the *Carolingian* Family

mily to the Saxons. In his Reign the Dukes of Lorraine, Swabia, and Bavaria, endeavour'd to make their Possessions Hereditary, which he could not prevent.

In 919, Henry of Saxony, surnam'd the *Faulconer*, because he delighted in Fowling, was proclaimed Emperor. The Pope profess'd to anoint and consecrate him; but he refus'd it, saying, *He was Emperor by the Providence of God, and the Consent of his People, which gave him a sufficient Title; and they that thought that not good enough, might go to Rome for a better.* He bravely defended his Subjects from the Hungarians, who made a great Inroad, and demanded a Yearly Tribute, for which he sent them, by way of Ridicule, a mangy Dog, defeated them near *Mersburg*, and slew 80000 of them, for which he was called *Pater Patrie*, the Father of his Country. In his Reign, the greatest Part of the Cities on the *Rhine* were either built or wall'd. He conquer'd the Serbes and Vandals, a Sarmatick Nation, who were possess'd of a great Tract of Land on the River *Elbe*. He drove them out of *Misnia*, *Lusatia*, and the Marquitate of *Brandenburg*. He was the first that instituted Sports and Turnaments; and order'd, that every 9th Boor should remove his Family into a City, which should be maintained by the Third of the Corn and Hay round it. He died of an Apoplexy in his Journey to *Italy*, after he had reign'd 7 Years and 6 Months.

In 936, his Son *Otho*, surnam'd the *Great*, succeeded. He had all the Princely Qualifications of his Father, compell'd *Harald* King of *Denmark* to own his Supremacy, and embrace Christianity, subdued the *Sclavonians* and *Bohemians*, and forc'd *Boleslaw*, the Prince of the latter, to turn Christian. He was engaged in Civil Wars with many Princes, especially with those who pretended to be of the Race of *Charles the Great*, and laid Claim to the Imperial Crown. He defeated the Hungarians near *Augsburg*; after which they never attempt'd any more IncurSIONS. There had been great Confusions in *Italy* for a long time; for sometimes one, sometimes another, usurp'd the Sovereignty there, which oblig'd *Otho* to march his Troops thither, and possess himself of that Country. He married the Widow of *Lotharius* King of *Lom-*

bardy, says the *Atlas Historique*, and brought the Tyrant *Berengarius* to submit; but he revolted again during the Civil Wars of *Germany*, over-run *Italy*, and distressed Pope *John XII.* and the City of *Rome* so, as they sent to *Otho* for Relief, who having deliver'd them from the Tyrant, they crown'd *Otho* King of *Italy* with the Iron Crown at *Milan*, proclaim'd him Emperor at *Rome*, forfeited *Berengarius* and his Posterity, and the Pope and Senate swore Fealty to the Emperor, on Condition of his preserving the Rights of the Holy See: After which Time, the Imperial Dignity and Crown of *Italy* were reckon'd Consequences of being Kings of *Germany*. But the Pope soon after conspired with *Albert*, Son to *Berengarius*, against him; and the Emperor marching again into *Italy*, the Pope and *Albert* fled to *Ostia*; the Romans renew'd their Oath of Fealty, and promis'd never to elect a Pope without the Consent of him and his Son. The Clergy and People pray'd him to call a Council, where *John XII.* was deposed, and *Leo VIII.* chose, who in the *Lateral* Council, where *Bonnet*, whom the Romans had perfidiously chosen afterwards, was deposed, confirmed to *Otho*, King of the Germans, and his Successors, the Right of choosing the Pope, as *Adrian* had granted to *Charlemain*, and to invest the Bishops in his Dominions. *Otho* returning to *Germany*, was obliged to a new Expedition to punish the *Italians* for their Revolt, restor'd Pope *John XIII.* chas'd the Greeks out of *Italy*, for the Treachery of *Nicephorus Phocas* their Emperor; and retiring to *Germany*, died at *Mersburg*, May 7. 974. in the 37th Year of his Reign, and 12th of his Empire. *Puffendorf* observes, That the frequent Revolts of the *Italians* was occasioned by his having no Strengths in *Italy*, and little Revenues there, except Free Quarters for his Army. Christening of Bells began in this Emperor's Reign.

His Son *Otho II.* with whom he shar'd his Government, succeeded. The Duke of *Bavaria*, his Cousin, instigated by some Bishops, was proclaimed Emperor at *Ratisbon*; but soon reduced: After which, *Otho* made War on *Lotharius* King of *France*, who invaded *Lorraine*, and defeated him near *Aix la Chapelle*. *Otho* afterwards enter'd *France*, and ravag'd the Neighbourhood of *Paris* with

with a potent Army; but was defeated in his Return, and had Advice at the same time, that the *Greeks* and *Saracens* had subdued Part of *Italy*, on which he made a Peace with *Lotharius*, by which he recover'd *Lorraine*. *Otho* march'd into *Italy*, and enter'd *Rome*; but having murder'd their Chief Men and Magistrates, whom he invited to a Feast in the *Vatican*, the *Italians* abhorring this Cruelty and Treachery, abandon'd him at the Battle of *Basentelle*; so that his Army was routed, and he himself escaping in a Vessel, was taken by Pyrates, from whom he got away by meer Chance; and as he was assembling an Army to retrieve his Disgrace, he died at *Rome*, either of Grief, or by the Wound of a poison'd Arrow, that had never been well cur'd, the 8th of December, 983. in the 10th Year of his Reign.

His Son *Otho III.* succeeded at 10 Years of Age, tho his Uncle the Duke of *Bavaria* was his Rival. The Archbishops of *Mentz* and *Cologne* were his Tutors, and *Gerbert*, afterwards Pope *Silvester II.* his Preceptor. *Crescentius*, Consul of *Rome*, made *Italy* to revolt some time after; upon which the Emperor march'd against him, reduced the Country, and took him in *Adrian's* Tower, now the Castle of *St. Angelo*; and Pope *John XV.* dying, made his Cousin *Bruno* of *Saxony* Pope, by the Name of *Gregory V.* at whose Request he pardon'd *Crescentius*, who, after his Return to *Germany*, design'd to make himself absolute at *Rome*, under Pretence of assisting the *Romans* to recover their Liberty. This oblig'd *Otho* to march thither with an Army: He besieg'd *Rome*, which surrender'd, and *Crescentius* was thrown Head-long from a Rampart. *Gregory XV.* being dead, *Otho* set up his Preceptor *Gerbert* in his room, and renew'd the Privileges which *Charlemain* had granted to the See. After this, *Otho* return'd to *Germany*, went in Pilgrimage to *Poland* to see the Corps of *St. Adalbert*, and erected the Duchy of *Poland* into a Kingdom. In his Return the Pope sent him Word, That the *Saracens* had taken *Capua*, in Correspondence with the *Romans*, who were grown weary of the *German* Government. This oblig'd him to repass into *Italy*, where he soon reduced the *Saracens*; but trusting too much to the *Romans*, who

had again submitted, and entering the City with a small Retinue, they besieg'd him in his Palace, from whence the Duke of *Bavaria* and Marquis of *Herraria* contriv'd his Escape, while they amus'd the People with Terms of Accommodation. Upon this he re-enter'd the City with his Army, and punish'd the Mutineers severely: After which, as he was returning to *Germany* to quell a Party that was forming against him, he died of Convulsions, occasion'd by Poison, in *January* 1002, in the 32d Year of his Age, and 19th of his Reign, without Issue. *Payfendorff* says, he was poison'd by a Pair of Gloves presented him by *Crescentius's* Widow, whom *Dr. Nicholson* thinks he had us'd as a Concubine, and flatter'd her with Hopes of Marriage; but being disappointed, she took that Way of Revenge. Some say, he was the first who appointed the Emperor to be chosen by the Majority of Seven Electors.

His Cousin *Henry II. D* of *Bavaria*, was chosen in his Place, according to his dying Request. The Marquis of *Turen*, perswaded the *Italians* to revolt, and defeated *Henry's* Army, commanded by the Duke of *Saxony*, at the Foot of the *Alps*; but *Henry* defeated him next Year, and was crown'd at *Pavia*. The *Poles* enter'd *Germany* during his Absence; but upon his Return, he forc'd 'em home. After this, he applied himself to make good Laws, to reform Abuses, to establish Bishopricks, and other Religious Foundations, and to enrich the Clergy. His Friends were angry at this, alledging, he gave his Riches to those who would make no good Use of them; and the Duke of *Bavaria* taking Arms against him, was subdued; but pardon'd and restor'd. Pope *Benet VIII.* implor'd his Assistance against those who had chosen the Anti-Pope *Gregory VI.* whose Party abandon'd him, and recall'd *Benet*, upon the Emperor's defeating the Rebels. Near *Verona* he obtain'd a second Victory over *Arduin*, and went to *Rome*, where he was crown'd by the Pope, confirm'd all the Privileges of his See, reserving only the Sovereignty of *Rome*, and the Power of sending Deputies thither to receive the Complaints of the People. He restored them the Privilege of choosing the Popes, allow'd them the Liberty to be consecrated before they swore Fealty to the

Impe-

Imperial Officers, and return'd to Germany; but was soon recall'd, defeated the Greeks, who had invaded Italy, chas'd them out of the Country, and in his Return had an Interview with Robert King of France, at the Confluence of the *Chier* and the *Maese*, where they made a League. He died the 17th of July, 1024. in the 52d Year of his Age, and 22d of his Reign, without Issue. Dr. *Nicholson* says, he agreed with his Empress *Gunegonda*, that both of them should preserve their Chastity; and upon Suspicion of her Fidelity, made her purge herself by the Fiery Ordell, which she passed without Hurt, if we may believe the Legendaries. *Puffendorf* tells us, That *Echert* Landgrave of *Hesse* contended with him for the Crown, but lost his Life in the Quarrel: That he subdued *Boleslaus* K. of Poland; and for his Munificence to the Clergy, was made a Saint. He is also called the Apostle of Hungary, because he thoroughly converted that Nation; and he defeated the *Wendish* Armies, who over-ran much of Germany.

The Duke of *Francia* *Conrad* the *Salique*, so call'd, either because his Mother was a French Woman of *Chamfermain's* Posterity, or because he liv'd according to the *Salique* Law, being recommended by Henry on his Death-bed, succeeded, tho' oppos'd by his Cousin *Conrad* the Younger. The Saxon Princes being angry that the Empire went from their Family, rais'd a War, which issued at last in the Ruin of both the Families. *Conrad* however subdued the Malecontents, went into Italy, accompanied by Prince Henry his Son, *Rodolph* King of *Burgundy*, and *Canute* the Great King of *Denmark*. He defeated the Rebels who oppos'd his Passage through the *Alps*; was crown'd King of Italy at Milan; and Emperor at Rome. While he was there, several Princes of the Empire took Arms to depose him. Upon his Return, he defeated them, pardoned some, and forfeited others. He also routed the *Frisians*, who had invaded his Country; and he acquir'd the Kingdom of *Burgundy*, which *Rodolph* III. Uncle to the Empress, had left to her Son Prince Henry, and defeated and kill'd *Endis* Count of *Champagne*; Nephew to *Rodolph* by his Sister, who claim'd it as nearest of Kin. He routed the *Lombards*, who had rebelled, quieted all

Italy, turn'd out *Pandolph* the Tyrant of *Capua*, and gave it the Prince of *Salerno*. He died at *Utrecht* the 4th of June, 1039. in the 15th Year of his Reign. *Puffendorf* says, he was also very successful against the *Poles* and *Sclavonians*. Other Historians give him this Character, That he was quick in Council, bold in Execution, belov'd by the Princes, the Darling of the People, and the Welfare of the Commonwealth. He made a Law, That no Prince of the Empire should invade any Province of it on Pain of Death.

His Son Henry III. surnamed the Black, succeeded, being Crown'd King of Germany 10 Years before by Consent of the States. He defeated and took the King of *Bohemia*, who refus'd to own the Sovereignty of the Empire, and releas'd him upon swearing Fealty, and paying his Arrears of Tribute. He routed the *Hungarians*, who assisted the *Bohemians*, restor'd their King *Peter*, and dethron'd the Usurper they had set up in his stead. Having Peace at home, he endeavour'd to procure the like to the Church, then plagu'd with three Anti-Popes, *Benedict*, who resided at *St. John de Lateran*; *Silvester*, at *St. Peter's*; and *John*, at *St. Mary Major*. *Gratian*, a Priest, got them all three to renounce for Money, and was chosen himself by the Name of *Gregory VI.* but his Election not being Canonical, the Emperor prevail'd with him to resign voluntarily at the Council of *Sutri*, having a Mind to recover the Right of Election himself. He thereupon assembled the Clergy, Senate, and People, in *St. Peter's* Church, and nam'd his own Chancellor *Suidger*, Bishop of *Bamberg*, whom they approved, and he was consecrated by the Name of *Clement II.* He afterwards Crown'd the Emperor, who assisted in a Council for abolishing Simony, the common Plague of the Church; and *Clement* died at *Bamberg* 9 Months after *Benedict IX.* who repented his having dispos'd himself, invaded the Chair; but was oblig'd to give Way to *Popo* Bishop of *Brescia*, whom the Emperor got elected by the Name of *Damianus II.* *Popo* reign'd but 24 Days, and *Benedict* resum'd the Chair; but being odious for his scandalous Life, the Clergy and People sent Deputies to the Emperor, who in an Assembly at *Worms* nam'd *Brando* of *Alsace*, Bishop of *Toul*, his Cousin, to be Pope in *Brando*'s Way to Rome, being per-

swaded by *Hildebrand*, Prior of *Cusi*, that his Election was not Canonical, because it did not belong to the Emperor, but to the Clergy, Senate and People, to chuse him freely, he went to *Rome* without any Marks of his Dignity; which Humility pleas'd the *Romans* so much, that they chose him unanimously. In the mean time the Emperor made War on *Godfrey the Bold*, Duke of *Neher-Lorraine*, who took Arms against him, for depriving him of *Upper-Lorraine*, in which his Father was invested by *Conrad the Salique*; but the Pope reconcil'd them. *Godfrey* dissembled on his Part; therefore to spite the Emperor, and to make him jealous, he married his Sister *Beatrice*, who was the Marquis of *Hebruria's* Widow, without his Consent: Upon this, *Henry* went with an Army, and took her from him, lest she should have conspired with her Husband to deprive him of the Crown of *Italy*; which so much enraged *Godfrey*, that he engaged his Cousin *Baldwin* of *Lisfe*, Count of *Flanders*, to join with him against the Emperor, who died some Time after in *Saxony*, the 9th of *October*, 1056. in the 31st Year of his Age, and 18th of his Reign, leaving several Children by his second Wife *Agnes*, Daughter to *William* Duke of *Aquitain*. Dr. *Nicholson* says, he renewed the old Law, That no Pope should be created without the Consent of the Emperor.

Henry IV. his Son, succeeded. His Reign was long and unfortunate. He was but Six Years of Age when he came to the Crown, and those entrusted with his Education neglected it. In his Minority, says *Puffendorf*, Church-men purchas'd Benefices at Under-Rates, and without Regard to Merit, which did the Empire much Mischief. When he came of Age, he resolv'd to make them give up those Purchases, which brought upon him the Hatred of the Clergy. The *Saxons* were his great Enemies, because he built Forts to bridle them, and seldom employ'd them in Offices. He communicated his Resolutions to the Princes of the Empire but rarely, and was managed by Favourites of mean Birth. On this Account the *Saxons* made a long War upon him; but he vanquish'd them at last. Pope *Hildebrand* or *Gregory VII.* gave him more Trouble than all his other Enemies. This Pope and his Predecessors were vex'd that they and the

Clergy should be subject to the Emperor; and *Hildebrand* thought it the fittest Time to embroil his Affairs when he was in War with the *Saxons*, and hated by most of his Princes. Upon this the Pope made a Decree, That it was not in the Power of the Emperor, or of any Secular Prince, to dispose of Church Benefices, nor give Investiture of Bishopricks; and that it belong'd only to the Pope. He also summon'd the Emperor to appear at *Rome*, to answer for his Male-Administrations, on Pain of Excommunication. On the other hand, the Emperor declar'd the Pope unworthy of that Post, and design'd to depose him. Upon this, the Pope excommunicated him, and freed his Subjects from their Allegiance, which in those Times of Ignorance and Bigotry prov'd fatal to the Emperor, destroy'd his Authority at once, and reduc'd him to great Extremities; for the greatest Part of the Princes assembled at *Treves*, where they depos'd *Henry*; but left the Execution of the Sentence to the Pope's Pleasure. So that to procure the Pope's Pardon, the Emperor made a Journey to *Italy* in the midst of Winter; and when he arriv'd at *Canusio*, he consented to the Penance of staying there 3 Days in a sharp Winter bare-footed, with his Wife and Son in the like Posture, in a coarse Woollen Habit, in the outer Court, and in an humble Manner to beg the Pope's Pardon and Absolution, which at last he obtain'd: But this mean Behaviour made him despicable to his Subjects; upon which he endeavour'd to recover his Reputation, and reduce the Rebels in *Italy* to Obedience. To prevent this, many of the Princes of *Germany*, by the Pope's Instigation, elected *Rudolph* Duke of *Schwaben* Emperor, to whom the Pope sent an Imperial Crown, with this Inscription:

Petra dedit Petro, Petrus Diadema Rudolpho.

*The Rock this Crown to Peter gave,
And Peter gives it Ralph his Slave.*

But the *Bavarians*, *Franconians*, and the Countries adjacent to the *Rhine*, remained faithful to *Henry*. Thus a bloody War ensued, wherein *Rudolph* and the *Saxons* were vanquish'd in two Battles, and in the third *Rudolph* lost his Life. After this, *Henry* conven'd

ven'd an Assembly of Bishops, in which *Hildebrand* was depos'd, and the Anti-Pope *Clement III.* was elected. The Emperor took *Rome*, and banish'd *Hildebrand*: But the *Saxons* continued in their Rebellion, and *Hildebrand* a second time excommunicated the Emperor, set up *Herman* Duke of *Luxemburg* in his stead, and after his Death *Ecbert* Marquis of *Saxony*. At last he stirr'd up the Emperor's Son *Henry* against his Father, whom he met, and deceitfully begg'd his Pardon; upon which the Emperor disbanded his Forces, and was treacherously made Prisoner and depos'd, in his Journey to the Diet at *Mentz*, with a small Retinue. He died soon after in great Misery, and so poor, that he begg'd a Prebendary of the Bishop of *Spires*, in the Church which he himself had built and endow'd, which was deny'd him. He reign'd 50 Years, during which he is said to have fought 66 great Battles, and generally obtain'd the Victory; which is more, as *Dr. Nicholson* observes, than *Marcius* *Marcellus*, *Julius* *Cæsar*, or any other Roman General, could boast of.

In 1106, he was succeeded by his Son *Henry V.* who imitated his Father, in maintaining the Imperial Power against the Incroachments of the Pope. After he had settled Affairs in *Germany*, he marched an Army to *Rome*, to recover the Emperor's Right in nominating the Popes, and also to be crown'd there. Upon this, Pope *Paschal II.* rais'd a great Tumult at *Rome*, in which the Emperor was so closely beset, that he was obliged to fight for his own Safety; and having dispers'd the Mob, made the Pope Prisoner, forc'd him to grant his Demands, and to confirm the Agreement with solemn Oaths and Excommunications; but as soon as the Emperor retir'd, the Pope declar'd the Agreement void, and stirr'd up the *Saxons* and Bishops of *Germany* against him, with whom he had a tedious War; and seeing at last that there was no other Way to end those Broils, he renounc'd his Right to the Investiture of Bishops in a Diet at *Worms*. This very much lessen'd the Emperor's Power, and exalted that of the Pope. Some Historians observe, That at his Coronation, Part of his Sword was melted with a Flash of Lightning, tho' the Scabbard was untouch'd. He reign'd 19

Years, died without Issue, and was buried at *Spires*.

Lotharius Duke of *Saxony* succeeded in 1125. He had *Conrad* Duke of *Franconia*, and *Frederick* Duke of *Swabia*, for his Rivals; but oblig'd them to submit after a long War. The *Atlas Historique* says, This War was concluded by the Prudence of *St. Bernard*; after which the Emperor carried Pope *Innocent II.* with him, establish'd him in the Chair, and was crown'd by him. He return'd to *Germany*, suppress'd a Rebellion in *Bohemia*, and defeated *Magnus* King of *Denmark*. He marched again into *Italy*, and restor'd Pope *Innocent*, who had been chased from *Rome* by the Anti-Pope *Anaclet*, with the Assistance of *Roger* of *Sicily* and the *Normans*; and having quieted that Country, he died in a Village on the *Alps* as he returned, the 30th of *September*, 1137, in the 13th Year of his Reign, leaving two Daughters, who were married to the Duke of *Bavaria* and the Landgrave of *Thuringia*. *Dr. Nicholson* says, he restor'd the Civil Law in *Germany*, after it had been banish'd from thence 500 Years.

Conrad III. Duke of *Schwaben*, *Lotharius's* Sister's Son, was chosen about 4 Months after at *Coblentz*. His Election was oppos'd by *Henry* Duke of *Saxony* and *Bavaria*, and his Brother *Wulff*, which occasioned great Confusion and Blood; but they being at last subdued, and Peace establish'd, he undertook a Croisade into the *Holy Land*, where he was in great Dangers; for he was obliged to fight his Way through the *Saracens* before he could reach *Jerusalem*, where he lost the greatest Part of his Army, by the Treachery of the *Greeks*, without doing any thing considerable. This obliged him to return home. He died the 15th of *February*, 1152, in the 13th Year of his Reign, as he designed to march into *Italy*. He is said to have been the first Emperor that was elected by the Seven Electors. In his Reign, *Gratian*, a *Benedictine* Monk, made a Collection of the Canon Law, which was afterwards taught in the Universities of *Germany*.

Frederick I. Duke of *Swabia*, surnamed *Barbarossa*, because of his Red Beard, succeeded. His Election was chiefly promoted because a *Gibelin* by his Father, and a *Guelf*

by his Mother, that he might reunite those two potent Families, which had so long disturbed the Peace of Germany. He was one of the greatest Princes ever Germany had, and bravely maintain'd the Rights and Grandeur of the Empire. He supported the Archbishop of *Magdebourg* against Pope *Eugene III.* and reduc'd the Towns of *Lombardy* that endeavoured to form themselves into Republicks in the Reign of *Lotharius*. He went to *Rome*, and was crown'd by Pope *Adrian IV.* whom he carried thither. The Romans being angry that they had no Share in the Ceremony, they besieged the Pope in the *Vatican*, because they thought he occasioned it; but the Emperor rescued and carried him to *Tivoli*. On his Return, he agreed the Quarrel betwixt the Archbishop of *Mentz* and *Herman* Count *Palatine* of the *Rhine*, who being the Aggressor, was sentenced to carry a Dog on his Shoulders from County to County; for Grief of which he died. *Frederick* assembled the States of the Empire at *Besancon*, where he received a haughty Letter from the Pope, intimating as if he had received the Sovereignty from him; upon which the Emperor and the States were so offended, that they commanded the Legates immediately to depart the Empire. The Pope dreading the Consequences, wrote another Letter, explaining the former, viz. That by the Word *Benefice*, he did not mean that the Emperor received the Crown from him as a Fief, but only that he reckoned his crowning him as a good Deed, which pleased the Emperor; but he soon had a greater Quarrel with the Pope, who could not bear that the Emperor should demand an Oath and Homage from all the Feudatories of the Empire, Ecclesiasticks as well as Seculars, and confirm'd them in their Possessions. The Pope sent 4 Cardinals to complain of it; but the Emperor maintain'd his Right, and offered to refer the Matter to Arbitrators, or otherwise to treat with the Senate of *Rome* about it. This provok'd the Pope, who look'd upon it as an Impachment of his Authority, and design'd to have excommunicated the Emperor for it; but his Death prevented it. Most of the Cardinals following *William the Wicked*, K. of *Sicily*, chose the Cardinal of *St. Mark*,

by the Name of *Alexander III.* but the Emperor's Party chose the Cardinal of *St. Cecilia*, by the Name of *Victor IV.* and the Emperor got his Election confirmed by the Council of *Pavia*. The Kings of *France*, *England*, *Sicily*, *Jerusalem*, *Hungary*, and *Denmark*, adhered to the former; but *Germany* and Part of *Italy* to the latter. The Emperor got him recogniz'd in a Diet at *Wurtzburg*, and passed the Alps to chastise the Romans, who called in Pope *Alexander*. He chased the Greeks out of *Ancona*, and taking *Rome*, got the Empress crown'd there. His Army being afflicted with the Plague, the opposite Party said it was a Judgment upon him. When he returned to *Germany*, most of the Towns of *Italy* made a League against him, repaired the Ruins of *Milan*; and to spite the Emperor, built a new Town, which they called *Alexandria*, in Honour of the Pope. The Emperor marched again to *Italy* to punish the Rebels; but was obliged to raise the Siege of *Milan*, and his Army was defeated, which was looked upon as a Punishment from Heaven for his continuing a Schism in the Church; so that he made Peace with Pope *Alexander*, promis'd him Obedience, and restored what belong'd to the See of *Rome*. Having ratified this Treaty at *Venice*, and married his Son to *Constance*, the only Daughter of *William* King of *Sicily*, he made an Expedition into the *Holy Land*, with the Kings of *England* and *France* (as some say) and most of the Princes of *Germany*, marched through *Hungary* and *Bulgaria*, enter'd *Asia*, defeated the Sultan of *Lycaonia*, chased the Sultan of *Egypt's* Troops out of *Little Armenia*; but died, as he was pursuing his Conquests, of a Pleurisy he got by washing himself in the River of *Serre*, where some say he was drown'd, the 10th of *June*, 1190. in the 37th Year of his Reign. So far the *Atlas Historique*. *Puffendorf* says, That during the War of *Italy*, he levelled *Milan* with the Ground; but his Son *Osbo* being taken by the *Venetians*, he was forced to make Peace. *Fox*, in his *Book of Martyrs*, Vol. 1. gives the Story of this Emperor at large, and of his Controversy with Pope *Alexander*, who at the Peace of *Venice* is said to have set his Foot upon the Emperor's Neck, when he kneeled to receive Absolution,

tion, abusing those Words of the Psalmist, Psalm 91. 13. said, *Thou shalt tread upon the Lion and Adder, the young Lion and the Dragon shalt thou trample under Feet*: To which the Emperor answer'd, *Not to thee, but to Peter*; and the Pope reply'd, *Both to me, and to Peter*: But Puffendorf says, many take this to be fabulous; yet 'tis mention'd by several Popish Authors. Dr. Nicholson gives him the Character of a Wife, Valiant, and Successful Prince.

Henry VI. his Son, succeeded, being crown'd King of Germany at *Aix la Chapelle*, in his Father's Life-time. He receiv'd the Imperial Crown from Pope *Celestin III.* who, as Puffendorf says, when the Emperor was on his Knees to receive it, the Pope struck it off again with his Foot, to denote his Power of giving the Crown, or taking it away. He defeated *Tancred*, natural Son to *Roger* King of *Sicily*, who disputed that and the Crown of *Naples* with him, which fell to him in Right of his Empress, King *Roger's* Daughter. Henry however recover'd both; but the Cruelty of the Germans made them revolt, and proclaim *Tancred's* Son *William*. Henry went again into *Italy*, and amusing *William* with sharing the Dominions betwixt them, he had him seiz'd, put out his Eyes, gelded him, and put him to Death. Henry rais'd Men with the Money that *Richard* King of *England* was oblig'd to pay him when taken Prisoner in his Dominions, on his Return from the *Holy Land*, and conquer'd *Apulia* and *Calabria*. He also oblig'd *Alexis Angelus*, Emperor of the *Greeks*, who had not an Army to oppose him, to pay a Tribute for the Outrages done to his Father and the Emperor *Conrad* in their March to the *Holy Land*. Historians say, he was so cruel, that for small Crimes he would condemn Men to be thrown into the Sea, impal'd, roasted, or to have a burning Crown of Fire fasten'd to their Heads with Nails. While he was preparing for an Expedition to the *Holy Land*, he died at *Messina* in *Sicily* of Poison, given him, as some think, by his Empress *Constance*, in the 8th Year of his Reign.

After Henry's Death, there were great Divisions in Germany, because *Frederick II.* Henry's Son, being only two Years old, his Uncle *Philip* pretended that the Administration was his Right, according to the Will of

the deceased Emperor; but because he would not submit to the Pope, he was excommunicated, and the Pope perswaded some of the Princes to elect *Otho* Duke of *Saxony*. Thus the Country was torn in Pieces; but most sided with *Philip*. After a long War, an Agreement was propos'd, by which *Otho* was to marry the Daughter of *Philip*, and to succeed after his Death. The *Atlas Historique* says, *Philip* defeated *Otho* in two Battles, and was crown'd at *Aix la Chapelle* before this Agreement: But *Otho* having afterwards murder'd a Friend of *Philip's*, he revok'd his Promise of giving him his Daughter; but promis'd to assist him in his Pretensions to a Princess of *Poland*, wherein having also fail'd him, he surpris'd *Philip* in his Chamber after he had been let Blood, and murder'd him the 12th of June, 1208. Others say, he was assassinated by *Otho* Count of *Wittelsbach*.

Otho Duke of *Brunswick* and *Lunenburg* succeeded, according to the Treaty with *Philip*, and put *Otho* of *Wittelsbach*, says the *Atlas Historique*, into the Ban of the Empire for murdering him. He deliver'd *Swabia* from the Tyrants that oppress'd it, and order'd Justice to be done according to the Laws of *Charlemain*: But possessing himself of the Estates of Bishops and Abbots who died, conferring the Publick Posts of the Empire on Foreigners, and treating the Princes haughtily, he was universally hated. Pope *Innocent III.* excommunicated him for seizing the Lands of the Church, absolv'd his Subjects from their Allegiance, and urg'd the German Princes to depose him: Upon which the King of *Bohemia*, the Dukes of *Austria* and *Bavaria*, the Landgrave of *Thuringia*, and others, assembling at *Bamberg*, chose *Frederick K.* of *Sicily*, Son to *Henry VI.* who was proclaimed King of the Romans in his Infancy. He march'd through *Italy* and Part of *Germany* without Resistance, was crown'd at *Aix la Chapelle*, and confirm'd in the Diet at *Francfort*, which cast the Balance on his Side; and *Otho* retir'd to *Brunswick*, designing to have liv'd in Peace. But *Renaud* Count of *Bologna* went to him in Name of the Princes in League against *Philip Augustus* King of *France*, and engag'd him to take Part with them, on Condition that when they had made an End with *Philip*, they should join him against *Frederick*. John

King of England, *William* Duke of *Brabant*, *Ferdinand* Count of *Flanders*, *Otho* Duke of *Limbourg*, *Philip* Count of *Namure*, *Henry* Duke of *Lorraine*, *Renaud* Count of *Bologna* and *Dammartin*, with other Princes, were in this League. The King of England gave 'em a great deal of Money, and they were to attack *France* on the Side of the *Netherlands*, while the *English* landed in *Guienne*. King *Philip* sent his Son to make Head against the *English*, and he himself enter'd *Flanders*, took *Tournay*, and defeated the Allies, who had 120000 Men, near *Bovines*, and took the Counts of *Flanders* and *Dammartin*. *Otho* narrowly escap'd to *Brunswick*, whence he sent the Marks of the Imperial Dignity by his Brother *Henry* Count *Palatine* of the *Rhine* to *Frederick*, and died of Grief the 27th of *April*, 1218. without Issue; according to the *Atlas Historique*.

Frederick being thus peaceably possessed of the Empire, he granted in Favour of Pope *Innocent III.* who had been his Tutor, all the Lands taken from the See of *Rome* by his Predecessors, with the Sovereignty of them, reserving only Provisions and Forage for the Emperor's Troops when he came to *Italy* to be crown'd, or to assist the Pope. He called a Diet, where his eldest Son *Henry* was chosen King of the *Romans*; and making the Duke of *Bavaria* Governor in his Absence, he went to *Italy*, and was crown'd by Pope *Honorius*, having first renounc'd the Duchy of *Spoleto* and *Tuscany* to the See of *Rome*, to whom, at the same time, he gave the Country of *Eundi*. He drove the *Saracens* out of *Sicily*, depriv'd Count *Agnani*, and the Bishops who had revolted, and put others in their room. Pope *Honorius* pretended, that being his Vassal, he could not deprive the Bishops without his Consent, and commanded him to restore them immediately, on Pain of Excommunication. The Emperor answer'd, That as Emperor and King of *Sicily*, he was Sovereign Judge of his own Subjects, and even of Clergymen in Secular Affairs; and that he had rather lose the Empire, than make himself unworthy of it by such Meanness of Spirit. The Pope was provok'd with this Answer; but *Frederick* continued firm, got his eldest Son crown'd King of the *Romans*, and prepared to make War upon the Towns of *Lombardy*, who had leagu'd toge-

ther to recover their Liberty. *John de Brienne*, King of *Jerusalem*, perceiving that this War would be prejudicial to him, mediated a Peace. The Emperor was absolv'd; and promis'd to go in a Year or two with all his Forces to the *Holy Land*. He call'd the States of the Empire together at *Cremena*, to exhort them to follow him; the Towns of *Lombardy* laid down their Arms at Pope *Gregory IXth's* Request, and contributed to the Expedition: The Croisado was preach'd every where; the Princes began to assemble; and when all was ready, the Emperor alledg'd, he was not prepar'd, or did so on purpose, because he apprehended *Sicily* would revolt; that Count *Agnani* would seize *Naples*; and his Enemies in *Germany* would take Advantage by his Absence: But the Pope pressed him so much, that he embark'd at *Brindisium* with the Landgrave of *Turingia*; but falling sick after 4 Days Sail, he landed at *Otranto*, from whence above 40000 *Germans* went home. Upon this the Pope excommunicated him. The Emperor returning to *Naples*, wrote to all the Princes of *Europe* to justify himself, and to be aveng'd on the Pope, made the Counts de *Frangipani*, the Chief of the *Roman* Lords, Princes of the Empire, and enter'd the Territories of the Church to support the *Romans*, who had chased away Pope *Gregory*. He brought the Troops of the Towns of *Lombardy* against the Emperor; but the War was laid aside on the Emperor's sudden Resolve to go into the *Holy Land*, according to his Promise. He assembled the States of the Empire and *Sicily* at *Balette*, appointed Vicars of the Empire in *Germany* and *Italy*, sail'd the 11th of *August*, and arriv'd at *Acra* the beginning of *November*. The Pope, who had solicited him to it before, now condemned the Enterprize, traversed him in every thing, forbade the Military Orders of *Palestine* to obey him, solicited his Son the King of the *Romans* to rebel, and declare himself Emperor; reduc'd most Part of *Italy*, made the Towns of *Lombardy* to revolt, disbanded those who had taken the Cross to follow the Emperor, and wrote to the Sultan of *Babylon* to attack him. *Frederick*, notwithstanding all this traiterous Opposition, brought that Sultan to a Truce of 10 Years, restor'd several Towns to the Christians, was crown'd King.

of Jerusalem, embark'd the 1st of May, 1229. and arrived at Naples the 30th. He forfeited the Knights Hospitallers and Templars of Sicily, chased John de Brienne out of Apulia, seiz'd Part of the Dominions of the Church, invested Rome to frighten the Pope, and retired to Capua. Some Princes of the Empire effected a Reconciliation betwixt them; the Pope absolv'd him, and promis'd to restore him to all his Rights in Sicily. The Emperor gave him a great Sum of Money, assisted him to subdue the revolted Romans, and return'd to Germany, where he found such Disorders, that he deprived his eldest Son of being King of the Romans, sentenc'd him to perpetual Prison, and put the Duke of Austria into the Ban of the Empire. The Pope having enter'd into a League with the Towns of Lombardy, the Emperor repass'd the Alps with 100000 Men, defeated the Milanais in Battle, conquer'd Sardinia, defeated the Forces of Venice and Genoa, seiz'd Tuscany, and besieged Rome, without valuing the Pope's Excommunication. Then began the Factions of the Guelphs and Gibelins, the latter being for the Emperor, and the former for the Pope, says the *Atlas Historique*; tho' he mention'd them before in the Reign of Frederick I. *Blondo* and *Sigonius* say, these Factions rose in the Empire of Conrad III. who favouring Pope *Anaclet I.* against *Innocent II.* his Son marched with his Army to a Place in Italy called Gibelin, from whence his Party were called Gibelins; and Guelph Duke of *Bavaria* being one of the Generals on the other Side, the other Faction were called Guelphs, which seems to agree best with the former Story of Frederick I's Mother being a Guelph of the House of *Bavaria*. Mr. Fox, in his *Book of Martyrs*, Vol. 1. is also of this Opinion. But to return to Frederick, Pope Gregory implor'd the Help of all Christian Princes; but died of Grief a few Days after the Defeat of his Fleet. *Celestin IV.* succeeded; but died in 18 Days. *Innocent IV.* came in his Place; and not thinking himself safe in Italy, fled to France, called a General Council at *Lions*, cited the Emperor to appear at it; and on his Refusal, excommunicated him, and absolv'd his Subjects from their Allegiance; tho' most of the Princes of Germany held that the Pope had only the Right of crowning, but

not of chusing or deposing the Emperor. Yet the Archbishop of *Mentz*, *Treves*, and *Cologne*, assembled at *Wurtzburg*, and elected *Henry Landgrave of Thuringia*, call'd the King of the Priests, who having defeated the Troops of *Swabia* and *Bavaria* that came to hinder his Election, was kill'd by an Arrow at the Siege of *Ulm*, and his Party chose *William Count of Holland*, who taking *Aix-la-Chapelle*, by the Assistance of his Father-in-Law *Orto Duke of Brunswick*, was crown'd there, while *Frederick* was employ'd in Italy against the Guelphs; and Fortune beginning to abandon him, those of *Parma*, after two Years Siege, defeated his Army, and plunder'd his Camp; and the Pope's Legate having defeated his Son *Entius* in the *Bolognese*, he retired to *Apulia*, where he died of Poison, given him by *Mainfroi* Prince of *Tarentum*, his natural Son, the 13th of December, 1250. in the 54th Year of his Age, and the 32d of his Reign. Dr. *Nicholson* says, he was Master of Greek, Latin, German, Italian, and the Turkish Languages, and understood most Arts and Sciences; was a Wise, Learned, and Brave Prince, and stood over 5 Excommunications. The Story of this Noble Emperor, and of his Controversy with the Pope, whom he describ'd to be the Anti-Christ, is at large in the First Volume of the *Book of Martyrs*.

Conrad his Son was chosen King of the Romans at 8 Years of Age; but that Election not being every way formal, he was elected again 3 Years after at *Spires*. He govern'd the Empire with great Prudence in his Father's Absence, and when he heard of his Death, he resolv'd to defend his Rights against *William Earl of Holland*; but perceiving that his Rival had the Favour of the Great Men, and being unwilling to risk all, he thought best to secure himself of *Naples* and *Sicily*, his own Inheritance, march'd with an Army thither, oblig'd his Bastard Brother *Mainfroi* to retire to *Tarentum*, and took *Naples* and *Capua*; but as he was preparing to reduce the rest, he was poison'd by the said *Mainfroi*, the 19th of May, 1254. in the 29th Year of his Age, and the 4th of his Reign. *Puffendorf* observes, That the Authority of the German Emperors in Italy was quite extinguish'd with *Frederick II.* and that it might not recover, the Pope gave the Kingdom of *Naples* to *Charles Duke*

of Anjou, who, at his Instigation, caus'd young Conrad, Son to Conrad, who was taken in a Battle as attempting to recover his Right, to be cut off by the Hands of an Hangman, which put an End to the Race of the Dukes of Swabia.

William Count of Holland, after the Death of Conrad, having no Rival, receiv'd those who had follow'd Frederick and Conrad into Favour, by which he established Peace in the Empire. He design'd to have gone into Italy to be crown'd by the Pope, and to restore Peace also there: But the Freelanders having revolted, and ravaged Holland, he march'd against them, and having engaged too far, after some Advantage over them, he receiv'd a Blow on the Head with a Stone; and being entangled in a frozen Marsh, was kill'd with Spears, and buried in the same Place, in 1255.

After his Death, Richard Duke of Cornwall, Son to John King of England, was chosen by some of the Princes at Frankfurt. He arriv'd in Germany the 13th of January, 1257, and was crown'd at Aix la Chapelle the 2d of May following; but others of the Princes chose Alphonso King of Castile; and Richard having shew'd more Resentment against those who were not for him, than against his open Enemies, lost his Interest, which, together with his want of Money, oblig'd him to return home, where he was killed before a Town which the Rebels had fortified against his Brother Henry, the 12th of April, 1271.

Alphonso, surnamed the Wise, and the Astrologer, Son to Ferdinand III. of Spain, agreed to the Election, at the Pope's Instigation; but being slow in his Resolves, he never enjoy'd the Empire. He is said to have read the Bible 14 times, and spent 400000 Crowns upon Learned Men to compose the Alphonso Tables, of which the Jews say, Rabbi Isaac Hazar was the Chief. Historians give him the Character of a Prodigal, Cruel, Opinionative Man, and alledge, he was so blasphemous, as to say, That had he been present at the Creation, he would have dispos'd Things in better Order than they are. He died in 1284. in the 32d Year of his Reign, and was buried at Sevil.

Rodolph Count of Habsburg, a Castle, as some say, in the Country of Argow, or, as others, in the Bersgaw, was chosen Empe-

ror in 1273, according to Puffendorf. Dr. Nicholson and he observe, That from the Death of Frederick II. to this Time, which was 23 Years, there was scarce any thing but an Interregnum; during which, the Empire suffer'd extremely by the several Competitors, and became a Theatre of Bloodshed, Confusion, and Robbery. In those Wars, the great Families of Swabia, Austria, and Thuringia, were extinguish'd, and scarce any thing of Justice was administred. To put a Stop to those Disorders, several Princes and Cities on the Rhine leagu'd together, and chose Rodolph, who was a Person of high Birth, descended from the Family of Alsace, which, says the *Atlas Historique*, was one of the most ancient and illustrious in Europe. He aggrandiz'd his Family, by giving them the vacant Fiefs of the Empire. By Consent of the States, he made his youngest Son Rodolph Duke of Swabia, and gave his eldest Son Albert, Austria, Stiria, Carinthia, and Carniola. He made excellent Laws for administring Justice, order'd all the Publick Acts and Pleadings, formerly writ in Latin, to be writ in German. He reduc'd Ottocair King of Bohemia, and all the other Rebels, with whom he fought 40 Set-Battles. He oblig'd all the Towns that held out against him to surrender, and demolish'd above 60 Castles in Thuringia, that serv'd for a Retreat to the Rebels. He refus'd to go and be crown'd at Rome, because of the ill Consequence it had to his Predecessors, alluding to that Saying of the Fox in the Fable, *Quia me Vestigia terrent*, i. e. That he saw the Footsteps of many Beasts that had enter'd the Lion's Den, but of none that had come out again; yet he manag'd Matters so, as not to break with the Pope. Some are of Opinion, that he might have restor'd the Empire to a more flourishing State, had he preserv'd the Rights of it in Italy, as he did in Germany: But whether he look'd upon Italy as a foreign Country, whose Customs and Manners did not suit the Germans, or that he had a mind to make Money of it, for he is charg'd with Covetousness, he sold the chief Towns there, their Liberty, for considerable Sums, as Florence, Genoa, Lucca, Bologna, &c. reserving only the Sovereignty to himself. To establish his Interest in the Empire, he married his three Daughters to Lewis Count Pala-

Palatine of the Rhine, Albert Duke of Saxony, and Otto Marquis of Brandenburg. A Grandson of Albert brought Tirol afterwards to the Family. Puffendorf and the Atlas Historique differ as to his Sons, for the latter makes Albert the youngest; tho' 'tis more probable he was the eldest, both because of the larger Dominions given him by his Father, and that he himself places him so in the Genealogical Chart or Tree of the present Imperial Family, who are descended from him. That same Author says also, That Rodolph propos'd his Son Albert to be chosen King of the Romans, which is a plain Proof that he was his eldest; but the States would not agree to it. Rodolph died in 1291. in the 70th Year of his Age, and the 18th of his Reign, and was buried at Spires.

Adolph Count of Nassau, Son to Adolph, Grand Marshal to Rodolph, was elected at Frankfurt Six Months after Rodolph's Death, tho' Albert laid Claim to the Crown; but the Electors being divided in their Votes, they left it to Gerard Archbishop of Mentz to name whom he pleas'd, and he chose Adolph his Cousin against their Mind. He was a very brave Prince, and gain'd 5 Battles against the Duke of Brabant, which rais'd his Fame. He took Part with Guy Count of Flanders, who married Philippine, Daughter to Edward King of England, and on his Account declar'd War against Philip IV. of France. He took Pay of the King of England, and serv'd in his Army, which some thought below his Dignity; but Puffendorf says, he enter'd into a League with him against France for a Sum of Money, and on Promise that the English should assist him to recover the Kingdom of Arles, which the French had seiz'd during the Troubles of Germany. On the other hand, the French sided with Albert, and upon their Approach to the Rhine, the Archbishop of Mentz, who turn'd Adolph's Enemy, because he would not let him be Chief in the Management next to himself, assembled some of the Electors, depos'd Adolph, and chose Albert in his stead. The Atlas Historique says, he bought Thuringia with the Money sent him from England to raise Troops; but the People being unwilling to submit to him, he oppress'd them, which heighten'd the Discontents against him. He was defeated and

kill'd by Albert himself in a Battle near Spires in 1298.

Albert's Election being thus confirmed, he reduced the Ecclesiastical Electors who had leagu'd against him, and a solid Peace might have been made betwixt them, had it not been for the Arrogance of the Archbishop of Mentz, who said, He had that in his Pocket by which he could chuse another Emperor when he pleas'd. The Pope offer'd him France, and to depose Philip the Fair: But Albert knowing the Pope had no Right to do so, was so far from accepting it, that, as a Proof of the Friendship they had contracted at an Interview, he quitted Philip the Kingdom of Arles. Albert embroil'd himself with the Swissers, which was of ill Consequence to him. He began with abolishing the Jurisdiction of their Clergy, who were very rich, and obliged the Nobles to do him Homage for their Estates; but the People being more jealous of their Liberty, and refusing to follow the Example, he built Citadels to curb them, and order'd his Judges to punish little Faults with the utmost Severity: Upon which the People took Arms, demolished his Castles, and in 1308 enter'd into a League for 10 Years. The Emperor prepar'd to reduce them with an Army; but was assassinated in the 10th Year of his Reign by John Duke of Swabia, his Nephew, whom he had covetously robb'd of his Dominions, on Pretence of being his Tutor. His Widow Elizabeth of Carinthia did afterwards build the Abbey of Konigsberg, in the Place where he was murder'd. He was said to be a Prince of quick Parts, liberal to those of Merit, and severe to Criminals. He made his Son Rodolph King of Bohemia, and endeavour'd in vain to subdue Hungary.

After his Death, Philip King of France aspir'd to the Imperial Crown; but the Pope and Archbishop of Treves got Henry VII. Duke of Luxemburg chosen, a Prince Devout, Valiant, Wise, and of so even a Temper, that neither Prosperity nor Adversity could change it. He married his Son to the Heiress of Wenceslaus King of Bohemia, redress'd the Disorders of the Empire, appointed his Son King John to govern there in his Absence, and march'd into Italy to re-establish the Imperial Authority in that Country. He was crown'd at Milan, where

where he restor'd the *Visconti*, and banish'd the *Turriani*. He reduc'd the other Towns, where he settled Lieutenants, who rais'd great Contributions to recruit his Army, which was lessen'd by Diseases. He design'd to have laid Siege to *Bologna*, *Florence*, and *Lucca*; but was obliged to march directly to *Rome*, where the *Guelphs* and *Gibelines* being of equal Strength, committed terrible Disorders, and had bloody Contests; so that which Side soever got the Victory, bought it dear. *Henry* defeated those who oppos'd his passing the *Tiber*, enter'd *Rome* at the Head of the *Gibelines*, the Chief of whom were the *Colonna's*, and the *Guelphs* retired to the *Vatican*, and *Castle St. Angelo*, where not being able to force them, he was crown'd in the Church of *St. John de Lateran* by a Deputation from *Clement V.* who had removed the See to *Avignon*. He afterwards block'd up *Florence*, but could not take it, the Citizens being assisted by the K. of *Naples*. The Pope endeavour'd to prevent a Rupture betwixt that K. and *Henry*; but offended the Emperor by his arrogant Letter, wherein he alledg'd, That both of them ought to submit to him, because of their Oaths. Upon this the Emperor broke with the Pope, declared War against *Robert of Naples*, forfeited him as a Vassal of the Empire, and gave the Kingdom to *Frederick of Sicily*, who promis'd to harrahs the Coasts with his Fleet, while the Emperor march'd to *Rome* by Land: But as he was in a fair Way to subdue his Enemies, a Monk poison'd him with a consecrated Wafer. The Emperor perceiv'd it as soon as he had taken it, and advis'd the Monk to make his Escape; but Heaven would not suffer it; so that he was taken, flea'd alive, and put to Death in 1313. The Emperor was universally regretted. 'Twas thought the *Florentines* hir'd the Monk to poison him.

After his Death, there was an Interregnum for a Year, when some of the Princes chose *Lewis Duke of Bavaria*, and others chose *Frederick the Fair*, Duke of *Austria*, eldest Son to the Emperor *Albert I.* This Rivalship continued 7 Years, *Lewis* governing in Upper Germany, and *Frederick* in the Lower. They fought two Battles, one near *Eslingen* on the *Neckar*, where Night parted them; the other near *Muldorf* in Lower *Bavaria*, where *Frederick* was taken and impris-

son'd. He refus'd to make his Escape by the Help of Magick, but was set at Liberty after three Years, on his renouncing the Empire, and died in 1330. During this Controversy, viz. in 1315, there happen'd such a terrible Famine in *Germany*, *Poland*, and *Bohemia*, that many People eat their nearest Relations, and the Wolves and other Beasts of Prey could scarce be kept off by Weapons from setting upon Men to satisfy their Hunger. *Lewis* soon after this Victory was engaged in a new War with Pope *John XXII.* who disput'd his Election, because made without his Consent. The Emperor despis'd his Claim, sent Assistance to the *Gibelines* in *Italy*, who forced the *Guelphs* to raise the Siege of *Milan*. Being willing to convince the Pope of his Error, he sent Ambassadors to shew him the Vanity of his Pretensions, and to desire him to suspend his Excommunication; but the Pope was obstinate; and the Emperor, resolute to defend his Title, publish'd a Manifesto, to shew that he held the Empire of God alone. Having settled Peace in *Germany*, he march'd to *Italy* in 1327, adjust'd Matters with the Chief of the *Gibelines*, was crown'd at *Milan*, reduc'd the *Tuscans*, and was receiv'd at *Rome* with great Acclamations. The Pope was at *Avignon*, and could not perform the Coronation; therefore the Senate, Clergy and People, did it by Deputies, of whom *Sciarras Colonna* was the Chief. The Emperor, to revenge himself for *John XXII's* Excommunication, got him depos'd for Heresy, sentenc'd him to Death, and made an Order, That the Pope, as well as other Bishops, should reside on his Cure, on Pain of Deprivation. *Peter Raynalouci*, a *Franciscan*, was chosen instead of *John*, by the Name of *Nicholas V.* which brought Things to an Extremity, and, together with his heavy Exactions, lost him the *Romans*, who curs'd him when he march'd from thence to besiege *Florence*; but he was obliged to raise the Siege, to prevent *Pisa's* falling into the Hands of his Enemies; and having settled Affairs there and at *Lucca*, to whom he recommended Pope *Nicholas*, he return'd to *Germany*, from whence he sent Ambassadors to Pope *John* for a Reconciliation, and promis'd to satisfy him in every thing that was not against the Rights of the Empire; but the Pope gave a haughty Answer, and

con-

continued inflexible. He died soon after; and *Lewis* in vain endeavour'd an Accommodation with *Bennet XII.* upon which the Princes of the Empire in a Diet declared the Empire Independent, and resolv'd to maintain the Rights of it. This was afterwards confirmed in a Diet at *Francfort*, made a perpetual Law, the Pope's Coronation declared unnecessary, and that it was Treason to say the contrary. *Bennet* continued obstinate, (tho' he was for a Reconciliation himself) because he durst not disoblige his Party, and died soon after. *Roger* Archbishop of *Roan* succeeded, by the Name of *Clement VI.* and being a Creature of *Philip de Valois* King of *France*, he rais'd the Princes of *Italy* against the Emperor, excommunicated and depos'd him. *Lewis* offer'd to submit to any reasonable Terms for a Reconciliation; but the Pope propos'd such extravagant Conditions, that they were universally rejected; and the Diet sent him Word, That if he did not change his Measures, they would oppose him to the utmost. Upon this the Pope again excommunicated *Lewis* and his Adherents, and order'd the Electors to chuse the King of *Bohemia's* Son, otherwise he would dispose of the Empire as he thought fit. Having gain'd the three Ecclesiastical Electors, and the Duke of *Saxony*, they chose *Charles* Marquis of *Moravia*, the King of *Bohemia's* Son; but the Majority of the Princes declared the Election void; so that *Lewis* reign'd in Peace till the 11th of October, 1347. that he died of an Apoplexy as he was a Hunting; in the 63d Year of his Age, and 33d of his Empire. Some thought he was poison'd by *Isabel* of *Arragon*, Dutches of *Austria*, because he carried the Empire from her Husband *Frederick*; but this was not believed. *Puffendorf* says, *Lewis* was the first who kept his Court always in his Hereditary Country out of his own Revenue; which Example was followed by succeeding Emperors, because the Revenues of the Empire, on which the Emperors us'd to maintain their Courts when they made their Progress as usual through the Empire, were much diminished by the Civil Wars. *Dr. Nicholson* says, That *Occam*, a Learned English Friar, told *Lewis*, That if he were protected, he could easily by his Writings overthrow all the Pope's Pretensions of

Power over Princes, which animated the Emperor to oppose the See of *Rome*.

After *Lewis's* Death, Part of the Electors chose *Edward* King of *England*, who had acquir'd great Fame by his glorious Actions in *France*; but he refusing to accept it, they chose *Frederick* Marquis of *Misnia*, who sold his Pretensions to *Charles IV.* at which, being justly offended, they chose *Gunter* Count of *Schwartzenburg*, noted for Virtue and Bravery, the 2d of February, 1349. but *Charles* having corrupted some of the Princes, and *Gunter* falling sick of Poison, given him by *Charles's* Means, as was suspected, he resign'd the Empire, by the Advice of those who chose him, for 22000 Marks, and two Towns in *Thuringia*, and died at *Francfort* that same Year.

After his Death, *Charles* was confirm'd by all the Electors, married his only Daughter to the Count *Palatine* of the *Rhine*, went to *Italy* to be crown'd by the Pope, and in a cowardly manner ruin'd the Authority of the Empire, which made the *Italians* despise and insult him, and refuse to let him into their Towns. He returned to *Germany*, where his Management was no better. He quitted the Kingdom of *Arles* to *France*, dismembred several other Parts of the Empire, corrupted the Electors to chuse *Wenceslaus* his Son King of the *Romans*, and sold the Towns of *Swabia* to the neighbouring Princes; so that 'twas said of him, *That in order to make the Imperial Eagle contemptible to all the World, he pluck'd off her best Feathers.* He is said to have established the Golden Bull, which regulates the Precedency and Prerogatives of the Electors. He united *Lusatia* and *Silesia* to *Bohemia*, his own Patrimony. He understood many Languages, had a charming Eloquence, and a great deal of Wit, but no Courage. He died at *Prague* in 1368. in the 32d Year of his Reign. *Puffendorf* says, he was depos'd by the Electors for his brutish Carelessness of the Empire; upon which he retired to *Bohemia* a considerable Time before his Death.

Wenceslaus King of *Bohemia*, his Son, succeeded; but being a weak Prince, he left the Management to his Ministers, and plung'd himself in all sorts of Vice, so that he became odious and contemptible, the Government was dissolv'd, and every one liv'd as he pleas'd; the Princes inroach'd upon

their Neighbours and the Free Towns, which they obliged to submit to them. *Wenceslaus* was the German *Sardanapalus*; and that he might not be interrupted in his Debauches, retir'd often to Forrests, where he spent Days and Nights in Sensuality. He sold *Genoa* to the French, *Milan* to *Galeacius* their Viscount, and would have sold the whole Empire, had he found a Purchaser. He thought every Hour lost that was not spent in Drinking; so that he was judged unworthy the Name of Emperor. He was twice taken Prisoner, but escaped; and *Robert the Debonnaire*, Count *Palatine*, was chosen in his stead. Most of the Towns submitted to him but *Nuremberg*, who offer'd 20000 Crowns of Gold to *Wenceslaus* for their Freedom. He refus'd the Money, and, like a Brute, demanded only *Bacharach* Wine. He died of an Apoplexy and Grief, occasion'd by the Revolt of the *Hussites* at *Prague*, where they kill'd his barbarous Senators in 1418.

Upon his Death, *Robert Count Palatine* was confirm'd. He put *Aix la Chapelle* into the Ban of the Empire, because they would not submit to him. It was some Time after his first Election e're all the Princes of *Europe* own'd him; so that *Wenceslaus's* Ambassadors were received at the Council of *Pisa* after he himself was depos'd; but after *Robert* oblig'd the Council to absolve the Empire from their Oath to *Wenceslaus*, he was universally acknowledg'd. He refus'd the Crown of *Bohemia*, tho' offer'd him by the States. He marched into *Italy*, to reduce *John Galias* Duke of *Milan*, who revolted; but being abandon'd by the Pope and *Florentines*, he was defeated near the Lake de *Garda*, retir'd into *Trent*; and tho' forsaken by the Arch-Duke of *Austria*, and the Archbishop of *Mentz* and *Cologne*, he march'd again as far as *Padua*; but the *Venetians* refusing to join him, and the Troops sent him by the *Florentines* not being enough to retrain his Army, he return'd to *Germany*, to make War on the Archbishop of *Mentz*, who broke all his Measures, died at *Oppenheim* in 1410, and was buried at *Heidelberg* in the Church of the Holy Ghost, which he founded.

After his Death, or, as some say, after the Abdication of *Wenceslaus*, *Indocus* or *Josse*, Marquis of *Moravia*, Brother to *Charles IV.*

was chosen, but never crown'd. He was unfit for Government, and the only remarkable Thing he did, was to make a Law, That the States of the Empire might without Treason oppose the Emperor, if he did any thing against the Laws. *Puffendorf* says, That *Frederick* Duke of *Brunswick* was chosen in his stead, before *Robert Count Palatine* above-mentioned; but in his Journey to *Francfort* was murder'd by Count *Waldeck*, at the Instigation of the Archbishop of *Mentz*.

Sigismund King of *Hungary* and *Bohemia* was chosen after *Indocus*, says the *Atlas Historique*, in 1411. He endeavour'd to extinguish the Schism which had divided the Church for 38 Years. He reform'd the Government of the Empire, regulated their Taxes, and in 1415 made *Frederick* of *Zollern*, Burgrave of *Nuremberg*, Hereditary Elector of *Brandenburg*, for 40000 Florins of Gold, if the Emperor died without Male-Issue. He erected the County of *Savoy* into a Dutchy, in Favour of *Amedee VIII.* in 1416. and 7 Years after made *Frederick the Warlike*, Marquis of *Misnia*, Elector of *Saxony*, vacant by the Death of *Albert IV.* the last of the House of *Ascanie*. He was an implacable Enemy to the *Hussites*, but always defeated by them; so that at last he made Peace with them, as the only Way to establish his Authority in *Bohemia*. He excited the Christian Princes to arm against the *Turks*, who made a great Progress in *Europe*; but was defeated by them at *Nigeboth* in *Hungary*, thro' the Jealousy and Forwardness of the French Auxiliaries, most of whom were cut off there, under the Conduct of *John* Duke of *Burgundy*, eldest Son to *Charles VI.* of *France*. In his Time, *John Huss* and *Jerome* of *Prague* were burnt at the Council of *Constance*, contrary to the Publick Faith given them by his Passport, which made the *Hussites* take Arms under *Zisca*, who cut off all that adher'd to the perfidious Council of *Constance*. *Sigismund* went thither to suppress them; but his Cruelty to those of *Bresslaw* made the Citizens of *Prague* refuse him Entrance; and *Zisca's* Reputation was such, that the Emperor's Forces always fled at the Sight of his Troops, so that he defeated *Sigismund* in 14 Battles; and when *Zisca* died, his Soldiers made a Drum of his Skin, thinking

the very Sound of it would terrify their Enemies. *Sigismund* called the Council of *Basle* to settle the Peace of the Church, went to *Italy*, and was crown'd at *Milan* and *Rome*; and the Success of the *Hussites* being on the Declension, he was crown'd at *Prague* in 1436, but died in 1438, in the 26th Year of his Reign.

Albert the Magnanimous, Duke of *Austria*, who was his Son-in-Law, succeeded first to the Kingdoms of *Bohemia* and *Hungary*, on a Treaty with the States, That he should not accept the Empire, because the *Hussites* were afraid he would annul their Privileges, if he grew too powerful. He afterwards drove *Uladislaus* King of *Poland* out of *Bohemia*, which he had seiz'd, suppress'd the *Hussites*, and depriv'd the *Bohemians* of the Right of electing their Kings. He obliged Sultan *Amurath*, the Grand Signior, to raise the Siege of *Belgrade*, which had lasted a Year; and defeated the Barons of *Bohemia*, who took Part with *Barba*, *Sigismund's* Widow, and call'd *Casimir* King of *Poland* to their Assistance. His being elected Emperor, over-aw'd those who would have rebell'd in *Bohemia* and *Hungary*. He confirm'd the Council of *Basle*, and endeavour'd to make Peace in the Church; but was diverted by a War against the *Turks*, who invaded *Hungary*; and as he marched against them, died of a Bloody Flux, occasioned by his eating of Melons, in 1439, in the 2d Year of his Reign: Since which, the Empire has continued in the House of *Austria*.

In 1440, *Frederick III.* called the *Pacifick*, eldest Son to his Kinsman *Ernest* Duke of *Austria*, Chief of the Branch of *Stiria*, was elected Emperor. He dealt with the Council of *Basle* to remove the Schism of the Church, and make Peace in *Christendom*; and he made the *German Concordat* in Favour of the Church of *Germany*, which was ratified by Pope *Nicholas V.* in 1448. He published a new Edition of the Code about Fiefs, and made a good Use of Printing, which was invented during his Reign. He established the Empire much as 'tis at present; but was attacked by Enemies in several Parts. He defeated the Duke of *Armagnac*, and drove him out of *Alsace* in 1444. but in 1452 was besieged by *Hunniades* in *Neustadt* in *Hungary*, because he would not deliver to them *Ladislaus*, whom

they had chosen to be King according to their Laws; so that he was forced to agree, that *Hunniades* should be Regent of *Hungary*, *George Podiebrad* of *Bohemia*, and *Ulric* Count de *Cilly* of *Austria*; but the latter becoming odious to the People, was chased from his Government the Year after. *Ladislaus* King of *Hungary* being dead, he seiz'd *Austria* against the Will of *Albert the Prodigal*, his Brother, with whom he had Ten Years War, and proscrib'd him at the Diet of *Ratisbon* in 1463. *Matthias Corvin*, King of *Hungary*, took *Vienna* from him in 1485. He formed the League of *Swabia* against the *Swissers*, which was called the *Buckler of St. George*, and demolished such Castles as serv'd for a Retreat to Robbers. He was accus'd of being so silent, that it pass'd for a Question, Whether he was alive or dead? He was so dilatory in reforming Abuses, that he us'd to say it was not yet Time to attempt it. He lost *Bohemia* and *Hungary* by his Avarice, in not laying out the Money that was necessary to secure his Possession, and died Aug. 14, 1493. He married *Leonora*, Daughter to *Alphonso* King of *Portugal*; from whence came the Union of the Houses of *Spain* and *Austria*.

Maximilian I. his Son, elected King of the *Romans* in 1486, succeeded. He was dumb 'till almost 10 Years of Age; but then spoke so quick, that he could scarce be understood. He acquir'd the *Netherlands* by his Wife *Mary*, the only Daughter of *Charles the Terrible*, Duke of *Burgundy*, whom he married in 1478. He endeavour'd in vain to recover the Towns on the *Somme*, and the Duchy of *Burgundy*, that *Lewis XI.* of *France* re-united to his Crown. He was taken by the Inhabitants of *Bruges*, but rescued by the Valour of *Albert* Duke of *Saxony*. *Mary* of *Burgundy* dying, he courted *Anne* of *Brittany*; but was supplanted by *Cha. VIII.* of *France*, and married for second Wife, *Blanche* Daughter to *Philip* Duke of *Milan*, whose Money he employ'd in retaking Part of the Towns of *Austria* that had been seiz'd by *Mat. Corvin*, King of *Hungary*. In 1495, he made the famous Constitution at *Worms*, called the *Publick Peace*, to prevent the Decision of Controversies in the Empire by the Sword, as formerly. At the same Time he instituted the Imperial Chamber, to put in force the Regulation his Father had made.

for Administration of Justice. He pursued the War against the *Swissers* in Execution of the Buckler of St. George; but being worsted in 8 Battles, made Peace with 'em at *Basle* in 1499. He instituted at *Augsburg* in 1500 the Council called the *Regency*, to govern the Empire with him. He divided *Germany* that same Year into 10 Circles, and made a sort of perpetual Alliance with the *Swissers*, call'd the *Hereditary Agreement*, with relation to the Dominions that came to him from the Arch-Duke *Sigismund*, his Cousin. The *Venetians* refusing him Passage through their Territories to be crown'd at *Rome*, he engaged the Pope and the King of *France* against them by the League of *Cambray*, that had well nigh ruin'd the Republick, which must have happened by their losing all they had in *Terra-firma* after the Battle of *Agnadelle*, had it not been for the Difference that fell out betwixt the Heads of the League. The *Imperialists* took *Padua*, but lost it again by Neglect in 1509; and the *Venetians* having prevailed with *Lewis XII.* of *France* to break off from the League, began to resume Courage. The Emperor defeated the *French* Troops near *Novara*, by the Help of the *Swissers*, in 1513, and those of the *Venetians* near *Vicenza*; but lost the Advantage of those Victories by the Revolt of the *Swissers* for want of Pay. He could not recover *Milan*, and the *Venetians* retook *Brescia* and *Verona*, which put an End to that War. The Count of *Goritz* dying, he incorporated that County with his other Dominions in 1515. Hereceived with great Magnificence *Sigismund* King of *Poland*, and *Uladislaus* King of *Hungary*, at *Vienna*, and renewed with the latter the Contract of mutual Succession on the Failure of either of their Issue. He promised the Great Duke of *Moscovy*, for the Sake of the common Peace, not to protect the Great Master of *Prussia*. He died at *Wells* in *Austria* the 24th of *January*, 1519. in the 25th Year of his Reign. Dr. *Nicholson* says, he never passed a Gibbet without making a reverend Salute, in these Words, *Salve sancta Justitia*, in Honour of Justice; and that 5 Years before his Death, he had his Coffin always carried about with him. He was reckon'd one of the most Eloquent and Learned Emperors that ever *Germany* had. His only Child *Philip* married *Jean*, Daugh-

ter to *Ferdinand* King of *Aragon*, and *Isabel* Queen of *Castile*, which brought him the Succession of *Spain*. He died at *Bruges* in 1506, leaving two Sons and four Daughters; *Charles*, born the 24th of *Febr.* 1500; *Ferdinand*, the 10th of *March*, 1503; *Eleanor*, who first married *Emanuel* King of *Portugal*, and then *Francis I.* of *France*; *Isabel*, who married *Christian II.* of *Denmark*; *Mary*, who espoused *Lewis* King of *Bohemia* and *Hungary*; and *Catherine*, promis'd to *John Frederick* Duke of *Saxony*, but married to *John III.* of *Portugal*. The Arch-Duke *Philip* contracted with *Lewis XII.* of *France* the Treaty of *Blois*, for dividing the Kingdom of *Naples*; and being dangerously ill, recommended to him by his Will his eldest Son, praying him to place such an one about him, as he should think most capable of giving him good Education; and accordingly *Lewis* chose *William* of *Croi*, of the Branch of *Chievres*, one of the wisest and ablest Men of his Time.
